Order from LC mi$2.40, ph$3.30 PB 137 695

A perturbation technique already used for the equation of state of pure substances by Zwanzig is developed to deal with binary fluid mixtures. We use a modified Lennard-Jones potential of pseudo-one component form for the unperturbed ensemble and introduce some effects of the specific potentials of the species involved as the perturbation. The most useful part of this report may be the zeroeth order results which give compressibility factors for gaseous mixtures fairly well at high temperatures.

THIN-WALLED COMPRESSION MEMBERS, by A. Pflüger. Rept. no. 2 (Final) on Contract AF 61(514)1140. July 59, 15p. 10 refs. AFOSR-TR-59-138.
Order from LC mi$2.40, ph$3.30 PB 144 313

This report treats the magnitude of the deformations occurring as a result of the buckling process. As a consequence of inaccuracies of shape and of the application of load, deformations will occur even before the buckling limit is reached. However, the statistical evaluation of the measurements taken shows these deformations not to exceed the limits permissible within the scope of reasonable demands regarding the outer appearance of a construction. When exceeding the critical value, however, the deformations will increase rapidly. Consequently, the necessary safety factor has to be related to the buckling limit. (See also PB 140 693)

ROTATION TESTS IN PLASTICITY, PART II, by Aris Phillips. Technical rept. no. 6 on Contract Nonr-609(12). Dec 58, 23p. 3 refs.
Order from LC mi$2.70, ph$4.80 PB 143 981

This report is a continuation of technical report No. 3 which appeared in December 1957. In the present report the ten rotation tests K-1 to K-10, which have been presented previously, are submitted to an additional evaluation. The reader is reminded here that in a rotation test the state of stress is changed by keeping the principal stresses constant while the principal directions are rotated. The ten rotation tests which are considered here were made on thin-walled tubes of aluminum alloy 3S-O. In these tests plane states of stress σ_1, σ_2 ($\sigma_1 > \sigma_2$), existing on the outside surface of a thin-walled tube, were rotated to various angles (up to 90°) about the radical direction (the direction of σ_3). The rotation of the principal axes of stress was achieved by using a combination of axial load, internal pressure, and torque.

VIBRATION AND FLUTTER OF CYLINDRICAL AND CONICAL SHELLS, by Yechiel Shulman. Rept. on Contract AF 49(638)219. June 59, 181p. 55 refs. ASRL technical rept. no. 74-2; AFOSR-[TN]-59-776.
Order from LC mi$8.40, ph$28.80 PB 144 307

The theory of thin shells is examined and some simplified general expressions are presented. These reduce to Donnell's expressions in the case of circular cylindrical shells. An appropriate variational principle is formulated and the similarity to shallow-shell theory is shown. These results and those of the more exact Flügge shell theory are applied to the problem of free vibration of conical shells. Approximate solutions are obtained by variational methods using the various theories and various displacement and stress functions. Comparison of the results indicates that the method which utilizes a logarithmic transformation of the axial coordinate in conjunction with appropriate displacement expansion modes satisfying the geometrical boundary conditions yields results valid for both the membrane and bending cases and is capable of being used to obtain higher approximations. The results reveal that the influence of taper on membrane and bending frequencies of circular cylinders is opposite in nature, the former being increased, the latter decreased by the taper.

Aeronautical Research Inst. of Sweden.
A THEORETICAL INVESTIGATION OF SECOND-ORDER SUPERSONIC INTERFERENCE EFFECTS, by Beverly J. Beane and Marten T. Landahl. Technical note no. 1 on Contract AF 61(052)75. Apr 59, 18p. 7 refs. FFA rept. AU-II-93:1; AFOSR-TN-59-962.
Order from LC mi$2.40, ph$3.30 PB 144 305

An approximate solution, valid for high Mach numbers, for the second-order supersonic flow problem of two interfering flow fields is given. The approximate solution requires that the spanwise curvature of the body flow field is small. A further approximation is made which leads to a very simple formula for the interference pressure. This formula is found to give relatively small errors in the cases investigated. It is found that second-order interference effects may be large at Mach numbers above 3. Thus it is demonstrated that large gains in control surface efficiency may be obtained by placing the control surface in a region of high pressure from the body.

Aerosciences Lab., General Electric Co., Philadelphia, Pa.
RECENT ADVANCES IN CHEMICAL KINETICS OF HOMOGENEOUS REACTION IN DISSOCIATED AIR, by W. G. Zinman. Rept. on Contract AF 04(647)269. 21 Sep 59, 20p. 41 refs. Technical information series R59SD426.
Order from LC mi$2.40, ph$3.30 PB 143 900

It is shown that the kinetics of certain types of homogeneous gas phase reactions should be considered in many flow problems involving diatomic gases at moderate temperatures. There are two general types of reactions: atom recombination ($A + A + M \rightarrow A_2 + M$) and two body reactions (i.e. $N + O_2 \rightarrow NO + O$). For many atom recombination reactions of technical importance, k_r is about $10^{11} ft.^6/lb.\text{-}mol.^2 sec$. In general, two body reactions are so rapid compared with atom recombination that certain equilibrium relations will be obeyed in many gas mixtures not in complete thermodynamic equilibrium. The rate constants necessary to determine when this can be done are given.

THE SELECTION OF ORGANIC COMPOUNDS AS ABLATING MATERIALS, by Albert H. Blatt. Oct 59, 9p. 1 ref. AFMDC-TN-59-28.
Order from LC mi$1.80, ph$1.80 PB 144 397

The use of organic compounds as ablating materials for the outer surface of the nose cones of re-entering ballistic missiles and satellites is examined. The paper is concerned with the chemist's point of view; that is, the cracking and dissociation processes. The paper concludes with suggestions about the choice of organic ablating materials.

Air Force Missile Test Center, Patrick AFB, Fla.
THE EDITING OF FLIGHT DATA, by Masao Yoshitsu. Rept. on Missile Test Project, Contract AF 08(606)1156. 3 Aug 59, 76p. 11 refs. RCA DATA Processing Technical rept. no. 50; AFMTC-TR-59-16.
Order from LC mi$4.50, ph$12.30 PB 143 991

Any method of the numerical determination of observations is more or less liable to error. This is expected, provided the errors are small enough to have the data appear credible. On the other hand, the large errors are undesirable as they are outside the scope of the probability theory. An editing technique to eliminate the large errors from flight data, leaving the good statistical data, is developed in this paper. Three examples are worked out to show that even a cluster of five large errors in consecutive observations may be systematically eliminated in the 58 steps of the technique. It is seen that the entire procedure may be readily programmed for a high speed electronic computer.

Army Rocket and Guided Missile Agency, Redstone Arsenal, Ala.
COMPRESSIBLE FLOW TABLES k = 1.26 ISENTROPIC PROCESS, by C. Hoebich. Rept. on One-Dimensional Compressible Flow Tables for a Perfect Gas in Mach Number Increments of 0.001 (k = 1.26); Isentropic Process. Jan 59, 89p. ARGMA TN 1H 1N-1.
Order from LC mi$4.80, ph$13.80 PB 144 413

This report tabulates functions of Mach numbers for compressible perfect gas. The ratio of specific heats k is 1.26. The increment used in these tables is sufficiently small (0.001 Mach number) to eliminate time-consuming interpolation.

Arnold Engineering Development Center [Tullahoma, Tenn.]
REDUCTION OF AIRSTREAM-INDUCED VIBRATIONS OF A PWT MODEL SUPPORT SYSTEM BY TUNNEL MODIFICATIONS, by H. L. Chevalier and W. E. Carleton. Rept. on ARO, Inc., Contract AF 40(600)800. Oct 59, 15p. 2 refs. AEDC-TN-59-125.
Order from LC mi$2.40, ph$3.30 PB 144 339

The effect of several modifications to the tunnel, designed to improve the vibrational characteristics of the support strut, was investigated in the 16-Ft Transonic Circuit of the Propulsion Wind Tunnel Facility. The modifications included changing the shape of the leading edge of the model support strut, the depth and position of bulges in the test section walls, and the position of the scavenging scoop for engine exhaust gases. The results show that the modifications permit the operation of the tunnel over a range of test conditions with safe sting vibrational amplitudes and with a suitable Mach number distribution through the tunnel test section.

Cornell Aeronautical Lab., Inc., Buffalo, N. Y.
A THEORY OF WING-PROPULSION COMBINATIONS IN SLOW FLIGHT, by R. J. Vidal. Rept. on Proj. 9-38-01-000 Task 902, Contract DA 44-177-tc-439. Sep 59, 39p. 9 refs. Rept. no. AI-1190-A-1; AD-216 171.
Order from LC mi$3.00, ph$6.30 PB 144 241

The development of a theory treating wing-propulsion systems in slow flight is presented. This development is applied to a class of configurations, characterized by wing and propulsion wakes which are equal in span, and is used to predict the performance of this class of aircraft. It is concluded that for aircraft of equal span, those generating thick propulsion wakes require the least power, and that configurations typified by thin jet wakes are inherently inefficient as regards power consumption in the very slow speed range. The theory is compared with the available helicopter data, and good correlation is obtained.

Guggenheim Aeronautical Lab., Calif. Inst. of Tech., Pasadena.
AN EXPERIMENTAL INVESTIGATION OF HYPERSONIC STAGNATION TEMPERATURE PROBES, by Richard D. Wood. Rept. on Hypersonic Research Project, Contract DA 04-495-ORD-19. 15 July 59, 100p. 40 refs. Memo. no. 50.
Order from LC mi$5.40, ph$15.30 PB 144 167

By the combined use of both shield and base heating, a probe recovery factor of r = 1.0 was obtained over a

range of Reynolds numbers at M_∞=5.75. By using the experimental data and simple heat balance equations, the probe losses, for the conditions investigated, were found to be in the proportion: shield conduction loss - 15; base conduction loss - 3; thermocouple conduction loss - 1; and thermocouple radiation loss - 3/100. The typical decrease in probe recovery factor observed for decreasing Reynolds number appears to be related to a decrease in the base temperature and not to the wire conduction loss as commonly assumed.

Institut de Recherches Scientifiques et Techniques du Centre-Ouest (France).
RESEARCH ON EXPERIMENTAL INVESTIGATION OF VARIABLE CIRCULATION AROUND AN ASPIRATED CYLINDER. Rept. on Contract AF 61(514)1379. [1959]| 42p. Etude IRST-E1/573; AFOSR-TN-59-105.
Order from LC mi$3.30, ph$7.80 PB 144 295

The object of this study is to determine the conditions necessary to obtain maximum lift and lift/drag ratio for a porous cylinder arranged to permit the aspiration of the surface laminar sub-layer. The method used to create a particular circulation consisted in (assuming complete suppression of the laminar layer) shifting the transition point, normally behind the cylinder, through an angle O to the right or left. This was obtained by a deflector fin which caused flow of air away from the aspirating surface. Two variations in procedure were also studied: 1. the fin was replaced by a small arc of surface devoid of aspiration pores thus allowing the flow to separate. 2. aspiration was provided on one side of the cylinder only allowing separation flow on the other side.

Institute for System Research, U. of Chicago, Ill.
AERODYNAMIC STUDIES: THE FORCES ACTING ON AN AIR VEHICLE: A REVIEW OF THE LITERATURE, by M. Z. Krzywoblocki. Rept. on Scientific and Engineering Research Investigations in Flight Dynamics, Contract AF 33(616)5689. Dec 58, 105p. 332 refs. WADC Technical note 56-360, Pt. 9; AD-161 012.
Order from OTS $2.50 PB 151 819

This work is an annotated bibliography of the scientific literature pertaining to methods of calculating the aerodynamic forces acting on an air vehicle in flight. The more interesting papers and reports (from the viewpoint of the aerodynamicist) are discussed briefly, others are listed without comment. (See also PB 151 815)

Midwest Research Inst. [Kansas City, Mo.]
FLUTTER OF CURVED PANELS, by John E. Yates and Edmond F. E. Zeijdel. Rept. on Contract AF 49(638)429. Sep 59, 45p. 6 refs. [AFOSR-TR-59-163]
Order from LC mi$3.30, ph$7.80 PB 144 486

Previous studies on panel flutter treated the panel as initially flat in the equilibrium state. A natural point of inquiry is the effects of panel curvature on panel flutter, and this is the subject of the present report. To investigate flutter of curved panels, the general equations of motion of shallow cylindrical shells are developed. The initial curvature is then taken as circular in the chordwise direction. The special case of infinite aspect ratio is considered and appropriate equations are developed for finite aspect ratio panels. Results are obtained for unit and infinite aspect ratio curved panels with simply supported edges for two Mach numbers (M = 1.5 and 2).

Naples U. (Italy).
LAMINAR MIXING OF STREAMS OF DIFFERENT GASSES, by Luigi G. Napolitano and A. Pozzi. Technical note no. 1 on Contract AF 61(052)160. Apr 59, 75p. 14 refs. Istituto di Aeronautica rept. no. 10; AFOSR-TN-59-977; AD-226 469.
Order from LC mi$4.50, ph$12.30 PB 143 911

Preliminary results of a study of laminar, isobaric mixing of streams of different gases are presented.

Naval Ordnance Lab., White Oak, Md.
THE THEORY OF STABILITY OF COMPRESSIBLE LAMINAR BOUNDARY LAYERS WITH INJECTION OF A FOREIGN GAS, by S. F. Shen. 28 May 57, 34p. 10 refs. Aeroballistic Research rept. 374; NAVORD rept. 4467; AD-158 520.
Order from LC mi$3.00, ph$6.30 PB 144 158

The stability theory of laminar boundary layers with regard to infinitesimal disturbances is extended to the case involving binary gas mixtures, as may occur when a different coolant is injected into the free stream (air) through pores along the surface. The "inviscid" solutions are given. The "viscous" solutions, the asymptotic solutions and the eigen-value problem are discussed. Based upon the "inviscid-criterion", it appears that a lighter coolant would result in a more stable laminar boundary layer than a heavier coolant, at least for subsonic free stream.

Naval Supersonic Lab., Mass. Inst. of Tech., Cambridge.
FREE CONVECTION PAST A VERTICAL FLAT PLATE: SOME NUMERICAL RESULTS, by Judson R. Baron and Morton Finston. Mar 59, 29p. 3 refs. Technical rept. 269.
Order from LC mi$2.70, ph$4.80 PB 144 186

Exact solutions are presented in numerical form for the free convection flow past a vertical plane surface of non-uniform temperature.

SOME REMARKS ON THE SOLUTION OF A SYSTEM OF EQUATIONS OCCURRING IN LAMINAR MIXING WITH AXIAL PRESSURE GRADIENTS, by Luigi G. Napolitano. Rept. on Contract AF 18(600)693. Sep 57, 16p. 1 ref. PIBAL rept. no. 393; AFOSR-TN-57-609; AD-136 599.
Order from LC mi$2.40, ph$3.30 PB 137 507

A fifth-order system of equations with 3-point boundary conditions is investigated from the point of view of obtaining solutions by high-speed computing machines. The first method of solution changes the variables and reduces the original equations to integro-differential equations defined over a finite interval of the independent variable. An iteration scheme is adopted and asymptotic solutions are presented as they are needed to compute the solution in the proximity of the end points. The second method considers the solution as an initial value problem. The 4-fold indeterminacy which arises when the solution is started from the point where the independent variable is zero, is shown to be reducible to a 2-fold one. The 2 parameters left are related to the attainment of the required asymptotic behavior of the solution.

Polytechnic Inst. of Brooklyn, N. Y.
TRANSONIC ROTATIONAL FLOW OVER A CONVEX CORNER, by Roberto Vaglio-Laurin. Rept. on Contract AF 49(638)217. Aug 59, 66p. 12 refs. PIBAL rept. no. 431; AFOSR-TN-59-355; AD-213 681.
Order from LC mi$3.90, ph$10.80 PB 144 381

A singularity is encountered in the flow field about two-dimensional and axisymmetric bodies characterized by a sharp corner, where the fluid velocity becomes sonic. Such is the case for several practical configurations in transonic and hypersonic flow. An investigation of this sonic singularity, and the application of results thereof to the analysis of flow fields about blunt bodies in the aforementioned category are presented. It is shown that the problem in question, as many other discontinuity problems, belongs to the family of asymptotic or boundary layer phenomena of mathematical physics. The solution of the first approximation equations is given by a series in powers of a variable measuring the distance from the corner with coefficients depending on an appropriate similarity variable. The leading coefficient of the series is independent of three-dimensional and rotationality effects, in complete analogy to the well-known solution of the corner problem in supersonic flow. Detailed results are presented for the leading singularity and for the first two corrections due to rotationality and axial symmetry of the flow.

Rome U. (Italy).
EXPERIMENTAL INVESTIGATION ON DELTA WING AND COMPLETE CONFIGURATION MODELS FOR AEROELASTIC SIMILARITY PROBLEMS AT SUPERSONIC BLOW DOWN WIND-TUNNEL, by Luigi Broglio, Carlo Buongiorno and others. Technical note no. 7 on Contract AF 61(514)888. Mar 59, 60p. 3 refs. SIARgraph no. 50; AFOSR-TN-59-954.
Order from LC mi$3.60, ph$9.30 PB 144 304

The experimental techniques for the aeroelastic investigation at the supersonic blow down wind tunnel are presented. Wind tunnel data at M = 3.01 on triangular wing model are given in. These results show the small importance of the chordwise deflection of the section on the aerodynamic characteristics. An experimental investigation at M = 3.12 on a complete airplane configuration is presented, showing the importance of the parameter $\frac{P_0}{E}$ on the lateral stability derivatives. In the Appendix of the report the preliminary design of a magnetic support for dynamic stability tests is presented.

Rome U. (Italy).
RESEARCH ON AEROELASTICITY, by Luigi Broglio. Final rept. on Contract AF 61(514)888. May 59, 12p. SIARgraph no. 51; AFOSR TR-59-134; AD-226 438.
Order from LC mi$2.40, ph$3.30 PB 144 297

Research is reported on the following: (a) modeling technique and theory for aeroelastic similarity in blow-down wind tunnel tests; (b) developing technique and an experimental device to study the same problems of point (a) but including dynamic effects; (c) finding exact solutions of the problem of the heat conduction in heterogeneous solids with boundary conditions function of space and time.

Technische Hochschule, Munich (West Germany).
SUPERSONIC FLOW PAST OSCILLATING BODIES OF REVOLUTION WITH A FREQUENCY NOT NECESSARILY SMALL, by Johann Muench. Technical note no. 8 on Contract AF 61(514)1080. 24 June 59, 13p. 3 refs. AFOSR-TN-59-452; AD-215 027.
Order from LC mi$2.40, ph$3.30 PB 143 965

This report gives a representation of the potential of linearized flow past bodies of revolution executing elliptic oscillations of arbitrary frequency. The potential is given in terms of BESSEL- and LEGENDRE-functions.

University of Southern California. Engineering Center, Los Angeles.
ANALYTICAL STUDY OF THE HEATING OF HYPERSONIC AIR FLOW BY ELECTRODE-LESS HIGH-FREQUENCY DISCHARGE, by James C. Williams, III, Paul C. Wilber, and Raymond L. Chuan. [Final rept.] on Contract AF 40(600)736. Oct 59, 75p. 24 refs. USCEC rept. 68-101; AEDC-TR-59-23.
Order from LC mi$4.50, ph$12.30 PB 143 921

The possibility of heating a supersonic gas stream by means of electrode-less high-frequency discharge is studied. This heating scheme logically can be divided into two parts: the discharge where energy is added to the gas stream and stored as potential energy of electron-ion separation, and the decay where the electrons and ions recombine and give up some of the separation energy as thermal energy of the gas. Qualitative consideration of the discharge phase indicates the necessary relations between the electric field parameters, the hydrodynamic parameters and the chamber dimensions for an efficient discharge. Both qualitative and quantative discussions of the decay are given, the latter of which yields the variation of the hydrodynamic variables in the decaying flow. Finally, in the latter portion of

this report, it is shown how high-frequency electrode-less discharge heating might be applied practically to the heating of a low density, high Mach number, wind tunnel gas stream.

Hydrodynamics, Hydraulics, and Hydrostatics

Indiana U., Bloomington.
A MATHEMATICAL EXAMPLE DISPLAYING FEATURES OF TURBULENCE, by Terence Butler. Rept. for 1 Sep 54-31 July 58 on Contract AF 33(616)2550. Mar 59, 75p. 16 refs. WADC Technical rept. 59-52; AD-213 590.
Order from OTS $2.00 PB 151 969

The Navier-Stokes equations have proven to be the proper description for laminar flow, but no solutions of these equations resembling turbulence have been found. Thus, the question arises whether a set of straightforward equations like the Navier-Stokes equations can have solutions of such complex nature as would be necessary to describe turbulent flow. An answer to this question is suggested by Dr. Eberhard Hopf who has contrived a set of equations which retain certain essential features of the Navier-Stokes equations, but which are much simpler. He has shown that these equations have very complex solutions, actually random functions, qualitatively similar to the velocity in turbulent phenomena. The present report explores Hopf's approach in further detail. The properties of turbulent flow as obtained in measurements are expressed by certain statistical averages. The present report investigates the corresponding quantities of Hopf's model by means of probability theory and thus establishes a basis for a more detailed comparison. It is found that the broader characteristics of turbulence are present in the solutions but that the inherent simplicity of Hopf's model limits the extent of the similarity. For example, the velocity has a normal distribution as in turbulence, but the probability distribution of the difference of the velocity at two points close together fails to exhibit the small but important deviations from the normal distribution that are found in turbulent flow. The results suggest the value of seeking to devise another set of equations which would be a step closer to the Navier-Stokes equations.

Rensselaer Polytechnic Inst., Troy, N. Y.
THE STABILITY OF VISCOUS FLOW BETWEEN ROTATING CONCENTRIC CYLINDERS WITH A PRESSURE GRADIENT ACTING ROUND THE CYLINDERS, by R. D. DiPrima. Rept. on Contract Nonr-591(12). 21 Jan 59, 18p. 10 refs. RPI MathRep no. 20.
Order from LC mi$2.40, ph$3.30 PB 144 116

In this paper the stability of a viscous fluid between concentric cylinders is analyzed, when the basic velocity distribution is the sum of a velocity distribution due to the rotation of the cylinders, Taylor (1923) and a "pumping" velocity distribution due to a pressure gradient acting round the cylinders, Dean (1928). The critical Taylor number is computed for a wide range of values of the ratio of average velocity of pumping to average velocity of rotation in the case that the outer cylinder is stationary. It is assumed that the spacing between the cylinders is small.

Technische Hochschule, Hannover (West Germany).
EFFECTS OF LONG-PERIOD WAVES IN HARBORS, by W. Hensen. Final technical rept. for 1 July 58-30 June 59 on Contract DA 91-508-EUC-355. [1959] 413p. 53 refs.
Order from LC mi$11.10, ph$63.60 PB 144 262

This report presents the results of basic model tests of the occurrence of resonant oscillations in harbor basins induced by long-period waves. The objectives of the experiments were to find out practicable means suitable for minimizing to a satisfactory degree the effects of resonant amplifications which, in most cases, are dangerous for shipping and harbor operations. Out of the numerous possibilities applicable to improve the nautical and operational conditions in harbors subject to long-period waves, the insertion of transversal moles of different lengths and groupings was selected for studies. The effects of such transversal moles on the vertical and horizontal water motions in a basin were investigated experimentally. The utilization of transversal moles for this purpose is considered serviceable because the moles simultaneously may be of use for harbor operations.

METALLURGY

Armour Research Foundation, Chicago, Ill.
DEVELOPMENT OF COBALT-BASE ALLOYS, by John J. Rausch. Summary rept. for 1 July 57-31 Aug 58 on Contract NOas-58-136-c. 29 Oct 58, 61p. 4 refs.
Order from LC mi$3.90, ph$10.80 PB 144 136

In an intensive study of the potentialities of all useful cobalt-base binary alloy systems, approximately 200 alloy compositions were studied. The individual alloying elements have been classified, both empirically and quantitatively, as to their effects on the parameters forgeability, ductility, elevated temperature strength, and oxidation resistance. Two distinct classes of strong cobalt-base alloys have evolved. One of these contains chromium with the addition of molybdenum, tantalum, or niobium either singly or in combination. The other type is composed of combinations of molybdenum, tantalum, or niobium.

Commonwealth Engineering Co. of Ohio, Dayton.
DEVELOPMENT OF A METHOD TO ACCOMPLISH ALUMINUM DEPOSITION BY GAS PLATING, by Malvern J. Hiler and William C. Jenkin. Rept. for 16 June 58-16 Dec 59 on Materials Applications, Contract AF 33(616)5594. June 59, 64p. 3 refs. WADC Technical rept. 59-88; AD-214 887.
Order from OTS $1.75 PB 151 923

The deposition of aluminum was accomplished by thermally decomposing vapors of tri-isobutyl aluminum on the surface of cleaned, heated copper test panels in a heated plating chamber. The test panels were subjected to a preliminary deoxidation by induction heating to 800°F on a hydrogen atmosphere, purging the chamber with argon gas while cooling the sample to 500 degrees, then admitting a mixture of gases containing tri-isobutyl aluminum vapors for varying periods. The plate produced is substantially pure aluminum, lustrous and ductile, of excellent conductivity, and in thickness up to 4.7 mils. Adhesion varied from poor to excellent.

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
SOME METALLURGICAL CONSIDERATIONS IN FORGING MOLYBDENUM, TITANIUM, AND ZIRCONIUM, by Harry B. Goodwin. 25 Mar 59, 43p. DMIC memo. 12.
Order from OTS $0.50 PB 161 162

Reasons for the current interest in molybdenum, titanium, and zirconium are outlined briefly and typical uses are cited. The forging of each metal is discussed separately. In each case the metallurgy of the metal is reviewed briefly and the effect of the metallurgical characteristics on forging practice is explained. Practical hints on forging each metal are also given.

Minerals Research Lab., U. of California, Berkeley.
HEATS OF FORMATION OF Au_3ZN AND AuZn, by Ray W. Carpenter, Raymond L. Orr, and Ralph Hultgren. Technical rept. no. 3 on Contract DA 04-200-ORD-171, T. O. 15. 1 Oct 59, 18p. 15 refs. Series no. 126, issue no. 3; OOR rept. 2287.3 met
Order from LC mi$2.40, ph$3.30 PB 144 478

The heats of formation of gold-zinc alloys of compositions Au_3Zn and AuZn were measured at various temperatures. At the composition Au_3Zn the best X-ray diffraction data indicate the disordered fcc α phase decomposes on cooling below 693°K to a complex ordered α_1 phase, which on further cooling below 543°K decomposes to form a second ordered α_2 phase. Heat contents and heats of formation show that (AuZn (β') has no tendency to disorder on heating to 800°K.

Minerals Research Lab., U. of California, Berkeley.
THE HEATS OF FORMATION OF SILVER-PALLADIUM ALLOYS, by John P. Chan (Master's thesis) Philip D. Anderson and others. Technical rept. no. 4 on Contract DA 04-200-ORD-171, T. O. 15. 1 Oct 59, 21p. 12 refs. Series no. 126, issue no. 4; OOR rept. 2287.4 met.
Order from LC mi$2.70, ph$4.80 PB 144 483

Heats of formation of five silver-palladium alloys at 330°K. The skewing observed in these heats of formation when plotted versus the composition has been interpreted in terms of the filling of the vacant 0.6 orbital in the 4d shell of palladium which is completed at 60 atomic percent of silver.

New York U. Coll. of Engineering, N. Y.
THE GRAIN BOUNDARY ADSORPTION OF SOLUTES, by J. Winter and S. Weinig. Final rept. on Contract Nonr-285(22). Dec 57, 43p. 12 refs. AD-153 300.
Order from LC mi$3.30, ph$7.80 PB 138 075

The grain boundary adsorption of solutes was studied using internal friction techniques. The segregation of alloying elements to the grain interfaces was studied as a function of both the bulk concentration and the solution temperature. Interaction energies in the range of 0.3 ev were obtained. This value was used to obtain the actual concentration of solute at the grain boundary. In corroboratory creep studies the direct grain boundary contribution to the total creep strain was measured. It was found that the interface creep varied with the type and magnitude of the solute adsorbed.

Rock Island Arsenal Lab., Ill.
SPECTROGRAPHIC STANDARDS FOR THE ANALYSIS OF ALUMINUM AND MAGNESIUM ALLOYS, by L. H. Moorhead. 19 Nov 58, 30p. 7 refs. Rept. no. 58-3208; AD-210 518.
Order from LC mi$2.70, ph$4.80 PB 144 385

Methods were set up for the X-ray analysis of aluminum alloys for several elements in high concentration ranges where the accuracy of this method exceeds that of optical emission spectroscopy. Optical spectrographic methods were developed for the analysis of aluminum alloys and magnesium alloys. The analytical curves, spectrum lines and complete operating conditions are shown. A statistical study proved the optical spectrographic methods to be accurate and standard comparison samples to be homogeneous.

Rodman Lab., Watertown Arsenal, Mass.
DESIGN AND OPERATION OF A TUBE TYPE LABORATORY VACUUM FURNACE, by Francis S. Delacey. Apr 59, 12p. 5 refs. Technical rept. no. RPL 41/9; AD-225 374.
Order from LC mi$2.40, ph$3.30 PB 144 322

A laboratory furnace was designed and assembled for use in the vacuum firing of compacted, powdered metal specimens. The furnace assembly includes a refractory mullite tube in which the specimens are fired, a pumping system, a graphite susceptor, and auxiliary instruments for registering pressure and temperature within the furnace tube. The power source for inductively heating the susceptor is a high-frequency spark gap converter. In normal operation, the furnace accommodates the equivalent of six 3" x 3/8" square, pressed compacts. Vacuums of 10^{-4}mm Hg and temperatures of 1400°C (2552°F) are reached in approximately two and one-half hours when titanium powder compacts are being fired. On the basis of preliminary firings, it is concluded that the furnace can be profitably utilized in evaluating vacuum sintering techniques.

Ferrous Metals

Crucible Steel Co. of America, Syracuse, N. Y.
DEVELOPMENT OF A DUCTILE, OXIDATION-RESISTANT, LOW-DENSITY ALLOY SYSTEM FOR INTERMEDIATE TEMPERATURE USE, by R. C. Gibson and P. Lillip. Final rept. for 26 June 58-26 June 59 on Contract NOas-58-848-c. 26 Aug 59, 43p.
Order from LC mi$3.30, ph$7.80 PB 144 134

Development of an age-hardenable Fe-Al-Mn-C alloy with low density, good oxidation resistance, high strength, and good ductility at intermediate temperatures (1100 to 1400 F). Development of a stable, age hardenable austenitic alloy possessing excellent room temperature strength and good elevated temperature strength with oxidation resistance at 1800 F approaching that of Type 304.

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
FABRICATION OF 17-7PH AND PH15-7Mo STAINLESS STEEL BY BEND ROLLING, DEEP DRAWING, AND SPINNING, by C. T. Olofson. 15 May 59, 5p. DMIC memo. 18.
Order from OTS $0.50 PB 161 168

James Forrestal Research Center, Princeton, N. J.
SELF-DIFFUSION IN ALPHA IRON, by C. Ernest Birchenall and Richard J. Borg. Rept. on Contract AF 49(638)533. Oct 59, 19p. 12 refs. Metallurgy rept. no. 20; AFOSR-TN-59-1085; AD-227 069.
Order from LC mi$2.40, ph$3.30 PB 144 006

The self-diffusion coefficients for α-iron have been determined between 980°C to 1167°K using Fe^{55} as the tracer. In the temperature region beginning at least 50°C above T_c the diffusion coefficient is given by $D = 118 \pm 2) \exp(-67240/RT) cm^2 sec^{-1}$.

Michigan U. Research Inst., Ann Arbor.
EFFECT OF PRIOR CREEP ON SHORT-TIME MECHANICAL PROPERTIES OF 17-7PH STAINLESS STEEL (RH 950 CONDITION COMPARED TO TH 1050 CONDITION) by Jeremy V. Gluck and James W. Freeman. Rept. for 1 Jan 58-31 Mar 59 on Materials Analysis and Evaluation Techniques, Contract AF 33(616)3368. Oct 59, 91p. 6 refs. WADC Technical rept. 59-339.
Order from OTS $2.25 PB 161 296

The effect of creep to 2 percent in 100 hours at temperatures from 600° to 900°F was determined on the tension, compression, and tension-impact properties of 17-7 PH(RH 950 Cond.) at room temperature or the exposure temperature. A substantial loss in ductility was observed in room temperature tension tests. Material exposed to creep at 600°F exhibited a substantial Bauschinger effect in tension and compression tests. The loss in ductility is attributed to stress and/or temperature induced aging during the creep-exposure.

Naval Weapons Plant, Washington, D. C.
EFFECTS OF CADMIUM PLATING THICKNESSES AND OVERLAYING UPON THE RECOVERY FROM HYDROGEN EMBRITTLEMENT OF AISI 4340, by S. V. Chek. 21 Sep 59, 20p. NAVORD rept. 6944; NWPW-T-27-59.
Order from LC mi$2.40, ph$3.30 PB 144 120

Recovery from hydrogen embrittlement at the 270,000 psi strength level by baking at 300°F was determined. Two procedures were used for the detection and evaluation of hydrogen embrittlement: the unnotched tensile test and the notched sustained load, static fatigue, test. Recovery was attained, at baking times within 4 hours when the cadmium plating ranged from 0.5×10^{-4} to 1.25×10^{-4} inch but recovery was unattained at commercial thicknesses of, or in excess of, 2.5×10^{-4} inch. Subsequent replating embrittled the steel.

Rodman Lab., Watertown Arsenal, Mass.
FACTORS AFFECTING DEPHOSPHORIZATION AND DESULPHURIZATION IN BASIC-ELECTRIC STEEL PRODUCTION, by John Zotos. Apr 59, 23p. 13 refs. Rept. no. RPL 10/18; AD-220 627.
Order from LC mi$2.70, ph$4.80 PB 143 947

Statistical analyses of equilibrium steelmaking data indicated that good correlation was obtained when: (1) the dephosphorizing power (P)/[P] = (percent phosphorus in the slag)/[percent phosphorus in the metal] was a logarithmic function of a slag parameter equal to the product of the slag's basicity $(\%CaO)/(\%SiO_2)$ times its oxidizing power (%FeO), and (2) the desulphurizing power (S)/[S] = (percent sulfur in the slag)/[percent sulfur in the metal] was a logarithmic function of a slag parameter equal to the quotient of the slag's basicity divided by its oxidizing power. Slag and metal compositions existing during the production of 4140, high nickel 4325, 4330 and 1040 AISI basic-electric steels were statistically analyzed using the same relationships. The results indicate that the dynamic (or non-equilibrium) dephosphorizing and desulphurizing powers of basic-electric slags are lower than their corresponding equilibrium values, and can be estimated at stage of a heat using the following equations: $(P)/[P] = 0.776 [(\%CaO)(\%FeO)/(\%SiO_2)]^{0.69}$ and $(S)/[S] = 10.38 [(\%CaO)/(\%SiO_2)(\%FeO)]^{0.48}$. These equations reveal that maximum dephosphorization and desulphurization conditions cannot exist simultaneously during basic-electric steel production due to the opposite effect of the slag's oxidizing power in the two slag parameters.

Rutgers State U., New Brunswick, N. J.
INHIBITION OF HYDROGEN EMBRITTLEMENT DURING PICKLING, by Donald B. Denney and Leonard Bauerman. Quarterly progress rept. no. 13, 1 Jan-31 Mar 59, on Contract DA 30-069-ORD-1689. [1959] 17p. 5 refs.
Order from LC mi$2.40, ph$3.30 PB 144 392

Preparation and study of compounds which are to be used in determining the mechanism of the action of hydrogen embrittlement inhibitors on steel in an acid pickling bath. The compounds which have been synthesized are structurally related to DHQ, one of the active ingredients in the reference standard inhibited hydrochloric acid.

Watertown Arsenal Labs., Mass.
INFLUENCE OF TEMPERATURE ON THE TENSILE AND FRACTURE PROPERTIES OF HIGH PURITY VACUUM MELTED IRON, by Harold G. Carter. Aug 58, 18p. 6 refs. Rept. no. WAL TR 330.3/1.
Order from LC mi$2.40, ph$3.30 PB 144 051

Specimens were tensile tested at +200°F, -319°F. At a testing temperature of liquid nitrogen (-319°F) the transgranular cleavage-type fracture was predominating. The ductility values approached zero. In addition, the microstructure contained many mechanical twins, which are believed to be found in very low temperature strained ferrite in nearly pure iron.

Watertown Arsenal Labs., Mass.
MECHANICAL PROPERTIES OF AISI 4340 STEEL IMPROVED BY CONSUMABLE-ELECTRODE VACUUM REMELTING, by Serge Cvikevich. Sep 59, 55p. 14 refs. Technical rept. no. WAL TR 310.1/1.
Order from LC mi$3.60, ph$9.30 PB 143 946

A slight improvement of impact properties due to consumable-electrode process remelting was observed in the material which was tempered in the upper tempering range. Marked improvement in fatigue properties was observed for samples tempered in the lower, as well as upper tempering ranges. An improvement in ductility properties was observed throughout the tempering range studied.

Light Metals

Chance Vought Aircraft, Inc., Dallas, Tex.
EVALUATION OF NEW HIGH STRENGTH TITANIUM SHEET ALLOYS, by J. W. Seeger and S. G. Young. Quarterly progress rept. no. 3, 1 July-30 Sep 58, on Contract NOas 58-104c. 31 Oct 58, 7p. CVA rept. no. E8R-11719.
Order from LC mi$1.80, ph$1.80 PB 138 472

Chart showing work schedule time table on this contract. Brief of current status.

BELT GRINDING OF TITANIUM SHEET AND PLATE, by Carl T. Olofson. 15 Mar 59, 8p. 5 refs. DMIC memo. 11.
Order from OTS $0.50 PB 161 161

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
EFFECTS OF HIGH STRAIN RATES AND RAPID HEATING ON THE TENSILE PROPERTIES OF TITANIUM ALLOYS, by F. R. Schwartzberg. 29 Dec 58, 33p. 7 refs. DMIC memo. 4.
Order from OTS $0.50 PB 161 155

The test data available allow the following generalizations to be drawn: (1) Yield and tensile strength increase with increasing strain rate; this behavior is most pronounced at temperatures above the present service limits of the subject alloys. Retention of strength to higher than normal temperatures can be achieved by testing at very high strain rates. (2) Ductility generally decreases with increasing strain rate. (3) Modulus of elasticity is not significantly affected by strain rate. (4) Holding time has no effect on tensile properties of titanium alloys annealed to a stable condition, except for losses in ductility due to surface oxidation at extremely high temperatures.

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
HACKSAWING OF TITANIUM AND TITANIUM ALLOYS, by Carl T. Olofson. 6 July 59, 13p. 5 refs. DMIC memo. 24; AD-220 194.
Order from OTS $0.50 PB 161 174

Titanium and its alloys can be hacksawed under cutting conditions adapted to the behavior of titanium. The difficulties encountered in other machining operations are also present in sawing. They include galling, smearing, abrasiveness, and the generation of high temperatures in the cutting zone. During the sawing process, a tiny chip forms as each saw tooth penetrates the work. Chips gradually enlarge and curl into each tooth gullet as the blade moves through the cut. The chips remain trapped in the gullets until the teeth emerge from the kerf. At that time, chips either fall out or are flushed out by the cutting fluid directed into the cutting zone. The objectives in hacksawing include straightness of cut, smoothness of cut surface, ample cutting rates, and reasonable tool life. Appropriate selections of pitch, speeds, and feeds not only should minimize the sawing difficulties of titanium, but also should create an economic balance between cutting rate and blade life. Cutting rates for titanium are about 25 to 50 per cent lower than those associated with quenched and tempered alloy steels of equivalent hardness. Blade life in terms of productivity is about 50 per cent lower than that with alloy steels of equivalent hardness.

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
JOINING OF BERYLLIUM, by N. E. Weare and R. E. Monroe. 30 Mar 59, 28p. 16 refs. DMIC memo. no. 13.
Order from OTS $0.50 PB 161 163

Beryllium is a brittle metal and is difficult to fabricate and join. Limited success has been reported on direct welding by tungsten-arc, pressure, and electron-beam processes. Good joints have been made by braze welding with aluminum filler and brazing with silver and the silver-copper eutectic alloy.

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
THE MACHINING OF BERYLLIUM, by C. T. Olofson. 5 June 59, 16p. 10 refs. DMIC memo. 21.
Order from OTS $0.50 PB 161 171

Beryllium machines like cast iron, but is more abrasive to tools. Its brittle behavior can cause spalling at the exit of cuts and cracking at the surface. During machining, pieces of built-up edge slough off the tool, causing a scuffed, machined appearance. Carbide tools are normally used for turning, milling, and drilling at speeds up to 250, 150, and 100 surface feet per minute, respectively. The recommendation of the Atomic Energy Commission that "for the present it is safest to regard beryllium metal and all its compounds as potentially toxic" is the guiding principle in beryllium safety. Beryllium should be machined in an easy-to-clean, isolated area. The AEC recommendation for a safe beryllium-in-air concentration is 2.0 micrograms or less per cubic meter. Chemical pneumonitis in some persons working with beryllium has been attributed to suspended solid particles or mists of beryllium, its compounds, or solutions of soluble beryllium compounds. Chip cleanliness is required to maintain the maxium salvage value of beryllium. Cutting fluids are often omitted to prevent chip contamination.

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
NITRIDING OF TITANIUM, by J. W. Holladay. 12 Aug 59, 13p. 26 refs. DMIC memo. 29; AD-225 299.
Order from OTS $0.50 PB 161 179

Contents:
Thermodynamic and kinetic considerations of nitriding titanium
Nitriding media
Nitriding procedures
Nitriding titanium with nitrogen gas
Nitriding with ammonia gas
Effect of alloy composition of nitriding
Nature of the nitride coating
Properties of the nitride coating

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
PHYSICAL AND MECHANICAL PROPERTIES OF TANTALUM, by H. R. Ogden. 28 Aug 59, 19p. 27 refs. DMIC memo. 32; AD-225 589.
Order from OTS $0.50 PB 161 182

The physical properties of tantalum, having been the subject of numerous investigations during the past 50 years, are well established. Some selected physical properties are presented in Table 1, and specific physical properties at various temperatures are given in Tables 2 through 8. The mechanical properties of tantalum, especially at elevated temperatures, have become of marked interest during recent years. Unfortunately, complete information is not yet available. Table 9 presents the room-temperature tensile properties of tantalum in various commercial forms. Tables 10 and 11 present the tensile properties of tantalum sheet and rod, respectively, at subzero, room, and elevated temperatures. The properties of tantalum at temperatures of 3000 to 5000 F are given in Tables 12 through 15. The effect of oxygen contamination on the tensile strength of tantalum at about 4530 F is shown by the data in Table 16.

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
PREPARATION AND ANALYSIS OF TITANIUM-HYDROGEN STANDARD SAMPLES, by Max J. Trzeciak. Rept. on Contract AF 18(600)1375. 9 Feb 59, 14p. DMIC memo. 9.
Order from OTS $0.50 PB 161 160

Titanium-hydrogen standard samples were prepared individually from degassed titanium rods. The hydrogen was added to the degassed titanium sample in a modified Sieverts apparatus. Battelle analyses of 20 standards were in good agreement with the amounts of hydrogen added. Analytical results of 24 samples by two outside laboratories were in excellent agreement with the amounts of hydrogen added. Eight standard samples analyzed by two other laboratories were in excellent agreement with the amounts of hydrogen added, eight analyses were in good agreement, and six analyses showed poor agreement. Twelve samples were run by the spectrographic technique. The results showed that there is a degree of agreement between the standard samples and the spectrographic results.

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
PROFILE MILLING TITANIUM AND ITS ALLOYS, by Carl T. Olofson. 10 July 59, 4p. 2 refs. DMIC memo. 25; AD-220 195.
Order from OTS $0.50 PB 161 175

Profile milling is a method of milling in which the path of a single-spindle cutter is guided and controlled by a stylus tracing a master form or a template made to the contour, shape, or pattern to be reproduced on the workpiece. When profile milling titanium and its alloys, vibrations must be held to an absolute minimum. Vibrations, when present, are induced in the cutter stylus and hence are reproduced at the cutter spindle. These add to any vibrations already present at the cutter. The result is poor tool life, even fracture of harder cutter materials such as carbides.

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
RECENT ADVANCES IN TITANIUM TECHNOLOGY, by E. W. Cawthorne and W. Stuart Lyman. 24 Oct 58, 34p. 2 refs. DMIC memo. 3.
Order from OTS $0.50 PB 161 154

Growth of commercial applications of titanium has been steady and careful. This usage can be expected to grow steadily and without fluctuation. Quality of mill products has continued to improve over recent months. Production brazing of titanium is still to be developed, but intensive research is underway. Titanium prices have continued to decline, although dramatic reductions have not occurred and are not to be expected. Titanium continues to have great promise in military aircraft and missile applications as a result of its weight-strength superiority over alternate materials and its superior corrosion resistance. Four major developments now underway will reinforce and augment these advantages offered by titanium. (1) Development of uniformly heat treatable high-strength alloy sheet (2) Development of sandwich construction techniques (3) Development of processing procedures and equipment to broaden the spectrum of forms and shapes in which titanium alloys are available (thin sheet, extrusions, castings) (4) Development of weldable alloys which will maintain useful strength up to 1000-1100 F and of alloys with room temperature strength of 200,000 psi, or greater.

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
ROUTING OF TITANIUM SHEET, by C. T. Olofson. 12 June 59, 6p. 3 refs. DMIC memo. 22.
Order from OTS $0.50 PB 161 172

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
SOME NOTES ON SAFE HANDLING PRACTICES FOR BERYLLIUM, by Webster Hodge. 22 Sep 58, 14p. 5 refs. DMIC memo. 2.
Order from OTS $0.50 PB 161 153

The rapid development of missiles systems has resulted in the introduction of beryllium metal into many machine shops, fabricating plants, and laboratories that have had no prior experience with this metal. It is generally known that beryllium and its compounds are highly toxic. The recommendations of the U. S. Atomic Energy Commission for control of beryllium hazards are also quite well known. However, many contractors appear to be somewhat puzzled about the practical steps necessary to stay within the limits of air contamination recommended by the AEC. The information that follows is based on a limited number of literature references, and a still more limited series of observations by DMIC personnel of shops in operation. No recommendations for safe handling of beryllium in setting up a new operation are intended or can be given in this report. However it is hoped that these references and brief descriptions may assist safety engineers, operators, and plant design groups in the task of setting up a reasonable program of safe handling practices to be adhered to in any shop that expects to handle beryllium for the first time.

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
THERMAL PROPERTIES OF TITANIUM AND TITANIUM ALLOYS, by J. W. Holladay. 25 Aug 58, 24p. 50 refs. DMIC memo. 1.
Order from OTS $0.50 PB 161 152

This memorandum contains available data on the thermal properties of titanium and titanium alloys. The properties covered are thermal conductivity, thermal expansion, heat capacity, thermal diffusivity, and emissivity. Methods are given for estimating values for these properties when experimental data are not available.

Minerals Research Lab., U. of California, Berkeley.
ACTIVATION ENERGIES FOR CREEP OF AN ALPHA SOLID SOLUTION OF MAGNESIUM IN ALUMINUM, by N. R. Borch, L. A. Shepard, and J. E. Dorn. Technical rept. no. 6 on Contract Nonr-222(49). 15 Feb 58, 35p. 29 refs. Series no. 103, issue no. 6; AD-157 760.
Order from LC mi$3.00, ph$6.30 PB 138 470

The activation energies for creep of an Al-3.2% Mg alloy were studied over a temperature range from 78°K to the melting point. With the exception of a temperature region from 200° to 380°K where locking effects and periodic yielding were observed, the activation energies for the alloy are the same as those previously reported for pure Al. Within this temperature region, however, an activation energy peak greater than 80,000 cal. /mole was obtained at 325°K, and creep became unmeasurably slow.

Pitman-Dunn Labs. Group, Frankford Arsenal, Philadelphia, Pa.
EFFECTS OF SHORT PERIODS OF INTERMITTENT VERSUS CONTINUOUS HEATING ON THE ROOM TEMPERATURE TENSILE PROPERTIES OF 2024-T4 ALUMINUM ALLOY SHEETS, by H. R. Pritchard. Technical rept. Sep 59, 13p. 1 ref. Memo. rept. M60-4-1.
Order from LC mi$2.40, ph$3.30 PB 144 237

Tensile properties and hardness were determined at room temperature on sheet specimens of 2024-T4 aluminum alloy which had been exposed to continuous and intermittent heating at 400° F for total periods of 2 to 16 hours. The effects of intermittent heating were cumulative and resulted in the same properties as produced by continuous heating. In both instances, the tensile strength decreased to 80 percent of the room temperature value after 16 hours at 400° F, while the yield strength decreased to 95 percent in the longitudinal direction and 90 percent in the transverse direction. After shorter periods at elevated temperature, the yield strength increased because of the occurrence of artificial aging.

IMPLICATIONS OF RHENIUM RESEARCH IN THE DESIGN OF REFRACTORY ALLOYS, by R. L. Jaffee. 2 Feb 59, 4p. DMIC memo. 7.
Order from OTS $0.50 PB 161 158

There appear to be three effects of rhenium in molybdenum which are responsible for its unique behavior. There are: oxygen redisposition, twinning, and unlocking of dislocations. By combination of elements we might provide complex alloys with the same behavior, which now seems to be unique for rhenium as a binary alloying element. Even if complexing of more abundant alloying elements fails to produce the effects of rhenium in improving the ductility of molybdenum and tungsten, the scientific value of the studies on rhenium will be considerable.

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
PHYSICAL AND MECHANICAL PROPERTIES OF MOLYBDENUM AND THE Mo-0.5Ti ALLOY, by Richard W. Douglass. 10 Apr 59, 23p. 18 refs. DMIC memo. 14.
Order from OTS $0.50 PB 161 164

Some physical properties of molybdenum and the Mo-0.5Ti alloys of interest in the elevated temperature applications of these materials are briefly summarized. Mechanical properties, including tensile, impact and fatigue data and creep and stress-rupture properties over a wide range of temperatures are also presented.

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
THE PROPERTIES OF MAGNESIUM-THORIUM ALLOYS, by R. J. Jackson. 29 May 59, 29p. 13 refs. DMIC memo. 20.
Order from OTS $0.50 PB 161 170

It is the purpose of this memorandum to present available engineering data for magnesium-thorium alloys of interest for structural applications of high-speed manned aircraft, which are commercially produced or have reached an advanced developmental stage. In addition, limited attention is given to fabrication of the alloys and design requirements that favor their selection.

THE STATUS OF CHROMIUM-BASE ALLOY DEVELOPMENT, by Daniel J. Maykuth. 30 Jan 59, 8p. 3 refs. DMIC memo. 6; AD-210 737.
Order from OTS $0.50 PB 161 157

Massachusetts Inst. of Tech., Cambridge.
CHROMIUM BASE ALLOYS, by H. L. Levingston and N. J. Grant. Technical rept. on Contract NOas-58-253-d. 1 Oct 58, 24p. 17 refs.
Order from LC mi$2.70, ph$4.80 PB 144 135

The brittle to ductile transition temperature of commercial electrolytic chromium was investigated. Elements with a high affinity for oxygen, nitrogen and carbon were added to the chromium. The reaction products which formed and their effect on several properties of chromium were correlated with ductility criteria. The investigation showed that the transition temperature of chromium, as determined by three point bend tests, can be lowered by deoxidation and denitrification techniques as well as by grain size refinement and by testing at reduced strain rates.

Army Chemical [Warfare] Labs., Army Chemical Center, Md.
CORROSION RESISTANCE OF METALS TOWARD ISOPROPYL METHYLPHOSPHONOFLUORIDATE (GB), by A. Stephens Hutchcraft, Jr., Virgil D. Mochel, and Lawrence C. Buckles. Special rept. 27 May 55, declassified 10 Dec 56. 12p. CRLR-510.
Order from LC mi$2.40, ph$3.30 PB 144 127

A summary of studies on the corrosion of various metals by GB (isopropyl methylphosphonofluoridate) a chemical warfare agent.

Battelle Memorial Inst., Columbus, Ohio.
MATERIALS-PROPERTY-DESIGN CRITERIA FOR METALS. PART 8. THE CREEP BEHAVIOR OF SELECTED MATERIALS IN THE RANGE UP TO 1 PER CENT NET CREEP STRAIN AND 1000 HOURS, by R. J. Favor, W. P. Achbach, and H. J. Grover. Rept. for 15 Aug 58-31 Jan 59 on Materials Application, Contract AF 33(616)3965. Sep 59, 30p. 21 refs. WADC Technical rept. 55-150, Pt. 8.
Order from OTS $0.75 PB 161 302

The objectives of this study were to compile and to evaluate creep strain versus time data on airframe structural materials. The range of interest, as recommended by the Elevated Temperature Task Group of the ANC-5 Panel, includes creep strain up to 1 per cent and time up to 1000 hours. Only two reference sources dealt with creep of airframe structural materials within the conditions of strain and time imposed. Although both of these sources have considerably extended the knowledge of creep behavior in the early stages of creep, it appears that neither has encompassed adequately the regions of interest specified. Reasons for this conclusion are discussed in this report. It should be emphasized that for creep strain above about 1 per cent, both sources of data appear adequate. (See also PB 131 515)

Case Inst. of Tech., Cleveland, Ohio.
RESEARCH ON STRAIN AGING EFFECTS IN TITANIUM, by Harold S. Gurev and William M. Baldwin, Jr. Rept. for May 58-May 59 on Metallic Materials, Contract AF 33(616)5691; Continuation of Contract AF 33(616)3536. Sep 59, 70p. 54 refs. WADC Technical rept. 59-223.
Order from OTS $1.75 PB 161 304

The effects of varying interstitial element content

(oxygen, carbon and nitrogen) on the tensile properties of an alpha-beta titanium alloy, Ti-140A, were determined at test temperatures ranging from room temperature to above 1000°F and at strain rates from 0.05 to 19,000 in/in/min. The stress rupture properties of such alloys and similar interstitial bearing modifications of an alpha alloy, A-110AT, were also determined between 400°F and 1000°F. The tensile properties of the alpha-beta modifications were strongly dependent on the nitrogen content alone, while the appearance of a strain rate dependent high temperature embrittlement in an alloy modification heat was governed by the identity of the principal interstitial present. (See also PB 131 381)

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
THE INFLUENCE OF SHEET THICKNESS ON TENSILE PROPERTIES OF METAL SHEET, by Alfred Rudnick and Robert L. Carlson. 23 Jan 59, 19p. 18 refs. DMIC memo. 5.
Order from OTS $0.50 PB 161 156

A review of the literature on the effect of specimen geometry indicates that the percentage total elongation increases as some power of the product of specimen thickness and width. Thus, it is possible to combine the effects of thickness and width into a single parameter -- cross-sectional area. No significant influence of thickness on strength apparently exists. Consideration of the correlation between laboratory measurements and actual useful ductility leads to the conclusion that uniform elongation may be a more significant index of ductility than is the more commonly used total elongation.

Forest Products Lab., Madison, Wis.
DEVELOPMENT OF A CASE LINER FOR LONG-TERM OUTDOOR STORAGE (FINAL REPORT), by Louetta Dieruf and Donald J. Fahey. Aug 59, 29p. 2 refs. Rept. no. 55-2 (Final); DA Proj. no. 591-07-001.
Order from LC mi$2.70, ph$4.80 PB 144 386

This report summarizes four annual examinations of case liners and their contents, which were in wood shipping containers exposed outdoors at four locations representing a wide range of climatic conditions. Liners, contents, and boxes were examined for rupture corrosion, warping, and general deterioration. Based on these annual appraisals, liner C (1-mil aluminum foil laminated between a 3-mil polyethylene film and 44/40 cotton scrim) can be used satisfactorily in protecting metal items against corrosion for at least 4 years of outdoor exposure in a wide range of climates. Linear A (2-mil polyethylene film sandwiched between two sheets of 60-pound creped kraft paper and coated on one surface with a 2-mil polyethylene film) and liner B (3-mil polyethylene film on a 60-pound kraft paper) will be limited to hot and arid climates, such as Yuma, Ariz., and to areas that have moderate precipitation with below-freezing temperatures most of the year, such as Fort Churchill, Canada. These liners cannot be used for even 1 year in humid climates like the Panama Canal Zone and Madison, Wis. The Douglas-fir containers offered better protection to the liner and its contents than boxes made from oak or southern pine. Treatment of the southern yellow pine box with a water-repellent preservative was advantageous when the box was exposed in areas with a high atmospheric moisture content.

Franklin Inst. Labs. for Research and Development, Philadelphia, Pa.
CELLULAR STRUCTURE IN ZINC CRYSTALS GROWN FROM THE MELT, by Victor V. Damiano and Marvin Herman. Rept. on Contract AF 18(600)1581. Aug 59, 23p. 10 refs. Interim rept. I-A1878-4; AFOSR-TN-59-765.
Order from LC mi$2.70, ph$4.80 PB 144 015

Substructure in zinc single crystals resulting from constitutional supercooling was examined. The effect of orientation on the cell structure arrangement is described in terms of preferred growth directions.

Illinois U., Urbana.
THE EFFECTS OF INELASTIC ACTION ON THE RESISTANCE TO VARIOUS TYPES OF LOADS OF DUCTILE MEMBERS FROM VARIOUS CLASSES OF METALS. PART XI. PHOTOELASTIC ANALYSIS OF I-BEAMS WITH ELLIPTIC-TYPE WEB CUTOUTS, by Will J. Worley. Rept. on Materials Analysis and Evaluation Techniques, Contract AF 33(616)5658. Sep 59, 27p. 6 refs. WADC Technical rept. 56-330, Pt. XI.
Order from OTS $0.75 PB 161 303

The data presented are intended to supplement the data presented in WADC TR 56-330 Pt. VII (PB 131 556). Report VII presented information on the fully plastic strength while Pt. XI discusses the elastic stress distribution in the web section of I-beams with various shapes of elliptic-type web cutouts. The prediction of the location of the fully plastic hinges using the shear difference method is discussed for one shape of web cutout. The method shows reasonable agreement when compared with available data on the actual aluminum alloy I-beam.

Industrial Research and Development Labs. (Gt. Brit.)
MECHANISM OF CORROSION OF COPPER AND COPPER ALLOYS BY AMMONIA SOLUTIONS WITH SPECIAL REFERENCE TO THE INHIBITORY ACTION OF SUGARS AND OTHER POLYHYDROXY COMPOUNDS, by J. A. Radley and J. S. Stanley. Final technical rept. for 1 Oct 58-1 Oct 59 on Contract DA 91-591-EUC-930. 31 Oct 59, 66p. 10 refs.
Order from LC mi$3.90, ph$10.80 PB 144 137

The investigation is a continuation of the investigation described in our previous report. It concerns the study of the mechanism of the reaction between metallic copper and ammonia solutions containing dissolved oxygen. An apparatus for measuring the kinetics of this reaction has been constructed, based on the use of a rotating disc, this apparatus shows considerable advantage over the rotating cylinders.

Manufacturing Labs., Inc., Cambridge, Mass.
DEVELOPING SUBSTITUTE BINDERS FOR COBALT IN WC-Co ALLOYS AND STUDYING THE EFFECT OF GRAIN SIZE OF WC ON THE STRENGTH OF WC-Co ALLOYS, by Harry Udin. Final rept. on Contract DA 19-020-505-ORD-4482. 30 June 58, 69p. 9 refs. Rept. no. WAL 330/16.
Order from LC mi$3.90, ph$10.80 PB 144 050

The optimum iron content of WC-Fe hot pressings, with or without additions of Si or B, is in the range of 4 to 5 wt. pct. Fe. Iron-silicon alloy binders containing 2.4-5.0 wt. pct. Si yield good quality pressings. Iron-boron alloy binders containing 0.02 to 1.0 wt. pct. B yield good quality pressings.

Modena U. (Italy).
BASIC RESEARCHES IN METAL CORROSION, by Giuseppe Bianchi. Technical final rept. on Contract AF 61(052)85. 30 Apr 59, 11p. AFOSR-TR-59-76.
Order from LC mi$2.40, ph$3.30 PB 144 122

The electrochemical processes of O_2 and H_2O_2 on platinum, graphite and gold electrodes have been studied, to get a knowledge of the mechanism of oxygen corrosion. The process of oxygen and hydrogen periozide reduction in alkaline solutions takes place, independently of the nature of the cathode, at tensions very near the reversible one corresponding to the process: $O_2 + H^+ + 2e = HO_2^-$.

Massachusetts Inst. of Tech., Cambridge.
THE GROWTH OF $Ni_3(Al, Ti)$ PRECIPITATES IN A NICKEL-CHROMIUM-TITANIUM-ALUMINUM ALLOY, by Neil Rogen and Nicholas J. Grant. Technical rept. on Contract NOas 58-253-d. [1959] 12p. 9 refs.
Order from LC mi$2.40, ph$3.30 PB 144 059

X-ray line broadening was used as a measure of precipitate particle growth during aging of a vacuum melted alloy. The variation of matrix lattice parameter, precipitate composition and hardness was related to the particle size.

Michigan U. [Research Inst.] Ann Arbor.
DEVELOPMENT OF APPARATUS AND METHODS FOR MEASUREMENT OF CREEP AT TEMPERATURES TO 3500°F, by M. J. Sinnott. Progress rept. no. 3. 25 Oct 48, 8p. NEPA 803-MIC-3; AD-204 943.
Order from LC mi$1.80, ph$1.80 PB 138 457

Michigan U. [Research Inst.] Ann Arbor.
DEVELOPMENT OF APPARATUS AND METHODS FOR MEASUREMENT OF CREEP AT TEMPERATURES TO 3500°F, by M. J. Sinnott. Progress rept. no. 5. 23 Dec 48, 13p. NEPA 864-MIC-5; AD-204 969.
Order from LC mi$2.40, ph$3.30 PB 138 460

Three of the four types of furnaces that were proposed for this project have been constructed and tested for various time periods and at various temperature levels. Work on the Geiger counter method of temperature measurement shows that this device is probably more accurate than the usual optical pyrometer with the sensitivity actually improving as the temperature is raised. An improved extensometer system has been evolved which practically eliminates creep in the specimen threads and has a sensitivity on the order of two-millionths of an inch per inch and should be applicable to 1800°C or 3250°F. (See also PB 138 457)

Michigan U. [Research Inst.] Ann Arbor.
DEVELOPMENT OF APPARATUS AND METHODS FOR MEASUREMENT OF CREEP AT TEMPERATURES TO 3500°F, by M. J. Sinnott. Progress rept. no. 6. 21 Jan 49, 10p. NEPA 886-MIC-6; AD-204 968.
Order from LC mi$1.80, ph$1.80 PB 138 461

The creep testing machine and extensometer system reported in the fifth progress report have been built and tested at room temperature. Work on the Geiger tube temperature measuring instrument has been proceeding satisfactorily. A simple molybdenum wound furnace has been developed and given service for over 150 hours at a temperature of 2700°F. (See also PB 138 460)

Northwestern Technological Inst., Evanston, Ill.
AN INVESTIGATION OF PHASE TRANSFORMATIONS AND OTHER STRUCTURAL CHANGES IN METALS BY MEASUREMENT OF ELASTICITY AND INTERNAL FRICTION, by M. E. Fine and A. Kelly. Final rept. for 1 June 55-31 Aug 59 on Contract AF 18(600)1468. 30 Sep 59, 51p. 25 refs. AFOSR-TR-59-141.
Order from LC mi$3.60, ph$9.30 PB 144 008

Apparatus for precise determination of dynamic young's modulus and internal friction at elevated temperatures; Kinetics and mechanism of zone formation in aluminum alloys; Studies of the deformation of single crystals of age hardened aluminum alloys; Structural and modulus changes in α-brass and $AuCu_3$; Acoustic relaxation effect in Mn_3O_4; Internal friction and young's modulus of hexagonal and cubic cobalt; Preparation of single crystals.

Ohio State U. Research Foundation, Columbus.
ELECTRONIC ENERGY BAND STRUCTURE AND EXCITATION STATES IN METALS, by J. Korringa, E. L. Jossem and others. Technical rept. no. 6 on Contracts N6onr-22521 and AT(11-1)-191. May 57, 35p. 23 refs. AD-139 131.
Order from LC mi$3.00, ph$6.30 PB 137 906

Electronic energy band structure and excitation states in metals are discussed under the following topics: (1) Band structure and excitation states in nickel, copper, and zinc, (2) Structures of the zirconium lines, (3) Report on the grating vacuum spectrometer, and (4) Corrections for self-absorption in the X-ray tube target. Theoretical and experimental data are discussed under the first topic. The study of the structures of zirconium lines was made before it was discovered that the structure on the high-frequency side of Zr L γ1 is caused by minute quantities of sulfate evaporated from the hot oxide cathode. However, the material was retained because of the possibility that such a study may add to the understanding of metallic alloying processes. The report on the grating vacuum spectrometer considers the problem of contamination.

Rock Island Arsenal Lab., Ill.
GUIDE FOR PRACTICAL PRESERVATION WITH VCI, by Ralph L. LeMar. 6 July 59, 30p. 3 refs. Rept. no. 59-1820.
Order from LC mi$2.70, ph$4.80 PB 144 387

VCI literature was surveyed for information which would provide packaging engineers with the detailed data that was necessary to utilize more readily, volatile corrosion inhibitors. This information was organized into sections so as to permit ready reference to any appropriate section. These sections are as follows: (A) Official documents relative to VCI. (B) General application fundamentals. (C) Environmental effects. (D) VCI compatibility: (1) Among different VCI materials. (2) With bearings. (3) With nonferrous metals. (4) With surface coatings and plates. (5) With nonmetals.

Watertown Arsenal Labs., Mass.
THE EFFECT OF CERIUM ON THE HEAT TREAT RESPONSE OF PRECIPITATION-HARDENING TITANIUM ALLOYS, by Ralph H. Hiltz, Jr. Apr 58, 25p. 11 refs. Technical rept. WAL TR 401/285; AD-157 339.
Order from LC mi$2.70, ph$4.80 PB 138 417

A study was made of the effect found in combining the weak precipitation-hardening alloys of titanium, Ti-Ag, Ti-Cu, and Ti-Si, with the more intense precipitation-hardening but hot-short Ti-Ce alloys. The three ternary alloys, Ti-Ag-Ce, Ti-Cu-Ce, and Ti-Si-Ce, showed appreciable precipitation-hardening response. The Ti-Si-Ce ternary showed a double peaking of hardness with aging. A portion of the response in this alloy was due to precipitation of elemental cerium, however, which indicates a hot-short material. The addition of cerium to the Ti-Ag alloy moved peak hardness to shorter times, and maximum hardness to a lower temperature. There is no alleviation of the rapid aging and overaging cycle characteristic of the binary silver alloy, and control of the hardening reaction is difficult. The alloy of titanium with copper and cerium showed pronounced precipitation hardening and a slow overaging reaction. This alloy shows promise of being suitable for commercial application.

NUCLEAR PHYSICS AND NUCLEAR CHEMISTRY

National Research Labs., Ottawa (Canada).
THE PREDICTION OF PIPELINE PRESSURE LOSSES WITH URANIUM TRIOXIDE SUSPENSIONS, by E. H. Dudgeon and W. C. Michie. Nov 57, 56p. 13 refs. Rept. MT-36.
Order from LC mi$3.60, ph$9.30 PB 134 228

Measurements of pipeline pressure losses for uranium trioxide aqueous suspensions have been made for two pipe diameters and a range of velocities, oxide concentrations, and temperatures. These results have been correlated using shear rate-shear stress information obtained from a specially designed rotational viscometer. The effect of pumping at high shear rates on the chemical and physical stability of the oxide has been investigated. The limiting velocity to avoid settling in a 1.85-inch diameter pipe has been measured.

New Mexico U., Albuquerque.
SIZE-SPECTRUM OF EXTENSIVE AIR SHOWERS OF THE COSMIC RADIATION, by John R. Green and James R. Barcus. Rept. on Contract AF 49(638)34. 7 Oct 59, 16p. 8 refs. AFOSR-TN-59-1068.
Order from LC mi$2.40, ph$3.30 PB 144 342

The operation and calibration of a single scintillator of area 7.3 m^2 is discussed.

Elementary Particles

Laval U. (Canada).
RESEARCH ON THE AUGER ELECTRONS ASSOCIATED WITH BETA-DISINTEGRATION, by Claude Geoffrion. Final rept. on Contract AF 18(600)1574. 31 Aug 59, 54p. 26 refs. AFOSR-TR-59-145.
Order from LC mi$3.60, ph$9.30 PB 144 007

This is a study of the energy of the electrons emitted by atoms when they reorganize themselves after vacancies have been made in their shells due to electron-conversions or electron-captures. This effect gives electron lines, the energy of which depends on the reorganizing process and on the atomic number of the emitter. These lines range from zero to a maximum of 80 kev, but are mainly in the low energy region. The experimental determination of Auger electron energy has been made with a 180° β-ray spectrometer. Theoretical work has been done and each part is reported separately in the following.

Maryland U., College Park.
HYPERFRAGMENT FORMATION FROM THE K^--DEUTERON INTERACTION IN FLIGHT, by T. B. Day, G. A. Snow, and J. Sucher. Rept. on Contracts AT(40-1)2504 and AF 49(638)24. [1959] 9p. 6 refs. Physics Dept. technical rept. no. 154; AFOSR-TN-59-1072.
Order from LC mi$1.80, ph$1.80 PB 144 343

The results show that the hope of observing hyperfragment formation in deuterium bubble chambers is not bright.

Michigan U., Ann Arbor.
PHOTOGRAPHY OF COSMIC RAY TRACKS WITH A CASCADE LUMINESCENT CHAMBER, by Lawrence W. Jones and Martin L. Perl. Luminescent Chamber Technical rept. no. 1 on Contract Nonr-1224(23). 24 Dec 58, 24p. 8 refs.
Order from LC mi$2.70, ph$4.80 PB 143 933

The tracks of minimum ionizing particles have been

photographed in a luminescent chamber for what is believed to be the first time. A cascade luminescent chamber made up of three image tubes coupled with refractive optics has been used to photograph tracks of cosmic ray μ mesons in a sodium iodide crystal. The apparatus is described, together with details of measurements on image tube characteristics and the nature of background. The same type of apparatus is applicable to other problems where very weak light signals (several thousand photons total) must be photographed.

Princeton U., N. J.
DETERMINATION OF THE SIGN OF THE ASYMMETRY PARAMETER IN Δ^0 DECAY FROM THE SCATTERING OF THE DECAY PROTON, by T. Bowen, C. R. Sun, and A. E. Werbrouck. Technical rept. no. 21 on Contract Nonr-1858(06). 3 Dec 58, 19p. 13 refs.
Order from LC mi$2.40, ph$3.30 PB 143 864

A statistical method is presented whereby the information provided by a small number of nuclear scatters of Δ^0 decay protons can be used to determine the sign of the asymmetry parameter due to parity non-conservation in Δ^0 decay. The analysis is applied to twenty-one proton scatters of Δ^0 hyperons decaying in the Princeton multiplate cloud chamber. Because the asymmetry to be expected in each observed nuclear scatter is small, our data do not yield a statistically significant result. However, if each experimenter would follow a similar procedure with his data, it should be possible to combine results to determine the sign with a high degree of certainty.

Purdue U., Lafayette, Ind.
POLARIZATION OF THE PROTON FROM PHOTODISINTEGRATION OF THE DEUTERON, by Masaaki Kawaguchi. Rept. on Contract AF 18(600)1579. [1958] 23p. 13p. AFOSR-TN-58-584; AD-162 104.
Order from LC mi$2.70, ph$4.80 PB 137 434

The transverse polarization of the outgoing proton from the photodisintegration of the deuteron is calculated in the angular momentum representation; without assuming any detailed interaction among particles. General formulas for the polarization as well as for the angular distribution are given in terms of the Racah coefficients. If we write the angular distribution in a form $a + b \sin^2 0\ (1 + 2c \cos 0)$, the polarization is given in terms of a, b, c, and the nucleon-nucleon scattering phase shifts of the S, P, and D states under reasonable assumptions. By using experimental values of a, b, and c, and scattering phase shifts as much as available and also some theoretical estimates of the phase shifts, 20 to 30% polarization is expected for up to 40 Mev gamma rays and 10 to 20% for 140 Mev gamma rays over a wide range of angles in the center of mass system.

Instruments and Installations

Eagle-Picher Research Labs., Miami, Okla.
RESEARCH ON GROWING OF CADMIUM SULFIDE CRYSTALS FOR DOSIMETER PURPOSES, by J. E. Powderly and K. E. Bean. Quarterly rept. no. 2, 17 July-17 Oct 57, on Contract DA 36-039-sc-73270. [1957] 50p. 8 refs. AD-154 774.
Order from LC mi$3.30, ph$7.80 PB 137 661

Single crystals of Cds weighing up to 100 g were produced. The test specimens obtained from the larger single crystals and from crystals having the least number of visible physical defects, were the most sensitive to γ rays and gave more reproducible results. A small concentration of In (0.001 to 0.004% of weight) increased the sensitivity of the crystals to γ rays. IR quenching prior to irradiation decreased the sensitivity of the crystals and caused longer rise times. A crystal prepared from very high purity CdS with no addition agents, had remarkable sensitivity to IR. Seeding at 1100°C, and when cooling, lowering the temperature slowly to 100°C and retaining that temperature for 24 hr, were favorable conditions for crystal growth.

Montana State U., [Bozeman].
ELECTRON LINEAR ACCELERATOR LABORATORY, by Mark J. Jakobson. Annual summary rept. for 1 Jan 58-1 Jan 59 on Contract Nonr-1662(00), [1959] 9p.
Order from LC mi$1.80, ph$1.80 PB 144 443

Summary of results of 1 year of research. Montana State University has a traveling wave electron linear accelerator with a 3.2 ft. two section cavity. The beam emerging from the analyzer magnet has an energy spread of 50 kev at 5 mev and an average current of 1.0 microamperes.

Naval Radiological Defense Lab., San Francisco, Calif.
A FIELD BETA-GAMMA DOSE-RATE METER, by Frank A. Devlin. May 57, 14p. Research and Development Technical rept. USNRDL-TR-178; AD-145 732.
Order from LC mi$2.40, ph$3.30 PB 144 396

A thin polyethylene chamber ionization detector has shown remarkable beta flux sensitivity. It was found that by adding a removable beta flux discriminator to the chamber it was practicable to differentiate between the beta component and the gamma component of the flux coming from a contaminated field. Laboratory experiments and field data substantiate the practicability of the system described. The gamma energy dependence of the detector was found to be a maximum of 17 percent high relative of Co^{60}.

Nuclear Reactions

Aerosciences Lab., General Electric Co., Philadelphia, Pa.
ANALYTIC WAVE FUNCTION. III. THE SPIN-ORBIT, SPIN-OTHER ORBIT AND SPIN-SPIN INTERACTIONS, by R. G. Breene, Jr. Rept. on Contract AF 04(647)269. 20 Oct 59, 20p. 7 refs. R59SD414.
Order from LC mi$2.40, ph$3.30 PB 144 190

In two earlier papers we have described our methods and programs for calculations of certain classes of atomic wave functions. In this paper we consider the application of the wave functions so obtained to the calculation of the spin-orbit, spin-other orbit, and spin-spin interactions. These calculations remove the horizontal degeneracy from the Slater diagram. We assume the Coulomb potential for the spin-orbit calculation and show the relative contributions of the nucleus and other type electrons to the result. In this and the succeeding interactions oxygen is used as an example. Although the order of the splitting is as observed, the observed asymmetry is not obtained, for the sum of all three effects is a symmetric splitting of the three levels. An explanation of this lack of asymmetry is offered which appeals to our neglect of the exchange portion of the potential in the spin-orbit calculation.

Boston U., Mass.
AN EXPERIMENTAL STUDY OF THE REACTION $Al^{27}(d, n)Si^{28}$, by Allen G. Rubin. Doctoral thesis. Rept. on [Contract AF 18(600)997], 1957, 137p. 98 refs. AFOSR-TN-57-636; AD-136 623.
Order from LC mi$6.90, ph$21.30 PB 137 528

The neutron spectrum and angular distributions of neutron groups from the reaction $Al^{27}(d, n)Si^{28}$ were obtained by the method of proton recoils in nuclear emulsions. A thin Al target was bombarded with 2.16 -Mev deuterons from the M. I. T. Rockefeller Van de Graaff generator, and neutrons were detected by means of 400-μ Ilford C-2 emulsions placed at 9 angles to the incident beam. The plates were scanned with a Leitz binocular microscope equipped with a moving stage, at 1000 magnification. Neutron spectra were obtained at 8 angles from 0° to 120°. A total of 12,500 tracks was scanned. Excited states of Si^{28} were obtained from these measurements from 1.78 ± 0.10 to 10.25 ± 0.06 Mev. The cross-section for formation of the 9.37 state of 0° is 10.1 millibarns per steradian, within a factor of 2. A second bombardment for the same reaction was made with a bombarding energy of 6.00 Mev to obtain valid stripping angular distributions; emulsions were placed at 9 angles to the incident beam, at 15° intervals, from 0° to 135°. The angular distributions which were obtained were compared with the Butler stripping theory to obtain the parities and limits on the spins of the states in Si^{28} which were reached in the reaction. A thin target of isotopic boron was bombarded with 7.03 Mev protons. The neutrons from the $B^{11}(p, n)C^{11}$ reaction indicated an excited state of C^{11} at 2.01 ± 0.06 Mev. The reaction $P^{31}(p, n)S^{31}$ was studied at E_p ± 17.2 Mev. The energy spectrum of the neutrons was determined by means of proton-recoil measurements in nuclear emulsions. The mass excess (M - A) of S^{31} was calculated to be -10.04 ± 0.20 Mev. Excited states of S^{31} were located at 1.15 ± 0.15, 2.28 ± 0.20, 3.35 ± 0.20, 4.51 ± 0.15, 5.94 ± 0.30, and 6.41 ± 0.20 Mev.

Pennsylvania U., Philadelphia.
STUDIES IN PHOTONUCLEAR REACTIONS. Rept. on Contract AF 49(638)454. 15 Oct 59, 15p. 27 refs.

Reviews findings and publications covering their research.

Radioactivity

Army Chemical Warfare Labs., Army Chemical Center, Md.
SURVIVAL IN FALLOUT AREAS, by Harold E. Shaw. Feb 59, 39p. 6 refs. CWLR-2272.
Order from LC mi$3.00, ph$6.30 PB 143 739

This report attempts to summarize, amplify, and clarify the current information available, and to present it in such form that it can be readily applied by doctrinal agencies.

General Electric Research Lab., Schenectady, N. Y.
THRESHOLD MEASUREMENTS AND THE PRODUCTION OF RADIATION DAMAGE IN THE NOBLE METALS, by J. W. Corbett and R. M. Walker. Scientific rept. no. 2 on Contract AF 19(604)5557. Oct 59, 7p. 9 refs. AFCRC-TN-59-764.
Order from LC mi$1.80, ph$1.80 PB 144 199

It is shown that the threshold energy T_d for radiation damage production in Cu, Ag, and Au is 22, 30, and ≥ 40 ev respectively. The fact that the T_d values are not the same for this homologous series of metals requires a reconsideration of deuteron radiation damage theory and experiment comparison. This shows that even beyond the different T_d values, the noble metals are not identical as far as the damage process.

Naval Ordnance Lab., White Oak, Md.
PROCEDURES FOR COUNTING AND HANDLING LOW ACTIVITY FOILS, by Donald G. Simons. 26 Aug 57, 14p. 6 refs. NAVORD rept. 5698.
Order from LC mi$2.40, ph$3.30 PB 144 040

When determining low activities in radioactive foils, the optimum time for counting activity is 1.8 half-lives. The background count should be made over a period at least four times that long. Special precautions are discussed for avoiding foil contamination and systematic errors in accumulating data from several experiments.

Stevens Inst. of Tech., Hoboken, N. J.
LITERATURE SURVEY ON THE EFFECTS OF NUCLEAR RADIATION TO ELECTRON TUBE MATERIALS, by E. R. Johnson. Quarterly rept. no. 7, 1 Dec 58-28 Feb 59, on Contract DA 36-039-sc-73146. [1959] 21p. 18 refs.
Order from LC mi$2.70, ph$4.80 PB 143 897

It is recommended that studies on the effect of nuclear radiation in aging, in reference to shock and vibration be undertaken. The effect of nuclear radiation on cold cathodes is very much greater than on hot cathodes. The mechanism of reduction of cathode material by hydrogen is discussed.

PERSONNEL SUPPLIES AND PERSONAL EQUIPMENT

[Aerospace] Medical Lab., Wright Air Development Center, Wright-Patterson AFB, Ohio.
DEVELOPMENT OF AN EMERGENCY PRESSURE SUIT (COVERALLS, HIGH-ALTITUDE, TYPE CSU-4/P) by Charles C. Lutz. Rept. on Pressure Suits and Accessories. Prototype garments developed at the David Clark Co. under Contracts AF 33(616)3329 and AF 33(600)36873. July 59, 26p. 7 refs. WADC Technical note 59-148; AD-226 056.
Order from OTS $0.75 PB 161 033

The design of coveralls, high-altitude, Type CSU-4/P attempts to correct operational deficiencies in presently available garments as to comfort, mobility, heat, ease of donning, fitting, and integration with other flight clothes. The requirements of the pressure suit were established, and seven prototype models were designed, each improving on the previous model. The outer layer of the most recent suit is orange in color as an aid to rescue operations. This suit will provide physiological protection for a large segment of the flying population for the times and altitudes required of such a garment (70,000 ft. for 5 minutes). Improved comfort and mobility are achieved in the unpressurized condition, and tolerable comfort and adequate mobility are maintained while pressurized. Present testing of the capabilities of the new garment and continued plans of the program are described.

George Washington U., Washington, D. C.
THE LOGISTICS OF CLOSE SUPPORT, by J. E. Hamilton. Rept. on Logistics Research Project, Contract Nonr-761(05). Jan 59, 110p. 1 ref. Serial T-86/59.
Order from LC mi$5.70, ph$16.80 PB 144 261

The Logistics of Close Support considers all of naval logistics as coming to an end within the confines of a ship. It relates the demands which arise within the ship to the ways and means of satisfying those demands. Ship logistics support starts with a man in a job on a ship and with the tools which he has and the things which he uses, and works its way through a tortuous path to the laying-in hospital, and the forest, the mine, the sea and the air. It embraces EVERYTHING except men's thoughts, the ideas which spring from these and the actions of the thinker or of others under his control which carry these ideas into purpose.

ENVIRONMENTAL PROTECTION RESEARCH BY MEANS OF RADIO TELEMETRY, PART 1. TELEMETRIC INSTRUMENTATION AND EXAMPLES OF FIELD USE IN STUDYING THE MAN-CLOTHING-ENVIRONMENT SYSTEM, by Francis W. Botsch, James J. Powers, and Alfred A. Koch. Oct 59, 31p. 27 refs. Technical rept. EP-119.
Order from LC mi$3.00, ph$6.30 PB 144 203

This report describes a frequency-type radio telemeter and associated automatic data reduction equipment designed to sense, transmit, and reduce biophysical data obtained from soldiers performing military-type activities during field exercises. The system consists of a transducer-transmitter section which is carried by the test subject, a receiving and recording unit which is located at the test site, and a laboratory data-reduction system. The telemeter permits remote recording of temperature, pressure, relative humidity, air movement, heart rate, and breathing rate with provision for converting transmitted data into analog or digitized readout or into a form adaptable to IBM computation. Data are presented to show the effect of variations in environmental factors such as wind and radiation on the man and his clothing. Graphs are used to illustrate the manner in which thermal variations at the outer surface of the clothing are modified and delayed by the clothing system and the response of the man-clothing-environment system to physiological conditions accompanying exercise.

Wayne-George Corp., Boston, Mass.
HIGH-SPEED, ELECTROMECHANICAL GOGGLE. Rept. on Visual Aids and Protection, Contract AF 33(616)5287. May 59, 29p. WADC Technical rept. 59-114; AD-215 828.
Order from OTS $0.75 PB 151 924

High-speed, electromechanical goggles, which were developed and constructed to protect the eyes of the wearer from burns or flashblindness caused by exposure to high-intensity flashes, are described. A signal is generated by a photodetector at the onset of the flash. This signal is amplified by an electronic amplifier and actuates the shutters of the goggles to shut out all light. The goggles are closed in less than 500 microseconds after the flash.

FLUORESCENCE AND CONDUCTIVITY PHENOMENA, by Hartmut Kallmann. Quarterly progress rept. no. 8 (Final) for Nov [56]-Jan [57] on Contract DA 36-039-sc-64526. Apr 57, 55p. 10 refs. AD-129 921.
Order from LC mi$3.60, ph$9.30 PB 137 530

Self-quenching in different types of molecules: The fluorescence of solutions containing 2 solutes of rather similar fluorescent properties and various chemical properties was measured and compared with the fluorescence of each when present alone in solution. Studies were conducted under high-energy excitation. Anthracene and 2 of its derivatives were chosen to check what happens when substances more closely related structurally as well as in fluorescence properties are combined. The results of anthracene combined with 9-methylanthracene and anthracene combined with 2-methylanthracene revealed a difference in behavior in these 2 combinations. Energy transfer in plastics: A 0.12 M quencher of di-p-tolylmercury reduced the fluorescence of a 0.05 M solution of 2,5-diphenyloxazole by a factor of 2. Decay of fluorescence excited by high energy and light: Fluorescence decay times of organic materials of the order of 10^{-9} to 10^{-7} sec were measured. De-excitation investigations on ZnS and ZnCdS phosphors: Experiments were undertaken to examine the effect of $\lambda \geq 7700$ A, heat, and time on the de-excitation process. Exposure to $\lambda \geq 7700$ A or to heat at 100°C for longer than 60 min contributed practically nothing further to the trap emptying process. Uncooled samples reached temperatures as high as 110°C during IR irradiation while cooled samples were maintained at about 10° to 15°C. Heat acts to empty electrons from traps, while IR acts to free positive holes which recombine either with electrons in the conductivity band or in traps. The difference between the so-called quenching and stimulable phosphors is essentially in the nature of the recombination process. (See also PB 135 930)

SOUND RADIATION IN A CLOSED SPACE FROM BOUNDARY LAYER TURBULENCE, by Ira Dyer. Rept. on Contract Nonr-2321(00). 12 Feb 58, 47p. 20 refs. Rept. no. 602.
Order from LC mi$3.30, ph$7.80 PB 144 115

A theory of noise generation by the action of boundary layer turbulence on an elastic system has been developed, with particular reference to underwater application. The elastic system considered is a rectangular plate closed off by a rectangular liquid-filled volume. A simple yet physically meaningful form is assumed for the boundary layer pressure correlation. The resulting plate vibration and sound radiation is derived, taking into account coupling between the plate motion and the sound field in the liquid. In the theory coupling is manifested by radiation-induced masses and viscous damping which, in effect, may be added to the mass and damping of the plate considered to be vibrating in vacuo. It is shown that the noise in the closed space decreases with decreasing free-stream speed and boundary layer thickness. Also the noise decreases with increasing mass and damping of the plate, and with increasing distance from the plate. The use of plate damping as a means of noise reduction is predicted to be limited on the one hand by radiation damping, and on the other hand by correlation decay in the assumed turbulence pressure field.

ABSORPTION OF ULTRASONIC WAVES IN ROTATIONAL ISOMER LIQUIDS OF THE RING TYPE, by Melvin Eli Pedinoff. Technical rept. no. 14 on Contract Nonr-233(48). Jan 59, 78p. 39 refs.
Order from LC mi$4.50, ph$12.30 PB 144 139

The ultrasonic pulse technique has been extended to lower frequencies by the use of solid dielectric transducers and has been used here for the determination of the anomalous absorption of sound in several organic liquids over a frequency range of approximately 150 to 3,500 kilocycles per second. The principal liquid studied, methylcyclohexane, has a large anomalous sound absorption which can be attributed to the irreversible perturbation of an equilibrium between two of its rotational isomers by the sound wave.

Harris Transducer Corp., Woodbury, Conn.
THE THEORY OF ACOUSTIC REFLECTORS FOR SONAR APPLICATIONS. REPORT 1. RESPONSE OF AN END LOADED CYLINDRICAL RESONATOR, by H. K. Farr. Rept. on Contract Nonr-2720(00). 15 Jan 59, 25p. 1 ref. HTC-73-R1.
Order from LC mi$2.70, ph$4.80 PB 144 398

This report is the first in a program for the study of passive devices for the reflection or scattering of sound energy in deep water. The object of the general program is to develop alternatives to the conventional low density baffle materials (cork, "cell-tite", etc.) which fail at very high hydrostatic pressures. The first device selected for study was a hollow right circular cylinder with a mass attached to each end. A sound wave exerts radial pressure on the walls which induces lengthwise motion of the end masses owing to the so-called Poisson ratio coupling. In the region of resonance such a device offers the possibility of an efficient reflector or scatterer of sound energy.

THE TWO HALL EFFECTS OF IRON-COBALT ALLOYS, by Frank P. Beitel, Jr. and Emerson M. Pugh (Summary of Research). Final rept. on Contract Nonr-760(04). 31 Dec 58, 97p. 18 refs.
Order from LC mi$5.40, ph$15.30 PB 143 980

Hall coefficients and resistivities of the Fe-Co alloys measured at 77°K, 169°K, and room temperature using fields up to 3.3 weber/m^2.

Michigan U. Research Inst., Ann Arbor.
GALVANO-MAGNETIC EFFECTS. PART I, by W. Tantraporn and Ernst Katz. Final rept. on Contract AF 49(638)69. Aug 59, 54p. 15 refs. 2613-8-F; AFOSR-TR-59-122, AD-226 081.
Order from LC mi$3.60, ph$9.30 PB 144 121

An historical preface is given. The phenomenological theory, as developed previously, is summarized, with special emphasis on applications to bismuth and gallium. The experimental method of measurement and results for bismuth are described. It is found that all resistivity brackets can be represented by the formula $\{\} = \Gamma_0 T e^{-\beta}\sqrt{T}$, where Γ_0 is a constant different for each bracket and β depends almost exclusively on the order of the bracket. This dependence is roughly given by $\beta_n = 2n/(n+4)$. Results from the literature for gallium are analyzed in terms of our phenomenological constants. The procedure of testing and its complications are sketched, as is the direction in which an entire new series of bracket relations is in process of being discovered by the present analysis. Comparison of limiting low-intensity reciprocity failure slope from sequence loops is made with previous measurements. A study is made of the number of quanta active in the formation of a just developable latent image as a function of grain size, density, and type of development by means of sequence loops. The method of sequence exposures is briefly described along with experimental results. The results confirm qualitatively the trend of the theoretical work but lead to quantitative difficulties, which are discussed. The conclusions are summarized.

Naval Research Lab., Washington, D. C.
RESONANCE ABSORPTION OF MICROWAVE BY PARAMAGNETIC SUBSTANCES, by Chihiro Kikuchi and Walter W. Wada. Final rept. 22 Sep 52, 70p. 31 refs. NRL rept. 4015.
Order from LC mi$3.90, ph$10.80 PB 143 880

A brief theoretical background for the interpretation of one of the most important phenomenon in paramagnetism—namely, resonance absorption of microwaves by paramagnetic salts. The results of these calculations in the case of hyperfine structure and specific heat for cupric salts are compared with experimental observations and found to be in excellent agreement.

Electronics

Air Force Cambridge Research Center, Bedford, Mass.
A SURVEY OF THE RESEARCH OF IONIZED MEDIA, by E. Atlee Jackson. Aug 59, 33p. 167 refs. AFCRC-TR-59-174.
Order from LC mi$3.00, ph$6.30 PB 144 382

The purpose of this article is to survey that literature which sheds light on either the dynamical or equilibrium properties of ionized media. While an attempt has been made to compile a fairly complete listing of the pertinent research, it is not intended to be exhaustive and some important papers may have been inadvertently overlooked. This survey has been arranged in chronological order, to the extent that this does not conflict with the conceptual development of the subject. The early development of this subject lends itself quite well to such an ordering. More recent developments, by their very nature, are more difficult to place in a logical order and are arranged somewhat arbitrarily as to subject matter. The brief discussions of this research attempt to point out some of the areas of controversy, incompleteness, and errors, but definitive conclusions are obviously impossible in many cases.

Case Inst. of Tech., Cleveland, Ohio.
A USE OF THE ANALOG COMPUTER IN ANTENNA PATTERN STUDIES, by Forest E. Brammer and Wen-Hsiung Ko. Scientific rept. no. 6 on Contract AF 19(604)3887. [1959] 24p. 3 refs. AFCRC-TN-59-579.
Order from LC mi$2.70, ph$4.80 PB 144 010

The analog computer is shown to lend itself to an evaluation of the convolution integral that occurs in the Fourier Transform method applied to antenna pattern studies. In the integral

$$g_a(u) = \int_{-\infty}^{\infty} g(u')\, S(u-u')\,du'$$

The scanning function, S(u), is not generated in the conventional sense but is closely approximated by the series of special functions. The method is one of changing the problem from step-by-step integration to one of solving a simple set of differential equations.

Excellent agreement is found between the results of the computer method and those obtained from analytical methods.

Electrical Engineering Research Lab., U. of Illinois, Urbana.
ON THE SYNTHESIS OF TIME VARYING LINEAR SYSTEMS, by Jose Benjar Cruz, Jr. Doctoral thesis. Technical note no. 9 on Contract AF 49(638)63. 7 Aug 59, 103p. 41 refs. AFOSR-TN-59-866; AD-226 580.
Order from LC mi$5.70, ph$16.80 PB 144 311

It is shown that any multi-input-multi-output linear system may always be represented by a set of single-input-single-output linear subsystems connected properly. Attention is focused on some properties of single-input-single-output linear systems which are generally time varying. These properties are exploited in developing synthesis procedures for time-varying linear systems with specifications in the time domain, frequency domain, and general λ domains. In connection with synthesis in a general λ domain, compatible systems are defined. The techniques for fixed linear systems in the frequency domain apply to compatible time-varying linear systems in an appropriate λ domain. The characterization or system functions for all the models considered belong to the class of separable functions first treated by Bendat. Necessary and sufficient conditions are derived for the exact realization of certain classes of functions. A much wider class of specified system functions may be expanded in terms of a set of orthogonal and realizable functions. The basic time-varying element used in most of the models is a time-varying gain amplifier. The approximation of the time-varying gain amplifier by periodically operated switches, sinusoidal time-varying amplifiers, and sequentially gated amplifiers is discussed.

Electronics Research Lab., U. of California, Berkeley.
GLOW CATHODES IN PULSED MAGNETIC FIELDS, by E. D. Hoag. Scientific rept. no. 4 on Contract AF 19(604)2270. 15 June 59, 56p. 5 refs. IER Series no. 60, issue no. 239; AFCRC-TN-59-379; AD-217 859
Order from LC mi$3.60, ph$9.30 PB 143 891

An experimental investigation has been carried out to study the microscopic characteristics of the beam in a smooth-bore cylindrical static magnetron with an aluminum secondary-emission cathode and a pulsed magnetic field. Certain curious hysteresis effects were noted that implied that the beam current depended rather sensitively upon the time derivative of the magnetic field; a discussion of the causes of this current, based on the theory of Buneman, is included. In addition, the circulating component of the beam current has been measured and is found to be compatible with the static space-charge distribution upon which Buneman bases his perturbation calculations. An Appendix has been included in which the details of the design work for the field coil and pulse facility are described in some detail.

Hermes Electronics Co., Cambridge, Mass.
THEORY OF ANTENNA PERFORMANCE IN SCATTER-TYPE RECEPTION, by S. Stein, D. E. Johansen and A. W. Starr. Final rept. on Contract AF 19(604)5214. 30 Sep 59, 179p. 26 refs. M-783; AFCRC-TR-59-191.
Order from LC mi$8.10, ph$27.30 PB 144 192

A theoretical investigation is reported which describes fundamental performance characteristics of an antenna system receiving from a distribution of coherent radio sources, such as in encountered in UHF transhorizon propagation. It is shown that to each source configuration, there exists an optimum antenna excitation which maximizes the received power. Assuming that the apparent source distribution is subject to random fluctuations in time, such as occurs in the transhorizon phenomenon, statistical properties of the received power are derived for the continuously optimized antenna. Both probability distributions and associated parameters measuring overall system performance are obtained. Computations are performed both for a small number of independently fluctuating discrete sources and for a smoothly distributed fluctuating source having small spatial correlation. As a basis for comparison, similar properties are then investigated for standard space and angle diversity systems. Initial computations indicate a large "gap" between the performance of existing or contemplated systems and the theoretical optimum.

Hughes Aircraft Co., Culver City, Calif.
A NEW METHOD OF PATTERN SYNTHESIS FOR LINEAR ARRAYS, by H. E. Shanks. Scientific rept. no. 3508/1 on Contract AF 19(604)3508. July 59, 21p. 4 refs. AFCRC-TN-59-568.
Order from LC mi$2.70, ph$4.80 PB 143 970

A unique phase expression is given which allows synthesis of a wide variety of shaped radiation patterns for a linear array. The accompanying amplitude distribution is found by a stationary phase evaluation of the radiation integral and is shown to be functionally related to the desired radiation pattern. Because of the optical type of approximation (stationary phase) used to evaluate the radiation integral, the method is most applicable to antennas with large size-to-wavelength ratios.

Institute of Mathematical Sciences, New York U., N. Y.
THE POTENTIAL AND CHARGE DISTRIBUTION NEAR THE TIP OF A FLAT ANGULAR SECTOR, by Ben Noble. Rept. on Contract AF 19(604)5238. May 59, 18p. 7 refs. Research rept. no. EM-135; AFCRC-TN-59-383; AD-226 497.
Order from LC mi$2.40, ph$3.30 PB 143 969

The calculation of the potential and charge distribution near the tip of a flat angular sector is reduced to the solution of a mixed boundary value problem on the surface of a sphere. A method is developed for finding the lowest eigenvalue and eigenfunction for this mixed problem. If r is the distance from the tip of the sector and the potential varies as r^{μ} when r tends to zero, numerical results are given for μ as a function of the angle of the sector.

Naval Ordnance Lab., White Oak, Md.
FERRITE CORE LOOP ANTENNAE PARAMETERS, by Jack Finkel. 28 July 58, 23p. 1 ref. NAVORD rept. 5764.
Order from LC mi$2.70, ph$4.80 PB 144 047

Analysis of an air-core loop, in terms of its effective height, inductance and equivalent resistance, is extended to include ferrite core antennae. An antenna whose winding is distributed over 80% of the length of the core has greater pickup than one whose winding is concentrated at the center of the core. The measurements indicate that the equivalent resistance, representing the losses in the core, is a linear function of the frequency.

Oklahoma U. Research Inst., Norman.
THEORETICAL INVESTIGATION OF THE COMPLEX INDEX OF REFRACTION OF A PLASMA FOR INFRARED AND VISIBLE RADIATION, by Otto H. Theimer. Final technical rept. on Contract DA 23-072-ORD-1320. 15 Aug 59, 28p. 15 refs. OOR rept. 2233.1-P.
Order from LC mi$2.70, ph$4.80 PB 144 330

The contributions of atoms and ions to the refractivity of plasmas are also discussed.

Stanford Electronics Labs., Stanford U., Calif.
A HOLLOW-BEAM CONDENSER, by R. E. Holaday. Rept. on Contract AF 33(600)27784. 4 June 59, 98p. 14 refs. Technical rept. no. 103-1.
Order from LC mi$5.40, ph$15.30 PB 144 060

A method is here described for condensing a hollow beam of electrons solely by means of a shaped magnetic field. If the field is shaped so that the inertial-overshoot of the electrons is not too severe, the beam follows the flux lines and shrinks in radius and thickness to a final size determined by the ratio of the final value of the magnetic field to its initial value. A theory for the electron trajectories in the absence of space charge is presented, along with the results of the theory that were obtained through use of an analog computer. Experimental results were obtained using a conventional immersed-flow hollow-beam gun placed in a shaped field generated by a series of short solenoids.

Technische Hochschule, Graz (Austria).
THEORETICAL STUDY OF TRIANGULAR APERTURE HORN ANTENNA, by Ernst Ledinegg. Final technical rept. for 1 Aug 58-31 Aug 59 on Contract DA 91-591-EUC-880. 1959, 87p. 13 refs.
Order from LC mi$4.80, ph$13.80 PB 144 376

The main part of the work was devoted to the calculation of the field types in waveguides of arbitrary cross-section. The second section of the report deals with the calculation of the radiation pattern of waveguide antennas. The third section treats the exact theory of the radiation field taking into account the interaction with the waveguide field.

Aeronutronic, Newport Beach, Calif.
EMISSIVITY OF DISPERSED CARBON PARTICLES, by V. Robert Stull and Gilbert N. Plass. Scientific rept. no. 6 on Contract AF 19(604)2166. 29 May 59, 41p. 8 refs. Publication no. U-503; AFCRC-TN-59-450.
Order from LC mi$3.30, ph$7.80 PB 144 414

The emissivity of dispersed spherical carbon particles is calculated from the Mie theory of scattering. A suitable dispersion equation is derived which represents the optical properties of carbon at flame temperatures. A general expression for the emitted radiation including all higher order scattering processes is obtained. The radiation emitted by carbon particles in flames is calculated for a range of particle radii from 50 to 800A and for several different particle size distributions. The shift of the intensity maximum to shorter wavelengths from the blackbody maximum is quantitatively explained.

Ballistic Research Labs., Aberdeen Proving Ground, Md.
ASYMMETRIC ROTOR EIGENVALUE TABLE, by T. E. Turner, B. L. Hicks, and G. Reitwiesner. Sep 53, 112p. 8 refs. Rept. no. 878.
Order from LC mi$6.00, ph$18.30 PB 144 079

A table of asymmetric rotor eigenvalues is given for $J = 1(1)12$ and $\chi = 0.00(0.01)1.00$. A brief account of the asymmetric rotor theory is also given to serve both as a ready reference for the users of this table and as a basis for the explanation of the computation. The eigenvalues were computed on the EDVAC and the methods of computation and checking are described.

Cornell U., Ithaca, N. Y.
AN OPTIMIZED METHOD FOR CORRECTING FOR SMEARING ABERRATIONS: COMPLEX X-RAY SPECTRA, by J. O. Porteus and L. G. Parratt. Technical rept. no. 7 on Contract AF 49(638)402. 1 Sep 59, 129p. 40 refs. AFOSR-TN-59-754.
Order from LC mi$6.30, ph$19.80 PB 143 952

A study is made of the true spectrum $T(\nu)$ from the observed spectrum $O(\nu_n)$ which has been recorded with a spectrometer whose smearing or "spectral window" function is $M(\nu_n - \nu)$. The correction involves the convolution or folding integral

$$O(\nu_n) = \int_{-\infty}^{\infty} T(\nu)\, M(\nu_n - \nu)\, d\nu.$$

This problem, with appropriate terminology, arises in almost every facet of experimental science. A mathematically unique solution exists only in case $O(\nu_n)$ and $M(\nu_n - \nu)$ are exactly known for all ν. Many investigators have attacked this problem, and many different "practical solutions" have been proposed. The problem is re-examined from the point of view of correcting x-ray spectra for resolving power, and previous solutions are found to be inadequate. A new optimized solution is proposed. The errors in this solution are discussed in detail. The specific spectral examples to which the new method is applied are the K emission and absorption of crystalline potassium chloride.

Cornell U., Ithaca, N. Y.
THE TEMPERATURE DEPENDENCE OF RAMAN INTENSITIES, by G. W. Chantry. Rept. on Raman Intensities of the A_1 Lines of Oxyanions, Contract AF 49(638)279. 11 Aug 59, 11p. 12 refs. AFOSR-TN-59-743.
Order from LC mi$2.40, ph$3.30 PB 143 997

The trace of the derived polarizability tensor has been measured on an absolute scale for the ions CO_3^{--}, NO_3^-, PO_4^{-3}, SO_4^{-2} and ClO_4^- in aqueous solution. From these and the known normal coordinate matrix elements, the values of the derivative with respect to bond length have been calculated. Results are interpreted in terms of bond order, and indicate appreciable π bonding in the ions NO_3^-, SO_4^{-2} and ClO_4^-. In these cases, as opposed to hydrocarbons a π electron makes a larger contribution to the derived bond polarizability than does a σ electron.

Cornell U., Ithaca, N. Y.
THE TEMPERATURE DEPENDENCE OF RAMAN INTENSITIES, by George W. Chantry and Robert A. Plane. Rept. on Raman Intensities of the A_1 Lines of Oxyanions, Contract AF 49(638)279. 11 Aug 59, 9p. 4 refs. AFOSR-TN-59-807.
Order from LC mi$1.80, ph$1.80 PB 144 013

The temperature dependence of the intensity of the Raman lines of a polyatomic molecule has been investigated. It is shown that, when account is taken of all possible "hot" band transitions as well as fundamental transitions, the temperature dependence of each band is the same as that found for the single band of a diatomic molecule. Degenerate vibrations are also considered and likewise shown to have the same temperature dependence.

Hebrew U. (Israel).
PARAMAGNETIC RESONANCE SPECTRA OF CHROMIUM AND MANGANESE IN THE SPINEL STRUCTURE, by R. Stahl-Brada and W. Low. Technical note no. 8 on Contract AF 61(052)59. June 59, 16p. 20 refs. AFOSR-TN-59-961; AD-226 397.
Order from LC mi$2.40, ph$3.30 PB 143 963

The paramagnetic resonance spectrum of Cr^{3+} was measured on a single crystal of ruby spinel $MgAl_2O_4$ at the wavelengths of 3 cms., 1.2 cm., and 8.6 mm and the paramagnetic spectrum of Mn^{2+} was measured on a single crystal of $ZnAl_2O_4$ at 3 cm.

INVESTIGATIONS OF INTERMOLECULAR FORCES, by Edward A. Mason. Final rept. for 15 Sep 55-15 Sep 59 on Contract AF 18(600)1562. 15 Oct 59, 34p. 25 refs. AFOSR-TR-59-147.
Order from LC mi$3.00, ph$6.30 PB 144 347

A new phenomenon in gaseous diffusion has been investigated which is the analogue of the Kirkendall effect in solids. The results have been shown to be explainable on the basis of the rigorous kinetic theory of gases. The experimental method appears to be a novel and useful way of measuring gaseous diffusion coefficients. Investigations of molecule-molecule and ion-molecule forces have also been carried out theoretically through studies of scattering and mobility. Applications of the results have included determination of gaseous ion mobilities and of high-temperature gas properties.

Institute of Molecular Physics, U. of Maryland, College Park.
THE KIRKENDALL EFFECT IN GASEOUS DIFFUSION, by Kenneth P. McCarty and Edward A. Mason. Rept. on Contract AF 18(600)1562. 11 Sep 59, 96p. 28 refs. IMP-OSR-13; AFOSR-AFOSR-TN-59-966, AD-226853.
Order from LC mi$5.40, ph$15.30 PB 143 917

The different rates of transfer by random motion of the two gases in binary diffusion tend to build up a hydrostatic pressure in one region of the mixture. This pressure will cause a back flow of the two gases together. The analogous effect in solids, the Kirkendall effect, has been demonstrated experimentally for gases and the results were explained theoretically. The apparatus used to observe the Kirkendall effect in gases was essentially two bulbs connected by a capillary tube and a larger diameter tube. A drop of silicone oil blocked the larger tube. Diffusion of gases through the capillary tube built up a pressure difference that caused the drop to move. The motion of the drop was used to determine the diffusion coefficients for several gas systems after the system He-Ar had been used to calibrate the apparatus.

EFFECT OF POISONING ON THE INFRARED SPECTRUM OF CARBON MONOXIDE ADSORBED ON NICKEL, by Carl W. Garland. Technical rept. no. 2 on Contract Nonr-1841(01). 30 Jan 59, 18p. 6 refs.
Order from LC mi$2.40, ph$3.30 PB 144 145

The infrared spectrum has been determined for CO adsorbed on both freshly-reduced nickel samples and on a series of nickel samples poisoned by preadsorption of CS_2. The nickel is supported on a high-area

alumina and comprises ten percent of the sample by weight. Spectra were recorded as a function of increasing coverage as CO was adsorbed.

Materials Research Lab., Watertown Arsenal, Mass.
ON THE ROLE OF THE EQUIVALENCE RESTRICTION IN MOLECULAR CALCULATIONS, by A. J. Freeman. Aug 59, 8p. 8 refs. MRL rept. no. 66; AD-225 879.
Order from LC mi$1.80, ph$1.80 PB 144 073

The results of 2 LCAO-SCF treatments of a molecule with a degenerate open shell, OH, are reported and compared. Both procedures are variants of the equivalence and symmetry restriction techniques, as introduced by Nesbet and Roothan, for treating open shell configurations. Values of the total energy, LCAO coefficients, and dipole moment are presented. Comparison shows very good agreement between the results of the 2 calculations.

Minnesota U., Minneapolis.
INITIAL-PERMEABILITY SPECTRA OF MICROSCOPIC IRON-OXIDE PARTICLES, by W. F. Brown, Jr., J. P. Hanton, and A. H. Morrish. Rept. on Contract AF 18(603)113. Oct 59, 10p. 5 refs. AFOSR-TN-59-759.
Order from LC mi$1.80, ph$1.80 PB 143 988

The magnetic resonance of single-domain ferromagnetic particles in zero applied steady magnetic field is studied theoretically and experimentally. The axial ratio of the powder particles deduced from the resonance measurements agrees reasonably well with optical data. This is strong evidence regarding the origin of the observed resonance.

Oregon U., Eugene.
THEORY OF FINE STRUCTURE PRESSURE BROADENING OF THE VIOLET TRIPLET OF MANGANESE, by Makoto Takeo. Interim technical rept. no. 3, 1 July 58-Aug 59, on The Modification of the Shape and Positions of Spectral Lines by Foreign Gases under Well-Defined Conditions of High Pressure and High Temperature, Contract DA 04-200-ORD-713. [1959] 12p. 8 refs.
Order from LC mi$2.40, ph$3.30 PB 144 027

A theory of fine structure pressure broadening of a multiplet is applied to manganese triplet lines with and without exchange effect under LS coupling. (See also PB 142 071)

SHOCK TUBE SPECTROSCOPY. I. THE SHOCK EXCITATION OF POWDERED SOLIDS by W. H. Parkinson and R. W. Nichols. Scientific rept. no. 1 on Contract AF 19(604)4560. 15 July 59, 100p. 45 refs. AFCRC-TN-59-620.
Order from LC mi$5.40, ph$15.30 PB 144 005

Helium driven shock waves in argon were used to excite a number of astrophysically important oxides (CuO, BeO, MgO, CaO, SrO, BaO, H_3BO_3, Al_2O_3, TiO_2, PbO, Pb_3O_4, V_2O_5, Cr_2O_3, $H_2W_4O_{13}$, α-Fe_2O_3, Fe_3O_4, $FeTiO_3$.) In addition to the metallic oxides some hydride compounds (Al + H, CuH) and carbon and cyanide compounds (C, AgCN, $K_3Fe(CN)_6$, $K_3Co(CN)_6$ KCN) were also studied. As an application to meteor physics four samples of meteorite were subjected to shock excitation. The type of spectrum (atomic or molecular) excited in the shock tube can be selected and restricted by suitably adjusting the Mach number (or gas temperature) through the initial pressure ratio and gas parameters. The combined results from the spectroscopic time resolved and microscopic experiments have suggested that on atomic vapour is ablated from the powder particles and excited thermally to luminosity by the argon atoms behind the reflected shock wave. This is followed by recombination of the ablated atoms to form molecules which emit the characteristic band spectrum. Finally as the temperature decreases the vapour condenses on the surfaces of the original powder grains often with the formation of new compounds.

Western Ontario U. (Canada).
SHOCK TUBE SPECTROSCOPY. II. SPECTROSCOPIC TEMPERATURE AND INTENSITY MEASUREMENTS IN A SHOCK TUBE, by W. H. Parkinson and R. W. Nicholls. Scientific rept. no. 3 on Contract AF 19(604)4560. 15 Aug 59, 45p. 26 refs. AFCRC-TN-59-622.
Order from LC mi$3.30, ph$7.80 PB 144 003

Spectroscopic rotational temperature measurements on the (0, 1) band of the CN Violet System have given temperatures which agree with the calculated gas kinetic temperature to about 10 percent. This method has provided a means of inferring a temperature without introducing temperature sensitive devices such as probes in the environment. Rotational intensity measurements on the (0, 0) AlH band of the $A^1\Pi - X^1\Sigma^+$ system has revealed an unusual intensity amomaly which is very pressure sensitive. Experiments in the shock tube at high pressure (7 to 13 atmospheres) and in a discharge tube at low pressure (less than one atmosphere) has suggested the following two possible mechanisms; (a) the presence of pressure sensitive strength factors rather than the usual H onl - London strengh factors, or (b) pressure induced predissociation of the excited $^1\Pi$ state by a postulated $^3\Sigma$ state according to the Kronig selection rules. Similar measurements with the CuH (0, 0) band ($^1\Sigma^+ - ^1\Sigma^+$) have showed that rotational equilibrium is not obtained with this molecule.

Western Ontario U. (Canada).
TRANSITION PROBABILITIES OF MOLECULAR BAND SYSTEMS. XVI. PART I. TRANSITION INTEGRALS WITH TRANSITION MOMENTS OF EXPOTENTIAL FORM. PART II. THE RECURSION RELATION FOR GENERALIZED LAGUERRE POLY-

NOMIALS AND THE REMAINDER FORMULAE FOR OVERLAP INTEGRALS, by G. P. Henderson, W. R. Jarmain, and P. A. Fraser. Scientific rept. no. 2 on Contract AF 19(604)4560. 1 Aug 59, 27p. 19 refs. AFCRC-TN-59-621.
Order from LC mi$2.70, ph$4.80 PB 144 004

This report describes two pieces of work concerned with intensities of diatomic molecular bands. The work was carried out some years ago and now appears to be of more importance. The first part concerns the evaluation of transition integrals involving transition moments of exponential form. The second part contains general proof of results presented in previous reports which were directly calculated only for simpler, but often important, special cases. These earlier results were of such a pattern that it was possible to suggest the general form in each case. (See also PB 139 865)

Bureau of Ordnance, Dept. of the Navy, Washington, D. C.
DESIGN AND CALIBRATION OF MEDIUM AND HIGH RESOLUTION INFRARED TELESCOPES FOR OBSERVATION OF ATMOSPHERIC RADIATION. 5 Apr 57, 102p. 14 refs. NAVORD rept. 4868; AD-143 654.
Order from LC mi$5.70, ep$18.30 PB 136 474

A report is made of the instrumentation and calibration involved in studies of sky background radiation in the IR region. The region is defined as lying between approximately 0.7 and 30 μ. A detail description is given of the design and calibration of the medium resolution telescopes (for wavelength regions from 3 to 30 μ and from 0.7 to 3.0 μ) and of the high resolution telescope. Particular attention is assigned to the 1.5° telescope for the thermal region designed on a modified Schwarzschild system. An inverted-cone, black-body source is compared with a Bureau of Standards calibrated lamp. The electronic components, consisting of amplifiers for the detectors and control circuits, are described. An explanation is given of the mechanical system for automatically scanning the sky.

Colorado State U., Fort Collins.
STUDIES, RESEARCH AND INVESTIGATIONS OF THE OPTICAL PROPERTIES OF THIN FILMS OF METALS, SEMI-CONDUCTORS AND DIELECTRICS, by Lawrence N. Hadley, Jr. Final rept. for 1 Feb-31 July 57 on Contract DA 44-009-eng-2618. 31 Aug 57, on Contract DA 44-009-eng-2618. 31 Aug 57, 20p.

FINAL REPORT, by Robert J. Low. Rept. on Contract AF 19(604)610. 9 July 58, 4p. 1 ref. AFCRC-TR-58-261; AD-206 784.
Order from LC mi$1.80, ph$1.80 PB 137 895

Work was summarized on the construction and assembly of the optical, mechanical, and electronic components of the 16-in. coronagraph for use at the Sacramento Peak Observatory, Sunspot, New Mexico. Other tasks were reported in mechanical and electronic construction and design, and optical construction. The initial planning and preliminary designs for an eclipse triple-spectrograph system were described.

Institute of Mathematical Sciences, New York U., N. Y.
STRUCTURE OF THE ELECTROMAGNETIC FIELD IN THE IMAGE REGION OF AN APLANATIC OPTICAL SYSTEM, by E. Wolf and B. Richards. Rept. on Contract AF 19(604)5238. July 59, 54p. 16 refs. Research rept. no. EM-136; AFCRC-TN-59-390.
Order from LC mi$3.60, ph$9.30 PB 143 890

An investigation is made of the structure of the electromagnetic field near the focus of an aplanatic system which images a point source. The solution is not restricted to systems of low aperture, and the computational results cover, in fact, selected values of the angular semi-aperture α on the image side, in the whole range $0 \leq \alpha \leq 90°$. The results have an immediate bearing on the resolving power of image forming systems; they also help to understand the significance of the scalar diffraction theory, which is customarily employed without proper justification, in the analysis of images in low aperture systems.

Solid State Physics

Air Force Cambridge Research Center, Bedford, Mass.
THE STRUCTURE OF ALUMINUM OXIDE, by F. Euler. Apr 59, 46p. 16 refs. AFCRC-TR-59-141; AD-215 066.
Order from LC mi$3.30, ph$7.80 PB 144 216

After a short survey of the literature, the ionic locations in sapphire (α-Al_2O_3) are discussed. Special interest is devoted to the surroundings of the aluminum ion where six oxygen ions are nearest neighbors, three of them being closer to the aluminum ion but farther apart among themselves than the other three. Distances between nearest neighbors and angles are calculated.

Armour Research Foundation, Chicago, Ill.
EXCESS NOISE IN SEMICONDUCTORS. Rept. no. 4 (Final) for 15 Nov 56-15 Nov 57 on Contract Nonr-1800(00). 4 Dec 57, 41p. 19 refs. AD-150 614
Order from LC mi$3.30, ph$7.80 PB 144 274

An experimental study of excess noise in semiconductors resulted in the discovery of fluctuations in the Seebeck effect, or thermoelectric potential, of semiconductors. The Seebeck noise, caused by fluctuations in the majority carrier concentration, had a 1/f component similar to that measured in current noise in semiconductors. The magnitude of the effect agreed with a straightforward calculation based on the established dependence of the thermal emf in semiconductors on carrier density when the magnitude of carrier density fluctuations was inserted. Results indicated that carrier density fluctuations with a 1/f spectrum existed even in the absence of dc current flow. Preliminary data were obtained concerning the importance of crystalline imperfections in 1/f noise. The 1/f noise level of n-type single crystal silicon decreased with increasing crystalline imperfection density.

Brown U. Div. of Applied Mathematics, Providence, R. I.
THE MEASUREMENT OF SURFACE STRAIN BY MEANS OF BONDED BIREFRINGENT STRIPS: A PRELIMINARY REPORT, by J. Duffy and T. C. Lee. Technical rept. no. 2 on Contract DA 19-020-509-ORD-4674. June 59, 19p. 9 refs. DA-4674/2.
Order from LC mi$2.40, ph$3.30 PB 143 771

A technique for the measurement of surface strains in opaque bodies is described and applied to a study of wave propagation phenomena. Essentially the method is a variation of the birefringent coating technique. The narrow edge rather than the flat face of the plastic strip is cemented to the metal surface and viewing is parallel to this surface in a standard polariscope. In this way the birefringent strip provides a measure of the strain all the way down to the metal surface avoiding the complications due to thickness effects attendant on birefringent coatings.

California U., Los Angeles.
THE EFFECT OF THE ELASTIC INTERACTION ON THE RATE OF CLUSTER GROWTH, by W. Grupen, R. Kikuchi, and George Sines. Rept. on Contract DA 04-495-ORD-1250. Aug 59, 23p. 2 refs. Dept. of Engineering rept. no. 59-37.
Order from LC mi$2.70, ph$4.80 PB 143 834

Diffusion in a solid from a concentration gradient and an energy gradient. Discussion of the magnitude of the elastic interaction.

ULTRASONIC ATTENUATION IN METALS AT LOW TEMPERATURES, by Daniel H. Filson. Technical rept. no. 13 on Contract Nonr-233(48). Jan 59, 70p. 27 refs.
Order from LC mi$3.90, ph$10.80 PB 144 140

Low temperature equipment; Acoustical measuring techniques; Techniques for resistance measurement; Low temperature measurements; Aluminum, Tin.

Cornell U., Ithaca, N. Y.
X-RAY REFLECTION STUDIES OF THE ANNEAL AND OXIDATION OF SOME THIN SOLID FILMS, by N. Wainfan and L. G. Parratt. Technical rept. no. 6 on Contract AF 49(638)402. 25 Aug 59, 29p. 23 refs. AFOSR-TN-59-755.
Order from LC mi$2.70, ph$4.80 PB 143 951

The technique of the total reflection of x-rays has been applied to the study of thin vacuum-deposited films of Cu, Ni, Ge, and Se on polished glass substrates. The effects of vacuum anneal and oxidation were studied.

Electron Tube Research Lab., U. of Minnesota, Minneapolis.
STUDIES ON BASE NICKELS FOR OXIDE COATED CATHODES, by W. G. Shepherd. Scientific rept. no. 4, 15 Jan-15 Apr 59, on Contract AF 19(604)3890. [1959] 107p. AFCRC-TN-59-399.
Order from LC mi$5.70, ph$16.80 PB 143 974

A modified circuit for use in the measurement of the saturation pulse emission of oxide-coated cathodes is described. Life tests of cathodes based on 0.22% and 0.08% Al-Ni alloy are presented. Chemical activation of an oxide cathode, under conditions allowing a controlled change in the coating reduction rate is reported. Influence of a heated Ti anode on the properties of an oxide-coated cathode is described. Poisoning of oxide cathodes due to anode bombardment is described. Particular emphasis in these studies is the recovery of emission following poisoning after various periods of cathode operation.

Gordon McKay Lab. of Applied Science, Harvard U., Cambridge, Mass.
HIGH PRESSURE EFFECTS ON IMPURITY LEVELS IN SEMI-CONDUCTORS, by Melvin G. Holland. Technical rept. no. HP-4 on Contract Nonr-1866(10). 1 Dec 58, 146p. 84 refs.
Order from LC mi$7.20, ph$22.80 PB 143 852

Effect of high hydrostatic pressure on the impurity levels due to three different impurities in germanium and silicon. The statistics for shallow and deep-lying impurity energy levels in semiconductors are presented, and discussed in terms of an alteration of their position with pressure. Results for silicon with a hydrogen donor atom, arsenic, and two hydrogenic acceptor atoms, aluminum and indium, are discussed. Pressure decreases the ionization energy of the arsenic impurity by about 1% in 10,000 kg/cm^2. Results for both n- and p-type gold-doped germanium where the impurity energy levels are both acceptors. Effect of pressure on minority carrier trapping in p-type manganese-doped silicon.

Institute for Fluid Dynamics and Applied Mathematics, U. of Maryland, College Park.
NATURE OF THE SINGULARITIES IN THE SPECTRUM OF A ONE-DIMENSIONAL IONIC LATTICE, by Joseph Gillis and George Weiss. Rept. on Contract AF 18(600)1315. Sep 59, 7p. 2 refs. Technical note BN-184; AFOSR-TN-59-931.
Order from LC mi$1.80, ph$1.80 PB 144 312

It is known, by a theorem of van Hove, that regular lattices will have singularities in their frequency spectra, the type of singularity depending on the dimension. Although several studies of the one dimensional lattice with coulomb interactions have appeared, no one yet has succeeded in identifying the type of singularity that appears in addition to the inverse square root singularity, in the frequency spectrum. In this note we establish that for a one-dimensional crystal the singularity is of the form $g(\omega) \sim A[(\omega-\omega_1) \ln 1/(\omega-\omega_1)]^{-1/2}$ where A is a constant and ω_1 is the position of the singularity.

Istituto Elettrotechnico Nazionale Galileo Ferraris (Italy).
OPTICAL MICROSCOPY EXAMINATION OF THE EFFECT OF HIGH ENERGY BOMBARDMENT ON SEMICONDUCTOR SINGLE CRYSTALS, by Guido Bonfiglioli, Andrea Ferro, and Adriana Mojoni. Technical note no. 1 on Contract AF 61(514)1333. [1958] 12p. 4 refs. AFOSR-TN-59-958.
Order from LC mi$2.40, ph$3.30 PB 143 962

Microscopy observations of etching patterns on Ge single crystals. The "primary structure" in etched Ge is due to the progressive rounding off of the etch pits which belonged to dislocations ending on lattice planes already taken away by the etchant.

ITT Labs., Nutley, N. J.
RESEARCH ON GROWING CRYSTALS OF FERRIMAGNETIC OXIDES, by A. J. Marino, Jr. Scientific rept. no. 8 for 1 Jan-31 Mar 59 on Contract AF 19(604)2261. July 59, 10p. 3 refs. AFCRC-TN-59-360; AD-216 817.
Order from LC mi$1.80, ph$1.80 PB 144 043

Crystals of manganese ferrite ($MnFe_2O_4$) have been grown by the flameless fusion technique with annealing during growth. A five-turn helical coil has been added to the conical r-f work coil used in this growth technique. This addition provides a method of keeping the grown crystal hot during the growth process and allows it to be cooled at a uniform rate. This slow cooling, coupled with "annealing" during growth, eliminates, or drastically cuts down, the cracking normally associated with crystals grown by flame fusion. (See also PB 140 063)

Laboratory for Insulation Research, Mass. Inst. of Tech., Cambridge.
FIELD-STRENGTH EFFECTS IN CADMIUM SULFIDE SINGLE CRYSTALS, by H. Gildea. Rept. on Contracts Nonr-1841(01) and AT(30-1)1937. Dec 58, 18p. 8 refs, Technical rept. 133.
Order from LC mi$2.40, ph$3.30 PB 144 126

Current-voltage-time characteristics using cadmium sulfide single crystals with d-c and unidirectional pulse voltages at various temperatures. In general the crystals showed a rather high conductivity, which proved essentially independent of temperature in the range from -175°C to 100°C. One type exhibited a low conductivity.

Manufacturing Labs., Inc., Cambridge, Mass.
THE LATTICE STABILITY OF METALS. II. ZINC, COPPER, AND SILVER, by Larry Kaufman. Technical rept. no. 2 on ONR Contract. 1 Jan 59, 44p. 28 refs.
Order from LC mi$3.30, ph$7.80 PB 144 220

An integrated thermodynamic analysis of the f. c. c.(α) and b. c. c. (β) solid solutions of the Ag-Zn and Cu-Zn systems. The differences in free energy between the α, β, and η (h. c. p.) forms of zinc, and the α and β forms of copper and silver have been calculated as a function of temperature. It is possible to calculate the activity of zinc in the α and β phases of Cu-Zn and Ag-Zn over a wide range of temperature and composition.

Materials Research Lab., Watertown Arsenal, Mass.
LONG-RANGE MAGNETIC INTERACTIONS VIA CONDUCTION ELECTRONS, by Arthur Paskin. July 59, 10p. 9 refs. MRL Rept. no. 65; AD-225 568.
Order from LC mi$1.80, ph$1.80 PB 144 072

Yosida [Phys Rev. 106:893, 1957] has shown that the long-range Zener ferromagnetic term [Phys. Rev. 81:440, 1951] arising from the exchange interaction between conduction electrons and unfilled-inner-shell electrons, does not appear explicitly when the calculation is extended to second-order perturbation. The magnetic interaction term to second-order perturbation, decreases rapidly with distance and is short-range relative to the Zener interaction which extends uniformly throughout the solid. Re-examination of the Yosida calculation discloses that the long-range magnetic term disappears because of certain free-electron approximations made for the energy and density of states of the conduction electrons. In a more general formulation of these terms, the Zener interaction does appear with a coefficient proportional to the difference of the density of states and the second-derivative of the number of electrons (of a given spin) with respect to their energy. Using nuclear magnetic resonance data, an estimation is made that the magnitude of the Zener term and the short-range interaction term are the same for the Cu-Mn alloys studied by Yosida.

Miami U., Coral Gables, Fla.
EFFECTIVE MASS OF ELECTRONS IN GALLIUM ARSENIDE, by L. C. Barcus, A. Perlmutter and J. Callaway. Rept. on Contract AF 49(638)62. 5 Mar 58, 9p. 6 refs. AFOSR-TN-58-152; AD-152 178.
Order from LC mi$1.80, ph$1.80 PB 137 659

The effective mass of electrons in a sample of n type gallium arsenide has been measured by determining the reflectivity in the infrared. The value obtained, $0.043 \pm 0.005\ m_o$, supports the hypothesis that the minimum of the conduction band is at the center of the Brillouin Zone.

Michigan U. [Research Inst.] Ann Arbor.
THE USE OF ELECTROLUMINESCENT PHOSPHORS IN THERMAL IMAGING, by Paul A. Silberg. Rept. on Project Michigan, Contract DA 36-039-sc-52654. Oct 57, 16p. 11 refs. 2144-120-T.
Order from LC mi$2.40, ph$3.30 PB 144 129

This report describes two possible ways of using electroluminescent phosphors for thermal imaging. The phosphors may be (1) mixed with a temperature-sensitive dielectric; or (2) deposited as a film on a temperature-sensitive dielectric. A theoretical analysis of each method is provided including an estimate of their respective sensitivities $\left(\frac{1}{B}\frac{dB}{dT}\right)$

Minerals Research Lab., U. of California, Berkeley.
EFFECT OF DILUTE COPPER ALLOYING ON THE ACTIVATION ENERGIES FOR CREEP OF ALUMINUM SINGLE CRYSTALS, by D. Walton, L. Shepard, and J. E. Dorn. Technical rept. no. 7 on Contract Nonr-222(49). 1 Dec 58, 33p. 15 refs. Series no. 103, issue no. 7.
Order from LC mi$3.00, ph$6.30 PB 144 118

The activation energies for creep of single crystals of Al containing up to 0.25% Cu in Alpha solid solution were determined by the effect of small changes in temperature on the creep rate. From 490°K to about 700°K, alpha solid solution alloys of Al containing 0.09% to 0.25% Cu yielded an activation energy of 41,000 cal/mole.

Moore School of Electrical Engineering, U. of Pennsylvania, Philadelphia.
MICROWAVE CRYSTAL DETERIORATION STUDIES, by P. P. Lombardini. Quarterly progress rept. no. 2, 1 Nov 58-31 Jan 59, on Study of the Deterioration of Microwave Crystal Diodes Exposed to High Level R-F Energy, Contract DA 36-039-sc-78055. 28 Feb 59, 32p. 3 refs. Moore School rept. no. 59-10.
Order from LC mi$3.00, ph$6.30 PB 144 155

During recent experimental investigations, it has been found that the process of temporary deterioration can be effected by the application of short duration d-c pulses to the diode in the negative direction. The effects of d-c and r-f pulses have been compared. The dependence of the phenomena of temporary deterioration upon r-f pulsewidth has been studied for the case of a carrier frequency in the S-band. Limited measurements have been made of the dependence of d-c backward current change on increasing temperature of the diode. These measurements indicate a continuous increase in backward current and a decrease in the percent change of backward current for temperatures above 100°C. (See also PB 142 764)

Naval Ordnance Lab., White Oak, Md.
A NEUTRON DIFFRACTION STUDY OF CHROMIUM-SUBSTITUTED FERRITES, by Stanley J. Pickart. 7 June 58, 83p. 28 refs. NAVORD rept. 6101.
Order from LC mi$4.80, ph$13.80 PB 144 048

The temperature dependence of the individual sublattice magnetizations, as well as the effect of an applied field upon the coherent magnetic intensities, has been determined for several of the compositions studied. The subject of this report is a study of the magnetic and crystallographic properties of mixed ferrite-chromites.

Naval Ordnance Test Station, China Lake, Calif.
SEMINAR ON SOLID-STATE PHYSICS, by R. S. Witte, C. E. Mandeville and others. 24 June 58, 54p. 6 refs. NOTS 2023.
Order from LC mi$3.60, ph$9.30 PB 144 049

Five selected subjects presented at the Seminar are: (1) Statistical Mechanics for Solids; (2) F-Centers and Luminescence; (3) Neutron Diffraction; (4) Electron Resonance in Solids; and (5) Polarons.

Pennsylvania U., Philadelphia.
THE INFLUENCE OF RADIATION INDUCED AND OTHER IMPERFECTIONS ON THE MECHANICAL, THERMAL AND OPTICAL PROPERTIES OF ALKALI HALIDE CRYSTALS by B. R. Russell, P. H. Miller, Jr. and M. E. Caspari. Final rept. on Contract AF 18(600)561. July 59, 58p. 15 refs. AFOSR-TR-59-123.
Order from LC mi$3.60, ph$9.30 PB 144 350

The research can be divided into two separate but somewhat related problems. One of these is concerned with the difference between the thermal expansion of alkali halide crystals when the expansion is measured by macroscopic techniques and when it is measured by determining changes in the lattice constant as a function of temperature by x-ray techniques. The other part of the program was concerned with a study of radiation damage from weak ionizing irradiation in alkali halides, and in particular KCl and NaCl crystals.

Polytechnic Inst. of Brooklyn, N. Y.
COMPOUNDS WITH DEFECT LATTICES, by E. Banks. Progress rept. no. 3, 1 Dec 56-28 Feb 57, on Contract DA 36-039-sc-71242. 29 Mar 57, 64p. 20 refs. AD-132 031.
Order from LC mi$3.90, ph$10.80 PB 138 208

An analysis of the magnetic effects of substitution in single crystals of $BaM_xFe_{(12-x)}O_{19}$ (where M = Al or Ga) suggests that Al enters preferentially in octahedral sites, while Ga shows preference for tetrahedral sites at low concentrations, but substitutes randomly at higher concentrations. Some preparations with zinc and magnesium partially substituted for iron were strongly magnetic. Some progress has been made in the direction of preparation of copper-iron selenides. A study of color centers produced by X-irradiation of CdF_2, containing NaF and/or CeF_3 in solid solution, is reported. (See also PB 138 209)

Polytechnic Inst. of Brooklyn, N. Y.
COMPOUNDS WITH DEFECT LATTICES, by E. Banks. Progress rept. no. 4, 1 Mar-31 May 57, on Contract DA 36-039-sc-71242. 25 June 57, 22p. 2 refs. AD-140 664.
Order from LC mi$2.70, ph$4.80 PB 138 207

Some preparations in the Cu-Fe-Se system have been made at integral ratios of known selenides. $CuFe_2Se_{2.5}$ yielded a weakly magnetic material with an X-ray pattern different from those previously reported. Cu_2FeSe_2 preparation showed some lines of the $CuFeSe_2$-$CuFe_2Se_3$ phase plus many additional lines. On heating WO_3 in vacuo with Ta_2O_5, new tetragonal phases were formed, having patterns similar to those of tetragonal $Na_{0.28}WO_3$. The samples had lost oxygen on heating, and were colored blue to green. A crystal-pulling apparatus was constructed, and some details of its operation are given. (See also PB 138 208)

Raytheon Mfg. Co., Waltham, Mass.
STUDY OF SEMICONDUCTOR MATERIALS AND DEVICES. Final rept. for 1 Oct 55-30 June 57 on Contract NObsr-72537; [Continuation of Contract NObsr-57323. [1957] 95p. 16 refs. AD-141 843.
Order from LC mi$5.40, ph$15.30 PB 137 774

The annealing behavior was studied in crystals which were grown from quartz crucibles and in samples where dislocations were introduced by plastic bending. For a deformed sample with a dislocation density of 10^7/sq cm, the amplitude of the 9-mμ band was reduced appreciably in 15 min at 1000°C; the undeformed sample with a dislocation density of 10^4/sq cm requires about 12 hr. Preliminary light scattering experiments in deformed and annealed samples show a definite anisotropy of the scattered intensity when the light vector is perpendicular or parallel to the dislocation lines. Measurements of surface conductance on germanium and silicon indicated localized surface states at the semiconductor-semiconductor oxide interface. Changes in structure were observed following the application of high electric fields across the oxide film. Control of the diffusion process for device fabrication was improved to yield reproducible values of Co and penetrations of about 4×10^{17}/cc and 0.5 mil, respectively. A new type HF semiconductor amplifying device, the spacistor, is described which utilizes the high field of a reverse biased junction to produce a very short transit time for the injected carriers. The device appeared operable at microwave frequencies.

Rice Inst., Houston, Tex.
ELECTRON EMISSION FROM PLASTICALLY STRAINED ALUMINUM, by W. D. Von Voss and F. R. Brotzen. Technical rept. no. 1 on Contract Nonr-2116(02). 31 Dec 58, 34p. 16 refs. AD-218 857.
Order from LC mi$3.00, ph$6.30 PB 143 929

Aluminum was strained in tension under a Geiger-Müller counter. Both the electron emission associated with plastic deformation and the subsequent delayed emission were observed. An attempt was made to correlate quantitatively the emission rates with the mechanical variables, i.e., strain and rate of deformation. The model used for this correlation links point imperfections formed during deformation with the emission from the oxide surface film.

Stanford Electronics Labs., Stanford U., Calif.
SPIN-LATTICE RELAXATION VIA HARMONIC COUPLING, by W. S. C. Chang. Rept. on Contract AF 33(600)27/84. 27 Aug 57, 18p. 8 refs. Technical rept. no. 156-5; AD-226 020.
Order from LC mi$2.40, ph$3.30 PB 144 062

Substantial experimental evidence was found for a new mechanism of spin-lattice relaxation which is called harmonic cross-relaxation. The relaxation rate of one transition in a multi-level system (ruby in the present instance) is found to be drastically shortened when the frequency of another transition is twice or 3 times the frequency of the first transition. The effect is observed with a traveling-wave-maser apparatus to permit wideband measurements. In one method, the inversion ratio of a 3-level maser pumping on transition 2-4 and amplifying on 2-3 is found to become unusually high when the idle or 3-4 frequency is one third of the 1-3 frequency, and to be small when this is not the case. The idle transition is apparently shorted out by harmonic coupling. In another method, which does not involve any maser action, the recovery of a saturated transition is observed directly at various operating points including ones where harmonic coupling to a transition at twice the frequency is present. With a short saturating pulse, 2 (or more) relaxation times are observed. The results indicate that if harmonic coupling is present, the 2 transitions thermalize with each other at a rapid rate (≈10 msec) and then both together thermalize with the lattice at a slower rate (≈100 msec). A saturating pulse longer than 10 msec brings both transitions to the same temperature and only the long relaxation time is observed.

Two types of systems are considered in this theoretical investigation. Type I is a system of charged-charged particles and the Coulombic interaction potential is assumed. In type II, the system is composed of both charged and uncharged particle, i. e. $N^+ + N$, and $\frac{1}{\gamma_4}$ potential is assumed. The $\frac{1}{\gamma_4}$ term is corrected for the polarizabilities. Some typical results are presented for the Diffusion. Viscosity and Thermal Conductivity coefficients for the Charged - change system in the temperature range of 10,000 to 15,000°K.

INTERACTION OF ELECTROMAGNETIC WAVES WITH IONIZED GASES, by Robert G. Jahn. Technical rept. no. 9 on Contract AF 18(603)02. Aug 59, 54p. 5 refs. AFOSR-TN-59-911; AD-226 365.
Order from LC mi$3.60, ph$9.30 PB 144 321

Possibilities are explored with regard to the use of microwaves as probes to study ionized gas flows. The case is studied where the propagating waves are disturbed by the gas, rather than the gas being disturbed by the wave field. The distinction is mainly implicit in the strength of the impressed signal, and, to a certain extent, in the free charge and total particle densities. Waves of small amplitude are considered; therefore, no component of the gas other than the electrons, both free and bound, is significantly disturbed. As such, the treatment is relevant to such problems as the study of the characteristics of ionized gases by microwave probes, and the problems of electromagnetic communication into and through ionized gas layers. Throughout, the approach is one which starts from the basic field relations and at every opportunity takes the simplest alternatives consistent with physical experience, while attempting to demonstrate the salient features of the interaction with a minimum of mathematical encumbrance.

THE PAIR DISTRIBUTION FUNCTION OF A HARD SPHERE BOSE SYSTEM CALCULATED BY THE PSEUDO-POTENTIAL METHOD, by Leopoldo S. Colin. Rept. on Contract AF 18(600)1315. Sep 59, 39p. 7 refs. Technical note BN-185; AFOSR-TN-59-928.
Order from LC mi$3.00, ph$6.30 PB 144 293

The pair distribution function for a system of hard sphere bosons has been performed replacing the hard sphere potential by the so-called pseudo-potential. The problem has been carried through using the quasi-particle formalism of Bogoliubov. In this calculation one considers a system of bosons interacting via the pseudo-potential, which can be regarded as a weak interaction when the system is very dilute. The Hamiltonian of the system is diagonalized by means of a canonical transformation and this has the effect of separating the energy into two parts, one which is the ground state energy and the other one which corresponds to an ideal Bose gas composed of "elementary excitations" or quasi-particles. This formalism was applied to the calculation of the pair distribution function of our system. This quantity was calculated by averaging over a grand canonical ensemble constructed with the total number of quasi-particles. A result which is seen to be valid both for the condensed and gaseous phases of the system and also for any distance r between the particles has been obtained. (See also PB 142 990)

ACTION-TRANSFER AND FREQUENCY-SHIFT RELATIONS IN THE NONLINEAR THEORY OF WAVES AND OSCILLATIONS, by P. A. Sturrock. Technical note on Contract AF 49(638)415. Sep 59, 21p. 13 refs. M. L. rept. no. 625; AFCRC-TN-59-892.
Order from LC mi$2.70, ph$4.80 PB 144 380

Certain relations which have arisen in the theories of electrical networks, electron tubes, plasma oscillations and particle accelerators are here shown to be special cases of general relations attributable to any system which may be described by a Hamiltonian. If such a system is analyzed into an interacting set of modes (waves or oscillators), we find that the rates of transfer of action to or from members of a group of interacting modes are in integral ratios, the integers being determined by the interaction, and are related in magnitude to the energy associated with the interaction. We find furthermore a conjugate set of relations which lead to the following statement: the fractional shifts in frequency of members of a group of interacting modes, when multiplied by the energies in those modes, are in integral ratios, the integers being determined by the interaction, and are related in magnitude to the energy associated with the interaction.

Microwave Lab., Stanford U., Calif.
THE EXCITATION OF PLASMA OSCILLATIONS, by P. A. Sturrock. Technical note on Contract AF 49(638)415. Sep 59, 15p. 12 refs. M. L. rept. no. 610; AFCRC-TN-59-891.
Order from LC mi$2.40, ph$3.30 PB 143 994

The theory of Bohm and Gross and the experiments of Looney and Brown upon the excitation of plasma oscillations by the two-stream mechanism, which appear superficially to be in disagreement, are here shown to be compatible with each other and with related experiments.

THE MECHANICAL PROTECTION OF THE W/Ir THERMOCOUPLE, by Gary Steven and Walter C. Troy. Rept. no. 22, 5 Sep-7 Oct 49. 13 Oct 49. 7p. NEPA 1185-ARM-23; AD-206 716.
Order from LC mi$1.80, ph$1.80 PB 138 452

Two zirconia tube shielded W/Ir thermocouples and an Ir/60% Rh, 40% Ir thermocouple were tested at 2000°C in oxidizing surroundings. The W/Ir thermocouples were operated in neutral atmospheres. Both ceramic tubes failed during the heating period of the furnace. A recalibration of the Ir/60% Rh, 40% Ir thermocouple after a 17-hour campaign at high temperature showed only a slight loss in thermal emf output. Furthermore, the weight loss at 2000°C in moderately oxidizing atmosphere was of a magnitude that would permit 100 hours of service at temperature. Safety equipment was added to the furnace set-up. Alimina and beryllia protected W/Ir thermocouples are now ready for high temperature stability tests. (See also PB 138 456)

Ballistic Research Labs., Aberdeen Proving Ground, Md.
CONDUCTION OF HEAT IN ONE-DIMENSIONAL MANIFOLDS WITH ARBITRARY INTERNAL HEAT SOURCES, by John F. Detlef. May 56, 19p. 2 refs. Rept. no. 980.
Order from LC mi$2.40, ph$3.30 PB 144 083

The general problem of heat conduction in one-dimensional manifolds composed of two substances of different conductivities and with arbitrary internal heat sources is here formulated and a general formal solution to the problem is obtained by operator methods. Of the several special cases discussed the most general is that of internal sources of exponential type. An existence theorem for one aspect of the general problem is included.

Brown U. Div. of Applied Mathematics, Providence, R. I.
TRANSIENT THERMAL STRESSES IN A SEMI-INFINITE SLAB, by Walter Jaunzemis (Pennsylvania State U.) and Eli Sternberg. Technical rept. no. 5 on Contract Nonr-562(25). Jan 59, 43p. 9 refs. 562(25)/5.
Order from LC mi$3.30, ph$7.80 PB 144 404

This investigation is concerned with the transient temperature and thermal-stress distribution generated in a semi-infinite slab if a finite segment of its edge is subjected to a sudden uniform change in temperature. The slab is supposed to be free from external loads and its faces are assumed to be insulated. Exact solutions in series form are obtained both for the heat-conduction problem and for the associated thermoelastic problem. The latter is treated quasi-statically within the classical two-dimensional theory of elasticity. The thermal stresses appropriate to the generalized plane-stress solution vanish identically in the limit as time tends to infinity. (See also PB 140 512)

Columbia U., New York.
TRANSPORT PROPERTIES OF GASES AT HIGH TEMPERATURES, by Charles F. Bonilla. Final rept. on Contract Nonr-266(11). 10 Feb 58, 2p. CU-20-58-Nonr-266(11)-Ch. E; AD-153 026.
Order from LC mi$1.80, ph$1.80 PB 138 328

The following technical activities were completed: (1) a mathematical analysis of the temperature fluctuations of a hot-wire surrounded by a gas and heated with alternating current superimposed on direct current, including amplitude and phase lag of the temperature wave behind the power wave, as a function of the thermal diffusivity of the surrounding gas; (2) construction and testing of a tungsten hot-wire cell, and the circuitry required to carry out the determination experimentally; (3) the viscosities of argon, steam, and heavy-water vapor were measured in a capillary efflux viscometer at atmospheric pressure up to 1600°C; and (4) the viscosities of steam-nitrogen mixtures were measured in a modified capillary efflux viscometer at atmospheric pressure from 350° to 860°C.

Illinois U. Engineering Experiment Station, Urbana.
EFFECT OF HEAT TRANSFER ON FLOW FIELD AT LOW REYNOLDS NUMBERS IN VERTICAL TUBES, by Edward M. Rosen and Thomas J. Hanratty. Technical rept. no. 8 on Contract DA 11-022-ORD-1707. Oct 59, 248p. 61 refs.
Order from LC mi$11.10, ph$41.10 PB 144 030

Variation of density and viscosity with temperature may cause distortions in the flow field and affect the rate of heat transfer to fluids flowing in vertical tubes. Under relatively mold conditions of heating and cooling with a constant temperature wall these distortions may be large enough to change the parabolic velocity profile associated with isothermal flow to such an extent that the flow becomes unstable and breaks down into turbulence. For heating in upflow it was found experimentally that unstable flows exist when the center line velocity drops to zero (inversion point) and

may even exist under milder conditions. For cooling in upflow unstable flows appeared to arise under only slightly more severe conditions than are necessary to cause the velocity gradient at the wall to go to zero. (See also PB 142 059)

Institute of Flight Structures, Columbia U., New York.
HEAT CONDITION IN A MELTING SLAB, by Stephen J. Citron. Technical rept. no. 15 on Contract Nonr-266(20). Jan 59, 96p. 28 refs. CU-15-59-ONR266(20)-CE.
Order from LC mi$5.40, ph$15.30 PB 144 260

The behavior, after the initiation of melting, of a slab insulated on one side and subjected to a heat input varying arbitrarily with time on the other is studied. A method of successive approximations is developed which requires the solution of an ordinary non-linear differential equation. Curves of melt-thickness versus time are presented for a constant heat input and for a typical heat input incurred by a body descending through the atmosphere.

AN EXPERIMENTAL INVESTIGATION OF THE POSSIBILITY OF ACHIEVING A STANDING DETONATION WAVE, by J. A. Nicholls, E. K. Debora, and R. S. B. Ong. Final rept. 2284-23-F; AFOSR-TR-59-132; AD-226 658.
Order from LC mi$2.70, ph$4.80 PB 143 908

The properties of gaseous detonation waves and the conditions that must be met to generate stable waves are described and discussed, as is the experimental facility which evolved as a result of these considerations. Preliminary experiments leading to the first known case of a stabilized detonation wave (probably very close to the Chapman-Jouguet case) are also described. In these experiments an ignition time delay has been detected between the shock wave and onset of combustion. It appears that this experimental technique has great potential in the study of chemical kinetics as well as in the study of stabilized detonation waves. Preliminary analytical work on the stability of a plane detonation wave is discussed.

Midwest Applied Science Corp., Lafayette, Ind.
PERIODIC TEMPERATURE DISTRIBUTION IN LAMINATED SOLIDS, by Richard J. Grosh. Rept. on Research on Application of the Theory-Practice of Electric Circuits to the Study of Transients in Thermal Insulation, Contract AF 33(616)5623. July 59, 29p. 37 refs. WADC Technical note 59-185.
Order from OTS $0.75 PB 161 292

Periodic heat conduction in plane, cylindrical, and spherically laminated solids is considered. Attention is given to cases of isotropic laminates, with constant product of density and specific heat and space varying thermal conductivity, after the transient period state has disappeared. Special attention is paid to treating these problems by matrix methods as suggested by the analogy of this problem with electrical four terminal networks. Finally, these mathematical methods are used to study the distributed parameter approximation of a plane laminated solid and in this way give some indication of the differences between steady state and transient measurements of thermal properties for porous insulating materials. The results indicate that, to a first approximation, a definite difference exists. The magnitude of the difference depends on the difference in thermal properties for the matrix and interstice material and the type transient. Nusselt's idealization of porous thermal insulation, a parallel fissured body, was used throughout the calculations.

Naval Ordnance Lab., White Oak, Md.
A METHOD FOR THE RAPID NUMERICAL SOLUTION OF THE HEAT CONDUCTION EQUATION FOR COMPOSITE SLABS, by Julius W. Enig. 20 Aug 59, 22p. 2 refs. NAVORD rept. 6666.
Order from LC mi$2.70, ph$4.80 PB 144 193

Two boundary conditions encountered in the heating of one-dimensional double slabs are the following: the heat flux is given at the inner surface and (a) the heat flux or (b) the temperature is prescribed at the outer surface. In this paper, a method is developed which permits the rapid calculation of (1) any given interior point temperature, and (2) the outer surface temperature or flux for (a) or (b) respectively, without computing other interior point temperatures. The partial differential equations are integrated in terms of an arbitrary outer surface temperature, the solution joined to the remaining boundary condition, and the resulting integral equation evaluated for the outer surface temperature or flux by a simple numerical scheme. The method performs an exact integration over the space dimension. Hence, once the outer surface temperature is determined, the interior temperatures are computed by exact formulae. Numerical solutions are compared to an exact solution for accuracy and to other numerical schemes for speed.

Naval Ordnance Test Station, China Lake, Calif.
DESIGN AND USE OF FINE WIRE THERMOCOUPLES FOR RESEARCH, by Maynard H. Hunt. Sep 59, 37p. 17 refs. NOTS TP 1919; NAVORD rept. 5828.
Order from LC mi$3.00, ph$6.30 PB 144 481

The work of several investigators in the field of heat transfer to fine wires in air is summarized, and empirical relationships established. The construction of fine thermocouples is described, with emphasis on the practical aspects of the problem, and several specialized probes are described.

Wave Propagation

[American Radio Relay League, West Hartford, Conn.]
A STUDY OF TRANSEQUATORIAL SCATTER PROPAGATION. Final rept. on Contract AF 19(604)2171. [1959] 27p. 5 refs. AFCRC-TR-59-262.
Order from LC mi$2.70, ph$4.80 PB 144 235

The ARRL-IGY Propagation Research Project was organized to collect and utilize observations by amateur radio operators in the very high frequency range. Bands available to them are one or more of the following (depending on location): 50-54, 70-72, 144-148, 220-225 and 420-450 Mc. The large number of such stations and their considerable activity more than offset the inability to make precise quantitative measurements. The well-known enthusiasm of the "hams" insured full cooperation from a network of observers not economically possible to duplicate in any other manner.

Bolt, Beranek, and Newman, Inc., Cambridge, Mass.
INPUT IMPEDANCE OF A BEAM COUPLED TO A PLATE, by George L. Lamb, Jr. Rept. on Contract Nonr-2322(00). 19 Dec 58, 31p. Rept. no. 603.
Order from LC mi$3.00, ph$6.30 PB 143 979

The present report analyzes the motion of an infinite elastic beam attached to an infinite elastic plate, and excited by a localized harmonic force. The interesting physical features of the bar-plate problem are illustrated in a simplified manner by considering first an infinite string attached to an infinite membrane. The results for the beam-plate system may be expressed in terms of two parameters, k_bL and r. The parameter k_bL describes the frequency dependence and degree of coupling of the beam to the plate, increasing with increasing frequency and with decreasing degree of coupling. At very low forcing frequencies, the plate stiffness combines with the bar mass to reduce the input impedance of the coupled system. At higher frequencies the impedance is essentially that of an uncoupled bar. The parameter r is the ratio of wavelength on the plate to wavelength on the bar.

Brown U. Div. of Engineering, Providence, R. I.
A LINE SOURCE ON AN INTERFACE BETWEEN TWO MEDIA, by V. M. Papadopoulos. Scientific rept. no. 5 on Research Directed Toward the Study of Radiation of Electromagnetic Waves, Contracts AF 19(604)4561 and Nonr-562(24). July 59, 16p. 8 refs. AF-4561/5; AFCRC-TN-59-564.
Order from LC mi$2.40, ph$3.30 PB 144 011

The velocity and pressure field of an unsteady line source is calculated by a similarity method when its strength is taken to have a step-function time dependence. The acoustic approximation is used in the case when the source lies on the stationary plane interface between homogeneous fluids of different density; the velocity of sound in each fluid is also different. The time derivative of the solution in section 1 of this acoustic problem gives the velocity potential when an acoustic line pulse occurs in the surface of, say, a deep sea. This is a first order solution in which the interaction of the acoustic disturbance above and below the interface is examined. The solution in section 1 is also of direct application in electromagnetic theory. This is discussed in section 3.

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
THE NATURE OF FADING PATTERNS OF OBLIQUE INCIDENCE RADIO SIGNALS RECEIVED AT MIDDLE LATITUDES DURING CERTAIN IONOSPHERIC DISTURBANCES, by Peter Ford Nicholson. Technical rept. no. 47 on Studies on Propagation in the Atmosphere, Contract DA 36-039-sc-74903. 18 Aug 58, 92p. 24 refs. Research rept. EE 372.
Order from LC mi$5.40, ph$15.30 PB 144 175

The fading of tone modulated CW transmissions from Ottawa, Canada, and Washington, D. C., have been recorded for a period of approximately two years. A close inspection of these records has been executed with the particular intention of arriving at some explanation for the fast-flutter fading observed during disturbed periods. It was found that on a qualitative, as well as on a statistical basis, the fading of the received signal varied with both type and intensity of disturbance. In the presence of an aurorally disturbed ionosphere, the character of fading was described as peaky random. Fading during spread F is again of the fast-flutter type. If sporadic E is the predominating disturbance, an important feature of the fading is the presence of large variations in signal strength. Distortion of voice modulated signals in the high frequency band may be described qualitatively as ranging from a slight tremolo during a mild disturbance to almost complete unreadability for severe conditions. In the present experiment if was found that distortion increased with both the amplitude of components in the fading spectrum and the extent to which higher components were present. The relationship between fading rate and transmission frequency has been investigated, and the results given. A relatively simple derivation for the frequency independence of the forward scattering is found in Appendix II.

Electrical Engineering Research Lab., U. of Texas, Austin.
REFLECTION OF CENTIMETER AND MILLIMETER RADIO WAVES FROM THE SURFACE OF A SMALL LAKE, by A. W. Straiton, J. R. Gerhardt and others. Rept. on Contract Nonr-375(01).

15 May 52, 26p. 5 refs. Rept. no. 63; ATI-194 010.
Order from LC mi$2.70, ph$4.80 PB 144 370

Reflection from the surface of a small lake was measured at wavelengths of 9, 3.2 and 0.86 centimeters with wind speeds over the lake ranging from four to twenty miles per hour. The path length used was 1430 feet and grazing angles up to 3 degrees were reached. Both horizontal and vertical polarizations were used. The nine and three centimeter fields at a given height fluctuated less than one decibel with time and their height-gain curves were easily identified with those predicted by the interference of a direct and a surface reflected wave. The characteristics of the eight and six tenths millimeter waves varied considerably with the degree of surface roughness. On the calmest day, the time variation of the signal at a maximum on the height-gain run was less than one decibel. The same variation increased to one and one-half decibels when the wind speed was thirteen miles per hour and to ten decibels when the wind was twenty miles per hour. The reflection coefficient curves for the various wavelengths and wind conditions are shown in the report.

Electrical Engineering Research Lab., U. of Texas, Austin.
STUDIES OF 2.15mm PROPAGATION AT AN ELEVATION OF 4 Kms AND THE MILLIMETER ABSORPTION SPECTRUM, by C. W. Tolbert, A. W. Straiton, and J. H. Douglas. Rept. on Contracts Nonr-375(01) and Nonr-375(07). 1 Nov 58, 18p. 6 refs. Rept. no. 104.
Order from LC mi$2.40, ph$3.30 PB 144 074

The water vapor losses at a wavelength of 2.15 millimeters were found to be 0.12 db/km/gram/m^3 at an elevation of 4 kilometers. Oxygen losses at the 4 km elevation were unmeasureably small and the scintillation of the signal over a 1.73 km path was less than 0.2 decibel. A calculated water vapor and oxygen absorption spectrum of the millimeter wavelengths, using the Van Vleck-Weisskopf equation and line breadth constants of 0.27 cm^{-1} and 0.02 cm^{-1}, respectively, was found to fit the measured values of absorption at wavelengths of 8.6, 4.3, 3.35 and 2.15 mm much better than do the normally accepted line breadths of 0.1 cm^{-1} for water vapor and 0.02 cm^{-1} for oxygen.

Institute of Mathematical Sciences, New York U., N. Y.
FIELDS IN THE NEIGHBORHOOD OF A CAUSTIC, by Irvin Kay. Rept. on Contract AF 19(604)3495. Sep 59, 23p. 4 refs. Research rept. no. EM-138; AFCRC-TN-59-567.
Order from LC mi$2.70, ph$4.80 PB 143 971

Starting with Picht's solution of the wave equation in the form of an integral of plane waves over a caustic we derive expressions for the solution which depend entirely on the geometry of the problem. An asymptotic evaluation of Picht's integral for high frequencies gives the desired result which can have a number of different forms depending on the precise region where the field is being observed. In particular, a change in the asymptotic field occurs in going from the regular ray field to the caustic or from a regular part of the caustic to a cusp.

A THEORETICAL METHOD FOR THE CALCULATION OF THE RADAR CROSS SECTIONS OF AIRCRAFT AND MISSILES, by J. W. Crispin, Jr., R. F. Goodrich, and K. M. Siegel. Rept. on Contract AF 19(604)1949. July 59, 414p. 143 refs. 2591-1-H; AFCRC-TN-59-774.
Order from LC mi$11.10, ph$63.60 PB 144 373

The problem of characterizing the radar properties of complex targets is such as to forbid a precise delineation of the methods. That this obtains will be made clear below as we point out the methods by means of examples. We will find that, although the formal solutions are known, the application of them to a given radar target usually leads to such complicated and involved treatments as to render these formal solutions practically useless. What is necessary is to first approximate the complex target by a collection of simple shapes, to next find appropriate methods of characterizing the radar properties of the simple shapes, and finally to recombine the simple shapes along with their radar characteristics to give a useful radar description of the original complex target.

Raytheon Mfg. Co., Wayland, Mass.
IONOSPHERE PROPAGATION STUDIES, by Leonard C. Edwards and D. E. Lindsay. Scientific rept. no. 2-7, 15 Sep 58-15 Mar 59, on Contract AF 19(604)2246. 15 Apr 59, 36p. 2 refs. AFCRC-TN-59-559.
Order from LC mi$3.00, ph$6.30 PB 144 379

The material in this report comprises the start of the third consecutive year of measurements over this HF forward scatter link. The results of the measurements indicate very little change in the signal levels for corresponding periods during the three years. During the early part of this period, changes were being incorporated into the Grand Bahama Island station and recording of the Greencastle signal there was not possible. Some measurements were made during February and March, but the signal to noise ratio was very poor. There is some indication, as there was in the case of 29 mc operation, that the signal level on 22 mc is about 10 db higher than expected. Confirmation of this would be dependent on a better knowledge of the gain realizable for the antennas being used for the two links being compared.

Applied Mathematics and Statistics Lab., Stanford U., Calif.
A MEASURE OF THE EFFORT REQUIRED TO INCREASE RELIABILITY, by Arthur Albert. Technical rept. no. 43 on Contract N6onr-251(40). 5 Nov 58, 15p.
Order from LC mi$2.40, ph$3.30 PB 144 317

In this case, failures in the system occur because so many components are involved. The results are therefore not necessarily applicable to the case where the system is unreliable because a few constituent components are highly unreliable. A compromise method would consist of estimating the reliability of sub-systems. In order to arrive at a good experimental design, some method for judging the effort involved in improving the reliability of a sub-system should be defined. For the sake of a preliminary study, we shall consider the simplest possible system, the so-called series system.

Naval Research Advisory Committee, Department of the Navy, Washington, D. C.
BASIC RESEARCH IN THE NAVY. A REPORT TO THE SECRETARY OF THE NAVY, by Arthur D. Little, Inc. Rept. on Contract Nonr-2516(00). 1 June 59, 2 vols. 57 refs.
Order from OTS $7.00(2 vols.) PB 151 925

Contents:
Volume I. Principal findings
Chap. 1. Introduction
Chap. 2. Navy dependence on technology - a brief history: A new era; Rise of the Office of Naval Research
Chap. 3. Basic research - an orientation: What is basic research? The shock wave - a case history; Strength in science indicated by Nobel prizes
Chap. 4. The relation of basic research to the missions of the Navy: Radar - a case history; The transistor - a case history; Importance of the competent man; Requirements for coupling between segments of the research process; Supplementary benefits of Navy basic research; Fields of science related to the missions of the Navy
Chap. 5. An approach to establishing a proper level of Navy participation in basic research: Comparison of Navy and industry basic research allocations; Some of the problems of increasing Navy basic research; A proposed mathematical model of the research process
Volume II. Memoranda
A. Method of Approach
B. Mathematical model
C. Manpower studies
D. Chronology of naval technical developments
E. References and source material

New York U., N. Y.
A STUDY OF CYRILLIC PRINTING TYPES IN RUSSIAN TECHNICAL LITERATURE, WITH SPECIAL REFERENCE TO THEIR APPLICABILITY TO SYSTEMS OF AUTOMATIC PRINT READING, by Charles Boni. Rept. on Russian Type Study, Contract AF 30(602)1824. 28 Apr 59, 190p. RADC-TR-59-35; AD-211 938.
Order from LC mi$8.40, ph$28.80 PB 143 945

An investigation of Russian type styles was conducted on recent and current printing of Russian technical literature to gather data of potential significance in the design of a character-discriminating device for scanning that literature. The following subject areas were selected for investigation and study: (1) physical characteristics of Russian publications, with special reference to papers and inks; (2) formal characteristics of the Cyrillic types used in current Russian publications, including a comparison with Latin alphabet characters; (3) light-reflectance properties of pages of Russian publications according to the imprint patterns left by the inked type on the paper; (4) typographic characteristics of Russian technical printing; (5) Russian proofreading, with special reference to typographic errors and such linguistic errors as misspellings and transpositions; and (6) trends and developments in print of Russian Technical publications.

Office of Ordnance Research, Durham, N. C.
PROCEEDINGS OF THE CONFERENCE [NO. 4] ON THE DESIGN OF EXPERIMENTS IN ARMY RESEARCH, DEVELOPMENT, AND TESTING SPONSORED BY THE ARMY MATHEMATICS STEERING COMMITTEE CONDUCTED AT THE QUARTERMASTER RESEARCH AND ENGINEERING CENTER 22-24 OCTOBER, 1958. Aug 59, 241p. 36 refs. Rept. no. 59-2.
Order from LC mi$11.10, ph$37.80 PB 143 833

Contents:
Errors of the third kind in statistical consulting
The AASHO road test as an example of large scale tests
Multiple correlation of mechanical with ballistic properties of armor plate
Analysis of cathode interface resistance equipment
Experimental designs for bio-assay with Pathogens
The application of experimental designs to radar systems data
Effects of ballistic and meteorological variations on the accuracy of artillery fire
Characteristics of various methods for collecting sensitivity data
Establishing and testing criteria for trajectory smoothing
Evaluation by indirect means of effects of bacteria on an unchallenged host
Determination of performance criteria for Quartermaster corps functions
Program for the interlaboratory determination of compression set of elastomers at low temperatures
An appraisal of sequential analysis under conditions restricted by the requirements for advanced scheduling and programming
Simplified computational procedures for estimating parameters of a normal distribution from restricted samples
Statistical problems associated with missile testing
Application of sequential type design and analysis to field tests
A discourse on a sequential observational program used in a study of a response surface for a complex weapons system
Some statistical aspects of preference and related tests
Statistical methods applied to the textile industry

Syracuse U. Research Inst., N. Y.
MULTIDIMENSIONAL INFORMATION THEORY, by Walter R. Baum and Stanford Goldman. Annual rept. no. 1 through 1 July 58 on Contract Nonr-669(10). Dec 58, 11p. 1 ref. Rept. no. EE494-5812A.
Order from LC mi$2.40, ph$3.30 PB 144 288

The principal purpose of the investigation is to develop an information theory which actually elucidates and makes full use of the multidimensional aspects of multidimensional information. A further purpose of the investigation is to exploit methods or results developed in the course of the work by application to other sciences. The general plan of attack has been along two different lines, both of which are continuing. The first line of attack has been along the line of pure mathematics. This work has included a study of the properties of functionals of multidimensional figures and a generalization of Crofton's ideas of geometric probability. It has also included the application of various advanced mathematical methods to the problem of finding a suitable measure theory for multidimensional figures. The second line of attack has been a study of the use of information in biological systems with the expectation that this will throw light on the salient characteristics of information and its use.

Stanford U., Calif.
ON THE STABILITY OF DYNAMIC PROCESSES, by Hirofumi Uzawa. Technical rept. no. 61 on Contract N6onr-21533. 28 Nov 58, 16p. 7 refs.
Order from LC mi$2.40, ph$3.30 PB 144 165

In economic analysis the question is raised whether or not the values of the prices or quantities changing subject to economic laws approach equilibrium values. With respect to the price mechanism of the competitive market, the stability problem has been extensively investigated and the price mechanism formulated as a system of differential equations. In the theory of optimum resource allocation, various dynamic processes which represent the competitive price mechanism are also formulated as systems of differential equations and it is questioned whether or not the optimum activity levels are stable. In the present note a system of differential equations is considered which represents a general dynamic process, and gives a sufficient condition for the stability of the system.

Wisconsin U., Madison.
HIGH LATITUDE FRONTIER SETTLEMENT, by Kirk H. Stone. Annual rept. on Contract [Nonr-1202(05)]. 1 Dec 58, 14p. U. of Wis. no. 484:2439.
Order from LC mi$2.40, ph$3.30 PB 143 859

The chief objective is to determine the planning procedures which will insure the maximum degree of permanence of present and future frontier settlement in the North American Subarctic and Arctic. This research is limited to people of races which are primarily mid-latitude inhabitants and does not include more than general consideration of native high latitude groups like the Eskimo, Indian, and Same (Lapp). In order to accomplish the chief objective it is essential to determine methods by which the permanence of frontier settlement may be measured. A secondary objective is to establish what the basic characteristics are of all high latitude frontier settlement by non-indigenous races in order to classify such settlement for analysis regarding social, economic, and military significance. Another secondary objective is to train Scandinavian and American graduate geographers in frontier settlement research so as to accelerate such study as well as to promote closer professional and personal relations between the countries involved.

Documentation

Armed Services Technical Information Agency, Arlington, Va.
AUTOMATION OF ASTIA: A PRELIMINARY REPORT, by William A. Barden, William Hammond, and J. Heston Heald. Dec 59, 55p. AD-227 000.
Order from OTS $1.25 PB 161 306

Early considerations in automation: The history of ASTIA's experience in planning and implementing the automation of its functions is presented. Different ideas were examined and discarded in a search for a more efficient method of indexing and retrieving information. In 1953 a preliminary study based on a systems concept embracing all the functions and services of the Agency was conducted, but a full scale study was not possible until 1958. When the final selection of the Remington Rand USS-90 (Univac Solid State Computer) was made, the ASTIA staff devised methods for making optimum use of the equipment in both the business-type and information retrieval functions. Automation program: The pre-automation and automated processing of reports through ASTIA and validation of requests of military contractors is described. The three stages by which the automatic data processing system will be put into operation are examined, and the process of compiling mechanized cumulative indexes to the Technical Abstract Bulletin is presented. Creation of a Thesaurus of Scientific Descriptors: The main objectives of Project MARS (Machine Retrieval System) are: (1) to prepare a Thesaurus of descriptors; and (2) to assign these descriptors to all AD numbered reports in the ASTIA collection. The ASTIA subject headings and subdivisions were overhauled and the list reduced from 70,000 to about 7,000 headings, now termed descriptors. The scope of subject coverage was divided into about 290 generic categories called display schedules. Procedures were established for the assignment of retrieval terms, both standard descriptors from the Thesaurus and "open-ended terms" which will not appear in the Thesaurus but will provide additional retrieval access points in the form of project names, equipment nomenclature, trade names, etc.

Case Inst. of Tech., Cleveland, Ohio.
AN OPERATIONS RESEARCH STUDY OF THE DISSEMINATION OF SCIENTIFIC INFORMATION, by Michael H. Halbert and Russell L. Ackoff. 14 Feb 58, 62p.
Order from LC mi$3.90, ep$12.30 PB 144 328

PILOT STUDY ON THE USE OF SCIENTIFIC LITERATURE BY SCIENTISTS, by Ralph R. Shaw. Rept. on National Science Foundation Grant G-536. 21 Nov 56, 104p. 33 refs.
Order from LC mi$5.70, ep$18.30 PB 144 327

ATOMIC ENERGY COMMISSION REPORTS

Reports may be purchased in accordance with instructions on the inside front cover of the U. S. GOVERNMENT RESEARCH REPORTS. As PB numbers are not indicated, order by series and number These reports may also be consulted at any AEC Depository Library. A list of these libraries may be obtained from the U. S. Department of Commerce. Office of Technical Services, Washington 25, D. C.

Reproduction in whole or part of any report listed herein is encouraged by the U. S. Atomic Energy Commission, subject to the approval of authors or originating sites. General inquiries from the industrial press about AEC-developed information should be directed to the Industrial Information Branch, Atomic Energy Commission, Washington 25, D C..

Biology and Medicine

The toxicity of indium, by W. L. Downs, J. K. Scott, L. T. Steadman, and E. A. Maynard. The University of Rochester. Atomic Energy Project. Radiation Chemistry and Toxicology Division, Rochester, N. Y. Nov 59. Contract W-7401-eng-49. 57p. Order from OTS. $1.75. UR-558

Studies on the toxicity of thorium nitrate, by W. L. Downs, J. K. Scott, E. A. Maynard, and H. C. Hodge. The University of Rochester. Atomic Energy Project, Radiation Chemistry and Toxicology Division, Rochester, N. Y. Dec 59. Contract W-7401-eng-49. 35p. Order from OTS. $1.00. UR-561

The phospholipide and phospholipide-fatty-acid composition of human serum lipoprotein factors, by G. J. Nelson and H. K. Freeman. University of California. Lawrence Radiation Laboratory, Berkeley, Calif. Oct 59. Contract W-7405-eng-48. 23p. Order from OTS. 75 cents. UCRL-8930

Chemistry—General

Thermochemical studies of organic fluorine compounds. Final report. Univ. of Colorado. Boulder, Colo. (nd). Contract AT(11-1)-168. 72p. Order from LC. Mi $4.50, ph $12.30. AECU-4201

The aqueous solubility of UF_4, by A. W. Savage, Jr., and J. C. Browne. Los Alamos Scientific Lab., Los Alamos, N. Mex. [1958?]. Contract W-7405-eng-36. 9p. Order from LC. Mi $1.80, ph $1.80. AECU-4244

Correlation of polarographic data with structure. Use of the Hammett-Taft relation. Report no. 48, by P. J. Elving and J. M. Markowitz. Univ. of Michigan, Ann Arbor, Mich. Sep 58. Contract AT(11-1)-70. 12p. Order from LC. Mi $2.40, ph $3.30. AECU-4254

Determination of hydrogen in solid hydride compounds by use of induction heating, by R. A. Dunleavy, M. R. Menke, and E. W. Rebol. General Electric, Atomic Products Div., Aircraft Nuclear Propulsion Dept., Cincinnati, Ohio. Jan 56. Contracts AT(11-1)-171 and AF 33(600)-38062. 7p. Order from OTS. 50 cents. APEX-243

Methods for the study of gas-metal reactions in ultra-high vacuum, by G. R. Love. Oak Ridge National Laboratory, Oak Ridge, Tenn. June 59. Contract W-7405-eng-26. 33p. Order from LC. Mi $3.00, ph $6.30. CF-58-9-93

Spectrographic analysis of normal human tissue from Richmond, Virginia, by I. H. Tipton, M. J. Cook, J. M. Foland, J. Rittner M. Hardwick, and K. K. McDaniel. Oak Ridge National Laboratory, Oak Ridge, Tenn. Aug 59. 52p. Order from LC. Mi $3.60, ph $9.30. CF-59-8-106

Equilibrium calculation in the system: Uranyl nitrate, nitric acid, water, TBP, and kerosene diluent using the oracle digital computer, by S. H. Jury and M. E. Whatley. Oak Ridge National Laboratory, Oak Ridge, Tenn. Aug 59. Contract W-7405-eng-26. 28p Order from LC. Mi $2.70, ph $4.80. CF-59-8-122

An automatic water deaeration system, by J. R. Raymond. General Electric Co., Hanford Atomic Products Operation, Richland, Wash. Apr 59. Contract W-31-109-Eng-52. 7p. Order from LC. Mi $1.80, ph $1.80. HW-60058

Sequential separation of some actinide elements by anion exchange, by F. P. Roberts and F. P. Brauer. General Electric Co. Hanford Atomic Products Operation, Richland, Wash. June 59. Contract W-31-109-Eng-52. 9p. Order from LC. Mi $1.80, ph $1.80. HW-60552

A remote phase separation bulb for highly radioactive sample analyses, by M. H. Campbell. General Electric Co. Hanford Atomic Products Operation, Richland, Wash. July 59. 12p. Order from LC. Mi $2.40, ph $3.30. HW-61179

Reliability of mass spectrometric determination of boron isotope abundance, by W. O. Haas, Jr., F. M. Rourke, J. L. Mewherter, and P. H. McDonald. General Electric Co., Knolls Atomic Power Lab., Schenectady, N. Y. Oct 59. Contract W-31-109-Eng-52. 19p. Order from OTS. 75 cents. KAPL-2062

The density of liquid plutonium metal, by C. E. Olsen, T. A. Sandenaw, and C. C. Herrick. The University of California. Los Alamos Scientific Lab., Los Alamos, N. Mex. Dec 59. Contract W-7405-ENG-36. 14p. Order from OTS. 75 cents. LA-2358

Uses of depleted uranium, by J. E. Donahue and A. E. Higinbotham. Massachusetts Institute of Technology. Engineering Practice School, Oak Ridge, Tenn. Nov 59. Contract W-7405-eng-26. Subcontract 70. 32p. Order from OTS. $1.00. MIT-OR-5

Effect of a thermal gradient on the hydrogen distribution in a metal. Application to the sodium reactor experiment, by G. G. Libowitz. Atomics International. A Division of North American Aviation, Inc. Canoga Park, Calif. Dec 59. Contract AT(11-1)-GEN-8. 20p. Order from OTS. 75 cents. NAA-SR-4194

Semiannual progress report for the period January 1959 through June 1959, by C. J. Rodden and others. New Brunswick Laboratory, New Brunswick, N. J. Oct 59. 63p. Order from OTS. $1.75. NBL-156

Particle size reduction during ultrasonic precipitation of thorium oxalate, by J. L. Straughn and W. B. Tarpley. Aeroprojects, Inc., West Chester, Pa. June 59. Contract AT(30-1)-1836. 51p. Order from LC. Mi $3.60, ph $9.30. NYO-7935

Measurement of radiative lifetimes. I. An apparatus for measurement of millimicrosecond radiative lifetimes of gas-phase molecules. II. The radiative lifetime of the $B\,^3O_u^+$ state of I_2 by two absolute absorption methods. Thesis, by F. E. Stafford. Appendix: Description of electronic system, by J. M. Sakai and F. E. Stafford. University of California. Lawrence Radiation Laboratory, Berkeley, Calif. Sep 59. Contract W-7405-eng-48. 128p. Order from OTS. $2.75. UCRL-8854

Charged-particle-induced fission: A mass spectrometric yield study. Thesis, by Y. Y. Chu. University of California. Lawrence Radiation Laboratory, Berkeley, Calif. Nov 59. Contract W-7405-eng-48. 75p. Order from OTS. $2.00. UCRL-8926

Bio-organic chemistry quarterly report for June, July, August 1959. University of California. Lawrence Radiation Laboratory, Berkeley, Calif. Sep 59. Contract W-7405-eng-48. 58p. Order from OTS. $1.50. UCRL-8961

Chemistry—Radiation and Radiochemistry

Concentration and final purification of neptunium by anion exchange, by J. L. Ryan. General Electric Co. Hanford Atomic Products Operation, Richland, Wash. Sep 59. Contract AT(45-1)-1350. 18p. Order from OTS. 75 cents. HW-59193 REV

Radioisotopes in industry. Report by National Industrial Conference Board, Inc. (nd). Con-AT(30-1)-2135. 136p. Order from OTS. $2.75. NYO-2977

Chemistry—Separation Processes for Plutonium and Uranium

Total cross sections of tritium hydrogen, and helium for fast neutrons, by J. H. Coon, R. O. Bondelid, and D. D. Phillips. Los Alamos Scientific Lab., Los Alamos, N. Mex. Oct 52. Decl. with deletions May 12, 1955. Contract W-7405-eng-36. 12p. Order from LC. Mi $2.40, ph $3.30. AECD-4284

Activation analysis of trace cobalt in tissue using 10.5-minute cobalt-60m, by D. G. Kaiser and W. W. Meinke. Univ. of Michigan. Ann Arbor, Mich. 1959. 13p. Order from LC. Mi $2.40, ph $3.30. AECU-4289

A study of equilibria involved between Darex off-gases and solutions. Annual report no. 1 for December 1, 1958 through July 31, 1959, by C. Orr, Jr., M. C. Kordecki, J. K. Gladden, and C. T. Young. Georgia Institute of Technology. Engineering Experiment Station, Atlanta, Ga. 1959. Contract W-7405-eng-26. 39p. Order from LC. Mi $3.00, ph $6.30. AECU-4304

A study of equilibria involved between Darex off-gases and solutions. A literature survey on the solubility of argon, chlorine, hydrogen chloride, nitric oxide, nitrogen, nitrogen dioxide, nitrous oxide and oxygen in water, nitric acid, hydrochloric acid and aqua regia. Special report no. 1, by T. W. Wilson. Georgia Institute of Technology. Engineering Experiment Station, Atlanta, Ga. June 59. Contract W-7405-eng-26. 107p. Order from LC. Mi $5.70, ph $16.80. AECU-4319

Solids accumulation and fission heating in the HRT Chemical Plant underflow pot (Co-op report, fall quarter, 1958), by W. E. Dunn. Oak Ridge National Laboratory, Oak Ridge, Tenn. June 59. Contract W-7405-eng-26. 14p. Order from LC. Mi $2.40, ph $3.30. CF-59-6-121

Decontamination of the PRFR Pilot Leaching Plant--Preliminary process design, by H. A. McLain. Oak Ridge National Laboratory, Oak Ridge, Tenn. July 59. Contract W-7405-eng-26. 9p. Order from LC. Mi $1.80, ph $1.80. CF-59-7-75

Reprocessing of ARE fuel, volatility Pilot Plant runs E-3 through E-6, by C. L. Whitmarsh. Oak Ridge National Laboratory, Oak Ridge, Tenn. Aug 59. 39p. Order from LC. Mi $3.00, ph $6.30. CF-59-8-73

Additional information on Eurochemic air sampling system, by E. M. Shank. Oak Ridge National Laboratory, Oak Ridge, Tenn. Sep 59. 2p. Order from LC. Mi $1.80, ph $1.80. CF-59-9-44

Estimate of potential fuel reprocessing, revision no. 29--Part A, by J. W. Ullmann. Oak Ridge National Laboratory, Oak Ridge, Tenn. Sep 59. 9p. Order from LC. Mi $1.80, ph $1.80. CF-59-9-51

Dissolution of thorium in mixtures of HNO_3 and HF, by D. G. Karraker and others. E. I. du Pont de Nemours & Co. Explosives Dept. Atomic Energy Div., Technical Div., Savannah River Lab., Aiken, S. C. Sep 59. Contract AT(07-2)-1. 16p. Order from OTS. 50 cents. DP-399

Reprocessing of power reactor fuels. Eighth quarterly progress report, July 1, 1959 to October 1, 1959, by E. S. Occhipinti and others. E. I. du Pont de Nemours & Co. Explosives Div., Atomic Energy Div., Technical Div., Savannah River Laboratory, Aiken, S. C. Nov 59. Contract AT(07-2)-1. 11p. Order from OTS. 50 cents. DP-439

Chemical stability of purex and uranium recovery process solvent, by R. H. Moore. General Electric Co. Hanford Atomic Products Operation, Richland, Wash. Mar 55. Decl. July 15, 1959. Contract W-31-109-Eng-52. 15p. Order from LC. Mi $2.40, ph $3.30. HW-34501

The removal of iodine from dissolver off-gas by caustic scrubbing, by K. V. Seyfrit. General Electric Co. Hanford Atomic Products Operation, Richland, Wash. May 57. Decl. with deletions July 7, 1959. Contract W-31-109-Eng-52. 6p. Order from LC. Mi $1.80, ph $1.80. HW-50259(Del.)

Pretreatment of fuel elements. Technical report no. 48: Chapter 130, by E. Detrilleux. European Company for the Chemical Processing of Irradiated Fuels, Mol, Belgium. [1958]. 10p. Order from LC. Mi $1.80, ph $1.80. NP-7754

Basic Chemistry. Technical report no. 38. Chapter 120, by S. Ahrland. European Company for the Chemical Processing of Irradiated Fuels, Mol, Belgium. 1959. 33p. Order from LC. Mi $3.00, ph $6.30. NP-7775

Introduction. Summary of work and plans. Report ED-I, Chapter 100, by E. Haeffner. European Company for the Chemical Processing of Irradiated Fuels, Mol, Belgium. 1959. 30p. Order from LC. Mi $3.00, ph $6.30. NP-7781

Activity Balance. Technical report no. 51, Chapter 160, by E. Detilleux, A. Redon, and M. Zifferero. European Company for the Chemical Processing of Irradiated Fuels, Mol, Belgium. [nd]. 9p. Order from LC. Mi $1.80, ph $1.80 NP-7783

Eurochemic purex flowsheets: No. 1. Drawing 89a and No. 2. Drawings 89b and 90b. European Company for the Chemical Processing of Irradiated Fuels, Mol, Belgium. 1959. Order from LC. Mi $3.30, ph $7.80. NP-7827

Safety hazards considerations. Technical report no. 45, Chapter 500, by H. H. Ph. Moeken and J. J. H. Alderhout. European Company for the

Chemical Processing of Irradiated Fuels, Mol, Belgium. 22p. Order from LC. Mi $2.70, ph $4.80. NP-7834

The site: Preliminary report on soil and underground water investigation. Technical report 44, Chapter 300, by E. Lüscher. European Company for the Chemical Processing of Irradiated Fuels, Mol, Belgium. [1959]. 22p. Order from LC. Mi $2.70, ph $4.80. NP-7846

Preliminary cost estimates. Technical report no. 47, Chapter 600, O. Jenne, E. Lüscher, M. Lung, F. Marcus, and A. Redon. European Company for the Chemical Processing of Irradiated Fuels, Mol, Belgium. [1957?] 5p. Order from LC. Mi $1.80, ph $1.80. NP-7853

Instrumentation: Principles, Specifications, flow sheets, data sheets, electrical equipment. Technical report no. 53. Chapter 220, by R. Winckler. European Company for the Chemical Processing of Irradiated Fuels, Mol, Belgium. 1959. 35p. Order from LC. Mi $3.60, ph $9.30. NP-7862

Chemical process flowsheets. Technical report no. 49, Chapter 140, by E. Detilleux, M. Lang, E. L. Nicholson, and A. Redon. European Company for the Chemical Processing of Irradiated Fuels, Mol, Belgium. [1959]. 55p. Order from LC. Mi $4.40, ph $12.30. NP-7866

Layout principles of main plant building. Technical report no. 46, Chapter 400, by E. Lüscher. European Company for the Chemical Processing of Irradiated Fuels, Mol, Belgium. [1959]. 3p. Order from LC. Mi $1.80, ph $1.80. NP-7867

Routine analytical laboratory requirements. Technical report no. 36, Chapter 410, by K. Samsahl and W. Schüller. European Company for the Chemical Processing of Irradiated Fuels, Mol, Belgium. [1959]. 11p. Order from LC. Mi $2.40, ph $3.30. NP-7868

Site development. Building arrangements. Technical report no. 43, Chapter 310, by E. Lüscher. European Company for the Chemical Processing of Irradiated Fuels, Mol, Belgium. [1959]. 4p. Order from LC. Mi $1.80, ph $1.80. NP-7869

Drawing standards for equipment and instrument flowsheets. Technical report no. 39, Chapter 200, by O. Jenne and R. Winckler. European Company for the Chemical Processing of Irradiated Fuels, Mol, Belgium. [nd]. 13p. Order from LC. Mi $2.40, ph $3.30. NP-7870

Fuel element investigation compilation of data. Report ED-C Rev., Chapter 110. European Company for the Chemical Processing of Irradiated Fuels, Mol, Belgium. 1959. 24p. Order from LC. Mi $2.70, ph $4.80. NP-7872

Chemical engineering. Technical report no. 41, Chapter 210. Appendix includes 37 drawings. European Company for the Chemical Processing of Irradiated Fuels, Mol, Belgium. 1959. 10p. Order from LC. Mi $11.10, ph $93.60. NP-7881

Sulfex process: Depassivation of stainless steel, by T. A. Gens. Oak Ridge National Laboratory, Chemical Technology Div., Oak Ridge, Tenn. [nd]. Contract W-7405-eng-26. 13p. Order from OTS. 50 cents. ORNL-2785

Controlled Thermonuclear Processes

Little pig plasma experiment. University of California. Radiation Laboratory, Livermore, Calif. Oct 58. 6p. Order from LC. Mi $1.80, ph $1.80. AECU-4309

Controlled Thermonuclear Research quarterly report, March, April, May 1959. University of California. Lawrence Radiation Laboratory, Berkeley and Livermore, Calif. June 59. Contract W-7405-eng-48. 102p. Order from OTS. $2.50. UCRL-8775

Criticality Studies

Multiplication measurements with highly enriched uranium metal slabs, by J. T. Mihalczo and J. J. Lynn. Oak Ridge National Laboratory, Oak Ridge, Tenn. July 59. Contract W-7405-eng-26. 35p. Order from LC. Mi $3.00, ph $6.30. CF-59-7-87

Isolation thicknesses of water for UO_2F_2 solution systems, by C. L. Schuske and A. N. Nickel. The Dow Chemical Company. Rocky Flats Plant, Denver, Colo. Dec 59. Contract AT(29-1)-1106. 11p. Order from OTS. 50 cents. RFP-169

SS Materials Management Meeting, May 25-28, 1959. United States Atomic Energy Commission, Nuclear Materials Management Div., Oak Ridge, Tenn. Nov 59. 227p. Order from OTS. $2.25. TID-7581

Health and Safety

Proceedings of the Second Industrial Medical Conference, Carbide and Carbon Chemicals Corporation, held at K-25 Plant Dispensary, Oak Ridge, Tennessee, August 18-20, 1948. Carbide and Carbon Chemicals Corp., K-25 Plant, Oak Ridge, Tenn. 119p. Order from LC. Mi $6.30, ph $19.80. AECU-4277

Special report on operation of KIWI-A reactor. Period covered: May, June, July, 1959, by O. R. Placak. Atomic Energy Commission. Nevada Test Organization, Off-site Radiological Safety Activities. July 59. 34p. Order from LC. Mi $3.00, ph $6.30. AECU-4294

The scattering of thermal radiation into open underground shelters, by T. P. Davis, N. D. Miller, T. S. Ely, J. A. Basso, and H. E. Pearse. University of Rochester, Atomic Energy Project, Rochester, New York. Oct. 59. 23p. Order from OTS. 75 cents. CEX-58.2

High-altitude sampling techniques. Progress report. University of Chicago, Chicago Midway Labs., Chicago, Ill. July 59. Contract AT(11-1)-508. 9p. Order from LC. Mi $1.80, ph $1.80. CML-SR-M-124-7

A proposed nuclear safety indicator for contact maintenance purposes, by G. M. Muller and N. Ketzlach. General Electric Co. Hanford Atomic Products Operation, Richland, Wash. Oct 55. Decl. Apr. 2, 1959. 3p. Order from LC. Mi $1.80, ph $1.80. HW-39433

A personnel film badge neutron dosimeter, by F. Swanberg, Jr. General Electric Co. Hanford Atomic Products Operation, Richland, Wash. May 59. Contract W-31-109-Eng-52. 16p. Order from LC. Mi $2.40, ph $3.30. HW-56827 (Rev.)

Health physics semiannual report for January-June 1959, by W. H. Truran. Knolls Atomic Power Lab., Schenectady, N. Y. 1959. Contract W-21-109-Eng-52. 20p. Order from LC. Mi $2.40, ph $3.30. KAPL-M-HP-1

Problems of air-borne contamination in handling PuF_4 powders, by W. R. Kennedy, A. Dumrose, and A. Ludwig. Los Alamos Scientific Lab., Los Alamos, N. Mex. July 47. Decl. Apr. 27, 1959. 18p. Order from LC. Mi $2.40, ph $3.30. LAMS-596

Soil sampling program for determining world-wide distribution of strontium 90. Summary of remarks to be made by L. T. Alexander to the Conference on the Passage of Fission Products through Food Chains at Harwell, England. Department of Agriculture. Soil Survey Labs., Beltsville, Md. Sep 58. 13p. Order from LC. Mi $2.40, ph $3.30. M-7089

Analysis of stratospheric strontium-90 measurements, by L. Machta and R. J. List. Weather Bureau, Washington, D. C. Mar 59. 22p. Order from LC. Mi $2.70, ph $4.80. M-7090

Field trial of treatments affecting strontium uptake. Department of Agriculture. 1954. 8p. Order from LC. Mi $1.80, ph $1.80. M-7123

High-level spill at the Hilac, by N. B. Garden and C. Dailey. University of California. Lawrence Radiation Laboratory, Berkeley, Calif. Sep 59. Contract W-7405-eng-48. 40p. Order from OTS. $1.25. UCRL-8919

Radioactivity of thorium and feasibility of in vivo thorium measurements, by R. E. Cofield. Union Carbide Nuclear Co. Division of Union Carbide Corp., Y-12 Plant, Oak Ridge, Tenn. Nov 59. Contract W-7405-eng-26. 25p. Order from OTS. $1.00. Y-1280

Instruments

Medium low-level soft-beta counting equipment, by J. E. Lewis. Radiochemistry, Inc., Louisville, Ky. June 59. Contract AT(11-1)-530. 35p. Order from LC. Mi $3.00, ph $6.30. AECU-4232

Upper atmosphere monitoring program. Report no. 1907. Progress report no. 7. Covering period February 1, 1959 through April 30, 1959, by J. Baumstark, S. Jones, R. Olson, A. Schekman, S. Stern, L. Torgeson, and W. Zeller. General Mills, Inc., Minneapolis. July 59. Contract AT(11-1)-401. 74p. Order from LC. Mi $3.90, ph $10.80. AECU-4280

Centrifuge for radiochemical processing. Little (Arthur D.) Inc., Cambridge, Mass. Sep 55. Contract W-7405-eng-26. 35p. Order from LC. Mi $3.00, ph $6.30. ALI-C-59535

An improved nuclear density gauge. Period covered June 1 to July 1, 1959, by G. M. Burgwald and

C. A. Stone. Illinois Institute of Technology. Armour Research Foundation, Chicago, Ill. June 59. Contract AT(11-1)-745. 4p. Order from LC. Mi $1.80, ph $1.80. ARF-1152-1

An improved nuclear density gauge. Period covered July 1 to August 1, 1959, by G. M. Burgweld. Illinois Institute of Technology. Armour Research Foundation, Chicago, Ill. Aug 59. Contract AT(11-1)-745. 4p. Order from LC. Mi $1.80, ph $1.80. ARF-1152-2

The effect of freon-114 on space recorders, by W. E. Hensel, Jr. Goodyear Atomic Corp., Portsmouth, Ohio. Apr 58. Decl. with deletions July 23, 1959. Contract AT(33-2)-1. 14p. Order from LC. Mi $2.40, ph $3.30. GAT-232(Del.)

Ring gasket punch guide, by K. B. Booth. Goodyear Atomic Corp., Portsmouth, Ohio. Dec 57. Contract AT(33-2)-1. 2p. Order from LC. Mi $1.80, ph $1.80. GAT-L-431

Factors affecting power transformer failure. A bibliography, by R. D. Hamilton. Goodyear Atomic Corp., Portsmouth, Ohio. Sep 59. Contract AT(33-2)-1. 25p. Order from LC. Mi $2.70, ph $4.80. GAT-T-574

Critical incident alarm--Model I: Instruction and maintenance manual, by P. R. Kelly. General Electric Co. Hanford Atomic Products Operation, Richland, Wash. May 59. 14p. Order from LC. Mi $2.40, ph $3.30. HW-60320

Conversion of mica-window G-M tube lead-pig counters to scintillation detection, by W. G. Spear and G. D. Crouch. General Electric Co. Hanford Atomic Products Operation, Richland, Wash. May 59. 8p. Order from LC. Mi $1.80, ph $1.80. HW-60338

An eddy current channel spacing gage, by A. C. Lind. Knolls Atomic Power Lab., Schenectady, N. Y. June 59. Contract W-31-109-Eng-52. 37p. Order from LC. Mi $3.00, ph $6.30. KAPL-M-ACL-1

Elements of fuel contamination control by alpha counting, by P. L. Eisenacher. Knolls Atomic Power Lab., Schenectady, N. Y. Aug 59. Contract W-31-109-Eng-52. 15p. Order from LC. Mi $2.40, ph $3.30. KAPL-M-PLE-2

A graphite-CO_2 ionization chamber instrument for gamma ray dose rate measurements with a six decade range, fast response and remote recording, by F. C. V. Worman and P. S. Harris. The University of California. Los Alamos Scientific Laboratory, Los Alamos, N. Mex. Dec 59. Contract W-7405-ENG-36. 18p. Order from OTS. 75 cents. LA-2361

A coil type level gauge for high temperature liquid metals, by G. E. Turner. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Nov 59. Contract AT(11-1)-GEN-8. 25p. Order from OTS. 75 cents. NAA-SR-4195

Improved alpha spectroscopy using a modified frisch grid ionization chamber and a 256-channel analyzer, by T. B. Crockett, T. T. McMillan, and J. W. Crowe. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Jan 60. Contract AT(11-1)-GEN-8. 22p. Order from OTS. 75 cents. NAA-SR-4433

A transistorized six-channel airborne strain gage calibrator and excitation unit, by R. H. Gablehouse and C. E. Erickson. Sandia Corp., Albuquerque, N. Mex. Nov 59. 22p. Order from OTS. 75 cents. SCR-128

Flying spot scanner investigation, by E. J. Bernard and E. L. Checketts. Sandia Corp., Albuquerque, N. Mex. June 59. 32p. Order from LC. Mi $3.00, ph $6.30. SCTM-120-59(15)

Transistorized audio amplifier PA-2W-1A, by M. H. Brock. Sandia Corp., Albuquerque, N. Mex. May 59. 10p. Order from LC. Mi $1.80, ph $1.80. SCTM-164-59-52

Power supply, by M. H. Brock. Sandia Corp., Albuquerque, N. Mex. May 59. 10p. Order from LC. Mi $1.80, ph $1.80. SCTM-165-59-(52)

Reliability considerations in circuit design, by A. M. Breipohl. Sandia Corp., Albuquerque, N. Mex. July 59. 21p. Order from LC. Mi $2.70, ph $4.80. SCTM-226-59-(15)

A large bakeable vacuum valve, by R. H. Batzer. University of California. Lawrence Radiation Lab., Livermore, Calif. Aug 59. Contract W-7405-eng-48. 13p. Order from LC. Mi $2.40, ph $3.30. UCRL-5649

Liquid-hydrogen target, by D. D. Newhart, V. Perez-Mendez, and W. L. Pope. University of California, Lawrence Radiation Lab., Berkeley, Calif. Aug 59. Contract W-7405-eng-48. 15p. Order from OTS. 75 cents. UCRL-8857

Isotopes-Industrial Technology

Expanding the utilization of radioisotopes and nuclear techniques in food toxicology and processing, by J. H. Rust. Massachusetts Institute of Technology, Dept. of Food Technology, Cambridge, Mass. Nov 59. Contract AT(30-1) 2309. 61p. Order from OTS. 75 cents. AECU-4327

Radioisotopes at work for agriculture, by A. G. Homan and R. R. Tarrice. Stanford Research Institute, Menlo Park, Calif. Oct 59. Contract AT(04-3)-115. 198p. Order from OTS. $3.50. SRIA-9

Radiation application and fission product utilization. A bibliography of selected unclassified literature, by G. A. Young. U. S. Atomic Energy Commission, Office of Isotopes Development, Washington, D. C. July 59. 187p. Order from OTS. $1.75. TID-3046 (Suppl. 2)

Industrial applications of radioisotopes and associated techniques. A literature search, by R. L. Scott. Atomic Energy Commission, Technical Information Service Extension, Oak Ridge, Tenn. Nov 59. 30p. Order from OTS. 75 cents. TID-3539

Metallurgy and Ceramics

The determination of the equilibrium phase diagram, zirconium-niobium. Period covered: July 1 to August 1, 1959, by C. E. Lundin. University of Denver, Denver Research Institute, Denver, Colo. Aug 59. Contract AT(11-1)-752. 5p. Order from LC. Mi $1.80, ph $1.80. AECU-4284

Study of factors influencing ductility of iron-aluminum alloys. Period covered: March 15, 1959 to March 15, 1960, by F. C. Perkins and J. F. Nachman. University of Denver. Denver Research Institute, Denver, Colo. Aug 59. Contract AT(11-1)-742. 9p. Order from LC. Mi $1.80, ph $1.80. AECU-4290

Adsorption of silicic acid on thoria-determined by infrared spectroscopy. Technical report no. V, by G. J. Spaepen, R. T. Wimber, and M. E. Wadsworth. University of Utah. Institute of Metals and Explosives Research, Salt Lake City, Utah. June 59. Contract W-7405-eng-26. 38p. Order from LC. Mi $3.00, ph $6.30. AECU-4299

Bonding uranium carbide to tantalum, by M. G. Bowman. Los Alamos Scientific Lab., Los Alamos, N. Mex. May 59. 2p. Order from LC. Mi $1.80, ph $1.80. AECU-4303

Ultrasonic power requirements for processing LMFR blanket to produce equiaxed thorium bismuthide particles, by W. B. Tarpley, C. D. McKinney, Jr., and J. G. Thomas. Aeroprojects, Inc., West Chester, Pa. Apr 59. Contract AT-30-2-GEN-16. 47p. Order from LC. Mi $3.30, ph $7.80. AECU-4333

Measurements of mechanical properties of pure and uranium-loaded graphites at elevated temperatures. Final report for June 27, 1957 through December 15, 1958, by L. Green, Jr., M. L. Stehsel, and C. E. Waller. Aerojet-General Corp., Azusa, Calif. Dec 58. [Sub] contract CTU-86039-1. 145p. Order from LC. Mi $7.20, ph $22.80. AGC-1537

Irradiation of extrusion-clad uranium-2 w/o zirconium alloy for EBR-1, Mark III, by J. H. Kittel. Argonne National Laboratory, Lemont Ill. Oct 59. Contract W-31-109-eng-38. 18p. Order from OTS. 75 cents. ANL-5918

Modification of CP-5 fuel assemblies for fuel capsule irradiation experiments, by W. N. Beck, J. H. Kittel and F. L. Brown. Argonne National Laboratory, Lemont, Ill. Nov 59. Contract W-31-109-eng-38. 24p. Order from OTS. 75 cents. ANL-6041

Examination of jacketed uranium slugs from the Los Alamos fast reactor "Clementine", by S. H. Paine, W. F. Murphy, and F. L. Brown. Argonne National Laboratory, Lemont, Ill. Oct 59. Contract W-31-109-eng-38. 17p. Order from OTS. 75 cents. ANL-6048

Examination of irradiated experimental NRU fuel rods, by S. H. Paine and W. F. Murphy. Argonne National Laboratory, Lemont, Ill. Nov 59. Contract W-31-109-eng-38. 26p. Order from OTS. 75 cents. ANL-6059

Experimental and theoretical studies of the solidification of uranium castings, by E. L. Foster, Jr., B. L. Fletcher, C. K. Franklin, A. Lechler, and R. F. Dickerson. Battelle Memorial Institute, Columbus, Ohio. Oct 59. Contract W-7405-eng-92. 61p. Order from OTS. $1.75. BMI-1390

Metallurgical studies of niobium-uranium alloys, by J. A. DeMastry, F. R. Shober, and R. F. Dickerson. Battelle Memorial Institute,

Columbus, Ohio. Dec 59. Contract W-7405-eng-92. 44p. Order from OTS. $1.25. BMI-1400

Metallographic examination of L6Z-114 in-pile autoclave pins, by A. E. Richt. Oak Ridge National Laboratory, Oak Ridge, Tenn. Feb 58. Contract W-7405-eng-26. 10p. Order from LC. Mi $1.80, ph $1.80. CF-58-2-15

Application of electroless-nickel brazing to tubular fuel elements for the N. S. Savannah. Status report, by J. T. Lamartine and W. C. Thurber. Oak Ridge National Laboratory, Oak Ridge, Tenn. June 59. Contract W-7405-eng-26. 31p. Order from LC. Mi $3.00, ph $6.30. CF-59-6-55

Run 300A-8 initial slurry run of 300A pump and loop, by J. C. Moyers. Oak Ridge National Laboratory, Oak Ridge, Tenn. July 59. Contract W-7405-eng-26. Order from LC. Mi $1.80, ph $1.80. CF-59-7-35

Secondary-side water treatment for corrosion control in aluminum heat exchangers: Practices and results at the Oak Ridge Research Reactor, by P. D. Neumann. Oak Ridge National Laboratory, Oak Ridge, Tenn. Aug 59. Contract W-7405-eng-26. 19p. Order from LC. Mi $2.40, ph $3.30. CF-59-8-50

Corrosion in hydrogen sulfide-water systems, by J. A. Snyder and D. Warren. Du Pont de Nemours (E. I.) & Co., Engineering Research Laboratory, Wilmington, Del. Oct 55. Decl. Mar. 7, 1957. Contract AT(07-2)-1. 240p. Order from LC. Mi $11.10, ph $37.80. DP-96

Corrosion of zirconium, carbon steel, and stainless steel in high temperature water, by R. J. Lobsinger. General Electric Co. Hanford Atomic Products Operation, Richland, Wash. Aug 58. Contract W-31-109-Eng-52. 11p. Order from LC. Mi $2.40, ph $3.30. HW-56995

Final report, design test PR-24 PRTR calandria shroud tube bellows, by H. L. Floyd. Hanford Atomic Products Operation, Richland, Wash. Aug 59. Contract AT(45-1)-1350. 22p. Order from OTS. 75 cents. HW-58801 REV

Photographic observations of the growth of uranium dioxide crystals by vapor deposition, by H. W. Newkirk and J. L. Bates. General Electric Co., Hanford Atomic Products Operation, Richland, Wash. Mar 59. 10p. Order from LC. Mi $1.80, ph $1.80. HW-59575

Hydrogen effects on Zircaloy-2 tensile properties, by H. H. Burton. Hanford Atomic Products Operation, Richland, Wash. July 59. Contract W-31-109-Eng-52. 52p. Order from OTS. $1.50. HW-61077

The law of oxidation of metallic cerium generalization to other metals, by J. Loriers. Translated by C. Groot. Hanford Atomic Products Operation, Richland, Wash. Sep 59. Contract AT(45-1)-1350. 8p. Order from OTS. 50 cents. HW-61492

Oxidation of metallic uranium, by J. Loriers. Translated by C. Groot. Hanford Atomic Products Operation, Richland, Wash. Sep 59. Contract AT(45-1)-1350. 8p Order from OTS. 50 cents. HW-61493

Vanadium-chromium alloy system, by O. N. Carlson and A. L. Eustice. Iowa State University of Science and Technology, Ames Laboratory, Ames, Iowa. Nov 59. Contract W-7405-eng-82. 17p. Order from OTS. 75 cents. IS-47

Examination of welds in hafnium "wye" control rods, by A. C. Cooley and W. E. Ray. Knolls Atomic Power Laboratory, Schenectady, N. Y. Aug 59. Contract W-31-109-Eng-52. 16p. Order from LC. Mi $2.40, ph $3.30. KAPL-M-ACC-3

Swaged metal fiber-UO_2 fuel element. First quarterly progress report. From December 22, 1958 to March 15, 1959, by L. Sundquist. Martin Company, Nuclear Division, Baltimore, Md. Apr 59. Contract AT(30-1)-2220, Task III. 37p. Order from OTS. $1.00. MND-SF-1714

Swaged metal fiber-UO_2 fuel element. Second quarterly progress report. From March 15, 1959 to June 15, 1959, by L. Sundquist. Martin Company, Nuclear Division, Baltimore, Md. July 59. Contract AT(30-1)-2220, Task III. 44p. Order from OTS. $1.50. MND-SF-1768

Swaged metal fiber-UO_2 fuel element. Third quarterly progress report. From June 15, 1959 to September 15, 1959, by J. Kane. Martin Company, Nuclear Division, Baltimore, Md. Oct 59. Contract AT(30-1)-2220. Task III. 58p. Order from OTS. $1.75. MND-SF-1769

Processing refabrication experiment (PRE) program bibliography, by G. L. Schalin. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Nov 59. Contract AT(11-1)-GEN-8. 13p. Order from LTS. 50 cents. NAA-SR-3703

Factors affecting yield and metal quality in the reduction of UF_4 to metal, by O. R. Magoteaux and C. C. Smitherman. National Lead Company, Technical Division, Cincinnati, Ohio. Dec 59. Contract AT(30-1)-1156. 17p. Order from OTS. 75 cents. NLCO-794

Scoping studies on electrolytic reduction of magnesium fluoride, by R. B. Steck and V. G. Minutolo. National Lead Company of Ohio. Technical Division, Cincinnati, Ohio. Jan 60. Contract AT (30-1)-1156. 26p. Order from OTS. $1.00. NLCO-796

Cast hollow fuel rods, by E. M. Avallone, A. R. Kaufmann, and J. E. Roman. Nuclear Metals, Inc., Concord, Mass. July 59. Contract AT (30-1)-1565. 17p. Order from LC. Mi $2.40, ph $3.30. NMI-1224

Evaluation of Zircaloy-clad-U-2 w/o Zr alloy tube no. 32, extrusion no. 18392, by D. F. Kaufman and R. G. Jenkins. Nuclear Metals, Inc., Concord, Mass. Apr 59. Contract AT(30-1)-1565. 37p. Order from LC. Mi $3.00, ph $6.30. NMI-4378

Power reactor program. Progress report to E. I. du Pont de Nemours and Company for the period February 1, 1959 through February 28, 1959, by S. Isserow and others. Nuclear Metals, Inc., Concord, Mass. June 59. Contract AT(30-1)-1565. 35p. Order from LC. Mi $3.00, ph $6.30. NMI-4386

Corrosion behavior of fuel elements with U-2 w/o Zr core clad with Zircaloy-2. Status report, by S. Isserow. Nuclear Metals, Inc., Concord, Mass. Apr 59. Contract AT(30-1)-1565. 40p. Order from LC. Mi $3.30, ph $7.80. NMI-4388

Twisted ribbon fuel element. Status report to E. I. du Pont de Nemours and Company, by A. R. Kaufmann. Nuclear Metals, Inc., Concord, Mass. June 59. Contract AT(30-1)-1565. 9p. Order from LC. Mi $1.80, ph $1.80. NMI-4390

Effects of thermal cycling on an integrally coextruded tubular fuel element of U-2 w/o Zr clad with Zircaloy-2. Final report to E. I. du Pont de Nemours and Co., by R. G. Jenkins. Nuclear Metals, Inc., Concord, Mass. Aug 59. Contract AT(30-1)-1565. 26p. Order from LC. Mi $2.70, ph $4.80. NMI-4391

Power reactor program. Progress report to E. I. du Pont de Nemours and Company for the period April 1, 1959 through April 30, 1959, by S. Isserow and others. Nuclear Metals, Inc., Concord, Mass. Aug 59. Contract AT(30-1)-1565 1565. 21p. Order from LC. Mi $2.70, ph $4.80. NMI-4393

Power reactor program: Progress report to E. I. du Pont de Nemours and Company for the period May 1, 1959 through May 31, 1959, by S. Isserow and others. Nuclear Metals, Inc., Concord, Mass. Aug 59. Contract AT(30-1)-1565. 26p. Order from LC. Mi $2.70, ph $4.80. NMI-4394

The corrosion resistance of several alloys in an HF-H_2O atmosphere at high temperatures, by C. F. Ritchie and E. K. Teter. Mallinckrodt Chemical Works, St. Louis, Mo. Jan 52. Decl. June 19, 1959. 15p. Order from LC. Mi $2.40, ph $3.30. NYO-1330

Study of the films formed on zirconium-niobium alloys in oxygen atmospheres. Final report, by O. Zmeskal and M. L. Brey.. University of Florida. Engineering and Industrial Experiment Station, Gainesville, Fla. June 59. Contract AT(40-1)-1826. 106p. Order from LC. Mi $5.70, ph $16.80. ORO-204

A survey of the literature on the elastic constants of barium titanate ceramics, by R. A. Graham. Sandia Corp., Albuquerque, N. Mex. June 59. 14p. Order from LC. Mi $2.40, ph $3.30. SCTM-206-59(51)

Graphite. A literature search, by T. F. Davis. Atomic Energy Commission, Technical Information Service Extension, Oak Ridge, Tenn. Oct 59. 82p. Order from OTS. $2.25. TID-3532

Pressure testing of Zircaloy tubing, by L. F. Cochrun. Westinghouse Electric Corp., Bettis Atomic Power Laboratory, Pittsburgh, Pa. Oct 59. Contract AT-11-1-GEN-14. 39p. Order from OTS. $1.25. WAPD-216

Deposition of corrosion products under irradiation Van de Graaf study, Interim report no. 4, by G. P. Simon. Westinghouse Electric Corp., Bettis Plant, Pittsburgh, Pa. Oct 58. 26p. Order from LC. Mi $2.70, ph $4.80. WAPD-CDA-(AD)-466

Annihilation of nuclei by displacement spikes, by D. E. Thomas. Westinghouse Electric Corp., Bettis Plant, Pittsburgh, Pa. Nov 57. 8p. Order from LC. Mi $1.80, ph $1.80. WAPD-IPC-743

Report on PWR experiment 11a5 the corrosion testing of platelets of varying cladding thickness, by E. L. Richards. Westinghouse Electric Corp., Atomic Power Div., Pittsburgh, Pa. Mar 54. Cecl. Aug. 25, 1958. 23p. Order from LC. Mi $2.70, ph $4.80. WAPD-MP-547

Location of residual spacer material in subassemblies. Inspection development report, by R. A. Betz. Westinghouse Electric Corp., Bettis Plant, Pittsburgh, Pa. May 59. 14p. Order from LC. Mi $1.80, ph $1.80. WAPD-NCQ-(DR)-7

Investigation of stretch-forming process for fabrication of reactor fuel elements, by M. D'Amore. Westinghouse Electric Corp., Atomic Power Department, Pittsburgh, Pa. Sep 59. Contract AT(30-3)-222. 38p. Order from OTS. $1.25. YAEC-146

Physics and Mathematics

Progress report for research on heat transfer to fluids flowing through non-circular channels, by J. P. Hartnett and C. Y. Koh. University of Minnesota, Minneapolis, Minn. June 59. Contract AT(11-1)-659. 12p. Order from LC. Mi $2.40, ph $3.30. AECU-4167

Technical progress report. Part I. High-speed computer program. Part II. Mathematical methods. Part III. Illiac use and operation. Part IV. IBM 650 use and operation. Part V. General laboratory information. University of Illinois. Digital Computer Lab., Urbana, Ill. Mar 59. Contract AT(11-1)-415. and Contract Nonr-1834 (15). 24p. Order from LC. Mi $2.70, ph $4.80. AECU-4235

Technical progress report. Part I. High-speed computer program. Part II. Switching circuit theory. Part III. Illiac use and operation. Part IV. IBM 650 use and operation. Part V. General laboratory information. University of Illinois. Digital Computer Lab., Urbana, Ill. Apr 59. Contract AT(11-1)-415 and Contract Nonr-1834 (15). 37p. Order from LC. Mi $3.00, ph $6.30. AECU-4236

Bibliography of neutron yields from the reactions p + T, d + T (1954 to September 1957), by S. Harris and H. Stearns. Los Alamos Scientific Lab., Los Alamos, N. Mex. [1957]. Contract W-7405-eng-36. 8p. Order from LC. Mi $1.80, ph $1.80. AECU-4246

Field distribution, by R. M. Hendrickson. Los Alamos Scientific Lab., Los Alamos, N. Mex. June 59. Contract W-7405-eng-36. 155p. Order from LC. Mi $7.50, ph $24.30. AECU-4248

Radiation effect of positive ion bombardment. Progress report for March 16, 1959 to June 15, 1959 and Annual report for June 15, 1958 to June 15, 1959, by R. L. Hines. Northwestern University, Evanston, Ill. July 59. Contract (11-1)-89. 5p. Order from LC. Mi $1.80, ph $1.80. AECU-4251

Tables of cross sections for π^+ photo-production from hydrogen, according to the theory of Chew, Goldberger, Low and Nambu. Technical report no. 8, by C. S. Robinson. University of Illinois. Physics Research Lab., Urbana, Ill. May 59. Contract Nonr-1834(05). 33p. Order from LC. Mi $3.00, ph $6.30. AECU-4272

Elastic modulus of isotopically concentrated lithium, by W. M. Robertson and D. J. Montgomery. Michigan State University, East Lansing, Mich. 1959. Contract AT(11-1)-400. 17p. Order from LC. Mi $2.40, ph $3.30. AECU-4281

Status report on a study of the use of furnace calorimetry for the rapid determination of specific heat of solids at high temperatures, by J. H. Boggs, R. A. Knezek, and J. A. Wiebelt. Oklahoma State University, School of Mechanical Engineering, Stillwater, Okla. Aug 59. Contract AT(11-1)-71. 13p. Order from LC. Mi $2.40, ph $3.30. AECU-4282

Research and investigation leading to methods of generating and detecting radiation in the 100 to 1000 micron wavelength range of the spectrum. Quarterly progress report no. 13 for March 1, 1959 to June 1, 1959, by P. D. Coleman and others. University of Illinois. Electrical Engineering Research Lab., Urbana, Ill. July 59. Contract AT(11-1)-392. 44p. Order from LC. Mi $3.30, ph $7.80. AECU-4293

Technical progress report. Part I. High-speed computer program. Part II. Mathematical methods. Part III. Illiac use and operation. Part IV. IBM 650 use and operation. Part V. General laboratory information. University of Illinois. Digital Computer Lab., Urbana, Ill. June 59. Contracts AT(11-1)-415 and Nonr-1834(15). 31p. Order from LC. Mi $3.00, ph $6.30. AECU-4307

The arithmetic unit. Report no. 92, by D. J. Wheeler. University of Illinois. Digital Computer Lab., Urbana, Ill. Aug 59. Contract AT(11-1)-415. 29p. Order from LC. Mi $2.70, ph $4.80. AECU-4318

An investigation of certain thermodynamic and transport properties of water and water vapor in the critical region, by E. S. Nowak and R. J. Grosh. Argonne National Laboratory, Lemont, Ill. Oct 59. Contract W-31-109-eng-38. 102p. Order from OTS. $2.50. ANL-6064

Nuclear excursion analysis on the IBM 650 (Early code), by E. M. Reiback and C. J. Stueck. Alco Products, Inc., Schenectady, N. Y. Feb 59. Rev. July 1959. 16p. Order from LC. Mi $2.40, ph $3.30. APAE-Memo-177(Rev.)

The determination of the diffusion coefficient of a gas-metal system, by V. L. Gelezunas. General Electric Co. Atomic Products Division, Aircraft Nuclear Propulsion Dept., Cincinnati, Ohio. Sep 57. Contracts AF 33(600)-38062 and AT(11--1)-171. 16p. Order from OTS. 50 cents. APEX-409

An IBM 704 program report, Aircraft Nuclear Propulsion shielding program 10-0, by J. W. Haffner, J. J. Loechler, and J. E. MacDonald. General Electric Co., Atomic Products Division, Aircraft Nuclear Propulsion Dept., Cincinnati, Ohio. Mar 1958. Contracts AF 33(600)-38062 and AT(11-1)-171. 36p. Order from OTS. $1.25. APEX-503

IBM 650 routine V a multigroup P_3 program for the neutron transport equation, by R. R. Haefner. E. I. du Pont de Nemours & Co., Theoretical Physics Division, Savannah River Laboratory, Aiken, S. C. Oct 59. Contract AT(07-2)-1. 63p. Order from OTS. $1.75. DP-427

SYZYGY, a code for calculating the thermal neutron flux spectrum near a temperature discontinuity, by J. E. Schlosser. Hanford Atomic Products Operation, Richland, Wash. Aug 59. Contract AT(45-1)-1350. 57p. Order from OTS. $1.75. HW-61042

Semi-annual summary research report in physics for January-June 1959, by Ames Laboratory Staff. Iowa State University of Science and Technology, Ames Laboratory, Ames, Iowa. Oct 59. Contract W-7405-eng-82. 55p. Order from OTS. $1.50. IS-14

Evaluation of blast and shock effects on tunnel support structures, by A. A. Lee and E. Y. Wong. Holmes & Narver, Inc., Los Angeles, Calif. May 59. 35p. Order from OTS. $1.00. ITR-1714

An IBM 704 program for the computation of cross-section in gamma-ray zero-zero transitions in nuclei, by R. E. Mills and R. M. Kloepper. The University of California. Los Alamos Scientific Laboratory, Los Alamos, N. Mex. Dec 59. Contract W-7405-ENG-36. 20p. Order from OTS. 75 cents. LAMS-2359

Reactor kinetics. A bibliography, by M. Bloomfield and F. G. Bennett IV. Atomics International, A Division of North American Aviation, Inc., Canoga Park, Calif. Nov 59. Contract AT(11-1)-GEN-8. 56p. Order from OTS. $1.50. NAA-SR-3808

Neutron flux distributions in organic moderated reactor cores, by V. A. Swanson. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Nov 59. Contract AT(11-1)-GEN-8. 21p. Order from OTS. 75 cents. NAA-SR-4184

Tolerance comparator, by P. A. Nicovich. Sandia Corporation, Albuquerque, N. Mex. Aug 59. 4p. Order from OTS. $5.25. SCR-112

Isotopic power and thermionic conversion. A literature search, by R. L. Scott. Atomic Energy Commission, Technical Information Service Extension, Oak Ridge, Tenn. Dec 59. 12p. Order from OTS. 50 cents. TID-3540

A table of emission lines in the vacuum ultraviolet for all elements (6 angstroms to 2000 angstroms) R. L. Kelly. Univ. of California. Lawrence Radiation Lab. Livermore, Calif. n. d. 523p. Order from OTS. $7.00. UCRL-5612

The lifetime and decay modes of negative K mesons, by N. A. Nickols. University of California. Lawrence Radiation Laboratory, Berkeley, Calif. Sep 59. Contract W-7405-eng-48. 52p. Order from OTS. $1.25. UCRL-8692

The cross section for compound-nucleus formation in heavy-ion-induced reactions, by T. D. Thomas University of California. Lawrence Radiation Lab., Berkeley, Calif. Apr 59. Contract W-7405-eng-48. 36p. Order from LC. Mi $3.00, ph $6.30. UCRL-8695

Technical progress report. Reactor physics and mathematics for the period September 1 to December 1, 1959, by D. Klein and others. Westinghouse Electric Corp., Bettis Atomic Power Lab., Pittsburgh, Pa. 1959. Contract AT-11-1-GEN-14 71p. Order from OTS. $2.00. WAPD-MRJ-8

Temperature coefficients of a highly enriched core in slab geometry, by S. L. Shufler, W. F. Vogelsang, R. S. Wick and H. I. Dolnick. Westinghouse Electric Corp., Bettis Atomic Power Laboratory, Pittsburgh, Pa. Oct 59. Contract AT-11-1-GEN-14. 30p. Order from OTS. $1.00. WAPD-TM-128

SPIC-1 -- An IBM-704 code to calculate the neutron distribution outside a right-circular cylindrical source, by P. Gillis. Westinghouse Electric Corp., Bettis Atomic Power Laboratory, Pittsburgh, Pa. Nov 59. Contract AT-11-1-GEN-14. 12p. Order from OTS. 50 cents. WAPD-TM-196

Progress Reports

Semi-annual progress report for January 1, 1959 to July 31, 1959, by M. C. Bell and others. University of Tennessee. Atomic Energy Commission, Agricultural Research Lab., Oak Ridge, Tenn. Dec 59. Contract AT-40-1-GEN-242. 58p. Order from OTS. $1.75. ORO-217

Radiation Effects on Materials

Radiation effects on selected structural metals. A literature search, by W. E. Bost. Atomic Energy Commission, Technical Information Service Extension, Oak Ridge, Tenn. Nov 59. 17p. Order from OTS. 50 cents. TID-3538

Radiochemistry of the PWR fuel material cycling tests (WAPD-29-1 and -2) in the WAPD-29 VH-3 loop of the materials testing reactor, by R. Ehrenreich. Westinghouse Electric Corp., Bettis Atomic Power Laboratory, Pittsburgh, Pa. Nov 59. Contract AT-11-1-GEN-14. 21p. Order from OTS. 75 cents. WAPD-TM-159

Radioactive Waste

Interim report on tests performed at the K reactors to effectively decontaminate the process piping by an internal chemical flush, by H. F. Jensen. General Electric Co., Handord Atomic Products Operation, Richland, Wash. May 58. Contract W-31-109-Eng-52. 13p. Order from LC. Mi $2.40, ph $3.30. HW-56001

Field experiments with model crib. I. Location, facility design and first experiment, by K. C. Knoll and J. L. Nelson. General Electric Co., Hanford Atomic Products Operation, Richland, Wash. Aug 59. Contract AT(45-1)-1350. 15p. Order from LC. Mi $2.40, ph $3.30. HW-61476

Reactors—General

Circulating loops for testing organic coolants. Survey and status, by J. G. Carroll. California Research Corp., Richmond, Calif. June 59. Contract AT(11-1)-174. 74p. Order from LC. Mi $4.50, ph $12.30. AECU-4326

Shock impingement experiments on crushable solids, by P. Lieberman. Illinois Institute of Technology, Armour Research Foundation, Technology Center, Chicago, Ill. June 59. Contract AT(11-1)-528. 98p. Order from OTS. $2.50. ARF-4132-10

Studies of reactor containment. Summary report no. 1 for February 1, 1959 to July 31, 1959, by T. A. Zaker. Illinois Institute of Technology. Armour Research Foundation, Technology Center, Chicago, Ill. Aug 59. Contract AT(11-1)-528. 80p. Order from OTS. $2.25. ARF-4132-11

Final report on design tests PR-50 and PR-51 reactor piping seal testing and reactor piping structural integrity, by P. M. Jackson. General Electric Co., Hanford Atomic Products Operation, Richland, Wash. June 59. Contract W-31-109-Eng-52. 61p. Order from OTS. $1.75. HW-60899

Plutonium recycle test reactor final safeguards analysis, by N. G. Wittenbrock and others. General Electric Co., Hanford Atomic Products Operation, Reactor Engineering Development Operation, Richland, Wash. Oct 59. Contract AT(45-1)-1350. 313p. Order from OTS. $5.00. HW-61236

Quarterly progress report for January, February, March, 1959, by W. E. Nyer and others. Phillips Petroleum Co., Atomic Energy Division, Idaho Operations Office, Idaho. Nov 59. Contract AT(10-1)-205. 66p. Order from OTS. $1.75. IDO-16539

MTR-ETR Technical Branches quarterly report. Period ending June 30, 1959, by J. R. Huffman and others. Phillips Petroleum Company, Atomic Energy Division, Idaho Operations Office, Idaho. Nov 59. Contract AT(10-1)-205. 77p. Order from OTS. $2.00. IDO-16561

Heat transfer in ETR fuel assemblies for cycle 13, by V. A. Walker. Phillips Petroleum Co., Atomic Energy Division, Idaho Operations Office, Idaho. Nov 59. Contract AT(10-1)-205. 24p. Order from OTS. 75 cents. IDO-16562

Nuclear reactor simulation by analog computer. A literature survey, by R. J. Allen, F. G. Bennett, IV, and R. N. Cordy. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Dec 59. Contract AT(11-1)-GEN-8. 56p. Order from OTS. $1.75. NAA-SR-3708

Gamma-ray and fast neutron annular streaming evaluation through sodium reactor experiment (SRE) Mark II control and safety rod assemblies, F. D. Anderson and others. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Oct 59. Contract AT(11-1)-GEN-8. 30p. Order from OTS. $1.00. NAA-SR-3989

Sodium reactor experiment (SRE) shielding evaluation for thermal neutron streaming at reactor vessel coolant pipe penetrations, by F. D. Anderson and others. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Oct 59. Contract AT(11-1)-GEN-8. 56p. Order from OTS. $1.50. NAA-SR-3990

Fuel cycles in nuclear reactors, by R. T. Shanstrom, M. Benedict, and C. T. McDaniel. Massachusetts Institute of Technology, Nuclear Engineering Dept., Cambridge, Mass. Aug 59. Contract AT(30-1)-2073. 397p. Order from OTS. $4.00. NYO-2131

Dispersions of uranium carbides in aluminum plate-type research reactor fuel elements, by W. C. Thurber and R. J. Beaver. Oak Ridge National Laboratory, Metallurgy Division, Oak Ridge, Tenn. [nd.] Contract W-7405-eng-26. 49p. Order from OTS. $1.50. ORNL-2618

Design of chemical processing plant for homogeneous reactor test, by A. M. Rom and H. O. Weeren. Oak Ridge National Laboratory, Chemical Technology Division, Process Design Section, Oak Ridge, Tenn. [nd.] Contract W-7405-eng-26. 105p. Order from OTS. $2.50. ORNL-2784

Gas-cooled reactors. Bibliography, by W. H. Richardson and F. Strachwitz. Sandia Corporation, Albuquerque, N. Mex. Sep 59. 216p. Order from OTS. $3.50. SCR-86

Containment of fragments from runaway reactor, by G. B. Huber and N. R. Zabel. Stanford Research Institute, Menlo Park, Calif. June 59. Contract AT(04-3)-115. 86p. Order from OTS. $2.25. SRIA-10

Reactor safety. A literature search, by R. J. Smith. Atomic Energy Commission, Technical Information Service Extension, Oak Ridge, Tenn. Nov 59. 41p. Order from OTS. $1.25. TID-3525(Rev. 1)

The calculation of pressure drop and flow distribution within a reactor vessel in a pressurized water nuclear reactor system, by J. S. Busch, L. L. Lynn, and C. F. Bonilla. Westinghouse Electric Corp., Bettis Atomic Power Laboratory, Pittsburgh, Pa. Aug 59. Contract AT-11-1-GEN-14. 43p. Order from OTS. $1.25. WAPD-217

Multi-region reactor lattice studies. Quarterly progress report for the period June 1 to September 30, 1959, by I. H. Coen. Westinghouse Electric Corp., Atomic Power Dept., Pittsburgh, Pa. Oct 59. Contract AT(30-1)-2176. 23p. Order from OTS. 75 cents. WCAP-1404

Reactors—Power

Pathfinder Atomic Power Plant radiation shielding study, by R. Corcoran, H. C. Crumpacker, and D. M. Leppke. Allis-Chalmers Mfg. Co., Atomic Energy Div., Milwaukee, Wis. June 59. Contract AT(11-1)-589. 44p. Order from LC. Mi $3.30, ph $7.80. ACNP-5912

Pathfinder Atomic Power Plant measurements of nuclear parameters of boiler and superheater lattices, by A. Jacobs and R. H. Vollmer. Pennsylvania State University, University Park, Pa., and Allis-Chalmers Mfg. Co., Atomic Energy Div., Milwaukee, Wis. Aug 59. Contract AT(11-1)-589. 27p. Order from LC. Mi $2.70, ph $4.80. ACNP-5918

Component cooling water system. Section III. Part VI-F. Third performance. Duquesne Light Co., Shippingport, Pa. June 59. 5p. Order from LC. Mi $1.80, ph $1.80. AECU-4256

Safety radiation level survey. Section II. Fourth performance. Duquesne Light Co., Shippingport, Pa. June 59. 7p. Order from LC. Mi $1.80, ph $1.80. AECU-4258

Intercalibration of nuclear instrumentation. Section IV. Second performance. Duquesne Light Co., Shippingport, Pa. June 59. 6p. Order from LC. Mi $1.80, ph $1.80. AECU-4259

Measurements of coefficients of reactivity. Section I. 300 EFPH. Third performance. Duquense Light Co., Shippingport, Pa. June 59. 42p. Order from LC. Mi $3.30, ph $7.80. AECU-4260

Determination of coefficients of reactivity. Section I. 1692.8 EFPH. Fifth performance. Duquesne Light Co., Shippingport, Pa. June 59. 42p. Order from LC. Mi $3.30, ph $7.80. AECU-4261

Safety radiation level survey. Section II. Second performance. Duquesne Light Co., Shippingport, Pa. June 59. 9p. Order from LC. Mi $1.80, ph $1.80. AECU-4262

Core instrumentation calibration. Section V. Fifth performance. Duquesne Light Co., Shippingport, Pa. June 59. 14p. Order from LC. Mi $2.40, ph $3.30. AECU-4263

Periodic radiation survey of reactor plant container and components after shutdown "F" survey. Section IV. Second performance. Duquesne Light Co., Shippingport, Pa. June 59. 4p. Order from LC. Mi $1.80, ph $1.80. AECU-4264

Reactivity lifetime (1000 hour run). Section III. First performance. Duquesne Light Co., Shippingport, Pa. June 59. 119p. Order from LC. Mi $6.00, ph $18.30. AECU-4265

Core I control rod drive mechanisms periodic tests. Section I. Tenth performance. Duquesne Light Co., Shippingport, Pa. June 59. 12p. Order from LC. Mi $2.40, ph $3.30. AECU-4266

Primary system relief valve test. Section I. Duquesne Light Co., Shippingport, Pa. June 59. 15p. Order from LC. Mi $2.40, ph $3.30. AECU-4267

Governor performance tests. Section IV. Third and fourth performance. Duquesne Light Co., Shippingport, Pa. July 59. 8p. Order from LC. Mi $1.80, ph $1.80. AECU-4269

Xenon transient. Section I. 145.4 EFPH. First performance. Duquesne Light Co., Shippingport, Pa. July 59. 16p. Order from LC. Mi $2.40, ph $3.30. AECU-4270

Loss of AC power following power operation. Section I. First performance. Duquesne Light Co. Shippingport, Pa. July 59. 8p. Order from LC. Mi $1.80, ph $1.80. AECU-4275

Status of pressurized water reactor reactivity accident analysis, by L. Geller, J. Cagnetta, and R. Dobbs. Vitro Engineering Co., New York, N. Y. Mar 58. Subcontract 73(14-1025). 19p. Order from LC. Mi $2.40, ph $3.30. AECU-4312

Monthly operating report. Duquesne Light Co., Shippingport, Pa. July 59. Contract AT-11-1-292. 38p. Order from LC. Mi $3.00, ph $6.30. AECU-4323

Main unit heat rate tests. Section I. Second performance. Duquesne Light Co., Shippingport, Pa. July 59. 23p. Order from LC. Mi $2.70, ph $4.80. AECU-4337

SM-1 research and development program; final report on fission product activity in the SM-1 primary coolant, by R. A. Hasse. Alco Products Inc., Schenectady, N. Y. June 59. 34p. Order from LC. Mi $3.00, ph $6.30. APAE-50

Variable moderator reactor development program. Quarterly progress report no. 1. Advanced Technology Labs. Division of American-Standard Mountain View, Calif. Aug 59. Contract AT (04-3)-250. 37p. Order from LC. Mi $3.60, ph $9.30. ATL-A-100

Reactor producing 3000°F steam for process heat, by F. J. Remick and others. Oak Ridge School of Reactor Technology, Oak Ridge, Tenn. Aug 56 Decl. June 30, 1959. 202p. Order from LC. Mi $9.30, ph $31.80. CF-56-8-211

Core levitation in the EGCR in case of main coolant pipe failure, by M. H. Fontana. Oak Ridge National Laboratory, Oak Ridge, Tenn. Aug 59. Contract W-7405-eng-25. 38p. Order from LC. Mi $3.30, ph $7.80. CF-59-8-2

Two-liquid-phase temperature limits for the homogeneous reactor fuel solution and its concentrates; comments on solid-liquid equilibria, by W. L. Marshall, J. S. Gill, and R. E. Moore. Oak Ridge National Laboratory, Oak Ridge, Tenn. Aug 59. Contract W-7405-eng-26. 11p. Order from LC. Mi $2.40, ph $3.30. CF-59-8-41

Preliminary hazards summary report. Volume III. Part B. License application. Carolinas Virginia

Nuclear Power Associates, Inc., Charlotte, N. C. July 59. 50p. Order from LC. Mi $3.60, ph $9.30. CVNA-27

Heavy water moderated power reactors. Progress report, July 1959, by D. F. Babcock and L. Isakoff. E. I. du Pont de Nemours & Co. Explosives Dept., Atomic Energy Div., Technical Div., Wilmington, Del. Oct 59. Contract AT (07-2)-1. 43p. Order from OTS. $1.25. DP-405

Heavy water components test reactor. Papers presented to the American Nuclear Society on June 17, 1959, by L. M. Arnett. E. I. du Pont de Nemours & Co., Explosives Dept., Atomic Energy Div., Technical Div., Savannah River Laboratory, Aiken, S. C. Oct 59. Contract AT(07-2)-1. 36p. Order from OTS. $1.00. DP-413

Heavy water moderated power reactors. Progress report for August 1959, by D. F. Babcock and L. Isakoff. E. I. du Pont de Nemours & Co., Explosives Dept., Atomic Energy Div., Technical Div., Wilmington, Del. Oct 59. Contract AT(07-2)-1. 59p. Order from OTS. $1.75. DP-415

Heavy water moderated power reactors. Progress report for September 1959, by D. F. Babcock and others. E. I. du Pont de Nemours & Co. Explosives Dept., Atomic Energy Div., Technical Div., Wilmington, Del. Nov 59. Contract AT(07-2)-1. 34p. Order from OTS. $1.00. DP-425

Water level corrections for gage glass installations in nuclear plant service, by J. C. Westmoreland. Knolls Atomic Power Lab., Schenectady, N. Y. July 59. Contract W-31-109-Eng-52. 35p. Order from LC. Mi $3.00, ph $6.30. KAPL-M-SMS-101

Los Alamos molten plutonium reactor experiment (LAMPRE) hazard report, by E. O. Swickard and others. The University of California, Los Alamos Scientific Laboratory, Los Alamos, N. Mex. Dec 59. Contract W-7405-ENG-36. 115p. Order from OTS. $2.75. LA-2327

Control of oxygen concentration in a large sodium system, by R. B. Hinze. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Dec 59. Contract AT(11-1) GEN-8. 46p. Order from OTS. $1.50. NAA-SR-3638

Self-sustaining plutonium recycle in sodium graphite reactors, by T. J. Connolly. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Sep 59. Contract AT(11-1)-GEN-8. 43p. Order from OTS. $1.25. NAA-SR-3912

Preliminary test of natural-circulation double-tube steam generator, by R. D. Welsh. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Dec 59. Contract AT(11-1)-GEN-8. 32p. Order from OTS. $1.00. NAA-SR-3969

Hazards analysis of the organic moderated reactor experiment, by R. O. Williams, Jr., and others. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Dec 59. Contract AT(11-1)-GEN-8. 255p. Order from OTS. $4.00. NAA-SR-4065

Power flattening in sodium graphite reactors by spatial variation of moderator properties, by T. J. Connolly. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Dec 59. Contract AT(11-1)-GEN-8. 26p. Order from OTS. 75 cents. NAA-SR-4180

SRE fuel element damage. An interim report, by A. A. Jarrett and others. Atomics International A Division of North American Aviation, Inc., Canoga Park, Calif. Nov 59. Contract AT(11-1)-GEN-8. 181p. Order from OTS. $3.00. NAA-SR-4488

Core parameter survey report for organic cooled reactors, by R. W. Hardy and B. L. Hoffman. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Dec 59. Contract AT(11-1)-GEN-8. 49p. Order from OTS. $1.50. NAA-SR-4510

Solubility relations among rare-earth fluorides in selected molten fluoride solvents, by W. T. Ward, R. A. Strehlow, W. R. Grimes, and G. M. Watson. Oak Ridge National Laboratory, Reactor Chemistry Division, Oak Ridge, Tenn. [nd.] Contract W-7405-eng-26. 15p. Order from from OTS. 75 cents. ORNL-2749

Proposed helium purification system for the experimental gas-cooled reactor (EGCR), by F. A. Anderson. Oak Ridge National Laboratory, Reactor Projects Division, Oak Ridge, Tenn. [nd.] Contract W-7405-eng-26. 60p. Order from OTS. $1.75. ORNL-2819

A study of problems associated with release of fission products from ceramic fuels in gas-cooled reactors, by J. A. Lane and others. Oak Ridge National Laboratory. Reactor Systems Evaluation Department, Oak Ridge, Tenn. [nd.] Contract W-7405-eng-26. 80p. Order from OTS. $2.25. ORNL-2851

Monthly technical report for May, 1959. Power Reactor Development Co., Detroit, Mich. Contract AT(11-1)-476. 11p. Order from LC. Mi $2.40, ph $3.30. PRDC-TR-23

Monthly technical report for June, 1959. Power Reactor Development Co., Detroit, Mich. Contract AT(11-1)-476. 9p. Order from LC. Mi $1.80, ph $1.80. PRDC-TR-24

20,000 kilowatt organic moderated power plant. U. S. Atomic Energy Commission, Technical Information Service, Oak Ridge, Tenn. Oct 59. 132p. Order from OTS. $2.75. TID-8512

Report of the sodium heavy-water reactor task force, May 1959, by F. K. Pittman. U. S. Atomic Energy Commission, Civilian Reactors Evaluation and Planning Branch, Division of Reactor Development, Oak Ridge, Tenn. Oct 59. 38p. Order from OTS. 50 cents. TID-8515

Pressurized water reactor (PWR) project. Technical progress report for the period August 24, 1959 to October 23, 1959, by P. N. Ross and others. Westinghouse Electric Corp., Bettis Atomic Power Laboratory, Pittsburgh, Pa. 1959. Contract AT-11-1-GEN-14. 91p. Order from OTS. $2.25. WAPD-MRP-82

Comparison of various one-dimensional transport theory approximations, by P. H. Wackman. Westinghouse Electric Corp., Bettis Atomic Power Division, Pittsburgh, Pa. Oct 58. 3p. Order from LC. Mi $1.80, ph $1.80. WAPD-PWR-PL-494

Operation and testing of the Yankee universal fuel handling tool, by L. J. Balog. Westinghouse Electric Corp. Atomic Power Dept., Pittsburgh, Pa. June 59. Contract AT(30-3)-222. 40p. Order from LC. Mi $3.30, ph $7.80. YAEC-137

Monthly progress report for the period July 1 to July 31, 1959, by H. E. Walchli. Westinghouse Electric Corp., Atomic Power Dept., Pittsburgh, Pa. Aug 59. Contract AT(30-3)-222. 13p. Order from LC. Mi $2.40, ph $3.30. YAEC-157

Quarterly progress report for the period April 1 to June 30, 1959, by H. E. Walchli. Westinghouse Electric Corp., Atomic Power Dept., Pittsburgh, Pa. Aug 59. Contract AT(30-3)-222. 87p. Order from OTS. $2.25. YAEC-161

Stable Isotope Separation

Status report on heavy water production program. Design of production plant--hydrogen distillation processes, Hydrocarbon Research, Inc., Contract AT(30-1)-810. Design of Pilot and Production Plant and Construction of Pilot Plant --dual-temperature process, The Girdler Corp., Contract AT(30-1)-947. Atomic Energy Commission. New York Operations Office, New York, N. Y. June 50. Decl. Jan. 15, 1959. 64p. Order from LC. Mi $3.90, ph $10.80. NYO-699

Deuterium separation study. Progress report no. 2, by W. P. Drews. Esso Research and Engineering Co., Linden, N. J. Aug 55. Decl. Mar. 4, 1957. Contract AT(30-1)-1407. 77p. Order from LC. Mi $4.50, ph $12.30. NYO-6085(Rev.)

Deuterium separation study. Progress report no. 4 Final report on heavy water manufacture survey, by F. T. Barr and W. P. Drews. Esso Research and Engineering Co., Linden, N. J. Oct 55. Decl. Mar. 25, 1957. Contract AT(30-1)-1407. 21p. Order from LC. Mi $2.70, ph $4.80. NYO-7523

Technology—Feed Materials

The application of diffusivity data in reducing the hydrogen content of gamma-extruded uranium bars, by H. W. Myers and others. Mallinckrodt Chemical Works, St. Louis, Mo. Dec 59. Contract W-14-108-Eng-8. 20p. Order from OTS. 75 cents. MCW-1439

The effect of uranium saturation on the extraction of elements other than uranium into tributyl phosphate, by G. P. Lang and J. T. Krieg. Mallinckrodt Chemical Works, St. Louis, Mo. Jan 60. Contract W-14-108-Eng-8. 17p. Order from OTS. 75 cents. MCW-1440

RESEARCH REPORTS

April 15, 1960
Vol. 33, No. 4

Sect H
OF MICHIGAN
1960
ENGINEERING LIBRARY

. . . A monthly listing of Government research reports available to industry . . .

n this issue:

A Review of the Air Force Materials Research and Development Program

A Bibliography on Gas Lubricated Bearings—Revised

Technical Resources Directory: Missile Ground Support Equipment

Heat Capacity of Beryllium

Toxicity of Beryllium

Development and Evaluation of an Improved Field Radio Repair Course

A Feasibility Study of the Application of Mass Spectrometry to Paint Vehicle Analysis

Analysis Design Study of a High Capacity Lightweight Compressor

Complete list of printed reports begins on page 349

The PB Reports . . .

announced in this publication have just been released, usually by agencies of the U. S. Government, for dissemination to the public. In most instances they result from Government or Government-sponsored research.

The Office of Technical Services is responsible, under Public Law 776, 81st Congress, for the collection and distribution of these technical reports in the interest of American science and industry.

The more important reports are reprinted for sale to the public by OTS. Many of the reports are so specialized that the demand for them does not warrant reproduction of printed copies; originals of these documents are deposited at the Library of Congress. There they may be inspected in the Annex Reading Room, or copies may be ordered from the Library in either photocopy or microfilm.

PB reports of special interest to smaller businesses are abstracted in OTS's monthly *Technical Reports Newsletter*, available from the Superintendent of Documents, Washington 25, D. C., at $1 a year domestic, $1.50 foreign.

Since 1945 thousands of business firms have used PB reports in their research programs. These reports now constitute one of the world's largest collections of non-confidential technical information, numbering over 250,000 items. OTS has published catalogs of related reports in more than 300 areas of industrial interest. For further information relative to any of its activities, you are invited to write OTS, U. S. Department of Commerce, Washington 25, D. C.

Except to the extent indicated by acknowledgment of authorship, OTS does not edit PB reports, nor does it accept responsibility for the information and conclusions contained in them. If copyrighted material appears, permission for its use should be requested from the copyright owners. Any national security restrictions that may have applied to these reports have been removed. Patents may cover the subject matter of any report, and the reader is advised to make patent searches before developing applications based on the reports.

How To Order

ALWAYS USE COMPLETE TITLE AND PB NUMBER of each report ordered. The letter "s" accompanying some PB numbers means "supplement," "t" means "translation," and "r" means a partial or complete revision. These letters should be included as part of the PB number. Prepayment is required.

TO ORDER FROM LC • Address your order to Library of Congress, Photoduplication Service, Publications Board Project, Washington 25, D. C. Make check or money order payable to Chief, Photoduplication Service, Library of Congress. State whether report is desired in microfilm or photocopy. Microfilm copies are in 35 millimeter film and require special reading equipment; if you do not have such a machine you may be able to use one at a library in your area.

TO ORDER FROM OTS • Address your order to Office of Technical Services, U. S. Department of Commerce, Washington 25, D. C. Make check or money order payable to OTS, Department of Commerce. Reports available from OTS may also be ordered through Department of Commerce field offices.

TO ORDER FROM OTHER SOURCES • When an agency other than OTS or LC is the source, use the full address included in the abstract of the report. Make check or money order payable to that agency.

U.S. GOVERNMENT RESEARCH REPORTS

U.S. DEPARTMENT OF COMMERCE
Frederick H. Mueller, *Secretary*

BUSINESS AND DEFENSE SERVICES ADMINISTRATION
William A. White, Sr., *Administrator*

Office of Technical Services
John C. Green, *Director*

Issued monthly. Annual subscription $9 ($2.50 additional for foreign mailing). Single copy $1. Make remittance payable to Superintendent of Documents and mail either to a Department of Commerce field office or to Superintendent of Documents, U.S. Government Printing Office, Washington 25, D.C. Address changes should be sent to Superintendent of Documents.

Contents may be reprinted freely. Mention of source will be appreciated

Use of funds for printing this publication approved by the Director of the Bureau of the Budget, July 18, 1958

BIBLIOGRAPHY

Searching the literature for transducer information. Part I. A guide to the literature. Oct 59. 61p. (PB 161 320) $1.75 353

BEHAVIORAL SCIENCES

Decision-making studies. Part I. The trade-off of variables in decision making. Jan 60. 9p. (PB 161 052) 50 cents 357
Development and evaluation of an improved field radio repair course. Sep 59. 89p. (PB 161 321) $2.25 355
Multidimensional scaling approach to the determination of basic psychological parameters for pure tones. Apr 59. 42p. (PB 161 316) $1.25 357
Self-instructional devices: A review of current concepts. Aug 59. 29p. (PB 161 339) 75 cents 354
Studies in human isolation. Sep 59. 54p. (PB 161 349) $1.50 357
Studies in research methodology. I. Compatibility of psychological measurements with parametric assumptions. Sep 59. 26p. (PB 161 335) 75 cents 356

BIOLOGICAL SCIENCES

A miniaturized operant conditioning chamber for behavioral research in the upper atmosphere. July 59. 13p. (PB 161 333) 50 cents 359
Toxicity of beryllium. Jan 59. 30p. (PB 161 319) 75 cents 360

CHEMISTRY

Binary nitrogen compounds of the elements: A literature survey. June 59. 81p. (PB 161 315) $2.25 361
Micellar properties of oil-soluble soaps and their significance in detergency. Jan 60. 19p. (PB 161 067) 50 cents 364
Perarylated silanes. Identification by x-ray diffraction power patterns. Sep 59. 37p. (PB 161 312) $1.00 361
Study of the physical chemistry and metallurgy of semiconducting materials. Dec 57. 40p. (PB 161 353) $1.00 362

EARTH SCIENCES

A preliminary report on a boundary layer numerical experiment. Oct 59. 36p. (PB 161 341) $1.00 369
Refinements in utilization of contour charts for climatically specified wind profiles. Oct 59. 28p. (PB 161 346) 75 cents 366
Scientific studies at Fletcher's Ice Island. Sep 59. 229p. (PB 161 289) $3.50 369
Study of a pulsed logarithmic photometer. Sep 59. 29p. (PB 161 344) 75 cents 368
The use of high-altitude rockets for scientific investigations: An annotated bibliography. Oct 59. 132p. (PB 151 805) 50 cents 370

ENGINEERING

Analysis design study of a high capacity lightweight compressor. Feb 59. 156p. (PB 161 347) $3.00 373
Approximate analysis of zero-lift trajectories. Aug 59. 27p. (PB 161 340) 75 cents 388
Arc welding of high-strength steels for aircraft and missile structures. July 59. 45p. (PB 161 177) 50 cents 371

ENGINEERING (con.) — Page

Calculation of transient discharges between separating contacts. Jan 60. 16p. (PB 161 024) 50 cents ... 380
Development of a fatigue testing apparatus for testing honeycomb sandwich structural panels in service-simulated sonic fatigue. Sep 59. 40p. (PB 161 317) $1.00 ... 372
Development of millimeter-wave backward-wave oscillator tubes. Sep 59. 131p. (PB 161 351) $2.75 ... 375
Evaluation of weld-joint flaws as initiating points of brittle fracture. Aug 58. 56p. (PB 161 323) $1.50 ... 396
Installations--General. Insect and rodent control. Feb 56. 176p. (PB 161 357) $3.00 ... 396
Investigation of radioisotopes for the inspection of ship welds. Feb 58. 64p. (PB 161 324) $1.75 ... 397
Magnetic inspection of projectiles by induction techniques. Nov 59. 18p. (PB 161 328) 50 cents ... 396
Power generation and distribution. Chapter 6. Central heating plants. Chapter 7. Compressed air plants. July 54. 77p. (PB 161 358) $2.00 ... 388
Power generation and distribution. Chapter 8. Electric power distribution. Oct 55. 156p. (PB 161 359) $3.50 ... 388
Preliminary studies of brittle fracture propagation in structural steel. May 58. 91p. (PB 161 325) $2.25 ... 397
Recalibration procedure for oxygen regulator test stand calibrator (National Instrument Laboratory Calibrator) Aug 59. 17p. (PB 161 334) 50 cents ... 370
Review of the Air Force materials research and development program. Nov 59. 169p. (PB 111 648 sup. 5) $3.00 ... 372
Technical resources directory: Missile ground support equipment. Nov 59. 22p. (PB 161 103) 50 cents ... 390
Titanium fabrication and reliability problems in aircraft. Sep 59. 32p. (PB 161 183) 50 cents ... 371
Weld flaw evaluation. July 58. 122p. (PB 161 322) $2.75 ... 403

MACHINERY, FABRICATION, AND ACCESSORY EQUIPMENT

A bibliography on gas lubricated bearings-revised. Sep 59. 109p. (PB 161 017) $2.50 ... 399
Welding of wrought age-hardenable nickel-base alloys for service at elevated temperatures. Nov 59. 21p. (PB 161 188) 50 cents ... 399

MATERIALS

A feasibility study of the application of mass spectrometry to paint vehicle analysis. Sep 59. 96p. (PB 161 326) $2.25 ... 400
Fluoroalkoxysilanes. Dec 59. 16p. (PB 161 026) 50 cents ... 402
New plastic materials through government research. Aug 58. 95p. (PB 161 332) $2.25 ... 403
Preparation and characterization of Graft Copolymers. Nov 59. 28p. (PB 161 047) 75 cents ... 403

MATHEMATICS

Singular differential boundary problems of a fourier type. Apr 59. 40p. (PB 161 350) $1.00 ... 407

MECHANICS

Beam vibrations with quasi-orthogonal boundary conditions. Nov 59. 46p. (PB 161 348) $1.25 ... 411
Measuring accuracy in creep tests. Part II. Influence of thermal stresses. Oct 59. 60p. (PB 161 356) $1.50 ... 411
On the stability of one-dimensional viscous flows: Sound waves and shock waves. Aug 59. 53p. (PB 161 318) $1.50 ... 411

METALLURGY — Page

A brief review of refractory metals. Dec 59. 37p. (PB 161 190) 50 cents ... 419
Development of a corrosion-resistant bearing steel for service in aircraft at temperatures up to 1000F. Oct 59. 70p. (PB 161 338) $1.75 ... 420
Development of high-strength steels by working of metastable austenite. Nov 59. 24p. (PB 161 189) 50 cents ... 417
Development of high-temperature iron-base alloys. Oct 59. 71p. (PB 161 337) $2.00 ... 417
Drilling high-strength steels heat treated to 330 to 560 Brinell hardness. Aug 59. 17p. (PB 161 181) 50 cents ... 418
Electron bombardment melting and casting of beryllium. Nov 58. 44p. (PB 161 327) $1.25 ... 417
Emulsifiable and fire resistant rust preventives. Apr 59. 73p. (PB 161 352) $2.00 ... 421
Fabrication of pure columbium. Sep 59. 9p. (PB 161 184) 50 cents ... 419
Heat capacity of beryllium. Oct 59. 11p. (PB 161 186) 50 cents ... 419
Heat treatment of high-strength steels for airframe applications. Nov 59. 111p. (PB 151 076) $2.50 ... 418
Mechanical- and physical-property data on modified 12 per cent chromium martensitic stainless sheet steels for airframe applications. Apr 59. 56p. (PB 161 165) 50 cents ... 418
Milling of high-strength steels in the hardness range of 330-560 Brinell. Aug 59. 40p. (PB 161 180) 50 cents ... 418
Procedures for electroplating coatings on refractory metals. Oct 59. 28p. (PB 161 185) 50 cents ... 420
Procedures for the metallographic preparation of beryllium, titanium, and refractory metals. Oct 59. 38p. (PB 161 187) 50 cents ... 420

MISCELLANEOUS

Report of NRL Progress. Feb 60. (PB 161 278) $1.25, $10.00/year ... 438

NUCLEAR PHYSICS AND NUCLEAR CHEMISTRY

Global fallout and its variability. Oct 59. 37p. (PB 161 345) $1.00 ... 423

PHYSICS

Atmospheric refraction of infrared radiation. Oct 59. 20p. (PB 161 342) 50 cents ... 420
Bibliography on acoustic sources and their related fields. Feb 59. 69p. (PB 161 330) $1.75 ... 425
Bibliography on propagation of sound through plates. Feb 59. 170p. (PB 161 329) $3.00 ... 425
Communication theory aspects of television bandwidth conservation. Aug 59. 27p. (PB 151 384) 50 cents ... 435
Design of single frequency filters. Aug 59. 10p. (PB 151 382) 50 cents ... 436
Determination of near infrared spectra. Sep 59. 32p. (PB 161 336) $1.00 ... 428
Frequency dependence of VHF ionospheric scattering. Apr 59. 17p. (PB 151 368) 75 cents ... 436
History of vertical-incidence ionosphere sounding at the National Bureau of Standards. Sep 59. 140p. (PB 151 387) $2.00 ... 436
Radio noise data for the International Geophysical Year July 1, 1957-December 31, 1958. July 59. 239p. (PB 151 377) $2.50 ... 436
Radio wave propagation in an inhomogeneous atmosphere. Sep 59. 21p. (PB 151 383) $1.00 ... 436
Service area of an airborne television station. Oct 59. 46p. (PB 151 394) 75 cents ... 437
Study of a phosphor light pulser. Sep 59. 26p. (PB 161 343) 75 cents ... 428
Survey of Central Radio Propagation Laboratory research in tropospheric propagation. Sep 59. 464p. (PB 151 385) $4.00 ... 436

PHYSICS (con.)

Tables of thermodynamic properties of air including dissociation and ionization from 1500°K. Dec 59. 147p. (PB 161 311) $2.75 433
Temperature conversion tables. Nov 59. 85p. (PB 161 354) $2.25 424

BIBLIOGRAPHY

Diamond Ordnance Fuze Labs., Washington, D. C.
SEARCHING THE LITERATURE FOR TRANSDUCER INFORMATION. PART I. A GUIDE TO THE LITERATURE, by J. Pearlstein. 15 Oct 59, 61p. TR-753.
Order from OTS $1.75 PB 161 320

This report provides a guide to the technical literature on transducers, including a classification of the related phenomena, principles, and materials which must be considered in any broad and systematic research and development program on these devices.

Patent Office, Washington, D. C.
PATENT CLASSIFICATION MICROFILM. [1960]
10 reels, 3,000,000 patents.
Order from LC mi$6.00/reel, $50.00/sec PB 144 504

This microfilm copy of the official record of the classification of U. S. patents issued through 23 Sep 59 is arranged numerically in Class and Subclass order according to the Patent Office Manual of Classification. The microfilm listing, used in conjunction with the manual, makes it possible to find out which patents relate to a given subject classified in a particular numbered class and subclass. The complete record is contained in ten 100 foot reels of 16 mm film comprising 5 reels of the original or primary subject classification of the patents, and 5 reels of their cross reference classification.
Original Classification
Reel no. 1, Patent Classes 1-60
Reel no. 2, Patent Classes 61-120
Reel no. 3, Patent Classes 121-180
Reel no. 4, Patent Classes 181-249
Reel no. 5, Patent Classes 250-346 /
Cross Reference Classification
Reel no. 6, Patent Classes 1-70
Reel no. 7, Patent Classes 71-140
Reel no. 8, Patent Classes 141-210
Reel no. 9, Patent Classes 211-280
Reel no. 10, Patent Classes 281-346 /

Patent Office, Washington, D. C.
PATENT CLASSIFICATION MICROFILM. CLASSIFICATION OF DESIGN PATENTS. 1960 1 reel
Order from LC $6.00 PB 144 625

The complete record of the classification of design patents is contained in a single microfilm reel (16 mm) which includes both the original and cross reference classification of these patents. (See also PB 144 504)

ASTRONOMY

Astrophysics

Arizona State Coll., Flagstaff.
GRATING RESOLUTION AT 6.3 MICRONS IN THE SOLAR-TELLURIC SPECTRUM, by Arthur Adel. Scientific rept. HB-7 on Infrared Spectroscopy of the Sun, Moon and Earth, Contract AF 19(604)2177. 10 Aug 59, 37p. AFCRC-TN-59-465.
Order from LC mi$3.00, ph$6.30 PB 144 583

The ephemeral atmospheric window at 6.3 microns has been observed with grating resolution. Twenty-five spectra of the region 6.150 mu - 6.350 mu are reproduced. (Author)

Carter Observatory (New Zealand).
OBSERVATIONS OF THE AURORA AUSTRALIS 1955 AND 1956, by G. W. McQuistan and B. L. Frankpitt. Scientific rept. no. 6 on Contract AF 64(500)04. 1 Mar 57, 42p. AFCRC TN-58-215; AD-146 866.
Order from LC mi$3.30, ph$7.80 PB 138 236

Visual observations of the Aurora Australis collected in New Zealand and adjoining regions over the period 1955 and 1956 are here recorded in a form suitable for further researches. (See also PB 138 689)

Geophysical Inst., U. of Alaska, College.
PHOTOMETRIC STUDIES OF AURORAL LUMINOSITY AND ITS CONNECTION WITH SOME ATMOSPHERE IONIZATION PHENOMENA, by W. B. Murcray. Scientific rept. no. 2 on Contract AF 19(604)1859. Sep 58, 20p. 12 refs. AFCRC-TN-58-386; AD-160 839.
Order from LC mi$2.40, ph$3.30 PB 137 890

The auroral radiation, 3914 Å, received from the entire sky on a horizontal diffusing plate was monitored continuously during the nights of 1955-56 and 1956-57. The 1955-56 data and part of the 1956-57 data were used to obtain a diurnal curve for the sky luminosity in this wavelength. The auroral light increases to a broad maximum which lasts from magnetic midnight till dawn. The luminosity was found to correlate fairly well with absorption as inferred from F-min values and with $(F\ E_s)^2$ and very well with the magnetic K indices.

High Altitude Observatory, Boulder, Colo.
FLARE-ASSOCIATED BURSTS AT 18 Mc/s, by C. Warwick and J. W. Warwick. Scientific rept. no. 3 on Contract AF 19(604)3872. 14 May 59, 13p. 10 refs. AFCRC-TN-59-364; AD-217 075.
Order from LC mi$2.40, ph$3.30 PB 144 430

Burst data are described resulting from continuous operation of an SCNA (sudden cosmic noise absorption) recorder since December, 1955. Bursts occur frequently in close time connection with flares but may appear before, during, or after the flare. On several occasions, these bursts can be directly identified as the low-frequency tail of type II bursts observed at higher frequencies. On less well-observed occasions, the low-frequency bursts do not appear to have higher frequency counterparts.

High Altitude Observatory, Boulder, Colo.
THE IONIZATION CROSS-SECTION OF FeXIV IN THE SOLAR CORONA BY ELECTRON COLLISION AND ITS RELATIONSHIP TO THE TEMPERATURE OF THE CORONA, by Sanford B. Schwartz. Doctoral thesis. Rept. on Contract Nonr-393(04). Jan 59, 81p. 33 refs.
Order from LC mi$4.80, ph$13.80 PB 144 455

The general problem of determining an estimate of the temperature of a quiet region of the solar corona is discussed.

Maryland U., College Park.
TRAPPED RADIATION IN THE EARTH'S MAGNETIC FIELD, by S. F. Singer. Scientific rept. no. 2 on Contracts AF [illegible] and AF 19(604)5575. Aug 59, 8p. 17 refs. Physics Dept. Technical rept. no. 153. AFCRC-TN-59-765; AFCRC-TN-59-1028.
Order from LC mi$1.80, ph$1.80 PB 144 416

The purpose of this paper is to look at a topic in astrophysics from the point of view of the laboratory. We will therefore not be concerned very much with the geophysical significance of trapped radiation.

Adjutant General's Office, Washington, D. C.
DEVELOPMENT OF A PROVISIONAL BATTERY FOR SELECTING ARMY HELICOPTER PILOT TRAINEES, by Nathan Rosenberg, Harold Martinek, and Alan A. Anderson. June 59, 34p. 4 refs. PRB Technical research note 104; AD-226 801.
Order from LC mi$3.00, ph$6.30 PB 144 671

A six-test battery to predict pass versus fail in training at the U. S. Army Primary Helicopter School was derived from valid tests in each of 4 batteries administered to 4 samples of helicopter pilot trainees. The tests selected were administered to a fifth sample to obtain measures of their intercorrelation essential to application of a test selection procedure. Thus, validity coefficients based on different samples were used in conjunction with intercorrelation coefficients in yet another sample to derive a new battery. Granting the experimental weakness of this procedure, the estimated validity of the resulting battery was higher than that of either of the 2 batteries which have been in operational use. (Author)

SELF-INSTRUCTIONAL DEVICES: A REVIEW OF CURRENT CONCEPTS, by William J. Carr. Rept. on Human Factors in the Design of Training Equipment, Contract AF 33(616)6526. Aug 59, 29p. 37 refs. WADC Technical rept. 59-503.
Order from OTS $0.75 PB 161 339

A selective review of the literature on self-instructional devices is presented, with emphasis on those studies which provide for a functional analysis of such devices. Three major classes of variables which influence the effectiveness of learning by means of self-instructional devices are: characteristics of the device, characteristics of the program, and characteristics of the learner. Major attention is devoted to an analysis of the process of programming, or the arrangement of the materials to be learned in proper sequence which maximizes rate of learning and degree of retention. Discussion is focussed on a number of variables of which the effectiveness of the process of programming might be a function. Some of these variables have not yet been subjected to experimental analysis. A working model is presented, based upon the familiar processes of conditioning. (Author)

DEVELOPMENT AND EVALUATION OF AN IMPROVED FIELD RADIO REPAIR COURSE, by George H. Brown, Wesley C. Zaynor and others. [Rept. on Contract DA 49-106-qm-1.] Sep 59, 89p. 5 refs. Technical rept. 58.
Order from OTS $2.25 PB 161 321

The objective of this study was to assist the U. S. Army Signal School in the development and experimental evaluation of an improved training course for Field Radio Repairmen, MOS 296.1. Graduates of the experimental course were significantly superior to the standard course graduates on four of the seven tests in the battery -- the Trouble Shooting, Test Equipment, Repair Skills, and Achievement tests. The groups did not differ significantly on the remaining tests -- the Alinement, Manuals, and Schematics tests.

Institute of Personality Assessment and Research, U. of California, Berkeley.
AN ASSESSMENT STUDY OF AIR FORCE OFFICERS. PART II: DESCRIPTION OF THE ASSESSED SAMPLE, by Harrison G. Gough and Irving Krauss. Rept. on Contract AF 18(600)8. Sep 58, 31p. 9 refs. WADC-TR-58-91, Pt. 2; AD-208 700.
Order from LC mi$3.00, ph$6.30 PB 144 605

An extensive psychological assessment of a group of Air Force captains is described. It presents sociological and psychological descriptions of the sample of 343 captains participating in the field-testing phase of the assessment. The typical member may be characterized as being a reserve officer who entered the service during World War II as an elisted man and who received his commission through flying school. He is eligible for promotion to the grade of major. He is married and desires an Air Force career. His intelligence score is above the mean for the general adult population, but below the level defined by Terman and others as superior. His personal adjustment and psychiatric stability are judged to be excellent. In social technique he is characterized by factors of leadership and dominance, capacity for status, and achievement motivation. Tests of social acuity and social insight place him in an average rank among groups of equivalent education or occupational status. His vocational interest profile is basically a military officer profile similar to the pattern observed in other studies of military officers. (Author) (See also PB 142 096)

Maryland U., College Park.
[illegible] VARIABLES IN THE PREDICTION OF RECRUITMENT, by Ray C. Hackman. Final rept. on Contract Nonr-2141(00). Oct 57, 36p. 3 refs.

This study investigated the relationship between the United States Navy's 1955 recruiting rate and forty-three variables describing the demographic characteristics of 40 of the 43 cities designated as main recruiting stations for the Navy. Fifteen of these measures correlated significantly with recruiting rate. A set of five of these variables correlated .79 with the criterion. The general pattern of relationships suggests that recruitment is more effective in less densely populated and less highly industrialized cities.

Naval Ordnance Lab. [White Oak, Md.]
SOLID BLAST PROTECTIVE DEVICES FOR SHIPBOARD PERSONNEL, PRELIMINARY EVALUATION OF MATERIALS FOR, by F. R. Barnet. 29 July 47, 20p. 3 refs. Naval Ordnance Lab Memo. 9147.
Order from LC mi$2.40, ph$3.30 PB 145 084

During sea battle personnel are subject to high velocity shock waves traveling through the ship's structure due to explosions aboard the ship or in close proximity to it. The effects of this "Solid blast" or "Deck heave" are such that persons may suffer serious injuries such as broken or crushed bones in the ankle, leg or spine, or severe blows due to being thrown against bulkheads or projections. In carrying out research work on protective devices, materials such as plastic foams or cellular structures, collapsible metal rings and rubber mats and rubber shoe soles were investigated. The rubber mats and shoe soles appeared to be the most satisfactory in every respect of the experimental devices considered. (Author)

PATENT CLASSIFICATION MICROFILM. [1960]
10 reels, 3,000,000 patents.
Order from LC mi$6.00/reel, $50.00/sec PB 144 504

This microfilm copy of the official record of the classification of U. S. patents issued through 23 Sep 59 is arranged numerically in Class and Subclass order according to the Patent Office Manual of Classification. The microfilm listing, used in conjunction with the manual, makes it possible to find out which patents relate to a given subject classified in a particular numbered class and subclass. The complete record is contained in ten 100 foot reels of 16 mm film comprising 5 reels of the original or primary subject classification of the patents, and 5 reels of their cross reference classification.
Original Classification
Reel no. 1, Patent Classes 1-60
Reel no. 2, Patent Classes 61-120
Reel no. 3, Patent Classes 121-180
Reel no. 4, Patent Classes 181-249
Reel no. 5, Patent Classes 250-346 /
Cross Reference Classification
Reel no. 6, Patent Classes 1-70
Reel no. 7, Patent Classes 71-140
Reel no. 8, Patent Classes 141-210
Reel no. 9, Patent Classes 211-280
Reel no. 10, Patent Classes 281-346 /

Patent Office, Washington, D. C.
PATENT CLASSIFICATION MICROFILM. CLASSIFICATION OF DESIGN PATENTS. 1960 1 reel
Order from LC $6.00 PB 144 625

The complete record of the classification of design patents is contained in a single microfilm reel (16 mm) which includes both the original and cross reference classification of these patents. (See also PB 144 504)

GRATING RESOLUTION AT 6.3 MICRONS IN THE SOLAR-TELLURIC SPECTRUM, by Arthur Adel. Scientific rept. HB-7 on Infrared Spectroscopy of the Sun, Moon and Earth, Contract AF 19(604)2177. 10 Aug 59, 37p. AFCRC-TN-59-465.
Order from LC mi$3.00, ph$6.30 PB 144 583

The ephemeral atmospheric window at 6.3 microns has been observed with grating resolution. Twenty-five spectra of the region 6.150 mu - 6.350 mu are reproduced. (Author)

Carter Observatory (New Zealand).
OBSERVATIONS OF THE AURORA AUSTRALIS 1955 AND 1956, by G. W. McQuistan and B. L. Frankpitt. Scientific rept. no. 6 on Contract AF 64(500)04. 1 Mar 57, 42p. AFCRC TN-58-215; AD-146 866.
Order from LC mi$3.30, ph$7.80 PB 138 236

Visual observations of the Aurora Australis collected in New Zealand and adjoining regions over the period 1955 and 1956 are here recorded in a form suitable for further researches. (See also PB 138 689)

Geophysical Inst., U. of Alaska, College.
PHOTOMETRIC STUDIES OF AURORAL LUMINOSITY AND ITS CONNECTION WITH SOME ATMOSPHERE IONIZATION PHENOMENA, by W. B. Murcray. Scientific rept. no. 2 on Contract AF 19(604)1859. Sep 58, 20p. 12 refs. AFCRC-TN-58-386; AD-160 839.
Order from LC mi$2.40, ph$3.30 PB 137 890

The auroral radiation, 3914 Å, received from the entire sky on a horizontal diffusing plate was monitored continuously during the nights of 1955-56 and 1956-57. The 1955-56 data and part of the 1956-57 data were used to obtain a diurnal curve for the sky luminosity in this wavelength. The auroral light increases to a broad maximum which lasts from magnetic midnight till dawn. The luminosity was found to correlate fairly well with absorption as inferred from F-min values and with $(F\ E_s)^2$ and very well with the magnetic K indices.

High Altitude Observatory, Boulder, Colo.
FLARE-ASSOCIATED BURSTS AT 18 Mc/s, by C. Warwick and J. W. Warwick. Scientific rept. no. 3 on Contract AF 19(604)3872. 14 May 59, 13p. 10 refs. AFCRC-TN-59-364; AD-217 075.
Order from LC mi$2.40, ph$3.30 PB 144 430

Burst data are described resulting from continuous operation of an SCNA (sudden cosmic noise absorption) recorder since December, 1955. Bursts occur frequently in close time connection with flares but may appear before, during, or after the flare. On several occasions, these bursts can be directly identified as the low-frequency tail of type II bursts observed at higher frequencies. NAVAL KNOWLEDGE AS PREDICTOR OF CAREER MOTIVATION AND ACADEMIC PERFORMANCE IN THE NROTC PROGRAM, by Bernard Rimland. June 59, 34p. 10 refs. BuPers Technical Bulletin 59-12; AD-227 793
Order from LC mi$3.00, ph$6.30 PB 144 537

Correlations between NKT scores and first semester grade point average were found to be about .10 for both Contract (N=2562) and Regular (N=1433) students.

NKT did not contribute to the multiple correlation of other tests with first semester grades. Correlations between NKT scores and first semester Naval Science Grades were found to be about .40 for Contract students and about .30 for Regulars. When the NKT was added to the combined mental ability test and high school records now used for prediction, the battery validity was raised from about .40 to .50 for Contract students and from about .37 to .45 for Regular students. No further work appears warranted in attempting to predict career motivation or grade-point average by use of the NKT.

Naval Personnel Research Field Activity, Washington, D. C.
PREDICTION OF OFFICER CANDIDATE MILITARY APTITUDE GRADES AND PEER RATINGS, by Rosemary Cliff and David Kipnis. June 59, 17p. 12 refs. BuPers Technical Bulletin 59-11; AD-227 794
Order from LC mi$2.40, ph$3.30 PB 144 538

This study was designed to develop tests which could be used in initial selection to predict military aptitude grades, peer ratings of officer candidates, and ultimately junior officer performance as evaluated by Fitness Reports. The Biographical Information Blank and the Risk Scale were found to be valid in predicting military aptitude grades and peer ratings. The results of the study indicate that officer selection for military aptitude can be improved by the use of some of the experimental instruments considered in this study.

Naval Personnel Research Field Activity, Washington, D. C.
THE VALIDITY OF THE BASIC TEST BATTERY AT NUCLEAR PROPULSION SURFACE SCHOOL, by Leonard Wollack. July 59, 16p. 5 refs. BuPers Technical Bulletin 59-17.
Order from LC mi$2.40, ph$3.30 PB 144 535

This study presents current information on the effectiveness of the Basic Test Battery (BTB) in selecting enlisted personnel for the Nuclear Power (NP) Surface School training program and the validity of the BTB in "fast" and "slow" training sections. Among the tests of the BTB, Arithmetic (ARI) was the best single predictor of school performance. Mechanical Comprehension (MECH) was the poorest. The MECH score added to either the General Classification Test (GCT) or ARI tended to lower prediction. Three of the Arco tests (Pre-Engineering, Mathematics, and Physics) gave predictions in this sample superior to that obtained with BTB scores. Tests of the BTB and the Arco achievement tests gave better prediction of school performance in the fast sections than in the slow sections. While the differences in prediction of fast and slow sections were not statistically significant, with the exception of the Physics test, the direction of the correlative differences was consistent with previous research findings.

Teachers Coll., Columbia U., New York.
PROBABILITY AND STATISTICS IN ITEM ANALYSIS AND CLASSIFICATION PROBLEMS; OPTIMAL TEST DESIGN IN A SPECIAL TESTING SITUATION, by Rosedith Sitgreaves. Sep 57, 36p. 5 refs. AFSAM-57-117; AD-157 698.
Order from LC mi$3.00, ph$6.30 PB 144 788

This paper considers a slightly different and more restricted model for tests of a single ability Y than the model formulated in an earlier study. It is assumed that all test items measure the same underlying variable X which has a correlation $(\rho^*)1/2$ with Y. An index h, defined as one minus the minimum expected squared error of estimate of Y attainable with a given test, is adopted as a measure of the "goodness" of the test. For a given k-item test, the estimation procedure with minimum squared error of estimate is found, and the value of h is determined. Various properties of h are demonstrated, and values of the test parameters which maximize this index are found. (Author)

Aerospace Medical Lab., Wright Air Development Center, Wright-Patterson AFB, Ohio.
STUDIES IN RESEARCH METHODOLOGY. I. COMPATIBILITY OF PSYCHOLOGICAL MEASUREMENTS WITH PARAMETRIC ASSUMPTIONS, by James V. Bradley. Rept. on Contract AF 33(616)3404. Sep 59, 26p. 5 refs. WADC Technical rept. 58-574(I).
Order from OTS $0.75 PB 161 335

The compatibility of typical psychological measurements with the assumptions of common, parametric, statistical tests is examined. Empirically obtained distributions of time scores and mathematically derived error distributions are used to illustrate conditions which give rise to serious violation of assumptions. (Author)

Applied Mathematics and Statistics Lab., Stanford U., Calif.
NOTE ON RELATIVE EFFICIENCY OF TESTS, by Colin R. Blyth. Technical rept. no. 16 on Contract Nonr-225(21). 27 Nov 57, 13p. 6 refs. AD-149 891.
Order from LC mi$2.40, ph$3.30 PB 137 997

This note is concerned with possible definitions of relative efficiency for two sequences of tests of the same hypothesis. For two examples of one kind of definition, relative efficiences of the Student test and sign test against normal alternative are calculated for fixed sample size and asymptotically.

Applied Psychological Services, Wayne, Pa.
TECHNIQUES FOR EVALUATING OPERATOR LOADING IN MAN-MACHINE SYSTEMS: A DESCRIPTION OF A MODEL AND THE RESULTS OF ITS FIRST APPLICATION, by Arthur I. Siegel and J. Jay Wolf. Rept. on Contract Nonr-2492(00). Feb 59, 104p. 12 refs.
Order from LC mi$5.70, ph$16.90 PB 144 790

A "model" was synthesized which may permit an improved analysis and prediction of the effectiveness of man-machine systems. The model was then applied to the pilots' task in landing an F4D aircraft on an aircraft carrier. The predictions from the model, presented and evaluated in this report, generally conform with reality, are generally reasonable, and indicate that many conditions necessary to the eventual fruition of a final model have been met. It further seems possible that the model may be effectively used at the present time for comparative evaluation of alternative designs. (Author)

Army Ordnance Human Engineering Lab., Aberdeen Proving Ground, Md.
AN EXPLORATORY STUDY INTO THE EFFECTS OF LOW BLAST PRESSURE ON BEHAVIOR IN RHESUS MONKEYS, by John Romba and Paul Martin. Oct 59, 21p. 24 refs. Technical Memo. 11-59.
Order from LC mi$2.40, ph$3.30 PB 144 713

Four psychological-test-sophisticated Rhesus monkeys were exposed to 90 shots of 5-7 pounds per square inch blast peak overpressures and changes in behavioral phenomena were noted. Interference with performance improvement on learning tests was apparent. Selective decrements in motor coordination were also noted. No locomotor activity changes were observed. The changes, however, cannot be interpreted as only blast pressure effects. The psychological experience of the blast situation to the animals must also be considered as a contributing factor. The elimination or reduction of confounding factors will be attempted in the next series of experiments. (Author)

Hearing and Communication Lab., Indiana U., Bloomington.
RECOGNITION MEMORY AND THE OPERATING CHARACTERISTIC, by James P. Egan. Technical note on Research Concerning the General Problem of Information Reception by Means of Speech Communication, Contract AF 19(604)1962. 15 June 58, 56p. 11 refs. AFCRC-TN-58-51; AD-152 650.
Order from LC mi$3.60, ph$9.30 PB 137 944

The present study, undertaken in the spirit of an exercise, attempts to show how the operating characteristic may be applied in the investigation of recognition memory.

Massachusetts Mental Health Center, Boston.
STUDIES IN HUMAN ISOLATION, by Sanford J. Freedman and Milton Greenblatt. Rept. for 15 Apr 58-14 Apr 59 on Biophysics Research, Contract AF 33(616)5663. Sep 59 54p. 34 refs. WADC Technical rept. 59-266.
Order from OTS $1.50 PB 161 349

Thirty normal college-age subjects were run in eight-hour experimental sessions involving (a) non-patterned visual and auditory input combined with social isolation, (b) visual deprivation (blackout) combined with auditory non-patterning and social isolation, and (c) social isolation alone. Perceptual and cognitive distortions and disorientations differentially induced by these conditions are described. Six additional somewhat "deviant" subjects were run under (a). A good quantitative measure of perceptual distortion was developed. Both perceptual and cognitive effects occur with either non-patterning or blackout of the visual field, but social isolation subjects experience essentially no effects. There is no consistent relationship between the two kinds of effects. The visual imagery reported strongly resembles hypnagogic imagery and this experience is related to a history of hypnagogic imagery. A theoretical formulation is proposed which would attribute the perceptual distortions to the organism's continuous automatic search for order in a non-ordered perceptual environment. (Author)

Mississippi Southern Coll., Hattiesburg.
MULTIDIMENSIONAL SCALING APPROACH TO THE DETERMINATION OF BASIC PSYCHOLOGICAL PARAMETERS FOR PURE TONES, by Robert W. Peters. Rept. on Research on Psychological Parameters of Sound, Contract AF 33(616)3644. Apr 59, 42p. 12 refs. WADC Technical rept. 59-201.
Order from OTS $1.25 PB 161 316

The multidimensional scaling model of successive intervals was applied to investigate the dimensionality of auditory perception of pure tones. The stimuli consisted of 16 pure tones. Thirty-nine observers made distance judgments of similarity between stimuli. These inter-stimuli distances were analyzed mathematically to reveal the minimum number of dimensions necessary to account for the distances between stimuli. The results of the analysis indicated that there were two dimensions, pitch and loudness. The purpose of the study was to evaluate the multidimensional scaling method for use in auditory areas where the dimensions are not well known, and, since the two anticipated dimensions, pitch and loudness, were revealed, proposed use of the model in other auditory areas is supported. DECISION-MAKING STUDIES. PART 1. THE TRADE-OFF OF VARIABLES IN DECISION MAKING, by J. R. Hayes and Elizabeth C. Smith. 6 Jan 60, 9p. 13 refs. NRL rept. 5418.
Order from OTS $0.50 PB 161 052

Subjects were required to make tactical decisions based on three variables (speed, distance, and number of airplanes) in a simulated air-defense situation. The experimentally varied factors were: (a) the amount of trade-off required for decision (correlation), (b) the adequacy of the forces available to the decision maker (adequacy), and (c) the form in which the information was displayed (arrangement). The dependent factor was decision time. It was shown that at least some properties of complex decisions can be described without recourse to economic theory. (Author)

Princeton U., N. J.
A REVIEW OF FACTORS IN LEARNING EFFICIENCY, by Robert M. Gagne and Robert C. Bolles (U. of Pennsylvania). Nov 58, 31p. 58 refs. AFOSR-TN-58-924; AD-162 275.
Order from LC mi$3.00, ph$6.30 PB 137 897

The main body of this report deals with principles derived from laboratory findings and theoretical writings that seem relevant to the problem of promoting efficient learning. In describing these factors and their origin, we have not attempted to provide a detailed review containing all relevant references. Instead, reference is usually made to a key paper, set of studies, or to an authoritative work summarizing the field. Consideration is given to the kind of evidence which exists, the suggestions it has for learning efficiency, and its adequacy in dealing with this problem. Some conclusions are drawn regarding the present state of knowledge of these principles and the research questions which appear to be in need of investigation.

Research Center for Human Relations, New York U., N. Y.
CONDITIONS AFFECTING COOPERATION. SECTION I: FACTORS RELATED TO THE INITIATION OF COOPERATION. SECTION II: TRUST AND COOPERATION, by Morton Deutsch (Bell Telephone Labs.) Final technical rept. on Contract Nonr-285(10). Feb 57, 129p. 22 refs. AD-124 701.
Order from LC mi$6.30, ph$19.80 PB 144 604

This report presents in final summary the theoretical thinking and the research studies done on conditions affecting cooperation. The work proceeded in two phases. In the first phase a series of studies was conducted under the general framework of a theoretical outline concerning the factors which influence the initiation of cooperation. In the second phase, the focus of theorizing and research centered upon some of the unique social psychological factors involved in the initiation of cooperation - namely, the factors related to the development of mutual trust.

Willow Run Labs., U. of Michigan, Ann Arbor.
THE BEHAVIORS OF MEMBERS OF PROBLEM-SOLVING GROUPS, by L. R. Hoffman and C. G. Smith. Rept. on Project Michigan, Contract DA 36-039-sc-52654. Feb 59, 31p. 8 refs. 2144-364-T.
Order from LC mi$3.00, ph$6.30 PB 144 548

This report investigates the variables determining the individual behaviors of members of 4-person problem-solving groups on 4 different problems, as derived from postmeeting ratings of their behaviors. A complex analysis-of-variance design is used to test for the effects of group type (homogeneity vs heterogeneity of member personalities), problems, and between-group and between-individual differences. Problem differences proved to be a major source of variance for all behaviors studied, with some problems eliciting task-directed behaviors and others more socio-emotional behaviors. Between-group differences and interactions between problems and groups were also large sources of variance. The only significant difference bewteen the homogeneous and heterogeneous groups was that the homogeneous groups engaged more in promoting personal relations. Results are discussed, and some basic propositions of group interaction are suggested. (Author)

BIOLOGICAL EFFECTS OF NOISE IN VERTEBRATE ANIMALS, by Adam Anthony and Eugene Ackerman. Rept. for 1 June 54-30 Sep 57 on Generation, Propagation, Action and Control of Acoustic Energy, Contract AF 33(616)2505. Nov 57, 128p. 54 refs. WADC Technical rept. 57-647; AD-142 078.
Order from LC mi$6.30, ph$19.80 PB 144 606

This report deals with the stress effects of noise on bodily functions other than hearing. It includes physiological, biochemical and behavioral effects of intense acoustic noise at low and high frequencies. Specific approaches employed are as follows: (1) flame spectrophotometric analyses of serum electrolytes, (2) serum ascorbic acid and blood sugar changes, (3) changes in adrenal and plasma cholesterol, (4) behavioral changes in noise exposed rats, mice and guinea pigs, (5) relationship of seizure-susceptibility to noise stimulation and (6) design and construction of a corona speaker for use in bioacoustic studies. It was demonstrated that short daily exposures to intense noise of about 132-140 db pressure levels can act as a physiological stress to which rats, mice and guinea pigs can satisfactorily adapt. These studies have also helped clarify the nature of the normal physiological defense mechanisms to excessive noise stimulation. By investigating the factors determining the severity of noise as a stress stimulus and using objective measures of the limits of endurance of animals to different types of intense noise situations, one can more intelligently cope with the problem of preventing noise from becoming a serious health menace to man. THE ANALYTICAL MECHANICS OF RATE OF ONSET, by Sigurd Hoyer (Potter Instrument Co.). Oct 59, 66p. 5 refs. AFMDC-TN-59-26.
Order from LC mi$3.90, ph$10.80 PB 144 424

The system investigated in Part I consists of a mass connected by a linear spring to a moving frame. One calculation also includes the effect of a Newtonian dashpot connected to oppose relative motion between the mass and the frame. The force in the coupling spring is determined as a function of the motion of the frame. The force depends on the acceleration of the frame, and on higher derivatives of the position of the frame with respect to time. We are here particularly interested in the effect on spring force of the rate of onset of acceleration of the frame. It is shown that the spring force may depend on the rate of onset of acceleration only. The purpose of Part II is to present the results of an investigation of the behavior of certain models when these models are subject to accelerated motion. The models treated here consist of a rigid frame holding either a frictionless compressible fluid, an elastic solid, or a visco-elastic solid. Equations which describe the behavior of the models are developed. Solutions of these equations are given for some particular cases. It is hoped that the results obtained will be of use in determining factors which cause damage to living organisms during periods of severe acceleration. Such periods of severe acceleration may, for example, occur in a plane crash, or in a rocket-powered flight with living passengers. (See also PB 142 846)

Albany Medical Coll., N. Y.
RENAL CLEARANCE OF GLUCOSE IN HYPOTHERMIC DOGS, by G. S. Kanter. July 59, 15p. 10 refs. AFSAM rept. 59-37; AD-227 573.
Order from LC mi$2.40, ph$3.30 PB 144 688

The quantitative alterations in both glomerular filtration rate (GFR) and tubular reabsorption of glucose, before, during, and after onset of hypothermia were investigated. With the development of hypothermia a progressive fall in glomerular filtration rate was observed (78 ± 5 ml/min. at control rectal temperature to 30 ± 5 ml/min. at RT of 25° C). Hypothermia has a twofold effect on renal function — physically via the cardiovascular system, resulting in a falling GFR, and chemically via the tubular reabsorption processes, resulting in a decreased glucose reabsorption. To study the kinetics of this decreased glucose reabsorption, the glucose Tm was investigated.

Dayton U., Ohio.
A MINIATURIZED OPERANT CONDITIONING CHAMBER FOR BEHAVIORAL RESEARCH IN THE UPPER ATMOSPHERE, by Frederick H. Rohles, Jr. (Aero Medical Lab.) and Richard Coy. Rept. on Human Performance in Advanced Systems, Contract AF 33(616)6264. July 59, 13p. 3 refs. WADC Technical note 59-261.
Order from OTS $0.50 PB 161 333

A miniaturized operant conditioning chamber for a mouse was designed for behavioral research in the upper atmosphere. It requires the animal to press a lever on a fixed ratio schedule of 25:1 for 20 minutes out of every 6 hours for food reward. The chamber utilizes mechanical power, and response recording is compatible with telemetry systems. The unit is 3.5 inches in diameter, 6.5 inches long, and weighs approximately 2.25 pounds. (Author)

Virginia U., Charlottesville.
BIOLOGICAL PAYLOADS IN SPACE FLIGHT, by Frank W. Banghart. Rept. on Contract AF(600)1792. Nov 58, 49p. ARDC-TR-58-58; AD-204 761.
Order from LC mi$3.30, ph$7.80 PB 144 586

An experimental program is proposed to determine the feasibility of manned space flight by means of a series of experiments designed to furnish the maximum amount of information, in progressive steps, from lower animal species to the ultimate manned flight. The basic instrumentation problem involves obtaining highly reliable and information-rich data from a space vehicle which may not be recovered, using minimum instrumentation weight. It is proposed that a storage-dumping procedure be used where the data are taped and stored and are dumped at the command of the monitoring station. The basic ecological problem consists of determining and controlling the environment in which a living organism is to be sent into space. The basic physiological problems considered are the specific areas of gravity and radiation.

CHANGE IN PLASMA TRANSAMINASE ACTIVITY OF RHESUS MONKEYS AFTER EXPOSURE TO VIBRATION, ACCELERATION, HEAT ON HYPOXIA, by Freeman W. Cope and B. David Polis. Rept. no. 5 on Proj. NM 11 01 12.7. 11 Dec 57, 10p. 8 refs. NADC-MA-5718; AD-209 173.
Order from LC mi$1.80, ph$1.80 PB 144 717

Significant increases in plasma glutamic-oxalacetic transaminase levels were observed in monkeys exposed to vibration, acceleration, heat, hypoxia, or noise and confinement stress. In all but 1 of 17 animals, no specific tissue damage was evident. The increase in plasma transaminase is interpreted as a non-specific stress effect. The data suggest that caution should be exercised in basing clinical judgements on serum transaminase levels. (Author)

Botany

PHOTOGRAPHIC DOCUMENTATION OF VEGETATIONAL CHANGES IN AFRICA OVER A THIRD OF A CENTURY, by H. L. Shantz and B. L. Turner.

Rept. on Contract [Nonr-2173(01)] Aug 58, 173p. 6 refs. Rept. 169.
Order from LC mi$8.10, ph$27.30 PB 143 349

The present photographic study has been to document the changes which have taken place at a particular site over a specified time. The area covered is large enough so that broad generalities might be drawn. The facts are presented from which each worker can draw his own conclusions. The duplicated pictures and discussions have been arranged in accordance with the broad vegetational belts or formations.

Syracuse U., N. Y.
CONTROL OF WOOD-ROTTING FUNGI, by M. W. Johnson. Technical rept. no. 9, 1 Jan-31 Dec 58, on Contract Nonr-669(06). [1958] 11p.
Order from LC mi$2.40, ph$3.30 PB 144 686

Abstracts of results are given on studies: (a) on utilization of isomers of amino acids; (b) on vitamin; (c) on polysaccharide production; and (d) on marine fungi.

THE REALIZATION OF BIOLOGICAL COMPUTERS. Quarterly rept. no. 4 (Annual) on Contract Nonr-1834(21). 15 Jan 59, 69p. 6 refs.
Order from LC mi$3.90, ph$10.80 PB 144 682

The following topics are covered: Sec. 1. Some mathematical aspects of the analysis and synthesis of biological computers, Sec. 2. Biological computer general neuron circuitry, and Sec. 3. On the design of artificial nerve nets.

School of Aviation Medicine, Brooks AFB, Tex.
A STANNOUS FLUORIDE-SILEX-SILICONE DENTAL PROPHYLAXIS PASTE WITH ANTICARIOGENIC POTENTIALITIES, by Vincent A. Segreto, Norman O. Harris, and Warren R. Hester. Nov 59, 7p. 8 refs. Rept. 60-11; AD-227 574.
Order from LC mi$1.80, ph$1.80 PB 144 687

A stannous fluoride-silex-silicone dental prophylaxis paste was developed and tested in vitro for anticariogenic potentialities. The active ingredient is stannous fluoride; the silex acts as the abrasive, and the silicone-petrolatum dilution acts as the moistening agent. Flavoring agents consist of oil of orange, oil of anise, and Sucaryl. Data indicate that the prophylaxis paste is more effective in preventing acid decalcification of enamel than a 10 percent topical application of aqueous stannous fluoride. (Author)

CUTANEOUS APPLICATION OF 1.1% MALATHION POWDER TO VOLUNTEERS, by Philip J. Gutentag. July 59, 11p. 11 refs. CWLR-2290.
Order from LC mi$2.40, ph$3.30 PB 144 668

A pilot study is described to determine the safety with which 1.1% malathion powder can be used when dusted over a person's entire body. The study also attempts to evaluate troop reaction to frequent dustings. During the entire study, consisting of eight complete cutaneous dustings in a 15-day period, there was no significant cholinesterase depression which could be ascribed to the malathion and there was no evidence of toxicity as determined by daily examination of the men. Troop acceptances of the powder throughout the experiment was good and there was no evidence that nonpowdered personnel objected to the presence of the powdered volunteers. From these studies, it appears that 1.1% malathion could safely be used on a large-scale field trial. (Author)

PERARYLATED SILANES. IDENTIFICATION BY X-RAY DIFFRACTION POWER PATTERNS, by Frank L. Chan and Leonard Spialter. Rept. on Analytical Chemistry of Special Alloy Chemicals. Sep 59, 37p. 13 refs. WADC Technical rept. 59-512.
Order from OTS $1.00 PB 161 312

X-ray powder diffraction data are presented for twenty arylsilanes in various forms of graphic presentation for ease in identification, characterization, and analysis. These include the actual pictorial diffraction patterns, extended listings of d-spacings with relative intensities, and a Hanawalt-type index identifying the catalogued compounds by means of all combinations of the three most intense lines. Purity of silanes is stressed to minimize confusion and errors arising from impurities and polymorphic forms. To insure accuracy in measuring distances and intensities of lines on the diffraction plates, recordings of their microphotometer traces were taken and precisely read. A surprising similarity of d-spacings had been observed for the most intense line, but not for those of lesser intensity, in the powder pattern of each of these compounds. This suggests a possible correlation between this pattern component and a basic element of molecular structure in a class of compounds.

New York U. Coll. of Engineering, N. Y.
RESEARCH ON THE PREPARATION OF PURE METALS, by Charles J. Marsel and Walter Brenner. Scientific rept. no. 3 for 15 Dec 58-31 Aug 59 on Contract AF 19(604)4124. 1959, 47p. 17 refs. AFCRC-TN-59-190; AD-215 624.
Order from LC mi$3.30, ph$7.80 PB 144 572

The preparation of pure tin was investigated via the decomposition of stannane. The preparation of pure gallium was first investigated via the reduction of gallium trichloride with lithium aluminum hydride in diethyl ether as a solvent. A more promising approach has now been developed which is centered on the preparation of lithium gallium hydride. Exploratory investigations were carried out on the preparation and the subsequent decomposition of antimony hydride for the preparation of the pure metal. (See also PB 142 291)

Wisconsin U., Madison.
BINARY NITROGEN COMPOUNDS OF THE ELEMENTS: A LITERATURE SURVEY, by Rosemary G. Ehl, Rodney J. Sime, and John L. Margrave. Rept. on Contract AF 33(616)3023. June 59, 81p. 832 refs. WADC Technical note 59-115.
Order from OTS $2.25 PB 161 315

A literature survey has disclosed the existence of more than 195 binary compounds of nitrogen with the other elements of the periodic system. About 80% of the known binary nitrogen compounds are nitrides while the rest are azides. Combinations with at least 75 elements are reported. In this report are presented a comprehensive bibliography and a set of tables designed to make it convenient for a researcher to locate preparative, crystallographic, or thermodynamic data. Miscellaneous references are also listed. (Author)

THE EXPECTED SQUARE OF THE LENGTH OF A HYDROCARBON CHAIN, by Arthur V. Tobolsky. Rept. on Contract Nonr-1858(07). 29 Jan 59, 8p. 3 refs. ONR Technical rept. RLT-29.
Order from LC mi$1.80, ph$1.80 PB 144 143

Three successive bonds along a hydrocarbon chain may be in a planar trans configuration or in two nonplanar gauche configurations. The energy of the trans configuration is taken as zero and the energies of the two gauche configurations are each taken as ε (per mole). The mean square length of a hydrocarbon type chain of n links each of length l_o is shown to be $\bar{r}^2 = (2+6a)/(3-3a)\, nl_o^2$, where $a = 1/[1+2\exp(-\varepsilon/RT)]$. The problem of excluded volume is not here considered.

Rochester U., New York.
THE FLUORESCENCE AND PHOTOLYSIS OF ACETONE AND ACETONE-BIACETYL MIXTURES, by Julian Heicklen and W. Albert Noyes, Jr. Rept. on Contract AF 18(600)1528. 12 Sep 58, 24p. 15 refs. AFOSR-TN-58-845; AD-203 335.
Order from LC mi$2.70, ph$4.80 PB 138 347

The photolysis of acetone has been redone to very low conversions. Also the fluorescence and photolysis of acetone-biacetyl mixtures have been studied. This paper presents the results of these studies.

PHOTOLYSIS OF AMORPHOUS LEAD AZIDE, by [Herbert M. Dumas, Jr.] Rept. on Contract DA 44-009-eng-2439. 31 Aug 56, 52p. 32 refs. AD-124 361.
Order from LC mi$3.60, ph$9.30 PB 137 724

Army Chemical Warfare Labs., Army Chemical Center, Md.
THE EFFECT OF POLYMERIC MODIFIERS ON THE BREAKUP OF DROPS BY HIGH-VELOCITY AIR STREAMS, by J. D. Wilcox, R. K. June and others. Rept. for Mar 56-July 58 on Agent Physicochemical Research. Sep 59, 22p. 24 refs. CWLR 2309.
Order from LC mi$2.70, ph$4.80 PB 144 740

The breakup of liquids was studied with a miniature shock tube, simulating conditions that occur in spraying from high-speed aircraft and in explosive dissemination. Investigated was the breakup of drops of agent simulants (Newtonian liquids) and of polymer solutions in agent simulants (non-Newtonian viscoelastic liquids), when subjected to a high-velocity air stream. It was found that polymeric modifiers which produce viscoelastic properties retard the breakup of the liquid.

Avco-Everett Research Lab., Everett, Mass.
NUMERICAL CALCULATION OF ABSOLUTE BREMSSTRAHLUNG INTENSITY FOR A FULLY IONIZED FULLY DISSOCIATED HYDROGENIC GAS, by G. Sargent Janes and Harold E. Koritz. Rept. on Contract AF 49(638)61. Sep 59, 16p. 4 refs. Research rept. 70; AFOSR-TN-59-1076.
Order from LC mi$2.40, ph$3.30 PB 144 345

Using the approximate relationships of Kirkpatrick and Weidmann for bremsstrahlung intensities, numerical calculations have been made on the IBM 650 at the Avco-Everett Research Laboratory for a fully ionized, fully dissociated hydrogenic gas. The intensities are given in terms of a quantity having the units ergs per sec per unit frequency interval per steradian per cubic centimeter as a function of $h\nu$, (from 0.5 to 4.0 electron volts) and kT (from 4 to 200 electron volts). A calibration method has been devised for measurement of absolute bremsstrahlung intensities, which continually compensates for the errors present in most calibration procedures.

Eagle-Picher Research Labs., Miami, Okla.
STUDY OF THE PHYSICAL CHEMISTRY AND METALLURGY OF SEMI-CONDUCTING MATERIALS, by K. E. Bean, W. E. Metcalf, and R. J. Starks. Quarterly rept. no. 11, 14 Sep-14 Dec 57, on Contract DA 36-039-sc-74890. [1957] 40p. 14 refs. AD-154 771.
Order from OTS $1.00 PB 161 353

A method was developed for the deposition of crystalline bars of silicon on a tantalum filament in such a manner as to allow the filament to be pulled out of the bar. Absorption of impurities from trichlorosilane using a quartz column containing freshly produced silica reduced the boron content of the silicon produced. Coordination compounds of BCl_3 were produced in crude $SiHCl_3$ using (1) octyl alcohol and (2) triphenylchloromethane to reduce the boron content of the silicon prepared therefrom. Floating zone studies were carried out on the silicon bars which had been pulled directly from the filaments. The symmetry of the bars made them zone more easily and retain their shape more readily than was the case of bars cut from grown crystals of silicon.

Horizons, Inc., Cleveland, Ohio.
ELECTRODE REACTIONS IN TITANIUM FUSED SALT ELECTROLYSIS, by A. J. Kolk. Final rept. on Contract Nonr-1178(00). 1 Aug 56, 150p. 20 refs.
Order from LC mi$7.20, ph$22.80 PB 138 422

Constant current voltammetry in molten salts is discussed as well as various phenomena associated with crystal growth during electrodeposition in molten salts. These include kinetics of cathodic deposition electrical double layers and transference in molten salts. Experimental data is presented on polarization curves of potassium fluotitanate in sodium chloride, the reduction of various titanium compounds to titanium, anodic and cathodic polarization curves of some titanium compounds. The appendix contains translations of articles on the electrochemistry of potassium fluotitanate.

ANODIC BEHAVIOR OF COPPER IN HYDROCHLORIC ACID AND IN PHOSPHORIC ACID (INCLUDING SCIENTIFIC REPORT ABOUT INTERNATIONAL SYMPOSIUM ON PASSIVITY, DARMSTADT, 1957) by J. H. Bartlett, R. S. Cooper and others. Technical rept. no. 5 (Final) on Contract DA 11-022-ORD-939. 30 Sep 57, 20p. 8 refs. AD-145 599.
Order from LC mi$2.40, ph$3.30 PB 144 563

An experimental study of the behavior of copper anodes in hydrochloric acid and in phosphoric acid, in order to learn more about how layers are formed and removed from electrodes. This is of fundamental importance in electrolytic rectification, electropolishing, prevention of corrosion, and the understanding of nerve conduction.

DISTRIBUTION OF RADICALS IN LAMINAR FLAMES. I. CRITERIUM OF VALIDITY OF THE STEADY STATE ASSUMPTION, by G. Millan, and I. Da Riva. Rept. on Contract AF 61(514)997. 31 Jan 59, 38p. 14 refs. AFOSR-TN-59-626; AD-217 811.
Order from LC mi$3.00, ph$6.30 PB 143 173

The determination of the distribution of the chemical radicals in the sine of the flames constitutes one of the basic problems in the study of these. Von Karman and Penner [Selected Combustion Problems, pp. 5-41. Butterworth's Scientific Publications, 1954] have proposed for it the extension to this case of the steady state assumption, used with success in other problems of chemical kinetics. However, a proper criterium, making it possible to determine in what cases the above assumption can be applied with sufficient guarantee, is not yet available. In this work it is demonstrated that the applicability of the assumption depends on the value of a certain dimensionless parameter, in which the effects of reaction and diffusion of the radicals are combined. Besides, a method of recurrence is developed which enables successive approximations for the distribution of the radicals to be obtained from that corresponding to the steady state. Finally a study is made of a mathematical model which, preserving all the properties of the flame, enables an easy comparison of the exact solution with the approximate ones obtained by means of the proposed methods. (Author)

Instituto Nacional de Technica Aeronautica Esteban Terradas (Spain).
DISTRIBUTION OF RADICALS IN LAMINAR FLAMES. 2. APPLICATION OF THE CRITERIUM OF VALIDITY OF THE STEADY STATE ASSUMPTION TO SEVERAL FLAMES, by I. Da Riva and G. Millan. Rept. on Contract AF 61(514)997. 31 Jan 59, 54p. 11 refs. AFOSR-TN-59-627; AD-217 812.
Order from LC mi$3.60, ph$9.30 PB 143 172

The object is to apply the criterium on the validity of the steady state assumption [PB 143 173] to various cases corresponding to flames studied by different authors. For it, the differential equation deduced for the concentration of the radical is integrated by means of the perturbation method set out in the above mentioned reference. With a view to simplifying the numerical calculation, the concentration of the principal species and of the radicals distinct from that under consideration, if existent, have been approximated by means of appropriate functions. The two first perturbations were normally sufficient to evaluate the accuracy with which the steady state assumption enables the concentration of the radicals to be calculated. The criterium set out makes it possible to prove that the steady state assumption is sufficiently approximate to calculate the concentration of the radicals in the following cases: Ozone flame, Hydrogen radical in the Hydrogen-Bromine flame and, Hydrogen flame. On the contrary, in the case of the Bromine radical in the Hydrogen-Bromine flame and particularly in the Hydrazine flame, the parameter for the validity of the assumption is very small and consequently the method

of perturbations does not converge and the steady state assumption for the concentration of the radicals gives large deviations with respect to their actual distributions. (Author)

A MASS SPECTROSCOPIC APPEARANCE POTENTIAL STUDY OF SOME BORON TRIHALIDES, by W. S. Koski, Joyce J. Kaufman and C. F. Pachucki. Technical note no. 8 on Contract AF 18(600)1526. Oct 58, 23p. 24 refs. AFOSR-TN-58-855; AD-203 497.
Order from LC mi$2.70, ph$4.80 PB 137 994

The appearance potentials of the positive ion fragments from BCl_3, BBr_3 and BI_3 were measured mass spectroscopically. These measurements permitted a determination of the average B-I bond dissociation energy in BI_3.

Laval U. (Canada).
KINETICS OF THE THERMAL REACTION OF HYDROGEN PEROXIDE WITH HYDROGEN, by Wendell Forst. Rept. on Contract AF 18(600)492. 25 Nov 58, 21p. 20 refs. AFOSR-TN-58-1070; AD-207 230.
Order from LC mi$2.70, ph$4.80 PB 138 351

The reaction proceeds with a pressure increase at constant volume and is thus accessible to study by the static method. At the pressures used the rate of activation is rate-determining in the unimolecular decomposition of hydrogen peroxide. When experimental results are corrected for activation by hydrogen, the reaction is found to be first order in both hydrogen and peroxide. Experimental evidence points to a low value for rate constant k_3. The significance of these results is briefly discussed in connection with the kinetics of the nitric oxide-hydrogen reaction.

National Research Labs., Ottawa (Canada)
THE SOLUTION OF AN EIGENVALUE PROBLEM (RATE OF EVAPORATION AND DECOMPOSITION OF A DROPLET OF AN OZONE-OXYGEN MIXTURE) BY MEANS OF ANALOGUE AND DIGITAL COMPUTERS, by R. Sandri. Aug 59, 18p. 1 ref. Mechanical Engineering rept. MB-15.
Order from LC mi$2.40, ph$3.30 PB 144 509

The rate of evaporation and decomposition of a droplet of a 50-50 mole percent mixture of liquid ozone and oxygen in a hot oxygen atmosphere at 20 atmospheres pressure was computed for different sizes of the droplet radius. This is an eigenvalue problem which could be solved with an accuracy of about 2 percent on the PACE analogue computer. As an accuracy check, the one-dimensional problem (rate of evaporation of a large drop) was solved also on the Bendix digital computer. The result differed by 2.2 percent from that obtained on the analogue computer. (Author)

TRI-DIMENSIONAL EXAMINATION OF CHEMICAL SYSTEMS IN GEL MEDIA, by L. H. Gevantman, R. C. Chandler, and J. F. Pestaner. 29 May 57, 31p. 16 refs. Research and development technical rept. USNRDL-TR-163; AD-143 510.
Order from LC mi$3.00, ph$6.30 PB 144 728

The present study describes a technique for the colorimetric measurement of tri-dimensional reaction product distributions in firm aqueous gels. Two chemical systems are employed. These systems contain agar (1 per cent by weight) in combination with low concentrations of either KI-starch or trichloroethylene-bromcresol purple. The change in the KI system, colorless to deep blue, results from the radiation-induced oxidation of I^- to I_2. The change in the trichloroethylene-bromcresol purple system, purple to yellow, is caused by the production of HCl. The gels are irradiated in square tubes with X rays from a Van de Graaff accelerator and a 250-KVP X-ray machine. After irradiation they are sliced and examined in detail. The color distribution throughout the reaction zone is measured photometrically with a recording microphotometer. Depth-dose plots for the two systems are shown. (Author)

Naval Research Lab., Washington, D. C.
MICELLAR PROPERTIES OF OIL-SOLUBLE SOAPS AND THEIR SIGNIFICANCE IN DETERGENCY, by W. D. Bascom, S. Kaufman and C. R. Singleterry. Interim rept. 13 Jan 60, 19p. 39 refs. NRL Rept. 5422.
Order from OTS $0.50 PB 161 067

Oil-soluble soaps in hydrocarbon solvents have been shown to form small and approximately isodimensional micelles. Under suitable conditions, some metal carboxylates form extended structures as well. Coordinate bonding is an important factor contributing to the stability of both types of structure. Micelles are in equilibrium with nonmicellar soap in the solvent so that the system behaves as a dilute but saturated soap solution in equilibrium with a finely divided saturating phase. This situation favors rapid and extensive adsorption on polar surfaces to effect detergency or rust inhibition. The presence of micelles facilitates the dissociation of oil-soluble soaps to produce stable micellar ions and to impart a stabilizing charge to polar particles suspended in the system. The solubilization of polar molecules in oil-soluble soap micelles involves coordination and sometimes hydrogen bonding. It provides a mechanism for the segregation of corrosive acids and of acidic precursors of sludge or lacquer. Solubilization of water by such micelles promotes dissociation of ion pairs in the micelle to form micellar ions and free anions. Water solubilization also allows secondary solubilization of inorganic salts not otherwise taken up by the micelle. Addition of excess water may lead to the formation of a stable water-saturated micelle or to the separation of a soap-rich liquid-crystalline phase. (Author)

RARE EARTH OXIDES. I. THE VAPORIZATION OF NEODYMIUM SESQUIOXIDE, Nd_2O_3. DISSOCIATION ENERGY OF NdO AND TaO, by Patrick N. Walsh and David White. Technical note 1 on Contract AF 18(600)1545. Jan 58, 19p. 24 refs. AFOSR-TN-58-291; AD-154 196.
Order from LC mi$2.40, ph$3.30 PB 144 643

The vaporization of Nd_2O_3 has been studied by the Knudsen effusion method in the temperature range 2040 to 2450°K. The dissociation energies for TaO and NdO is calculated to be $D_o^o(NdO) = 7.34 \pm 0.2$ e. v.

Ohio State U. Research Foundation, Columbus.
RARE EARTH OXIDES. II. THE VAPORIZATION OF LANTHANUM SESQUIOXIDE, La_2O_3, AND YTTRIUM SESQUIOXIDE, Y_2O_3; DISSOCIATION ENERGIES OF LaO, YO, AND TaO, by Patrick N. Walsh and David White. Technical note 2 on Contract AF 18(600)1545. Feb 58, 22p. 15 refs. AFOSR-TN-58-382; AD-154 289.
Order from LC mi$2.70, ph$4.80 PB 144 642

The vaporization of La_2O_3 and Y_2O_3 from tungsten and tantalum refractories has been studied by the Knudsen effusion method in the temperature ranges 2000-2450°K, and 2000-2700°K, respectively. The sesquioxides decompose to the corresponding monoxides and oxygen on vaporization from tungsten cells. The dissociation energies of the monoxides are $D_o^o(LaO) = 8.02 \pm 0.17$ e. v., and $D_o^o(YO) = 7.25 \pm 0.3$ e. v. LaO(g) and TaO(g) are the principal products formed in the vaporization of La_2O_3 from a tantalum effusion cell. Y_2O_3 also reacts with tantalum, yielding a mixture of YO(g), Y(g), and TaO(g). From the determination of the heats of these reactions, the dissociation energy of TaO(g) is found to be $D_o^o(TaO) = 9.34 \pm .06$ e. v. A method is described for deriving equilibrium concentrations and heats of formation from Knudsen effusion data when more than one reaction occurs in the Knudsen cell. (Author) (See also PB 144 643)

AN EXPERIMENTAL STUDY OF SPARK STABILIZATION BY A GAS VORTEX, by Christopher Cobb and Vernon H. Blackman. Rept. on Contract AF 49(638)334. 28 Aug 59, 23p. 3 refs. T-3TN099-334; AFOSR TN-59-925.
Order from LC mi$2.70, ph$4.80 PB 144 768

For several years, pressure gradients in a gas flow have been used to stabilize an electric discharge. This work has been concerned mainly with a vortex flow in which the low density channel along the axis of the vortex can be used to confine an electric arc. It was decided to investigate transient discharges, i. e., sparks, in the presence of a gas flow. Since the vortex geometry is of great interest for arc applications, the work was oriented toward the discharge of sparks along the axis of a vortex, with the feeling that a time resolved photographic study of spark stabilization and growth in a vortex channel could shed information on the stabilization of arcs by the vortex motion.

Purdue U., Lafayette, Ind.
THE THERMOCHEMISTRY OF RHENIUM COMPOUNDS, by James P. King (Doctoral thesis). Rept. on Contract AF 18(600)1525. 26 Oct 59, 148p. 81 refs. AFOSR-TN-59-1164.
Order from LC mi$7.20, ph$22.80 PB 144 741

Mostly covers the following: The potential of the ReO_3/ReO_4^- electrode and the thermodynamics of rhenium trioxide. The heats of formation of rhenium trichloride and rhenium tribromide. The heat of formation of the hypochlorite ion. The entropy and structure of rhenide ion.

PHOTOIONIZATION ANALYSIS BY MASS SPECTROSCOPY, by G. L. Weissler, J. A. R. Samson and others. Technical rept. no. 3 on Contract AF 19(604)2049. 1 Aug 58, 50p. 64 refs. AD-202 792.
Order from LC mi$3.30, ph$7.80 PB 137 534

A vacuum ultraviolet monochromator has been combined with a mass spectrometer similar to previously reported instrumentation to study photoionization processes between 1570A and 430A. Monochromatic photons were used to ionize A, He, Ne, O_2, N_2, CO, NO, CO_2, N_2O, and NO_2; and preliminary measurements of ion intensity as a function of photon energy have been obtained for the parent ions together with their fragments. The onset of ionization and the plot of ions per unit photon flux versus λ will be compared to previously reported work on photoionization cross sections. Dissociative ionization energies have also been determined for some of the above gases, and the results for N_2O favor the N_2 dissociation energy of 9.8 ev.

GENERAL CARGO HINTERLANDS OF NEW YORK, PHILADELPHIA, BALTIMORE AND NEW ORLEANS, by Donald J. Patton. Rept. no. 2 on Contract Nonr-595(05). Mar 58, 25p. 13 refs.
Order from LC mi$2.70, ph$4.80 PB 138 539

The present contribution to the study of port hinterlands has three objectives. First, hinterland origin and destination maps are presented for port traffic of a general cargo nature for New York, Philadelphia, Baltimore and New Orleans, the four leading general cargo ports in the eastern half of the United States. Second, several preliminary conclusions are presented regarding factors contributing to the hinterland patterns depicted. Third, an attempt is made to suggest several of the problems which would appear to merit attention in further research relating to the spatial relations of ports. (See also PB 135 898)

Quartermaster Research and Engineering Center, Natick, Mass.
GLAZE: ITS METEOROLOGY AND CLIMATOLOGY, GEOGRAPHICAL DISTRIBUTION, AND ECONOMIC EFFECTS, by Iven Bennett. Rept. on Contract DA 44-109-qm-1496. Mar 59, 224p. 216 refs. Technical rept. EP-105; AD-216 668
Order from LC mi$9.90, ph$34.80 PB 144 450

Information is given on air mass and frontal conditions associated with glaze formation in different parts of the United States. Maps illustrate surface and upper air synoptic patterns of typical glaze storms. Considerable new information is presented on the frequency, intensity, duration, and geographical distribution of glaze. Major emphasis is on the United States, but other parts of the world, particularly Europe, are included. Bituminous or macadam highway surfaces are slightly superior to concrete in inhibiting glaze formations and in contributing to its rapid melting. Material from highway departments of 34 states describes icing conditions encountered and methods used to combat the ice.

Climatology and Meteorology

Air Force Cambridge Research Center, Bedford, Mass.
GENERAL DESIGN FOR WEATHER OBSERVING AND FORECASTING SYSTEM, 433L, by R. M. White, R. F. Myers and F. W. Ward. 15 Dec 57, 93p. 1 ref. AFCRC-TN-57-609; AD-133 846.
Order from LC mi$5.40, ph$15.30 PB 144 602

A study was made to review Air Force operational and technological weather support problems in order to recommend revisions and reorientations of the system design philosophy and development plan. No attempt was made to present a detailed plan: this is to serve as a general study which may function as a guide in the preparation of detailed engineering design plans. Topics of discussion include (1) the Air Force Weather problem, (2) system design characteristics, (3) system description, (4) system implementation, and (5) resources.

Air Force Cambridge Research Center, Bedford, Mass.
REFINEMENTS IN UTILIZATION OF CONTOUR CHARTS FOR CLIMATICALLY SPECIFIED WIND PROFILES, by Allen E. Cole. Oct 59, 28p. 118 refs. Air Force Surveys in Geophysics no. 116; AFCRC-TR-59-280.
Order from OTS $0.75 PB 161 346

Differences between mean monthly (or seasonal) wind profiles obtained from actual wind observations and those prepared from height contours of constant-pressure charts are examined. The study is divided into two parts: (a) a comparison of mean monthly vector winds based on complete sets of monthly rawin observations with geostrophic and gradient winds taken from mean monthly constant-pressure maps and (b) an investigation of the accuracy of mean monthly resultant winds computed from complete sets of rawin data. Procedures to be followed in preparing mean monthly and seasonal wind profiles from data obtained from the height contours on mean monthly constant-pressure maps are recommended. (Author)

MEASURE FLIGHTS FOR THE RESEARCH OF AEROPHYSICAL PROBLEMS; MEASUREMENT OF CLOUD ELEMENTS, ATMOSPHERIC VERTICAL VELOCITY, ATMOSPHERIC OZONE CONTENT, by Walter Georgii. Final rept. for 1 Mar 58-30 Sep 59 on Contract DA 91-508-EUC-297. 1959, 96p. 4 refs.
Order from LC mi$5.40, ph$15.30 PB 144 240

Size of cloud particles: Methods for direct and indirect determination of drop sizes in clouds are described. The methods developed are of sufficient accuracy to be applied for the determination of drop sizes. Vertical air velocity: (1) term of vertical velocity and vertical acceleration; (2) purpose of measurements concerning air traffic, missiles, gliding; (3) methods of measurements: flight measurements, combined measurements, balloon measurements (theodolite, radar); (4) own measurements; (5) vertical velocity and vertical acceleration in atmospheric boundary layers, in frontal zones, in waves, in local convection, and in mixing airmasses. Vertical distribution of ozone: Measurement flights of ozone have been carried out up to 6500 m altitude over forest areas, smaller settlements, over lakes and in the foot hills of the Alps. The flights indicated that the ozone amounts over the city have been always found smaller than over the country. The differences were not very great since the ozone content was always small over the country with the exception of flight No 11. During all other measurement flights a long period of high pressure dominated Europe with only small low pressure disturbances, which did not reach Bavaria. Correspondingly weak wind flow existed.

Deutscher Wetterdienst, Aachen (West Germany).
ATMOSPHERIC ELECTRIC AND METEROLOGICAL INVESTIGATIONS IN HIGHER MOUNTAIN RANGES, by Hans Israel. Final rept. on Alps-Proj. 1954-57, Contract AF 61(514)640. 1 Sep 57, 177p. 94 refs. AFCRC-TR-58-248; AD-152 607.
Order from LC mi$8.10, ph$27.30 PB 137 823

During a period of 13 months geophysical measurements were made at more than four stations, situated between 200 and more than 3.500 m above sea level in Switzerland. The measurements concerned in general the electric potential gradient of the atmosphere, the air-earth current, the general local brightness and the general meteorological data - and partially the two polar electric conductivities of the atmosphere, the content in condensation nuclei, the sun radiation in several spectral ranges and the ozone content. The results of the first total evaluation are given in 16 reports, four of which deal with the measuring technique. (See also PB 137 365)

Florida State U., Tallahassee.
FINAL REPORT, by Noel E. LaSeur. Rept. on Contract AF 19(604)753. 31 July 59, 24p. 23 refs.
Order from LC mi$2.70, ph$4.80 PB 144 531

Research devoted primarily to two general problems: (1) the structure, analysis and forecasting of synoptic scale weather systems in the tropical Atlantic region; and (2) hurricane structure and some aspects of its relation to the formation, movement and dissipation of these storms.

High Altitude Observatory, Boulder, Colo.
THE DEVELOPMENT OF THERMALLY DRIVEN CIRCULATIONS, by B. Haurwitz. Scientific rept. no. 1 on Contract AF 19(604)5488. Nov 59, 34p. 3 refs. AFCRC-TN-59-628.
Order from LC mi$3.00, ph$6.30 PB 144 592

Some simple models of atmospheric circulations are considered. It is assumed that a temperature difference in the horizontal is established and maintained by some outside agency, such as differential solar heating. The resulting motion is studied without and with the effects of friction. The advective temperature change which appears as a non-linear term in the differential equations is taken into account. Mathematical expressions are given for the development of the circulation without friction.

Illinois State Water Survey, Urbana.
AN EVALUATION OF THE AREA INTEGRATOR, by Eugene A. Mueller. Research rept. no. 7 on Contract DA 36-039-sc-75055. Dec 58, 37p. 5 refs.
Order from LC mi$3.00, ph$6.30 PB 144 670

The operational results of the area integrator as developed by the Illinois State Water Survey are reported. The use of a range integrating device with radar as a solution to the incoherent return from precipitation is described and found to improve the area comparisons of the area integrator to the radar. Results of the study indicate that better relationships between radar power return and precipitation rate must be determined before the area integrator becomes a useful tool. At present the quantitative amounts as determined by the area integrator are as accurate as the amounts obtained manually from the radar. (Author)

Massachusetts Inst. of Tech., Cambridge.
HEMISPHERIC HUMIDITY CONDITIONS DURING THE YEAR 1950, by Jose P. Peixoto. Scientific rept. no. 3 on General Circulation Project, Contract AF 19(604)2242. Oct 58, 146p. 9 refs. AFCRC-TN-58-609; AD-207 285.
Order from LC mi$7.20, ph$22.80 PB 137 989

A monograph is presented which contains the final outcome of an observational study of the water vapor field for the year 1950. The analysis was performed on polar stereographic maps showing the main geographical features. From these maps, zonally averaged values are obtained for any of the moisture characteristics. The moisture properties can be averaged over limited regions of the map for comparison with hydrologic and oceanographic measurements (e.g., evaporation and salinity measurements). The study is concerned only with the water in the vapor phase which is the most important form in which water is transported.

Massachusetts Inst. of Tech., Cambridge.
MEASUREMENT OF DROP SIZE DISTRIBUTION AND LIQUID WATER CONTENT IN NATURAL CLOUDS, by D. P. Keily and S. G. Millen. Scientific rept. no. 1 on Contract AF 19(604)3050. 30 Dec 58, 57p. 2 refs. AFCRC-TN-59-494; AD-228 667.
Order from LC mi$3.60, ph$9.30 PB 144 798

Cloud drop size distributions observed from aircraft are presented for 2 stratus and thin cumulus situations. As in a previous thin cumulus observation, 2- to 4-μ diameter drops predominate and liquid water content is much less than one tenth g/cu m. (Author)

Michigan U. Research Inst., Ann Arbor.
RESEARCH IN THE MEASUREMENT OF AMBIENT PRESSURE, TEMPERATURE, AND DENSITY OF THE UPPER ATMOSPHERE BY MEANS OF ROCKETS, by N. W. Spencer. Final rept. on Contract AF 19(604)545, continuation of Contract AF 19(122)55. June 58, 95p. 23 refs. 2096-18-F; AFCRC-TR-58-464; AD-203 480.
Order from LC mi$5.40, ph$15.30 PB 137 759

A summary discussion of research activities that took place under the subject contract is given. A listing of reports and papers prepared during the contract is included, as well as two appendices to formalize earlier informal letter reports.

Naval Ordnance Test Station, China Lake, Calif.
THE RELATION OF UPPER-AIR TURBULENCE TO TROPOPAUSE LAYERS, by Royal C. Gould. 1 Jan 59, 35p. 1 ref. NOTS-TP-2242; NAVORD-6544.
Order from LC mi$3.00, ph$6.30 PB 144 702

This report is concerned with the occurrence of turbulence aloft associated with tropopause layers, and is based on rawinsonde data taken at the Naval Ordnance Test Station, China Lake, over a two-year

period. Types of turbulence, frequency of occurence, and contributing weather factors are analyzed. It was found that turbulence was invariably associated with tropopauses, and the characteristics, type, and magnitude of the turbulence were attributed to the proximity, relative position, and degree of intensity of frontal activity. (Author)

Texas A. and M. Coll., College Station.
THE SYNOPTIC ANALYSIS AND FORECASTING APPLICATIONS OF RADAR WEATHER OBSERVATIONS, by Myron G. H. Ligda. Final rept. on Contract AF 19(604)1564. June 58, 131p. 39 refs. Reference 58-9F; AFCRC TR-58-251; AD-152 629.
Order from LC mi$6.90, ph$21.30 PB 138 225

The use of radar observations in intermediate range (12 to 48 hr) forecastings is treated. By application of an analytical technique which involves determination of the past, current, and future location of discrete volumes of atmosphere of high water content, elements of weather forecasting can be determined more precisely. The problems of storm structure are considered.

Weather Forecasting Research Center, U. of Chicago, Ill.
THE THERMAL FIELD OF THE ARCTIC STRATOSPHERE NEAR 80°W IN JANUARY, by E. Paul McClain. Scientific rept. no. 11 on Contract AF 19(604)2179. Sep 59, 23p. 18 refs. AFCRC-TN-59-619; AD-227 653.
Order from LC mi$2.70, ph$4.80 PB 144 689

Revised means, frequency distributions and other statistics based on 10 years of January temperature observations at the 200, 100, and 50-mb levels are presented for 4 arctic stations. The frequency distributions are shown to be markedly bimodal, a characteristic which becomes more pronounced with increasing height and latitude. Thermal conditions in the arctic and antarctic stratospheres are compared with the aid of recent IGY data. (Author)

STUDY OF A PULSED LOGARITHMIC PHOTOMETER, by Michael R. Zatzick. Sep 59, 29p. 22 refs. Instrumentation for Geophysics and Astrophysics no. 11; AFCRC-TR-58-275.
Order from OTS $0.75 PB 161 344

A pulsed photometer circuit with a quasi-linear logarithmic response, covering a usable dynamic range of 5 orders of magnitude, is described in detail. A circuit analysis is given and an equation for the theoretical sensitivity curve (log of incident intensity vs. total dynode voltage) is derived. The experimental curve for the test circuit is in good agreement with the derived result. The thermionic dark current and leakage current are shown to be the factors which determine the range and linearity of the response. A semiquantitative argument is used to calculate the transient response in limiting cases, and the design requirements for optimizing the speed of response are discussed. (Author)

A TREATMENT OF ANALYTICAL PHOTOGRAMMETRY WITH EMPHASIS ON BALLISTIC CAMERA APPLICATIONS, by Duane C. Brown. 20 Aug 57, 145p. 34 refs. RCA data reduction technical rept. no. 39; AFMTC-TR-57-22; AD-124 144.
Order from LC mi$7.20, ph$22.80 PB 143 235

The theory and the methods underlying the reduction of ballistic camera observations at the Air Force Missile Test Center are presented. (Author)

Northwestern U., Evanston, Ill.
AN ESSAY KEY FOR THE PHOTOIDENTIFICATION OF FARM CROPS AT SEVERAL INTERVALS DURING THE GROWING SEASON IN NORTHERN ILLINOIS, PART I. NATURE OF THE PROBLEM; PART II. GENERAL ASPECTS OF THE PHOTO APPEARANCE OF CROPS, by Clyde F. Kohn. Technical rept. no. 3 on Contract N7onr-45005. Dec 52, 47p. 24 refs. ATI-206 337.
Order from LC mi$3.30, ph$7.80 PB 144 692

One major problem in the use of aerial photographs in the study of crop distribution is the lack of keys for the identification of farm crops. This monograph is directed to the development of such keys. The interpretation of photographs used in the development of the keys was based on principles laid down in recent studies.

Northwestern U., Evanston, Ill.
AS ESSAY KEY FOR THE PHOTO IDENTIFICATION OF FARM CROPS AT SEVERAL INTERVALS DURING THE GROWING SEASON IN NORTHERN ILLINOIS. PART III. PHOTO APPEARANCE OF HAY FIELDS, by Clyde F. Kohn and Marjorie Smith Goodman. Technical rept. no. 3 on Contract N7onr-45005. July 53, 44p. AD-15 690.
Order from LC mi$3.30, ph$7.80 PB 144 693

An analysis was made of 23 hay fields scattered throughout a 13 1/2-sq mi area. The samples included hay in all possible associations with types of landforms, soils, and variations in farm practices. The fields may be identified easily and with accuracy. Hay fields have 2 characteristics in common with other crops in the research area. They are of the same size and form as fields of other crops, and the photo appearance of hay fields is not affected by variations in landforms and soils, and only slightly by variations in farm practices. The fields possess 5 characteristics which distinguish them from other crops on aerial photographs. The 2 cycles of growth through which hay passes are recorded on aerial photographs by a cyclic progression of tonal values. At each stage of growth, there are unique field markings (texture), tonal values, and objects associated with hay fields. The fields outnumber all other kinds of cultivated crops. Tones of hay fields during their early, middle, and late stages of growth register more darkly than any other group. There are no periodic limitations to the aerial photo identification of hay crops as there are to the identification of other crops in the research area. (See also PB 144 692)

Pennsylvania U., Philadelphia.
SUMMARY OF SCIENTIFIC RESULTS, by Lester E. Klimm. Rept. for 1 Dec 56-1 Dec 57 on Contract Nonr-551(01). 1 Dec 57. 7p. AD-148 211.
Order from LC mi$1.80, ph$1.80 PB 138 077

Descriptions and graphic compilations are presented of the following land-use map categories of Pennsylvania from 1:250,000-scale aerial photography: (1) the D-line method and the nearest-neighbor concept, (2) possible naval application of the D-line method, (3) multiple-category D-line analysis, (4) detailed analysis of a single dispersant having area, (5) the D-line method applied to distribution of points, and (6) the D-line method without counting or sampling the actual distribution. This approach provides a wide selection of actual distribution of categories for analysis of areal association in a state where landscapes vary from being simple to very complex.

STRAITS OF FLORIDA: PHYSICAL AND CHEMICAL DATA MAY 1957 - NOVEMBER 1958, by M. P. Wennenkens, D. M. Dunlop and others. Rept. on National Science Foundation Grant G-5041 and Contract Nonr-840(01). Dec 58, 84p. Rept. 58-5.
Order from LC mi$4.80, ph$13.80 PB 144 746

This report contains hydrographic and G. E. K. data collected between May 1957 and November 1958. Sampling stations are shown on the accompanying charts. The positions of the sampling stations are determined from D. R. plots and radar fixes. Sampling was by means of Nansen reversing water bottles. Deep-sea reversing thermometers were used to determine temperature; at each station. The depths reported for sub-surface observations were calculated from measured wire angles and from unprotected reversing thermometers; accepted depths were determined by using the depth-ratio (Z/L) method as described in H. O. Publication No. 607.

Physics of the Atmosphere

A PRELIMINARY REPORT ON A BOUNDARY LAYER NUMERICAL EXPERIMENT, by Mariano A. Estoque. Oct 59, 36p. 31 refs. GRD Research notes no. 20; AFCRC-TN-59-462.
Order from OTS $1.00 PB 161 341

A mathematical model of the atmospheric boundary layer over a flat homogeneous terrain is presented. The model consists of two sublayers: a thin sublayer adjacent to the earth's surface in which the fluxes of momentum and heat are independent of height and an overlying transitional zone where frictional effects gradually decrease with height. The equations are integrated numerically to obtain the distributions of wind and temperature with height during a 24-hour period for a given set of initial and boundary conditions. The results indicate that the model is capable of predicting the diurnal wind and temperature variations which are observed over flat homogeneous terrain. (Author)

STUDY OF SINGLE STATION ATMOSPHERIC

SOUNDING SYSTEMS, VOLUME II, by Howard Davis and Seymour S. Shefter. 17 June 52, declassified 8 Sep 54. 116p. Technical memo. no. M-1453; ATI-175 097.
Order from LC mi$6.00, ph$18.30 PB 144 649

The investigation of meteorological, electronic, and other applicable instrumentation techniques to be ultimately applied to atmospheric sounding equipments included the determination of the capabilities of known equipments. In Volume I, the theoretical capabilities of a number of equipments were analyzed and it was indicated that the rawin, remitter, and radar systems were superior to the other systems. A number of flight tests were conducted to determine whether the equations derived in Volume I contained all the factors essential to a determination of the equipment accuracy, and to determine the correctness of the various system errors assumed.

Naval Research Lab., Washington, D. C.
ROCKET RESEARCH REPORT NO. 29. THE VIKING 10 FIRINGS, by Milton W. Rosen and James M. Bridger. Interim rept. 5 May 55, 39p. 6 refs. NRL Rept. 4513.
Order from LC mi$3.00, ph$6.30 PB 145 038

The tenth Viking rocket, launched at White Sands Proving Ground, New Mexico, on May 7, 1954, carried a payload of 675 pounds to an altitude of 136 miles. At the first attempt to launch this rocket on June 30, 1953 an explosion occurred in the combustion chamber. The repaired rocket was modified to include redesigned control systems which were being prepared for the new series of rockets beginning with Viking 11, and the ground equipment was redesigned and rebuilt. On the second flight attempt, the rocket performed well; there was some improvement in propellant loading, but there was a significant loss in peak altitude because of an excess of oxygen at burnout. The attitude control of the rocket was much better than in previous flights, and research equipment in the rocket operated properly; important data were obtained on the structure and composition of the ionosphere and on aerodynamic heating. Telemetering performance was excellent; a continuous record from takeoff to blowoff, at 474.3 seconds, was obtained. The rocket was tracked by radar from 27 seconds to 495 seconds, and by Askania theodolites for 102 seconds, and doppler data were obtained for 475 seconds. Trajectories, obtained from data provided by rocket-borne and range instrumentation, are compared in Appendix A. (Author)

Naval Research Lab., Washington, D. C.
THE USE OF HIGH-ALTITUDE ROCKETS FOR SCIENTIFIC INVESTIGATIONS: AN ANNOTATED BIBLIOGRAPHY, by Mildred Benton. Oct 59, 132p. 965 refs. Bibliography no. 16.
Order from OTS $0.50 PB 151 805

The growth and development of upper-atmosphere investigation by means of rockets is delineated in the periodical articles and technical reports referenced and annotated in this bibliography. Both domestic and foreign literature is included. The period covered is 1946 - June 1959. References are listed chronologically by author or issuing agency. An author index and a subject index are included. For periodical references, the normal form of entry is author, title, and journal, volume, pagination, and date, followed by a brief annotation or abstract. The form of entry for books is author, title, pagination, place of publication, publisher, and year. This sequence is also followed in citing articles in Proceedings of meetings, symposia and conferences. Research reports are reported in a similar manner except that place of publication follows the corporate author. The report number is also included following the date of publication, as well as the contract number, for sake of convenience in ordering or borrowing. The majority of references have been examined. When examination was not possible, due to non-availability of the publication, entries located in abstracting journals were used, or the statement "not examined" included.

RECALIBRATION PROCEDURE FOR OXYGEN REGULATOR TEST STAND CALIBRATOR (NATIONAL INSTRUMENT LABORATORY CALIBRATOR) by James E. P. Davis. Rept. on In Service Test Apparatus. Aug 59, 17p. 1 ref. WADC Technical note 59-275.
Order from OTS $0.50 PB 161 334

This report gives a detailed description of the apparatus used to recalibrate an oxygen regulator test stand calibrator. It also provides an accurate system for data processing and recording which gives a final calibration accuracy of ±0.5%. (Author)

Air Force Missile Development Center, Holloman AFB, N. Mex.
THE ESTIMATION OF SHORT-TIME FLIGHT PATHS FOR INTERCEPTION DASHES, by Ray Holland, Jr. (New Mexico Military Inst.) Nov 59, 35p. AFMDC-TN-59-33.
Order from LC mi$3.00, ph$6.30 PB 144 596

A method to systematize the selection of a short-time flight path is presented. It is intended to be used as the first approximation in an iterative variational computation for determining a true minimum time path for interception dashes. The method applies to an aircraft already airborne flying in a short time from specified initial values of horizontal position x_o, altitude y_o, and velocity v_o to specified destination values of horizontal position x_n and altitude y_n, remaining at all times in a single vertical plane. (Author)

Aircraft Lab., Wright Air Development Center, Wright-Patterson AFB, Ohio.
ENVIRONMENTAL ASPECTS OF SONIC FATIGUE, by Orville R. Rogers and Robert F. Cook. Rept. on Aeroelasticity, Vibration and Noise. Feb 57, 19p. WADC Technical note 57-68; AD-118 072.
Order from LC mi$2.40, ph$3.30 PB 144 802

Equipment and aircraft structures as presently designed are not always adequate to withstand the high intensity noise produced by modern powerplants used in military aircraft. The methods presently used to test equipment and structure do not include testing in intense noise. The purpose of this report is to consolidate available noise data in a useable form to determine methods of testing equipment and structure in noise. As a result of this study requirements for noise test equipment are more closely defined. (Author)

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
ARC WELDING OF HIGH-STRENGTH STEELS FOR AIRCRAFT AND MISSILE STRUCTURES, by J. T. Niemann, R. P. Sopher, and P. J. Rieppel. 31 July 59, 45p. 13 refs. DMIC memo. 27; AD-220 519.
Order from OTS $0.50 PB 161 177

High-strength steels are being used in many aircraft and missile applications because of their good mechanical properties at room temperature and up to 1000 F. The steels in this category include hot-work die steels and martensitic and precipitation-hardening stainless steels. In addition, there is considerable interest in low-alloy hardenable steels which have room-temperature yield strengths in excess of 200,00 psi. One of the important considerations in selecting these steels for a particular application is their ability to be fabricated by welding. For the past several months, the Defense Metals Information Center has been collecting information on welding the high-strength steels. This report presents the data now available on arc welding. TITANIUM FABRICATION AND RELIABILITY PROBLEMS IN AIRCRAFT, by W. Stuart Lyman, C. T. Olofson, and A. M. Federico (North American Aviation, Inc.) 4 Sep 59, 32p. 20 refs. DMIC memo. 33; AD-226 589.
Order from OTS $0.50 PB 161 183

Presented at the Western Metal Congress in Los Angeles, Calif., 19 Mar 59.

This memorandum is intended to be a brief, up-to-date summary of fabrication and reliability problems associated with titanium. Most of the available information is on fabrication; little has been published about reliability. A selected bibliography at the end of the memoranudm lists 20 reports and publications related to titanium fabrication and (to a very slight extent) reliability. The memorandum itself briefly reviews the subject in four quick steps: (1) Metallurgical background, (2) Reliability of incoming material, (3) Shop experiences, and (4) Service reliability. (Author)

THE APPLICATION OF POINT LIGHT SOURCE TECHNIQUES TO A BREAKOUT LANDING ATTACHMENT FOR A TWIN-ENGINE INSTRUMENT TRAINER. Rept. on Contract Nonr-1628(00). Mar 59, 60p. 7 refs. Technical rept. NAVTRADEVCEN-1628-2; AD-227 558.
Order from LC mi$3.60, ph$9.30 PB 144 452

This report describes the results of a study to determine if a satisfactory visual presentation can be obtained with point light source techniques for a low ceiling, poor visibility landing training attachment for a twin-engine instrument trainer. The scope and important elements of the problem were determined through interviews with pilots as well as from the requirements of the contract specification. A very promising point source projection system has been devised for use as a low ceiling, poor visibility landing training attachment for a twin-engine instrument trainer. The techniques employed to simulate atmospheric conditions which limit visibility (fog, haze, rain and snow) have been proved successful in a mock-up of limited scope. It is recommended that other aspects of the proposed system be evaluated through the experiments described.

deFlorez Co., Inc., Englewood Cliffs, N. J.
THE APPLICATION OF POINT SOURCE PROJECTION TECHNIQUES TO HELICOPTER LOW-ALTITUDE NAVIGATION TRAINING. Rept. on Contract Nonr-1628(00). Mar 59, 49p. 8 refs. Technical rept. NAVTRADEVCEN-1628-3.
Order from LC mi$3.30, ph$7.80 PB 144 453

This report describes the results of a study to determine if a satisfactory visual presentation can be obtained with point light source techniques for application to a helicopter low altitude navigational trainer. The scope and the important elements of the problem were determined through interviews with pilots as well as from the requirements of the contract specification. A very promising point source projection system has been devised for use in helicopter low altitude navigational training. It is recommended that this system be evaluated through the experiments described. (See also PB 144 452)

DeFlorez Co., Inc., Englewood Cliffs, N. J.
THE APPLICATION OF POINT SOURCE PROJECTION TECHNIQUES TO LOW ALTITUDE-HIGH SPEED NAVIGATION TRAINING. Rept. on Contract Nonr-1628(00). Apr 59, 49p. 8 refs. Technical rept. NAVTRADEVCEN-1628-4.
Order from LC mi$3.30, ph$7.80 PB 144 454

This report describes the results of an investigation to determine if a satisfactory visual presentation can be obtained with point light source techniques for application to a low altitude-high speed navigation trainer. It includes an analysis of the training task to determine the skills to be developed and the cues required for its performance. A very promising point source projection system has been devised for use in low altitude-high speed navigation training. It is recommended that this system be evaluated through the experiments described. (See also PB 144 453)

Flight Control Lab., Wright Air Development Center, Wright-Patterson AFB, Ohio.
THE INFLUENCE OF GEOMETRY PARAMETERS UPON LAG ERROR IN AIRBORNE PRESSURE MEASURING SYSTEMS, by J. P. Lamb, Jr. July 57, 53p. 15 refs. WADC Technical rept. 57-351; AD-130 790.
Order from LC mi$3.60, ph$9.30 PB 144 530

The general nature of the lag problem in airborne pressure measuring systems is discussed. It is concluded that variations in system geometry offer the most promise in improving response. The remainder of the report is given to a theoretical examination of various geometry parameters and to an evaluation (utilizing both theoretical and experimental methods) of their effect upon lag error. Techniques for computing lag error in any system are presented. Theory and experiment are shown to be in agreement for the case of laminar flow. Evidence of transitional flow is also presented. Based upon the results of the study, specific dimensions for tubing lines and pitot-static tube chambers are recommended for use in the static pressure systems of high performance aircraft. (Author)

General Electric Co. [Schenectady, N. Y.]
ELECTROLUMINESCENT LIGHTING OF AIRCRAFT INSTRUMENTS, by John J. Fraizer. Rept. on Contract AF 33(616)5277. Sep 58, 154p. 13 refs. WADC Technical rept. 58-510; AD-202 504.
Order from LC mi$7.50, ph$24.30 PB 144 902

One phase of the report is the results of environmental tests applied to 5 manufacturers' lamps. Included are temperature, humidity, radio noise, voltage, and frequency tests. The data has been evaluated and analytical relationships have been developed. The second phase of the report is the application of electroluminescence to lighting various aircraft instruments. The instruments lighted included tachometers, flowmeters, voltmeters, and two vertical tape devices. Specific problems encountered were bringing power to pointer lamps on a low torque indicators, lighting a cyclometer register, and lighting vertical tapes. (Author)

Lear, Inc. [Grand Rapids, Mich.]
WHOLE PANEL STUDY AND DEVELOPMENT. SUMMARY REPORT 1957-1958. Rept. for 1 July 57-30 June 58 on Control-Display Integration Program, Contract AF 33(616)5167. Rev. Mar 59, 290p. 30 refs. Lear Engineering rept. 1289-1; WADC Technical rept. 58-447; AD-155 815.
Order from LC mi$11.10, ph$44.10 PB 144 543

The primary objective of the program was advancement of the state of the art of instrument panel and cockpit design. The cockpits were designed for classes of vehicles rather than specific Air Force weapons systems of the future. The pilot-manager concept, which was conceived during this program, is explained. Two cockpits, called the Mark II and Mark III, were delivered to the Air Force. The instrumentation and layouts of these cockpits are described. Also presented is an enumeration of individual items studied which have been selected for further study by the Air Force and airframe manufacturers. (Author)

Materials Lab., Wright Air Development Center, Wright-Patterson AFB, Ohio.
A REVIEW OF THE AIR FORCE MATERIALS RESEARCH AND DEVELOPMENT PROGRAM, by Helen H. Maxwell. Rept for 1 July 58-30 June 59. Nov 59, 169p. WADC Technical rept. 53-373, Supplement 6.
Order from OTS $3.00 PB 111 648 (sup. 5)

Two hundred and twelve (212) technical reports and technical notes written during the period 1 July 1958-30 June 1959 are abstracted herein. These reports cover the following general areas of research: adhesives, biochemistry, electronic materials, materials physics, metallurgy, petroleum products, plastics, protective treatments, rubber and textiles. A numerical index, contractor index and an investigator index of all the technical reports and technical notes issued during the period March 1923 - June 1959 are also provided. (Author) (See also PB 111 648 S4)

Midwest Research Inst., Kansas City, Mo.
DEVELOPMENT OF A FATIGUE TESTING APPARATUS FOR TESTING HONEYCOMB SANDWICH STRUCTURAL PANELS IN SERVICE-SIMULATED SONIC FATIGUE, by Edmond F. E. Zeijdel and William H. Ashley. Rept. for 15 Apr 57-15 Apr 59 on Materials Analysis and Evaluation Techniques, Contract AF 33(616)5172. Sep 59, 40p. 8 refs. WADC Technical rept. 59-231.
Order from OTS $1.00 PB 161 317

Theoretical and experimental investigations for the development of a fatigue testing apparatus for testing honeycomb sandwich panels in service-simulated sonic fatigue are described in this report. These investigations indicate the need of a 200,000-v. AC generator to simulate electrostatic fields of approximately 400,000 v/cm. In addition, it is indicated that the medium surrounding the test specimen must be changed to prevent corona discharge. For this purpose sulfur hexafluoride at 9 to 10 atmospheres may be utilized. The design of a 200,000-v. AC generator is complicated and expensive. An alternative procedure to accomplish the same objectives is therefore recommended. (Author)

New York U. Coll. of Engineering, N. Y.
HANDLING AIR CONTAMINANTS RESULTING FROM A CLOSED ECOLOGICAL SYSTEM, by Gerald Palevsky. Progress rept. on the Engineering Biotechnology of Handling Wastes Resulting from a Closed Ecological System, Contract AF 18(603)71. July 57, 18p. 28 refs. AFOSR-TN-58-269; AD-154 170.
Order from LC mi$2.40, ph$3.30 PB 137 797

Consideration is given to the control of temperature, humidity, air motion, foreign matter, microorganisms, air conditioning, and water supply in creating an acceptable environment for humans working in a closed ecological system. Each factor is considered in relation to the others.

North American Aviation, Inc., Columbus, Ohio.
DOD HIGH STRENGTH TITANIUM ALLOY SHEET RESEARCH PROGRAM, by A. M. Federico and P. Maynard. Progress rept. no. 5, 1 July-30 Sep 58, on Contract NOas 57-785-d. 31 Oct 58, 32p. Rept. no. NA57H-527-5; AD-207 900.
Order from LC mi$3.00, ph$6.30 PB 137 866

Preliminary fusion and resistance welding tests are in progress on small quantities of 4Al-3Mo-1V and 16V-2 1/2 Al received.

Oklahoma U. Research Inst., Norman.
ANALYSIS DESIGN STUDY OF A HIGH CAPACITY LIGHTWEIGHT COMPRESSOR, by A. C. Buckingham, Stan H. Lowy and B. V. Ketcham. Final rept. on Contract DA 44-177-tc-502. 9 Feb 59, 156p. 16 refs. AD-208 315.
Order from OTS $3.00 PB 161 347

This design study has established the feasibility of a vane type oscillating compressor suitable for various applications where unit weight is a major consideration. In a comparative analysis with the best available lightweight centrifugal compressor, the vane type unit for a given pressure ratio and mass flow was far superior in displacement and weight savings. The comparison was made on the basis of compressor weight per atmosphere pressure rise per mass flow. Compared to the sliding vane, positive displacement compressor with discharge pressures up to 9 1/2 atmospheres and capacities to 2000 cubic feet per minute, the vane type oscillating compressor still maintains a large weight advantage. This weight advantage increases still further when comparison is made with impeller or gear type positive displacement compressors.

Princeton U., N. J.
EFFECT OF FLAPPING HINGE RESTRAINT AND OFFSET ON THE STABILITY AND CONTROL OF UNDUCTED STAND-ON HELICOPTERS, by Peter Hampton. Rept. on Contract DA 44-177-tc-392. May 59, 138p. 6 refs. Rept. no. 462; AD-227 157.
Order from LC mi$6.90, ph$21.30 PB 144 816

This report deals with the longitudinal stability and control of unducted stand-on helicopters. The effect is investigated of varying the physical characteristics of the rotor system of a typical machine of this type. The rotor, which was presumed to be rigid on the original machine, is now considered as a rotor of the flapping type, modified by: (a) varying the spring restraint of a flapping hinge mounted at the rotor hub. (b) varying the offset from the rotor hub of a free flapping hinge. In addition the induced velocity through the rotor is assumed to have a linear longitudinal variation. Theoretical stability derivatives are obtained for these cases and the resulting stability and control discussed. (Author)

Princeton U., N. J.
LONGITUDINAL STABILITY AND CONTROL OF A DUCTED-ROTOR FLYING PLATFORM, by Joseph J. Traybar. Rept. on Contract DA 44-177-tc-392. May 59, 144p. 9 refs. Rept. no. 464; AD-227 158.
Order from LC mi$7.20, ph$22.80 PB 144 815

An analysis is presented for the prediction of the longitudinal stability and control characteristics of a ducted-rotor flying platform. The stability characteristics of this vehicle are corroborated by the investigations and exhibited rather clearly by various stability diagrams. Artificial stabilization is discussed and can be used to stabilize certain configurations. The predictions of excessive trim requirements and large tilt angles for forward flight are substantiated. Also, the effects of changing duct design and vertical center of gravity location on the stability derivatives are discussed, and material is presented to reflect the degree to which these changes can be used as aids in stabilizing the platform. (Author)

Rosemount Aeronautical Labs., U. of Minnesota, Minneapolis.
PRESSURE DISTRIBUTION IN TRANSONIC FLOW OF RIBBON AND GUIDE SURFACE PARACHUTE MODELS, by H. G. Heinrich, J. G. Ballinger, and P. E. Ryan. Rept. on Contract AF 33(616)3755. Feb 59, 96p. WADC Technical note 59-32; AD-210 257.
Order from LC mi$5.40, ph$15.30 PB 145 031

The pressure distributions over the canopy of two rigid parachute models were made in a speed range of free stream MACH numbers from .6 to 1.2. Internal and external pressure distributions were conducted on a guide surface and a ribbon model parachute. The results of these data will be used in determining an accurate method of calculating the heat transfer throughout a parachute canopy during descent. Presented are details pertaining to the test methods and equipment used to obtain the experimental data. (Author)

SIMULATION OF AIRCRAFT, by Mark E. Connelly. Rept. on Contracts N5ori-07895 and N61339-45. Feb 58, reprinted May 59, 206p. Technical rept. NAVTRADEVCEN 7591-R-1.
Order from LC mi$9.30, ph$31.80 PB 144 640

This report is an outgrowth of a one-year study of the equations of motion and the computing techniques used in the aerodynamic computer section of Operational Flight Trainers. One of the objectives of the study was to standardize and simplify, insofar as possible, the mathematical model used to represent an aircraft in flight. In this connection, an extensive analysis of axis systems, basic dynamics, and aerodynamic coefficients was carried out. Digital and analog simulation studies were employed to determine allowable simplifications in the equations of motion. The results of this work are summarized in the following report. Although the emphasis is on flight simulators used for training purposes, the material presented is generally applicable to the entire field of flight simulation. (Author)

MOBILE LIQUID-OXYGEN PLANT, by Edward F. Kelley. Rept. for Jan 46-Jan 58 on Liquid Oxygen Plants, Storage, and Distribution Equipment (10-100 Tons per Day). 23 June 58, 131p. Technical rept. 1532-TR.
Order from LC mi$6.90, ph$21.30 PB 144 730

The report concludes that: a. The application of the Kapitza principles of liquefying air for the production of liquid oxygen, using the low-pressure cycle and turboexpander, has been accomplished to meet the military requirements for mobile, van-mounted, liquid-oxygen generators. b. The end result is a reduction in weight per ton of product, compared with industrial machinery, in the order of 75 percent. c. Development work should be continued. Development work should be pursued toward the end of transferring liquid oxygen by static pressure in lieu of the pump.

Westinghouse Research Labs., Pittsburgh, Pa.
ELECTRICAL CLEANUP OF GASES, by J. H. Carmichael. Progress and final rept. for Mar 54-Mar 59 on Contract AF 18(600)1049. 1 May 59, 6p. 5 refs. Research rept. 71F191-R20; AFOSR TR-59-80.
Order from LC mi$1.80, ph$1.80 PB 142 947

A study of the mechanism for trapping gases as ions on metal surfaces has been made. In order to separate ionic pumping from chemical absorption, only rare gases were used. In these studies it was found that the re-emission of these gases from the surface was playing an important role. A study of the ionic pumping and spontaneous re-emission of these gases has contributed considerably in an understanding of the pumping characteristics of ion pumps and ionization gauges.

HOUSING ADMINISTRATION. 5 Aug 57, 433p. Technical pub. NAVDOCKS TP-Ad-3, Rev.; BUDOCKSINST 11101.29A.
Order from LC mi$11.10, ph$66.60 PB 144 513

This Technical Publication is intended for the guidance of personnel concerned with the procurement, administration, maintenance, and operation of housing facilities and programs under the jurisdiction of the Department of the Navy. It cites the authorities, powers, and responsibilities under which Navy housing facilities and programs are administered. It prescribes the procedures to be followed to obtain effective control and administration of housing, gives technical guidance and counsel, and sets out the considerations to be taken into account in making decisions. It seeks to bring about efficiency, standardization, and procedural uniformity in the administra-

policies on housing in general, the methods used to classify housing, and the organizational provisions made by the Navy to handle housing matters. Chapter 2 is devoted to public quarters. It discusses general aspects of public quarters administration, including designation, assignment, occupancy, equipping, and accountability. Chapter 3 deals with Title VIII (Wherry) housing. It sets forth policies, legislation, regulations and authorities; procedures; and the respective responsibilities of the Department of the Navy, the Federal Housing Administration, the project sponsor, and the mortgage lender. Chapter 4 discusses administration rental housing facilities that are maintained and operated directly by the Department of the Navy.

[Defense Atomic Support Agency] Washington, D. C.
BLAST LOADING ON DOMES AND ARCHES, by Ferd E. Anderson, Jr. 21 July 58, 12p. 8 refs. AFSWP-522.
Order from LC mi$2.40, ph$3.30 PB 144 501

Dome and arch structural configurations offer promise in the design of economical above-ground protective structures up to incident peak overpressures of about 100 psi. Studies of the response of such structures to blast loads are underway but are somewhat hindered by the lack of information on the blast loading likely to occur. The purpose of this report is to present an analysis of dome and arch loading derived from shock tube data, wind tunnel data, and data collected from a nulcear weapons test, in Nevada in 1957

Electrical and Electronic Engineering

Air Force Missile Test Center, Patrick AFB, Fla.
TELEMETRY AUTOMATIC REDUCTION EQUIPMENT TARE II, by E. W. Earle, J. T. Winkler and W. H. Butler. Final engineering rept. 5 Aug 58, 82p. AFMTC-TR-58-17; AD-134 267.
Order from LC mi$4.80, ph$13.80 PB 144 441

TARE II is essentially an automatic data reduction system designed to convert raw telemetry data (FM, PDM or PAM/FM) into digital form. Once in digital form, the data is then separated, reduced, linearized and tabulated at a high rate of speed by an automatic computer. The signal input to the system is on magnetic tape previously recorded from the range telemetry stations. The digitized output of the system is recorded on six tract magnetic tape in proper format for computer insertion. In addition to missile flight function information; computer formatting information and periodic time samplings are also digitized and recorded on the output tape.

Andersen Labs., Inc., West Hartford, Conn.
TAPPED CARRIER TYPE ACOUSTIC DELAY LINE. Final rept. for 15 Oct 56-30 Oct 58 on Contract AF 19(604)2146. [1958] 35p. 1 ref. AFCRC-TR-58-190; AD-228 086
Order from LC mi$3.00, ph$6.30 PB 144 417

Theoretical and experimental investigations have been conducted on several methods of accomplishing a tapped, carrier type acoustic delay line having 32 equally spaced taps, a total storage capacity of 1200 digits with a counting rate in excess of 800,000 digits per second. The various methods studied fall into the following general categories: (a) "Branch" tapping wherein the acoustic beam strikes an improperly matched boundary which is at an angle to the direction of propagation, part of the acoustic energy continuing through the boundary and part being reflected at an angle of reflection equal to the angle of incidence; one branch being terminated at an output tap transducer and the other continuing down the line to the next tap. (b)"Series" tapping, wherein the transducers for each tap are inserted directly in the acoustic beam normal to the direction of propagation. (c) Optical tapping, wherein the strains produced in the fused quartz by the acoustic beam are detected by the displacement or polarization of a light beam passing at right angles to the direction of propagation through the thickness of the quartz slab. (d) Parallel acoustic beams wherein each tap is arrived at by a separate acoustic path and has a separate input as well as separate output transducers. After some preliminary study, this method was abandoned since it does not strictly fulfill the objectives of the Contract as defined under Item 1. (e) Tapping along the path of a Raleigh type surface wave.

Battelle Memorial Inst., Columbus, Ohio.
COMPONENT EVALUATION AND SPECIFICATION ENGINEERING. TEST DATA ON TASK XV. RESISTOR, VARIABLE, SUBMINIATURE. VOL. I OF II. Data taken July 54-May 55, Contract DA 36-039-sc-63136. [1955] 194p. AD-114 851.
Order from LC mi$8.70, ph$30.30 PB 137 806

Battelle Memorial Inst., Columbus, Ohio.
THE FURTHER DEVELOPMENT AND EVALUATION OF AURAL READING DEVICES FOR THE BLIND, by John S. Abma, Lois L. Huffman, and Lawrence J. Mason. Summary rept. for 1 July 58-30 June 59 on Contract V1005 M-1961; Continuation of Contract V1005 M-1261. 30 June 59, 83p. 4 refs.
Order from LC mi$4.80, ph$13.80 PB 144 748

Experience in using five prototype aural reading devices indicated the desirability of a number of mechanical and electronic modifications. Changes were made and these alterations resulted in a reliable instrument that produces the letter code much more clearly than did the first models. Evaluation activities included the investigation of various training techniques.

Bendix Aviation Corp., Southfield, Mich.
DEVELOPMENT OF MILLIMETER-WAVE BACKWARD-WAVE OSCILLATOR TUBES; 35-75 KMC, by M. I. Antoniou, F. E. Clifford, and A. G. Piefer. Rept. for 15 Aug 57-14 Nov 58 on Electronic Tubes and Transistors, Contract AF 33(600)35830. Sep 59, 131p. 5 refs. WADC Technical rept. 59-401.
Order from OTS $2.75 PB 161 351

The development program included (1) analytical and experimental work on the formation and focusing of variable voltage electron beams, and on the optimum design of r-f interaction structures, (2) design, fabrication and testing of experimental tubes, and (3) delivery of three Q-band and three V-band tubes. One of the objectives in the electron gun work was to minimize the lens effects normally present in an ordinary electron gun system. The analytical and experimental work on the formation of variable voltage electron beams concentrated on the three-anode gun system. The study of the r-f circuit concentrated on the geometries of ridge-ladder and fin type structures. A metal envelope mechanical design was used for the developmental model tubes. Tests on operating tubes included measurements of frequency as a function of tuning voltage and measurements of output power. The results of the tests are given in considerable detail. One Q-band tube produced more than 25 milliwatts of output power over a portion of the band.

Bliley Electric Co., Erie, Pa.
INDUSTRIAL PREPAREDNESS STUDY ON 5000.000 kc/s 5th OVERTONE HIGH PRECISION CRYSTAL UNITS, by J. M. Wolfskill and R. T. Schlaudecker. Completion rept. for step 1 on Contract DA 36-039-sc-54697. Nov 57, 55p. AD-158 622.
Order from LC mi$3.60, ph$9.30 PB 137 422

This report presents the process manual which was developed for the production of 5000.000 kc high precision quartz crystal units. The units produced have a short term stability of 1 part in 10^9, aging of less than 1 part in 10^8 per week and a temperature coefficient of less than 1 part in 10^7 per degree centigrade. The units use "A" cut, fifth overtone, plano-convex, polished crystal discs, wire mounted in T 5 1/2 glass envelopes. This report includes a copy of the specification governing these units, a material list, a list of the special equipment used (with pictures of the more important pieces), a discussion of the difficulties encountered, a table of yields attained and a listing of the technical personnel who performed this work. One of the most difficult phases of the program was the consistent failure of equipment to meet the exacting demands. In particular this was true during those operations which required accurate comparisons to less than 1 part in 10^9. While this was finally achieved, the only reference frequency source available for practical checking of the production quantity of these units was a preproduction sample unit which had actually been produced under this same contract. This unit has been in continuous operation since early in April of this year, 1957, and careful periodic evaluation has proved that it is still very acceptable as a reference standard. (Author)

Case Inst. of Tech., Cleveland, Ohio.
STUDY OF APERTURE FIELDS IN THE DIFFRACTION BY A SLIT, by Hwei-Piao Hsu. Scientific rept. no. 5 on Contract AF 19(604)3887. 31 July 59, 60p. 14 refs. AFCRC-TN-59-585.
Order from LC mi$3.60, ph$9.30 PB 144 582

Several approximate techniques of solution for the aperture fields in the diffraction by a slit are discussed and compared with the rigorous solution. The

latter was obtained from the Mathieu function series; an extension to the available tables being required. None of the approximate techniques are completely satisfactory. Experimental measurements by means of a parallel-plate device of the field distribution over the aperture in slits of 3.5λ, 3λ, 2.21λ, 1.27λ width were performed and discussed, and satisfactory comparison with the exact solution for the cases of 1.27λ and 2.21λ width obtained. The exact solution of diffraction by a slit due to a line source is also presented. (Author)

Colorado U. Engineering Experiment Station, Boulder.
ATTAINABLE CHARACTERISTICS FOR A SPANATRON TUBE, by J. C. Twombly. Technical rept. no. 7 (Final) on Contract Nonr-1147(01). 30 Apr 58, 22p. 2 refs.
Order from LC mi$2.70, ph$4.80 PB 138 571

Using performance of a cyclotron resonance microwave detector in a uniform magnetic field as a reference, performance of such a tube in the non-uniform field required for wide-band spectrum analysis is presented. The relationship between threshold sensitivity and spectrum width per channel is demonstrated, and experimental verification is cited. Likewise, the effect of channel width on the shape of the frequency response curve for that channel is developed, along with factors governing the choice of this channel width. Representative oscillograms are included for illustration.

Compagnie Generale de Telegraphie Sans Fil (France).
A NEW TYPE OF ENDFIRE ANTENNA "SAUCISSON ANTENNA", by Erich Spitz. Final technical rept. no. 1 for 1 May-30 Sep 59 on Contract DA 91-591-EUC-1128. 1959, 28p.
Order from LC mi$2.70, ph$4.80 PB 144 459

The report describes the first phase of development a new type of an endfire antenna, called "Saucisson Antenna". It consists essentially of a twin-line surrounded by a helix. The antenna should work in the range 350-600 Mc/s. Scale models working in the S band (2.600-4.500 Mc/s) have been realized and investigated. The best one is described and experimental results are given. (Author)

Compagnie Generale de Telegraphie Sans Fil (France).
RESEARCH ON AIR TO GROUND SCATTER (I) [AND] SUPERGAIN AND VOLUMETRIC ANTENNAS (II), by J. Robieux and E. Spitz. Technical (Final) rept. on Contract AF 61(514)1150, part of complete final rept. on Contract AF 61(052)102. 15 June 59, 27p. AFCRC-TR-59-193.
Order from LC mi$2.70, ph$4.80 PB 144 597

An antenna, radiating in the rear direction at 220 Mc, designed to be mounted on a C-54 plane, was investigated. The antenna consisting of four corrugated surfaces was built in reduced scale and pattern and gain is given. Some experiments with closely coupled sources are given. A built supergain broadside antenna is described. (Author)

Computation Lab., Harvard U., Cambridge, Mass.
COMPUTATION OF FM COCHANNEL INTERFERENCE, by Howard Aiken. Rept. on Design and Operation of Digital Calculating Machinery, Contract AF 19(604)4947. 1 July 59, 27p. 8 refs. Scientific rept. no. AF-54; AFCRC-TN-59-778.
Order from LC mi$2.70, ph$4.80 PB 144 973

Corning Glass Works, N. Y.
CAPACITORS, HIGH KVA TRANSMITTING TYPES, GLASS DIELECTRIC. Final rept. on Contract NObsr-57558. 1 Apr 55, 63p.
Order from LC mi$3.90, ph$10.80 PB 145 025

This final report on the development of high power transmitting capacitors with glass dielectric contains a short summary of the background of the development. Salient elements of design of these capacitors are noted. Data on final samples submitted for evaluation, and methods of their construction, are presented.

Cruft Lab., Harvard U., Cambridge, Mass.
QUARTERLY SCIENTIFIC REPORT NO. 20. Rept. for 1 Apr-1 July 58 on Contract AF 19(604)786. 1 July 58, 4p. AFCRC-TN-58-364; AD-160 808.
Order from LC mi$1.80, ph$1.80 PB 137 891

Brief summaries of work on theory of antennas coupled to two-wire line; the problem of electrical scanning of dipole arrays; scattering from a reactively loaded linear antenna; scattering from slotted cylinders; and the scattering of plane waves by obstacles.

Diamond Ordnance Fuze Labs., Washington, D. C.
BIREFRINGENCE OF FERRITE TUBES IN CIRCULAR WAVEGUIDE, by N. Karayianis and J. C. Cacheris. 19 Aug 59, 24p. 3 refs. TR-651.
Order from LC mi$2.70, ph$4.80 PB 144 566

Birefringence of various ferrite configurations in circular waveguide over the frequency range 9.0 to 10.0 kMc. The use of ferrite tubes in circular waveguide as quarter-wave plates is feasible, dependent on a compromise between bandwidth and differential phase shift per unit length.

Diamond Ordnance Fuze Labs., Washington, D. C.
A TECHNIQUE FOR DESIGNING TRANSFORMERS TO MATCH BETWEEN TWO CIRCULAR WAVEGUIDES, by N. Karayianis. 28 Aug 59, 15p. 5 refs. TR-765; AD-229 091.
Order from LC mi$2.40, ph$3.30 PB 144 705

A simple method of designing transformers to match between two arbitrary impedance, circular waveguides is described, and an example given. The method combines a generalization of measurements made of tubes of Teflon in circular waveguide with the general knowledge concerning the nature of multistep transformers. The experimental results of the application of the technique to design a match between standard-size X-band circular guide and a complex dielectric-ferrite-loaded

reduced-size circular guide are included. The essential results are that the reflections after matching are more than 15 db down from the incident signal in the range 9.1 to 9.9 kmc, whereas before matching there was almost total reflection of the incident signal. (Author)

Diamond Ordnance Fuze Labs., Washington, D. C.
TEST CIRCUITS FOR THE MEASUREMENT OF TRANSISTOR CURRENT-GAIN IN THE 0.1- TO 200-Mc FREQUENCY RANGE, by George N. Kambouris and Erwin Hirschmann. 15 June 59, 11p. 7 refs. TR-723; AD-219 810.
Order from LC mi$2.40, ph$3.30 PB 144 665

Tests sets were designed and constructed that permit accurate measurement of the magnitude of transistor current gain in both the common-emitter and common-base configurations over an extended frequency range (up to 200 Mc) and at various bias conditions. Components and techniques used and problems encountered are described. (Author)

Diamond Ordnance Fuze Labs., Washington, D. C.
WIDE-BAND TRANSISTORIZED VIDEO AMPLIFIER, by Einar Naess. 30 June 59, 8p. TM-59-5.
Order from LC mi$1.80, ph$1.80 PB 144 710

The design and construction data are included of a miniaturized, wideband video amplifier utilizing 2N502 transistors. The final design occupies a volume of 0.7 cu in., weighs 0.5 oz, and operates with 0.2 watt, at 12 volts. It has a 65-db voltage gain, 60-Mc bandwidth, and one-volt output across a 1000-ohm impedance. (Author)

Electrical Engineering Research Lab., U. of Illinois, Urbana.
PATTERN SYNTHESIS FOR ANTENNA ARRAYS ON CIRCULAR, ELLIPTICAL, AND SPHERICAL SURFACES, by R. H. DuHamel. Technical rept. no. 16 on Contract N6-ORI-71 Task XV. May 52, 103p. 60 refs. ATI-166 395.
Order from LC mi$5.70, ph$16.80 PB 144 814

A general method of pattern synthesis is presented for an array of antenna elements placed on a circle, an ellipse, a sphere, a spheroid and an ellipsoid. Since only the element pattern is required, the antenna elements may be dipoles or loops, either with or without a concentric reflecting surface, or slots. This method of pattern synthesis could be quite useful in the design of antenna systems for direction finding, radar, and other applications.

Electrical Engineering Research Lab., U. of Illinois, Urbana.
PROOFS OF SOME NETWORK THEOREMS BY TOPOLOGICAL FORMULAS, by S. L. Hakimi and W. Mayeda. Interim technical rept. no. 11 on Contract DA 11-022-ORD-1983. 25 Sep 58, 25p. 4 refs.
Order from LC mi$2.70, ph$4.80 PB 138 574

In this report, some properties of network functions are deduced by means of topological formulas. The studies include the relationship between missing powers in polynomials in network functions and network geometry, Fialkow and Gerst coefficients conditions, and frequency and magnitude scaling. Although some of these results were previously known, we will show that they can also be obtained with simplicity using topological formulas.

Electronic Communications, Inc., Timonium, Md.
BROADBAND, STEERABLE LINEAR ARRAYS, by D. D. King, R. F. Packard, and R. K. Thomas. Scientific rept. no. 1 on Contract AF 19(604)5234. 7 Oct 59, 30p. AFCRC-TN-59-789.
Order from LC mi$2.70, ph$4.80 PB 144 598

Requirements for a broadband steerable linear antenna array are given. The limitations due to grating lobes of an equally spaced array are discussed. Several different unequally spaced arrays have been studied which have two advantages: (1) fewer elements for comparable beamwidth (2) grating lobes and minor lobes replaced by sidelobes of unequal amplitude and all less than the main beam. A scheme for controlling the cosine arguments in the radiation pattern formula is given which has resulted in the best pattern of this study.

Electronics Research Lab., U. of California, Berkeley
MODES IN LINEAR CIRCUITS AND LINEAR SAMPLED DATA SYSTEMS, by Charles A. Desoer. Rept. on Contract AF 18(600)1521. 27 July 59, 45p. 19 refs. Series no. 60, issue no. 224; AFOSR-TN-59-849.
Order from LC mi$3.30, ph$7.80 PB 144 493

The purpose of this paper is to develop the concept of modes in linear circuits. It is well known that the chapter on modes in lossless circuits or in conservative mechanical systems belongs naturally to any good text on the subject. The contribution of this paper is to show that provided a suitable point of view is taken, the concept of modes does apply indeed to any linear circuit: more precisely, it will be shown that it applies to any lossy or lossless, active or passive, reciprocal or nonreciprocal circuit. The importance of the mode concept lies in the fact that it allows one to consider a linear circuit as a whole, to break up its behavior as a sum of very simple patterns, and to visualize easily the effect of externally applied forces. Furthermore it provides a very informative description of the resonance phenomenon.

Federal Telecommunication Labs., Nutley, N. J.
LOW-LOSS COAXIAL CABLES. Final rept. for 1 Oct 55-30 Sep 56 on Contract DA 36-039-sc-70140. Feb 57, 77p. 3 refs. AD 134 895.
Order from LC mi$4.50, ph$12.30 PB 145 059

To improve the quality of polyethylene coaxial cables, theoretical changes in conductor designs and dielectric structure leading to lower loss are considered, particularly to reduce attenuation in the super-high-frequency (SHF) band. The principles of foaming polyethylene by decomposition of chemical additives

are described, and the effects on the dielectric properties are discussed.

Ferranti Electric, Inc., New York.
DEVELOPMENT OF AN ACOUSTIC DELAY LINE FOR DIGITAL STORAGE. Final rept. on Contract AF 19(604)3900. 8 July 59, 32p. 1 ref. AFCRC-TR-59-169.
Order from LC mi$3.00, ph$6.30 PB 144 442

The primary purpose of this work is to extend the region of the low temperature coefficient of delay. An additional object has been an evaluation of the reproducibility of the temperature coefficient, when similar materials, given identical treatment, are used to make several delay lines. Other important topics investigated are: adjustable tapped torsional lines, lines operating at a higher frequency, use of compensating materials to reduce overall temperature effects and establishment of a procedure whereby proper heat treatment of a material may be determined.

Georgia Inst. of Tech. Engineering Experiment Station, Atlanta.
INVESTIGATION OF METHODS FOR MEASURING THE EQUIVALENT ELECTRICAL PARAMETERS OF QUARTZ CRYSTALS by Douglas W. Robertson and S. N. Witt, Jr. Progress rept. no. 1, 16 Apr-15 July 56, on Contract DA 36-039-sc-71191. [1956] 46p. 4 refs.
Order from LC mi$3.30, ph$7.80 PB 138 498

Four units of extended frequency range have been constructed under the present contract for use with experimental bridge and substitution type CI Meters. These units complete a set of ten rheostats which exhibit phase angles of less that $\pm 11^{o}$ over a range of 30 to 200 ohms from 75 to 300 mc/sec.

Georgia Inst. of Tech. Engineering Experiment Station, Atlanta.
INVESTIGATION OF METHODS FOR MEASURING THE EQUIVALENT ELECTRICAL PARAMETERS OF QUARTZ CRYSTALS, by Douglas W. Robertson, S. N. Witt, Jr. and William R. Free. Progress rept. no. 3, 15 Oct 56-15 Jan 57, on Contract DA 36-039-sc-71191. [1957] 54p.
Order from LC mi$3.60, ph$9.30 PB 138 496

An experimental thermistor bridge power measuring system was assembled and tested. The results obtained from the experimental system indicate that a system of this type should be capable of measuring crystal power dissipations over the range of 0.5 to 4.0 mw with an accuracy of ±5 percent. The experimental model of the coaxial Crystal Parameter Bridge was completed. Impedance matching within 15 percent for magnitude and 5 degrees for phase angle at drive levels as low as 0.5 mw have been obtained with the present unit. (See also PB 138 497)

Georgia Inst. of Tech. Engineering Experiment Station, Atlanta.
INVESTIGATION OF METHODS FOR MEASURING THE EQUIVALENT ELECTRICAL PARAMETERS OF QUARTZ CRYSTALS, by Douglas W. Robertson, S. N. Witt, Jr. and William R. Free. Progress rept. no. 4, 16 Jan-1 June 57, on Contract DA 36-039-sc-71191. [1957] 71p. 3 refs.
Order from LC mi$4.50, ph$12.30 PB 138 495

A prototype thermistor-bridge power meter for measuring the r-f power dissipated in VHF quartz crystals was constructed and tested. An experimental UHF capacitance bridge oscillator was constructed that displayed characteristics suitable for use with the coaxial bridge. Crystal controlled oscillations as high as 420 mc/sec were obtained with a modified version of this oscillator. (See also PB 138 496)

Georgia Inst. of Tech. Engineering Experiment Station, Atlanta.
STUDY OF THE EFFECTS OF PROCESSING TECHNIQUES AND MATERIALS ON AGING OF QUARTZ CRYSTAL UNITS, by Richard B. Belser. Quarterly rept. no. 5, 15 May-15 Aug 56, on Contract DA 36-039-sc-64613. [1956] 128p.
Order from LC mi$6.30, ph$19.80 PB 138 707

A glass-sealing lathe and a chamber for the simultaneous plating by evaporation of both faces of resonator blanks have been constructed.

Ionospharen-Institut Breisach (West Germany).
RESEARCH ON PULSE TRANSMISSION AT OBLIQUE IONOSPHERIC INCIDENCE, by Karl M. A. Bower. Annual summary rept. 1958/9 on Contract AF 61(052)129. 23 July 59, 13p. 1 refs. AFCRC-TN-59-770.
Order from LCmi$2.40, ph$3.30 PB 144 589

Description of apparatus for oblique incidence pulse experiments including amplitude recording. First results obtained between Germany and the US. (Author)

[ITT] Labs., Nutley, N. J.
LOW- AND VERY-LOW-FREQUENCY ANTENNA DATA. Final engineering rept. for May 56-Aug 57 on Contract Nonr-2148(00). Oct 57, 76p. 7 refs. AD-145 986.
Order from LC mi$4.50, ph$12.30 PB 137 694

The problems involved in applying helical top-loading techniques to large, high-power antennas for the VLF range were studied. Electrical design and performance parameters are calculated for a 15-kc antenna and a 1/10 scale model. Results indicate that it is feasible to erect a high tower on land with a large helix and capacitive load mounted on top. A typical 15-kc antenna would consist of a guyed fabricated steel tower 1700 ft high surmounted by a 150-ft helix and 150-ft capacitive load on top of the helix. The tower can be grounded and insulators can be omitted in the guy wires. The antenna feed line would be run up to the tower to the base of the helix. The helix would be made entirely of strong insulating material except for a few discretely placed metal members to strengthen the frame. Radiation efficiency of about 60% appears attainable. Voltage at the top of the antenna approaches 5 megavolts rms for 2 megawatts input. The resulting voltage gradients have a safety factor of about 3.5 on the breakdown strength of air. The Q is relatively high which limits the keying speed. Experiments on 1/10,000 scale models of the 15-kc structure indicated that directive arrays are feasible. Such arrays would simplify the problems of mechanical design, erection, and high voltage (since the power would be divided between several towers).

Jet Propulsion Lab., Calif. Inst. of Tech., Pasadena.
TRANSISTORIZED RELAY AMPLIFIER, by R. A. Bruns and J. H. Wilcher. Rept. on Contract DA 04-495-ORD-18. 2 Sep 58, 17p. 6 refs. Memo. no. 20-170; AD-207 045.
Order from LC mi$2.40, ph$3.30 PB 144 715

The development of a transistorized relay amplifier of superior performance to vacuum-tube type of amplifiers commonly used is described. The circuit was designed from an analytic approach utilizing matrices amenable to digital computer solution for the performance of a large amount of computations. The digital computer permitted a thorough survey of parameter studies and illustrates a powerful design method extendible to cirucits of greater complexity. Performance tests of the transistorized relay amplifier with the analog computer showed it to be superior to the vacuum-tube type in lower noise level, a smaller inactive zone, and much faster time response. (Author)

Johns Hopkins U., Baltimore, Md.
A THEORY OF NEARLY LINEAR SYSTEMS, by Francis H. Clauser. Rept. on Contract AF 49(638)496. [1959] 75p. AFOSR-TN-59-1133.
Order from LC mi$4.50, ph$12.30 PB 144 779

A theory is developed which permits the usual concepts of impedance and admittance to be applied to nonlinear systems, but the impedances and admittances now become matrices whose components give not only the response to the multiple frequencies that are present in nonlinear systems, but also the intercoupling of these frequencies as well. Numerous examples are used to show that the method can treat a wide variety of problems such as subharmonic and superharmonic resonance, oscillator lock-in, parametric amplification, superregeneration, rectification, modulation and the like. (Author)

Marathon Battery Co., Wausau, Wis.
INDUSTRIAL PREPAREDNESS STUDY ON PAPER LINED BATTERIES TYPE BA-270/U-XPL. by George H. Schroeder. Final technical rept. on Contract DA 36-039-sc-30270. Sep 57, 65p.
Order from LC mi$3.90, ph$10.80 PB 144 503

The equipment provided for the production of paper lined cells for battery BA-270/U-XPL is described. The more significant experimental work is recounted as well as the performance of batteries furnished the Signal Corps on several occasions. The batteries furnished as the third preproduction lot met the performance requirements. The contractual batteries were made and shipped. (Author)

Mauch Labs., Inc., Dayton, Ohio.
THE DEVELOPMENT OF A READING MACHINE FOR THE BLIND, by A. F. Emanuel and H. A. Mauch. Summary rept. for 12 Sep 58-30 June 59 on Contract V 1005 M-1943. 30 June 59, 8p.
Order from LC mi$1.80, ph$1.80 PB 144 749

A mechanical model of the human speech mechanism was built and evaluated in an effort to produce a speech-like, and more easily learned, output. This model was then abandoned because of its inherent limitations. Further efforts to produce a speech-like output results in the development of a collection of speech sounds (word fragments) which are capable of being used to construct artificial words closely resembling speech. A device which will mechanically compose artificial words from word fragments was designed and partially constructed. Studies are described which propose solutions to scanning problems.

Mellon Inst. [of Industrial Research, U. of Pittsburgh, Pa.]
HIGH TEMPERATURE PRINTED CIRCUITRY, by G. H. Young, C. H. T. Wilkins and others. Quarterly rept. no. 10, third series, 1 Jan-31 Mar 59, on Computer Components Fellowship no. 347, Contract AF 19(604)1959. 1959, 55p. 11 refs. AFCRC-TN-59-777.
Order from LC mi$3.60, ph$9.30 PB 144 545

Continued investigations regarding the development of high temperature, passive, two-dimensional, printed circuitry have included: surface resistivity studies; further development of film capacitors; metal film resistor studies; and development of non-glaze-containing, screen-painted enamel circuits. (See also PB 138 813)

Michigan U. Research Inst., Ann Arbor.
INVESTIGATION OF MICROWAVE PROPERTIES OF FERROELECTRIC MATERIALS, by C. B. Sharpe. Quarterly progress rept. no. 2, 1 May-1 Aug 58 on Contract DA 36-039-sc-75003. Aug 58, 15p. 3 refs. 2732-2-P.
Order from LC mi$2.40, ph$3.30 PB 138 790

A theory based on the scattering matrix approach is presented for high dielectric constant materials. Correction formulas for the non-uniform field effect in disc and rectangular shaped samples at high frequencies have been verified.

Michigan U. [Research Inst.] Ann Arbor.
PRODUCTION OF LARGE TRANSIENT CURRENTS BY INDUCTIVE ENERGY STORAGE, by R. C. Walker and H. C. Early. Rept. on Contract AF 40(600)720. Dec 57, 21p. 2 refs. 2665-2-T.
Order from LC mi$2.70, ph$4.80 PB 144 549

Research involving transient currents of the order of 10^6 to 10^7 amperes involves peak power levels which are larger than can ordinarily be obtained from a utility power line. Some form of intermediate energy storage is usually desirable which will permit taking energy from the power line over a period of seconds or minutes and then discharging the energy over a

much shorter interval. The relative merits of several methods of energy storage were discussed in an AIEE paper. In this paper it is shown that storage of electrical energy in a magnetic field is often economically advantageous in situations where the energy is in the megajoule range and the discharge current pulse has a duration of several milliseconds.

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
DISCONTINUITIES IN THE CENTER CONDUCTOR OF SYMMETRIC STRIP TRANSMISSION LINE, by H. M. Atschuler and A. A. Oliner. Rept. on Contract AF 19(604)2031. 13 July 59, 38p. 11 refs. Research rept. R-749-59; PIB-677; AFCRC-TN-59-599.
Order from LC mi$3.00, ph$6.30 PB 144 437

A systematic measurements program has been carried out to check the validity of theoretical formulas for the equivalent circuit parameters of a variety of discontinuities in the center conductor of symmetric strip transmission line. These theoretical formulas have been in part previously available and are in part new or modified. Results indicate that, in general, these formulas are adequate for most engineering purposes and that certain of the network parameters can be neglected.

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
OPTIMUM VOLTAGE TRANSFER EQUALIZATION FOR A REACTIVE LOAD AND A FINITE GENERATOR, by Walter H. Ku. Rept. on Contract Nonr-839(05). 13 Feb 59, 17p. 5 refs. Research rept. R-678-58; PIB-606; AD-218 471.
Order from LC mi$2.40, ph$3.30 PB 144 822

The problem of designing the optimum coupling networks is considered. A definitive result was obtained for the ratio of voltage gain of a dissipative matched equalizer to that of a reactive equalizer for a given lossless load when a generator with a finite internal resistance is used. If the voltage ratio is prescribed with a normalized shape f(w), and the maximum possible scale factor consistent with physical realizability is K_M for a matched equalizer and K_X for a lossless equalizer, then in general for any realizable f(w), $K_X/K_M=\sqrt{2}$. Examples comparing the performance of optimum matched and optimum lossless equalizers are presented. (Author)

RESEARCH AND DEVELOPMENT OF CATHODE RAY TUBES, by Kurt Schlesinger. Final rept. on Contract DA 36-039-sc-64614. [1958] 281p. 26 refs. AD-157 744.
Order from LC mi$11.10, ph$44.10 PB 144 914

Electrostatic wide angle deflection (65 degrees) from a common center has been accomplished with "soft" beams (2 to 4 KV), using specially developed electrostatic yokes, or "Deflectrons". The new wide angle Deflectrons consist of a glass cone, 1-1/2" long, whose inside surface carries a plated metal pattern with 4 terminals. Pincushion distortion and noncircularity has been corrected by special geometry of the printed pattern, notably the "sine^2 graded pitch" type. Post acceleration from 2.5 KV to 25 KV has been accomplished, without any loss of deflection, by a new "barrier mask" intensifier using a high-transmission (50%), etched, metallic, dome of high resolution (3.10^5 holes at 18" diameter). Secondary emission from the first surface has been cancelled by a coat of magnesium oxide on a base of enamel, using a barrier bias of 100 volt relative to an adjacent wire collector. Three types of displays have been built using this combination: (1) A single gun, 19" - 65° electrostatic radar indicator. (2) A dual deflection tube, using a single gun but two aligned Deflectrons in sequence. (3) An all electrostatic character writing tube, called "Printoscope". This latter tube uses a total of five Deflectrons; four are grouped in two Tandem units for character selection; one is used for address. Performance records and special circuit information are included in the report. (Author)

Naval Ordnance Test Station, China Lake, Calif.
AN ALL TRANSISTOR PDM TELEMETRY CODER, by James S. Sherwin. 1 June 57, 12p. NOTS-1807; NAVORD rept. 5600; AD-146 367.
Order from LC mi$2.70, ph$4.80 PB 144 721

This report describes an all transistor PDM telemetry coder that is very linear, is unaffected by variations in signal voltage during the information pulse, and is free from the microphonic effects encountered in vacuum tube circuits. The complete circuit includes an astable blocking oscillator pulse-rate generator, a voltage-controlled delay multivibrator (DMV) encoder, and a gated memory circuit which prevents variations in signal voltage from appearing at the input to the DMV during the information pulse. The coder operates at a pulse rate of 900 ±5 pps, exhibits a transfer function linear to within ±0.5%, and can be calibrated to 0.1%. Seven silicon transistors are utilized. (Author)

CALCULATION OF TRANSIENT DISCHARGES BETWEEN SEPARATING CONTACTS, by H. E. Strauss and C. W. Klee. Interim rept. 13 Jan 60, 16p. 9 refs. NRL Rept. 5416.
Order from OTS $0.50 PB 161 024

A criterion has been formulated for the prediction of the type of transient-repetitive short arcs or glow to be expected between separating contacts interrupting a current too small to cause drawing-out of an arc. In simple form, the criterion is that when the current calculated for an assumed glow transient, using a formula based on an idealized relationship of voltage and current involving constant parameters, is less than a critical current, a glow discharge forms, and when the calculated current is greater, an arc discharge forms. If a glow discharge occurs, the energy in the circuit is sufficiently dissipated at the end of this discharge that only circuit oscillations follow. If an arc occurs, generally energy conditions in the circuit will be such that the gap voltage rebuilds to the breakdown potential; and usually this occurs a number of times resulting in a series of arcs. In order to evaluate the merit of the criterion and the assumed parameters, transients were observed experimentally in the simple circuit on which the

analysis was based and compared with the calculated transients. The agreement found between the two encourages confidence in the basic assumptions that permitted selections of a criterion and of discharge parameters. (Author)

Naval Research Lab., Washington, D. C.
INVERSE NETWORKS, by Charles F. White. Final rept. 23 Nov 59, 11p. 2 refs. NRL rept. 5420.
Order from LC mi$2.40, ph$3.30 PB 143 407

"Inverse networks" are introduced as a class of two terminal-pair, linear, passive, structurally dual networks. From a given network composed of combinations of lumped resistance, inductance, and capacitance another "inverse" network with an identical voltage transfer function may be formed by use of the concept of inverse impedances together with a topological transformation procedure that is presented.

Naval Research Lab., Washington, D. C.
SUBMERGED VLF RECEPTION; A STUDY OF VARIOUS LOOP COUPLING METHODS, by S. V. Fratianni. 31 Dec 46, declassified 15 Dec 53. 19p. 6 refs. Rept. R-2872.
Order from LC mi$2.40, ph$3.30 PB 144 601

This problem provides for research to yield more effective submerged reception, the present phase relating to the attainment of the best energy transfer from the collecting loop to the receiver. Various coupling units available to the service have been studied. While the study of couplings is the prime consideration, it was found desirable to include the limitations of the various couplers and their usefulness to the Navy.

Naval Research Lab., Washington, D. C.
TWO-DIMENSIONAL TRACKING WITH IDENTICAL AND DIFFERENT CONTROL DYNAMICS IN EACH COORDINATE, by R. Chernikoff, J. W. Duey, and F. V. Taylor. Interim rept. 27 Nov 59. 7p. 2 refs. NRL rept. 5424.
Order from LC mi$1.80, ph$1.80 PB 143 803

In many complex tracking devices, the control dynamics may differ in the various coordinates. This requires the operator to supply a different transfer function in each tracking dimension. The purpose of this investigation was to determine the effect upon tracking produced by using various pairings of position, rate, and acceleration control dynamics in the X and Y coordinates of a two-dimensional tracking system. The results indicate that in all cases, minimum error occurred when the dynamics in the two coordinates were the same and that error increased as the dissimilarity between the dynamics became greater. These findings are interpreted as suggesting that a human has a limited information-handling capacity, that some of this capacity is used to change from one task to another, and that the greater the difference between control tasks the less the capacity which remains for the performance of either. (Author)

Naval Research Lab., Washington, D. C.
THE USE OF QUICKENING IN ONE COORDINATE OF A TWO-DIMENSIONAL TRACKING SYSTEM, by J. W. Duey and R. Chernikoff. Interim rept. 30 Nov 59, 6p. 3 refs. NRL rept. 5428.
Order from LC mi$1.80, ph$1.80 PB 143 801

In a previous study, it was found that tracking error in one coordinate of a two-dimensional tracking system was affected by the dynamics used in the other coordinate. In particular, tracking performance progressively deteriorated as the dynamics in the two coordinates became more dissimilar. The present study sought to extend these findings by determining how the introduction of quickening into one coordinate of a second-order, two-coordinate tracking system would affect performance in the unquickened coordinate. In the light of the previous study, it might be expected that quickening one coordinate would degrade the performance of the other. On the other hand, the simplification of the tracker's task induced by quickening might effect an improvement in performance. The findings suggest that a counterbalance of the above factors was achieved, since quickening one coordinate did not affect performance in the other. (Abstract)

Navy Electronics Lab., San Diego, Calif.
HUMAN FACTORS IN THE DESIGN AND UTILIZATION OF ELECTRONICS MAINTENANCE INFORMATION, by J. H. Stroessler, J. M. Clarke and others. 31 May 57, 36p. 11 refs. Research rept. 782; AD-149 158.
Order from LC mi$3.00, ph$6.30 PB 144 662

The results of the survey are summarized in the report proper and are given in full in Appendix C.

Navy Electronics Lab., San Diego, Calif.
A SIMPLIFIED DISTORTION ANALYZER, by H. E. Chubb and S. H. Sessions. 13 July 57, 17p. 8 refs. Research and Development rept. 789; AD-205 995.
Order from LC mi$2.40, ph$3.30 PB 144 661

The problem was to develop a simple technique and equipment for measuring audio distortion in sonar trainers, particularly those using phonographic or magnetic-tape input, as an aid to maintenance technicians in making rapid checks on and locating malfunctions in trainers and similar equipments.

Navy Electronics Lab., San Diego, Calif.
STUDIES IN HUMAN CONTROL DYNAMICS, by M. Lichtenstein. Rept. for Sep 54-May 56. 7 Oct 57, 37p. Research and Development rept. 805; AD-206 439.
Order from LC mi$3.00, ph$6.30 PB 144 724

The continuous control performances of operators were studied in relation to system input characteristics, control system transfer functions, tracking mode, and display factors. Analyses of results were made in terms of integrated track errors, input and

output auto- and cross-correlation functions, spectrum analyses, and phase-plane diagrams. Some hypotheses about control action were developed. Some applications of test results to engineering design of man-operated control systems are suggested.(Author)

Navy Experimental Diving Unit, Naval [Weapons Plant] Washington, D. C.
THE PERFORMANCE OF UNDERWATER TELEVISION USING BOTH NATURAL AND ARTIFICIAL ILLUMINATION, by J. R. R. Hartner, G. M. Janney, and T. L. Rakoskie. Interim rept. 2 June 59, 41p.
Research rept. 2-59; AD-226 794.
Order from LC mi$3.30, ph$7.80 PB 144 673

A study of the performance of underwater television using natural and artificial illumination was started. The hydrological range capabilities of various television systems were measured. Various combinations of commercial sources of illumination were tested both in the day-time and at night. The initial results show that, in relatively turbid water, the night-time performance is somewhat superior to the performance possible in the day-time. (Author)

New York U. Coll. of Engineering, N. Y.
ON THE WIENER PREDICTION PROBLEM AND THE PROBLEM OF THE OPTIMIZED, NOISEFREE AUTOMATIC CONTROLLER, by Nils Ashlund. Rept. on Contract AF 49(638)586. Oct 59, 19p. 6 refs.
Technical note 400-2; AFOSR-TN-59-1100.
Order from LC mi$2.40, ph$3.30 PB 144 783

A solution of the Wiener prediction problem in the sampled, non-stationary case has been presented by Kalman. The method used is founded on statistical orthogonal projections. Kalman and Koepcke have also presented a solution of the problem of minimizing a generalized loss-function defined for a sampled, noisefree automatic controller. Here dynamic programming is used. The solutions of the two problems have structural resemblances and the problems are called the duals of each other by Kalman, who finds the close resemblance very surprising.

Office of Scientific Research and Development. Div. 14.
X-BAND VIDEO CRYSTALS, by W. E. Meyerhoff and W. E. Stephane (Pennsylvania U.). Rept. on Contract OEMsr-[383] 20 May 44, declassified, 11p. 4 refs. Rept. no. 274; ATI-21 017.
Order from LC mi$2.40, ph$3.30 PB 144 648

Procedures are described for the manufacture of X-band video crystals with an average figure of merit of over 100. Their resistance averages 20,000 ohms. Pulses of about 0.6 erg cause the figure of merit to decrease by 20%. These crystals are fairly stable, the figure of merit changing ±10% on the average over a week's time. (Author)

RESPONSE CHARACTERISTICS OF INTERPHONE EQUIPMENT NUMBER 3 INCLUDING INFORMATION ON PROPOSED STANDARD TEST METHODS FOR HEADSET RECEIVERS AND MICROPHONES, by H. W. Rudmose, F. M. Wiener and others (Cruft Lab.) Rept. on Contract OEMsr-658. 1 Mar 43. declassified 10 May 46. 132p. OSRD rept. no. 1095; ATI-158 961.
Order from LC mi$6.90, ph$21.30 PB 144 518

This report records the results of an experimental program planned to investigate and to develop where necessary suitable methods for testing the physical properties of military interphone equipment. The research reported here was started at the request of the late Commander Malcolm P. Hanson of the Navy Department Bureau of Aeronautics. Part of this program has been covered in two previous transmittals of the same title, dated January 30 and June 23, 1942. Information is now being obtained on the effects of reduced pressure and low temperature on the behavior of the human voice, and will be presented at a later date. The earlier reports contain tentative methods of testing microphones and headphones, but following further experience, certain revisions have seemed necessary. It is believed that those test methods advocated at this writing are suitable for use in preparing specifications. Part of the procedures have already been adopted by the United States Army and Navy.

VARIABLE CAPACITOR DEVELOPMENT, by E. J. Caron. Quarterly rept. no. 1, 1 Feb-1 May 58, on Contract NObsr-72751. 12 May 58, 13p.
Order from LC mi$2.40, ph$3.30 PB 144 954

Radio Condenser Co., Camden, N. J.
VARIABLE CAPACITOR DEVELOPMENT, by E. J. Caron. Quarterly rept. no. 2, 1 May-1 Aug 58, on Contract NObsr-72751. 15 Aug 58, 20p. AD-219 009.
Order from LC mi$2.40, ph$3.30 PB 144 872

A method of evaluating variable capacitors for small variations of capacity when under vibration was satisfactorily achieved. These variations can be measured in terms of frequency where the capacitor is the tuning element of a 16 - 32 mc oscillator. (Author) (See also PB 144 954)

Radio Condenser Co., Camden, N. J.
VARIABLE CAPACITOR DEVELOPMENT, by E. J. Caron. Quarterly rept. no. 3, 1 Aug-1 Nov 58, on Contract NObsr-72751. 17 Nov 58, 30p.
Order from LC mi$2.70, ph$4.80 PB 144 873

The variable capacitor to be built under this contract has a specification of frequency deviation when subjected to vibration and used to tune an oscillator over the 16 - 32 Mc. range. The specification calls for a maximum deviation of 100 cycles. A number of variable capacitors were evaluated for frequency deviation when subjected to vibration and used as the tuning element of a 16 Mc. oscillator. These capacitors were selected to cover a reasonable range of construction variables such as air gap, plate size, frame, etc. In addition, modifications were made and evaluated. The lowest deviations on standard capacitors exceeded

1200 cycles. The data taken in this report period will be valuable in determining the structure of a special capacitor unit which will be built to permit the various capacitor parameters to be evaluated independently. (Author) (See also PB 144 872)

Radio Condenser Co., Camden, N. J.
VARIABLE CAPACITOR DEVELOPMENT, by E. J. Caron. Quarterly rept. no. 4, 1 Nov 58-1 Feb 59, on Contract NObsr-72751. 13 Feb 59, 26p.
Order from LC mi$2.70, ph$4.80 PB 144 874

A rugged capacitor frame structure was built to permit evaluation of various parameters independently. The first group of findings (evaluation of deviation in terms of plate hardness) is nearly complete. Under vibration at 55 cycles per second, the average high quality stable capacitor has a frequency deviation of 4,000 cycles. Some structures show deviations as low as 1,200 cycles. Modifications can be made to obtain reductions in the order of 50 percent. Effects of variations of each parameter involved are being analyzed to obtain information which will permit making a design incorporating the optimum value in each case. Thus a design of very low frequency deviation will be achieved. (Author) (See also PB 144 873)

Radio Condenser Co., Camden, N. J.
VARIABLE CAPACITOR DEVELOPMENT, by E. J. Caron. Quarterly rept. no. 5, 1 Feb-1 May 59, on Contract NObsr-72751. 15 May 59, 18p.
Order from LC mi$2.40, ph$3.30 PB 144 875

This report covers a series of experiments to determine the manner in which the design parameters of a variable air capacitor affect the frequency stability of an oscillator using this capacitor as the main frequency determining element. The parameters investigated include air gap, rotor and stator plate thickness, rotor plate radius, and rotor and stator plate hardness. A rugged frame structure was built in such a manner that these parameters could be investigated independently of other factors. The data obtained has been used to design a capacitor with high stability against vibration and of a size which is reasonable and practical. (Author) (See also PB 144 874)

Radio Corp. of America, Princeton, N. J.
DEVELOPMENT OF AN ELECTROSTATICALLY FOCUSED MEDIUM-POWER TRAVELING-WAVE AMPLIFIER FOR S-BAND, by D. J. Blattner and F. E. Vaccaro. Final rept. for 1 Dec 56-31 Mar 58 on Contract AF 19(604)1947. [1958] 43p. 3 refs.
AFCRC-TR-58-127; AD-152 363.
Order from LC mi$3.30, ph$7.80 PB 137 828

Work performed has demonstrated the feasibility of operating traveling wave tubes with electrostatic focusing over a wide range of power levels. With no compromise of the advantageous features of traveling wave amplifiers - wide bandwidth, high gain, linear small-signal amplification - many of their disadvantages have been removed. Thus the electrostatically focused traveling wave amplifier requires no magnetic focusing field, (hence no alignment), is light in weight, and can be made as independent of environmental conditions as any thermionic tube vacuum tube.

Raytheon Mfg. Co. Newton, Mass.
INDUSTRIAL PREPAREDNESS STUDY ON TRANSISTORS AND AUTOMATIC MACHINERY FOR THEIR MANUFACTURE, by Frank M. Dukat and G. Freedman. Quarterly rept. no. 8, 28 Dec 56-28 Mar 57, on Contract DA 36-039-sc-66038. [1957] 28p. AD-159 992.
Order from LC mi$2.70, ph$4.80 PB 138 094

Tentative specifications for the QC-117 transistor, based on the Type 30 welded package, are being discussed. The introduction of small quantities of boron in the emitter results in considerable beta improvement and also in improved voltage saturation. (See also PB 129 406)

Raytheon Mfg. Co., Newton, Mass.
INDUSTRIAL PREPAREDNESS STUDY ON TRANSISTORS AND AUTOMATIC MACHINERY FOR THEIR MANUFACTURE, by Frank M. Dukat and George Freedman. Quarterly rept. no. 10, 28 June-28 Sep 57, on Contract DA 36-039-sc-66038. [1957] 21p. AD-159 994.
Order from LC mi$2.70, ph$4.80 PB 138 054

Results of QC-131 lifetime tests to 2000 hours indicate good shelf life characteristics, relatively stable beta and acceptable Ico performance for room temperature and high temperature and operating storage conditions. (See also PB 138 050)

Raytheon Mfg. Co., Newton, Mass.
INDUSTRIAL PREPAREDNESS STUDY ON TRANSISTORS AND AUTOMATIC MACHINERY FOR THEIR MANUFACTURE, by Frank M. Dukat and George Freedman. Quarterly rept. no. 11, 28 Sep-28 Dec 57, on Contract DA 36-039-sc-66038. [1957] 14p. AD-159 995.
Order from LC mi$2.40, ph$3.30 PB 138 055

The reproducibility of boron-aluminum alloys for fused-junction LF silicon transistor (type QC-131) emitters was studied. The use of boron-aluminum and tin instead of boron-tin and aluminum emitter alloys improved the falloff of hfe (small-signal short-circuit forward-transfer current ratio) vs I_e (emitter current), and the saturation resistance. The boron-aluminum ribbon alloys, which were successfully used on experimental units, were tried on pilot production of the QC-131. Results were satisfactory. A diluted etching solution improved pilotline yields at the in-line test stage and lowered the base resistance. (See also PB 138 054)

Raytheon Mfg. Co., Newton, Mass.
SILICON POWER TRANSISTORS (DEVICES 15 AND 16), by Frank M. Dukat and George Freedman. Final rept. for 1 Jan-30 Oct 57 on Feasibility Study of Diffused Semiconductor Devices, Contract DA 36-039-sc-72710. [1957] 105p. AD-207 652.
Order from LC mi$5.70, ph$16.80 PB 138 052

Feasibility, both mechanical and electrical, has been demonstrated for Device 15 and for Device 16 to a modified specification. This has been done by the approach of double diffusion for which two feasible variations are described.

Raytheon Mfg. Co., Newton, Mass.
SILICON VIDEO AMPLIFIER (DEVICE 25), by John Sardella, Anthony Caggiano and others. Quarterly rept. no. 1, 12 Sep-12 Dec 57, on Industrial Preparedness Study on Transistors, Contract DA 36-039-sc-72710. [1957] 38p. AD-207 653.
Order from LC mi$3.00, ph$6.30 PB 138 051

PHASED ARRAYS, by George J. Vogel. Nov 59, 63p. 7 refs. RADC-TR-59-135.
Order from LC mi$3.90, ph$10.80 PB 144 775

In conventional radars, the antenna physically moves to cause the radar beam angle to change. The physical limitations of this antenna movement impose serious restrictions on the uses to which this radar can be put. In Phased Arrays, the antenna does not move. The beam angle is changed by electronic means. This report presents the author's effort on phased arrays over the past year (1958). The author describes how the beam position is determined, some limitations peculiar to phased arrays and an improvement. A number of techniques using the advantages of phased arrays (that normal radars do not have) are also presented. To make the most of the proposed radars, considerable computer and hardware design must be accomplished. (Author)

Seattle U., Wash.
RESEARCH ON TRAVELING WAVE ANTENNAS, by Donald K. Reynolds and Rubens A. Sigelmann. Final rept. on Contract AF 19(604)4052. June 59, 37p. 2 refs. AFCRC-TR-59-160; AD-217 821.
Order from LC mi$3.00, ph$6.30 PB 144 657

Continuously excited traveling wave antennas: By means of the continuous excitation of a long (40 λ) Yagi antenna by a two wire transmission line, periodic interchanges of energy between the line and the antenna can be obtained. The amplitude modulation of the surface wave on the antenna produced in this matter gives rise to useful end-fire radiation characteristics over a wide frequency band. Twisted Yagi antennas: Results are presented on a 40 λ twisted Yagi, with 4 identical twist sections. This antenna is shown to have useful end-fire characteristics and high directivity, although with very high side lobe levels. Distributed excitation of uniform traveling wave antennas: By means of a distributed exciter, which spreads the excitation of a 10 λ uniform Yagi antenna over the first quarter of the length of the antenna, a radiation pattern is obtained which is very nearly that of an ideal uniformly excited end-fire line source operating such as to produce maximum forward gain. Traveling wave antennas with broad pattern bandwidth: This investigation attacks the problem of non-uniform linear arrays, operated such that at a given frequency only a portion of the array can support a surface wave. By this means it is hoped to provide a substantially constant radiation pattern over a large frequency band. Preliminary results are presented. (Author)

Semiconductor Lab., Hughes Products, Los Angeles, Calif.
HIGH-FREQUENCY SILICON TRANSISTOR, by T. W. Griswold. Supplementary Feasibility rept. for 1 Sep-31 Oct 57 on Contract DA 36-039-sc-72702. [1957] 16p.
Order from LC mi$2.40, ph$3.30 PB 138 484

The techniques used to make Device 21 have been refined to the practical limit in an effort to meet the requirements of Device 22. Process changes to vary the depth of penetration, base width, base and emitter doping have been made. (See also PB 133 238)

A 2-8 kMc BIFILAR HELIX BACKWARD-WAVE OSCILLATOR, by R. W. Grow and D. A. Dunn. Rept. on Contract DA 36-039-sc-73178. 29 Sep 58, 16p. 6 refs. Technical rept. no. 382-1; AD-207 852.
Order from LC mi$2.40, ph$3.30 PB 137 914

This paper describes a very wide band voltage tunable bifilar helix backward-wave oscillator for use in a signal generator or for other low power applications. The oscillator tuned continuously from 2 to 8 kmc with a voltage variation of 76 to 2140 volts. With 5 ma of beam current it produced between 6 and 240 mw of RF power over this frequency range. The operating curves were reasonably smooth throughout the tuning band, making it both practical and useful as an electronically tunable oscillator. (Author)

Stanford Electronics Labs., Stanford U., Calif.
THE USE OF DOPPLER SHIFT FOR THE DIRECTIONAL RESOLUTION OF RECEIVED SIGNALS, by E. Gehrels. Technical rept. no. 32 on Contract Nonr-225(24). 21 Apr 58, 130p. 15 refs.
Order from LC mi$6.30, ph$19.80 PB 138 549

This dissertation describes a way in which two or more signals of the same radio frequency, but of a different direction of arrival, may be resolved by taking advantage of the above Doppler shift. In this case the received signal consists of the sum of the various individual signals, each having a superimposed frequency modulation whose characteristics depend on the direction of arrival of that particular signal component. By properly processing the composite signal the individual components can be separated, thus achieving directional discrimination analogous to that of a directional antenna. Because of this analogy, the rotating antenna system is called a "Doppler array."

STUDY OF EFFECTS AND CONTROL OF SURFACE CONTAMINANTS ON DIELECTRIC MATERIALS, by S. Chaikin. Quarterly progress rept. no. 2 1 Oct-31 Dec 54, on Contract DA 36-039-sc-64454. 25 Jan 55, 57p. 7 refs.
Order from LC mi$3.60, ph$9.30 PB 145 046

Accelerated conditions for contamination of samples by migration of silver from electrodes were developed, and studies of the effect of relative humidity, voltage, certain cleaning procedures, and other treatments were made on the paper-base phenolic laminate, Grade XXXP. Silver migration was promoted by high humidities and voltages, and by certain cleaning methods. Using about ten different samples of plastics, filled and unfilled, the effect of fingerprints on the d-c surface resistance was studied. The presence of iron was demonstrated in an etched sample of copper-clad XXXP by using sensitized filter paper. A sensitive filter paper test for the presence of rosin, a universal ingredient of fluxes for electronic use, was developed. To become familiar with the operation of the contamination chamber, aerosols of sodium chloride were generated in the presence of XXXP samples. (See also PB 145 045)

Stanford Research Inst. [Menlo Park] Calif.
STUDY OF EFFECTS AND CONTROL OF SURFACE CONTAMINANTS ON DIELECTRIC MATERIALS, by S. Chaikin. Quarterly progress rept. no. 3, 1 Jan-31 Mar 55, on Contract DA 36-039-sc-64454. 4 May 55, 66p.
Order from LC mi$3.90, ph$10.80 PB 145 047

The susceptibility of various materials to migration of silver from electrodes was investigated. Solder coating of silver, as a preventive measure, was also studied; it was found that the net volume of silver migration, on XXXP, was greatly reduced but that its damaging effects were only somewhat lessened. The relative behavior of a number of new materials in a standard humidity cycle was ascertained before and after contamination with fingerprints. The materials included Teflon-glass, epoxy-glass, diallyl phthalate-glass, Kel-F, neoprene, polyvinylchloride, cellulose acetate butyrate, steatite, and pyrex glass. A study of etching time (with ferric chloride) vs resistivity showed that exposure of XXXP panel in the etching solution for about five times as long as was necessary to remove copper from it had no serious degrading influence on its surface resistivity. Three rosin-alcohol fluxes of various degrees of activation were studied in regard to their effect on surface resistance of XXXP. The effect of contamination of XXXP, N-1, G-6, G-5, Teflon-glass, and epoxy-glass with sodium chloride and sulfuric acid aerosols was studied. Occurrences of insulation failure in a commercial printed circuit panel are being investigated. (See also PB 145 046)

Stanford Research Inst. [Menlo Park] Calif.
STUDY OF EFFECTS AND CONTROL OF SURFACE CONTAMINANTS ON DIELECTRIC MATERIALS, by S. Chaikin. Quarterly progress rept. no. 4, 1 Apr-30 June 55, on Contract DA 36-039-sc-64454. 25 July 55, 38p. 1 ref.
Order from LC mi$3.00, ph$6.30 PB 145 048

The susceptibility to silver migration of diallyl-phthalate-glass, Kel-F, Mycalex 400, and a new sample of N-1 was studied. Gold flash was tested as a silver migration preventive and found to be almost completely successful. An improvement in the method of detection of surface iron and copper was made by sensitizing the test paper with o-phenanthroline. Using this improved paper, the effect of etching time and washing time on the retention of iron by XXXP was determined and, where possible, was correlated with changes in surface resistivity. Fingerprints on Mycalex 400 were found not to lower the high humidity resistance below that to which a clean sample is reduced in that environment. Tests of unfluxed XXXP samples and fluxed and dip-soldered XXXP samples that had been exposed to airborne dust for a month showed that the high humidity surface resistance of the former was much more seriously lowered than that of the latter. A standing potential of 480 v dc on a fingerprint-contaminated XXXP sample at high humidity improved the surface resistance by a factor of 17 in 20 hours. Printed circuit processes used by a number of West Coast companies were studied in relation to the contaminants problem. (See also PB 145 047)

Stanford Research Inst. Menlo Park, Calif.
STUDY OF EFFECTS AND CONTROL OF SURFACE CONTAMINANTS ON DIELECTRIC MATERIALS, by S. Chaikin. Quarterly progress rept. no. 5, 1 July-30 Sep 55, on Contract DA 36-039-sc-64454. 11 Nov 55, 38p. 4 refs.
Order from LC mi$3.00, ph$6.30 PB 145 049

It was found that silver will not undergo migration when it is present in chemical combination with another metal. For the occurrence of silver migration, silver must touch the base material. However, it was found that a link between the silver and the base material could be formed by a fiber or a dust particle, permitting silver migration to occur. Cadmium plating was also shown to prevent migration. In the first of a series of experiments dealing with the prevention of silver migration by surface treatment, migration on XXXP and melamine-glass laminates was reduced about 75% by pre-treatment of the laminates with a silicone emulsion. The nature of contamination of glass-fiber-filled melamine and Teflon laminates by silver migration was shown with photomicrographs of silver migrated samples of these materials. In comprehensive experiments using XXXP base material the effect of etching time and washing time on surface resistance was studied, as was also surface retention of iron and copper. An improved test for surface iron and copper based on zinc ferrocyanide was developed. Abrasion of etched XXXP panels, an operation normally employed to remove the photoresist which protects copper during etching, was shown to improve surface resistance and to reduce greatly the quantity of surface iron and copper. No serious surface leakage was found from

several commercial activated rosin-base solder fluxes when tested either before or after dip-soldering, even after one week of storage at 97% relative humidity. Ferric oxide, and only ferric oxide, was identified as the precipitate which formed in a used ferric chloride etching solution. (See also PB 145 048)

Stanford Research Inst., Menlo Park, Calif.
STUDY OF EFFECTS AND CONTROL OF SURFACE CONTAMINANTS ON DIELECTRIC MATERIALS, by S. Chaikin. Quarterly progress rept. no. 6, 1 Oct-31 Dec 55, on Contract DA 36-039-sc-64454. 31 Jan 56, 48p.
Order from LC mi$3.30, ph$7.80 PB 145 050

A commercial silver conducting ink, designed for the fabrication of printed circuits by direct screening on an insulating base material, was tested for silver migration. The silver underwent very extensive migration on Mycalex, slight migration of XXXP, and no migration on epoxy-glass. Fourteen electronic components containing silver-plated or silver alloy parts were tested for silver migration. Migration occurred on dielectrics of seven of the components, four extensively enough so that ultimate failure of the component was indicated. The susceptible dielectrics were steatite, nylon, and the paper-base phenolic laminate, XXXP. A practical, general test for contamination is suggested, based on leakage resistance measurements at low and high humidity. A study of the effect of the degree of exhaustion of the etching bath on the surface resistance of etched circuits showed no correlation. Continued study was given to a comparison of activated rosin-base solder fluxes in their effect on the surface resistance of XXXP. None of the activated fluxes tested introduced leakage caused by the activator, even through a strenuous and degrading temperature-humidity cycling procedure lasting one month. The effect of MFP (Moisture and Fungus Proof) varnish on the surface resistance of contaminated and uncontaminated printed circuits was studied using XXXP. The effect of surface contamination on the a-c property, Q, at 50 megacycles, was studied in preliminary experiments. Q is a measure of the quality of a dielectric with respect to energy losses. These experiments showed that, with fingerprint contamination, a 30% drop in Q occurred in measurements at 97% relative humidity. (See also PB 145 049)

Stanford Research Inst., Menlo Park, Calif.
STUDY OF EFFECTS AND CONTROL OF SURFACE CONTAMINANTS ON DIELECTRIC MATERIALS, by S. Chaikin. Quarterly progress rept. no. 7, 1 Jan-31 Mar 56, on Contract DA 36-039-sc-64454. 30 Apr 56, 42p.
Order from LC mi$3.30, ph$7.80 PB 145 051

Three types of silver-containing printed circuits were studied with respect to silver migration. A commercial sample of the type made from pressed silver powder underwent extensive migration. Commercial samples of circuits made by chemical deposition of silver followed by plating of copper were tested, and a slight to moderate amount of migration was found to occur, although the layer of silver present was extremely thin. Silver-plated etched copper circuits supported migration on both XXXP and on epoxy-glass laminates. Various printed circuit washing solutions in commercial use were evaluated with respect to their contaminating etched boards (not with respect to thoroughness of etchant removal) and none of those tested was found to degrade circuits seriously, if the circuits were made from XXXP or epoxy-glass laminates. The solvents acetone, toluene, and trichloroethylene were found not to degrade the surface resistance of the XXXP and epoxy-glass samples upon which they were tested; in fact, with some samples (particularly epoxy-glass) the effect on the resistance was a beneficial one. Baths for electroplating solder, silver, nickel, and rhodium were studied. It was found that solder-plating, using a fluoborate bath, did not affect the insulation resistance of the XXXP or epoxy-glass samples. Silver plating, however, caused an appreciable drop in resistance of both the XXXP and epoxy-glass samples. The nickel-and rhodium-plating treatments resulted in slight to moderate lowering in the surface resistance of some samples of both types of laminates. Fingerprint and ferric chloride contamination reduced Q about 30-50% with XXXP and epoxy-glass laminates. The behavior of uncontaminated samples upon introduction into high humidity was quite variable. Printed circuits having samples of three types of protective coatings specially developed for the Signal Corps were submitted by them for testing. Two of the three were much superior to the other in insulation resistance tests at high humidity. (See also PB 145 050)

Stanford Research Inst., Menlo Park, Calif.
STUDY OF EFFECTS AND CONTROL OF SURFACE CONTAMINANTS ON DIELECTRIC MATERIALS, by S. Chaikin. Quarterly progress rept. no. 8, 1 Apr-30 June 56, on Contract DA 36-039-sc-64454. 20 Aug 56, 52p. 5 refs.
Order from LC mi$3.60, ph$9.30 PB 145 052

Because the end result of silver migration in electronic equipment can be dielectric failure, the use of silver is commonly avoided. Although data from this and other research efforts have outlined the parameters affecting silver migration, these data cannot always be used as a guide to predicting the occurrence of silver migration in real situations. A scheme has been developed which would relate the various parameters by means of a nomograph. Exploratory experiments were made in which the effect of temperature, at 95-100% relative humidity, on silver migration was investigated. In an additional experiment pertaining to the temperature-humidity relationship, the danger of silver migration in a piece of equipment at high humidity before and after warm-up was evaluated. Silver migration from coin silver, an alloy containing 10% copper, was found to be enormously less than that from pure silver. Various printed circuit washing solutions in commercial use were evaluated with respect to thoroughness of etchant removal. The most effective washing solutions on both XXXP (a paper-base phenolic laminate) and epoxy-glass were hydrochloric acid, Pluronic L-62 (a non-ionic detergent), and, possibly, Versene. Activated-rosin soldering fluxes were studied further by means of a new test which was developed to explore contamination by solder flux decomposition products. Significant differences among activated fluxes were demonstrated in preliminary experiments. The resistance of selected samples as a function of relative humidity, continuously changed at a uniform rate, was measured, and the results interpreted in terms of conductivity in a surface film of water and, to some extent, in the volume of the material. A circuit was developed for studying the change in resistance of a dielectric at high humidity as a function of applied voltage and of time. The results of experiments with XXXP show that increased voltage and a standing potential improve resistance. (See also PB 145 051)

Stanford Research Inst., Menlo Park, Calif.
STUDY OF EFFECTS AND CONTROL OF SURFACE CONTAMINANTS ON DIELECTRIC MATERIALS, by S. Chaikin. Final rept. for 1 July 54-15 Dec 57 on Contract DA 36-039-sc-64454. 15 Jan 58, 214p. 35 refs.
Order from LC mi$9.60, ph$33.30 PB 145 057

A chemical and electrical study has been carried out dealing with surface contamination of printed circuits and with silver migration. Printed circuit contaminants included fingerprints, etching and plating bath chemicals, solder fluxes and others. Factors accelerating silver migration were found to be temperature, relative humidity, and voltage. Susceptibility of various base materials were studied and many types of silver-bearing printed circuits were investigated. Methods of minimizing silver migration were found and a means of predicting its occurrence in a real situation was developed. (Author) (See also PB 145 056)

STUDY OF SYSTEM RELIABILITY, by F. M. Reza, A. Speth and S. Jutila. Technical rept. no. 1 on Contract AF 19(604)2452. June 58, 19p. 2 refs. SURI rept. no. EE 507-586T-1; AFCRC-TN-58-356; AD-160 799.
Order from LC mi$2.40, ph$3.30 PB 137 852

The present technical report covers the major work done on the project during our first year. The three main lines of study undertaken were: Part I - Study of the tolerance in systems; Part II - Redundant component networks; Part III - Equilibrium between disturbances and recoveries.

Transistor Applications, Inc., Boston, Mass.
INVESTIGATION OF THE APPLICATIONS OF NEGATIVE RESISTANCE DIODES FOR SWITCHING CIRCUITS, by A. W. Carlson and Robert E. McMahon. Final scientific rept. for 16 Mar 58-16 Sep 59 on Contract AF 19(604)3066. Sep 59, 29p. 5 refs. AFCRC-TR-59-352; AD-144 426.
Order from LC mi$2.70, ph$4.80 PB 144 426

This is the final report of work concerned with switching applications of semiconductor negative resistance devices. Work accomplished since the last scientific report included some multivibrator circuits using a tunnel diode and application of p-n-p-n diodes as core drivers. The work accomplished during the contract is reviewed and conclusions stated.

Mechanical Engineering

Bureau of Yards and Docks, Washington, D. C.
POWER GENERATION AND DISTRIBUTION. CHAPTER 6. CENTRAL HEATING PLANTS. CHAPTER 7. COMPRESSED AIR PLANTS. 15 July 54, 77p. Technical pub. NAVDOCKS TP-Pu-3.
Order from OTS $2.00 PB 161 358

Chapter 6 covers central heating plants and is primarily concerned with the design and maintenance of plants supplying steam for heating and industrial uses. Feed-water heating and pumps are described. The second half of the chapter covers maintenance, operation, and inspection of boilers, stokers, oil and gas burners, and heating plant auxiliaries; testing equipment and troubleshooting also are discussed, and methods of steam-pressure reduction are analyzed. Chapter 7 offers detailed information on the design, construction, operation, and maintenance of compressed air plants. This information covers the selection of compressors and auxiliary equipment, their application in the plants, and the design of the interconnecting piping for compressors and auxiliary equipment, as well as for vacuum services. Maintenance and operation of air compressors and auxiliary equipment, together with pertinent safety precautions and instructions, are outlined in the latter part of the chaper.

Bureau of Yards and Docks, Washington, D. C.
POWER GENERATION AND DISTRIBUTION. CHAPTER 8. ELECTRIC POWER DISTRIBUTION. 15 Oct 55, 156p. Technical pub. NAVDOCKS TP-Pu-3.
Order from OTS $3.50 PB 161 359

Chapter 7 offers detailed information on the design, construction, operation, and maintenance of compressed air plants. This information covers the selection of compressors and auxiliary equipment, their application in the plants, and the design of the interconnecting piping for compressors and auxiliary equipment, as well as for vacuum services. Maintenance and operation of air compressors and auxiliary equipment, together with pertinent safety precautions and instructions, are outlined in the latter part of this chapter.

Aeronutronic Systems, Inc. [Glendale, Calif.]
STUDY OF METHODS OF PRODUCING HIGH-SPEED PARTICLES, by T. Bergstralh, D. Kruciff and others. Final rept. on Contract AF 49(638)366. Nov 58, 68p. 20 refs. Pub. no. U-698; AFOSR-TR-59-181.
Order from LC mi$3.90, ph$10.80 PB 144 731

The aims of this research program were to: (1) Investigate methods for accelerating small particles with diameters in the range of 1 to 1000 microns to velocities of 5 to 10 km/sec. (2) Investigate methods for measuring the size and velocity of such particles. (3) Make measurements of the effects of particle impacts on various materials.

Air Force Cambridge Research Center, Bedford, Mass.
THE APPROXIMATE ANALYSIS OF ZERO-LIFT TRAJECTORIES, by C. P. Hoult. Aug 59, 27p. 27 refs. GRD Research Notes no. 17; AFCRC-TN-59-404.
Order from OTS $0.75 PB 161 340

The gross motion of a ballistic rocket following a zero-lift trajectory during both powered flight and re-entry is discussed with special reference to the importance of the appropriate dimensionless parameters. Approximate solutions are found for the tip-over maneuver, low- and high-altitude powered flight, and re-entry. Of the greatest significance to the rocket dynamicist is that all the above solutions are related to confluent hypergeometric functions which have been used to describe short-period motion in the literature. (Author)

Air Force Missile Test Center, Patrick AFB, Fla.
THE DETERMINATION OF SPACE ORIENTATION AND LENGTH OF AN ELONGATED OBJECT FROM SERIES OF LONG FOCUS PHOTOGRAPHS, by Heinrich J. Eichhorn. Rept. on Contract AF 08(606)1156. 4 Sep 59, 38p. RCA Data Processing Technical rept. no. 51; AFMTC-TR-59-19.
Order from LC mi$3.00, ph$6.30 PB 144 421

A method is developed to derive the kinematical parameters of a tumbling elongated object from either an isolated series of observationa of this object's "body angles" and simultaneous observations of its azimuth and altitude as seen from one station, as well as from series of these data that were observed simultaneously at two separated stations. The theory is tested on and applied to the pass of the rocket of Sputnik III in the morning of 1958 September 11, which was observed from San Salvador and from Mayaguana. The methods developed for the One- and for the Two Station Solutions (both of which were

tried) yield practically identical results. The length of the aforementioned rocket was computed with a relative accuracy of 2.8% from data collected at the same pass.

Antenna Lab., Calif. Inst. of Tech., Pasadena.
ON SATELLITE TYPE ANTENNAS, by G. G. Weill and Cavour Yeh. Technical rept. no. 17 on Contract AF 18(600)1113. 30 Aug 58, 21p. 2 refs. AFOSR-TN-58-655; AD-162 186.
Order from LC mi$2.70, ph$4.80 PB 137 903

Using some previous study of the radiation of an antenna over a perfectly conducting sphere, various structures of antennas for space vehicles are discussed theoretically. The currents induced on the sphere are taken into account for the computation of radiation patterns. (Author)

Applied Physics Lab., Johns Hopkins U., Silver Spring, Md.
PERFORMANCE CHARACTERISTICS OF THE ACCELERATION SWITCHING HYDRAULIC SERVO, by W. Seamone. Rept. on Contract NOrd-7386. Sep 58, 25p. 6 refs. CM-945; AD-208 258.
Order from LC mi$2.70, ph$4.80 PB 144 719

The acceleration switching technique has been found to enhance hydraulic servo system performance for applications requiring precision and reliability over a wide range of load and environmental conditions. This paper discusses static and dynamic performance of a switching-type system and shows where performance is improved over the equivalent linear flow-control servos. Operation of acceleration switching servos under adverse environmental conditions shows little degradation of system performance. (Author)

Army Ordnance Human Engineering Lab., Aberdeen Proving Ground, Md.
EVALUATION OF SIGHTING DEVICES FOR A SMALL HAND-HELD ROCKET LAUNCHER, by Harold T. Curran, Jr., Robert T. Gschwind and others. Sep 59, 21p. 6 refs. Technical memo. 6-59.
Order from LC mi$2.70, ph$4.80 PB 144 542

This study investigated the degree of difference in accuracy due to aiming error between three types of experimental sighting devices: An iron sight with a twenty inch sight radius utilizing a plexiglass plate upon which a reticle was etched for the front post (Sight "A"), a unity-power optic using singlet lenses (Sight "B"), and a unity-power optic using doublet lenses (Sight "C"). Twenty-eight Infantry men from Fort Dix, New Jersey were used as subjects. Greater accuracy will be attained with Sight "C" than Sight "B", and Sight "B" will yield better performance than Sight "A". Determinants of qualitative disparity between the sights, and possible effects of low illumination sighting are discussed.

Ballistic Research Labs., Aberdeen Proving Ground, Md.
THE CALCULATION OF MAXIMUM ORDINATE OF AN A-4 ROCKET FROM THE CONDITIONS AT BURNOUT, by Virginia M. Reklis and C. Ronald Cassity. Feb 48, declassified, 43p. Rept. no. 655.
Order from LC mi$3.30, ph$7.80 PB 144 809

In Part I standard formulae are given for the determination of the maximum ordinate of an A-4 rocket (or any long time-of-flight missile). A practical example, A-4 round 12, is given as illustration. The variation of the force of gravity with altitude and the rotation of the earth have been taken into account. In Part II the formulae have been adjusted to a series from more adaptable to quick computation. For expediting the determination of maximum ordinates of future missiles tables are presented giving the maximum altitudes with corresponding times-of-flight after burnout as functions of the areal velocity, the vertical component of velocity and altitude at burnout. (Author)

Ballistic Research Labs., Aberdeen Proving Ground, Md.
DOPPLER DETERMINATION OF POSITION, by Boris Garfinkel. 11 Apr 47, 14p. 1 ref. Rept. no. 638.
Order from LC mi$2.40, ph$3.30 PB 145 061

The problem of determining the position of a missile from three simultaneous radio-doppler observations has been treated by S. Kusaka. A new method of solution described here shortens the computations and improves the accuracy of the results. (Author)

Ballistic Research Labs., Aberdeen Proving Ground, Md.
DOPPLER DETERMINATION OF PROJECTILE TRAJECTORY, by Shuichi Kusaka. May 46, 9p. Rept. no. 609.
Order from LC mi$1.80, ph$1.80 PB 145 063

For the determination of the trajectory of a projectile by means of a radio transmitter and three receivers, formulae are given for the coordinates of the projectile in terms of the observed quantities. Formulae are derived for the general case and two special cases are considered. (Author)

Ballistic Research Labs., Aberdeen Proving Ground, Md.
FULL-SCALE FREE-FLIGHT BALLISTIC MEASUREMENTS OF AIRCRAFT ROCKETS BY OPTICAL METHODS, by Dirk Reuyl. 15 June 48, declassified. 63p. 5 refs. Rept. no. 676.
Order from LC mi$3.90, ph$10.80 PB 144 805

Optical methods of full-scale free-flight ballistic measurements of aircraft rockets are described briefly. A series of photographs is included to illustrate the methods. The methods are applicable to other projectiles as well. Also they may be readily modified to serve in the ballistic studies of ground rockets and other missiles in free flight. (Author)

Ballistic Research Labs., Aberdeen Proving Ground, Md.
TRACKING TELESCOPE FUNDAMENTALS, by James B. Edson. 23 Aug 48. 25p. 1 ref. Rept. no.

672.
Order from LC mi$2.70, ph$4.80 PB 144 803

This report assembles a foundation of simple basic information useful in the design and operation of tracking telescopes. Some topics discussed are: Appearance of the missile compared to planets; conditions for optimum missile visibility; telescope size requirements; effects of the atmosphere; station site selection; tracking and photographic techniques. Construction and installation at White Sands Proving Ground of the first tracking telescope is described. (Author)

Ballistic Research Labs., Aberdeen Proving Ground, Md.
TRAJECTORY OF THE ROCKET A-4 DURING BURNING OBSERVED BY MITCHELL PHOTOTHEODOLITES, by H. P. Hitchcock and V. M. Reklis. 16 Oct 47, declassified. 54p. 1 ref. Rept. no. 639.
Order from LC mi$3.60, ph$9.30 PB 144 808

The method of observing the Rocket A4 at White Sands Proving Ground with two Mitchell phototheodolites, measuring the film, and reducing the data is explained. The trajectory data obtained for rounds 3 to 17 are presented and the results analyzed briefly from a ballistic point of view, as well as from the point of view of their accuracy. (Author)

Carnegie Inst. of Tech., Pittsburgh, Pa.
RE-EXAMINATION OF THE THEORIES OF JET FORMATION AND TARGET PENETRATION BY LINED CAVITY CHARGES, by R. J. Eichelberger. Rept. on Contract DA 36-061-ORD-394. June 54, 128p. 25 refs. CEL rept. no. 1.
Order from LC mi$6.30, ph$21.30 PB 144 831

Diamond Ordnance Fuze Labs., Washington, D. C.
ARMING ASSEMBLY, BOMB FUZE: TAIL T46E1 AND SHAFT, DRIVE, FUZE ARMING, T7E1, T8E1, AND T9E1, by Charles N. Whelan. Terminal rept. 10 Nov 59, 16p. 3 refs. TR-770.
Order from LC mi$2.40, ph$3.30 PB 144 704

The research and development and the production engineering of the Arming Assembly, Bomb Fuze: tail T46E1, and the Shaft, Drive, Fuze Arming T7E1, T8E1, and T9E1 have been completed. The arming assembly was developed to arm the M905 (T771), M906 (T788), and T787 mechanical bomb tail fuzes when installed in conical-fin general purpose bombs. The drive shafts have been given separate Federal Item Identifications because a different length shaft is required for each of the three bomb fin assemblies (M128A1, M129, and M130) on which the arming assembly is to be used. A SELF-CONTAINED MECHANICAL RECORDING ACCELEROMETER, by George Blagman. 1 July 59, 22p. 3 refs. TR-703; AD-228 747.
Order from LC mi$2.70, ph$4.80 PB 144 708

A mechanical recording accelerometer has been developed to measure firing or impact accelerations in non-rotated projectiles or rockets. The instrument is small, rugged, and self-contained, requiring no outside power, no external triggering, and no telemetry. The sensing and recording mechanism can be adapted to measurement of impulses up to 5000 g over periods up to 30 msec. A record of acceleration magnitude versus time is provided with an accuracy of ±10 percent of peak values. The record is permanent and readily interpreted. Field tests of the instrument in an 81-mm mortar shell were successful. The instrument can be reused after recovery. (Author)

Diamond Ordnance Fuze Labs., Washington, D. C.
A TRANSDUCER INFORMATION PROGRAM FOR ORDNANCE, by J. Pearlstein. 1 Oct 59, 43p. 16 refs. TR-752; AD-227 969
Order from LC mi$3.30, ph$7.80 PB 144 409

An Ordnance Transducer Research Project has been established at DOFL in accordance with OTCM 36576. The requirements set forth in the OTCM were studied against a background of information from a limited number of sources in order to plan an effective program for conducting the project. The results of this study are summarized below: (1) The principles involved in the design, performance, and evaluation of transducers cut across all the fields of physical science and engineering. (2) Ordnance activities are coextensive with all these fields. (3) A central problem of the project - the documentation of the results of scientific research and technology, involving the elements of selecting, classifying, storing, searching, retrieving, and communicating information - must be given continued study. (4) It is proposed to adopt a "multiaspect" documentation system similar to the "Peek-a-Boo" system employed by the Office of Basic Instrumentation of the National Bureau of Standards for coverage of the scientific literature. (5) A simple 5 in. x 8 in. card index will be used for commercially available transducers.

Director of Defense Research and Engineering, Washington, D. C.
TECHNICAL RESOURCES DIRECTORY: MISSILE GROUND SUPPORT EQUIPMENT. 1 Nov 59, 22p.
Order from OTS $0.50 PB 161 103

Through its extensive research and engineering programs, the Department of Defense is developing material and equipment designed to meet present and future military requirements. The diverse tasks embraced in these programs range throughout the broad scope of military activities. This directory of military technical resources is intended to encourage communication in the Military Departments and in industry in the area of ground support equipment for missile systems.

Feltman Research and Engineering Labs., Picatinny Arsenal, N. J.
LEAD AZIDES FOR USE IN DETONATORS, by Robert L. Wagner. Jan 60, 38p. 23 refs. Technical rept. 2662.
Order from LC mi$3.00, ph$6.30 PB 143 938

During the development of a short detonator (M47) for use in 20 mm ammunition it became evident that as smaller fuzes were made, more efficient explosives for use in initiators would be needed. To meet such a need several different types of lead azide were investigated as possible replacements for the standard dextrinated lead azide covered by Military Specification MIL-L-3055. The types of lead azides investigated include dextrinated, RD-1333, polyvinyl alcohol (PVA), British Service, colloidal, and dextrinated colloidal. A minimum of 25 mg RD-1333 lead azide or 30 mg PVA lead azide was required to initiate RDX in the M47 detonator as compared with 90 mg for dextrinated lead azide. Neither RD-1333 nor PVA was hygroscopic, but dextrinated lead azide picked up over .5% moisture in 35 minutes at 82%-92% relative humidity. RD-1333, PVA, British Service, colloidal, and dextrinated colloidal lead azide had impact sensitivities of 5, 4-5, 2, 2, and 3 inches, respectively, using the 2-kg weight, as compared with 4-6 inches for dextrinated lead azide.

Feltman Research and Engineering Labs., Picatinny Arsenal, Dover, N. J.
PRODUCT ENGINEERING TO IMPROVE MATERIALS AND DESIGN MODIFICATION OF FIBER CONTAINERS AND HERMETICALLY SEALED CONTAINERS (6046-90, 91, 92, 93), by Theodore Fruchtman. Oct 59, 7p. Final engineering rept. FR: 3-60.
Order from LC mi$1.80, ph$1.80 PB 144 744

Under this Project work was done on a variety of items and subdivisions. This report summarizes the work, item by item.

Feltman Research and Engineering Labs., Picatinny Arsenal, Dover, N. J.
THE T36E1 STEEL-WOOL WHITE-PHOSPHORUS (SWP) SMOKE GRENADE, by Leo F. Young and William M. Conway. Nov 59, 33p. 9 refs. Technical rept. 2618.
Order from LC mi$3.00, ph$6.30 PB 144 743

A smoke grenade which can be projected from combat vehicles for concealment has been developed. Designated the T36E1, it contains a white phosphorus smoke charge in which steel wool is used to prevent excessive spread of the smoke cloud.

General Electric Co., Schenectady, N. Y.
ACCELERATION CHARACTERISTICS OF THE HERMES B-1 RAMJET TEST VEHICLE, by W. F. Dankhoff and L. H. Edelfelt. Rept. on Project Hermes, Contract [DA 30-115-ORD-23]. 21 Sep 49, declassified 17 Nov 58, 16p. 1 ref. Technical information series no. DF-49-GL-153.
Order from LC mi$2.40, ph$3.30 PB 144 627

This report presents the results of an investigation to determine the effect of air-fuel ratio and altitude upon the acceleration characteristics of the Hermes B-1 test vehicle between the Mach numbers of 2.9 and 4.0.

General Electric Co., Schenectady, N. Y.
AERODYNAMIC EVALUATION OF HERMES A-3A ROUNDS #1 AND #2, by O. Klima, Jr. and R. E. Geiger. Rept. on Project Hermes, Contract [DA 30-115-ORD-23]. 7 Oct 53, declassified 17 Mar 58, 8p. 4 refs. Technical information series no. DF 53A0654.
Order from LC mi$1.80, ph$1.80 PB 144 609

The results of a preliminary aerodynamic analysis of Rounds #1 and #2 made to correlate the aerodynamic behavior of the missile with the predicted behavior as obtained from wind-tunnel test results are presented herein.

General Electric Co., Schenectady, N. Y.
ALTERNATIVE NAVIGATION SYSTEM SIMILAR TO 84 MINUTE PENDULUM SYSTEM, by A. P. Adamson. Rept. on Project Hermes, Contract [DA 30-115-ORD-23]. Jan 53, declassified 17 Mar 58, 7p. Technical information series no. DF 53A0500.
Order from LC mi$1.80, ph$1.80 PB 144 620

A slight method of mechanization of 84 minute pendulum navigation system is presented. Alternate methods of mechanization of 84 minute pendulums are possible and should be investigated. (See also PB 144 623)

General Electric Co., Schenectady, N. Y.
ANALYSIS OF WING TEMPERATURE AT VARIOUS POINTS-SKIN ONLY, by W. W. Fischer. Rept. on Project Hermes, Contract [DA 30-115-ORD-23]. Nov 50, declassified 17 Mar 58, 77p. 4 refs. Technical information series no. DF 50A0517.
Order from LC mi$4.50, ph$12.30 PB 144 631

A proposed wing for the Hermes B-1 utilizing biconvex configuration, monocoque type construction has been analysed for temperature distribution during the first three minutes after takeoff from the ground. Steel and titanium sheet materials with various surface treatments were considered.

General Electric Co., Schenectady, N. Y.
DAMPED 84 MINUTE PENDULUM NAVIGATION SYSTEM, by A. P. Adamson. Rept. on Project Hermes, Contract [DA 30-115-ORD-23]. Jan 53, declassified 17 Mar 58, 11p. Technical information series no. DF 52A0667.
Order from LC mi$2.40, ph$3.30 PB 144 617

A method for damping an 84 minute pendulum navigation system is discussed. The method involves the use of doppler velocity data in addition to the usual inertial data. The method discussed is operable but, in many cases, not advantageous.

General Electric Co., Schenectady, N. Y.
DESIGN OF INTERIM TACTICAL ANTENNA MOUNT PER SPEC. OST 3039, by B. Wilbur. Rept. on Project [Hermes] Contract [DA 30-115-ORD-23]. 23 Sep 53, declassified 13 May 58, 86p. Technical information series no. DF-53A0401.
Order from LC mi$4.80, ph$13.80 PB 144 618

Design incomplete at time of U. S. Government cancellation of contract. Status of design, reasons for basic features, are shown, with photos of model and main layouts.

General Electric Co., Schenectady, N. Y.
DEVELOPMENT PROPOSALS OF THE PROPULSION SUB-SECTION OF PROJECT HERMES. Rept. on Project Hermes, Contract [DA 30-115-ORD-23]. 22 Jan 54, declassified 25 Dec 58, 69p. 3 refs. Technical information series no. DF54A0510.
Order from LC mi$3.90, ph$10.80 PB 144 614

This study was created to furnish a collecting point for ideas which have been suggested as deserving further study. Some of these ideas are practical and immediately applicable, others are unproved. The ideas outlined in this study are aimed toward bi-propellant rockets with some comparison to hybrid-types included.

General Electric Co., Schenectady, N. Y.
EIGHTY-FOUR MINUTE PENDULUM, by A. P. Adamson. Rept. on Project Hermes, Contract [DA 30-115-ORD-23]. 14 Feb 52, declassified 17 Mar 58, 19p. Technical information series no. DF 52A0517.
Order from LC mi$2.40, ph$3.30 PB 144 623

This report discusses the methods and the physical picture involved in calculating the characteristics of an "84 minute pendulum", a term describing a certain class of navigational devices. Includes the description, an analysis, and a discussion of error in the system. The system as described can have many sources of errors. A preliminary investigation indicates that the stabilizers tried for damping the device and eliminating the oscillatory would seem to make the steady state reponse errors larger. Further study of the investigations done by other organizations should be done. (See also PB 144 617)

[General Electric Co., Schenectady, N. Y.]
EXPERIMENTAL NORMAL FORCE COEFFICIENT AND CENTER OF PRESSURE FOR SIMULATED STICK-FREE CONDITIONS OF PROPOSAL VII; AND PROPOSAL VII_{10}, by John O. Powers. Rept. on Project Hermes, Contract [DA 30-115-ORD-23]. 1 Aug 52, declassified. 8p. Hermes A-2 Aerodynamic data memo. no. 20C.
Order from LC mi$1.80, ph$1.80 PB 144 612

Hermes A-2 Aerodynamic Specification Memorandum #20B presented a theoretical estimate of the approximated variation of stick-free normal force coefficient and center of pressure as a function of Mach number for the Proposal VII configuration. The present memorandum (20C) presents the experimental values of these parameters as obtained by recent supersonic wind-tunnel tests at the Aberdeen Proving Ground and the Jet Propulsion Laboratory. Experimental values are also presented for a Proposal VII type configuration modified by a 10% increase in each of the fin dimensions. This configuration is here denoted as Proposal VII_{10}.

General Electric Co., Schenectady, N. Y.
GIMBAL GEOMETRY AND SERVO ANALYSIS FOR HA3B ODOMETER, by J. D. M. Cameron. Rept. on Project [Hermes] Contract [DA 30-115-ORD-23]. 27 May 53, declassified 17 Mar 58, 19p. Technical information series no. DF53A0593.
Order from LC mi$2.40, ph$3.30 PB 144 621

Report contains gimbal geometry analysis, which, when combined with gimbal servo equations, leads to differential equations that can be solved for table position errors as functions of time if missile angular velocities are known. Appendices contain pertinent trigonometric identities, discussion of Euler angular velocities, and a sample calculation.

[General Electric Co., Schenectady, N. Y.]
HA-2 TRIM CHARACTERISTICS WITH TRAILING-EDGE BARS AS CONTROLS (XSSM-A-13), by John O. Powers. Rept. on Project Hermes, Contract [DA 30-115-ORD-23]. 4 Oct 52, declassified 28 May 58, 8p. Hermes A-2 Aerodynamic data memo. no. 10G.
Order from LC mi$1.80, ph$1.80 PB 144 613

The configuration considered in this memorandum differs from other configurations in the Hermes Aero. Data Memo. #10 Series in that the flap type controls have been replaced by a new type of aerodynamic control. The previous memos in the #10 series remain valid for the configurations there considered.

General Electric Co., Schenectady, N. Y.
HERMES A-3B INERTIAL AZIMUTH GUIDANCE, by A. P. Adamson. Rept. on Project Hermes, Contract [DA 30-115-ORD-23]. 7 Apr 52, declassified 17 Nov 58, 13p. Technical information series no. DF 52A0535.
Order from LC mi$2.40, ph$3.30 PB 144 626

A discussion of the possibility of using an inertial guidance system for the HA3B azimuth control and an analysis of the performance which might be expected from such a system. Inertial control for the HA3B azimuth control is sufficiently attractive so that it should be studied carefully and immediately since it may provide a means whereby the guidance system maybe greatly simplified. The two major problems to be investigated are: (a) What gyro drift rate must be expected in the missile. (b) How can the azimuth odometer be aligned before takeoff.

General Electric Co. [Schenectady, N. Y.]
HINGE MOMENT, NORMAL FORCE, AND CENTER OF PRESSURE OF THE FINS EXCLUDING FIN EFFECT ON THE BODY, by Helen C. Engvold and Otto Klima, Jr. 30 Mar 53, 6p. 2 refs. Hermes A-3A Aerodynamic Data Memo. 44B.
Order from LC mi$1.80, ph$1.80 PB 144 353

This memorandum replaces memoranda 44 and 44A and may be used to estimate the hinge moments for the Hermes A-3A missiles through #8. Preliminary subsonic wind-tunnel tests results at NACA Langley Laboratory on a model of the Hermes A-3B

and free-flight tests of a somewhat similar fin taken from reference 2 have made it possible to further refine the previous estimates. A more rigorous subsonic analysis of the effect of angle of attack α and angle of fin deflection, δ, (on C_h C_z, and center of pressure of the fin force than has been made here will be made on the Hermes A-3B when the final NACA Langley tests are available. The normal-force coefficients given in this memorandum include only the actual force on the fins and do not include the effect of the fin on the body; hence they should not be used in trim calculations. Fin forces given in memorandum #3D remain valid for trim calculations. The effects of fin elastic deflections on hinge moments are not included in this memo. Although it is probably not necessary to evaluate these aeroelastic effects for the success of A-3A flights through #8, they will be needed to apply the hinge moment results from the A-3A firings to the Hermes A-3B. Without a knowledge of aeroelastic affects, the hinge-moment measurements that are to be made on the A-3A full-scale missiles (to aid in determining the maximum hinge moments expected on the Hermes A-3B) will be of little use. The Douglas people are presently evaluating these A-3A aeroelastic effects for Mach numbers above 2.0. It does not appear practicable to evaluate these below M = 2 except by full-scale flight test, where results with high and low dynamic pressure, q, may yield a significant comparison.

General Electric Co., Schenectady, N. Y.
INERTIAL GUIDANCE SYSTEM FOR HERMES A2, by A. P. Adamson. Rept. for 1 Mar 51-1 Mar 52 on Project Hermes, Contract [DA 30-115-ORD-23]. 1 Mar 52, declassified 25 Dec 58, 7p. Technical information series no. DF-51A0516.
Order from LC mi$1.80, ph$1.80 PB 144 622

Some of the development problems which must be solved in this data folder are listed. An inertial guidance system should be technically possible for Hermes A-2. Such a system would have military advantages and its development should be carried out as soon as possible.

General Electric Co., Schenectady, N. Y.
INERTIAL GUIDANCE SYSTEMS, by A. P. Adamson. Rept. on Project Hermes [Contract DA 30-115-ORD-23]. Oct 51, declassified 17 Mar 58, 17p. Technical information series no. DF 51A0524.
Order from LC mi$2.40, ph$3.30 PB 144 615

An inertial guidance system which might be suitable for Hermes A-2 and Hermes A-3 guidance is considered. The primary aim is to determine whether such a system is feasible and to explain its operation and characteristic so they are easy to understand. The system discussed seems feasible and reasonably simple though quite accurate inertial elements are needed.

[General Electric Co., Schenectady, N. Y.]
NORMAL FORCE COEFFICIENT AND CENTER OF PRESSURE WITH ZERO ELEVATOR DEFLECTION PROPOSAL VII, by Richard E. Geiger. Rept. on Project Hermes, Contract [DA 30-115-ORD-23]. 10 Sep 52, declassified. 3p. Hermes A-2 (XSSM-A-13) Aerodynamic data memo. no. 21B.
Order from LC mi$1.80, ph$1.80 PB 144 610

This memorandum supersedes A-2 Aero. Spec. #21A. It presents a revision of the Proposal VII stick-fixed (i.e. undeflected elevator) normal force and center of pressure previously presented in that memo. The revision is based on supersonic wind-tunnel tests of the complete configuration. Memo. #21A was based on linearized theory with modified bare body test data.

General Electric Co., Schenectady, N. Y.
PRELIMINARY A4, B-1 TRAJECTORY, by F. Fay. Rept. on Project Hermes, Contract [DA 30-115-ORD-23]. 18 May 50, declassified 17 Nov 58, 16p. Technical information series no. DF 50A0509.
Order from LC mi$2.40, ph$3.30 PB 144 628

A trajectory is presented here for the A-4, B-1 (wingless) combination. The A-4 (German) is used as a booster to deliver the Hermes B-1 ramjet to the specified launching conditions of : Mach No. — 4.0, Missile Attitude— 20° (from horiz.), Altitude— 60,000 ft.

General Electric Co. [Schenectady, N. Y.]
ROLL MOMENT DUE TO FIN DEFLECTION AND AEROELASTIC EFFECTS, by Otto Klima, Jr. and Patricia A. Gill. 10 Mar 53, declassified. 2p. Hermes A-3A Aerodynamic Data Memo. 39A.
Order from LC mi$1.80, ph$1.80 PB 144 354

This memorandum is based on recent wind-tunnel test results of the Hermes A-3B adjusted to apply to the Hermes A-3A. An approximation of the aeroelastic effects is also included. The effect of the jet vane on roll moment is not included. This moment may be calculated using Memoranda 16C and 16E.

[General Electric Co., Schenectady, N. Y.]
ROLL MOMENT DUE TO NONSYMMETRY, by O. Klima, Jr. 10 Mar 53, 1p. Hermes A-3A Aerodynamic Data Memo. 39B.
Order from LC mi$1.80, ph$1.80 PB 144 355

Hermes A-3A Aerodynamic memo #39A should be used for rudder effectiveness in roll. In addition to the roll moment caused by fin deflection a nonsymmetrical attitude of the missile to the air flow, resulting from a roll angle and an angle of attack, also introduces a roll moment. This roll moment varies as the fourth power of the angle of attack but is not appreciable at angles below 10°. Since the A-3A missiles through number 8 will probably not experience angles of attack much larger than 10°, this nonsymmetrical roll study will not be continued on the A-3A. If the free flight shoots of the A-3A reveal roll difficulties this nonsymmetrical effect can be investigated at that time using Hermes A-3B wind tunnel test results. The report is here quoted in its entirety.

General Electric Co., Schenectady, N. Y.
S1 DIGITAL COMPUTER, by T. R. Green. Rept. on Project Hermes, Contract [DA 30-115-ORD-23]. 29 Apr 52, declassified 17 Mar 58, 29p. Technical information series no. DF 52A0545.
Order from LC mi$2.70, ph$4.80 PB 144 616

Part I of this report develops a theory for determining by digital computer the four corrections, range and azimuth displacement, azimuth velocity, and time correction for initiating terminal straight line flight. This part also contains a computer flow diagram. Part II introduces dimensional analysis for displacement, range, desirable parameters, as well as pulse values. Average error is in the order of 64 feet. This error lowered to 42 or 31 feet with additional adjustment as described in the general introduction.

General Electric Co., Schenectady, N. Y.
SKIN TEMPERATURE AND COOLING ANALYSIS OF THE COMBUSTION CHAMBER WALL AND NOZZLE OF THE HERMES B-1 VEHICLE, by I. H. Edelfelt and N. C. Witbeck. Rept. on Project Hermes, Contract [DA 30-115-ORD-23]. Oct 48, declassified 17 Mar 58, 12p. 6 refs. Technical information series no. DF-49-GL-65.
Order from LC mi$2.40, ph$3.30 PB 144 607

The transient and equilibrium temperatures of the Hermes B-1 combustion chamber and exhaust nozzle are calculated for design flight conditions. The resultant temperatures indicate that some means of nozzle cooling is required to prevent tailpipe burnout. Two means of nozzle cooling are investigated theoretically; namely, air cooling by annularly ducted ram air, and protection by means of fuel additives. It is found that the two methods in combination will prevent equilibrium temperatures from exceeding 1800° F.

[General Electric Co., Schenectady, N. Y.]
STATIC STABILITY MARGIN FOR ROUNDS 1-4 (NEAR VERTICAL TRAJECTORY), by O. Klima, Jr. and S. K. Hellman. Rept. on Project Hermes, Contract [DA 30-115-ORD-23]. 26 Aug 52, declassified. 5p. 4 refs. Hermes A-3A Aerodynamic data memo. no. 14A.
Order from LC mi$1.80, ph$1.80 PB 144 619

This memorandum supplements Aero. Spec. Memo. 14. It gives the possible range of static stability margin for the A-3A missile during the powered flight portion of Rounds 1-4 (near vertical trajectory). The static stability margin given in this memorandum is based on the most recent center-of-pressure results for the complete missile as presented in memorandum 24E and includes calculated effects of elasticity, air temperature effects, and tolerances on center of gravity and center of pressure locations. All this data is for the near-vertical power-on trajectory of the first four rounds of the A-3A.

General Electric Co., Schenectady, N. Y.
SUMMARY OF A4, B-1 TRAJECTORIES, by F. Fay. Rept. on Project Hermes, Contract [DA 30-115-ORD-23]. [1950] declassified 17 Mar 58, 47p. Technical information series no. DF 50A0514.
Order from LC mi$3.30, ph$7.80 PB 144 630

The results of a number of Hermes A-4, B-1 trajectories are included with a brief resume of the general purpose of each. For reference the trajectories have been given Roman numerals corresponding to their chronological order. On the following page a plot of each has been made in x-y coordinates. In trajectories I and II a modified A4 was used as a booster. This is the same A4 that was incorporated in the Hermes II Ram and is designated here as A4 (modified). A standard A4 was assumed for trajectories III, IV, and V.

General Electric Co., Schenectady, N. Y.
SUMMARY OF HERMES B-1 TEST VEHICLE DRAWINGS, by K. I. Igler. Rept. on Project Hermes, Contract [DA 30-115-ORD-23]. Sep 50, declassified 17 Mar 58, 20p. Technical information series no. DF 50A0510.
Order from LC mi$2.40, ph$3.30 PB 144 629

[General Electric Co., Schenectady, N. Y.]
SUPERSONIC ELEVATOR NORMAL FORCE - PROP. VII, by R. E. Geiger. Rept. on Project Hermes, Contract [DA 30-115-ORD-23]. 9 Oct 52, declassified. 7p. Hermes A-2 Aerodynamic data memo. no. 17F.
Order from LC mi$1.80, ph$1.80 PB 144 611

This memorandum presents supersonic elevator normal force characteristics for the Proposal VII configuration. It supplements the previous memos of this series which remain valid for their respective configurations. During April, 1952 an experimental investigation of the supersonic elevator normal force characteristics of the Hermes A-2, Proposal VII configuration was conducted at the Aberdeen Proving Ground. The test data have been reduced and the elevator normal-force characteristics calculated. This memorandum presents the results of these computations.

General Electric Co., Schenectady, N. Y.
TRANSIENT TEMPERATURE OF INTRA-WING ANTENNA LEAD, by W. W. Fischer. Rept. on Project Hermes, Contract [DA 30-115-ORD-23]. Dec 50, declassified 25 Dec 58, 19p. 3 refs. Technical information series no. DF 50A0520.
Order from LC mi$2.40, ph$3.30 PB 144 632

The transient temperature of a proposed antenna lead between the wing skins has been calculated for two possible conditions. For flight times of more than two minutes duration, after separation from the A4 booster, a rigid co-axial antenna lead must be used to prevent failure of the lead. Aluminum tube with ceramic spacers for the inner conductor would provide a satisfactory arrangement for flight times up to 8 minutes. Supports for the lead should be minimized both in quantity and cross-sectional area and be made of thermally non-conducting, heat-resistant material.

[General Electric Co., Schenectady, N. Y.]
TRIM NORMAL-FORCE COEFFICIENT AND ELEVATED DEFLECTION FOR TRIM FOR COMPLETE MISSILE — PROPOSAL VII, by R. E. Geiger. Rept. on Project Hermes, Contract [DA 30-115-ORD-23].

16 Sep 52, declassified. 7p. 3 refs. Hermes A-2 (XSSM-A-13) Aerodynamic data memo. no. 10E.
Order from LC mi$1.80, ph$1.80 PB 144 608

This memorandum which supersedes Memorandum 10D, presents revised supersonic trim normal force and elevator deflections for the Proposal VII configuration as described in Hermes A-2 Aerodynamic Data Memoranda 20B and 10D. The revision is based on supersonic wind-tunnel tests of the complete configuration. The data previously presented in Memo 10D were based on theory and modified bare-body test data.

High Altitude Observatory, Boulder, Colo.
SCIENTIFIC REPORT NO. 1, by James W. Warwick. Rept. for 14 Apr-13 July 58 on Contract AF 19(604)3872. 1 Oct 58, 21p. 5 refs. AFCRC-TN-58-392; AD-160 848.
Order from LC mi$2.70, ph$4.80 PB 137 796

A secular change took place in the spin-fading rate during the three weeks of observation of the radio transmissions from Sputnik I, between 4 Oct and 24 Oct 57. This effect allows a determination of atmospheric density near the perigee point. For an assumed atmospheric scale height of 30 kilometers, we derive a value 3.8×10^{-13} gm. cm^{-3} for the density at 220 kilometers. Some fluctuations in the spin decay appear to be real, and may result from small changes in the orientation of the spin axis within the satellite. An alternative interpretation, in terms of charged drag resulting from motion of the satellite through the ionospheric plasma, requires a charge of at least 10^4 volts on the satellite. This charge might be acquired in the auroral zone.

Massachusetts Inst. of Tech., Cambridge.
ORDNANCE LOGISTICS STUDIES. II. SECONDARY ITEM SUPPLY CONTROL, by Herbert P. Galliher. Interim technical rept. no. 9 on Fundamental Investigations in Methods of Operations Research, Contract DA 19-020-ORD-2684. Aug 58, 99p. 2 refs.
Order from LC mi$5.40, ph$15.30 PB 138 575

This is a further report of an operations research study being conducted for the Field Service Division of the Office of the Chief of Ordnance. The general objective of the study has been to develop improved decision-rules for controlling stocks of secondary items (primarily repair parts), especially in respect to the incidence of stock-shortages, the size of inventories and the costs of stocking and replenishment.

Naval Ordnance Lab., White Oak, Md.
TEMPERATURE MEASUREMENT WITH LEAD SULFIDE CELLS, by W. W. Scanlon, L. G. Mundie, and P. W. Shadle. 20 Mar 50, 12p. NOLM 10830.
Order from LC mi$2.40, ph$3.30 PB 145 030

With lead sulfide cells it is possible to measure quickly and accurately the skin temperature of an object from room temperature to 400° or 500°C provided care is taken to standardize the surface emissivity. Temperatures which exist for one or two seconds can be measured with an accuracy of ±0.22°C at 30°C, and ±0.02°C at 80°C. Temperatures which exist for only a few tens of microseconds can be measured with accuracies of ±8°C at 160°C and ±2°C at 210°C. (Author)

Naval Research Lab., Washington, D. C.
THE INFLUENCE OF TEMPERATURE ELEVATION ON THE PENETRATION OF MISSILES INTO COPPER TARGETS, by W. J. Ferguson and K. R. McKinney. Interim rept. 19 Nov 59, 14p. 2 refs. NRL rept. 5407.
Order from LC mi$2.40, ph$3.30 PB 143 406

One-eight-inch-diameter tungsten carbide spheres were fired into thick copper targets at room temperature and at 800°F at velocities from less than 1000 to 5000 ft/sec. It is shown that the depth of penetration, crater diameter, and volume of target material displaced increase as a consequence of the elevation of the temperature. The depth of penetration of the missile and the volume of target material displaced are essentially independent of cracking and breakup of the missile until extensive fracturing makes it impossible to ascertain from visual observation that the missile was probably spherical. (Author)

ENGINEERING OF EQUIPMENT FOR MASS PRODUCTION OF M9 MORTAR PROPELLANT, by F. A. Handville. Dec 59, 30p. 3 refs. Technical rept. DB-TR: 2-60.
Order from LC mi$2.70, ph$4.80 PB 144 738

Studies were conducted which indicated the feasibility of using ball powder as a replacement or alternate to M9 flake propellant both for the ignition charge and for the propellant increments for the Cartridge, HE, M362 for the 81 mm mortar.

Picatinny Arsenal, Dover, N. J.
AN ULTRASONIC METHOD FOR THE ACCEPTANCE TESTING OF TUNGSTEN CARBIDE CORES (PHASE I), by David Stein. Nov 58, 18p. 2 refs. Technical rept. DE-TR: 8-58; AD-207 673.
Order from LC mi$2.40, ph$3.30 PB 138 508

Size and location of defect indications observed ultrasonically correlated consistently with the general size and location of flaws revealed by sectioning or fracture of cores. The test results indicated that ogive flaws may be more critical in determining ballistic behavior than body flaws.

Stanford Research Inst., Menlo Park, Calif.
THE STUDY OF ROCKET SLED SLIPPER WEAR PROBLEMS, by J. S. Arnold, T. D. Witherly, and C. T. Vincent. Rept. on Contract AF 29(600)1516. Oct 59, 59p. 2 refs. AFMDC-TR-59-38.
Order from LC mi$3.60, ph$9.30 PB 144 595

In the use of rocket-propelled track vehicles, the wear of the sliding bearing (slipper) which is the contact between the vehicle and the track has sometimes led to component failures. Methods of reducing

this wear include the use of track coatings and wear-resistant slipper materials. Four metal coatings (aluminum, lead, zinc, and tin babbitt) were tested with stainless steel and molybdenum sliders on the AFMDC track (Holloman Air Force Base) at 2500 ft/sec for 2000 ft. Of these coatings, zinc was the most effective and reduced the wear rate of the slipper material to approximately one-fifth that observed on the bare rail, a reduction well within the problem specification. Two nonmetallic coatings,

Utah U., Salt Lake City,
PROPAGATION CHARACTERISTICS OF DETONATION GENERATED PLASMAS, by L. L. Udy. Rept. on Contract AF 18(603)100. 20 June 58, 35p. 6 refs. AFOSR-TN-58-754; AD-201 613.
Order from LC mi$3.00, ph$6.30 PB 138 177

Electrical conduction measurements were made in the highly ionized plasma region produced by detonating high explosives. The plasma was determined to originate directly from reaction of the high explosive rather than from thermal ionization associated with the accompanying shock wave. The mechanism of conduction was considered, and it was shown that electron flow through the plasma accounted for practically all of the current.

Watertown Arsenal Labs., Mass.
MAGNETIC INSPECTION OF PROJECTILES BY INDUCTION TECHNIQUES, by Patrick C. McEleney and Vincent H. Early. Rept. on Improved Magnetic Inspection Control Procedures. Nov 59, 18p. 1 ref. WAL TR-145/18.
Order from OTS $0.50 PB 161 328

An Automatic Flaw Detector for projectiles utilizing the magnetic induction method for inspection of high explosive shell bodies and armor-piercing shot of sizes 75mm through 120mm. This report discusses over-all principles of operation, explains electromechanical and electronic circuits, defines present status of equipment and makes recommendations for future work.

Sanitation and Safety Engineering

Bureau of Yards and Docks, Washington, D. C.
INSTALLATIONS--GENERAL. INSECT AND RODENT CONTROL. 1 Feb 56, 176p. Technical pub. NAVDOCKS TP-Pu-2, supersedes issue of 15 May 53; Air Force Manual no. 85-7; Army Technical manual no. 5-632, superseded issue of 7 Oct 47.
Order from OTS $3.00 PB 161 357

This manual discusses the control of insects, rodents, and other pests at Department of Defense installations. Special emphasis is placed on the supervision and execution of measures recommended for the control of pests that affect the health, efficiency, and morale of those residing at installations, or that damage and destroy property, including stockpiles of supplies. Measures include water management for mosquito control, termiteproofing, ratproofing, chemical treatment of wood and soil, fumigation of commodities, application of residual and other types of sprays, application of insecticidal dusts, and trapping and baiting for rodent control. Included among pests that must be controlled are: mosquitoes, flies, fleas, lice, ticks, chiggers, bed bugs, cockroaches, foliage-feeding insects, scale insects, aphids, stored-product pests, termites, wood borers, fungi, rats, mice, field rodents, and predatory animals.

Naval Radiological Defense Lab., San Francisco, Calif.
FEASIBILITY AND APPLICABILITY OF ROOF WASHDOWN SYSTEM, by W. S. Kehrer and M. B. Hawkins. 7 May 58, 42p. 12 refs. Research and development technical rept. USNRDL-TR-232.
Order from LC mi$3.30, ph$7.80 PB 144 801

The feasibility and applicability of a washdown or water curtain system against radioactive fallout for building roofs were evaluated, based on the results of a water requirements experiment plus presently available information. The system was found to be both feasible and applicable. The evaluation is based on commercially available components, including the test surfaces. However, some thoughts are also given on a new general design of buildings and on roofing surfaces to be developed to obtain optimum roof washdown effectiveness.

Ship Building

Battelle Memorial Inst., Columbus, Ohio.
EVALUATION OF WELD-JOINT FLAWS AS INITIATING POINTS OF BRITTLE FRACTURE, by R. P. Sopher, A. L. Lowe, Jr., and P. J. Rieppel. Rept. on Contract NObs-61748. 29 Aug 58, 56p. 5 refs. SSC-107.
Order from OTS $1.50 PB 161 323

A study of conditions needed for initiation of a brittle fracture from flaws 4 in. or less in length. If local stresses are high in the vicinity of a flaw, then the applied stress may be low when brittle fracture initiates from that flaw provided that the steel is at or near the nil ductility temperature. Stress conditions that are expected to exist in ship structures were incorporated in the test specimen.

David Taylor Model Basin, Washington, D. C.
POWERING CHARACTERISTICS FOR A LIBERTY SHIP PROPELLED BY OUTBOARD TYPE PROPULSION UNITS, MODEL 3748-1, by B. Nakonechny and A. H. Weaver, Jr. Jan 58, 22p. 3 refs. Rept. 1263.
Order from LC mi$2.70, ph$4.80 PB 144 644

The David Taylor Model Basin conducted experiments on a model of a Liberty ship to determine (1) the number of outboard-type marine propulsion units needed to propel the ship at speeds of 8 and 10 knots, (2) the best locations along the second deck for installing the units, and (3) the optimum axis of rotation of

the propeller. It was concluded from the tests that at least three units are required for a speed of 8 knots and five units for a speed of 10 knots; that there are seven satisfactory locations for installing the units; and that the optimum axis of rotation for the propeller is zero degree (parallel to centerline of ship) in all locations except one. It was also recommended that a suitable plate be fitted on the full-scale propulsion units. (Author)

Illinois U., Urbana.
PRELIMINARY STUDIES OF BRITTLE FRACTURE PROPAGATION IN STRUCTURAL STEEL, by W. J. Hall, W. G. Godden and O. A. Fettahlioglu. Rept. on Contracts NObs-(65790, 72046). 15 May 58, 91p. 17 refs. SSC-111.
Order from OTS $2.25 PB 161 325

Tests were conducted to obtain information concerning the crack speed and the strain distribution in a mild steel plate during brittle crack propagation. The adopted specimen consists of an insert plate welded to pull plates mounted in the testing machine. The plate is cooled with dry ice, and impact drives a wedge into a notch in the edge of the specimen. Crack speeds ranging from 1150 to 5900 fps were recorded; absolute peak elastic strains as high as 0.002500 in. per in. were recorded in the vicinity of the fracture with negligible permanent set remaining after the fracture.

Naval Ordnance Lab., White Oak, Md.
THE INVESTIGATION OF RADIOISOTOPES FOR THE INSPECTION OF SHIP WELDS, by E. L. Criscuolo, D. P. Case, and D. Polansky. 28 Feb 58, 64p. 12 refs. SSC-110.
Order from OTS $1.75 PB 161 324

A study was conducted that explored the potentialities of radioactive isotopes for the inspection of welds in ship structures. Various parameters were investigated to determine an optimum radiographic technique for the inspection of hull welds of 1/2- to 2-in. plate. Technique and sensitivity curves for thulium, iridium, cesium, and colbalt are included. For the inspection of welds in 1/2-in. to 1-in. thick plate, iridium is the most promising isotope. A portable exposure container for iridium has been developed.

Swarthmore Coll., Pa.
WELD FLAW EVALUATION, by Samuel T. Carpenter and Roy F. Linsenmeyer. Final rept. on Contract NObs-72060. 29 July 58, 122p. 14 refs. SSC-105.
Order from OTS $2.75 PB 161 322

This report is an evaluation of the ability of weld flaws to initiate brittle fracture. It deals with brittle fracture mechanics, static tests on flawed butt welds, static and dynamic tests on small butt weld flaws with and without residual stress, and static tests on weld flaws in a controlled field of high residual stress.

MACHINERY, FABRICATION, AND ACCESSORY EQUIPMENT

Rodman Lab., Watertown Arsenal, Mass.
EVALUATION OF SEVERAL TOOL-LIFE TESTING TECHNIQUES, by Roy Mennell and Edwin A. Jeffery. Dec 58, 39p. 9 refs. Rept. no. RPL 23/5.
Order from LC mi$3.00, ph$6.30 PB 138 506

During testing, tool rake angles, cutting speed, and depth of cut were varied and other machining variables controlled or randomized. Accelerated tool-life criteria evaluated include: wear-land on the flank face of the cutting tool, percentage increase in feed force on the cutting tool, and surface finish of the workpiece.

Rutgers [State] U. [New Brunswick, N. J.]
PRELIMINARY STUDY ON JUMPING AND RUNNING TYPES OF LOCOMOTION, by R. K. Bernhard. July 58, 54p. 12 refs. Land Locomotion Research Branch rept. no. 43; AD-220 980.
Order from LC mi$3.60, ph$9.30 PB 144 540

Running, leaping, galloping, bouncing and jumping motions are analyzed from theoretical considerations for their applications to vehicle propulsion. The theory is then substantiated by test data taken from a laboratory analogue of various oscillatory motions. Cross-country speeds on the order of 20-30 mph are proved feasible compared to the 5-10 mph speeds obtainable by present wheeled and tracked vehicles. Since the oscillations may be uncomfortable to the vehicle operator, various isolation systems are proposed. (Author)

Engines and Propulsion Systems

Applied Physics Lab., Johns Hopkins U., Silver Spring, Md.
TABLE OF LEGENDRE FUNCTIONS FOR COMPLEX ARGUMENTS, by M. E. Lyman. Rept. on Contract NOrd-7386. 10 Dec 58, 25p. 2 refs. TG-323; AD-209 360.
Order from LC mi$2.70, ph$4.80 PB 144 718

These calculations were made on the Univac Scientific 1103A Computer, using the subroutine written for the calculations of rocket instability. Since precision was not required, no attempt has been made to minimize loss of accuracy.

Arnold Engineering Development Center, Tullahoma, Tenn.
EVALUATION OF HOT-WATER-DRIVEN DIFFUSER EJECTORS, by R. P. Rhodes. Rept. on ARO, Inc., Contract AF 40(600)800. Nov 59, 32p. 3 refs. AEDC-TN-59-127; AD-227 981.
Order from LC mi$3.00, ph$6.30 PB 144 415

Exploratory investigations were conducted to evaluate the performance of various diffuser-ejector configurations driven by water heated to the saturation temperature. The apparatus consisted of a nozzle mounted axially in a cylindrical diffuser, which was connected to an exhaust system. A pressure vessel was provided in which the water was collected and heated. Tests were conducted using nozzle configurations having water flows ranging from 0.39 to 3.99 lb/sec at a driving pressure of 200 psia in combination with 6, 8, and 10-in. diffusers. At this fixed driving pressure, the mass flow of water per unit diffuser area was found to be the controlling parameter. As this parameter was increased, the maximum rise ratio of the ejector decreased, and the cell pressure increased. Lowering the driving pressure reduced the minimum cell pressure but also reduced the pressure rise ratio across the diffuser. A maximum ejector rise ratio of 4.2 and a minimum cell pressure of 0.22 psia were achieved during the course of this investigation.

Ballistic Research Labs., Aberdeen Proving Ground, Md.
THE PREPARATION OF 3,3,3,-TRIS (NITRATOMETHYL)-PROPENE-1 AND 3,3-BIS (NITRATOMETHYL)-BUTENE-1, by Lester P. Kuhn and Alan C. Duckworth. Aug 59, 14p. 4 refs. Memo. rept. no. 1230.
Order from LC mi$2.40, ph$3.30 PB 144 729

The synthesis of two new vinyl compounds containing nitrate ester groups and having the structures

$CH_2 = CHC(CH_2ONO_2)_3$ and $CH_2 = CHC(CH_2ONO_2)_2CH_3$

is described. Many of the intermediates involved in the preparation of these compounds are also described for the first time in this report.

Detroit Arsenal, Center Line, Mich.
LOW TEMPERATURE TEST OF THE RELOCATED CRANKCASE OIL DIAPHRAGM BREATHER ASSEMBLY, by Milton C. DuBay. 25 Nov 57, 24p. Rept. no. 4025 (Final); AD-156 378.
Order from LC mi$2.70, ph$4.80 PB 144 760

The object of this test was to determine whether freezing of a relocated crankcase oil diaphragm breather assembly, as installed on the AVI 1790-8 engine, can be obtained at the low temperature of minus 40 F.

Diamond Ordnance Fuze Labs., Washington, D. C.
A TRANSISTORIZED TELEMETER FOR THE MEASUREMENT OF ROCKET-MOTOR PRESSURE ON THE APG STATIC SPIN STAND, by Walter L. Gieseler. 10 Apr 59, 12p. 1 ref. TR-728; AD-219 322.
Order from LC mi$2.40, ph$3.30 PB 144 664

A telemeter has been developed for determining rocket-motor pressures during tests on the static spin stand of the Ballistic Research Laboratories at Aberdeen Proving Ground. This device is designed to telemeter pressures up to about 2000 psi, and to withstand spin rates of about 200 rps. The circuit design and test results are given. (Author)

A NON-LINEAR NON-STEADY AEROTHERMOCHEMICAL ANALYSIS OF COMBUSTION INSTABILITY IN A ROCKET CHAMBER, by Henry Berger. Rept. on Contract AF 49(638)165. 1 May 59, 83p. 16 refs. Technical note PRL-TN-59-5; AFOSR-TN-59-703.
Order from LC mi$4.80, ph$13.80 PB 144 500

In this report the fundamental equations are carefully derived. The assumptions necessary to obtain an approximate quasi-one-dimensional system of equations are explained. The characteristic equations are then derived; their final form is changed slightly in order to suit the numerical procedures. The steady state gas flow conditions constitute the initial conditions of the problem. Various steady state equations are derived and the stability of some of these in difference form is considered briefly. The special problems arising from the use of a zero initial velocity at the injector are analysed in detail. Use of an integrated form of the energy equation is made in avoiding some of these difficulties. Numerical results are obtained by using representative estimates for some of the parameters and are presented graphically. A rigorous method of numerical integration of the non-steady equations, differing from the standard characteristic method common in gas dynamics analyses, is examined. Its advantages are considered and sample numerical calculations are presented.

Guggenheim Jet Propulsion Center, Calif. Inst. of Tech., Pasadena.
SPRAY COMBUSTION THEORY, by F. A. Williams. Technical rept. no. 26 on Contract DA 04-495-ORD-446. Aug 58, 20p. 4 refs. AD-203 610.
Order from LC mi$2.40, ph$3.30 PB 137 529

The coupled steady-state equations of motion of a statistical ensemble of spherical droplets and a coexisting multicomponent reacting gaseous continuum are derived under the assumption that the induced random fluctuations in the properties of the fluid are negligible. These equations are reduced to a form appropriate for describing the one-dimensional flow of a fluid containing a spray which is stationary with respect to the gas. The burning-rate eigenvalue problem for one-dimensional heterogeneous combustion process of the type $A \rightarrow nB$ is formulated, and an analysis for sprays composed of uniform droplets illustrates the properties of the eigenvalue. An approximate analytical solution for the burning velocity is shown to be in numerical agreement with experiments on tetralin. (See also PB 136 043)

Sundstrand Turbo Div., Sundstrand Machine Tool Co. [Pacoima, Calif.]
SELECTED SCALING PROCUDURES FOR LIQUID-FUEL ROCKET ENGINES, by S. S. Penner. Technical note no. 6 on Contract AF 18(603)107. 31 Mar 58 17p. 5 refs. S/TD no. 1241; AFOSR-TN-58-416; AD-158 219.
Order from LC mi$2.40, ph$3.30 PB 144 656

In previous technical notes, we have considered the development of scaling procedures for liquid-fuel rocket engines with maintenance of complete similarity for all important operating variables, and also the special case in which only similarity with respect to high-frequency oscillations is enforced. It is the purpose of the present discussion to consider scaling rules of intermediate scope. The judicious utilization of the results derived from the present study should prove of value in deciding on the particular set of similarity conditions which must be satisfied in order to minimize development costs for large-scale engines.

Machine Parts and Mechanisms

RESEARCH AND DEVELOPMENT OF PROCEDURES FOR JOINING OF SIMILAR AND DISSIMILAR HEAT-RESISTING ALLOYS BY ULTRASONIC WELDING, by Norman E. Weare, John N. Antonevich and others. Rept. for July 57-June 58 on Metallic Materials, Contract AF 33(616)5342. Feb 59, 83p. 16 refs. WADC Technical rept. 58-479; AD-208 323.
Order from LC mi$4.80, ph$13.80 PB 145 015

Metallographic examinations of the heat-resistant weldments showed the presence of cracks at the edges of many of the spot welds. Methods of preventing such cracking can probably be determined. Efforts in the fundamental studies were aimed at studying the mechanism of bonding by ultrasonic welding.

Climax Molybdenum Co. of Michigan, Detroit.
ARC-CAST MOLYBDENUM-BASE ALLOYS, by M. Semchyshen and R. Q. Barr. Supplement to summary rept. on Contract N8onr-78701. 1957. 171p. 22 refs.
Order from LC mi$8.10, ph$27.30 PB 144 447

Contents:
Mechanical properties of wrought alloys
Mechanism of strengthening within the molybdenum-titanium system
Alloy systems:
Molybdenum-titanium
Molybdenum-niobium
Molybdenum-zirconium
Molybdenum-hafnium
Metallographic techniques
X-ray fluorescence analysis for alloying elements in molybdenum-base alloys

Columbia U. School of Engineering, New York.
A SIMPLE ALLOCATION PROBLEM, by C. Derman, Technical rept. no. 1(N) on Contract Nonr-266(55). 26 Jan 59, 14p. 8 refs.
Order from LC mi$2.40, ph$3.30 PB 144 554

We are concerned with the following allocation problem. Suppose at the beginning of a given time period there exists T units of some product (or service) which are to be allocated among k locations. The demand at each location is a random variable with a distribution which depends on the location. At the end of the time period the unused produce (or service) loses its value. The problem of interest here is that of allocating the T units among the k locations so that the expected number of units used to satisfy demand is maximized.

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
THE WELDING OF WROUGHT AGE-HARDENABLE NICKEL-BASE ALLOYS FOR SERVICE AT ELEVATED TEMPERATURES, by W. J. Lepowski and R. E. Monroe. 25 Nov 59, 21p. 39 refs. DMIC memo. 38.
Order from OTS $0.50 PB 161 188

The purpose of this memorandum is to summarize information on welding wrought age-hardenable nickel-base alloys. The report will cover the fusion and resistance welding of some of the more familiar alloys that comprise the age-hardenable nickel-base materials.

HANDBOOK OF THE FUNGI PRESCRIBED FOR USE IN MILITARY SPECIFICATIONS, by Charles B. Lee. 25 Mar 57, 136p. Rept. no. 3656 (Final).
Order from LC mi$6.90, ph$23.10 PB 144 678

This handbook is arranged with an introduction to and a definition of the classes, genera and species of fungi observed in the deterioration of military materials. Three classes of the lower fungi are discussed and species from these classes are illustrated either by photograph or drawing and each is given a brief description in non-technical language. A total of thirty-one species of fungi is mentioned and, in addition, taxonomic keys are presented as aids in identification. A short specification analysis by species is also included.

Naval Civil Engineering Lab., Port Hueneme, Calif.
A FEASIBILITY STUDY OF THE APPLICATION OF MASS SPECTROMETRY TO PAINT VEHICLE ANALYSIS, by R. D. Hitchcock. Interim rept. 11 Sep 59, 96p. 28 refs. Technical rept. 030; AD-209 528.
Order from OTS $2.25 PB 161 326

A Pyrex glass heated-inlet system was designed and built for the introduction of paint vehicles into the mass spectrometer in a vapor state. It was found that a conventional ball-and-socket glass joint, operable by external magnets, could be used as a vacuum cut-off valve. It was also found that stable temperatures could be maintained in the inlet system without hermostatic control. Repeated analyses of linseed oil at 250 C, 300 C, 350 C, and 400 C were made. Repeated analyses of a vinyl alkyd vehicle and a paint solvent were made and for each material the prominent peaks were treated mathematically to yield a single frequency distribution. Both distributions appeared to be almost perfectly Gaussian -- an indication that, because of the small number of peaks, the measured values of each peak are normally distributed. Percentage standard deviations derived from the plots showed that variations for the vinyl alkyd peaks are of the order of magnitude of 4 percent, and for the solvent, of the order of magnitude of 2 percent. The cracking patterns of other drying oils and synthetic resins and mixtures of these two types of vehicles were measured and studied. It is concluded that a Pyrex glass heated-inlet system can be used to introduce the vapors of paint vehicles into a mass spectrometer and that, in spite of random variations in molecular structure induced by elevated temperatures, a distinct cracking pattern can be associated with each vehicle. (Author)

MODIFIED PIEZOELECTRIC LEAD TITANATE ZIRCONATE CERAMICS, by Frank Kulcsar. Technical rept. no. 14 on Contract Nonr-1055(00). 2 Dec 57, 29p. 1 ref. AD-150 443.
Order from LC mi$2.70, ph$4.80 PB 138 222

In an effort to increase the dielectric constant, small additions of Nb_2O_5 or Ta_2O_5 were made to lead titanate zirconate compositions near the morphotropic phase boundary. The compounds, PbO, TiO_2, ZrO_2, and one of the addition compounds (Nb_2O_5, Ta_2O_5, La_2O_3, and $SrCO_3$) were mixed and pressed into disks. Electrical measurements were made at room temperature including measurements of the capacity, dissipation factor, and resonant and antiresonant frequencies. The modified ceramics had piezoelectric planar coupling coefficients of at least 0.50 and dielectric constants of up to 1300. The mechanical Q factor was decreased to about 70. A marked improvement was noted in shelf-aging characteristics and in stability with respect to the temperature dependence of the resonant frequency. The Curie temperature was also lowered. The grain structure was refined, especially the ceramics containing 2 w-% additions of Nb_2O_5 or Ta_2O_5. Dielectric constants up to 1695 with planar couplings of about 0.55 were obtained by adding 1 w-% Nb or 2 w-% Ta to $Pb_{0.95}Sr_{0.05}(Zr_{0.54}Ti_{0.46})O_3$.

TITANIUM CARBIDE-NICKEL CERMETS: PROCESSING AND JOINING, by John Wulff, James E. Cline and others. Rept. on Contract AF 33(038)8879. Mar 52, declassified 15 Dec 53. 21p. 17 refs. WADC Technical rept. 52-103; ATI-171 301.
Order from LC mi$2.70, ph$4.80 PB 144 559

Titanium carbide-nickel cermets can be sintered to have transverse rupture strengths over 250,000 pounds per square inch. Joining titanium-carbide cermets to high-temperature alloys has been accomplished by vacuum diffusion, and gives a weld stronger than the cermet. Fabrication of cermet articles of graded composition has been successfully accomplished by fragmentation-forming, i.e. cold forging the powder in a ductile envelope and subsequently sintering.

AN EXPERIMENTAL STUDY OF SILICATE LIQUID IMMISCIBILITY, by M. D. Karkhanavala and W. A. Weyl. ONR Technical rept. no. 45 on Contract N6onr-269, Task Order 8. Apr 52, 6p. 6 refs. ATI-159 366.
Order from LC mi$1.80, ph$1.80 PB 144 560

The inverted S-shaped liquidus curve of certain silicate systems (Li_2O-SiO_2 and BaO-SiO_2) is attributed to an existing "tendency" towards immiscibility. The authors advance a theory of the atomic structure of a homogeneous phase having a tendency towards unmixing. It is assumed that two basically different types of groups are present, but that the interfacial energy is too high to allow these groups to form separate phases. This difficulty can be overcome by bringing into the system a noble metal (Pd) in a finely subdivided state. By this means a homogeneous melt of 10.4 mol % Li_2O and 89.6 mol % SiO_2 was separated into two phases.

Fuels, Lubricants, and Hydraulic Fluids

Aerojet-General Corp., Azusa, Calif.
PRESSURE-MEASURING INSTRUMENTATION FOR COMBUSTION STABILITY STUDIES, by Leon Green, Jr. Rept. on Contract AF 18(600)1048. Dec 55, 43p. AGC TN-14; OSR-TN-55-474; AD-81 081.
Order from LC mi$3.30, ph$7.80 PB 137 840

The operation of the pressure-measuring system employed in the solid-propellant combustion stability study being pursued under the present contract is described, and the limitations of the system are pointed out.

Battelle Memorial Inst., Columbus, Ohio.
A STUDY OF THE INFLUENCE OF LUBRICANT PROPERTIES ON THE PERFORMANCE OF AIRCRAFT GAS TURBINE ENGINE ROLLING-CONTACT BEARINGS, by L. B. Sibley, J. C. Bell and others. Final technical rept. for 22 Apr 57-21 Sep 58 on Contract AF 33(616)5109. Oct 58, 75p. 73 refs. WADC Technical rept. 58-565; AD-204 218.
Order from LC mi$4.50, ph$12.30 PB 145 032

The development of improved lubricants for aircraft gas turbine engine bearings depends, to a large extent, on how well the influence of lubricant properties on bearing performance can be predicted. A literature and field survey and some special experiments and analyses on this problem have been conducted. A possible approach for further research in this field is suggested.

Feltman Research and Engineering Labs., Picatinny Arsenal, Dover, N. J.
DEVELOPMENT OF QUANTITATIVE TESTS FOR ESTABLISHMENT OF STABILITY OF PROPELLANT, by Charles Lenchitz, Norman E. Beach, and Marvin Goldstein. Dec 58, 9p. 2 refs. Technical memo. no. GL-5-58.
Order from LC mi$1.80, ph$1.80 PB 138 354

As basic information, the stability tests standard at this Arsenal were evaluated for quantitative efficiency. This work substantiates a belief that the current thermal stability tests are qualitative rather than quantitative. The present tests are based on the detection or measurement of the gaseous products of propellant decomposition.

Feltman Research and Engineering Labs., Picatinny Arsenal, Dover, N. J.
INVESTIGATION OF THE STABILITY OF DETERIORATING PROPELLANTS, by Norman E. Beach. Dec 58, 21p. 1 ref. Technical memo. no. GL-4-58.
Order from LC mi$2.70, ph$4.80 PB 138 355

This report covers the accomplishments under the initial project. The scope of this "starter" project was to plan for and initiate work leading to the determination of the safe-life characteristics of propellants, and the test(s) or determination (s) which best give basis for a prediction of remaining safe life of propellants.

Feltman Research and Engineering Labs., Picatinny Arsenal, Dover, N. J.
NATIONAL EVALUATION OF THE QUICK TEST FOR DETECTION OF PROPELLANT DETERIORATION, by Norman E. Beach and John F. Dippman. Dec 58, 48p. Technical memo. no. GL-1-58.
Order from LC mi$3.30, ph$7.80 PB 138 356

Object was to effect a wide, unbiased trial of the Quick Test for detection of deterioration in stored propellant through the independent efforts of the potential user. The parameters for evaluation are: functional adaptability, universality, relation to existing stability tests and efficiency with respect to the establishment of cut-off criteria.

Naval Research Lab., Washington, D. C.
FLUOROALKOXYSILANES, by C. M. Murphy, J. G. O'Rear and others. Interim rept. 15 Dec 59, 16p. 9 refs. NRL rept. 5411.
Order from OTS $0.50 PB 161 026

Eight fluoroalkyl esters of silicic acid and one of phosphoric acid were prepared from the fluoroalcohols $F(CF_2)_n CH_2OH$, $H(CF_2CF_2)_nCH_2OH$, $H(CF_2CF_2)_n(CHOH(CH_3)$, and $H(CF_2CF_2)_nCOH(CH_3)_2$. These orthoesters were studied as potential high-temperature lubricants and hydraulic fluids. Most of the compounds have pour points below -65°F. Increasing the fluorine content improves flammability resistance but raises the viscosity-temperature coefficient. Orthoesters derived from primary fluoroalcohols are resistant to pyrolysis and oxidation but sensitive to hydrolysis. Stabilization against hydrolysis is achieved by introducing one or two tert-butoxy groups but at the expense of thermal and oxidation stability. Both secondary and tertiary fluoroalkoxy groups are inferior to tert-butoxy groups for stabilizing orthoesters against hydrolysis. The best compromise structures fail one or more of the requirements for a satisfactory high-temperature lubricant or hydraulic fluid.

Leather and Textiles

Fabric Research Labs., Inc., Dedham, Mass.
AN INDEX OF BLEND IRREGULARITY AND ITS PRACTICAL USE, by Myron J. Coplan, Charles A. Lermond, and Ruth A. Kenney. Technical rept. no. 4 on Contract Nonr-1422(00). 31 Dec 57, 26p. 12 refs.
Order from LC mi$2.70, ph$4.80 PB 138 405

It appears that staple processing machining tends to allow fibers to remain in clusters. Three cylinder carding reduces this somewhat. Drafting apparently reduced the clustering as evidenced by blend distribution along the strand length. The actions of doubling and condensing alone cannot accomplish this, but seem to randomize single fibers within cross-sections. (See also PB 124 313)

Fuels Research Lab., Mass. Inst. of Tech., Cambridge.
HEAT TRANSFER TO SKIN THROUGH THERMALLY-IRRADIATED DRY CLOTH, by N. Y. Chen and W. P. Jensen. Technical rept. no. 6 on Contract Nonr-1841(37). 8 July 58, 71p. 7 refs. AD-200 210.
Order from LC mi$4.50, ph$12.30 PB 144 818

An analysis is presented of the problem of heat transmission through dry opaque or diathermanous cloth and an air space into underlying skin, following exposure to thermal radiation. The problem is solved numerically by finite difference approximations, the method being given in detail. It is shown that a technique requiring only the appropriate weighting of temperature-rise data obtained from three curves yields results within 1 to 2% of those obtained by extensive machine calculations in which allowance is made for energy absorption at each of several increments into which the diathermanous cloth is conceptually divided. The analytical work is verified by good agreement with experimental results.

Owens-Corning Fiberglas Corp., Newark, Ohio.
PROPERTIES OF GLASS FIBERS AT ELEVATED TEMPERATURES, by W. H. Otto. Final rept. for 15 June 58-15 Aug 59 on Contract NOas-58-841-c. 15 Sep 59, 80p. 4 refs.
Order from LC mi$4.50, ph$12.30 PB 144 574

Glass fibers of four different glass compositions were evaluated on the basis of measured tensile strength, stress-rupture and modulus of elasticity at elevated temperatures. Strength-temperature relations were established for each glass from 75°F to that temperature at which a reduction of approximately seventy-five per cent of the original value was encountered. Stress-rupture measurements over the possible temperature range were made for load durations up to twenty hours. Measurements of modulus of elasticity were made at temperatures up to the softening temperature of the fibers. The effects of environment and commercial organic finishes on tensile strength and stress-rupture were investigated. (Author) (See also PB 143 669)

Quartermaster Research and Engineering Center, Natick, Mass.
STUDIES ON THERMAL PROPERTIES OF FABRICS OF VARYING SPECTRAL RESPONSE FOR THE OUTER LAYER OF THE COLD-WET UNIFORM IN A TWO-LAYER SYSTEM. PART I. PHYSICAL MEASUREMENTS OF FABRIC ASSEMBLIES. PART II. THERMAL PROTECTIVE PROPERTIES OF CAMOUFLAGE FABRICS, by Alvin O. Ramsley. Sep 59, 39p. 22 refs. Textile Series rept. 109; AD-227 159.
Order from LC mi$3.00, ph$6.30 PB 144 532

An investigation considering the problem of whether the somewhat higher absorptance required for adequate infrared camouflage would increase hazards from thermal radiation is described. Three cotton fabrics were used which differed from each other only in regard to the specific vat dyes required to achieve OD-7 and OG-107. One sample was vat dyed to a visual shade matching OG-107 but having a reflectance at 1μ satisfactory for good camouflage against active infrared detectors. Part I describes preparation of samples, optical and thermal measurements. Thermal data were obtained with the Quartermaster carbon arc source and inanimate receivers. Part II reviews available literature which used similar fabric systems. Previously reported data, obtained both in laboratory and field studies, neither refute nor corroborate the view that a good infrared camouflage colorant system in clothing assemblies is necessarily inimical to good thermal protection. The experimental portion describes a test in which pigs were protected during exposure to the carbon arc source by each of the 3 fabrics. It was concluded that the fabric which possesses all the reflectance characteristics necessary for good camouflage affords at least as good protection as the present standard OG-107. (Author)

Plastics

A STUDY OF THE KINETICS OF SOLID-PHASE REACTIONS. Quarterly no. 9, 16 Sep-15 Dec 58, on Contract AF 18(603)74. 12 Dec 58, 9p. 3 refs. Rept. no. 1282-9.
Order from LC mi$1.80, ph$1.80 PB 144 571

The surface decomposition (linear pyrolysis) of both linear and cross-linked polymethylmethacrylate polymers has been studied over the surface-temperature range from 550 to 910°K.

Army Prosthetics Research Lab., Washington, D. C
REVISED TECHNIQUE FOR STAINING VINYL FILMS, by James T. Hill. 13 Oct 58, 5p. 1 ref. Technical rept. no. 5838; AD-205 260.
Order from LC mi$1.80, ph$1.80 PB 144 726

A revised technique of staining vinyl films, to determine their resistance to oil soluble inks, is presented A new ink formula is also presented to insure a reproducible supply of stainant. (Author)

Cornell U., Ithaca, N. Y.
AN EXPERIMENTAL STUDY OF MECHANICAL AND DIELECTRIC LOSSES IN CERTAIN HIGH POLYMERS, by H. S. Sack. Final rept. on Contract Nonr-401(09). Jan 59, 90p. 23 refs.
Order from LC mi$4.80, ph$13.80 PB 144 405

Second-order transitions in pure polyvinyl acetate, cellulose acetate pure and plasticized, cellulose nitrate pure, plasticized, plasticized and stabilized, and plasticized and cross-linked were studied using both mechanical and dielectric loss measurements. In the study of mechanical losses, the main effort was directed towards low frequencies, and equipment was designed which permitted measurements down to about 10^{-4} cps. Temperatures as low as -200°C were used in some cases. Dielectric measurements were made at higher frequencies, i.e., 60 cps to 2 mc. The addition of a plasticizer does not change radically the value of the activation energy for any particular transition, but only shifts the peaks to lower temperatures. The addition of a stabilizer makes the measurements more consistent and reproducible. Contrary to expectation, cross-linking reduces the value of the activation energy as observed from dielectric measurements. Plasticized samples are found to be rather unstable. It is suspected that the plasticizer evaporates during the experiments, thus often leading to incorrect results.

Feltman Research and Engineering Labs., Picatinny Arsenal, Dover, N. J.
PREPARATION AND CHARACTERIZATION OF GRAFT COPOLYMERS, by Suresh N. Chinai, Jacob D. Matlack and others. Nov 59, 28p. 20 refs. Technical rept. 2660.
Order from OTS $0.75 PB 161 047

A number of synthetic problems involved in the preparation of poly(methyl methacrylate) grafted to polystyrene and its precursors have been resolved. The preparation of a completely isopropylated polystyrene by the polymerization of p-isopropylstyrene monomer has obviated earlier difficulties of color, fluorescence, and variable composition. The subsequent antoxidation of this material in a non-aromatic solvent, cyclohexane, with lauroyl peroxide as the oxidation catalyst has yielded a material of good reproducibility and high purity. Resorting to a sugar-containing polymerization recipe gave grafting at favorable rates with fair reproducibility. The grafts and their precursors were characterized by light-scattering and viscosity techniques. The apparently insufficiently dissimilar nature of the component polymers prevented the resolution of the polymeric mixture by extraction and fractional precipitation methods into similar structural species. The course of the fractional precipitation was followed with radioactive polymer. The infrared spectra of the p-isopropylstyrene monomer and its intermediates, and of related polymeric materials, are presented and analyzed in this report.

Material Lab., New York Naval Shipyard, Brooklyn.
THE EFFECTS OF WATER IMMERSION ON THE PROPERTIES OF GLASS REINFORCED POLYESTER LAMINATES, by S. Dastin. Final rept. 5 Apr 57, 7p. Lab. Project 4860-J-5.
Order from LC mi$1.80, ph$1.80 PB 145 028

The effects of water immersion on the properties of woven roving reinforced polyester laminates have been studied. Laminates were fabricated at the Laboratory by the "void free" vacuum bag technique, employing present day improved finish woven roving reinforcements. The laminates investigated showed superior wet strength retention as compared to laminates fabricated with earlier woven roving reinforcements. Further, the study indicated that, with a general purpose polyester a one hour gel system is sufficient to wet the reinforcement satisfactorily and to yield a sound laminate. The investigation also showed that, if resistance to water attack is a prime consideration, the laminate should contain resin in excess of about 45% by weight. (Author)

Office of Technical Services, Washington, D. C.
NEW PLASTIC MATERIALS THROUGH GOVERNMENT RESEARCH, by James Kanegis. Aug 58, 95p. 143 refs.
Order from OTS $2.25 PB 161 332

Hundreds of unclassified R&D reports released over the past three years by government agencies have been analyzed for significant content. Those of greater interest have been selected for review in the following order: irradiated plastics; molding; transparent materials; adhesives; coatings; fibers; sealants,

foams, interlayers, honeycomb; laminates; specific plastics such as inorganic and metallorganic polymers, silicones, fluoroplastics, acrylics; polyesters, epoxides, polyurethanes; polyethylene; vinyls and vinylidenes; phenolics; others such as styrenes, polyamides, and S-base. Fields of interest of various agencies are outlined. Most comments are documented, usually by reference to specific PB reports. (Author)

IDENTIFICATION OF ELASTOMERS BY INFRARED SPECTRA OF THEIR PYROLYZATES, by J. W. McGarvey. 19 Aug 58, 24p. 7 refs. Rept. no. 58-2159.
Order from LC mi$2.70, ph$4.80 PB 138 408

Representative infrared spectra of the pyrolyzates of various types of elastomers were recorded for the purpose of identifying unknown elastomers by comparison. This procedure offers an unusually rapid, qualitative method of analysis and possesses certain advantages which are lacking in more conventional techniques. The identification of an unknown sample by comparison of its infrared pyrolyzate spectrum to reference spectra in this report will usually permit a complete analysis to be made in approximately twenty minutes.

Rock Island Arsenal Lab., Ill.
TENSILE TEST REPRODUCIBILITY OF ELASTOMERIC VULCANIZATES, by Stanley L. Eisler. 3 Sep 58, 29p. 9 refs. Rept. no. 58-2315.
Order from LC mi$2.70, ph$4.80 PB 138 409

A number of variables were studied to determine their effect on the reproducibility of tensile tests of elastomeric vulcanizates. It was found that the size of the filler particles and the presence of undispersed curative particles, which probably produced areas of overcure, were the two most important factors affecting the tensile test reproducibility. These findings are in contrast to most published work which has dealt principally with the sample preparation and test procedure errors.

Wood and Paper

MARINE LAMINATING PROPERTIES OF SELECTED WOOD SPECIES, KHAYA OR AFRICAN MAHOGANY (KHAYA SPP.) by R. F. England. Sep 59, 5p. 7 refs. Progress rept. no. E-412-4.
Order from LC mi$1.80, ph$1.80 PB 144 701

The laminating properties of Khaya were investigated using three commercial adhesives. Curing conditions of 150-153°F for 6 hours (glueline temperature) produced satisfactory results with each of the adhesives tested. (Author)

Material Labs., Puget Sound Naval Shipyard, Bremerton, Wash.
MARINE LAMINATING PROPERTIES OF SELECTED WOOD SPECIES, KOKRODUA (AFRORMOSIA ELATA) by R. F. England. Sep 59, 5p. 7 refs. Progress rept. no. E-412-5.
Order from LC mi$1.80, ph$1.80 PB 144 700

The laminating properties of Kokrodua (a tropical African hardwood) were investigated using three commerical adhesives. Curing conditions of 150-153°F for 6-1/2 hours (glueline temperature) produced satisfactory results with each of the adhesives tested. (Author)

Material Labs., Puget Sound Naval Shipyard, Bremerton, Wash.
MARINE LAMINATING PROPERTIES OF SELECTED WOOD SPECIES, GREENHEART (OCOTEA RODIAEI) by R. F. England. Sep 59, 6p. 7 refs. Progress rept. no. E-412-6.
Order from LC mi$1.80, ph$1.80 PB 144 699

The laminating properties of greenheart (a tropical South American hardwood) were investigated using three commercial adhesives. Curing conditions of 150-154°F for 6 hours (glueline temperature) produced unsatisfactory results with each of the adhesives tested. (Author)

MATHEMATICS

Air Force Cambridge Research Center, Bedford, Mass.
AN ALGORISM FOR FACTORING X^n-1 OVER A FINITE FIELD, by Eugene Prange. Oct 59, 23p. AFCRC-TN-59-775.
Order from LC mi$2.70, ph$4.80 PB 144 588

An algorism is given for factoring X^n-1 over the finite field F_q of q elements. This can be of use in constructing another finite field over F_q, in constructing a linear recursion of period n over F_q, or in constructing cyclic error-correcting group codes. The algorism has two parts: Step 1, the construction of the multiplicative identities of the minimal ideals of $F_q[X]/[X^n-1]$; Step 2, the use of these idempotents in the construction of the irreducible factors of X^n-1. (Author)

HOLDER CONTINUITY OF N-DIMENSIONAL QUASI-CONFORMAL MAPPINGS, by E. David Callender. Technical rept. no. 81 on Contract Nonr-225(11). 19 Feb 59, 32p. 1 ref.
Order from LC mi$2.70, ph$4.80 PB 144 813

This paper is an extension of previous work on the Hölder continuity of two-dimensional quasi-conformal mappings. The approach of Finn and Serrin is used to prove analogous results in n dimensions.

Ballistic Research Labs., Aberdeen Proving Ground, Md.
THE ESTIMATION OF DISPERSION FROM DIFFERENCES, by Anthony P. Morse. 13 July 45, 21p. 6 refs. Rept. no. 557.
Order from LC mi$2.70, ph$4.80 PB 145 060

In order to estimate dispersions in data, it is frequently desirable to eliminate the effects of unknown trends. It is shown that this may often be done by employing differences of an appropriate order. Tables estimating the precision of such a method are given. (Author)

California U., Berkeley.
THE ASYMPTOTIC BEHAVIOUR OF THE REAL SOLUTIONS OF CERTAIN SECOND ORDER DIFFERENTIAL EQUATIONS, by J. G. van der Corput. Technical rept. no. 3 on Asymptotic Expansions, Contract AF 18(600)958. June 55, 175p. 7 refs. AD-74 696.
Order from LC mi$8.10, ph$27.30 PB 144 546

Primary consideration is given to complete asymptotic expansions of the form $y'' + [P(x) + f(x)]y' + [Q(x) + g(x)]y = 0$, where f(x) and g(x) are perturbations of the related equation $y'' + P(x)y' + Q(x)y = 0$. Attention is also given to the case where the full asymptotic expansion is not required, and weaker conditions on f(x) and g(x) are considered which permit a discussion of the behavior of the solutions at infinity. (See also PB 144 547)

California U., Berkeley.
FUNDAMENTAL THEOREMS OF ASYMPTOTICS, by J. G. van der Corput. Technical rept. no. 1 on Asymptotic Expansions, Contract AF 18(600)958. June 54, 71p. 2 refs. AD-39 511.
Order from LC mi$4.50, ph$12.30 PB 144 547

Topics covered are equality, limits, convergent series, convergent multiple series, uniform convergence, analytic functions with prescribed asymptotic expansion, and equations.

California U., Berkeley.
INFINITELY MULTIPLE VALUED HARMONIC FUNCTIONS IN SPACE WITH TWO BASE BRANCH CURVES OF ORDER ONE. PART II, by Griffith C. Evans. Technical rept. no. 4 on Contract Nonr-222(62). Jan 59, 21p. 1 ref.

NOTE ON APPROXIMATION BY BOUNDED ANALYTIC FUNCTIONS (PROBLEM α), by J. L. Walsh. Rept. on Contract AF 18(600)1461. Aug 58, 12p. 9 refs. AFOSR-TN-58-701; AD-162 235.
Order from LC mi$2.40, ph$3.30 PB 137 873

Harvard U., Cambridge, Mass.
NOTE ON INVARIANCE OF DEGREE OF POLYNOMIAL AND TRIGONOMETRIC APPROXIMATION UNDER CHANGE OF INDEPENDENT VARIABLE, by J. L. Walsh. Rept. on Contract AF 18(600)1461. Aug 59, 14p. 6 refs. AFOSR-TN-59-593; AD-217 183.
Order from LC mi$2.40, ph$3.30 PB 144 489

The object of this note is to show that various commonly used measures of degree of approximation are invariant under one-to-one analytic transformation of the independent variable, and this is true for both approximation by polynomials in the complex variable and trigonometric approximation in the real variable. The methods used here have already been used several times in the literature, especially by J. H. Curtiss, and Walsh and Sewell, and Walsh, but the present treatment is more unified and more complete, and emphasizes for the first time invariance of degrees of approximation. (Author)

NOTE ON LEAST-SQUARE APPROXIMATION TO AN ANALYTIC FUNCTION BY POLYNOMINALS, AS MEASURED BY A SURFACE INTEGRAL, by J. L. Walsh. Rept. on Contract AF 18(600)1461. Aug 58, 13p. 2 refs. AFOSR-TN-58-708; AD-162 242.
Order from LC mi$2.40, ph$3.30 PB 137 926

Harvard U., Cambridge, Mass.
ON DEGREE OF APPROXIMATION BY BOUNDED HARMONIC FUNCTIONS, by J. L. Walsh. Rept. on Contract AF 18(600)1461. Apr 59, 30p. 10 refs. AFOSR-TN-59-235; AD-212 005.
Order from LC mi$2.70, ph$4.80 PB 144 468

If u(x, y) is defined on an analytic Jordan curve C, a necessary and sufficient condition that u(x, y) be of class L(p, α), $0 < \alpha < 1$, on C is that there exist functions $u_n(x, y)$ harmonic in a region D containing C satisfying $|u_n(x,y)| = AR^n$ in D and $|u(x, y)-u_n(x, y)| \leq A_1/n^{p+\alpha}$ on C. This result on Problem α for harmonic functions can be complemented by a result on Problem β precisely analogous to Theorem 1 of TAMS vol. 87 (1958) pp. 467-484 provided f(z) and $f_n(z)$ are supposed analytic on and within each B_j.

Harvard U., Cambridge, Mass.
POLYNOMIALS OF BEST APPROXIMATION ON AN INTERVAL, by J. L. Walsh and T. S. Motzkin (U. of California) Rept. on Contract AF 18(600)1461. Oct 59, 12p. 4 refs. AFOSR-TN-59-854; AD-228 078
Order from LC mi$2.40, ph$3.30 PB 144 494

The present writers have recently studied juxtapolynomials and their relation to polynomials of best approximation to a given function on a real finite point set, especially with reference to oscillation properties. The object of the present note is to indicate, partly without proof, new results on the analogous problems of approximation to a given continuous function on a closed finite interval E. (Author)

Institute for Advanced Study, Princeton, N. J.
ON A PROBLEM OF L. FEJES-TOTH, by B. Graunbaum. Rept. on Contract AF 49(638)253. Sep 59, 4p. AFOSR-TN-59-981; AD-228 282.
Order from LC mi$1.80, ph$1.80 PB 144 471

In Euclidean 3-space, a point is "hidden" by a set of spheres (which do not contain the point) if any ray issuing from the point intersects at least one of the spheres. Fejes-Toth established that six congruent, non-intersecting spheres may hide a point. We prove that five congruent non-intersection spheres may not hide a point.

Institute of Mathematical Sciences, New York U., N. Y.
THE INFLUENCE OF EDGES AND CORNERS ON POTENTIAL FUNCTIONS OF SURFACE LAYERS, by Rolf Leis. Rept. on Contract AF 49(638)229. June 59, 23p. 3 refs. Research rept. no. BR-29; AFOSR-TN-59-943.
Order from LC mi$2.70, ph$4.80 PB 144 766

The potential functions of multiple surface layers behave singularly when approaching the boundary of the surface. The degree of the singularities of these functions and their derivatives are discussed in this paper. (Author)

ON SOME FREDHOLM INTEGRAL EQUATIONS ARISING IN DIFFRACTION THEORY, by C. H. Yang. Rept. on Contract AF 49(638)229. Aug 59, 20p. 7 refs. Research rept. BR-31; AFOSR-TN-59-944.
Order from LC mi$2.40, ph$3.30 PB 144 765

Kernels of integral equations arising in diffraction theory are investigated. These kernels depend on a parameter α. Fredholm's theory shows that the resolvents of the kernels are meromorphic functions of α and, hence, can be expanded into power series of α which are convergent for certain regions. Regions of convergence for α, in which the perturbation method would work, are examined. (Author)

LORENTZ STRUCTURES ON THE PLANE, by J. Wolfgang Smith. Technical note on Contract AF 49(638)42. [1959] 27p. 3 refs. AFOSR-TN-59-652.
Order from LC mi$2.70, ph$4.80 PB 144 659

Very little is known at present about the global properties of Lorentz manifolds. While these differ from Riemannian spaces ostensibly in the signature of the metric tensor field, one comes to realize quickly that Lorentz geometry in the large will require its own methods and must lead to some unaccustomed results.

RADIAL CLUSTER SETS AND THE DISTRIBUTION OF VALUES OF MEROMORPHIC FUNCTIONS, by W. B. Woolf. Rept. on Contract AF 49(638)104. Oct 59, 34p. 19 refs. AFOSR-TN-59-1041.
Order from LC mi$3.00, ph$6.30 PB 144 772

This paper is devoted to an investigation of the behavior near a singularity of a function $w = f(z)$ meromorphic in the unit disk. Particular emphasis is placed on the problem of deriving meaningful results for non-isolated singularities.

Minnesota U. [Minneapolis].
CHANGE OF TIME SCALE FOR MARKOV PROCESSES, by Steven Orey. Rept. on Contract AF 49(638)617. 1 Sep 59, 22p. 5 refs. AFOSR-TN-59-1067.
Order from LC mi$2.70, ph$4.80 PB 144 771

Let $\{X_n\}$ be a recurrent Markov chain, $n = 0, 1, \ldots$. A new process $\{X_t\}$, $0 \leq t < \infty$ is obtained from the original process by requiring a wait of duration $\gamma(x)$ after reaching x, for every state x, where $\gamma(x) > 0$. Let $\tilde{X}_t = (X_t, Y_t)$, where Y_t is the elapsed time since the last transition. $\{\tilde{X}_t\}$ is a Markov process; Y_t is a generalized renewal process. Results are obtained about the structure of the $\tilde{X}_t$ - process and the asymptotic behavior of the transition probabilities. The case in which the waiting times are random variables is also treated. (Author)

THE POWER SERIES EXPANSION OF A CERTAIN CLASS OF FUNCTIONALS, by M. P. Barnett. Rept. on Contract N7onr-28511. 7 Jan 59, 11p. 3 refs. WIS-ONR-35.
Order from LC mi$2.40, ph$3.30 PB 144 550

The technique described in this report is in effect a generalization of a procedure used in classical astronomy that involved the so-called Newcomb operators. The general procedure is derived in section 2, and is summarized in equations (11), (12), (15), (17), and (18). Section 3 deals with possible extensions of the method and, section 4 contains some comments on the relationship between the present method and the special cases treated previously by earlier workers.

SINGULAR DIFFERENTIAL BOUNDARY PROBLEMS OF A FOURIER TYPE, by Robert W. McKelvey. Rept. on Contract AF 33(616)5649. 30 Apr 59, 40p. 8 refs. WADC Technical rept. 59-288.
Order from OTS $1.00 PB 161 350

Let L be a linear differential operator defined for twice differentiable functions x(t) by $Lx = -x'' + q(t)x$, with q(t) real, continuous, and satisfying $\int_0^\infty t\,|q(t)|\,dt < \infty$. Since the operator L falls under Weyl's "limit point case", it follows that the differential equation $Lx = \lambda x$, the condition that x(t) be integrable-squared on $0 \leq t < \infty$, and the boundary condition $\sin\alpha \cdot x(0) - \cos\alpha \cdot x'(0) = 0$, for fixed α ($0 \leq \alpha < \pi$), determine a non-trivial boundary problem H. Much of the paper is an investigation of the solutions of $Lx = \lambda x$ on $0 \leq t < \infty$ when λ is near zero, and through this, of the nature of the spectral function of H when λ is in a neighborhood of the origin. The results are then applied to a study of the related eigenfunction expansion of an arbitrary summable function f(t). (Author)

ON AN ITERATIVE METHOD FOR FINDING A LOCAL MINIMUM OF A FUNCTION OF MORE THAN ONE VARIABLE, by E. M. L. Beale. Technical rept. no. 25 on Contract DA 36-034-ORD-2297. Nov 58, 45p. 13 refs. OOR rept. 1715.23M.
Order from LC mi$3.30, ph$7.80 PB 144 817

A new approach to the problem of finding a minimum

(or at least a local minimum) of an arbitrary function of several variables is presented. This approach tends to reduce the number of function evaluations required to obtain an adequate approximation to the minimum, at the expense of considerable extra computation between evaluations. It is therefore considered appropriate in situations where each evaluation is a slow or costly process. A complete algorithm based on this approach is described, but some of the details may require modification in the light of further practical experience. (Author)

THE DEVELOPMENT OF STATISTICAL METHODS FOR EXPERIMENTAL DESIGNS IN QUALITY CONTROL AND SURVEILLANCE TESTING, by R. N. Pendergrass and R. A. Bradley. Technical rept. no. 5 (Final) on Ranking in Triple Comparisons, Contract Nonr-2352(01). Jan 59, 41p. 30 refs.
Order from LC mi$3.30, ph$7.80 PB 144 400

Paired comparisons are widely used in subjective testing. While small block-size designs are usually necessary, it is not always desirable to use paired comparisons. This paper deals with methods of analysis for the ranking of t treatments in sets or subsets of the possible $\binom{t}{3}$ triple comparisons formed from t treatments. A mathematical model for triple comparisons has been devised as an extension of the model for paired comparisons. Treatment parameters are postulated and estimated by the method of maximum likelihood and the asymptotic variances and covariances of these estimators are found. Test procedures are also derived. A brief numerical example is included. (See also PB 143 925)

STATISTICAL TECHNIQUES IN LIFE TESTING. CHAPTER III. PROBLEMS OF ESTIMATION, by Benjamin Epstein. Technical rept. no. 4 on Contract Nonr-2163(00). 15 Jan 59, 106p. 11 refs.
Order from LC mi$5.70, ph$16.80 PB 144 401

It is frequently important that one make estimates of mean life, rates of failure, probability of survival for a given time, etc, on the basis of data arising from life tests. The data may be generated in many ways; e.g., they may arise from truncated, censored, sequential, replacement, non-replacement, interrupted, or combined experiments; we may or may not know the exact times to failure. We shall try in what follows to give rules and procedures which enable us to give point and interval estimates which are in some sense optimum.

Wisconsin U., Madison.
FOURIER TRANSFORMS OF GENERALIZED FUNCTIONS, by Jacob Kerevaar. Rept. on Contract N7onr-28507. Oct 58, 44p. 10 refs. AD-212 336.
Order from LC mi$3.30, ph$7.80 PB 144 433

Presented at the Symposium on Harmonic Analysis at Cornell U., Ithaca, New York, July 1956.

A symmetric theory of Fourier transforms is discussed for generalized functions or distributions. The class of distributions for which Fourier transforms are defined is the class of distributions of moderate growth. A fundamental sequence $[f_n]$ on $(-\infty,\infty)$ is said to be of moderate growth if there exist an integer $p \geq 0$, as a sequence $[f_n^{(-p)}]$ of antiderivatives of order p of the f_n, and constants A and a such that $|[f_n^{(-p)}(t)]| \leq A(|t|+1)^a$, $-\infty < t < \infty$, $n = 1, 2, \ldots$. A distribution ϕ is said to be of moderate growth if one of its defining fundamental sequences is. The class of distributions of moderate growth is characterized as the class of (generalized) derivatives $[F]^{(p)}$ of arbitrary order p of the integrable functions F which satisfy an inequality of the form $|F(t)| \leq B(|t|+1)^b$, $-\infty < t < \infty$.

DESIGN OF A GENERAL PURPOSE DATA STORAGE SYSTEM, by Earl D. Gibson and Howard Knoer. Final rept. for 15 July 57-31 Oct 58 on Contract AF 19(604)2648. [1958] 138p. 44 refs. AFCRC-TR-58-189; AD-160 856.
Order from LC mi$6.90, ph$21.30 PB 138 424

This is the final report on a program of investigation, study, and design of a data storage system as a means of recording the data from a variety of analog computers in a form suitable for analytical study by digital computation. The problems associated with selecting the data to be stored and the sampling rates are considered. A highly flexible system which could be readily adapted to the needs of a wide variety of applications is presented. The basic functions of collecting digitizing, and storing the data are discussed along with several optional, special features. An alternate system is described along with several detailed approaches to some of the key problems.

704 PERTURBATION CALCULATION AML PROBLEM 840-121, by Maxine Jackson. Jan 58, 15p. Rept. 1166; reprint of Applied Mathematics Lab. Technical rept. 60.
Order from LC mi$2.40, ph$3.30 PB 138 431

The three group 704 Perturbation Calculation (P. S.) is a code prepared for the Knolls Atomic Power Laboratory to be used in connection with CURE, their 704 program for two-dimensional reactor design calculations.

General Electric Co., Schenectady, N. Y.
MEASURED RANGE ACCURACY OF THE HERMES A-3 DIGITAL COMPUTER AS AFFECTED BY (a) CERTAIN GUIDANCE SYSTEM TOLERANCES (b) WINDS AND FINITE GROUND LOOP RESPONSE, by P. G. Cushman and J. J. Weinstein. Rept. on Project Hermes, Contract [DA 30-115-ORD-23]. 10 Sep 51, declassified 17 Mar 58, 15p. 3 refs. Technical information series no. DF 51A0520.
Order from LC mi$2.40, ph$3.30 PB 144 624

Deviations of the Hermes A-3 flight path from the standard trajectory in elevation and azimuth require small corrections to be made in the computed range of the missile. This study was made to determine if the corrections, corresponding to expected flight path deviations, were small enough to be neglected in the digital computer.

Michigan U., Ann Arbor.
LECTURES ON SWITCHING AND AUTOMATA THEORY, by Calvin C. Elgot. Rept. on Contracts Nonr-1224(21) and DA 20-018-ORD-16971. 1958, 80p. 62 refs.
Order from LC mi$4.50, ph$12.30 PB 144 451

These lectures include a study of two-terminal series-parallel relay contact networks, multi-terminal relay contact networks, and sequential networks. General, systematic techniques for the study of series-parallel networks have employed Boolean algebra or propositional calculus. A basic paper on multi-terminal relay contact nets makes use of matrices whose entries are elements of a Boolean algebra. More recent work makes use of the algebraic concepts: lattice, semi-group, group. The concept of ring when suitably specialized is intimately connected with Boolean algebras. This indicates the extent to which algebra is invading the mathematical theory of switching. Much recent work has employed more advanced aspects of logic than the propositional calculus. Indeed, the use of logic and its techniques has already produced significant results and promises still more fruitful ones.

National Research Labs., Ottawa (Canada)
REQUIREMENTS FOR A HYBRID ANALOG-DIGITAL COMPUTER, by D. C. Baxter and J. H. Milsum. Oct 59, 29p. 14 refs. Mechanical engineering rept. MK-7.
Order from LC mi$2.70, ph$4.80 PB 144 508

Conventional analog and digital computers are critically compared as to their relative suitability for scientific and engineering problems. Hybrid computers are defined as those in which computing operations of both types are combined, and the requirements are outlined for such a union to be advantageous. An economical, completely-general-purpose, hybrid computer seems unlikely, but there are many special purpose applications of advantage, and examples are given. (Author)

Stavid Engineering, Inc., Plainfield, N. J.
RESEARCH DIRECTED TOWARDS INSTALLATION, TESTING, DEVELOPMENT, AND MODIFICATION

OF EXPERIMENTAL DATA PROCESSING EQUIPMENT. Final engineering rept. on Contract AF 19(604)3503. Nov 59, 98p. 12 refs. AFCRC-TR-59-355; AD-228 308
Order from LC mi$5.40, ph$15.30 PB 144 425

This report describes the efforts of the contractor during a 17-month period in providing technical and engineering support necessary to the operation of a complex data processing system used as a tool in human research studies. It describes the system used, the problems encountered and their solutions, and the developmental tests toward improvement of equipment and simulation techniques. The report describes the use of equipment in two separate configurations: (1) the use of an experimental tactical air control center system with semi-automatic tracking, intercept, storage, and display provisions for component and system tests in human factor studies; and (2) through the experience gained, its eventual evolution and ultimate reinstallation into an advanced laboratory simulation facility for research on man/machine systems. In the latter configuration, the report places particular emphasis on various techniques used for the simulation and generation of complex tactical situations and corresponding methods of display, readout, and data reduction for purposes of threat evaluation and action selection. Thus, although intended for research in problems of military psychology, the information techniques employed are applicable and should be of interest to those concerned with systems of air traffic control, ground control of interceptors, missile launch, and control and command systems in general.

MECHANICS

Bolt, Beranek and Newman, Inc., Cambridge, Mass.
DAMPING OF BENDING WAVES IN MULTI-LAYER PLATES, by Gunther Kurtze. Rept. on Contract Nonr-2321(00). 27 Feb 59, 88p. 4 refs. Rept. no. 614.
Order from LC mi$4.80, ph$13.80 PB 144 819

Damping of structure-borne noise and vibration requires materials with high internal losses. Unfortunately homogeneous isotropic materials which combine the desired structural rigidity with a high loss tangent are not available for most applications. The desired damping, therefore, is usually obtained by various "damping treatments" in which dissipative coatings or layers are added to the structural elements. The analysis necessary for the design of such damping treatments involves the solving of a system of coupled differential equations, usually of the fourth order and, in addition, a considerable amount of algebra.

Brown U. Div. of Engineering, Providence, R. I.
AN EXPERIMENTAL STUDY OF PULSE PROPAGATION IN ELASTIC CYLINDERS, by D. Y. Hsieh and H. Kolsky. Technical rept. no. 4 on Contract Nonr-562(14). Oct 57, 11p. 9 refs. Nonr-562(14)/4.

THE FORMULATIONS OF CONSTITUTIVE EQUATIONS IN CONTINUUM PHYSICS, by A. C. Pipkin and R. S. Rivlin. Technical rept. no. 4, Jan 57-Sep 58, on Application of Invariance Principles in Continuum Mechanics, Contract DA 19-020-ORD-4531. Sep 58, 115p. 13 refs. DA-4531/4.
Order from LC mi$6.00, ph$18.30 PB 138 438

Constitutive equations prescribing a tensor of arbitrary rank in terms of displacement gradients and an arbitrary number of vectors are examined. The restrictions imposed upon such relations by form-invariance under rotation of the physical system are obtained. A method of finding the restrictions due to symmetries of the material is outlined, and this method is used in obtaining explicit results for seven groups of symmetry transformations.

Brown U. Div. of Applied Mathematics, Providence, R. I.
NOTE ON THE EXPANSION IN POWERS OF POISSON'S RATIO OF SOLUTIONS IN ELASTOSTATICS, by Eli Sternberg and Rokuro Muki. Technical rept. no. 6 on Contract Nonr-562(25). Feb 59, 12p. 13 refs. 562(25)/6.
Order from LC mi$2.40, ph$3.30 PB 144 823

This paper examines the power-series development with respect to Poisson's ratio of the solution to the second boundary-value problem (surface tractions prescribed) in three-dimensional classical elastostatics for the case of vanishing body forces. The individual terms of this expansion, by means of steady-state thermoelasticity theory, are found to admit an independent physical interpretation. This interpretation, in turn, permits certain conclusions concerning the dependence upon the elastic constants of solutions to space problems.

Brown U. Div. of Applied Mathematics, Providence, R. I.
ULTRASONIC ATTENUATION IN MILD STEEL UNDER DEFORMATION, by Raymond G. Bayer. Rept. on Contract AF 18(603)136. 15 Sep 58, 42p. 14 refs. AFOSR-TN-58-913; AD-204 567.
Order from LC mi$3.30, ph$7.80 PB 137 930

The losses in mild steel as a function of strain results from the combination of magnetic domain mechanisms and dislocation mechanisms. A heuristic model using known magnetic domain losses and known dislocation losses is proposed to explain the observed dependence.

Institute of Research, Lehigh U. [Bethlehem, Pa.]
PROPAGATION OF ELASTIC AND PLASTIC DEFORMATION IN SOLIDS, by C. W. Curtis. Annual rept. for 1 Sep 57, 31 Aug 58 on Contract DA 36-034-ORD-1456, Supplement 4. [1958] 17p. 8 refs.
Order from LC mi$2.40, ph$3.30 PB 138 475

Contributions to the theory of the propagation of elastic strain calculations to determine the effect of varying the time-dependence of the applied pressure. Method of solving problems involving "mixed end conditions."

BEAM VIBRATIONS WITH QUASI-ORTHOGONAL BOUNDARY CONDITIONS, by Y. C. Das, L. E. Goodman and A. R. Robinson. Rept. for June-Dec 58 on Materials Analysis and Evaluation Techniques, Contract AF 33(616)5426. Nov 59, 46p. 8 refs. WADC Technical rept. 59-76.
Order from OTS $1.25 PB 161 348

An exact solution is developed for the transient and steady-state motion of beams when rotational or translational viscous damping enters the boundary conditions. The method is applicable to any structures whose governing differential equations and boundary conditions would, in the absence of energy dissipation, constitute a classical Strum-Liouville system. (Author)

Naval Ordnance Lab., White Oak, Md.
ROTATION INDUCED BY SINUSOIDAL EXCITATION, by Daniel Stern. 9 Sep 57, 26p. 14 refs. NAVORD rept. 5726; AD-157 273.
Order from LC mi$2.70, ph$4.80 PB 144 720

A freely supported rigid rod rests in a tube. The rod of outside radius r, and the tube of inside radius R, are both right circular cylinders. The longitudinal axes of the rod and tube are horizontal. If the tube receives transverse sinusoidal excitations, the rod usually bounces. However, for particular combinations of frequency and acceleration, it is possible for the rod to rotate without bouncing. Experimental results of various rod and tube models are reported. The locus of the rod's center during rotation is derived. A relationship between rotation and exciting frequency is derived. An expression for the period of rotation is developed. An approximate relationship for predicting rotation is also developed. (Author)

Royal Inst. of Tech. (Sweden).
MEASURING ACCURACY IN CREEP TESTS. PART II. INFLUENCE OF THERMAL STRESSES, by Arne Mellgren. Rept. for June-Dec 58 on Materials Analysis and Evaluation Techniques, Contract AF 61(052)05. Oct 59, 60p. 10 refs. WADC Technical rept. 59-78, Pt. 2.
Order from OTS $1.50 PB 161 356

In this report the author calculates the thermal stresses induced in cylinders and plates by non-uniform surface temperatures. The relations of thermal stresses to creep are then determined for cylindrical and sheet creep specimens. These relations are expressed mathematically for sinusoidal and square wave surface temperature gradients. Numerical examples are presented and discussed. (Author) (See also PB 151 928)

Aeronautical Research Lab., Wright Air Development Center, Wright-Patterson AFB, Ohio.
ON THE STABILITY OF ONE-DIMENSIONAL VISCOUS FLOWS: SOUND WAVES AND SHOCK WAVES, by Louis G. Kaufman, II and Morris Morduchow (Polytechnic Inst. of Brooklyn). Aug 59, 53p. 29 refs. WADC Technical rept. 59-355.
Order from OTS $1.50 PB 161 318

The solution to the steady one-dimensional Navier-Stokes equations is presented for the case of Prandtl number equal to 3/4 and constant coefficients of specific heats and viscosity. The solution has been shown to be valid for ordinary air flows with free-stream Mach numbers not exceeding about two. The unsteady flow solution is achieved by assuming a small one-dimensional perturbation of the steady flow and thence linearizing the equations. Solutions for the disturbance then vary exponentially with time. Two simultaneous ordinary differential equations for the velocity and temperature disturbances as functions of the space variable, with the complex damping or amplification factor as an eigenvalue depending on the disturbance wave length, are then derived. Disturbed uniform flows of both inviscid and viscid fluids are solved exactly; the resulting characteristic equations have eigenvalues with negative real parts which indicate that the disturbance decreases with time and hence that the uniform flows are stable. These results can be interpreted as indicating the speed of propagation and the rate of damping of one-dimensional sound waves with viscosity and heat conduction. Approximate methods are applied to obtain the characteristic equation for shock-wave flows. All of the several methods used here, which are essentially applications of the methods of collocation and of averages, yield the exact solution results for the special case of sonic flows, and all tend to predict instability for shock-wave flows. The analysis indicates, in particular, that for shock-wave flows there will always exist disturbance wave lengths, namely sufficiently large ones, for which the disturbances will tend to amplify with time. The instability is less pronounced, if at all present, for very small disturbance wave lengths (less than 10^{-4} inches for sea-level atmospheric conditions. (Author)

CALIBRATION OF A 40-INCH CONTINUOUS FLOW TUNNEL AT MACH NUMBERS 1.5 TO 6, by C. J. Schueler and W. T. Strike. Rept. on ARO, Inc., Contract AF 40(600)800. Nov 59, 39p. 9 refs. AEDC-TN-59-136.
Order from LC mi$3.00, ph$6.30 PB 144 585

A test program was conducted to calibrate the von Karman Gas Dynamics Facility"s 40- by 40-in., continuous, supersonic wind tunnel (Tunnel A). Theoretical nozzle contours were adjusted, and local Mach numbers and flow angles were measured within a region of the test section. Results of the calibration at Mach numbers from 1.5 to 6 in half Mach number increments are presented. Included in the nozzle calibration program were tests of two typical models, AGARD Calibration Model B and a 15-deg cone cylinder.

INITIAL BEHAVIOR OF A SPHERICAL RAREFACTION WAVE, by K. A. Faymon. Technical rept. no. 3 on Contract Nonr-1141(01). May 57, 158p. 17 refs.
Order from LC mi$7.50, ph$24.30 PB 138 998

The initial behavior of a spherical rarefaction wave is investigated by allowing an initially quiet gaseous sphere to expand into a vacuum. The ensuing motion in different regions of the x, t-plane is investigated by seeking solutions to the spherical equations of motion in the form of power series for the particle and sonic velocities.

Cornell Aeronautical Lab., Inc., Buffalo, N. Y.
ROLLING PULLOUT STUDY. PART II: FLIGHT MEASUREMENT OF VERTICAL AND HORIZONTAL TAIL LOADS DURING A RUDDER LOCKED ROLLING PULLOUT MANEUVER, by D. W. Rhoads. Rept. on Contract W33-038-ac-18517. Jan 52, declassified 27 July 54. 415p. 5 refs. Rept. no. TB-451-F-4; AF Technical rept. no. 6701; ATI-204 300.
Order from LC mi$11.10, ph$63.60 PB 144 525

Flight tests have been conducted on an F-80A airplane for the basic purpose of determining the existing vertical and horizontal tail loads during a typical rudder locked rolling pullout maneuver. In addition to these basic quantities, recorded time histories of the control inputs, rolling and yawing velocities, sideslip angle, normal acceleration, and forward speed change are presented. The tests were made under a variety of geometric and aerodynamic configurations. Such quantities as load factor, Mach number, c.g. position, altitude and lateral moments of inertia were varied in order to present as complete a picture as possible of the responses to be expected under various plausible conditions. All of these tests were conducted well within the safe limits of the airframe, based on structural tests and standard safe load criteria. (See also PB 151 018)

SHOCK TUBE DRIVER TECHNIQUES AND ATTENUATION MEASUREMENTS, by Charles E. Wittliff and Merle R. Wilson. Rept. on Contract AF 18(603)10. Aug 57, 39p. 9 refs. Rept. no. AD-1052-A-4; AFOSR-TN-57-546; AD-136 531.
Order from LC mi$3.00, ph$6.30 PB 144 652

The development of the hypersonic shock tunnel at the Cornell Aeronautical Laboratory, Inc. has been accompanied by a study of various techniques for producing strong shock waves to drive the shock tunnel. The results of this study are described as to technique and relative efficiency of different driver gases, and the resultant attenuation of the shock wave in the low pressure tube. It has been found that as the strength of the shock wave increases so does the amount of attenuation. Furthermore, the more efficient a given driver technique is in producing a shock wave, the larger the degree of attenuation that is observed. A survey of the presently available theories on shock wave attenuation indicates that the theories do not accurately predict the attenuation of shock waves having Mach numbers greater than 2, whereas all of the experimental data reported herein are for shock wave Mach numbers greater than 4. This serves to illustrate the need for a better understanding of the attenuation of strong shock waves. (Author)

Cornell U. Graduate School of Aeronautical Engineering, Ithaca, N. Y.
AN INSTRUMENT FOR THE STUDY OF AERODYNAMIC FLOWS, by Wallis R. Grabowsky. Rept. on Contract Nonr-401(25). [1958] 34p. 6 refs.
Order from LC mi$3.00, ph$6.30 PB 144 457

Considerable progress in aerodynamic studies has resulted from the application of instruments measuring flow parameters. The hot wire, pitot tube, interferometer, and schlieren-photograph techniques have all proved to be invaluable assets in these studies. Each of these techniques has application in various free stream velocity ranges, the entire range going from supersonic to subsonic flow speeds. The instrument described was designed to determine quantitatively one flow parameter (the density) within the bounds of the following requirements: (1) It was to be applicable throughout the entire free stream velocity range of all the techniques listed above. (2) It was to extend considerably the lower free stream velocity limit of any of the techniques listed above. (3) It was not to interact with the flow pattern to such a degree that it would make the information obtained as a result of accomplishing requirement (2) difficult to interpret.

Cornell U. Graduate School of Aeronautical Engineering, Ithaca, N. Y.
ON THE "TRIPLE POINT" IN SHOCK-DIFFRACTION PROBLEMS, by Tien-Fun Sun. Rept. on Contract AF 18(600)1523. Sep 56, 129p. 16 refs. AFOSR TN-56-583; AD-115 007.
Order from LC mi$6.30, ph$19.80 PB 138 687

The purpose of the present study is to determine the flow inside the diffracted wave, the position and the strength of the diffracted wave, and in particular how it reinforces or attenuates the incident or the reflected shock at the points - "triple points" where it intersects them.

David Taylor Model Basin, Washington, D. C.
THE DETERMINATION OF THE LOCAL SKIN FRICTION AND THE THICKNESS OF TURBULENT BOUNDARY LAYERS FROM THE VELOCITY SIMILARITY LAWS, by Paul S. Granville. Oct 59, 19p. 22 refs. Rept. 1340; AD-227 625
Order from LC mi$2.40, ph$3.30 PB 144 541

The applicability of pipe calibrations of Preston tubes to boundary layers is discussed on the basis of the logarithmic similarity law and the displacement effect of the tubes. A new logarithmic formula for the boundary-layer thickness of flat plates which is especially useful for high Reynolds numbers is also derived from the similarity laws.

Institute of Aerophysics, U. of Toronto (Canada).
INVESTIGATION OF FREE-MOLECULE AND TRANSITION FLOWS NEAR THE LEADING EDGE OF A FLAT PLATE, by E. L. Harris. Rept. on Contract AF 18(600)1185. Nov 58, 97p. 17 refs. UTIA rept. no. 53; AFOSR-TN-58-1043; AD-206 757.
Order from LC mi$5.40, ph$15.30 PB 144 754

Pressure measurements were made in the flow over a thin flat plate set parallel to the stream in the UTIA low-density wind tunnel. The length of the plate was approximately 7 mean free paths and free-stream speed ratios of 0.55 and 0.78 were used. Pressure measurements were obtained from forward- and backward-facing orifice-type probes, and wall taps. Reasonably good agreement was obtained between orifice impact-pressures measured less than one mean free path from the leading edge and a theoretical pressure calculated on the assumption that molecules entering the orifice probe came from the region upstream of the plate and from the plate surface after a diffuse reflection from it. That is, free molecule flow was shown to exist in a region less than one mean free path downstream from the leading edge.

Institute of Aerophysics, U. of Toronto (Canada).
MEASUREMENT OF TWO-POINT CORRELATIONS OF THE SURFACE PRESSURE ON A CIRCULAR CYLINDER, by V. Prendergast. Rept. on Contract AF 49(638)249. July 58, 32p. 3 refs. UTIA Technical note 23; AFOSR-TN-58-861; AD-203 674.
Order from LC mi$3.00, ph$6.30 PB 144 739

Results of an experimental investigation of the two-point correlations of the surface pressure on a circular cylinder are presented. The cylinder was mounted in a wind tunnel at right angles to the flow and contained within it the two microphones which were used as pressure transducers. The curves of correlation coefficient approached a constant asymptote (approximately 0.2), rather than zero at large hole spacing; this is tentatively regarded as a spurious environmental effect. The curves were accordingly adjusted to a zero asymptote. A plot of correlation

length v, Reynolds number, computed from the adjusted curves, has been presented. (Author)

Institute of Engineering Research, U. of California, Berkeley.
LOW DENSITY SUPERSONIC DIFFUSER PERFORMANCE, by Arthur M. Collins. Master's thesis. Rept. on Contract Nonr-222(45). 15 Jan 59, 49p. 22 refs. Rept. no. HE-150-164; Series no. 20, issue no. 126.
Order from LC mi$3.30, ph$7.80 PB 144 551

The impact pressure and static pressure recoveries of a supersonic, converging-diverging diffuser were measured in the range M = 1.7 - 4.1, Re_L 500 - 3200. The Reynolds number was with respect to the leading edge diameter. It was found that, for subsonic flow in the back end of the diffuser, normal shock static and impact pressure recoveries were the best that could be obtained. Afterglow photographs were taken of the low density flow inside the transparent plastic diffuser.

James Forrestal Research Center, Princeton, N. J.
INVESTIGATION OF THE INTERACTION OF A TURBULENT BOUNDARY LAYER WITH PRANDTL-MEYER EXPANSION FANS AT M 1.88, by K. R. Ananda Murthy and A. G. Hammitt. Rept. on Contract AF 18(600)498. Aug 58, 41p. 3 refs. Rept. no. 434; AFOSR-TN-58-839; AD-203 081.
Order from LC mi$3.30, ph$7.80 PB 144 580

An investigation has been made to study in detail the interaction of expansion fans with a two-dimensional supersonic turbulent boundary layer at a free stream Mach number of 1.88. The angle of expansion, which is the only parameter varied in this experimental setup, varies from 5° to 30°. Schlieren photographs of the flow pattern have been taken to obtain an overall picture of this type of interaction. Static pressure and total head tube measurements have been made to study the interaction in detail. The method of rotational characteristics has been applied to the boundary layer velocity distribution as it expands around the corner to construct the flow field and to calculate the inviscid pressure distribution near the corner as a better approach to the problem than the classical Prandtl-Meyer flow.

Jet Propulsion Lab., Calif. Inst. of Tech., Pasadena.
SCHLIEREN EVALUATION OF A SHOCK TUBE FOR PRESSURE-GAGE PERFORMANCE, by Stuart M. Hauser. Rept. on Contract DA 04-495-ORD-18. 18 Nov 57, 54p. 13 refs. Rept. no. 20-115; AD-159 887.
Order from LC mi$3.60, ph$9.30 PB 144 716

In order to determine the origin of the nonperiodic noise appearing in gage-response records made with the gage-evaluation shock tube of the Jet Propulsion Laboratory, a schlieren system was set up at the end of the shock tube for photographing characteristics of the incident and reflected shock fronts, as well as the flow region following each. The schlieren light source had an effective flash duration of 0.5 μsec, producing schlieren pictures of the shock front which show no noticeable blurring. Sensitivity of the optical system was adequate for detecting pressure gradients as low as 5 psi/in. This was satisfactory for observing features of gage-response traces corresponding to noise steps as low as 5 psi, which occurred in a time less than 20 μsec. Although the shock tube does not produce clean, ideal aerodynamic flow, the investigation revealed that the undesirable features of gage-response records are not associated with observed nonideal characteristics of the shock front or of its interactions with the end of the shock tube. Consequently, it may be concluded that the shock tube is a satisfactory instrument for the investigation of the frequency response of pressure gages. The frequency range extends from 100 cps to well beyond 100,000 cps. (Author)

Naval Supersonic Lab., Mass. Inst. of Tech., Cambridge.
AN EXPERIMENT ON THE INSULATING PROPERTIES OF BOUNDARY LAYERS, by Frank H. Durgin. Rept. on Contract AF 18(603)82. July 59, 142p. 54 refs. Technical rept. 218; AFOSR-TN-57-392; AD-132 467.
Order from LC mi$7.20, ph$22.80 PB 144 422

An experimental investigation of the "insulating properties" of laminar and turbulent boundary layers has been conducted. The test was undertaken as part of a more general program in which the effects of mass transfer through a porous wall to a boundary layer are being studied. The purpose of the present test was to determine which of several theories was best able to predict the insulating properties of the boundary layer. The model was a cone. The forward half was cooled uniformly to about 100°F below recovery temperature. Theoretical methods due to Baron, Lighthill, and Libby and Morduchow have been used to predict the temperature decay over the aft part of the cone for the laminar case. Lighthill's theoretical results are in very close agreement with the experimental results. Methods due to Seban, Rubesin, and Hill have been applied to the turbulent case. The experimental results fall about halfway between the predictions of Seban and Rubesin. In calculating the theoretical results it is shown that the methods of Lighthill, Seban, Rubesin, and Hill can all be reduced to an integral of the same form and a solution for this integral is given.

National Research Labs., Ottawa (Canada).
AN EXPERIMENTAL STUDY OF ROTATING STALL IN A TWO-STAGE AXIAL COMPRESSOR, by R. F. Myer. Aug 59, 57p. 15 refs. Aeronautical rept. LR-259.
Order from LC mi$3.60, ph$9.30 PB 144 507

The stalling behaviour of an Orenda CT-100, experimental, two-stage axial compressor was studied at the constant operating speed of 3000 r.p.m. Rotating stall was observed to commence at a mass flow coefficient of 0.435 and as the mass flow was reduced several different patterns of rotating stall were observed. In two ranges of operation "steady" patterns consisting of three rotating stalls were observed, in two other ranges of operation rotating stall was observed but the stall patterns were continually changing, while for very low mass flow operation the flow over the whole of the annulus appeared to be stalled. Reversed flow within the stalls was found to be an important feature of rotating stall. (Author)

Naval Supersonic Lab., Mass. Inst. of Tech., Cambridge.
THE HETEROGENEOUS, LAMINAR, BOUNDARY LAYER, by Judson R. Baron. Rept. on Contract AF 18(600)82. [June 57] 30p. 6 refs. Technical rept. no. 236; AFOSR-TN-57-398; AD-132 474.
Order from LC mi$2.70, ph$4.80 PB 145 023

Study is made of the general mass transfer situation for which the fluid introduced into the high speed boundary layer differs appreciably in physical properties from those of the external fluid flow. The descriptive system of equations are deduced from Enskog's solution of the Boltzmann equation and include provision for component mass conservation, energy migration resulting from specific enthalpy differences, and thermodynamic coupling between the transport phenomena. A similarity analysis is presented for laminar flows with and without pressure gradients and numerical results are given for helium and carbon-dioxide as foreign gases in a primarily air boundary layer flowing over a flat plate. It is shown that the injection of relatively low density fluid yields considerable alleviation of the thermal levels normally encountered at supersonic Mach numbers. A qualitative argument is offered to explain the effects on the basis of available thermal capacity. The related sublimation problem is considered briefly. (Author)

Polytechnic Inst. of Brooklyn, N. Y.
THE USE OF HELIUM FOR COOLING NOZZLES EXPOSED TO HIGH TEMPERATURE GAS STREAMS, by Antonio Ferri and Paul A. Libby. Rept. on Contract AF 33(616)17. July 55, reissued Nov 58, 25p. 3 refs. WADC Technical note 55-318; AD-94 314.
Order from LC mi$2.70, ph$4.80 PB 144 903

The results of preliminary theoretical analysis and tests of the use of helium as a cooling gas in hypersonic wind tunnel and rocket motor nozzles are presented. The helium is introduced tangential to the exposed surface from a slot located where the local Mach number is about 0.4. Thereby, an insulating layer of helium is formed between the exposed surface and the high temperature gas stream. Helium appears to be the most appropriate insulating gas because of its high sonic velocity and because of its chemical inertness. The theoretical analysis indicates that the method should be applicable over a wide range of stagnation conditions.

Polytechnic Inst. of Brooklyn, N. Y.
ANALYSIS OF TIP-CLEARANCE FLOW IN TURBOMACHINES, by Chung Hua Wu and Wen Wu. Technical rept. no. 1 on Contract Nonr-839(04). July 54, 63p. 23 refs. AD-36 783.
Order from LC mi$3.90, ph$10.80 PB 145 033

A basic analysis of the blade tip flow phenomena is presented. The analysis is based on a steady relative flow of a viscous incompressible fluid. A rotating cylindrical coordinate system which moves with the blade at the same speed is used. An order-of-magnitude analysis reduces the basic equations to a set of simplified equations for both low and high Reynolds number. Expressions are given for the determination of the distributions of pressure and velocity in the clearance space and the mass flow across the tip clearance space. The computation of the velocity distribution is relatively simple and three methods of solution for the pressure distribution are presented. (Author)

University of Southern California. Engineering Center, Los Angeles.
SOME FURTHER RESULTS ON HEATING A SUPERSONIC GAS STREAM WITH A RADIO FREQUENCY DISCHARGE, by Frederick O. Smetana. Technical note on Contract AF 18(603)95. 1 Nov 59, 20p. 7 refs. Rept. 56-207; AFOSR-TN-59-1127.
Order from LC mi$2.40, ph$3.30 PB 144 781

Results of further experiments with RF discharge heating of a supersonic gas stream are reported. Temperature increases of at least 600°F were recorded although the presence of strong electrical fields made it extremely difficult to interpret temperature indications. The action of the ionized gas and the strong field limits the type of materials which may be used for nozzle materials. Qualitative indications of the decay of active species, N-N recombination, wall heating, effect of pressure, nozzle configuration, and electrode configuration were also obtained. (Author)

California Inst. of Tech., Pasadena.
VISCOUS EFFECT ON SURFACE WAVES GENERATED BY STEADY DISTURBANCES, by T. Yae-tsu Wu and R. E. Messick. Rept. on Contract Nonr-220(28). Feb 58, 33p. 9 refs. Engineering Div. rept. no. 85-8; AD-154 372.
Order from LC mi$3.00, ph$6.30 PB 138 276

A linearized theory is applied to investigate the viscous effect on water waves generated and maintained by a system of external disturbances which is distributed over the free surface of an otherwise uniform flow. The flow is taken to be in the steady state configuration. The analysis is carried out to yield the asymptotic expressions for the surface wave when the Reynolds number of the flow is either large or small.

Cornell U. Graduate School of Aeronautical Engineering, Ithaca, N. Y.
INTERFACIAL INSTABILITY OF FLUIDS OF ARBITRARY ELECTRICAL CONDUCTIVITY IN UNIFORM MAGNETIC FIELDS, by I. C. T. Nisbet. Rept. on Contract Nonr-401(25). [1958] 57p. 22 refs.
Order from LC mi$3.60, ph$9.30 PB 144 456

The stability to small sinusoidal disturbances of an infinite plane interface separating an electrically conducting fluid from a lighter non-conducting fluid is investigated in the case where both fluids are in-

compressible and inviscid, gravity and a uniform magnetic field act on the system permits study of the effects of variation of the conductivity of the upper fluid and the direction of the applied field.

Diamond Ordnance Fuze Labs., Washington, D. C.
DEVELOPMENT OF A SONIC FLOWMETER FOR STEEL PIPE, by Don R. Pardue, James C. McDade, and Frank Vrataric. 15 Dec 58, 49p. 5 refs. TR-663; AD-209 129.
Order from LC mi$3.30, ph$7.80 PB 144 635

The flowmeter described in this report was developed to measure flow rates from 3000 to 8000 gpm through a thick-walled steel pipe. The "upstream-downstream" method is used whereby the phase difference of an ultrasonic wave is measured in both directions to determine rate of flow. An FM system, whose modulation rate is equivalent to the delay time between transducers, is utilized to minimize undesirable "leakage" signals.

Institute of Engineering Research, U. of California, Berkeley.
A NOTE ON THE LINEARIZED DEEP WATER THEORY OF WAVE PROFILE AND WAVE RESISTANCE CALCULATIONS, by J. K. Lunde. Technical rept. no. 4 on Contract Nonr-222(30). Dec 57, 121p. 12 refs. Series no. 82, issue no. 4; AD-153 809.
Order from LC mi$6.30, ph$19.80 PB 138 110

Hydrodynamics Lab., Calif. Inst. of Tech., Pasadena.
OBSERVATIONS ON CAVITATION BUBBLE COLLAPSE, by Albert T. Ellis. Rept. on Contract N6onr-24420. Dec 52, 81p. 25 refs. Rept. no. 21-12; AD-7615.
Order from LC mi$4.80, ph$13.80 PB 145 035

The methods of generating bubble cavities which were studied included (1) pressure variation by flow over submerged bodies and (2) direct variation of the hydrostatic pressure. Observations were made in a high-speed water tunnel and in a small sample of stationary water. In the experiments, collapsing bubbles showed increasing departures from the spherical shape with decreasing radius. The collapse time of the bubbles was longer than predictions based on the extended Rayleigh theory. The theoretical explanation of this fact lies in the asymmetry of the collapse shapes. The general effect of large coupling between radial and translational bubble motion was to produce an increase in the translational motion in the direction of decreasing pressure. Rebounding and nonrebounding bubbles were observed. The latter type was believed to be a more important source of cavitation damage and noise than the bubbles containing permanent gas with their cushioned collapse. The observations indicated that bubble growth is more stable than bubble collapse.

St. Anthony Falls Hydraulic Lab., U. of Minnesota [Minneapolis]
EXPERIMENTAL STUDIES OF SUPERCAVITATING FLOW ABOUT SIMPLE TWO-DIMENSIONAL BODIES IN A JET, by Lorenz G. Straub and Edward Silberman. Proj. rept. no. 59 on Contract Nonr-710(24). Apr 58, 38p. 15 refs.
Order from LC mi$3.00, ph$6.30 PB 138 550

A two-dimensional free-jet water tunnel is described briefly. Results of experimental measurements on a two-dimensional cup, symmetrical wedges, inclined flat plates, and a circular cylinder in the tunnel are given. Measured force coefficients at zero cavitation number are in good agreement with theory. Shapes of the cavities were computed for one of the wedges and for one of the plates at zero cavitation number; the observed shapes are also in good agreement with the theory.

METALLURGY

Battelle Memorial Inst., Columbus, Ohio.
HIGH-TEMPERATURE-ALLOY CUTTING PROGRAM, by J. E. Clifford, D. E. Semones, and J. McCallum. Final engineering rept. on Contract AF 33(600)35440. 18 Jan 59, 153p. 11 refs. AMC TR-59-7-617; AD-210 979.
Order from LC mi$7.50, ph$24.30 PB 144 650

New methods for cutting high-temperature alloys included chemical machining, chemical cutting by high-velocity jets, abrasive slurries, ultrasonics, electro-arc and electrospark machining, explosive cutting, and electrolytic machining. Multiple cutoff by electrolytic machining was selected for development. A survey made of industrial methods for billet cutoff permitted economic comparisons of new with existing methods and pinpointed important specifications.

Kaiser Aluminum and Chemical Co., Spokane, Wash.
THE IMPROVEMENT IN WELD SOUNDNESS BY THE USE OF HALOGENS AND HALIDES IN INERT GAS METAL ARC WELDING OF ALUMINUM, by A. R. Pfluger and M. B, Kasen. Phase rept. 1 on Welding of High Strength Aluminum Alloys, Contract DA 04-200-ORD-333. 30 Dec 55, 72p. 2 refs. Interim project rept. no. MS PR 55-68; AD-107 075.
Order from LC mi$4.50, ph$12.30 PB 144 646

A study was made of the effect of the additions of Cl, $AlCl_3$, $MgCl_2$ or $TiCl_4$ to the arc area during the inert gas metal arc (MIG) welding of Al alloys. Chlorine was added to the argon shielding gas in amounts of 0.05 to 0.25 vol-% and resulted in improvement in weld soundness and an increase in the tensile strength and ductility of the weld metal. Plates, 1/2 and 3/4 in. thick, were used in the tests. The optimum Cl addition was 0.063% for a total shielding gas flow of 60 cu ft/hr. A reduced quantity of dross and entrained (gas) porosity in the weld was accomplished. Excessive spatter was noted during the MIG welding of Al alloys containing Mg when welded in the presence of halide or halogen additions to the arc area. The use of shorter arc lengths (arc voltage) and higher currents decreased the tendency of the spatter to agglomerate into globules. Difficulty was encountered in attempts to introduce $AlCl_3$ into the weld area. Welds made with a

cored wire containing 1/2% $MgCl_2$ compared favorably with welds achieved by the use of Cl additions to the shielding gas but produced a great amount of spatter and an erratic arc. The use of $TiCl_4$ additions to the protective atmosphere resulted in increased weld soundness and gave better arc characteristics than were obtained by using Cl, $AlCl_3$, or $MgCl_2$.

Lockheed Aircraft Corp., Sunnyvale, Calif.
ELECTRON BOMBARDMENT MELTING AND CASTING OF BERYLLIUM, by H. T. Sumsion and C. O. Matthews. Rept. on Contract NOrd-17017. 7 Nov 58, 44p. 4 refs. LMSD-48330; AD-208 004.
Order from OTS $1.25 PB 161 327

Electron-bombardment furnace and process for melting and casting 3-inch diameter beryllium ingots are described. The ultimate objective is to produce a beryllium or beryllium-alloy ingot which can be fabricated into plate. Initial metallurgical evaluations of the cast ingots have been made by visual inspection, metallographic examination, chemical and X-ray diffraction analyses, machinability, hardness, tensile, and bend tests. Effect of variations in melt stock and process variables, including composition, on ingot structure have been investigated. Data are given for ingots evaluated to date

Powder Metallurgy Lab., Stevens Inst. of Tech., [Hoboken, N. J.]
A SURVEY OF ULTRA FINE POWDERS AND POWDER MIXTURES, by Frank W. Heck, Donald P. Ferriss, and others. Final rept. on Subcontract NOas-54-519. 30 Nov 56, 28p. 6 refs.
Order from LC mi$2.70, ph$4.80 PB 145 029

Cooling pyrophoric iron and mixed ultra-fine powders to about -250F permits their being safely handled and compacted in air. A method of reducing oxygen in these powders to less than 0.02% without sintering has been devised. Some experimental powders exhibit unusual strength and/or ductility after simple compacting and sintering. Others require hot pressing or hot coining to establish solid state bonding. (Author)

Titanium Metallurgical Lab., Battelle Memorial Inst., Columbus, Ohio.
THE DETERMINATION OF HYDROGEN IN TITANIUM AND ITS ALLOYS; A CRITICAL REVIEW, by T. D. McKinley (E. I du Pont de Nemours & Co.). 23 Sep 57, 25p. 27 refs. Titanium Metallurgical Lab. memo.
Order from LC mi$2.70, ph$4.80 PB 144 564

Theory, operational characteristics, and indicated precision and accuracy of analytical methods based on vacuum extraction, equilibrium pressure, and combustion approaches are reviewed. At the present time, vacuum extraction at 1400 C and the equilibrium pressure method are recommended for determination of hydrogen in titanium and titanium-rich alloys.

Utah U., Salt Lake City.
KINETICS OF OXIDATION OF METAL POWDERS, by Harold H. Boehm and H. Edward Flanders. Technical rept. no. 3 on Contract DAI 04-495-501-ORD(P)-19. 16 May 58, 75p. 23 refs. AD-208 077.
Order from LC mi$4.50, ph$12.30 PB 144 562

When spherical magnesium particles were oxidized below the ignition temperature in a range of 400-600° C, it was observed that internal oxidation amounted to a larger percentage than external scale formation. Density determinations were undertaken before and after oxidation of the particles in an effort to study the mechanism of internal oxidation.

Ferrous Metals

Crucible Steel Co. of America, Pittsburgh, Pa.
DEVELOPMENT OF HIGH-TEMPERATURE IRON-BASE ALLOYS, by A. Kasak, V. K. Chandhok, and E. J. Dulis. Rept. for Apr 58-May 59 on Metallic Materials, Contract AF 33(616)5428. Oct 59, 71p. 5 refs. WADC Technical rept. 59-353.
Order from OTS $2.00 PB 161 337

An investigation was conducted to develop steels that have very high strengths at ambient temperature and at temperatures approaching 1200 F. The results show that with proper balancing of the composition and optimum heat-treatment the objective of the program could be attained. Up to 1100 F the steels developed had higher strengths than any other steel known today. The highest strengths were obtained on steels that contained 0.35-0.40% C, 7-9% Cr, 0.5-1.0% V, 5-7% Mo, 5-8% Co, up to 1% Ti, up to 1% Ta+Cb, up to 1.5% W, and up to 0.01% B. One steel that contained 0.36% C, 7.72% Cr, 1.15% V, 5.71% Mo, 4.93% Co, and 0.009% B had a tensile strength of 310,000 psi at room temperature and 201,000 psi at 1100 F; the 100-hr creep-rupture strength at 1100 F was 98,000 psi. Also, excellent strengths were obtained at 1200 F. Beneficial effects on strength and ductility were sometimes derived from using a novel heat-treating schedule. Microscopic studies indicated that the fracture behavior and the creep-rupture strength were significantly influenced by the formation and coalescence of carbides at the grain boundaries. (Author)

DEVELOPMENT OF HIGH-STRENGTH STEELS BY WORKING OF METASTABLE AUSTENITE, by F. R. Morral. 30 Nov 59, 24p. 18 refs. DMIC memo. 39.
Order from OTS $0.50 PB 161 189

On hot-cold-worked steels, as in steels conventionally heat treated to martensite, there is a trend of rising strength and falling ductility with increasing carbon content. The greater the deformation of the metastable austenite, the better the yield and tensile strength properties. Tensile strengths of 400,000 psi have been obtained with deformations on rolling of the order of 90 per cent reduction in cross section. For the aircraft and missiles industries, the steels containing 0.30 to 0.40 carbon seem to be the most suitable. The effect of particular alloying elements on

the behavior of the deformed metastable austenite is not known. The tempering sequence depends on the steel used. If subcritical deformation of metastable austenite is to become a commercial process, development of plant techniques is necessary. (Author)

DRILLING HIGH-STRENGTH STEELS HEAT TREATED TO 330 TO 560 BRINELL HARDNESS, by A. F. Gerds, Carl T. Olofson, and F. W. Boulger. 24 Aug 59, 17p. 4 refs. DMIC Memo-31; AD-225 672.
Order from OTS $0.50 PB 161 181

Successful drilling of hardened steels requires adequate power, rigidity, and appropriate drills. Drilling speeds and feeds range from 7 to 40 feet per minute, and 0.0005 to 0.005 inch per revolution, respectively. Feeds must be positive. Idling in the hole without cutting work hardens the steel below the drill point, making further drilling virtually impossible. Rigid setups between work and drill, and the use of short, heavy-duty drills are emphasized. These factors increase drill life and hole accuracy, and frequently allow the use of less expensive high-speed steel drills. A back-up plate is often important for added support, especially when drilling through holes. The composition and geometry of the drill have pronounced effects on successful drilling of high-strength steels, but the available information does not warrant specific recommendations on these two factors. This report, however, describes conditions and tools which were reported to be suitable for use with various workpieces. (Author)

HEAT TREATMENT OF HIGH-STRENGTH STEELS FOR AIRFRAME APPLICATIONS, by R. J. Fiorentino, D. B. Roach, and A. M. Hall. Rept. on Contract AF 18(600)1375. 27 Nov 59, 111p. 29 refs. DMIC rept. 119.
Order from OTS $2.50 PB 151 076

This report is a summary of the information gathered from four steel producers and twenty-four steel consumers on the status of the heat treatment of high-strength steels for airframe applications. The materials covered in the report are (1) the low-alloy hardenable engineering steels, (2) the hot-work die steels (3) the martensitic stainless steels, (4) the martensitic precipitation-hardenable stainless steels, (5) the semi-austenitic precipitation-hardenable stainless steels, (6) the austenitic precipitation-hardenable stainless steels, and (7) the cold-rolled austenitic stainless steels. The topics covered under each material include illustrative heat treatments, uses, fabrication, atmospheres, protective coatings, cleaning, and descaling. Also included is a list of some large-capacity heat-treating-furnace equipment available throughout the country. (Author)

MILLING OF HIGH-STRENGTH STEELS IN THE HARDNESS RANGE OF 330-560 BRINELL, by C. T. Olofson. 17 Aug 59, 40p. 30 refs. DMIC memo. 30; AD-225 673.
Order from OTS $0.50 PB 161 180

Carbide tool materials best suited for use include the C-2, C-3, C-6, and C-7 grades. Carbide cutter design utilizes 0- and 15-degree negative rake angles, depending on the hardness of the steel being milled. Corner angles from 30 to 45 degrees are employed to lengthen the cutting edge so uniform tool wear is obtained. Relief angles from 6 to 10 degrees are used as a compromise between the best cutting-edge support and the longest tool life per tool regrind. Carbide cutters, operating at 0.001 to 0.010 inch per tooth feed and at depths of cut up to 0.10 inch, employ cutting speeds between 50 and 700 feet per minute, depending on the milling operation and the hardness of the steel. High-speed-steel cutters appropriate for milling high-strength steels include the molybdenum types of M-3, Type 2, M-10, M-4, and M-7, and the cobalt grade, M-34. Tungsten high-speed steel with 5 per cent cobalt (T-15) seems to give the best tool life, on the basis of limited data. High-speed-steel cutter design employs 0- to 35-degree positive rake angles, 30- to 45-degree corner angles, and 5- to 10-degree clearance angles, depending on the milling operation. These tools operate at feeds between 0.001 and 0.010 inch per tooth, depths of cut up to 0.25 inch, and speeds between 6 and 120 feet per minute. (Author)

Martin Co., Baltimore, Md.
AUTOCLAVE TESTING OF TYPE 304 STAINLESS STEEL, ADDENDUM, by L. Frank and P. Eisenberg. Addendum to Contract DA 44-009-eng-3043, Task 1, phase 2. Nov 58, 15p. 6 refs. MND-E-1322-I; AD-209 929.
Order from LC mi$2.40, ph$3.30 PB 144 522

The oxygen concentration in the steam phase should be the prime concern in relation to environmental conditions contributing to stress corrosion cracking. Strain gage measurements were made on U-bend specimens used in the autoclave tests. Stress values resulting from loading the specimen ranged to about 39,000 psi in the bend. (See also PB 151 149)

Light Metals

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
HEAT CAPACITY OF BERYLLIUM, by J. W. Holladay. 19 Oct 59, 11p. 23 refs. DMIC memo. 36.
Order from OTS $0.50 PB 161 186

This memorandum collects the data available to the Defense Metals Information Center on the heat capacity of beryllium. Heat capacity as a function of temperature and the effect of impurities on the heat capacity are discussed.

James Forrestal Research Center, Princeton U., N. J.
THE THERMODYNAMIC ACTIVITY OF CADMIUM IN MAGNESIUM-CADMIUM ALLOY, by Richard J. Borg and C. Ernest Birchenall. Technical rept. no. 2 on Contract Nonr-1858(08). 16 Apr 58, 12p. 8 refs. Metallurgy rept. no. 15.
Order from LC mi$2.40, ph$3.30 PB 138 612

Vapor pressures for eight compositions of Mg-Cd have been determined by the Knudsen effusion technique. Measurements were made at several temperatures for each alloy and the results interpolated to a common temperature for the calculation of the activities. (See also PB 138 899)

New York U. Coll. of Engineering, N. Y.
THE INFLUENCE OF PRIOR PLASTIC STRAIN AND INTERSTITIAL CONTENT ON THE AGING BEHAVIOR AND MECHANICAL PROPERTIES OF ALPHA-BETA TITANIUM ALLOYS, by R. F. Bunshah. Final rept. on Contract DA 30-069-505-ORD-1779. Aug 58, 103p. 21 refs. WAL no. 401/258; AD-210 521.
Order from LC mi$5.70, ph$16.80 PB 144 561

A study of the effect of prior plastic strain on the aging behavior of Ti-8Mn & Ti-16V base alloys at various interstitial levels. The influence of interstitials in both sets of alloys is to increase the maximum hardness produced on aging. In the Ti-8Mn base alloys, the addition of 0.2%O_2 to the base composition delayed the overaging process. 0.1% C addition acted the same way. The addition of 0.015%H_2 and 0.025%H_2 increased the initial aging rate and the over aging rate.

Nonferrous (except light) Metals

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
A BRIEF REVIEW OF REFRACTORY METALS, by R. I. Jaffee. 3 Dec 59, 37p. 24 refs. DMIC memo. 40.
Order from OTS $0.50 PB 161 190

In this paper the refractory metals will be taken as the metals with melting points equal to or higher than that of chromium, 1875 C.

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
FABRICATION OF PURE COLUMBIUM, by W. D. Klopp and Webster Hodge. 11 Sep 59, 9p. 10 refs. DMIC memo. 34; AD-226 046.
Order from OTS $0.50 PB 161 184

The fabrication of pure columbium is readily carried out cold with conventional tools. Precautions must be taken, when extreme-pressure processes are used, to prevent sticking by the use of very smooth die finishes and proper lubricants. Since the metal is rapidly contaminated by all common gases at elevated temperatures, welding operations must be performed in an atmosphere of helium or purified argon, and annealing operations in a high vacuum. Solid-solution alloys may be handled, in general, like pure columbium. (Author)

Sylvania Research Labs., Bayside, N. Y.
STUDY OF THE PROPERTIES OF ULTRA PURE NICKEL, by G. W. Hees, L. Castleman and G. H. Morrison. Scientific rept. no. 1 for 1 Jan-30 Sep 59, on Contract AF 19(604)5213. 15 Dec 59, 43p. 8 refs. TR59-104-205-704.3; AFCRC-TN-59-966.
Order from LC mi$3.30, ph$7.80 PB 144 972

The floating zone technique is an excellent method for melting nickel without risking contamination from a crucible and thus can be used to consolidate the chemical extraction product and remove volatile impurities. A survey was made of chemical methods of purification of nickel. The general techniques that were investigated included solvent extraction, ion exchange, precipitation and electrodeposition. Various trace analytical techniques are discussed with the relative applicability of each to the determination of trace impurities in high purity nickel.

Structural Metallurgy and Corrosion

Crest Research Labs., Inc., Santa Fe Springs, Calif.
MECHANISM OF CORROSION AND CORROSION INHIBITION OF STEEL IN WEAK ACID SOLUTION: DETERMINATION OF QUANTITATIVE LOCAL CELL POLARIZATION CURVES, by Willard R. Scott, Gilson H. Rohrback and Harold A. Parker-Jones. Final technical rept. on Contract Nonr-2113(00). 2 Feb 59, 124p. 30 refs.
Order from LC mi$6.30, ph$19.80 PB 144 576

An apparatus and a procedure were developed for precise measurement of the mixed electrode potential, interface resistance, and interface capacitance of a corroding metal surface in the presence of polarizing current. Studies were made on mild steel corroding freely in oxygen-free salt water at pH 4 - 6, and on this electrode in the presence of several different types of corrosion inhibitors.

Crucible Steel Co. of America, Pittsburgh, Pa.
DEVELOPMENT OF A CORROSION-RESISTANT

BEARING STEEL FOR SERVICE IN AIRCRAFT AT TEMPERATURES UP TO 1000F, by G. Steven and T. V. Philip. Rept. for Apr 58-July 59 on Metallic Materials, Contract AF 33(616)5428. Oct 59, 70p. 10 refs. WADC Technical rept. 59-390.
Order from OTS $1.75 PB 161 338

Corrosion resistance has been added to the high initial hardness, adequate temper resistance (600-900 F), and good dimensional stability of a high-speed type bearing alloy. To produce secondary hardening, the base composition of a quench hardenable stainless steel, 440C, was modified with V, W, Mo, and Co. The following composition is recommended for use as a stainless bearing steel for 500 hr of operation up to 900 F: 1.10-1.15% C, 0.15% max Mn, 0.15% max Si, 13.5-14.5% Cr, 2.5-3.0% V, 2.0-2.5% W, 3.75-4.25% Mo, 5.0-5.5% Co. For best performance, the steel should be heat-treated as follows: heat to 2200 F, oil quench, and refrigerate to -105 F. Rockwell "C" 66 is achieved (2% retained austenite) by tempering the steel for 1+1+2 hr at 1000 F with intermediate sub-zero cooling after the first and second draws. Tempering twice for 2 hr at 1000 F also results in a useful structure. After 500 hr at 900 F the hardness drops to R_C 65 (hot hardness of R_C 57), and the structure contracts 13 µin./in. After three cycles of a water-vapor corrosion test, the surface of fully heat-treated WADC66 is only slightly more pitted than that of annealed 430 stainless steel. (Author)

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
PROCEDURES FOR ELECTROPLATING COATINGS ON REFRACTORY METALS, by John G. Beach and John A. Gurklis. 9 Oct 59, 28p. 37 refs. DMIC memo. 35.
Order from OTS $0.50 PB 161 185

The purpose of this memorandum is to bring together a partial selection of procedures that have been employed to electroplate various metals onto the refractory metals, in an attempt to answer the question of how to produce sound, adherent electroplates on the refractory metals. Refractory metals covered are: vanadium, columbium, tantalum, tungsten, titanium, and molybdenum.

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
PROCEDURES FOR THE METALLOGRAPHIC PREPARATION OF BERYLLIUM, TITANIUM, AND REFRACTORY METALS, by R. D. Buchheit and G. A. Wheeler. 26 Oct 59, 38p. 1 ref. DMIC memo. 37.
Order from OTS $0.50 PB 161 187

It is the purpose of this memorandum to provide some basic information for such companies who wish to establish and practice satisfactory procedures for the metallographic preparation of the following metals: beryllium; chromium; columbium; molybdenum; platinum group: platinum, palladium, ruthenium, rhodium, iridium, and osmium; rhenium; tantalum; titanium; tungsten; and vanadium.

Dynamic Properties Lab., Calif. Inst. of Tech., Pasadena.
STUDY OF THE YIELD PHENOMENON IN ZINC SINGLE CRYSTALS, by K. R. King. Technical note no. 4 on Contract AF 18(600)490. Nov 58, 28p. 8 refs. AFOSR-TN-58-1023; AD-162 288.
Order from LC mi$2.70, ph$4.80 PB 137 812

Static and rapid loading shear tests on single crystals of 99.99+ per cent purity zinc were performed. A system was devised for the testing of single crystal specimens in compression which produces a uniform shear stress on the slip planes suitable for rapid load testing as well as static testing. Distinct upper yield points are exhibited by annealed specimens tested in compression.

Engineering Materials Research Lab., Brown, U., Providence, R. I.
A THEORY OF THE NON-LINEAR INFLUENCE OF NORMAL STRESS ON FATIGUE UNDER COMBINED STRESSES, by J. D. Coleman and W. N. Findley, Masters thesis. Technical rept. no. 4 on Basic Research on Fatigue Failures under Combined Stress, Contract DA 19-020-ORD-3520. Nov 56, 31p. 14 refs. EMRL-5; OOR rept. 1348.5E; AD-117 366.
Order from LC mi$3.00, ph$6.30 PB 137 865

The possible effect of anisotropy is considered. A non-linear theory is developed and compared with other theories and with results of tests of SAE 4340 steel at a hardness of Rockwell C-25.

Franklin Inst. Labs. for Research and Development, Philadelphia, Pa.
DISLOCATIONS IN DEFORMED SINGLE CRYSTALS OF ALPHA BRASS. PART I. GENERAL OBSERVATIONS, by J. D. Meakin and H. G. F. Wilsdorf. Rept. on Contract AF 49(638)162. Dec 59, 28p. 33 refs. Interim rept. I-A2027-1; AFOSR-TN-59-1047; AD-229 609.
Order from LC mi$2.70, ph$4.80 PB 144 570

Using a combined decoration and etching technique the dislocation structure of annealed and deformed α-brass has been studied. Using slip line data, the mean path of a dislocation and the configuration of groups along an active slip plane have been deduced.

James Forrestal Research Center, Princeton, N. J.
KINETICS OF FORMATION OF POROUS OR PARTIALLY DETACHED SCALES, by C. E. Birchenall. Rept. on Contract AF 18(600)967. July 54, 30p. 2 refs. Metallurgy rept. no. 1; OSR-TN-54-286, AD-49 866.
Order from LC mi$2.70, ph$4.80 PB 144 557

This report examines the variety of kinetic relations which may be found for the oxidation of solid metals when porosity forms in the oxide or at the metal-oxide interface according to several systematic procedures. Particular attention is given to the time sequence in which various rate laws may govern the process. The need for more careful correlation of microstructures with rate measurements is emphasized. The possible role of plastic deformation is also considered. (Author)

Minerals Research Lab., U. of California, Berkeley.
ACTIVATION ENERGIES FOR CREEP OF SINGLE ALUMINUM CRYSTALS FAVORABLY ORIENTED FOR CUBIC SLIP, by Y. A. Rocher, L. A. Shepard, and J. E. Dorn. Technical rept. no. 5 on Contract Nonr-222(49). 20 Dec 57, 23p. 16 refs. Series no. 103, issue no. 5; AD-153 469.
Order from LC mi$2.70, ph$4.80 PB 138 112

Creep activation energies for single aluminum crystals favorably oriented for shear by (010) [101] glide were determined over the temperature range from 78°K to 900°K. From 800°K to 900°K, unusually high activation energies ranging from 28,000 to 54,000 cal./mole were obtained. The maximum activation energy was attributed to recrystallization.

Naval Boiler and Turbine Lab., [Philadelphia, Pa.]
FUEL OIL ASH CORROSION RESISTANCE OF CHROMIUM METAL, by J. R. Witmeyer. Evaluation rept. 29 July 57, 22p. (1 color photograph will not reproduce) NBTL Test R-255; AD-147 471.
Order from LC mi$2.70, ph$4.80 PB 144 919

Relative corrosion resistance of commercially pure chromium metal and 25Cr:20Ni, alloy to synthetic fuel oil ash was tested using high vanadium and high sodium corrodents, at 1700, 2000 and 2200 F. The chromium showed better corrosion resistance than 25Cr:20Ni. Cyclic tests at 2000 F revealed the poor oxidation resistance of the chromium compared to 25Cr:20Ni. Brittleness and grain growth increased as the temperature. (Author) (See also PB 136 267)

Naval Engineering Experiment Station, Annapolis, Md.
SEA WATER CORROSION OF VARIOUS MATERIALS TESTED IN SEVEN 20-TUBE MODEL CONDENSERS, by J. L. Basil and J. S. Whelan. 21 Mar 58, 142p. 6 refs. Research and Development rept. 910027A.
Order from LC mi$3.30, ph$7.80 PB 144 651

Seven 20-tube model condensers were tested for corrosion and erosion resistance by pumping natural sea water through the tubes at 10 ft/sec. One was an all-aluminum condenser. The others had 70-30 and 90-10 copper-nickel tubes with water boxes and tube sheets of various alloys. The report describes the condition of the units after destructive examination.

New York U. Coll. of Engineering, N. Y.
MINIMIZATION OF THE INFLUENCE OF RESIDUAL HYDROGEN ON BRITTLENESS IN ALPHA-BETA TITANIUM ALLOYS, by P. A. Farrar and H. Margolin. Final rept. on Contract NOas-55-955-d. Oct 59, 93p. 22 refs.
Order from LC mi$5.40, ph$15.30 PB 144 575

The Ti-10%Mo-H system was investigated. The effect of variation of amounts of α and β in Ti-Mn alloys on the embrittlement by hydrogen has been investigated, using the Ti-3, 8 and 12%Mn alloys. The effect of heat treatments at temperatures above the eutectoid temperature of the Ti-H system have been investigated for the Ti-6Al-4V-H alloys after prior plastic strain.

Northwestern Technological Inst., Evanston, Ill.
THE STRENGTH OF ALUMINUM SILVER ALLOYS, by Anthony Kelly. Rept. on Contract AF 18(600)1468. 7 Nov 58, 5p. 9 refs. AFOSR-TN-58-912; AD-204 568.
Order from LC mi$1.80, ph$1.80 PB 137 847

Single crystals of aluminum - 6 at.% silver quenched from the δ-phase field and aged at room temperature show a critical resolved shear stress at 0°C of 7-8 kgs. mm.$^{-2}$

Rensselaer Polytechnic Inst., Troy, N. Y.
PROPERTIES OF MAGNESIUM AND MAGNESIUM ALLOY SINGLE CRYSTALS AT ROOM AND OTHER TEMPERATURES, by E. D. Levine, W. F. Sheely and R. R. Nash. Final rept. for 1 July 54-31 Dec 57 on Contract DA 30-115-ORD-546. 30 Apr 58, 163p. 62 refs. AD-200 875.
Order from LC mi$7.80, ph$25.80 PB 144 529

Single crystals specimens of magnesium and magnesium alloys containing indium, cadmium, thallium, aluminum, zinc, lithium, and thorium were prepared in both cylindrical and spherical form. Examination of stress-strain curves illustrated that the most important factor in solution strengthening of these alloys is an interaction between solute atoms and substructural boundaries in the crystals.

Rock Island Arsenal Lab., Ill.
EMULSIFIABLE AND FIRE RESISTANT RUST PREVENTIVES, by Van Y. S. Hong. 21 Apr 59, 73p. 44 refs. Rept. no. 59-1103; AD-214 943.
Order from OTS $2.00 PB 161 352

An emulsifiable and fire resistant type of rust preventive compound was developed. Suitable test methods and requirements were evolved for the evaluation of this type of material. Protection afforded to Ordnance materials, such as small hardware items under accelerated weather conditions, was found to be adequate. Advantages of this type of material over current types of rust preventive compounds were ascribed to their fire resistant property, protection efficiency, and economy. A discussion of the limitations of this type of compound from the standpoint of practical application was made. Practical and theoretical aspects on the resolution of these problems were suggested.

Springfield Armory, Mass.
ULTRASONIC STUDIES OF DIE BLOCK MATERIALS, by R. D. Korytoski. 15 June 59, 24p. 7 refs. SA-TR19-1502.
Order from LC mi$2.70, ph$4.80 PB 144 567

Basic studies were conducted using ultrasonic vibration principles in nondestructive evaluation die block material. These studies included (1) ultrasonic reflection investigations, (2) destructive metallurgical examinations of materials ultrasonically tested, (3) evaluation of material performance in forging application. (Author)

Yale U., New Haven, Conn.
ROTATION TESTS IN PLASTICITY, by Aris Phillips and Shan Yuan Yu. Technical rept. no. 3 on Contract Nonr-609(12). Dec 57, 25p. 8 refs. AD-153 838.
Order from LC mi$2.70, ph$4.80 PB 138 079

Ten rotation tests on thin-walled tubes of aluminum alloy 3S-0 show that the assumption of isotropic strain-hardening is only approximately valid in the range of small plastic strains. In these tests plane states of stress α_1, α_2 ($\alpha_1 > \alpha_2$) existing on the outside surface of a thin-walled tube were rotated to various angles (up to 90°) about the radial direction. During the rotation the values α_1 and α_2 remained unchanged. Authors found that the plastic strain components increase during the rotation, but that the directions of the principal axes of plastic strain remain practically constant in most cases.

Yale U., New Haven, Conn.
A THEORY OF IDEAL LOCKING MATERIALS, by Aris Phillips. Technical rept. no. 4 on Contract Nonr-609(12). Feb 58, 20p. 6 refs. AD-153 839.
Order from LC mi$2.40. ph$3.30 PB 138 253

The concept of the ideal locking material, is extended to cover materials which have two different equations of state, one for the change in volume and the other for the change in shape. Possible stress-strain relations are discussed. The concepts of volumetric locking and of distortional locking are introduced, and it is shown by means of an example that there are cases in which these two modes of locking are incompatible over the same region. The problem of locking of a hollow sphere is discussed in detail.

METHODS FOR CALCULATION OF THERMAL MULTIPLICATION CONSTANT, RESONANCE ESCAPE PROBABILITY AND FAST FISSION FACTOR FOR LOW ENRICHMENT REACTORS, by B. J. Byrne. Rept. on Contract DA 44-009-eng-2868. 25 Jan 57, 42p. 1 ref. APAE memo. no. 82; AD-210 689.
Order from LC mi$3.30, ph$7.80 PB 145 024

This report describes methods used for the calculation of thermal multiplication constant, resonance escape probability, and fast fission factor for a low enrichment reactor. These parameters are used in a modified two-group calculation of the effective multiplication constant. Previously, a homogeneous model has been used for calculation of these parameters. The methods presently being used incorporate the effect of heterogenity into the calculation of thermal multiplication constant and resonance escape probability. The fast fission factor is still calculated on the basis of a homogeneous model, but a new correlation has been chosen which gives a better fit to available experimental data. (Author)

DETERMINATION OF RELATIVE ABUNDANCE, RATIO OF MAGNETIC MOMENTS, RATIO OF CAPTURE CROSS-SECTIONS OF GADOLINIUM ISOTOPES BY MEANS OF PARAMAGNETIC RESONANCE SPECTRUM, by W. Low and D. Shaltiel (Israel Inst. of Tech.). Technical note no. 5 on Contract AF 61(052)59. Nov 58, 12p. 6 refs. AFOSR TN-59-84; AD-210 144.
Order from LC mi$2.40, ph$3.30 PB 138 711

Naval Radiological Defense Lab., San Francisco, Calif.
IONIZATION RATE AND PHOTON PULSE DECAY OF FISSION PRODUCTS FROM THE SLOW-NEUTRON FISSION OF U^{235}, by C. F. Miller and P. Loeb. 4 Aug 58, 91p. 5 refs. Research and development technical rept. USNRDL-TR-247.
Order from LC mi$5.40, ph$15.30 PB 144 727

Computation giving the theoretical ionization rate and response of the AN/PDR-39(TIB) radiac at 3 feet above an infinite plane uniformly contaminated with fission products from 10^4 fissions of U^{235} per sq. ft. are presented as a function of time after fission. The response of the USNRDL 4-pi ionization chamber and the photon pulse rate for the fission products are also presented as a function of time after fission. Disintegration-rate multipliers for each fission product nuclide per d/s of the nuclide are given; the multipliers were used to obtain the contribution of each fission product nuclide to the gross response. The theoretical ionization rate decay curve was integrated to obtain the gamma dose from the fission product mixture for various periods of time after fission. (Author)

A STUDY OF DEAD TIME AND RESOLVING TIME IN A PROPORTIONAL COUNTER, by William Reidy. Rept. on Contract AF 18(600)1555. Jan 59, 58p. 21 refs. AFOSR-TN-59-501; AD-215 926.
Order from LC mi$3.60, ph$9.30 PB 144 492

Measurements were made on a helium isobutane counter, which determined the variation of dead time and resolving time with voltage and pulse amplitude. The purpose of this investigation, was to determine the dead time and resolving time of the counter when operated in the proportional region and contrast this with operation in the geiger region. Results were obtained from photographs and direct measurements of the counter pulse as displayed on an oscilloscope. In addition, measurements were made by the two-source method to determine the resolving time of a proportional counter and its associated electronic counting system.

AN ATTEMPT AT UNIVERSAL FOUR-FERMION INTERACTION, by J. C. Pati and S. Oneda. Rept. on Contract AF 49(638)24. June 59, 47p. 31 refs. Physics Dept. Technical rept. no. 139; AFOSR-TN-59-630; AD-218 820.
Order from LC mi$3.30, ph$7.80 PB 144 429

An attempt is made to explain the various decays of strange particles on the basis of vector and axial-vector four-fermion interaction. The existence of (V+A) currents as well as (V-A) currents is considered as a possibility and the interaction is assumed to have the form $f(J_a^{(+)} J_a^{(+)} + J_a^{(-)} J_a^{(-)}) + h.c.$, where f is the coupling constant, $J_a^{(-)}$ is composed of all charged currents which have negative chirality, $A\gamma_a(1+\gamma_5)B$, and $J_a^{(+)}$ of those charged currents which have positive chirality, $C\gamma_a(1-\gamma_5)D$. The leptonic currents necessarily belong to the $J_a^{(-)}$ group since the neutrion has a negative helicity.. We have studied the appropriate assignment of chiralities to various possible charged baryonic currents in order to explain the characteristics of hyperon decays in the framework of global symmetry for the pion interactions. The virtual pionic or kaonic effects outside the loop are neglected. Results show that there are 3 solutions which can explain reasonably well the branching ratios and asymmetry parameters of hyperon decays. One of the solutions seems to be the best since it explains rather well the rates of hyperon decays and $\pi \to 1 + \gamma$ decay at the same time. Signs of asymmetry parameters of hyperon decays are important to distinguish these solutions.

Purdue U., Lafayette, Ind.
DECAY OF HYPERONS AND MESONS FROM THE UNIVERSAL FERMI INTERACTION, by Akihiko Fujii and Masaaki Kawaguchi. Rept. on Contract AF 18(600)1579. [1958] 22p. 8 refs. AFOSR-TN-58-921; AD-204 559.
Order from LC mi$2.70, ph$4.80 PB 137 844

The decay of the hyperon, charged pion and kaon except $K_{\pi 3}$ is investigated on the basis of the universal V-A Fermi interaction together with the idea of the Gell-Mann tetrahederon, by treating the virtual baryon-antibaryon pair effect in a phenomenological way. It is shown that the decay rate of $K^{+}_{\pi 2}$ calculated by the parameters adjusted to the decay of π^{+}, $K^{+}_{\mu 3}$, and K^{+}_{e3} is in agreement with experiment, thus suggesting a possible consistent picture of the model. Effort was concentrated on two problems, the properties and behavior in matter of (1) the antiprotons, and (2) the negative K-mesons.

Radioactivity

Air Force Cambridge Research Center, Bedford, Mass.
GLOBAL FALLOUT AND ITS VARIABILITY, by E. A. Martell. Oct 59, 37p. 84 refs. Geophysical Research Papers no. 65; AFCRC-TR-59-268.
Order from OTS $1.00 PB 161 345

Ba^{140}/Sr^{90} activity ratio data for individual rains are discussed to show means of distinguishing between the stratospheric or tropospheric origin of fallout. Sr^{89}/Sr^{90} activity ratio data allow approximate estimation of the fallout contribution from major test series. Evidence for variation in stratospheric storage times, transport paths, and fallout distribution areas is discussed. Estimated residence times are 6 months to 1 year for Soviet tests, 1 to 2 years for debris in the lower equatorial stratosphere, and 5 to 10 years for the CASTLE tests. (Author)

DECONTAMINATION OF FISSION PRODUCTS AND OTHER ATOMIC BOMB DETONATION DEBRIS, by C. F. Miller, R. Cole and others. 24 Nov 53, declassified 29 Jan 59, 46p. 7 refs. USNRDL-439.
Order from LC mi$3.30, ph$7.80 PB 145 026

The decontamination of simulated atomic bomb detonation radioactivity in a synthetic seawater contaminant medium has been investigated. The effects of initial level and time of cleaning on the decontamination of Navy gray paint surfaces using a stirrer and a spray chamber were observed where the data could be best represented by the general equation

$$F = aI^{n-1} + \frac{I}{1+K_2}$$

in which F is the fraction of contamination remaining, I is the initial level, and a, n, and K_2 are functions of the time at which the decontamination is performed. The first term of this equation was associated with sorption phenomena while the second term was derived for a solubility mechanism. The equation was applied to previous data which the authors had obtained using the same contaminant medium on paint surfaces for various decontaminating reagents. (Author)

LAUNDERING CHARACTERISTICS OF ENVIRONMENTAL HEADGEAR: ARMY CAP, FIELD, COTTON, OG 107 AND NAVY CAP, INTERMEDIATE, COLD WEATHER, by Jean H. Crosson. Oct 59, 18p. 4 refs. Clothing Branch Series rept. no. 12.
Order from LC mi$2.40, ph$3.30 PB 144 534

The investigation was to compare the laundering characteristics of two similar types of Army and Navy environmental headgear in order to determine the effects of laundering on sizing, fit and appearance. The study showed that both types of caps shrank, excessively in the case of the Navy item, and the appearance of each was poor, with the lowest rating accorded the Army Model. To overcome the laundering and appearance problems, development of new material has been undertaken and caps incorporating the first approach, namely, a Dacron/Rayon fabric in a Gabardine weave, have been procured for User Test.

RESULTS OF AN APPROXIMATION METHOD TO THE MIE THEORY FOR COLLOIDAL SPHERES, by R. Penndorf. Scientific rept. no. 1 on Research on Aerosol Scattering in the Infrared, Contract AF 19(604)5743. Sep 59, 45p. 11 refs. Technical rept. RAD-TR-59-36; AFCRC-TN-59-608; AD-227 660.
Order from LC mi$3.30, ph$7.80 PB 144 438

An approximation method is outlined for computing the total Mie scattering coefficient K in aerosols using infrared light sources. The method is valid for any size parameter α, from small to very large spheres and any arbitrary real refractive index $n \leq 2$. Analytical expressions are developed for the phase and the amplitude of K at the maxima and minima. The constants in these analytical expressions are determined from existing data computed by the exact Mie theory. Finally, a graphical interpolation process allows for determination of K for any arbitrary size. This method leads to an accuracy of ± 2 or 3 percent for K as compared with results obtained by the Mie theory. This approximation method is then applied to 14 refractive indices n between 1.05 and 2.0. The results for smoothed $\overline{K}$ values are listed for the range $\alpha = 0.2(0.2)\,30(0.5)40$, which is considered sufficient for most applications. For very large spheres, the laws of geometrical optics can be used successfully. Graphical representations of all cases are also included. From these figures, the appropriate $\overline{K}$ value can be read off directly for any given size parameter, and also for any given radius of the aerosol particle, if the wavelength of the incoming infrared radiation is selected.

TEMPERATURE CONVERSION TABLES, by Wayne A. Brodhecker. Nov 59, 85p. NAFI-TP-99.
Order from OTS $2.25 PB 161 354

The platinum resistance thermometer used as a primary standard in the Standards and Calibration Laboratory at the U. S. Naval Avionics Facility, Indianapolis is calibrated in degrees Celsius (centigrade), and many of the thermometers used at NAFI are in degrees Fahrenheit. There was a need for a method of converting degrees C to degrees F without having to perform the mathematical calculations for each point checked on a thermometer. The tables were calculated on an IBM 650 Computer; using the basic formula ($^oC = 9/5\ ^oF + 30^o$). This formula was used instead of the formula ($^oF = 5/9\ (^oC - 32^o)$) in order to make use of the three-place accuracy obtained in using the resistance thermometer and at the same time to keep the tables small enough to be of practical use. By interpolation three-place accuracy may be obtained in degrees F when going from degrees C to degrees F. Range is -100^oF to 300^oF. Calculation is to 3 decimal places.

Acoustics

Cornell Aeronautical Lab., Inc., Buffalo, N. Y.
ACOUSTIC PROPAGATION IN A DIATOMIC GAS SUBJECT TO THERMAL OR CHEMICAL RELAXATION, by Walter E. Gibson and Franklin K. Moore. Rept. on Contract AF 18(603)19. Dec 58, 70p. 14 refs. Rept. no. HF-1056-A-2; AFOSR-TN-58-1057; AD-206 988.
Order from LC mi$3.90, ph$10.80 PB 144 523

A theory of acoustic propagation in a gas subject to relaxation phenomena is presented. In most applications of the thoery to diatomic gases, only one degree of freedom need be considered, all the others being either frozen or in equilibrium. An acoustic equation is obtained herein for small disturbances from an equilibrium state of rest; this equation applies equally well to unsteady one-dimensional waves or to steady two-dimensional disturbances. The problem of two-dimensional airfoil in a supersonic flow of relaxing gas is considered. From the acoustic equation, the law of decay of shock waves and the values of the flow properties on the surface of the airfoil are derived. Furthermore, the asymptotic behavior of the flow field is obtained far from the airfoil so that the formation of an equilibrium wave is described.

Naval Ordnance Lab., White Oak, Md.
NUMERICAL SOLUTION OF THE WAVE EQUATION FOR A POINT SOURCE IN SHALLOW WATER, by B. L. Hord. 23 Sep 57, 30p. 4 refs. NAVORD-5716; AF-157 276.
Order from LC mi$2.70, ph$4.80 PB 144 722

Numerical integrations have been made of the wave equation solution for a point source in shallow water. Difficulties in making evaluations for the case $c_1 < c_2$ were considered but no computations were made for this case. Values were obtained for several source frequencies and two different source-receiver geometries for the case $c_1 > c_2$. The results show a smooth transition between two asymptotic values for the normal incidence configuration. Values for the second configuration were computed for several source frequencies up to 450 cps. Higher frequencies require prohibitive computation times on the IBM 650 computer. (Author).

Naval Research Lab., Washington, D. C.
THE THEORY OF THE THICK-SHELL HOLLOW-PIEZOCERAMIC-SPHERE UNDERWATER SOUND TRANSDUCER, by S. Hanish. Interim rept. 10 Dec 59, 33p. 10 refs. NRL rept. 5405.
Order from LC mi$3.00, ph$6.30 PB 142 854

A thick-shell hollow piezoceramic sphere electroded completely on both inside and outside surfaces and polarized radially can be used as a source (and receiver) of underwater sound. Restricting the theory to moderately thick shells, the text analyzes the acoustic performance of this structure. Derivations are obtained of electromechanical equations of displacement in the radial extensional mode under forced electrical drive, electromechanical coupling, acoustic power, receiving sensitivity, and input electrical admittance. Low-frequency and thin-shell approximations are also formulated, and results are compared with published literature. (Author)

A BIBLIOGRAPHY ON ACOUSTIC SOURCES AND THEIR RELATED FIELDS, by George B. Thurston and Raya Stern. Rept. on Contract Nonr-1224(24). Feb 59, 69p. 347 refs. Rept. no. 2784-2-S.
Order from OTS $1.75 PB 161 330

This report is a bibliography on acoustic sources and their related fields. Both single sources and arrays of sources have been considered. The abstracts are arranged into a detailed subject outline having four major topics: Single Sources and Receivers; Arrays of Sources and Receivers; Transducer Properties; Acoustic Fields. Articles published during the period from 1935 to 1958 are reviewed principally.

Willow Run Labs., U. of Michigan, Ann Arbor.
A BIBLIOGRAPHY ON PROPAGATION OF SOUND THROUGH PLATES. by George B. Thurston and Raya Stern. Rept. on Contract Nonr-1224(24). Feb 59, 170p. 991 refs. Rept. no. 2784-1-S.
Order from OTS $3.00 PB 161 329

This report is a bibliography on propagation of sound through plates. The abstracted material is organized in accordance with a detailed subject outline having five major topics: Transmission Through Plates; Wave Propagation; Properties of Materials; Vibrating Surfaces and Plates; General References. Literature surveyed is principally in the period from 1929 to 1958. Approximately 450 abstracts are given.

Electricity and Magnetism

Atomics International, Canoga Park, Calif.
RESEARCH ON ELECTRON ENERGY STATES IN TRANSITION METALS, by Ted G. Berlincourt, Guy W. Lehman, and R. R. Hake. Final rept. for 1 May-30 June 57 on Contract AF 18(600)1575. 31 July 58, 42p. 35 refs. AI-3051; AFOSR-TR-58-109; AD-201 611.
Order from LC mi$3.30, ph$7.80 PB 137 811

Hall effect, resistivity, and magnetoresistivity of Cu, Zr, Ti, and Nb at temperatures between 1^oK and room temperature and in magnetic fields up to 30 kilogauss. Anomalous behavior was observed in the Hall effect of Cu in that size effects were evident for sample thicknesses considerably greater than the generally accepted mean free path. Strong temperature dependences were observed in the Hall coefficients of Cu, Ti, and Zr, the coefficients of Zr and Ti were found to be extremely sensitive to impurity content.

COMMUNICATION BY PARTICLE BEAMS, by William M. Preston (Harvard U.) and S. Gruber. Sep 59. 24p. AFCRC-TR-59-189; AD-228 528.
Order from LC mi$2.70, ph$4.80 PB 144 418

It is shown that the use of particle beams is impractical for communications, whether the particles are charged or uncharged, and whether evaluation is based on generation, transmission, or detection.

Diamond Ordnance Fuze Labs., Washington, D. C.
A UNIFIED THEORY OF BREAKDOWN AND THE GLOW DISCHARGE, by A. L. Ward and M. J. Reddan. 16 Oct 59, 24p. 10 refs. Technical rept. TR-784.
Order from LC mi$2.70, ph$4.80 PB 144 759

Townsend's basic ionization equations for cold-cathode discharges between parallel plates are modified by Poisson's equation to account for the distortion of the field by space charges. Numerical calculations of voltage vs current-density static characteristics have been carried out on the IBM 704 computer. The regions of validity of earlier breakdown approximations are indicated. The subnormal, normal and abnormal glow regions are shown to develop as the current is progressively increased. Although comparison with experimental data is made difficult by the changing area of discharges, data both from DOFL and from other laboratories indicate the validity of the calculations. (Author)

Willow Run Labs., U. of Michigan, Ann Arbor.
GENERALIZED ENERGY RELATIONS OF NONLINEAR REACTIVE ELEMENTS, by Chai Yeh. Memo. on Project Michigan, Contract DA 36-039-sc-78801. Sep 59, 8p. 1 ref. 2900-97-R.
Order from LC mi$1.80, ph$1.80 PB 144 502

This memorandum generalizes the theory of energy relations of nonlinear reactive elements from its original form of two applied frequencies by Manley and Rowe to any number of nonharmonically related frequencies. The derivation of equations follows a pattern similar to the one established by Manley and Rowe with the exception that a Fourier summation of r variables is used. (Author)

Aeronutronic, Newport Beach, Calif.
SPECTRAL EMISSIVITY OF HYDROGEN CHLORIDE FROM 1000-3400 CM^{-1}, by V. Robert Stull and Gilbert N. Plass. Scientific rept. no. 5 on Contract AF 19(604)2166. 15 May 59, 31p. 9 refs. Publication no. U-461; AFCRC-TN-59-467; AD-228 303.
Order from LC mi$3.00, ph$6.30 PB 144 412

The spectral emissivity of hydrogen chloride from 1000 - 3400 cm^{-1} is calculated as a function of temperature, pressure, and amount of radiating gas. The emissivity was calculated with the aid of an electronic computer from the usual expressions for the energy and intensity taking into account up to 2900 spectral lines at 2400°K. The harmonic oscillator approximation was used to evaluate the electric dipole matrix element for the higher vibrational states where no experimental measurements have been made. The emission from HCl^{35}, HCl^{37}, DCl^{35}, and DCl^{37} was included in the calculation. The statistical model and the random Elsasser model were used to calculate the emissivity from the line strengths. The characteristic shift of the emission to lower frequencies as the temperature increases is quantitatively explained. The emission in this frequency region of any flame containing HCl can readily be obtained from the results given here.

Catholic U. of America, Washington, D. C.
A STUDY OF NH RADICAL BY THE LCAO-SCF MOLECULAR ORBITAL METHOD [AND] A MOLECULAR ORBITAL TREATMENT OF SIMPLE OPEN SHELL MOLECULAR SYSTEMS, by Virginia Griffing, Marjorie Boyd and Bernard J. Ransil. Technical rept. no. 4 on Contract Nonr-1220(00). 15 Feb 58, 60p. 66 refs.
Order from LC mi$3.60, ph$9.30 PB 138 340

Guggenheim Jet Propulsion Center, Calif. Inst. of Tech, Pasadena.
SPECTROSCOPIC STUDIES OF HEATED SALTS BEHIND SHOCK FRONTS, by H. Takeyama and V. C. D. Dawson. Technical rept. no. 8 on Contract AF 18(603)2. Nov 58. 27p. 5 refs. AFOSR-TN-58-1079; AD-207 589.
Order from LC mi$2.70, ph$4.80 PB 138 350

The spectra of heated solids behind shock fronts are similar to spark and arc spectra and are strongly dependent upon the shock conditions. Experimental studies of emission intensities as a function of time indicate that excessive cooling occurs in the shock tube and that population temperatures of electronically excited atoms and positive ions cannot be determined reliably.

Harvard U., Cambridge, Mass.
A NOTE ON THE DETERMINATION OF MOLECULAR STRUCTURE FROM SPECTROGRAPHIC DATA, by Victor W. Laurie. Rept. on Contract N5ori-76, T. O. 14. [1957] 12p. 34 refs. AD-153 017.
Order from LC mi$2.40, ph$3.30 PB 138 446

The problem of the change upon isotopic substitution of "effective" bond lengths and angles involving hydrogen is considered. Evidence is presented that in certain cases such variation is largely due to vibration of the heavy atoms rather than of the hydrogens. A method of calculating this effect is presented which utilizes a parameter similar to the "quantum defect" $\Delta = I_c - I_a - I_b$ observed in planar molecules.

Mallinckrodt Chemical Lab., Harvard U., Cambridge, Mass.
MICROWAVE SPECTRUM OF $CH_2DCH{:}CH_2$; EQUILIBRIUM CONFORMATION OF PROPYLENE, by Dudley R. Herschbach and Lawrence C. Krisher. Rept. on Contract N5ori-T866, T. O. 14. [1957] 5p. 7 refs.
Order from LC mi$1.80, ph$1.80 PB 138 449

A sample of $CH_2DCH{:}CH_2$ was prepared by reacting allyl chloride with D_2O in the presence of Zn dust and excess Ac_2O. The frequencies were observed and recorded. Two isomers were observed, and the spectra were in excellent agreement with initial predictions. The relation $I_a + I_b - I_c = I(CH_3)$ was satisfied for the species assigned as sym-I which indicated that it had a plane of symmetry containing the D atom.

An effort is made to explain the inter-relations between the fundamental laws of physics, the molecular properties, the bulk properties of materials, and the various types of experimentation. These inter-relations are becoming extremely important as interests widen to encompass extreme conditions of temperature, pressure, etc., and as experimentation becomes more precise.

Ohio State U. Research Foundation, Columbus.
FURTHER DEVELOPMENTS IN THE THEORY AND USE OF THE ELECTRON SPECTROMETER, by Edwin N. Lassettre, Sam Silverman, and Marvin E. Krasnow. Scientific rept. no. 11 on Contract AF 19(122)642. July 57, 24p. 3 refs. AFCRC-TN-58-235; AD-220 107.
Order from LC mi$2.70, ph$4.80 PB 139 429

The equations used for the determination of electronic collision cross sections by means of an electron spectrometer have been described and discussed in a previous report. The construction and performance of a spectrometer suitable for this purpose has also been described. Since the preparation of these reports several of the factors which affect the accuracy of the measured cross sections have been examined in greater detail from both an experimental and theoretical viewpoint. Those factors which will be treated in detail in this report are the pressure dependence of the scattering, the determination of cross sections by the study of the scattering due to a mixture of the gas under consideration and the calibrating gas, and, finally, a study of the effect of incident beam divergence on the accuracy of the measured cross sections. The discussion of these matters will serve to confirm the validity of the procedures heretofore used and will indicate some ways in which the technique may be further improved. This report supplements Scientific Report No. 2 of this series.

Air Force Cambridge Research Center, Bedford, Mass.
ATMOSPHERIC REFRACTION OF INFRARED RADIATION, by Thomas P. Condron. Oct 59, 20p. 5 refs. GRD Research Notes no. 23; AFCRC-TN-59-617.
Order from OTS $0.50 PB 161 342

This note contains preliminary calculations of approximate infrared irradiance values in the neighborhood of caustic surfaces; these caustics are predicated from ray calculations based on the ARDC Model Atmosphere. The caustics which should occur at 1500 km skip-distances are caused by the downward refraction of a small bundle of rays emitted from a source at nearly horizontal inclination to the earth's surface at various altitudes. The predicted increases in irradiance in these annular caustic regions indicates that the phenomenon may be useful for long-range missile detection. (Author)

Air Force Cambridge Research Center, Bedford, Mass.
THE "CLAM SHELL" THERMAL IMAGE DEVICE (THERMAL IMAGER) by George P. Ploetz. Sep 59, 9p. AFCRC-TN-59-759.
Order from LC mi$1.80, ph$1.80 PB 144 587

A novel thermal imaging device is described. Two identical reflecting paraboloids are mounted face to face so that the focal point of each falls at the vertex of the other. This arrangement allows both the source and image to be external to the optical system. The benefits of the device include: improved images, higher temperatures, and increased power transfer. STUDY OF A PHOSPHOR LIGHT PULSER, by Michael R. Zatzick. Sep 59, 26p. 10 refs. Instrumentation for Geophysics and Astrophysics no. 10; AFCRC-TR-58-274.
Order from OTS $0.75 PB 161 343

A short persistence 5RP-15A cathode-ray tube and a simple optical system (lens, ultraviolet pass filter, and adjustable slit) were used with moderate success to produce variable "square wave" light pulses of predictable rise time and duration. Absence of the expected near ultraviolet emission peak of the P-15 limited observable pulse durations to ~7 μsec instead of an expected ~0.1 μsec since preliminary RCA data did not mention that only one out of fifty P-15 coatings emit the near ultraviolet peak. Rise times of ~0.1 μsec were possible, but the transient response of the photometer for increasing light levels, ~300 v/μsec, permitted observation of only 2.5 μsec rise times (10 to 90 percent). When neither the phosphor nor photometer limitations entered, the measured pulse shape was reproducible within the 5-percent expected error. Improvements in the design of the light pulser are suggested for attaining faster light pulses. (Author)

THE BEHAVIOR OF A LIGHT RAY PENETRATING A SUPERSONIC FLOW FIELD, by Harald A. Melkus. Oct 59, 58p. 6 refs. AFMDC-TR-59-39.
Order from LC mi$2.60, ph$9.30 PB 144 594

Data on deflections of a light ray penetrating a supersonic flow field have been requested by the Guidance and Control Division, Directorate of Advanced Technology, Holloman Air Force Base. The data are important for estimates of aerodynamically induced errors in schemes for measuring angular positions of a guidance platform during motion on a sled at supersonic speeds. (Author)

Anderson Physical Lab. [Champaign, Ill.]
THE DETERMINATION OF NEAR INFRARED SPECTRA, by Scott Anderson, Raymond Isaac, and Myra Blankenship. Rept. for 1 May 58-30 Apr 59 on The Determination of Near Infrared Spectra, Contract AF 33(616)5283. Sep 59, 32p. 22 refs. WADC Technical rept. 59-344.
Order from OTS $1.00 PB 161 336

Near infrared spectra of organic compounds of interest to the Air Force Research and Development Program, were determined between the region 0.7 to 3.2μ on a Beckman DK-2 Ratio Recording Spectrophotometer. Modification of the instrument's recording, to accommodate a chart which presents spectra at a single scale expansion of 2x, is discussed. Rapid sorting of spectra was provided with the use of Wyandotte-ASTM structure and name-formula IBM cards. (Author)

INFRARED FILM STUDIES, by L. Hurtle. Quarterly technical rept. no. 3, 23 Oct 56-23 Jan 57, on Contract DA 44-009-eng-2876. 8 Mar 57, 13p.
AD-202 426.
Order from LC mi$2.40, ph$3.30 PB 144 645

A stable, stress-free, unsupported foil or film is obtained by controlling the thickness of each individual layer of InS and MgF_2. Two new methods of controlling this film thickness were tried. In the first method, the film was continuously deposited on a Ta ribbon and the change in color was observed as a function of time. The filament of Ta could then be purged by passing a current through it and made ready for a second measurement. In the second method a section of a previously made unsupported foil or a very thin mica flake was mounted along the edge of the rotating sample. Films condensing on this foil or flake would cause it to bend either under compression or tension. Hence the rate of deposition of each material could be suitably adjusted to produce a stress-free foil.

MULTILAYER INTERFERENCE FILTERS FOR INFRARED, by Vern N. Smiley. Scientific rept. no. 3 on Contract AF 19(604)1899. Oct 59, 169p. 26 refs. AFCRC-TN-59-601; AD-228 287.
Order from LC mi$7.80, ph$25.80 PB 144 434

The basic theory of interference filters is discussed starting with the simple Fabry-Perot filter. Methods of calculating the transmittance and reflectance of a multilayer stack are discussed with emphasis on an analog computer method. A derivation of a nearly exact expression of the bandwidth and an expression for the fraction of power transmitted between half-maximum points for an all-dielectric Fabry-Perot filter are given. Band-pass filters of a type containing more than one multiple half-wave layer are examined in detail by calculated curves for several different configurations; they are shown to be superior to the Fabry-Perot dielectric filters. A five-layer dielectric Fabry-Perot filter designed for use as a low-pass filter is treated in detail. A method of analysis consisting of replacing any multilayer system by one layer with two effective interfaces is used to explain the operation of band-pass and low-pass filters. Methods of making experimental filters are discussed, including the experimental difficulties involved. An example of a five layer experimental filter is given.

ROTATING DISKS: INSENSITIVITY OF DESIGN, by Jacques Heyman. Technical rept. no. 29 on Contract Nonr-562(10). Dec 57, 19p. 3 refs. C11-29; AD-154 469.
Order from LC mi$2.40, ph$3.30 PB 138 078

The plastic method of design of rotating disks leads to profiles very similar to those generated by conventional elastic methods. The minimum weight disk is investigated and it is shown that a practical disk approximates very closely in its leading dimensions to the minimum weight disk. In particular, the axial length of a disk at its bore is insensitive to the precise form of profile, which makes an elastic trail and error method workable. This insensitivity is examined by using a plastic analysis.

Fulmer Research Inst., Ltd. (Gt. Brit.).
THE SPACING OF SLIP LINES IN METALS, by J. T. Barnby, J. S. Steel and E. A. Calnan. Annual technical rept. no. 2, Apr 58-Apr 59, on Contract DA 91-508-EUC-175. Apr 59, 39p. 15 refs. Research rept. R. 113/5; AD-220 168.
Order from LC mi$3.00, ph$6.30 PB 143 118

An electron microscopic study of the spacing of slip lines in polycrystalline O. F. H. C. copper and high purity brasses containing 5, 15, 30 and 37 per cent zinc is described. Copper specimens showed well defined peaks in the distribution diagrams for slip line spacing, at about 300A. The change in slip-line spacing with zinc content is discussed in terms of current theories of solid solution hardening. Experiments have been directed at producing thin films of copper and brass for transmission electron microscopy, and studying in these specimens the effects of quenched-in vacancies.

Gordon McKay Lab. of Applied Science, Harvard U., Cambridge, Mass.
HIGH PRESSURE EFFECTS IN SEMICONDUCTORS; INTERBAND SCATTERING IN GERMANIUM, by Marshall I. Nathan. Technical rept. HP-1 on Contract Nonr-1866(10). 1 Feb 58, 116p. 63 refs.
Order from LC mi$6.00, ph$18.30 PB 138 445

There are minima in the conduction bands of germanium and silicon along the (111) and the (100) directions in k-space. The (111) minima at an energy E_g are the lowest minima in the conduction band of germanium; while the (100) minima at an energy E_s are lowest in silicon. Results of the measurement of the pressure variation of the electrical conductivity of n-type germanium at several temperatures between 0°C and 82°C to 18,000 kg/cm^2 and at 76°C to 30,000 kg/cm^2 are presented. The interband scattering theory is extended to predict the pressure behavior of the galvanomagnetic effects in n-type germanium. (See also PB 140 386)

DISLOCATION STRUCTURES OBSERVED IN HIGH-PURITY RECRYSTALLIZED ALUMINUM BY X-RAY DIFFRACTION, by A. R. Lang and G. Meyrick (U. of Bristol). Technical rept. no. 1 on Contract Nonr-1866(39). 17 Feb 59, 7p. 4 refs.
Order from LC mi$1.80, ph$1.80 PB 144 578

Honeywell Research Center, Hopkins, Minn.
THE RELATIONSHIP BETWEEN PLASTIC FLOW AND THE FRACTURE MECHANISM IN MAGNESIUM OXIDE SINGLE CRYSTALS, by T. L. Johnston, R. J. Stokes and C. H. Li. Technical rept. no. 4 on Contract Nonr-2456(00). Feb 59, 34p. 8 refs. HR-59-419.
Order from LC mi$3.00, ph$6.30 PB 144 579

Magnesium oxide crystals plastically deformed under a three point load develop internal slits coplanar with the (110) slip plane and parallel to the [001] bending axis in the tension region. If microcracks form in the early stages of plastic flow their growth is unrestricted and the material is brittle. If the crystal is first plastically deformed to introduce sufficient slip the growth of the microcracks is impeded in certain directions and they develop into narrow slits. For brittle specimens fracture starts from a point, whereas for ductile specimens the fracture appears to start from one of the narrow slits.

Illinois U., Urbana.
HALL EFFECT FOR ELECTRONS IN SILVER CHLORIDE, by Koichi Kobayashi and Frederick C. Brown. Rept. on Contract AF 18(600)662. Aug 58, 27p. 21 refs. AFOSR-TN-57-743; AD-201 509.
Order from LC mi$2.70, ph$4.80 PB 137 540

The drift mobility of electrons in single crystal silver chloride has been investigated over a wide temperature range by means of transit time techniques. Results of these measurements are in reasonable agreement with the theory of electron mobility in polar crystals down to about 80°K but show a wide discrepancy at lower temperatures. The present experiments were carried out to determine whether this effect is due to scattering by imperfections or to multiple trapping effects, and to extend mobility data into the very low temperature range.

Illinois U., Urbana.
A METHOD FOR MEASURING MAGNETIC FIELDS IN SUPERCONDUCTORS, by H. R. Lewis, J. F. Cochran and others. Rept. on Contract AF 18(603)49. Nov 59, 18p. 12 refs. AFOSR-TN-59-1154.
Order from LC mi$2.40, ph$3.30 PB 144 568

In order to measure the magnetic field in a superconductor, a suitable radioisotope is embedded at the desired depth. The rotation of the angular correlation pattern is then used to determine the magnetic field at the nuclear site.

Institute of Optics, U. of Rochester, N. Y.
THE FUNDAMENTAL ABSORPTION EDGE IN CADMIUM SULFIDE, by David Dutton. Technical rept. 14 on Contract AF 18(600)193. June 58, 33p. 32 refs. AFOSR-TN-58-545; AD-158 362.
Order from LC mi$3.00, ph$6.30 PB 137 715

The absorption and reflection spectra of CdS have been determined in the temperature range 90° - 340°K by photoelectric measurements on single crystals, using polarized light.

Laboratory for Insulation Research, Mass. Inst. of Tech., Cambridge.
SOME PROPERTIES OF QUENCHED MAGNESIUM FERRITES [AND] TEMPERATURE-DEPENDENT LAG IN POLYCRYSTALLINE YTTRIUM-IRON GARNET, by J. D. Epstein and B. Frackiewicz. Rept. on Contracts Nonr-1841(10) and AF 30(635)2872. Jan 59, 22p. 17 refs. Technical repts. 134 and 135.
Order from LC mi$2.70, ph$4.80 PB 144 482

Magnetic properties of magnesium ferrites where the fraction of magnesium ions in tetrahedral sites, varies from 0.14 to 0.26. Properties examined are: saturation moment, Curie point, initial permeability and coercive force. Samples quenched from 1100°C and then tempered at 600° require somewhat less than 16 h. to attain an equilibrium cation distribution at the latter temperature. Certain samples of polycrystalline yttrium-iron garnet are characterized by a room-temperature permeability spectrum having two regions of dispersion, one at microwave, the other at radio frequency. The former dispersion is identified as gyromagnetic in origin. The radio-frequency dispersion, which exhibits a temperature-activated shift to lower frequency with decreasing temperature, appears due to an electron-diffusion controlled domain-wall relaxation. The activation energy for the process is 0.38 ev.

Naval Ordnance Lab., Corona, Calif.
THE EFFECT OF LINEAR LOADING CAPACITANCES UPON THE SWITCHING TRANSIENT OF COLEMANITE, by David J. White. 12 Sep 58, 36p. 1 ref. NOLC rept. 314; NAVORD rept. 5922; AD-138 640.
Order from LC mi$3.00, ph$6.30 PB 138 640

The polarization-reversal, transient of ferroelectric colemanite shows a discrepancy on the order of 20% from the empirically developed relations for

$BaTiO_3$. The source of the discrepancies in the experimental switching transient of ferroelectric colemanite must be sought in the nature of the ferroelectric colemanite itself.

Naval Ordnance Lab., White Oak, Md.
SOLID STATE DIVISION ANNUAL REPORT FOR 1957, ed. by Robert Talley. 1 July 58, 47p. 61 refs. NAVORD rept. 6193.
Order from LC mi$3.30, ph$7.80 PB 145 027

Most of the work was performed in the field of magnetism with emphasis on antiferrimagnetism and magnetic resonance; and on semiconductors, primarily photo-effects and bulk properties of PbS, PbSe, PbTe, and InAs. (Author)

Naval Ordnance Test Station, China Lake, Calif.
A KINETIC STUDY OF OXYGEN CHEMISORPTION ON PbS LAYERS, by K. Laws and V. R. Honnold. 19 June 58, 20p. 6 refs. NOTS-1623; NAVORD rept. 5378; AD-200 917.
Order from LC mi$2.40, ph$3.30 PB 144 876

Experiments were conducted to study the kinetics of oxygen chemisorption on evaporated layers of PbS. In general the rate of chemisorption, as determined by measuring the resistance of the layers, increased with increasing temperature and oxygen pressure. The data indicates that O^- ions are being formed predominantly in the ranges of temperature and pressures utilized for the experiments. The relationship of the results obtained to the problem of oxygen photosensitization of PbS is discussed. (Author)

Paris U. (France).
STUDIES OF DISLOCATIONS IN METALS BY X-RAY METHODS, by André Guinier. Annual summary rept. no. 1, 1 Jan 58-1 Jan 59, on Contract AF 61(052)51. [1959] 10p. 13 refs. AFOSR-TN-59-348; AD-213 668.
Order from LC mi$1.80, ph$1.80 PB 144 519

The atomic structure of a dislocation was studied by means of diffuse X-ray scattering. Suitable specimens were obtained with single Cu crystals so that only one system of slip lines would be visible. Theoretical calculations showed that scattering is concentrated in the immediate vicinity of the normal nodes of the reciprocal lattice. The scattering due to the thermal agitation is also maximum around the nodes, and its intensity is larger than the expected scattering from the dislocations even at low temperatures. Localization of the imperfections or dislocations in a crystal was investigated by X-ray techniques. Two extreme theoretical cases which were studied are the perfect crystal with dynamical theory and the mosaic crystal with the cinematical theory. The predicted reflecting power is much smaller for the perfect crystal.

Pittsburgh U., Pa.
THE CLOCK PARADOX AND THE PHYSICS OF DISCONTINUOUS GRAVITATIONAL FIELDS, by T. M. Donahue and C. B. Leffert. Technical rept. no. 1 on Contract Nonr-624(06). Oct 57, 28p. 8 refs. AD-146 664.
Order from LC mi$2.70, ph$4.80 PB 137 547

The motion of the clocks as represented in a solution of the clock paradox offered by C. Moller (The Theory of Relativity, p. 258, Oxford University Press, London, 1952) is studied in detail. It is found that in the non-inertial rest frame of the accelerated clock the free clock suffers discontinuities in velocity whenever the "gravitational field" in that frame abruptly changes. Although these discontinuities occur at points of discontinuity of the metric tensor, examination of a case in which the gravitational field is turned on smoothly reveals that the effect is a real one within the framework of the general theory of relativity. By the principle of equivalence it follows that even in a real gravitational field when that field changes in time velocity dependent terms in the acceleration of a particle exist. These become impulsive for abruptly changing fields and can even cause an acceleration in the direction "opposite" to the field.

Rice Inst., Houston, Tex.
THE EFFECT OF VIBRATIONS ON ORDERING IN A COPPER-GOLD ALLOY, by H. C. Burghard, Jr. and Franz R. Brotzen. Technical rept. no. 2 on Contract AF 49(638)78. 1 Oct 58, 31p. 19 refs. AFOSR-TN-58-915; AD-204 564.
Order from LC mi$3.00, ph$6.30 PB 137 846

Experiments were performed to determine the effects of mechanical vibrations on ordering in CuAu. The effects of 5, 10 and 15 kc vibrations were investigated over a range of ordering temperatures of 280 to 360°C. A decrease in the rate of ordering was observed at all frequencies and ordering temperatures. This retarding effect is attributed to the interference of moving dislocations with growth of ordered domains. (Author)

Stockholm U. (Sweden).
STUDIES ON THE CRYSTAL CHEMISTRY OF TITANIUM, VANADIUM AND MOLYBDENUM OXIDES AT ELEVATED TEMPERATURES, by Arne Magnéli, Sten Andersson and others. Final technical rept. no. 1 for 1 Oct 58-30 Sep 59 on Contract DA 91-591-EUC-935. Oct 59, 142p. 15 refs.
Order from LC mi$7.20, ph$22.80 PB 144 408

The work reported in this document has been performed in continuation of X-ray studies previously conducted by members of this research group on the crystal chemistry at elevated temperatures of titanium, vanadium and molybdenum oxides. The atomic arrangement of the ordered phase Ti_3O occurring within the solubility range of oxygen in α-titanium, has been determined. A study has been made of structural and geometrical relations between the δ-titanium oxide and several other phases. An analysis has been performed of the phase relations of the vanadium-oxygen system within the $VO_{0.25}$-$VO_{1.5}$ region at 800°C. Accurate atomic coordinates have been determined for Ti_2O_3 and V_2O_3 at room temperature and for Ti_2O_3 at ∿260°C. The crystal structure of the high-temperature modification of Ti_3O_5 has been determined from single-crystal data regis-

tered at 175°C. The crystal structure of V_3O_5 has been refined to a considerable degree of accuracy. General expressions have been derived for structural properties of the homologous series M_nO_{2n-1} (M = Ti, V or (Ti and Cr)). The phase relations of the MoO_2-MoO_3 region of the molybdenum-oxygen system have been investigated within the temperature range 500° -870°C.

Theoretical Physics

Avco [Everett] Research Lab. [Mass.]
IONIZATION PHENOMENON OF SHOCK WAVES IN OXYGEN-NITROGEN MIXTURES, by S. C. Lin. Rept. on Contract AF 04(645)18. June 58, 25p. 15 refs. Research rept. 33; AD-201 912.
Order from LC mi$2.70, ph$4.80 PB 144 736

An experimental method is described for the study of ionization phenomenon associated with shock waves in gases. By proper choice of experimental conditions, this method should allow a direct and unambiguous determination of the electron density and the averaged electron-molecule (and atom) interaction cross section as a function of distance behind the shock front. Preliminary results obtained for shock waves in a number of oxygen-nitrogen mixtures are presented.

California U., Berkeley.
ELIMINATION OF GHOSTS IN PROPAGATORS, by P. J. Redmond. Rept. on Contract DA 04-200-ORD-171, T. O. 11. 21 July 58, 16p. 18 refs. OOR rept. 1353. 14P; AD-220 865.
Order from LC mi$2.40, ph$3.30 PB 137 909

Within the general framework of perturbation theory a method for calculating modified propagators in terms of proper Feynman diagrams is derived. This method differs from previous approaches in that one insists that the propagator have the correct analytical behavior as a function of p^2. As a result one gets an expression for the propagator which is similar to a conventional term by term perturbation theory expansion except that it is only necessary to consider proper diagrams and that the iteration of the proper diagrams is represented by a damping factor.

Cornell U., Ithaca, N. Y.
ULTRA-SMALL-ANGLE X-RAY SCATTERING, by L. G. Parratt, J. O. Porteus and others. Technical rept. no. 2 on Contract AF 49(638)402. 20 Dec 58, 16p. 18 refs. AFOSR-TN-58-781; AD-202 002.
Order from LC mi$2.40, ph$3.30 PB 137 936

A new double two-crystal spectrometer is proposed. It is believed that with this instrument, with a high-energy synchrotron as an x-ray source, with either perfect crystals on the spectrometer for the ultra-small angles or with deliberately imperfect crystals for the conventional angular range, and with the newly developed unfolding procedures to correct for the residual instrumental effects, the techniques of small-angle scattering would be advanced to new levels of usefulness in many problems of structural analysis.

Fairchild Engine Div., Deer Park, N. Y.
SOME PROPERTIES OF A HYDROGEN PLASMA, by Charles L. Eisen and Robert A. Gross. Rept. on Contract AF 49(638)15. June 59, 41p. 9 refs. AFOSR-TN-59-588; AD-216 770.
Order from LC mi$3.30, ph$7.80 PB 144 449

The chemical equilibrium composition of a hydrogen mixture is determined over the temperature range from 10^3 °K to 10^6 °K and pressures from 10^{-6} to 10^6 atmospheres. The species recognized are, H_2, H, H^+, H^- and e^-. Equilibrium and frozen values of γ, C_p and the speed of sound are presented in the dissociation and ionization regimes. Electrical conductivity and bremsstrahlung power radiation data are also given.

Institute for Fluid Dynamics and Applied Mathematics, U. of Maryland, College Park.
THE WAVE MOTIONS OF SMALL AMPLITUDE IN A FULLY IONIZED PLASMA. PART I. WITHOUT EXTERNAL MAGNETIC FIELD, by S. I. Pai. Rept. on Contract AF 49(638)401. Nov 59, 27p. 12 refs. Technical note BN-191; AFOSR-TN-59-1271.
Order from LC mi$2.70, ph$4.80 PB 144 778

Wave motions of infinitesimal amplitude in a fully ionized plasma, consisting of singly charged ions and electrons, have been investigated. A two-fluid theory has been used in this paper. There are no externally applied electromagnetic fields. (See also PB 143 387)

Institute of Field Physics, U. of North Carolina, Chapel Hill.
COVARIANT COMMUTATORS FOR THE QUANTIZED GRAVITATIONAL FIELD, by Bryce S. DeWitt. Rept. on Contract AF 49(638)563. Oct 59, 8p. 3 refs. Publication no. 4; AFOSR-TN-59-1080; AD-226 875.
Order from LC mi$1.80, ph$1.80 PB 144 487

The derivation of covariant commutators for the quantized gravitational field provides an important application of the theory of bi-tensor Green's functions. Because of the coordinate invariance of general relativity, well defined commutators can be obtained only if we (1) introduce some form of invariant coordinates, and (2) succeed in finding an explicit expression which can be used to define an arbitrary external source. These two requirements are related.

Johns Hopkins U., Baltimore, Md.
PLASMA DYNAMICS, by Francis H. Clauser. Final rept. on Contract AF 18(600)671. Aug 59, 79p. AFOSR-TR-59-125; AD-227 708.
Order from LC mi$4.50, ph$12.30 PB 144 732

It is found that in the flow of a gas consisting of charged particles such as electrons, the non-linearity of the equations introduces several new concepts to the lore of fluid mechanics. The behavior of such a gas is investigated without recourse to linearization for the full range of Mach numbers. It is found that the gas can behave in several different ways for the same set of boundary conditions. (Author)

Plasma Propulsion Lab., Republic Aviation Corp., Farmingdale, N. Y.
OPTIMUM POWER GENERATION USING A PLASMA AS THE WORKING FLUID, by J. L. Neuringer. Rept. on Contract AF 49(638)552. May 59, 52p. 4 refs. SRS(PPL) rept. 114; AFOSR-TN-59-571; AD-217 005.
Order from LC mi$3.60, ph$9.30 PB 144 490

With the possibility of controlled thermonuclear fusion in the future, the question arises whether it would be possible to use the plasma itself as the working fluid to generate electric power by electro-magnetic induction. The problem considered here is the steady one-dimensional motion of a plasma in a channel of arbitrary and slowly varying cross section. (See also PB 144 491)

Syracuse U., N. Y.
CONSERVATION LAWS IN NON-LINEAR FIELD THEORIES, by Robert Penfield and Henry Zatzkis. Technical rept. no. 4 on Contract N6onr-248(06). Jan 50, 12p. 6 refs. AD-201 065.
Order from LC mi$2.40, ph$3.30 PB 137 922

In this paper we have applied the concepts of "strong" and "weak" conservation laws in non-linear field theories as set forth in recent papers. Only if the strong conservation laws are available in a theory, can we treat situations in which matter is present in discrete regions of space without possessing detailed knowledge of the internal structural laws of the matter itself.

Thermodynamics

Brown U. Div. of Engineering, Providence, R. I.
ON TRANSIENT THERMAL STRESS IN LINEAR VISCOELASTICITY, by Eli Sternberg. Technical rept. no. 3 on Contract Nonr-562(20). Nov 57, 31p. 21 refs. 562(20)/3; AD-149 766.
Order from LC mi$3.00, ph$6.30 PB 137 531

The principle of correspondence appropriate to the linear theories of elasticity and viscoelasticity is extended to account for the presence of a time-dependent temperature field, and is applied to the quasi-static determination of transient thermal stresses in a general, linear, homogeneous and isotropic, infinite viscoelastic medium with a spherical cavity. It is assumed that the body is free from loading and that the stress-inducing temperature distribution has polar symmetry about the center of the cavity. An exact solution to this problem is established in integral form on the assumption that all physical parameters are independent of the temperature. Closed explicit solutions, in terms of error functions, are deduced for the special instance in which the material is either a Maxwell or a Kelvin solid, if the temperature field obeys the heat-conduction equation and is generated by a suddenly applied, steadily maintained, heating (or cooling) of the boundary. (Author)

TABLES OF THERMODYNAMIC PROPERTIES OF AIR INCLUDING DISSOCIATION AND IONIZATION FROM 1500°K TO 15,000°K, by Joseph Hilsenrath, Max Klein and Harold W. Woolley. Rept. on ARO, Inc., Contract AF 40(600)800. Dec 59, 147p. 21 refs. AEDC-TR-59-20 MIPR-AEDC-2; OSS 59-24.
Order from OTS $2.75 PB 161 311

Tables are presented, at close spacing in density ($\Delta \log \rho/\rho_0 = 0.2$ from -7. to +2.), of the thermodynamic properties of air from 1,500°K to 15,000°K. The properties tabulated are: the number of moles, $Z^* = PV/RT$, the dimensionless functions for internal energy, E^*/RT, enthalpy, H^*/RT, entropy, S^*/R, and the pressure, P, in atmospheres. Here the asterisk indicates that the properties are for the equilibrium mixture treated as an ideal gas (without so-called van der Waals effects). The underlying equations for this work and the input data are discussed briefly. A comparison is made between the reported values and the work of Gilmore, of the Rand Corporation, and of Predvoditelev and associates, of the U. S. S. R. (Author)

Naval Supersonic Lab., Mass. Inst. of Tech., Cambridge, Mass.
AN INVESTIGATION OF POROUS WALL COOLING, by Richard P. Bernicker. Rept. on Contract AF 49(638)245. June 59, 59p. 10 refs. Technical rept. 393; AFOSR-TN-59-873; AD-227 555.
Order from LC mi$3.60, ph$9.30 PB 144 473

Equations are developed to describe the thermal exchange when a coolant is forced through a heated porous wall, and solutions are obtained on the basis of a simplified model consisting of identical cylindrical

channels replacing the actual capillary-like passages. The solutions depend upon Reynolds and Prandtl numbers, geometric parameters involving wall porosity and pore size, and Nusselt number. Experiments were performed with one family of porous materials, and Nausselt numbers were correlated in terms of Reynolds and Prandtl numbers, and porosity. Nusselt number varies almost linearly with Peclet number. Temperature distributions obtained indicate a very small difference between solid and coolant temperatures at the exit surface.

Naval Supersonic Lab., Mass. Inst. of Tech., Cambridge.
SUBLIMATION OF A HEMISPHERE IN SUPERSONIC FLOW, by Robert Weiss. Rept. on Contract AF 49(638)245. July 59, 63p. 38 refs. Technical rept. 391; AFOSR-TN-59-870; AD-227 553
Order from LC mi$3.90, ph$10.80 PB 144 496

Mass transfer cooling with a light gas has been shown to reduce the large heat transfer rates to a body that is moving rapidly through the atmosphere. The possibility of using a subliming body so as to provide self governing mass transfer cooling has been suggested. To make a preliminary evaluation of this approach, an investigation of the heat transfer rates to several subliming bodies of hemispherical shape has been carried out. Tests were run at a Mach number of 3.5 with solid carbon-dioxide, naphthalene and camphor, three relatively "heavy" materials. Additional tests with camphor models determined the effect of Reynolds number on the heat transfer rate. It was found that heat transfer was reduced in proportion to the mass-injection rate, and that a greater reduction was effected with a lesser weight material; and that increasing Reynolds number also produced a lower level of heat transfer coefficient. The bodies tended to assume a conical shape, a phenomenon more noticeable with increasing Reynolds number; only one model appeared to have reached a state of equilibrium. The investigation indicated both the feasibility of conducting an experiment of this nature and the applicability of subliming bodies both in reducing and absorbing aerodynamic heating.

Plasmadyne Corp., Santa Ana, Calif.
FLEXURE OF A TWO-DIMENSIONAL ARC UNDER FORCED CONVECTION, by Paul G. Thiene. Rept. on Contract AF 49(638)334. 25 Aug 59, 74p. 4 refs. T 2TN089-334; AFOSR-TN-59-947; AD-228 540
Order from LC mi$4.50, ph$12.30 PB 144 488

A rudimentary inquiry is conducted into the nature of the physical mechanisms which maintain an arc in the presence of forced convection. The basic fluid-mechanical and electromagnetic equations are developed for the case of a dilute, three-component quasineutral arc plasma. The basic equations, in particular the equation of energy balance, are then applied to a simple model of a two-dimensional arc in a low-Mach-number subsonic flow. The proposed model is based on the notion of a definite, localized zone of ohmic heating. An analogy is qualitatively drawn between the convection-loaded arc model and a structural beam with a distributed load. The equation of energy balance provides the temperature distribution through the arc model from which the curvature, "flexural rigidity" and deflection curve are determined. Also included is a tentative criterion for blowout. (Author)

Wave Propagation

Ballistic Research Labs., Aberdeen Proving Ground, Md.
PRELIMINARY INVESTIGATION OF THE SHOCK WAVE PROPAGATED FROM THE OPEN END OF A CYLINDRICAL SHOCK TUBE, by Glenn P. Beichler and Leonard P. Grady. Jan 54, 17p. 3 refs. Technical note no. 843; AFSWP no. 768.
Order from LC mi$2.40, ph$3.30 PB 138 676

By means of an array of gauges mounted beyond the open end of a shock tube, pressure-time records were obtained. The results indicate a tendency toward formation of a spherical wave front covering a wide solid angle at a distance from the end of the tube. When a pseudo-spherical front has been formed, similarities exist between the positive phase of pressure-time records obtained from free-air explosions and those obtained by this method but durations and pressure decay with distance do not scale with those of free-air explosions.

Columbia U. School of Engineering, New York.
HE_{11} EXCITED DIELECTRIC SURFACE WAVE RADIATORS, by S. P. Schlesinger and A. Vigants. Technical rept. no. 1 on Contract AF 19(604)3879. 1 June 59, 76p. 20 refs. AFCRC-TN-59-573; CU-5-59-AF-3879-EE; AD-228 309.
Order from LC mi$4.50, ph$12.30 PB 144 420

A solution is presented, using Huyghens' Principle formulated in terms of a Green's function approach, to the radiation problem for the dielectric image line of finite length on an infinite image surface, or the equivalent full round rod, excited in the HE_{11} mode. The integration of appropriate electric and magnetic current sources over the sides and end of the dielectric element yields an expression for the radiation intensity. This is modified to include a weighting function and a reflection coefficient to account for launching effects and the rod end discontinuity. A comparison with earlier simplified theory is made, and the extent to which the results may predict such properties as side lobe characteristics and E- and H-plane differences is presented.

Institute of Mathematical Sciences, New York U., N. Y.
A NEW METHOD FOR THE DETERMINATION OF FAR FIELDS WITH APPLICATIONS TO THE PROBLEM OF RADIATION OF A LINE SOURCE AT THE TIP OF AN ABSORBING WEDGE, by F. C. Karal, Jr. and S. N. Karp. Rept. on Contract AF 19(604)5238. Sep 59, 31p. 9 refs. Research rept. no. EM-145; AFCRC-TN-59-596.
Order from LC mi$3.00, ph$6.30 PB 144 435

A new simple operational method for the determination of the diffracted far field for wedges with impedance boundary conditions is presented. The exterior angle of wedge is $2\pi - \frac{\pi}{2n}$, where n is an integer. The excitation may be either an incident plane wave or a line source. The method is described in detail for the case of an absorbing wedge with a line source located at the tip. Several examples are given to illustrate the method. It is also shown that the method can be applied directly to the classical problem of perfectly conducting wedges.

Institute of Mathematical Sciences, New York U., N. Y.
ON THE DETERMINATION OF THE FREE ELECTRON DISTRIBUTION OF AN IONIZED GAS, by Irvin Kay. Rept. on Contract AF 19(604)3495. Sep 59, 33p. 8 refs. Research rept. no. EM-141; AFCRC-TN-59-591.
Order from LC mi$3.00, ph$6.30 PB 144 436

A standard simplified model of the problem of determining the free electron distribution in an ionized gas by radio sounding experiments is discussed, and a relation between the elements of the corresponding scattering matrix is derived. Under the conditions assumed, a closed form expression for the charge distribution in terms of a reflection coefficient which is a rational function of frequency is obtained.

Institute of Mathematical Sciences, New York U., N. Y.
REFLECTION AND TRANSMISSION BY A CLASS OF CURVED DIELECTRIC LAYERS, by S. N. Karp. Rept. on Contract AF 19(604)5238. Aug 59, 20p. 2 refs. Research rept. no. EM-140; AFCRC-TN-59-584.
Order from LC mi$2.40, ph$3.30 PB 144 427

We consider the reflection and transmission of electromagnetic waves by a special class of curved dielectric layers. The layers in question are bounded by two non-intersecting confocal parabolas, and between these boundaries, the dielectric constant, which may be complex, has a special form of space dependence. It is found that layers of this type have striking properties. If a plane wave is normally incident on such a layer, from the convex side, then the reflected field can be expressed as a product of two factors. The first factor is the field which would be reflected by a conducting parabola coincident with the surface of the layer. The second factor has no space dependence; it depends only upon the spacing of the shell boundaries, the frequency and the special choice of dielectric constant. The transmitted wave has an especially simple form. It is a plane wave. The configuration thus has properties similar to those of a plane dielectric slab. In fact, the plane slab is a limiting case of the geometry we have described.

Ionosphere Research Lab., Pennsylvania State U., University Park.
EXPERIMENTAL AND THEORETICAL INVESTIGATIONS OF THE LOW FREQUENCY POLARIZATION AT 60, 75 AND 150 KC/S, by A. J. Ferraro. Scientific rept. no. 121 on Ionospheric Research, Contract AF 19(604)4563. 13 July 59, 100p. 15 refs. AFCRC-TN-59-632.
Order from LC mi$5.40, ph$15.30 PB 144 440

The instrumentation for recording the state of polarization of 60 kc/s and 75 kc/s echoes for vertical incidence radio soundings is described in detail. Basically, the equipment resolves the polarization ellipse into its two circularly polarized components: the ordinary and extraordinary modes. The results of thirteen months of recording in the intervals of December 1956 to April 1957 on 75 kc/s and October 1957 to May 1958 on 60 kc/s are presented as monthly averages. In addition, a few typical daily curves of polarization for magnetically quiet and disturbed days are discussed.

A catalogue of 25 ionospheric models for which the group height, phase height, absorption, and polarization have been computed for 60-75 kc/s and 150 kc/s are presented.

Ionosphere Research Lab., Pennsylvania State U., University Park.
IONOSPHERIC INVESTIGATION FROM SATELLITE RADIO OBSERVATIONS. 1. DOPPLER EFFECT RECORDING INSTRUMENTATION, by W. J. Ross. Scientific rept. no. 120 on Ionospheric Research, Contract AF 19(604)4563. 30 June 59, 86p. 14 refs. AFCRC-TN-59-631; AD-227 909.
Order from LC mi$4.80, ph$13.80 PB 144 439

A brief survey is made of the main features of satellite transmitters and of the ionospheric propagation effects produced in the radio waves from them. From these considerations the desirable properties of the transmitter are summarized and the necessary properties of the receiving apparatus are inferred. Detailed descriptions of the various units of the receiving instrumentation are then given, followed by the presentation of a sample record analyzed to yield electron content of the ionosphere.

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
GUIDED WAVES ON SINUSOIDALLY MODULATED REACTANCE SURFACES, by A. A. Oliner and A. Hessel. Rept. on Contract AF 19(604)2031. 14 Sep 59, 32p. 6 refs. Research rept. R-777-59; PIB-705; AFCRC-TN-59-771.
Order from LC mi$3.00, ph$6.30 PB 144 423

A rigorous solution is derived for the propagation characteristics and field distributions of waves guided by a plane surface which possesses a surface reactance modulated sinusoidally in the propagation direction. The explicit field amplitudes and the determinantal equation for the propagation wavenumber are expressed in a continued fraction form which is rapidly convergent for all values of modulation. Numerical results are obtained for both surface wave (modal) and leaky wave (non-modal) solutions. The relevance of these studies to high gain modulated surface wave antennas is discussed.

National Bureau of Standards, Boulder, Colo.
COMMUNICATION THEORY ASPECTS OF TELEVISION BANDWIDTH CONSERVATION, by William C. Coombs. Aug 59, 27p. 10 refs. Technical note no. 25.
Order from OTS $0.50 PB 151 384

New concepts of communication bandwidth utilization and conservation are in prospect through difference signal modulation systems in which only relative changes information is transmitted in lieu of absolute amplitudes. By these systems, the changes data function is made one of time as well as of amplitude, so that better advantage can be taken of redundancies in the video signal. Advantageous conversions of information rate are made feasible by reason of a tremendous disparity existing between the extremely high information capacity of conventional television systems and the relatively very low perception capability of a human observer channel. Information conversions more consistent with perception capabilities of the human channel are achieved in difference signal modulation without usual great expansion of bandwidth that would be required to reproduce every possible absolute amplitude of each datum in the whole video picture mosaic directly. Conversion to binary digital form accrues the further advantages of binary systems, including greater immunity to noise, greater adaptability to discrete data storage media, greater ease of scrambling for security, and greater amenability of encoding to optimum parametric controls for most advantageous transmission. DESIGN OF SINGLE FREQUENCY FILTERS, by Forrest F. Fulton, Jr. 20 Aug 59, 10p. 1 ref. Technical note no. 23.
Order from OTS $0.50 PB 151 382

Efficient procedures are shown for designing filters formed by a number of identical resonant circuits loosely coupled together, and which are required to accept one narrow band of frequencies and reject another narrow band somewhat removed in frequency, without any special requirements on the shape of the attenuation curve in between these regions. The design is based on using a large number of sections. (Author).

National Bureau of Standards, Washington, D. C.
FREQUENCY DEPENDENCE OF VHF IONOSPHERIC SCATTERING, by James C. Blair. Apr 59, 17p. 11 refs. Technical note no. 9.
Order from OTS $0.75 PB 151 368

This report contains data obtained by recording received signal intensities simultaneously at five frequencies over the 1295 km path between the Long Branch transmitting station at Long Branch, Illinois, and the receiving site at Boulder, Colorado (Table Mesa field station). The data presented here cover the period of September 1, 1957 to June 30, 1958 (except for some later data on meteor bursts and sudden ionospheric disturbances). Good simultaneous signal intensity records were obtained for most of this period on 30, 40, 50 and 74 Mc. The available transmitter at 108 Mc was not suitable for continuous reliable records prior to June 5, 1958. A set of high-speed records was made for 10-minute intervals at different times during one day and analyzed for amplitude-distribution and fading-rate. Also, a low-sensitivity recording was made for the study of meteor bursts. Data presented here show the measured results of frequency dependence of average received power and illustrate how the level of average received power is influenced by meteoric ionization, sporadic-E ionization, and ionospheric and magnetic disturbances. A summary of hourly median and upper and lower decile values on all frequencies is included, as well as data on amplitude distributions and fading rates.

National Bureau of Standards, Boulder, Colo.
A HISTORY OF VERTICAL-INCIDENCE IONOSPHERE SOUNDING AT THE NATIONAL BUREAU OF STANDARDS, by Sanford C. Gladden. Sep 59, 140p. 191 refs. Technical note no. 28.

RADIO NOISE DATA FOR THE INTERNATIONAL GEOPHYSICAL YEAR JULY 1, 1957-DECEMBER 31 1958, by W. Q. Crichlow, C. A. Samson and others. 27 July 59, 239p. 1 ref. Technical note no. 18.
Order from OTS $2.50 PB 151 377

During the International Geophysical Year, radio noise measurements were made by a world-wide network supervised by the National Bureau of Standards. The months in which usable data were obtained are shown, and the results of the measurements are summarized. Month-hour data for each station are given first, followed by the seasonal-time-block values. In order to conform to the seasonal pattern used in CCIR Report No. 65, the data for June 1957 and January and February 1959 have been included.

National Bureau of Standards, Boulder, Colo.
RADIO WAVE PROPAGATION IN AN INHOMOGENEOUS ATMOSPHERE, by James R. Wait. 10 Sep 59, 21p. 20 refs. Technical note no. 24.
Order from OTS $1.00 PB 151 383

A self-contained treatment of the theory of radio waves in an inhomogeneous atmosphere is given. The refractive index is assumed to vary with height above the earth in a monotonic fashion. Variation according to an exponential law is used for illustration of general principles. For this case, rigorous series formulas are developed for the distance to the horizon for an elevated point in the atmosphere. (Author)

A SHORTENED METHOD OF STAR-REDUCTION, FOR CALIBRATING BALLISTIC CAMERAS, by R. d'E. Atkinson. 8 Jan 46, 42p. Rept. no. 593.
Order from LC mi$3.30, ph$7.80 PB 145 062

A method is given for reducing the zenith to the equator and equinox of any standard catalogue, so as to eliminate the reductions of individual stars to the apparent equator and equinox of date. The aberration is handled by an approximate method, but the errors introduced by this are very small. Secondly, the standard coordinates, referred to an astronomical azimuth, are now given directly by closed formulae, so that it is no longer necessary to solve explicitly for azimuth and zenith distance for each star. The number of references per star to seven figure trigonometrical tables is reduced by this from eleven to three, and the total amount of computation is correspondingly cut down.

A STUDY OF SALES FLUCTUATIONS IN TERMS OF PROBABILITY DISTRIBUTIONS, by Sharu S. Rangnekar and Charles C. Holt. ONR Research memo. no. 46 on Planning and Control of Industrial Operations, Contract Nonr-760(01). Aug 56, 23p. 8 refs.
Order from LC mi$2.70, ph$4.80 PB 138 505

In order to make decisions regarding production and inventory in a manufacturing concern or regarding inventory in a distributing concern, it is necessary to predict the future sales. When the future sales are uncertain - which is the usual case - some knowledge of the probable forecast error is also needed for arriving at an optimum decision. One approach to the sales forecast problem is to try to forecast the mean (average) sales rate and treat the deviation from the mean as an (unforcastable) random variable with a known probability distribution. This paper is concerned with this random component of sales. The prediction of mean sales is not considered.

Radiological Physics Division semiannual report for January through June 1959, by J. E. Rose and L. D. Marinelli. Argonne National Laboratory, Lemont, Ill. Oct 59. Contract W-31-109-eng-38. 101p. Order from OTS. $2.50. ANL-6049

Medical gamma-ray spectrometry, by D. A. Ross. Oak Ridge Institute of Nuclear Studies, and Basic principles of scintillation counting for mdeical investigators, by C. C. Harris, D. P. Hamblen, and J. E. Francis. Oak Ridge National Laboratory, Oak Ridge, Tenn. [nd.] Contract W-7405-eng-26. 72p. Order from OTS. $2.00. ORNL-2808/ORINS-30

Radiation background in Albuquerque, New Mexico, during and after the teaport series, by H. H. Sander and T, B, Cook, Jr. Sandia Corp., Albuquerque, N. Mex. Sep 55. 12p. Order from LC. Mi $2.40, ph $3.30. SCTM-206-55-(51)

Origin of life on earth and elsewhere, by M. Calvin. University of California. Lawrence Radiation Laboratory, Berkeley, Calif. Dec 59. Contract W-7405-eng-48. 44p. Order from OTS. $1.25. UCRL-9005

Radiation effect on the permeability of yeast cells to sodium and potassium ions. Thesis, by Kwan Hsu. University of California. Lawrence Radiation Laboratory, Berkeley, Calif. Dec 59. Contract W-7405-eng-48. 101p. Order from OTS. $2.50. UCRL-9012

Chemistry—General

High sensitivity mass spectrometry of the rare gases, by O. A. Schaeffer. Brookhaven National Laboratory, Upton, N. Y. Dec 59. 12p. Order from OTS. 50 cents. BNL-581 (T-161)

Separation factor and transfer coefficients associated with ion exchange separation of enriched as-depleted As., by S. H. Jury. Oak Ridge National Laboratory, Oak Ridge, Tenn. Aug 52. Decl. Dec 17, 1958. Contract W-7405-eng-26. 14p. Order from LC. Mi $2.40, ph $3.30. CF-52-8-218

Size of U. S. Steam-electric plants, by R. C. Robertson. Oak Ridge National Laboratory, Oak Ridge, Tenn. May 59. Contract W-7405-eng-26. 15p. Order from LC. Mi $2.40, ph $3.30. CF-59-5-130

A colorimetric method for rapid determination of traces of selenium, by E. M. Ray. Goodyear Atomic Corporation. Technical Division, Chemical Analysis Department, Portsmouth, Ohio. Dec 59. Contract AT-(33-2)-1. 10p. Order from OTS. 50 cents. GAT-289

Infrared spectra of ClO_2, ClO_2F, and ClO_3F, by E. A. Smith, F. C. Steinbach, and K. E. Beu. Goodyear Atomic Corp., Portsmouth, Ohio. Oct 59. Contract AT(33-2)-1. 6p. Order from LC. Mi $1.80, ph $1.80. GAT-T-687

The melting points of uranium dioxide, uranium monocarbide, and uranium mononitride, by H. W. Newkirk and J. L. Bates. General Electric Co., Hanford Atomic Products Operation, Richland, Wash. Mar 59. 5p. Order from LC. Mi $1.80, ph $1.80. HW-59468

Decontamination studies for HAPO high temperature reactor recirculation systems. Progress report June 1958-June 1959, by L. D. Perrigo and R. D. Weed. General Electric Co. Hanford Atomic Products Operation, Richland, Wash. June 59. Contract W-31-109-Eng-52. 34p. Order from LC. Mi $3.00, ph $6.30. HW-60677

Zirconium extraction by tributyl phosphate, by R. L. Hickok and R. D. Cannon. Phillips Petroleum Co. Atomic Energy Division, Idaho Falls, Idaho. Nov. 59. Contract AT(10-1)-205. 50p. Order from OTS. $1.25. IDO-14487

Research report in engineering. Semi-annual summary for January-June 1959, by Ames Laboratory Staff. Iowa State University of Science and Technology, Ames Laboratory, Iowa City, Iowa. Nov 59. Contract W-7405-eng-82. 27p. Order from OTS. $1.00. IS-16

Misidentifications in the ARC spectra of the rare earths, by R. N. Kniseley, V. A. Fassel and C. F. Lentz. Iowa State University of Science and Technology, Ames Laboratory, Iowa City, Iowa. Nov 59. Contract W-7405-eng-82. 21p. Order from OTS. 75 cents. IS-50

Organic fluorine compounds prepared by the electrochemical method. Literature survey, 1950 - July 1959, by S. A. Shahan. Union Carbide Nuclear Co. Division of Union Carbide Corporation. Oak Ridge Gaseous Diffusion Plant, Oak Ridge, Tenn. Jan 60. Contract W-7405-eng-26. 20p. Order from OTS. 75 cents. K-1438

The determination of chlorine in polyurethane plastic, by A. L. Henicksman, E. H. VanKooten, R. D. Gardner, and W. H. Ashley. The University of California. Los Alamos Scientific Laboratory, Los Alamos, N. Mex. Dec 59. Contract W-7405-ENG-36. 11p. Order from OTS. 50 cents. LA-2362

Estimated upper bounds to the half-life of thermal decomposition of ammonia, hydrogen, methane, and propane, by D. Herschbach. Los Alamos Scientific Laboratory, N. Mex. Aug 55. Decl. Aug 11, 1959. Contract W-7405-eng-36. 30p. Order from LC. Mi $2.70, ph $4.80. LAMS-1954

Process development of 2, 2-dinitropropyl acrylate, by T. M. Benziger, R. K. Rohwer, and W. H. Stein. Los Alamos Scientific Laboratory, Los Alamos, N. Mex. Oct 55. Decl. Sep 25, 1959. Contract W-7405-eng-36. 45p. Order from LC. Mi $3.30, ph $7.80. LAMS-1974

Solubility of terphenyls at room temperature, by R. T. Keen. North American Aviation, Inc., Atomics International Division, Canoga Park, Calif. Jan 58. 4p. Order from LC. Mi $1.80, ph $1.80. NAA-SR-MEMO-2412

Thermo-physical properties of OMRE circulating coolant, by G. Asanovich. North American Aviation, Inc., Atomics International Division, Canoga Park, Calif. May 59. 16p. Order from LC. Mi $2.40, ph $3.30. NAA-SR-MEMO-3843

The system lithium hydride--calcium hydride, by C. E. Messer and J. A. Krol. Tufts University, Medford, Mass. Sep 59. Contract AT(30-1)-1410. 12p. Order from LC. Mi $2.40, ph $3.30. NYO-8026

Thorex pilot plant corrosion studies: II. Corrosion of types 304L, 309SCb, and 347 stainless steel during development and production-development periods, by J. L. English. Oak Ridge National Laboratory, Oak Ridge, Tenn. [nd.] Contract W-7405-eng-26. 48p. Order from OTS. $1.50. ORNL-2844

Pilot plant preparation of thorium- and thorium-uranium oxides, by K. O. Johnsson and R. H. Winget. Oak Ridge National Laboratory, Chemical Technology Division, Oak Ridge, Tenn. [nd.] Contract W-7405-eng-26. 16p. Order from OTS. 75 cents. ORNL-2853

A study of spectrophotometric methods for the determination of osmium, by G. Goldstein. Oak Ridge National Laboratory, Analytical Chemistry Division, Oak Ridge, Tenn. [nd.] Contract W-7405-eng-26. 69p. Order from OTS. $2.25. ORNL-2862

Master analytical manual, by M. T. Kelley. Oak Ridge National Laboratory, Analytical Chemistry Division, Oak Ridge, Tenn. Nov 59. 527p. Order from OTS. $5.75. TID-7015 (SUPPL. 1)

A method of purification of Americium, by Keiji Naito. University of California. Lawrence Radiation Laboratory, Berkeley, Calif. Nov 59. Contract W-7405-eng-48. 23p. Order from OTS. 75 cents. UCRL-8748

The gravimetric determination of hafnium and zirconium in hafnium materials, by T. M. Reinhold. Westinghouse Electric Corp., Bettis Plant, Pittsburgh, Pa. Apr 59. 4p. Order from LC. Mi $1.80, ph $1.80. WAPD-M-(GLA)-718

Recovery of uranium from uranium-zirconium fuel scrap, by T. P. Sprague. Union Carbide Nuclear Co. Division of Union Carbide Corp. Y-12 Plant, Oak Ridge, Tenn. Jan 58. Contract W-7405-eng-26. 27p. Order from OTS. $1.00. Y-1282

Chemistry—Radiation and Radiochemistry

Theoretical and experimental studies of sodium irradiator systems, by O. A. Kuhl, L. Galanter, S. Zwickler, and B. Manowitz. Brookhaven National Laboratory, Upton, N. Y. May 59. 19p. Order from OTS. 75 cents. BNL-567 (T-153)

Chemistry—Separation Processes for Plutonium and Uranium

Chemical Engineering Division summary report for July, August, September, 1959, by S. Lawroski. and others. Argonne National Laboratory, Lemont, Ill. 1959. Contract W-31-109-eng-38. 165p. Order from OTS. $3.00. ANL-6068

PRFR pilot leaching plant--preliminary process design, by H. A. McLain. Oak Ridge National Laboratory, Oak Ridge, Tenn. July 59. Contract W-7405-eng-26. 50p. Order from LC Mi $3.60, ph $9.30. CF-59-7-76

A gelatin-filtration headend for fuel reprocessing solutions from silicon-containing aluminum alloys, by B. J. Newby and B. E. Paige. Phillips Petroleum Co., Atomic Energy Division, Idaho Falls, Idaho. Feb 59. Contract AT(10-1)-205. 54 pages. Order from OTS. $1.50. IDO-14468

Idaho Chemical Processing Plant technical progress report for January through March 1959, by C. E. Stevenson and others. Phillips Petroleum Co., Atomic Energy Division, Idaho Falls, Idaho. Aug 59. Contract AT(10-1)-205. 71p. Order from OTS. $2.00. IDO-14471

The determination of excessive emulsification by coalescence behavior measurements, by O. W. Parrett. Phillips Petroleum Co., Atomic Energy Division, Idaho Falls, Idaho. Nov 59. Contract AT(10-1)-205. 25p. Order from OTS. 75 cents. IDO-14486

Electrorefining of irradiated thorium-uranium alloy, by W. N. Hansen, W. L. Long, and E. W. Murbach. Atomics International, A Division of North American Aviation, Inc., Canoga Park, Calif. Jan 60. Contract AT(11-1)-GEN-8. 14p. Order from OTS. 75 cents. NAA-SR-4660

Modified zirflex process for dissolution of zirconium- and niobium-bearing nuclear fuels in aqueous fluoride solutions: Laboratory development, by T. A. Gens and F. G. Baird. Oak Ridge National Laboratory, Oak Ridge, Tenn. [nd.] Contract W-7405-eng-26. 30p. Order from OTS. $1.00. ORNL-2713

Controlled Thermonuclear Processes

Thermonuclear project semiannual report, for period ending July 31, 1959, by A. H. Snell and others. Oak Ridge National Laboratory, Oak Ridge, Tenn. 1959. Contract W-7405-eng-26. 136p. Order from OTS. $2.75. ORNL-2802

Some exact radiating solutions to Vlasov's equations, by L. C. Biedenharn. Oak Ridge National Laboratory, Oak Ridge, Tenn. 1959. Contract W-7405-eng-26. 20p. Order from OTS. 75 cents. ORNL-2838

Kinetic equations for plasma and radiation, by A. Simon and E. G. Harris. Oak Ridge National Laboratory, Oak Ridge, Tenn. [nd.] Contract W-7405-eng-26. 33p. Order from OTS. $1.25. ORNL-2880

Current sources for scaling magnetic fields, by S. C. Snowdon. Midwestern Universities Research Association, Madison, Wis. Dec 59. Contract AT(11-1)-384. 21p. Order from OTS. 75 cents. MURA-535

The hard-core pinch. Part I, by D. H. Birdsall, S. A. Colgate, and H. P. Furth. University of California. Lawrence Radiation Laboratory, Livermore, Calif. July 59. Contract W-7405-eng-48. 13p. Order from LC. Mi $2.40, ph $3.30. UCRL-5599

The hard-core pinch. Part II, by D. H. Birdsall, S. A. Colgate, and H. P. Furth. University of California. Lawrence Radiation Laboratory, Livermore, Calif. July 59. Contract W-7405-eng-48. 15p. Order from LC. Mi $2.40, ph $3.30. UCRL-5602

Criticality Studies

Nuclear calculations for the organic moderated exponential experiments, by J. J. McClure. Atomics International, Division of North American Aviation, Inc., Canoga Park, Calif. Mar 59. 8p. Order from LC. Mi $1.80, ph $1.80. NAA-SR-MEMO-3659

Critical mass of an OMR core using plate type fuel elements, by H. C. Field. Atomics International, A Division of North American Aviation, Inc., Canoga Park, Calif. June 59. 4p. Order from LC. Mi $1.80, ph $1.80. NAA-SR-MEMO-3980

Health and Safety

Radiochemical analysis of marine biological samples following the "Redwing" shot series - 1956, by C. W. Thomas, D. L. Reid, and L. F. Lust. Hanford Atomic Products Operation, Richland, Wash. Dec 58. Contract W-31-109-Eng-52. 81p. Order from OTS. $2.25. HW-58674

Hanford environmental monitoring annual report, 1958, by B. V. Andersen. Hanford Atomic Products Operation, Richland, Wash. Aug 59. Contract AT(45-1)-1350. 18p. Order from OTS. 75 cents. HW-61676

Prevention and handling of radiation emergencies, by K. W. Bahler, A. F. Rupp, R. H. Lafferty, Jr., J. W. Wachter, and L. S. O'Rourke. Union Carbide Nuclear Co., Division of Union Carbide Corporation, Oak Ridge, Tenn. and Paducah, Ky., and Goodyear Atomic Corp., Portsmouth, Ohio. Dec 59. Contracts W-7405-eng-26 and AT-(33-2)-1. 68p. Order from OTS. $2.00. K-1436

Measurement of radioactive fallout air sedimentation apparatus, by J. F. Lakner. University of California. Lawrence Radiation Laboratory, Livermore, Calif. July 59. Contract W-7405-eng-48. 34p. Order from OTS. $1.00. UCRL-5636

Instruments

Manipulator cable with constant stress, by J. H. Grimson. Argonne National Laboratory, Lemont, Ill. Nov 59. Contract W-31-109-eng-38. 44p. Order from OTS. $1.25. ANL-6079

A scintillation transistorized alpha-beta-gamma hand and shoe counter, by W. G. Spear. Hanford Atomic Products Operation, Richland, Wash. July 59. Contract AT(45-1)-1350. 105p. Order from OTS. $2.50. HW-60631

An automatic analyzing monitor for reactor effluent cooling water, by H. G. Rieck, C. A. Ratcliffe and L. C. Schwendiman. Hanford Atomic Products Operation, Richland, Wash. May 59. Contract W-31-109-Eng-52. 69p. Order from OTS. $2.00. HW-61117

Differential pressure safety device, by R. Holland. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Jan 59. Contract AT(11-1)-GEN-8. 28p. Order from OTS. $1.00. NAA-SR-3867

The lid tank shielding facility at Oak Ridge National Laboratory. Part III. Instrumentation, by D. W. Cady. Oak Ridge National Laboratory, Oak Ridge, Tenn. 1959. Contract W-7405-eng-26. 58p. Order from OTS. $2.00. ORNL-2587

On the relationship between DC large signal current gain and AC small signal current gain for a common base transistor connection, by T. E. Lommasson. Sandia Corporation, Albuquerque, N. Mex. Oct 55. 4p. Order from LC. Mi $1.80, ph $1.80. SCTM-219-55-53

Transducer system response tests, by R. Masnovi. Westinghouse Electric Corp. Atomic Power Division, Pittsburgh, Pa. Oct 58. 26p. Order from LC. Mi $2.70, ph $4.80. WAPD-TH-450

Metallurgy and Ceramics

Thermodynamic properties of carbides at high temperatures. Annual report and renewal proposal, by S. Fujishiro and N. A. Gokcen. University of Pennsylvania, Philadelphia, Pa. Sep 59. 8p. Order from LC. Mi $1.80, ph $1.80. AECU-4346

Using ceramics and cermets in nuclear power reactors, by G. L. Ploetz. Knolls Atomic Power Laboratory, Schenectady, N. Y. [nd]. 21p. Order from LC. Mi $2.40, ph $3.30. AECU-4354

Apparatus for measuring the thermal conductivities of metals, by S. T. Zegler and M. V. Nevitt. Argonne National Laboratory, Lemont, Ill. Oct 59. Contract W-31-109-eng-38. 15p. Order from OTS. 50 cents. ANL-5611

Casting of zirconium containing small internal cooling holes, by D. S. Parker. General Electric Co., Atomic Product Division, Aircraft Nuclear Propulsion Department, Cincinnati, Ohio. Nov 59. Contracts AT(11-1)-171 and AF 33(600)-38062. 11p. Order from OTS. 50 cents. APEX-538

High-temperature irradiation of a zirconium-hydride-2 w/o uranium alloy, by G. E. Lamale and others. Battelle Memorial Institute, Columbus, Ohio. Dec 59. Contract W-7405-eng-92. 37p. Order from OTS. $1.25. BMI-1401

Effect of additions to Zircaloy on hydrogen pickup during aqueous corrosion, by W. E. Berry, E. L. White, and F. W. Fink. Battelle Memorial Institute, Columbus, Ohio. Dec 59. Contract W-7405-eng-92. 30p. Order from OTS. $1.00. BMI-1402

Estimates of the effect of bubble size on fuel element swelling, by A. H. Willis. General Electric Co., Knolls Atomic Power Laboratory, Schenectady, N. Y. Sep 59. Contract W-31-109-Eng-52. 13p. Order from OTS. 75 cents. KAPL-2050

Prediction of high temperature tensile and creep properties from hot hardness tests of a Zr-Nb-Sn alloy, by D. L. Douglass. General Electric Co., Knolls Atomic Power Laboratory, Schenectady, N. Y. Aug 59. Contract W-31-109-Eng-52. 8p. Order from OTS. 75 cents. KAPL-2051

Measurement and interpretation of electrical properties of zirconium hydride for hydrogen-to-metal ratios between 1.5 and 2, by P. W. Bickel. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Jan 60. Contract AT(11-1)-GEN-8. 12p. Order from OTS. 50 cents. NAA-SR-4173

Interim report on the aluminum powder metallurgy product development program, by W. H. Friske. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Jan 60. Contract AT(11-1)-GEN-8. 34 pages. Order from OTS. $1.00. NAA-SR-4233

Apparatus for determining linear thermal expansions of materials in vacuum or controlled atmosphere, by S. D. Fulkerson. Oak Ridge National Laboratory, Oak Ridge, Tenn. [nd]. Contract W-7405-eng-26. 37p. Order from OTS. $1.25. ORNL-2856

Development and properties of silver-base alloys as control rod materials for pressurized water reactors, by I. Cohen. Westinghouse Electric Corporation. Bettis Atomic Power Laboratory, Pittsburgh, Pa. Dec 59. Contract AT-11-1-GEN-14. 118p. Order from OTS. $2.75. WAPD-214

Particle Accelerators and High-Voltage Machines

Beat factors for an accelerator with a general magnetic field, by G. Parzen. Midwestern Universities Research Association, Madison, Wis. Sep 59. Contract AT(11-1)-384. 5p. Order from OTS. 50 cents. MURA-513

Fields excited by beam currents in circular accelerators, by J. Van Bladel. Midwestern Universities Research Association, Madison, Wis. Dec 59. Contract AT(11-1)-384. 22p. Order from OTS. 75 cents. MURA-538

The admittance and transfer functions of solid core electromagnets, by N. F. Ziegler. Oak Ridge National Laboratory, Oak Ridge, Tenn. [nd]. Contract W-7405-eng-26. 51p. Order from OTS. $1.75. ORNL-2860

Bevatron operation and development. XXI, February, March, April 1959, by W. D. Hartsough. University of California. Lawrence Radiation Laboratory, Berkeley, Calif. Oct 59. Contract W-7405-eng-48. 22p. Order from OTS. 75 cents. UCRL-8927

Physics and Mathematics

Annular fixed-bed ion-exchange studies, by G. A. Nicholson. Hanford Atomic Products Operation, Richland, Wash. May 59. Contract W-31-109-Eng-52. 29p. Order from OTS. $1.00. HW-59709

Nuclear physics research quarterly report for April, May, June, 1959, by J. E. Faulkner and others. Hanford Atomic Products Operation, Richland, Wash. July 59. Contract AT(45-1)-1350. 58p. Order from OTS. $1.75. HW-61181

A comparison of PCTR and critical experiment determinations of k_{∞} for two weight per cent uranium-235 enriched UF_4 in paraffin, by V. I. Neeley. Hanford Atomic Products Operation, Richland, Wash. Sep 59. Contract AT(45-1)-1350. 28p. Order from OTS. $1.00. HW-62031

Duration of atomic collisions. A Note on recombination rate theory, by D. L. Bunker. Los Alamos Scientific Lab., Los Alamos, N. Mex. Nov 58. Contract W-7405-eng-36. 23p. Order from LC. Mi $2.70, ph $4.80. LA-2295

April 1960

U. S. Government

RESEARCH REPORTS

. . . A monthly listing of Government research reports available to industry . . .

U. S. DEPARTMENT OF COMMERCE

THIS SUPPLEMENT is issued to announce a number of older research reports which, because of staff limitations, OTS could not process in the usual manner into USGRR.

The reports are available only in photocopy and microfilm from the Library of Congress.

They are merely listed in this Supplement, not abstracted.

The Supplement contains its own index, and the reports listed will not be included in the six-months cumulative index for this Volume of USGRR.

CONTENTS

Page

The PB Reports . . .

announced in this publication have just been released, usually by agencies of the U. S. Government, for dissemination to the public. In most instances they result from Government or Government-sponsored research.

The Office of Technical Services is responsible, under Public Law 776, 81st Congress, for the collection and distribution of these technical reports in the interest of American science and industry.

The more important reports are reprinted for sale to the public by OTS. Many of the reports are so specialized that the demand for them does not warrant reproduction of printed copies; originals of these documents are deposited at the Library of Congress. There they may be inspected in the Annex Reading Room, or copies may be ordered from the Library in either photocopy or microfilm.

PB reports of special interest to smaller businesses are abstracted in OTS's monthly *Technical Reports Newsletter*, available from the Superintendent of Documents, Washington 25, D. C., at $1 a year domestic, $1.50 foreign.

Since 1945 thousands of business firms have used PB reports in their research programs. These reports now constitute one of the world's largest collections of non-confidential technical information, numbering over 250,000 items. OTS has published catalogs of related reports in more than 300 areas of industrial interest. For further information relative to any of its activities, you are invited to write OTS, U. S. Department of Commerce, Washington 25, D. C.

Except to the extent indicated by acknowledgment of authorship, OTS does not edit PB reports, nor does it accept responsibility for the information and conclusions contained in them. If copyrighted material appears, permission for its use should be requested from the copyright owners. Any national security restrictions that may have applied to these reports have been removed. Patents may cover the subject matter of any report, and the reader is advised to make patent searches before developing applications based on the reports.

How To Order

ALWAYS USE COMPLETE TITLE AND PB NUMBER of each report ordered. The letter "s" accompanying some PB numbers means "supplement," "t" means "translation," and "r" means a partial or complete revision. These letters should be included as part of the PB number. Prepayment is required.

TO ORDER FROM LC • Address your order to Library of Congress, Photoduplication Service, Publications Board Project, Washington 25, D. C. Make check or money order payable to Chief, Photoduplication Service, Library of Congress. State whether report is desired in microfilm or photocopy. Microfilm copies are in 35 millimeter film and require special reading equipment; if you do not have such a machine you may be able to use one at a library in your area.

TO ORDER FROM OTS • Address your order to Office of Technical Services, U. S. Department of Commerce, Washington 25, D. C. Make check or money order payable to OTS, Department of Commerce. Reports available from OTS may also be ordered through Department of Commerce field offices.

TO ORDER FROM OTHER SOURCES • When an agency other than OTS or LC is the source, use the full address included in the abstract of the report. Make check or money order payable to that agency.

U.S. GOVERNMENT RESEARCH REPORTS

U.S. DEPARTMENT OF COMMERCE

Order from LC mi $2.40, ph $3.30 PB 128943

Covers period 30 June 1956 through Sep 1956 Scientific report no. 5.

American Meteorological Society, Boston, Mass.
ON THE SPECTRAL LINE PROFILES OF THE SOLAR CHROMOSPHERE, by V. A. Krat and T. V. Krat, 1955. 57 p. Contract AF 19 (604) 1936.
Order from LC mi $3.60, ph $9.30 PB 128651

Trans. from Russian by B. de L. Jezierski and D. Kraus of Izvestiia glavoni astronomicheskoi observatorii v Pulkove 19(6): 1-30, 1955.

Boston College, Mass.
PROPAGATION OF RADIO PULSES INCIDENT OBLIQUELY UPON A HORIZONTALLY STRATIFIED IONOSPHERE, IN THE PRESENCE OF THE MAGNETIC FIELD OF THE EARTH, by R. J. Marcou, 1 June 1957. Final report AF CRC TR-57-298; Contr AF 19 (604)-1299. AD-117265.
Order from LC mi $2.70 ph $4.80 PB 128748

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
STUDY AND INTERPRETATION OF LOW ANGLE FLUCTUATIONS FROM THE RADIO STAR CASSIOPEIA AS OBSERVED AT ITHACA, N. Y., by Braulio Dueno, 25 Sept 1955, 130 p. Contr DA36-039-SC-56748. Technical Report No. 27 Research Report EE 263.
Order from LC mi $6.30, ph $19.80 PB 127744

David Sarnoff Research Center, Princeton, N. J.
SOLAR RESEARCH STUDIES FINAL REPORT by W. A. Miller, 15 Dec 1956, 108 p. DA36-039-SC-64-524.
Order from LC mi $5.70, ph $16.80 PB 129526

Florida State U., Tallahassee.
BLUE HAZE AND THE VERTICAL STRUCTURE OF THE MARTIAN ATMOSPHERE, by Seymour L. Hess, 1 Feb 1957, 17 p. TR 8; Contr.Nonr-1600 (00).
Order from LC mi $2.40, ph $3.30 PB 132491

Florida U. Engineering and Industrial Experiment Station, Gainesville.
INVESTIGATION OF ATMOSPHERIC RADIO NOISE. SCIENTIFIC REPORT NO. 14, by A. W. Sullivan and P. J. Nawrocki, 15 Feb 1957, 31 p. AF CRC TN 56-984; AF 19(604)-876.
Order from LC mi $3.00, ph $6.30 PB 128812

Incomplete: Page iii (with abstract) missing, page v bound ahead of p. iv.

Geophysical Inst., U. of Alaska, College.
AN ANALYSIS OF THE SOLAR AND LUNISOLAR DAILY VARIATIONS IN THE GEOMAGNETIC FIELD AT SITKA, ALASKA 1902-1952, by Joseph C. Cain, Apr 1957, 135 p. AFCRC TR 57-272; Contract AF 19(604)-503.
Order from LC mi $6.90, ph $2.30 PB 128974

Thesis

Georgetown College Observatory, Washington, D. C.
ON THE GEODETIC APPLICATION OFA SOLAR ECLIPSE, by A. Goldstein, O. F. Mattingly, etc., Aug 1957. 16 p. AF CRC TR 57-201; Contr. AF 19 (604)-880. AD-113 611.
Order from LC mi $2.40, $3.30 PB 129347

Technical Report No. 1.

Georgetown College Observatory, Washington,D. C.
ON THE RELATION BETWEEN PHOTOMETRIC OBSERVATIONS AND GEOMETRIC POSITIONS OF THE SUN AND MOON DURING A SOLAR ECLIPSE, PAPER I, by Vera Cooper Rubin, Aug 1957, 24 p. AFCRC TN 57-498; Contr. AF 19(604)-880. Technical Report 4. 7-21-58. AD-113604.
Order from LC mi $2.70, ph $4.80 PB 129431

High Altitude Observatory, Boulder, Colo.
FINAL REPORT, 29 Aug 1956, 6 p. Contr. Nonr-1651(01).
Order from LC mi $1.80, ph $1.80 PB 128625

Naval Research Lab., Washington, D. C.
UPPER ATMOSPHERE RESEARCH REPORT NO. III. PART 2, COMPILED AND EDITED by H. E. Newell, Jr. and J. W. Siry, Apr 1947, 38 p. NRL R-3139.
Order from LC mi $3.00, ph $6.30 PB 129164

Northwestern U., Evanston, Illinois.
INVESTIGATION AND RESEARCH IN ASTRONOMY CONSISTING OF: MEASUREMENT AND REDUCTIONS OF RELATIVE POSITIONS OF DOUBLE STARS FROM PHOTOGRAPHIC PLATES, by K. A. Strand, Dec 1956, 4 p. Contr. Nonr 1711(00).
Order from LC mi $1.80, ph $1.80 PB 132003

Ohio State University Research Foundation, Columbus, Ohio.
ATMOSPHERE TRANSMISSION OF STARLIGHT AND SOLAR INTENSITY OBSERVATIONS, Final report by Roger Hosfeld and J. Allen Hynek, May 1957, 7 p. AFCRC TR-57-286; Contract AF 19(604) 964. AD-117 226.
Order from LC mi $1.80, ph $1.80 PB 129396

Redstone Arsenal, Huntsville, Ala.
EQUATIONS OF MOTION OF SATELLITE IN UPPER REGION OF EARTH'S ATMOSPHERE, by Charles A. Lundquist, 18 April 1955, 18 p. RSL OML 6M-64.
Order from LC mi $2.40, ph $3.30 PB 128719
Erratum sheet stapled inside front cover.

Smithsonian Institution, Washington, D. C.
OBSERVATIONS ON ABLATION AND METALLURGICAL EFFECTS PRODUCED BY SURFACE HEATING OF THE ALGOMA METEORITE, by Robert R. O'Neil, Sept 24, 1957, 11 p. AFOSR-TN-57-541; Contr AF 18 (600) - 1596. Technical Report No. 1. AD-136 529.
Order from LC mi $2.40, ph $3.30 PB 129992

Stanford Electronics Labs., Stanford U., Calif.
REFLECTION AND TRANSMISSION AT A SHARPLY-BOUNDED IONOSPHERE, by I. W. Yabroff, July 29, 1957, 76 p. SURPL TR-1; AFOSR TN 57-466; Contract AF 18(603)-126. AD-136 457.
Order from LC mi $4.50, ph $12.30 PB 130220

Texas A. and M. Research Foundation, College Station.
CONNECTIVE CELL BANDS IN THE CENTRAL AND EASTERN UNITED STATES AS OBSERVED BY RADAR, by Wayne Leach, April 1957, 52 p. AF CRC TN-57-457; Contr AF19(604)-1564, Scientific Report No. 2. AD-117 205
Order from LC mi $3.60, ph $9.30 PB 128936

Masters Thesis A6 M Proj. 131, Ref. 57-18T.

Utah University, Salt Lake City, Utah.
EXPERIMENTAL PLAN AND INSTRUMENTATION FOR THE ELECTRON DENSITY IN THE IONOSPHERE. Final report, by Obed C. Haycock, Leon B. Linford, et al, May 1957, 132 p. AF CRC TR 57-283; Contr. AF 19 (604)-348; AD-117 219.

THE EFFECTS OF FRICTION ON THE ACCURACY OF KNOB SETTINGS, by P. Swartz, R. F. Green, et al. Aug 1, 1955. 9 p. SDC-TR 241-6-14.
Order from LC mi $1.80, ph $1.80 PB 127616

Rochester U., N. Y.
THE EFFECTS OF INERTIA ON THE ACCURACY OF KNOB SETTINGS, by B. Weiss, R. F. Green, Jan 1953. 6 p. SDC-TR 241-6-9; Contr. N 6 ONR-241, T. O. 6.
Order from LC mi $1.80, ph $1.80 PB 127613

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE AFSAM COMPENSATORY BALANCING TEST MODEL A, by R. B. Payne, Nov 1948. 11 p. AF SAM Proj.-21-02-011, Report No. 1. Test No. 2.
Order from LC mi $2.40, ph $3.30 PB 130984

Test No. 2.

School of Aviation Medicine, Randolph Air Force Base, Tec.
AN ANALYSIS OF THE EFFECTS OF AERIAL TRANSPORTATION ON PATIENTS, by F. L. Duff, K. E. Pletcher, Sep 1948. 12 p. AF SAM Proj.-21-02-035. Report No. 1.
Order from LC mi $2.40, ph $3.30 PB 130986

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE RELATIONSHIP BETWEEN LEG STRENGTH, LEG ENDURANCE AND OTHER BODY MEASUREMENTS, by E. R. Elbel, Jan 1950. 12 p.
Order from LC mi $2.40, ph $3.30 PB 130979

Unnumbered Proj-No. Series.

School of Aviation Medicine, Randolph Air Force Base, Tex.
STUDY ON THE EFFICIENCY OF AIRCRAFT INSIGNIA AND AIRCRAFT MARKINGS, by S. J. Gerathewohl, & H. Hober, Aug 1950. 39 p.
Order from LC mi $3.00, ph $6.30 PB 130976

School of Aviation Medicine, Randolph Air Force Base, Tex.
VISUAL PROBLEMS OF PILOT IN PRONE POSITION, by H. W. Rose &P. H. Ripple, Aug 1951. 11 p. AF SAM Proj. 21-24-011-Report 1.
Order from LC mi $2.40, ph $3.30 PB 130970

Wright Air Development Command, Wright-Patterson Air Force Base, Ohio.
THE PRESENCE OF A DUAL PERCEPTUAL SET FOR CERTAIN PERCEPTUAL-MOTOR TASKS, by C. W. Simon, June 1954. 33 p. WADC TR 54-286; Contr. W33-038 ac-19816.
AD-52500
Order from LC mi $3.00, ph $6.30 PB 130379

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
RESPIRATORY RESPONSE TO OXYGEN BREATHING WITH A FULL-HEAD OXYGEN MASK, by Elizabeth Comfort and Kent W. Gillespie, April 1953. 19 p. WADC TR 53-130.
AD-23892
Order from LC $2.40, ph $3.30 PB 133696

Personnel and Training

Adjutant General's Office, Washington, D. C.
DEVELOPMENT AND EVALUATION OF PROTOTYPE ARMY LANGUAGE PROFICIENCY TESTS, by T. F. Dunn, V. M. Tye, et al. May 1957. 29 p. PRB TRR 1105.
Order from LC $2.70, ph $4.80 PB 130675

Adjutant General's Office, Washington, D. C.
DEVELOPMENT OF ENLISTMENT SCREENING TEST, FORMS 3 AND 4, by M. A. Morton, T. J. Houston et al. May 1957. 13 p. WD AGO PRB TRR 1102.
Order from LC mi $2.40, ph $3.30 PB 130678

Adjutant General's Office, Washington, D. C.
DEVELOPMENT OF INSTRUMENTS FOR SCREENING AFQT-5 AND 6 FAILURES, by J. P. Mundy, L. A. Meyer, et al. May 1957. 27 p. graphs, tables.
Order from LC mi $2.70, ph $4.80 PB 130676

Adjutant General's Office, Washington, D. C.
DEVELOPMENT OF THE ARMED FORCES QUALIFICATION TESTS FORMS 5 AND 6, by J. P. Mundy, Leon G. Goldstein, April 1957, 24 p. PRB TRR 1101.
Order from LC mi $2.70, ph $4.80 PB 130679

Adjutant General's Office, Washington, D. C.
EVALUATION OF THE PUERTO RICAN SCREENING TEST (ECFA) AGAINST SUCCESS ON THE JOB, by K. F. Schenkel, L. A. Meyer, et al. June 1957. 14 p. PRB TRR 1106.
Order from LC mi $2.40, ph $3.30 PB 130674

Adjutant General's Office, Washington, D. C.
MENTAL SCREENING TESTS FOR WOMEN IN THE ARMED FORCES, by M. A. Morton, T. J. Houston, et al. May 1957. 14 p. PRB TRR 1103.
Order from LC mi $2.40, ph $3.30 PB 130677

Adjutant General's Office, Washington, D. C.
SELECTION OF ARMY AND AIR FORCE RESERVE OFFICER TRAINING CORPS STUDENTS, by Howard Roy and Joyce Brueckel, June 1954. 13 p. PRB TRN 28.
Order from LC mi $2.40, ph $3.30 PB 128384

Adjutant General's Office, Washington, D. C.
SELECTION OF EXPERIMENTAL PREDICTORS FOR LONGITUDINAL VALIDATION IN COMBAT ARMS, by L. P. Willemin and A. H. Birnbaum, et al, June 1957. 17 p. PRB TRN-72.
Order from LC mi $2.40, ph $3.30 PB 132551

Adjutant General's Office, Washington, D. C.
VALIDATION OF POTENTIAL COMBAT PREDICTORS: RESEARCH PLAN OF LONGITUDINAL STUDY, by L. P. Willemin and A. H. Birnbaum, et al, June 1957. 11 p. PRB TRN-73.
Order from LC $2.40, ph $3.30 PB 132552

Adjutant General's Office, Washington, D. C.
VALIDATION OF POTENTIAL COMBAT PREDICTORS: ZI RESULTS FOR ARMOR, by A. H. Birnbaum, et al, July 1957. 17 p. PRB TRN 78.
Order from LC mi $2.40, ph $3.30 PB 132555

Adjutant General's Office, Washington, D. C.
VALIDATION OF POTENTIAL COMBAT PREDICTORS: ZI RESULTS FOR ARTILLERY, by L. P. Willemin and N. Rosenberg, July 1957. 17 p. PRB TRN-78.
Order from LC mi $2.40, ph $3.30 PB 132554

Adjutant General's Office, Washington, D. C.
VALIDATION OF POTENTIAL COMBAT PREDICTORS: ZI RESULTS FOR COMBAT ENGINEER, by A. H. Birnbaum, et al, July 1957, 16 p. PRB TRN-79.
Order from LC $2.40, ph $3.30 PB 132556

Adjutant General's Office, Washington, D. C.
VALIDATION OF POTENTIAL COMBAT PREDICTORS: ZI RESULTS FOR INFANTRY, by L. P. Willemin and N. Rosenberg, July 1957. 21 p. PRB TRN-76.
Order from LC mi $2.70, ph $4.80 PB 132553

Adjutant General's Office, Washington, D. C.
VALIDATION OF POTENTIAL COMBAT PREDICTORS IN OVERSEAS MANEUVERS, by L. P. Willemin, et al, Aug 1957. 21 p. PRB TRN-80.
Order from LC mi $2.70, ph $4.80 PB 132557

Aero Medical Lab., Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
ORIENTATION OF CONTROLS IN BILATERAL TRANSFER OF TRAINING, by L. D. Pigg, July 1954. 28 p. WADC TR 54-376.
AD-63505.
Order from LC mi $2.70, ph $4.80 PB 130384

Air Force Personnel and Research Training Center, Lackland Air Force Base, Tex.
DEVELOPMENT OF AIRMAN CLASSIFICATION BATTERY AC-2A, by Leland D. Brokaw and George G. Burgess, June 1957. 43 p. AFPTRC-TR-57-1.
AD-131422.
Order from LC mi $3.30, ph $7.80 PB 132151

Air Force Personnel and Training Research Center, Lackland Air Force Base, Tex.
ESTIMATES OF FAILURES OF THE ARMED FORCES QUALIFICATION TEST, 1956. by John W. Merck and C. A. McMahan, June 1957. 22 p. AFPTRC TN 57-67.
AD-126398.
Order from LC mi $2.70, ph $4.80 PB 129669

Air Force Personnel and Training Research Center, Lackland Air Force Base, Tex.
A FACTOR ANALYSIS OF THE AIR FORCE FACTOR REFERENCE BATTERY I, by Charles Wrigley and Joseph E. Morsh, Dec 1956. 18 p. AFPTRC-TN-56-137; Contract No. AF 33(038)-25726-A.
AD-098913.
Order from LC mi $2.40, ph $3.30 PB 128107

Air Force Personnel and Training Research Center, Lackland Air Force Base, Texas.
LANGUAGE APTITUDE TESTS AS PREDICTORS OF SUCCESS IN A SIX-MONTH RUSSIAN COURSE, by Francis D. Harding, Jr., and James T. McWilliams Jr., June 1957. 11 p. AFPTRC TN-57-86.
AD-134206.
Order from LC mi $2.40, ph $3.30 PB 129556

Air Force Personnel and Training Research Center, Lackland Air Force Base, Texas.
A PROPOSAL FOR AN OFFICER EFFECTIVENESS SELECTION BATTERY BASED ON MEASURES OBTAINABLE DURING BASIC AND ADVANCED AFROTC, by Ernest C. Tupes, June 1957. 13 p. AFPTRC-TN-57 87.
AD-134207.
Order from LC mi $2.40, ph $3.30 PB 129671

Air Force Personnel and Training Research Center, Lackland Air Force Base, Tex.
THE RELATIVE EFFECTIVENESS OF AN AIR FORCE TRAINING DEVICE USED INTACK VERSUS WITH ISOLATED PARTS, by Lewis E. Aukes and George B. Simon, June 1957. 22 p. AFPTRC TN 57-77.
AD-131429.
Order from LC mi $2.70, ph $4.80 PB 129668

Air Force Personnel and Training Research Center, Lackland Air Force Base, Texas.
A REPLICATION STUDY OF WORK GROUP STRUCTURE AND TASK PERFORMANCE, by Thornton B. Roby and John T. Lanzetta, June 1957. 18 p. AFPTRC-TN-57-85.
AD-134205.
Order from LC mi $2.40, ph $3.30 PB 129670

Air Force Personnel and Training Research Center, Lackland Air Force Base, Tex.
A REVIEW OF THE LITERATURE RELATING TO THE SCOPE-INTERPRETATION AND MAP-READING TASKS OF THE AIRCRAFT OBSERVER, by William H. Lichte and Robert G. Eason, Aug 1957. 42 p. 67 refs. AFPTRC TN-57-110.
AD-134231.
Order from LC mi $3.30, ph $7.80 PB 132411

Air Force Personnel and Training Research Center, Randolph Air Force Base, Tex.
A SCALING TECHNIQUE DESIGNED TO GIVE APPROXIMATIONS TO FACTOR SCALES, by D. M. Knoell and R. A. DeGaugh, Feb 1957. 21 p. AFPTRC TN 57-21.
AD-98924.
Order from LC mi $2.70, ph $4.80 PB 128585

Air Force Personnel and Training Research Center, Lackland Air Force Base, Texas.
SUPERVISORY JUDGMENT AS A CRITERION OF AIRMAN PERFORMANCE, by Joseph E. Morsh and John Schmid, Jr., May 1956. 14 p. AFPTRC TN 56-56.
Order from LC mi $2.40, ph $3.30 PB 127131

American Inst. for Research, Washington, D. C.
THE DEVELOPMENT AND VALIDATION OF SITUATIONAL PROBLEMS FOR TRAINING IN THOSE LEADERSHIP BEHAVIORS ESSENTIAL FOR EFFECTIVE PERFORMANCE AS A JUNIOR OFFICER, by C. P. Hahn, 31 Oct 1956. 41 p. Contr. Nonr 890(04). Final report.
Order from LC mi $3.30, ph $7.80 PB 128679

American Inst. of Research, Pittsburgh, Pa.
MATERIALS FOR THE TEAM PERFORMANCE RECORD PROGRAM, Dec 1956. 62 p. Contr. N 7-onr 370 (08).
Order from LC mi $3.90, ph $10.80 PB 132320S

Supplement for use with PB 132320.

American Inst. for Research, Pittsburgh, Pa.
THE TEAM PERFORMANCE RECORD. AN AID FOR TEAM ANALYSIS AND TEAM TRAINING, by Murray Glanzer and Robert Glaser, Dec 1956. 58 p. Contr. N 7 onr-370 (08).
Order from LC mi $3.60, ph $9.30 PB 132320

Armour Research Foundation, Chicago, Ill.
DEVELOPMENT OF AN ARCTIC PERSONNEL HEATING DEVICE, by E. Gyory Sept 1956. 78 p. Contr. FDA-19-129 QM-355.
Order from LC mi $4.50, ph $12.30 PB 133911

Courtney and Co. Philadelphia, Penn.
PERSONNEL REPLACEMENT AND TRAINING ABOARD DESTROYERS, Albert Elkin. 127 p. Contract Nonr-1413(00).
Order from LC mi $6.30, ph $19.80 PB 127402

Educational Research Corp. Cambridge, Mass.
AN EVALUATION OF THE EFFECTIVENESS OF A NAVAL OFFICER CORRESPONDENCE COURSE, by W. J. E. Crissy et al, Dec 1956. 45 p. Contr. Nonr-1625 (00).
Order from LC mi $3.30, ph $7.80 PB 130606

Educational Testing Service, Princeton, New Jersey.
THE EFFECTIVENESS OF AN EASIER "MALE" MECHANICAL TEST FOR USE WITH WOMEN, by William G. Mollenkopf, 1 July 1956, 12 p. Contr. Nonr-694 (00); NAVPERS TR 56-6.
Order from LC mi $2.40, ph $3.30 PB 127738

Educational Testing Service, Princeton, N. J.
A STUDY OF SCORES OTHER THAN NUMBER RIGHT, by William G. Mollenkopf, Jan 1957. 25 p. Contr. Nonr-694 (00);
Order from LC $2.70, ph $4.80 PB 132486

George Washington U., Washington, D. C.
IDENTIFICATION OF THE IMPORTANT SKILLS IN DAYLIGHT LAND NAVIGATION, by Donald C. Findlay, et al. July 1957. 27 p. Contr. DA 44-109 Qm-650;
Order from LC mi $2.70, ph $4.80 PB 132161

George Washington U., Washington, D. C.
A SURVEY OF HUMAN FACTORS IN MILITARY NIGHT OPERATION (WITH SPECIAL APPLICATION TO ARMOR), by D. A. Gordon, Nov 1957. 66 p. HRRO SR 11; Contr. DA 49-106-QM-1.
Order from LC mi $3.90, ph $10.80 PB 132528

Hughes Aircraft Co., Culver City, Calif.
DESIGN OF TWO FIRE CONTROL SYSTEM MAINTENANCE TRAINING DEVICES, by L. J. Briggs and W. E. DuVall Sept 1957. 26 p. Contr. (65AF) 41 (657)-83.
AD-134242.
Order from LC mi $2.70, ph $4.80 PB 133857

Human Resources Research Office, George Washington U., Washington, D. C.
CHANGES IN STUDENT MOTIVATION AT AN ARMY TECHNICAL TRAINING SCHOOL, by Janet C. Heilmann, Hobart G. Osburn, Etc. Dec 1955. 43 p. HRRO TR 24.
Order from LC mi $3.30, ph $7.80 PB 132404

Human Resources Research Office, George Washington U., Washington, D. C.
AN EXPERIMENTAL EVALUATION OF A BASIC EDUCATION PROGRAM IN THE ARMY, by S. James Goffard, April 1956. 75 p. HRRO TR 28.
Order from LC mi $4.50, ph $12.30 PB 132407

Human Resources Research Office, George Washington U., Washington, D. C.
ORDNANCE IFC ELECTRONICS MAINTENANCE PERSONNEL—ANALYSIS OF ACTIVITIES WITH IMPLICATIONS FOR TRAINING, by Robert H. Kolstoe, Joseph C. Hammock, et al, Sept 1956. 103 p. HRRO TR 31.
Order from LC mi $5.70, ph $16.80 PB 132408

Human Resources Research Office, George Washington U., Washington, D. C.
A SIMPLIFIED METHOD FOR RATING THE PERFORMANCE OF STEREOSCOPIC RANGE FINDER OPERATORS, by Howard C. Olson and Norman Willard, Jr., Dec 1956. 23 p. GWU HRRO TR 34; Contr. DA 44-109-QM-650.
Order from LC mi $2.70, ph $4.80 PB 132409

Institute for Research in Human Relations, Philadelphia, Pa.,
THE DEVELOPMENT OF PROCEDURES FOR EVALUATING THE FLEET PROFICIENCY OF GRADUATES OF THE NAVAL AIR TECHNICAL TRAINING SCHOOLS. FINAL REPORT, by Elliott Danzig and James J. Keenan, Jr., 1956. 29 p. Contr. Nonr-1348 (00).
Order from LC mi $2.70, ph $4.80 PB 129398

International Research Associates, New York.
A BASIC LESSON PLAN FOR THE TEACHING OF MAP READING IN THE MARINE CORPS RESERVE (GROUND), Jan 1957. 126 p. Contr. Nonr-1654 (00).
Order from LC mi $6.30, ph $19.80 PB 132463

Technical Report III.

International Research Associates, Inc., New York, N. Y.
AN EXPERIMENTAL EVALUATION OF PRELIMINARY MARKSMANSHIP TRAINING IN THE MARINE CORPS RESERVE (GROUND), Jan 1957. 171 p. Contract Nonr-1654(00).
Order from LC mi $7.80, ph $25.80 PB 132538

Tech. report I, Proj. on Training problems in the Marine Corps Reserve.

International Research Associates, Inc., New York, N. Y.
A SET OF OBJECTIVE TESTS OF MAP READING ABILITY FOR USE IN THE MARINE CORPS RESERVE (GROUND), Jan 1957. 54 p. Contr. Nonr-1654(00).
Order from LC mi $3.60, ph $9.30 PB 132539

Technical report II, Project on training problems in the Marine Corps Reserve.

Maintenance Lab., Lowery Air Force Base, Colo.
AN ANALYSIS OF THE SCORING SYSTEM FOR THE E-4 FIRE CONTROL PERFORMANCE TEST, by Wilbur C. Miller and Joel E. Greene, Aug 1957. 24 p. AFPTRC TN-57-109. AD-134230.
Order from LC mi $2.70, ph $4.80 PB 132410

Research Report.

Missouri U., Columbia.
A DISCRIMINATORY STUDY FOR CLASSIFICATION OF NAVY AN(P) SCHOOL GRADUATES INTO NAVY CLASS "A" SCHOOL ASSIGNMENTS, by D. K. Ottman, J. L. Ferguson, et al. Oct 1956. 104 p. Contr. Nonr 649 (00), TR-7.
Order from LC mi $5.70, ph $16.80 PB 130654

Operator Lab., Randolph Air Force Base, Tex.
INTERCORRELATIONS AMONG LEADERSHIP CRITERIA FOR A POPULATION OF AIR FORCE INSTRUCTORS, by Donald T. Campbell, June 1957. 11 p. AFPTRC TN 57-90.
AD-134233.
Order from LC mi $2.40, ph $3.30 PB 132398

Psychological Laboratory, University of Southern Calif., Los Angeles.
AN EVALUATION OF SHIPBOARD TRAINING IN OPERATIONS KNOWLEDGE, by G. L. Bryan, n.d., 41 p. PL 18; Contr. Nonr-228(02).
Order from LC mi $3.30, ph $7.80 PB 128542

Psychological Laboratory, University of Southern California, Los Angeles.
A FACTOR-ANALYTIC INVESTIGATION OF THE FACTOR CALLED GENERAL REASONING, by J. P. Guilford, N. W. Kettner, etc., Aug 1955. 16 p. Contr. N6onr-23810.
Order from LC mi $2.40, ph $3.30 PB 127058

Psychological Laboratory, University of Southern Calif., Los Angeles.
A FACTOR-ANALYTIC STUDY OF VERBAL FLUENCY: STUDIES OF APTITUDES OF HIGH-LEVEL PERSONNEL, by J. P. Guilford and P. R. Christensen, Sept 1956. 43 p. PL 17; Contr. N6onr-23810.
Order from LC mi $3.30, ph $7.80 PB 128538

Psychological Laboratory, University of Southern California, Los Angeles.
THE RELATIONSHIP BETWEEN CERTAIN FACTOR-ANALYZED ABILITIES AND SUCCESS IN COLLEGE MATHEMATICS, by John R. Hills, Aug 1955. 16 p. Contr. N6-ONR-23810.
Order from LC mi $2.40, ph $3.30 PB 127114

Studies of aptitudes of high-level personnel, No. 15.

St. Louis University, Missouri.
THEMATIC APPERCEPTION TEST RESPONSE PATTERNS IN THE PREDICTION OF OFFICER SUCCESS, by E. D. Ossorio and M. K. Rigby, Mar 1957. 33 p. Contr. N7onr-40802.
Order from LC mi $3.00, ph $6.30 PB 133554

School of Aviation Medicine, Randolph Air Force Base, Tex.
ADAPTABILITY SCREENING OF FLYING PERSONNEL, by P. Warchel, Mar 1957. 18 p. AF SAM 56-62.
AD-140470.
Order from LC mi $2.40, ph $3.30 PB 130050

School of Aviation Medicine, Randolph Air Force Base, Tex.
ADAPTABILITY SCREENING OF FLYING PERSONNEL, by S. C. Fulkerson, July 1957. 18 p. AF SAM 57-106.
Order from LC mi $2.40, ph $3.30 PB 132266

School of Aviation Medicine, Randolph Air Force Base, Tex.
ADAPTABILITY SCREENING OF FLYING PERSONNEL. EARLY FLIGHT BEHAVIOR AS AN INDEX OF SUBSEQUENT ADAPTABILITY TO FLYING TRAINING, by W. E. Brown and D. K. Trites, Aug 1957. 21 p. AF SAM R-57-114.
Order from LC mi $2.70, ph $4.80 PB 132772

School of Aviation Medicine, Randolph Air Force Base, Tex.
AIRCREW ATTRITION IN COMBAT-1. COMBAT EXPECTANCY AS A FUNCTION OF THE MISSION NUMBER OF FLYERS BOMBER COMMAND, U. S. EIGHTH AIR FORCE, MARCH-JULY 1944, by W. L. Dixson and Max Halperin, May 1951. 42 p. AFSAM 21-32-006, rept. 1.
Order from LC mi $3.30, ph $7.80 PB 132420

School of Aviation Medicine, Randolph Air Force Base, Fla.
COMPARISON OF LIFE EXPECTANCY, PERIOD OF ACTIVE DUTY AND MEDICAL HISTORY OF FLYING AND NON-FLYING OFFICERS-1920-1947, by S. J. Cutler and J. A. Rafferty, Jan 1949. 32 p. AF SAM Proj. 21-02-014-Report No. 1.
Order from LC mi $3.00, ph $6.30 PB 130977

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE EFFECTS OF DRUGS AND CONTROLLED PROGRESS FEEDBACK UPON TWO-MEMBER TEAM BEHAVIOR, by R. M. Ritter and R. B. Payne, Mar 1957. 8 p. AF SAM 57-58.
Order from LC mi $1.80, ph $1.80 PB 130074

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE EFFECTS OF SCALE AND PRACTICE ON TEST SCORES OF THE WECHSLER ADULT INTELLIGENCE SCALE AND THE WECHSLER-BELLEVUE INTELLIGENCE SCALE, FROM I, by Samuel Karson and Kenneth B. Pool, Jan 1957. 5 p. AF SAM 57-39.
Order from LC mi $1.80, ph $1.80 PB 128473

School of Aviation Medicine, Randolph Air Force Base, Tex.
HEARING ACUITY OF AIR FORCE FLIGHT-LINE PERSONNEL, by Lennart L. Kopra, July 1957. 14 p. AF SAM 57-73.
Order from LC mi $2.40, ph $3.30 PB 132261

School of Aviation Medicine, Randolph Air Force Base, Tex.
A STUDY OF COMBAT LEADERSHIP IN THE AIR FORCE BY USE OF A RATING SCALE, by M. F. Roff, Feb 1950. 31 p. AF SAM Proj.-21-02-013.
Order from LC mi $3.00, ph $6.30 PB 130985

School of Aviation Medicine, Randolph Air Force Base, Tex.
STUDY OF TIME REQUIRED TO COMPLETE A "64" EXAMINATION FOR FLYING, by V. A. Byrnes, Sept 1948. 3 p. AF SAM Proj. 21-02-082.
Order from LC mi $1.80, ph $1.80 PB 130975

School of Aviation Medicine, Randolph Air Force Base, Texas.
SURFACE TEXTURE AND DEPTH PERCEPTION, by S. J. Gerathewohl and P. A. Cibis, Apr 1957. 11 p. AF SAM 57-24.
Order from LC mi $2.40, ph $3.30 PB 130054

Tulane University, New Orleans, La.
LEARNING TASK AND MODE OF OPERATION VARIABLES IN USE OF THE SUBJECT-MATTER TRAINER, by A. L. Irion and L. J. Briggs Oct 1957. 26 p. Contr. AF(657)-13.
AD-134252.
Order from LC mi $2.70, ph $4.80 PB 133858

Wisconsin U., Madison.
COMPARISON OF ON TARGET METHOD AND THE STANDARD HAND SCALE METHOD OF SCORING B-29 SIGHT-CAMERA FILM, by Robert R. Sears, E. B. Knouft, et al. 19 June 1945. 39 p. NDRC APP-3; Contr. OEMsr-1171, OSRD-5222.
Order from LC mi $3.00, ph $6.30 PB 130738

Wisconsin U., Madison.
TRACKING PERFORMANCE AS MEASURED BY TIME CONTINUOUSLY ON TARGET, by E. J. Archer and L. D. Wyckoff, etc. Mar 1954. 22 p. WADC TR-54-210; Contr. AF 18 (600) 54.
AD-35128.
Order from LC mi $2.70, ph $4.80 PB 130369

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
TRANSFER TRAINING AFTER TWO DAYS OF PRACTICE WITH ONE TASK OR WITH VARIED TASKS, by C. P. Duncan and B. J. Underwood, Sep 1954. 21 p. WADC TR 54-381; Contr. AF 33 (616)-308.
AD-54619.
Order from LC mi $2.70, ph $4.80 PB 130385

Psychology

Adjutant General's Office, Washington, D. C.
EVALUATION OF EXPERIMENTAL REASONING PERCEPTUAL SPEED AND PSYCHOMOTOR TESTS FOR TRY OUT AS COMBAT PREDICTORS, by L. P. Williams and N. Rosenberg, Apr 1957. 21 p. PRB TRN 70.
Order from LC mi $2.70, ph $4.80 PB 130680

Adjutant General's Office, Washington, D. C.
PREDICTION OF ON-JOB PERFORMANCE IN GUIDED MISSILE CREW SPECIALTIES, by W. H. Helme and R. K. White, Feb 1958. 15 p. PRD TRN 89.
Order from LC mi $2.40, ph $3.30 PB 133940

Adjutant General's Office, Washington, D. C.
PREDICTION OF SUCCESS IN PERSONNEL AND ADMINISTRATION COURSES, by I. A. Wood et al. Mar 1956. 12 p. PRB TRN-56.
Order from LC mi $2.40, ph $3.30 PB 127413

Adjutant General's Office, Washington, D. C.
SELECTION AND STANDARDIZATION OF TESTS FOR IMPROVED COMBAT APTITUDE AREAS, by A. H. Birnbaum et al. Dec 1957. 18 p. PRB TRN 87.
Order from LC mi $2.40, ph $3.30 PB 133941

Adjutant General's Office, Washington, D. C.
VALIDATION OF THE ARMY PERSONALITY INVENTORY AGAINST A MILITARY ADJUSTMENT CRITERION, by F. O. Carleton and L. K. Burke, May 1957, 17 p. PRB TRN 71.
Order from LC mi $2.70, ph $4.80 PB 130681

Aero Medical Lab., Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
ON THE INTERPRETATION OF WORD FREQUENCY AS A VARIABLE AFFECTING SPEED OF RECOGNITION, by Davis H. Howes June 1954. 16 p. WADC TR 54 282.
AD-43066.
Order from LC mi $2.40, ph $3.30 PB 129575

American Inst. for Research, Pittsburgh, Pa.
DESCRIPTIVE VARIABLES FOR THE STUDY OF TASK-ORIENTED GROUPS, by R. Glaser, June 1956. 17 p. Contr. N7onr-37008.
Order from LC mi $2.40, ph $3.30 PB 130672

Antioch Coll., Yellow Springs, Ohio.
EFFECT OF ACOUSTIC NOISE ON TIME JUDGMENT, by Harry J. Jerison and Arden K. Smith, Oct 1955. 17 p. WADC TR-55-358; Contr. AF 18 (600) 50.
AD-99641.
Order from LC mi $2.40, ph $3.30 PB 130362

Applied Mathematics and Statistics Lab., Stanford U., Calif.
A COMPARISON OF THREE MODELS FOR A HUMPHREYS—TYPE CONDITIONING SYSTEM, by Richard C. Atkinson, 20 Nov 1956. 12 p. Contr. Nonr 225 (17).
Order from LC mi $2.40, ph $3.30 PB 129916

Applied Mathematics and Statistics Lab., Stanford U., Calif.
A MODEL OF RISKLESS CHOICE, by E. W. Adams and R. F. Fagot, 7 Aug 1956. 65 p. TR-4; Contr. Nonr-225(17).
Order from LC mi $3.90, ph $10.80 PB 128714

Army Medical Research Lab., Fort Knox, Ky.
DESCRIPTION OF HUMAN ROTATION DEVICE, by F. E. Guedry, Jr. and H. Kalter. 23 May 1956. 19 p. AMRL Rpt. 242.
Order from LC mi $2.40, ph $3.30 PB 128523

Army Medical Research Lab., Fort Knox, Ky.
JUDGEMENTS OF VISUAL VELOCITY AS A FUNCTION OF LENGTH OF OBSERVATION TIME, by A. G. Goldstein, May 24, 1956. 18 p. AMRL 239.
Order from LC mi $2.40, ph $3.30 PB 128806

Carnegie Inst. of Tech., Pittsburgh, Pa.
CHANGES IN MUSCULAR TENSION DURING PSYCHOMOTOR PERFORMANCE, by Lee W. Gregg, May 1957. 32 p. QMC EPS-54; Contr. DA-19-129-QM-250.
Order from LC mi $3.00, ph $6.30 PB 130717

Connecticut U., Storrs.
INDIVIDUAL DIFFERENCES IN THE PERCEPTION OF SYNTHETIC SPEECH, by S. L. Witryal and W. A. Kaess, Dec 31, 1956. 12 p. Contr. Nonr 1886 (00).
Order from LC mi $2.40, ph $3.30 PB 130946

Connecticut U., Storrs.
POSITIVE AND NEGATIVE TAKING ON A FORCED CHOICE AUTHORITORIAN SCALE, by W. A. Kaess and S. L. Witryol, Dec 31, 1956. 22 p. Contr. Nonr 1886 (00).
Order from LC mi $2.70, ph $4.80 PB 130947

Connecticut U., Storrs.
A STUDY OF DEVELOPMENT CHANGES IN CONCEPTUAL AND PERCEPTUAL ASSOCIATIVE CLUSTERING, by W. A. Bausfield, Nov 1956. 8 p. Contr. Nonr-631 (00).
Order from LC mi $1.80, ph $1.80 PB 130575

Frankford Arsenal, Philadelphia, Pa.
PSYCHOLOGICAL AND PHYSIOLOGICAL EFFECTS OF GUN BLAST WITH SPECIAL REFERENCE TO RECOILLESS RIFLES, by R. V. Nunez and R. J. Seidel, Aug 1957. 31 p. FALR 18.
Order from LC mi $3.00, ph $6.30 PB 132530

Franklin Inst., Philadelphia, Pa.
A CROSS-SPECTRUM ANALYZER, by George H. Barnes, Nov 1955. 37 p. WADC TR-55-445; Contr. AF 33 (616) 2804.
AD-98319.
Order from LC mi $3.00, ph $6.30 PB 130364

Harvard U., Cambridge, Mass.
PREPAREDNESS AND OCCUPATIONAL CHOICE, by D. V. Tiedman and Robert P. O'Hara, Jan 1, 1955. to Nov 30, 1956. 25 p. Contr. N5ori-07669.
Order from LC mi $2.70, ph $4.80 PB 130942

Human Resources Research Office, George Washington U., Washington, D. C.
COMMITTEE PROBLEM-SOLVING TECHNIQUES AT THE NATIONAL WAR COLLEGE, by Frank Restle, Sept 1954. 53 p. HRRO TR 10.
Order from LC mi $3.60, ph $9.30 PB 132402

Human Resources Research Office, George Washington U., Washington, D. C.
CONSISTENCY IN RE-LAYING AS A FACTOR IN TANK GUNNERY, by Leland E. Thune and Andrew J. Eckles III, Dec 1955. 31 p. HRRO TR 25.
Order from LC mi $3.00, ph $6.30 PB 132405

Human Resources Research Office, George Washington U., Washington, D. C.
FACTORS AFFECTING CREDIBILITY IN PSYCHOLOGICAL WARFARE COMMUNICATIONS, by Earl R. Carlson and Herbert I. Abelson, July 1956. 61 p. HRRO SR 5.
Order from LC mi $3.90, ph $10.80 PB 132400

Human Resources Research Office, George Washington U., Washington, D. C.
THE KAZAKHS: A BACKGROUND STUDY FOR PSYCHOLOGICAL WARFARE, by Lawrence Krader and Ivor Wayne, Nov 1955. 156 p. HRRO TR 23.
Order from LC mi $7.50, ph $24.30 PB 132403

Iowa State U., Iowa City.
A REVIEW OF SENTENCE COMPLETION TECHNIQUES, by A. L. Benton and C. D. Windle, 15 Feb 1957. 29 p. Contr. Nonr-311(00).
Order from LC mi $2.70, ph $4.80 PB 132634

Iowa State U., Iowa City.
SOME CHARACTERISTICS OF SUI SENTENCE COMPLETION TESTS, by A. L. Benton, 15 Oct 1956. 16 p. Contr. Nonr-311(00).
Order from LC mi $2.40, ph $3.30 PB 130775

Maryland U., College Park.
LEARNING, RETENTION AND RECOVERY OF MEANINGFUL MATERIAL-A STUDY OF CLUSTERING IN FREE RECALL BASED ON SYNONYMS, by Charles N. Cofer. 1956. 11 p. Contr. Nonr 595 (04).
Order from LC mi $2.40, ph $3.30 PB 129973

Maryland U., College Park.
LEARNING, RETENTION AND RECOVERY OF MEANINGFUL MATERIAL-AN EXPLORATION OF THE "RECOVERY" EFFECT IN WORD ASSOCIATION, by Charles N. Cofer. 1956. 9 p. Contr. Nonr 595 (04).
Order from LC mi $1.80, ph $1.80 PB 129977

Maryland U., College Park.
LEARNING, RETENTION AND RECOVERY OF MEANINGFUL MATERIAL-AN EXPLORATORY RETROACTION STUDY WITH CERTAIN MILLER-SELFRIDGE MATERIALS, by Charles N. Cofer. 1956. 8 p. Contr. Nonr. 595(04).
Order from LC mi $1.80, ph $1.80 PB 129975

Maryland U., College Park.
LEARNING, RETENTION AND RECOVERY OF MEANINGFUL MATERIAL-EVIDENCE FOR MEDIATIONAL PROCESSES IN FREE RECALL AS EXHIBITED BY CLUSTERING OF MODIFIERS, by Richard C. Gonzalez, Charles N. Cofer. 1956. 8 p. TR 7 Contr. Nonr 595(04).
Order from LC mi $1.80, ph $1.80 PB 129979

Maryland U., College Park.
LEARNING, RETENTION AND RECOVERY OF MEANINGFUL MATERIAL-FURTHER OBSERVATIONS ON THE RECALL OF STORIES VARYING IN THE ADJECTIVE-VERB QUOTIENT, by David J. King, Charles N. Cofer. 1956. 22 p. Contr. Nonr 595(04).
Order from LC mi $2.40, ph $3.30 PB 129981

Maryland U., College Park.
LEARNING, RETENTION AND RECOVERY OF MEANINGFUL MATERIAL—INTRODUCTORY STATEMENT AND A REVIEW OF RELATED WORK AND OF THE STUDIES OF THE FIRST EIGHTEEN MONTHS, by Charles Cofer. 1956. 14 p. Contr Nonr 595(04).
Order from LC mi $2.40, ph $3.30 PB 129972

Maryland U., College Park.
LEARNING, RETENTION AND RECOVERY OF MEANINGFUL MATERIAL—RETROACTIVE INTERFERENCE, RETENTION AND CLUSTERING IN FREE RECALL, by Charles N. Cofer. 1956 11 p. Contr. Nonr 595(04).
Order from LC mi $2.40, ph $3.30 PB 129974

Maryland U., College Park.
LEARNING, RETENTION AND RECOVERY OF MEANINGFUL MATERIAL—SOME EXPLORATORY OBSERVATIONS ON THE RECALL OF STORIES VARYING IN THE ADJECTIVE-VERB QUOTIENT, by David J. King, Charles N. Cofer. 1956. 10 p. Contr. Nonr-595(04).
Order from LC mi $1.80, ph $1.80 PB 129980

Maryland U., College Park.
LEARNING, RETENTION AND RECOVERY OF MEANINGFUL MATERIAL—THE EFFECTS OF MODIFIERS ON THE ORGANIZATION OF VERBAL MATERIAL AS SHOWN IN CLUSTERING IN FREE RECALL, by Richard C. Gonzalez, Charles N. Cofer. 1956. 13 p. Contr. Nonr 595(04).
Order from LC mi $2.40, ph $3.30 PB 129978

Naval Research Lab., Washington, D. C.
PSYCHOLOGICAL STUDIES OF TRACKING BEHAVIOR, PART 1, RATE AND TIME CHARACTERISTICS OF SIMPLE CORRECTIVE MOVEMENTS, by L. V. Searle, 3 Mar 1948. 18 p. NRL R-3248.
Order from LC mi $2.40, ph $3.30 PB 129282

Naval Research Lab., Washington, D. C.
PSYCHOLOGICAL STUDIES OF TRACKING BEHAVIOR. PART II, A STUDY OF THE ACCELERATION PATTERN OF QUICK MANUAL CORRECTIVE RESPONSES, by F. V. Taylor and H. P. Birmingham, 3 Mar 1948. 16 p. NRL R-3249.
Order from LC mi $2.40, ph $3.30 PB 129283

Naval School of Aviation Medicine, Naval Air Station, Pensacola, Florida.
THE UTILIZATION OF STUDENTS SPARE TIME DURING WORKING HOURS, by Joseph de Rivera. 6 Jan 1956. 9 p.
Order from LC mi $1.80, ph $1.80 PB 127210

New York U., N. Y.
EXPERIMENTAL ANALYSIS OF PROBLEM SOLVING BEHAVIOR, by H. H. Kendler, 1 Feb 1957. 8 p. Contr. Nonr-187(00).
Order from LC mi $1.80, ph $1.80 PB 132631

Final Report.

Northeastern U., Boston, Mass.
SPEECH ANALYSIS, by S. H. Chang, 28 Feb 1958. 35 p. AF CRC TR 58-107; Contr. AF 19(604)-2198. AD-146814.
Order from LC mi $3.00, ph $6.30 PB 133651

Psycho—Acoustic Lab., Harvard U., Cambridge, Mass.
FINAL REPORT-1 NOV 1945-31 Mar 1956. 25 Oct 1956. 17 p. PNM 70; Contr. N5ori-76.
Order from LC mi $2.40, ph $3.30 PB 129984

Project NR 142-201.

Psycho-Acoustic Lab., Harvard U., Cambridge, Mass.
PERIODIC STATUS REPORT XXVIII MAY 16-NOV 15, 1956. 15 Nov 1956. 17 p. PNM 71; Contr. Nonr-1866. (15).
Order from LC mi $2.40, ph $3.30 PB 129983

Richardson, Bellows, Henry and Co. Inc., N. Y.
SHOULD THEORY PRECEDE OR FOLLOW A "HOW-TO-DO-IT" PHASE OF TRAINING, by H. H. Edgerton, 31 Dec 1956. 52 p. Contr. Nonr 1722 (00).
Order from LC mi $3.60, ph $9.30 PB 132002

Rochester U., N. Y.
ACCURACY OF SETTING CONTROL KNOBS AS FUNCTIONS OF DIRECTIONS OF FINAL MOVEMENT AND NUMBER OF SETTINGS, by Russell F. Green and S. D. S. Spragg, Aug 1, 1955. 9 p. SDC TR 241-6-15 Contr. N6onr-241, T. O. 6.
Order from LC mi $1.80, ph $1.80 PB 128149

Rochester U., N. Y.
THE EFFECT UPON PERFORMANCE ON A FOLLOWING TRACKING TEST OF INTERCHANGING THE DIRECTION OF DISPLAY MOVEMENT CONTROLLED BY EACH HAND, by A. A. Gerall and R. F. Green, 1 Aug 1955. 8 p. SDC TR 241-6-24; Contr. N6onr-241, T. O. 6.
Order from LC mi $1.80, ph $1.80 PB 127647

Rochester U., N. Y.
THE EFFECTS OF CONTINUITY IN DISPLAY AND CONTROL MOVEMENT RELATIONSHIPS ON TWO-BAND TRACKING PERFORMANCE, by R. F. Green, B. G. Andrews, et al. Oct 26, 1953. 9 p. SDC-TR 241-6-12; Contr. N6onr-241, T. O. 6.
Order from LC mi $1.80, ph $1.80 PB 127614

Rochester U., N. Y.
THE EFFECTS OF PLANES OF ROTATION OF CONTROL CRANKS ON PERFORMANCE LEVELS

AND TRANSFER EFFECTS IN COMPENSATORY AND FOLLOWING TRACKING, by R. F. Green, D. R. Goodenough, et al. 1 Aug 1955. 10 p. SDC TR 241-6-22; Contr. N6onr-241, T. O. 6.
Order from LC mi $1.80, ph $1.80 PB 127650

Rochester U., N. Y.
THE EFFECTS OF VARYING DEGREES OF KNOWLEDGE OF RESULTS ON KNOB SETTING PERFORMANCE, by R. F. Green, H. L. Zimiles, etc., 1 Aug 1955, 7 p. SDC TR 241-6-20; Contr. N6onr-241, T. O. 6.
Order from LC mi $1.80, ph $1.80 PB 127651

Rochester U., N. Y.
THE EFFECTS ON PERFORMANCE OF A COMPENSATORY TRACKING TASK OF INTERCHANGING THE CONTROL OF THE AYES OF MOVEMENT BETWEEN THE HANDS, by Russel F. Green, 1 Aug 1955, 8 p. SDC TR 241-6-23; Contr. N6onr-241 T. O. 6.
Order from LC mi $1.80, ph $1.80 PB 127648

Rochester U., N. Y.
TIME-ORDERED EFFECTS IN LONG SERIES OF KNOB CONTROL ADJUSTMENTS, by B. Weiss, P. D. Coleman, etc., 1 Aug 1955. 7 p. SDC TR 241-6-19; Contr. N6onr-241, T. O. 6.
Order from LC mi $1.80, ph $1.80 PB 127652

Rochester U., N. Y.
TRANSFER EFFECTS IN COMPENSATORY TRACKING RESULTING FROM REVERSAL OF THE DISPLAY-CONTROL RELATIONSHIP ON ALTERNATE BLOCKS OF TRIALS, by B. G. Andreas, R. F. Green, etc., 1 Aug 1955. 10 p. SDC TR 241-6-21; Contr N6onr-241, T. O. 6.
Order from LC mi $1.80, ph $1.80 PB 127649

Rochester U., N. Y.
THE TRANSFER OF TRACKING SKILL AS A FUNCTION OF TASK DIFFICULTY (TARGET SIZE), by Russel F. Green, Dec 16, 1953. 11 p. SDC-TR 241-6-13; Contr. N6onr-241, T. O. 6.
Order from LC mi $2.40, ph $3.30 PB 127615

St. Louis U., Mo.
TWO SCREENING PROBLEMS I. WOMEN RECRUITS II. DRILL INSTRUCTORS, by Walter L. Williams and Marilyn K. Rigby, 15 Nov 1956. 13 p. Contr. ONR-NR 151-092. TR 6- Dept. of Psych.
Order from LC mi $2.40, ph $3.30 PB 129911

School of Aviation Medicine, Randolph Air Force Base, Tex.
AIRCREW ATTRITION IN COMBAT II. COMBAT EXPECTANCY AS A FUNCTION OF THE NUMBER OF COMBAT HOURS OF FLYERS, FIGHTER COMMAND, U. S. EIGHTH AIR FORCE, MARCH-JULY 1944, by W. L. Dixson and Max Halperin, May 1951. 39 p. AFSAM Proj. 21-32-006, rept. 2.
Order from LC mi $3.00, ph $6.30 PB 132422

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE EFFECT OF INCIDENTAL PERIPHERAL CUES ON DISCRIMINATION LEARNING IN MONKEYS, by W. Lynn Brown and Richard M. Carr, June 1957. 4 p. AF SAM 57-111.
Order from LC mi $1.80, ph $1.80 PB 132175

School of Aviation Medicine, Randolph Air Force Base, Tex.
ESTIMATING CORRELATION IN A NORMAL BIVARIATE POPULATION WHEN OBSERVED VALUES OF ONE VARIATE ARE OBTAINED ONLY FOR A SELECTED SUBSET OF OBSERVED VALUES OF THE OTHER VARIATE, by D. F. Votaw, Jr., June 1949. 11 p. AF SAM Proj. 21-02-095.
Order from LC mi $1.80, ph $1.80 PB 132229

School of Aviation Medicine, Randolph Air Force Base, Tex.
REPRESENTATION OF LOCALITY IN A BIOLOGIC INFORMATION SYSTEM, by C. M. Williams, May 1957. 8 p. AF SAM 57-96.
Order from LC mi $1.80, ph $1.80 PB 130079

School of Aviation Medicine, Randolph Air Force Base, Tex.
SKILL FATIGUE AS A FUNCTION OF WORK-REST DISTRIBUTION, by Robert B. Payne and George T. Hauty, Ph.D., July 1957. 6 p. AF SAM 57-140.
Order from LC mi $1.80, ph 1.80 PB 132515

School of Aviation Medicine, Randolph Air Force Base, Tex.
SOME RELATIONS BETWEEN ACQUIRED AUTONOMIC AND MOTOR BEHAVIOR DURING AVOIDANCE CONDITIONING, by Philip J. Bersh, Joseph M. Notterman, May 1956. 8 p. AF SAM 56-80.
Order from LC mi $1.80, ph $1.80 PB 127293

School of Aviation Medicine, Randolph Air Force Base, Tex.
STATISTICAL EVALUATION OF THE EXPERIMENTAL ARMA OF WORLD WAR II, by J. A. Rafferty and W. L. Deemer, Jr., Aug 1949. 11 p. AF SAM Proj. 21-02-097 Report No. 2.
Order from LC mi $2.40, ph $3.30 PB 132228

Syracuse U., N. Y.
STUDIES IN CONFORMITY BEHAVIOR, by Francis J. Di Vesta Feb 1, 1957. 39 p. AFOSR TN 57 138; Contract AF 18(603) 20. Technical Note No. 1. AD-120,495.
Order from LC mi $3.00, ph $6.30 PB 129616

Tufts Coll., Medford, Mass.
STUDIES IN GROUP BEHAVIOR, by W. C. Schutz, Aug 1953. 54 p. Contr. Nonr 49403.
Order from LC mi $3.60, ph $9.30 PB 132069

Tulane U., New Orleans, La.
STUDIES ON THE EFFECT OF FLICKERING LIGHT ON HUMAN SUBJECTS, by L.M.N. Bach, C. J. Sperry, Jr., and J. T. Ray, June 30, 1956. 104 p. Contr DA-44-009-eng-2448.
Order from LC mi $5.70, ph $16.80 PB 129971

Virginia Polytechnic Inst. Blacksburg.
STATISTICAL ANALYSIS OF MILITARY RISKS RESULTING FROM EXTREME ENVIRONMENTAL CONDITIONS, Aug 1956. 39 p. Contr. DA 44-109 QM-1488.
Order from LC mi $3.00, ph $6.30 PB 130424

Virginia U., Charlottesville.
THE CONCEPT OF RESPONSE RESTRICTION APPLIED TO DIAL READING, by Melvin Freitag and William A. Lee, April 1955. 17 p. WADC TR-54-364; Contr. W33-038-ac-21269. AD-85566.
Order from LC mi $2.40, ph $3.30 PB 129657

Virginia U., Charlottesville.
THE INFLUENCE OF CATEGORICAL CUING ON THE IDENTIFICATION OF VISUALLY DISTORTED WORDS SELECTED FROM A LOGICALLY ORGANIZED POPULATION, by Richard H. Henneman, R. Starling Reid, et al. Apr 1955. 19 p. WADC TR-53-311; Contr. W33-038-ac-21269. AD-85567.
Order from LC mi $2.40, ph $3.30 PB 129569

Virginia U., Charlottesville.
THE INFLUENCE OF COMPLEX TASK VARIABLES ON THE RELATIVE EFFICIENCY OF AUDITORY AND VISUAL MESSAGE PRESENTATION, by L. Starling Reid and William H. Morse, Apr 1955. 15 p. WADC TR 54-288; Contr. W33(038)-ac-21269. AD-88065.
Order from LC mi $2.40, ph $3.30 PB 129573

Virginia U., Charlottesville.
THE INFLUENCE OF MESSAGE DISTORTION AND MESSAGE FAMILIARITY, by James G. Holland and William A. Lee. Apr 1955. 24 p. Contract W33(038)-ac 21269. AD-88793.
Order from LC mi $2.70, ph $4.80 PB 129572

Virginia U., Charlottesville.
THE INFLUENCE OF MESSAGE LENGTH AND DISTRACTING TAX COMPLEXITY, by Richard H. Henneman and Thomas L. Mathews. Apr 1955. 21 p. WADC TR 54 145; Contr. W33(038)-ac-21269. AD-88329.
Order from LC mi $2.70, ph $4.80 PB 129577

Virginia U., Charlottesville.
THE INFLUENCE OF SENSORY CHANNEL OF CUING ON THE IDENTIFICATION OF AURALLY PRESENTED DISTORTED WORDS, by Eugene R. Long and William D. Garvey Apr 1955. 26 p. WADC TR 54-361; Contr. W33(038)-ac-21269. AD-85565.
Order from LC mi $2.70, ph $4.80 PB 129570

Virginia U., Charlottesville.
THE ROLE OF SETTING CUES IN REDUCING THE SIMULTANEOUS LOCATION AND IDENTIFICATION AMBIGUITY OF LETTER PATTERNS, by Eugene R. Long and William D. Garvey. April 1955. 23 p. WADC TR 54 289; Contr. W33(038)-ac-21269. AD-85564.
Order from LC mi $2.70, ph $4.80 PB 129574

Virginia U., Charlottesville.
THE INFLUENCE OF SETTING CUES ON MANUAL RESPONSES MADE TO FOLLOWING-INSTRUCTIONS MESSAGES, by Richard H. Henneman and Norman R. Outcalt, Apr 1955. 18 p. WADC TR-54-365; Contr. W33-038-ac-21269. AD-90893.
Order from LC mi $2.40, ph $3.30 PB 129656

Virginia U., Charlottesville.
THE ROLE OF SPATIAL CUING AS A RESPONSE-LIMITER FOR LOCATION RESPONSES, by Eugene R. Long and William A. Lee, Dec 1953. 21 p. WADC TR 53-312 Contr. W33-038-ac-21269. AD-34516.
Order from LC mi $2.70, ph $4.80 PB 129578

Virginia U., Charlottesville.
THE ROLE OF STIMULUS AMBIGUITY AND DEGREE OF RESPONSE RESTRICTION IN THE RECOGNITION OF DISTORTED LETTER PATTERNS, by Eugene R. Long, et al., May 1954. 22 p. WADC TR 54-147; Contract W33-038-ac-21269. AD-48906.
Order from LC mi $2.70, ph $4.80 PB 129576

Virginia U., Charlottesville.
THEORETICAL CONSIDERATIONS AND EXPLORATORY INVESTIGATION OF "SET" AS RESPONSE RESTRICTION, by Eugene R. Long, Richard H. Henneman et al. Dec 1953. 28 p. WADC TR 53-311 Contr. W33(038)-ac-21269. AD-34517.
Order from LC mi $2.70, ph $4.80 PB 129579

Washington U., Seattle.
AN ANALYTICAL AND EMPIRICAL EXAMINATION OF SOME PROPERTIES OF IPSATIVE MEASURES, by W. V. Clemans, Oct 1956. 95 p. Contr. Nonr-477(08).
Order from LC mi $5.40, ph $15.30 PB 130250

Washington U., Seattle.
CUMULATIVE CALCULATIONS OF REGRESSION CONSTANTS, by W. M. Meredith, June 1956. 67 p. Contr. Nonr-477(08).
Order from LC mi $3.90, ph $10.80 PB 128617

BIOLOGICAL SCIENCES

School of Aviation Medicine, Randolph Air Force Base, Tex.
CARE AND MANAGEMENT OF A MACACA MULATTA MONKEY COLONY, by R. J. Young and B. D. Fremming, Feb 1957. 12 p. AF SAM 57-49.
Order from LC mi $2.40, ph $3.30 PB 130067

Psychiatry

School of Aviation Medicine, Randolph Air Force Base, Tex.
NEUROPSYCHIATRY FOR THE FLIGHT SURGEON, by John C. Mebane M.D., Sept 1956. 229 p.
Order from LC mi $9.90, ph $34.80 PB 130960

Anatomy and Physiology

Aero Medical Lab., Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
CRITERIA FOR SHORT TIME EXPOSURE OF PERSONNEL TO HIGH INTENSITY JET AIRCRAFT NOISE, by K. M. Eldred, Sept 1955. 29 p. WADC TN-55-355. AD-84553.
Order from LC mi $2.70, ph $4.80 PB 130807

Aero Medical Lab., Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
DESIGN PROPOSALS FOR ARMED FORCES RESUSCITATOR KITS, by H. Seeler, Dec 1956. 19 p. WADC TR-56-632. AD-110647.
Order from LC mi $2.40, ph $3.30 PB 129636

Air Force Cambridge Research Center, Mass.
THE ANALYSIS OF CLIPPED SPEECH, by Friedrich Vilbig, Oct 1956. 23 p. AF CRC TR-56-120. AD-110144.
Order from LC mi $2.70, ph $4.80 PB 128334

Armed Forces-NRC Committee on Hearing and Bio-Acoustics, Washington, D. C.
CHABA THIRD ANNUAL REPORT, by Hallowell Davis, Donald H. Eldredge, et al. 31 May 1956. 40 p. CID TR 9; Contr. Nonr 1151(01).
Order from LC mi $3.00, ph $6.30 PB 127716

Armed Forces—NRC Vision Committee, Washington, D. C.
THE EFFECT OF PRE-EXPOSURE ON DARK ADAPTATION. AN ANNOTATED BIBLIOGRAPHY, by Patricia I. McBride, Dorothea E. Johannsen, etc. June 1955. 73 p. tables.
Order from LC mi $4.50, ph $12.30 PB 128676

Army Medical Nutrition Lab., Denver, Colo.
CALORIC INTAKE FOR PROLONGED HARD WORK IN THE COLD, by B. E. Welch et al., 22 Mar 1957. 31 p.
Order from LC mi $3.00, ph $6.30 PB 133770

USAMNL Subproject No. 1-10.

Army Medical Nutrition Lab., Denver, Colo.
THE EVALUATION OF ENERGY EXPENDITURE BY INDIRECT CALORIMETRY, by A. D. Rankin and Frank Koniski 16 Aug 1956. 17 p. CMR MN 118.
Order from LC mi $2.40, ph $3.30 PB 127907

Army Medical Research Lab., Fort Knox, Ky.
THE EFFECTS OF NOISE ON WORK OUTPUT AND PHYSIOLOGICAL ACTIVATION, by M. M. Helper, 25 Mar 1957. 28 P. AMRL R-270.
Order from LC mi $2.70, ph $4.80 PB 132783

Army Medical Research Lab., Fort Knox, Ky.
THE INFLUENCE OF INTENSE NOISE ON PERFORMANCE OF A PRECISE FATIGUING TASK, by M. Loeb, 5 Apr 1957. 13 p. AMRL R-268.
Order from LC mi $2.40, ph $3.30 PB 132782

U. S. AMRL Proj.-6-95-20-001 Subtask, Noise and Vibration Problems.

Aviation Medical Acceleration Lab., Naval Air Development Center, Johnsville, Pa.
DETERMINATION OF CEREBRAL BLOOD FLOW USING RADIOACTIVE KRYPTON, by B. M. Lewis and S. S. Kety, 20 Feb 1956. 41 p. NADC MA 5601; NAVMED P 8 Project NM 001 100 301;
Order from LC mi $3.30, ph $7.80 PB 127713

Aviation Medical Acceleration Lab., Naval Air Dev. Center, Johnsville, Pa.
A METHOD FOR THE IN SITU STUDY OF AORTIC ELASTICITY IN THE DOG, by Richard W. Lawton, Leon C. Greene. Feb 27, 1956. 15 p. NADC MA 5603 Proj. NM 001 100 315, Report 2;
Order from LC mi $2.40, ph $3.30 PB 127712

Bowman Gray School of Medicine, Wake Forest Coll., Winston Salem, N. C.
THE RELATIONSHIP OF LYMPHOCYTES WITHIN THE SPIDERMIS TO THE AMOUNT OF EPIDERMAL PROLIFERACTIVE ACTIVITY, by Warren Andrew, 30 Nov 1956. 14 p. Contr Nonr 1092.
Order from LC mi $2.50, ph $3.30 PB 129934

Annual Progress Report.

California Inst. of Tech, Pasadena.
FACTORS STIMULATING PRODUCTION OF HEMOGLOBIN AND RED CELLS, Dec 14, 1956. 4 p. Contr. Nonr-220(09).
Order from LC mi $1.80, ph $1.80 PB 130626

California Inst. of Tech., Pasadena.
STUDIES OF MECHANISMS OF TOLERANCE TO TISSUE TRANSPLANTS, by Ray D. Owen. 26 Dec 1956. 8 p. Contr. Nonr-220(20).
Order from LC mi $1.80, ph $1.80 PB 130926

California U., Berkeley.
THE NATURE OF BURN SHOCK, FINAL SCIENTIFIC REPORT, by N. Pace and S. F. Cook, 30 Sep 1954. 20 p. Contr. N7onr-295(44).
Order from LC mi $2.40, ph $3.30 PB 133553

Chemical Corps Medical Lab., Army Chemical Center, Maryland.
THE EFFECT OF HYALURONIDASE ON ATROPINE ABSORPTION, by Charles Harris and Bernard S. Cohen, July 1952. 14 p. MCLR-123.
Order from LC mi $2.40, ph $3.30 PB 129675

Chemical Warfare Labs., Army Chemical Center, Md.
ADHERENCE OF WATER TO THE SKIN, by F. N. Craig, W. H. Salterfield II, etc., June 17, 1957. 12 p. CWLR 2129.
Order from LC mi $2.40, ph $3.30 PB 129368

Chemical Warfare Labs., Army Chemical Center, Md.
A COMPARISON BETWEEN THE BREAKING POINT OF TWO BREATH HOLDS SEPARATED BY A SINGLE INSPIRATION (U), by Stephen M. Cain and C. Maxson Greenland, July 29, 1957. 17 p. CWLR 2139.
Order from LC mi $2.40, ph $3.30 PB 130011

Chemical Warfare Labs., Army Chemical Center, Md.
THE EFFECT OF GB ON DARK ADAPTATION IN MAN, by L. S. Rubin and M. N. Goldberg, Aug 7, 1957. 21 p. CWLR 2155.
Order from LC mi $2.70, ph $4.80 PB 130727

Chemical Warfare Labs., Army Chemical Center, Maryland.
THE PISCINE HEART, by Charles G. Wilber, 15 Mar 1957. 21 p. CWLR 2103.
Order from LC mi $2.70, ph $4.80 PB 127080

Chemical Warfare Labs., Army Chemical Center, Maryland.
PROPHYLACTIC AND THERAPEUTIC EFFECTIVENESS OF SOME OXIMES AGAINST LETHAL DOSES OF INHALED GB VAPOR IN RATS, by William S. Koon, Norman B. Billups, etc., 22 July 1957. 19 p. CWLR-2146.
Order from LC mi $2.40, ph $3.30 PB 129674

Chemical Warfare Labs., Army Chemical Center, Md.
A REVIEW OF HAMSTER NUTRITION, Robert D. Appleman, Mar 4, 1957. 18 p. CWLR 2087.
Order from LC mi $2.40, ph $3.30 PB 127311

Children's Hospital, Philadelphia, Pa.
ANTI-HAPTEN ANTIBODIES, FINAL REPORT FOR PERIOD 15 MAY 1951 TO SEPTEMBER 30, 1955, by Fred Karush, Sep 1956. 6 p. Contr. Nonr 453(00).
Order from LC mi $1.80, ph $1.80 PB 129328

Cornell U., Ithaca, N. Y.
CONTINUOUS PERSPECTIVE TRANSFORMATIONS AND THE PERCEPTION OF RIGID MOTION, by James J. and Eleanor J. Gibson, Sep 1956. 20 p. Contr. NONR 401 (14).
Order from LC mi $2.40, ph $3.30 PB 128695

Cornell U., Ithaca, N. Y.
(1) THE EFFECTS OF WINDOWS OF TWO SIZES ON MATCHE OF OBJECTIVE VELOCITY. (2) DISTANCE CONSTANCY. (3) APPARATUS FOR THE STUDY OF VISUAL TRANSLATORY MOTION, by O. W. Smith and J. J. Gibson, Sep 1956. 24 p. Contr. Nonr 401(14).
Order from LC mi $2.70, ph $4.80 PB 128646

Cornell U., Ithaca.
INTERACTION EFFECTS IN JUDGMENT OF CURVATURE, by O. W. Smith and P. C. Smith, Mar 1957. 26 p. Contr. Nonr 401(14).
Order from LC mi $2.70, ph $4.80 PB 132741

Cornell U., Ithaca, N. Y.
JUDGED DISTANCE AND SIZE CONSTANCY, by O. W. Smith, Sep 1956. 25 p. Contr. Nonr 401(14).
Order from LC mi $2.70, ph $4.80 PB 128783

Cornell U., Ithaca, N. Y.
A NEW EXPLANATION OF THE VELOCITY TRANSPOSITION PHENOMENON, by O. W. Smith and L. Sherlock, Sep 1956. 14 p. Contr. Nonr 401(14).
Order from LC mi $2.40, ph $3.30 PB 128700

Human Engineering Lab., Aberdeen Proving Ground, Md.
VISUAL EFFICIENCY UNDER DESERT CONDITIONS, by Leon T. Katchmar, Robert E. Jelinek, 1956. 36 p. HEL TM 20.
Order from LC mi $3.00, ph $6.30 PB 129962

Illinois U., College of Medicine, Chicago.
PHYSIOLOGICAL TESTS AS INDEX OF ATROPINE ABSORPTION, by Charles W. Frye, Robert D. Miller, Etc. Mar 1954. 20 p. Contr. DA 18-108-CML-2395; MLCR 26.
Order from LC mi $2.40, ph $3.30 PB 129676

Ingeniors Vetenskaps Akademien (Sweden).
STUDIES ON THE CIRCULATION IN ORGANIC SYSTEMS WITH APPLICATIONS TO INDICATOR METHODS, by Bengt Joel Andersson, 1957. 18 p. Acta Polytechnica 229 (1957).
Order from LC mi $2.40, ph $3.30 PB 134216

Physics Including Nucleonics Series Vol.3 No. 11.

Innsbruck U., (Austria).
AUDITORY GUIDANCE STUDIES, by I. Kohler, 1 July 1956. 64 p. AF OSR TR 56-43; Contr. AF 61 (514)-889. AD-97077.
Order from LC mi $3.90, ph $10.80 PB 127084

Instituto Nazionale di Ottica, Florence (Italy).
BASIC RESEARCH IN THE FIELD OF VISION, by Lucia Ronchi and Marcella Bittini, N. D. 15 p. EOARDC-TN-57-10 AFOSR-TN-57-203 Contr. AF61(514)-634 C. AD-126500.
Order from LC mi $2.40, ph $3.30 PB 127681

Sponsored by OSR ARDC.

Instituto Nazionale Di Ottica, Florence (Italy).
BASIC RESEARCH IN THE FIELD OF VISION, by Lucia Ronchi Rositani and Marcella Bittini, Jan 1958. 16 p. AF OSR TN 58-208; Contr. AF 61(052)-17. AD-152249.
Order from LC mi $2.40, ph $3.30 PB 133685

Johns Hopkins U., Baltimore, Md.
A VELOCITY MODULATED RASTER DISPLAY FOR BRIGHTNESS DISCRIMINATION STUDIES, by Dale M. Barger and Robert G. Roush, Aug 1953. 9 p. WADC TR 53-249; Contr. AF 33(038)-22642. AD-23712.
Order from LC mi $1.80, ph $1.80 PB 133690

Kansas U., Lawrence.
THE COLLECTION, PRESERVATION AND SEROLOGICAL COMPARISON OF RESPIRATORY PROTEINS (HEMOCYANINS) AND OTHER TISSUE PROTEINS OF MARINE ORGANISMS, by Charles A. Leone and Alvin Wiens, Jan 1956. 6 p. Contr. Nonr-58303.
Order from LC mi $1.80, ph $1.80 PB 127192

Louisville U., Ky.
MOVEMENT ANALYSIS OF THE PERFORMANCE OF A SIMPLE PERCEPTUAL-MOTOR TASK UNDER VARIOUS CONDITIONS, by Robert B. Ammons and Carol H. Ammons, Apr 1954. 25 p. WADC TR 54-36 Contr. AF 33(038) 10196.
Order from LC mi $2.70, ph $4.80 PB 128428

Medical College of Virginia, Richmond.
THE EFFECT OF ESERINE AND GAMMEXANE ON THE ABSOLUTELY AND RELATIVELY REFRACTORY PERIOD OF TURTLE HEART STRIPS AND THE EFFECT OF GAMMEXANE ON THE SPONTANEOUSLY BEATING FROG HEART AND (Technical Report No. 1.), (A STUDY OF THE EFFECTS OF THE NEUTRAL ALKALOID RYANODINE ON SKELATAL MUSCLE AND OTHER TISSUES. (Technical Rept. No. 2), by R. W. Ramsey, 14 June 1956. Contract N6 onr 198.
Order from LC mi $2.70, ph $4.80 PB 127365

Michigan U., Ann Arbor.
STUDIES OF ALLEGED D. C. ELECTROSENSITIZATION OF NIGHT VISION, by R. L. DeValois and O. T. Law, Jan 1956. 32 p. 2144-56-T; Contr. DA-36-039-SC-52654.
Order from LC mi $3.00, ph $6.30 PB 130590

Naval Radiological Defense Lab., San Francisco, Calif.
AN APPARATUS FOR EXPOSING MICE TO RADIOACTIVE AEROSOLS, by J. C. Sherwin, R. K. Fuller, et al. 2 Feb 1956. 18 p. NRDL TR 78.
Order from LC mi $2.40, ph $3.30 PB 129959

Naval Research Laboratory Field Station, Boston, Mass.
THE EFFECTS OF VIDEO MIXING RATIO AND LIMITING ON SIGNAL THRESHOLD POWER, by S. G. Sydoriak, Feb 1946. 39 p. Report R-3008.
Order from LC mi $3.00, ph $6.30 PB 129266

Ohio State U., Research Foundation, Columbus.
ANATOMICAL AND PHYSIOLOGICAL EFFECTS OF RAPID DECELERATION, by Alfred F. Fasola and Rollo C. Baker, Aug 1955. 109 p. WADC TR54-218; Contr AF 33 (038)−19727. AD-92025.
Order from LC mi $5.70, ph $16.80 PB 130370

Ohio State University Research Foundation, Columbus.
THE RELATIVE INTELLIGIBILITY OF SPEECH RECORDED SIMULTANEOUSLY AT EAR AND MOUTH, by Henry M. Moser and John J. Dreher, etc., May 1956. 11 p. OSURF TR 28 AF CRC TN 55-64; Contr. AF 19(604) 1577.
Order from LC mi $2.40, ph $3.30 PB 127113

Ohio State U., Research Foundation, Columbus.
RESPONSE OF THE ACCOMMODATIONS MECHANISM TO VISUAL STIMULI, by Dr. G. Westhermer, Nov 1956. 31 p. OSURF TR 1; Contr. NONR-495-(09).
Order from LC mi $3.00, ph $6.30 PB 130248

Oregon U., Eugene.
FINAL REPORT, by Bradley T. Scheer, Jan 1, 1952 to Dec 31, 1956. 8 p. Contr. Nonr. 692 (00).
Order from LC mi $1.80, ph $1.80 PB 130896

Oregon U., Eugene.
RELATION OF ADRENAL HORMONES TO SALT AND WATER BALANCE IN COLD-BLOODED VERTEBRATES, by Bradley T. Scheer, G. Campbell, et al. Jan 1, to Dec 31, 1955. 7 p. Contr. Nonr 692 (00). Progress Report.
Order from LC mi $1.80, ph $1.80 PB 127190

Quartermaster Research and Engineering Center, Natick, Mass.
CALORIC INTAKE AND ENERGY EXPENDITURE OF EIGHT MEN IN A TEMPERATURE ENVIRONMENT, by E. R. Buskirk, P. F. Iampietro, et al. Mar 1957. 18 p. EP 52.
Order from LC mi $2.40, ph $3.30 PB 127722

Quartermaster Research and Engineering Center, Natick, Mass.
CALORIC INTAKE ASSOCIATED WITH PROLONGED HARD WORK IN THE COLD, by E. R. Buskirk, B. E. Welch, et al. May 1957. 33 p. EP-58.
Order from LC mi $3.00, ph $6.30 PB 128682

Quartermaster Research and Engineering Center, Natick, Mass.
DEVICE TO CONTROL MUSCULAR TENSION AND FOREPERIOD LENGTH FOR REACTION TIME STUDIES, by John L. Kobrick, June 1957. 11 p. EPS 50.
Order from LC mi $2.40, ph $3.30 PB 130718

Quarter master Research and Engineering Center, Natick, Mass.
SOME PHYSIOLOGICAL RESPONSES OF MEN WEARING BODY ARMOR IN THE DESERT, by J. A. Vaughn, Alan R. MacLeod, et al. Mar 1957. 24 p. EP 44.
Order from LC mi $2.70, ph $4.80 PB 127720

Quartermaster Research and Engineering Center, Natick, Mass.
SPATIAL DYNAMICS OF THE NECK-SHOULDER REGION, by Paul A. Baker, May 1957. 18 p. EP-56. AD-137929.
Order from LC mi $2.40, ph $3.30 PB 130716

Quartermaster Research and Engineering Center, Natick, Mass.
THE USE OF DRY BONE WEIGHTS FOR IDENTIFICATION, by Paul T. Baker and Russell W. Newman, May 1957. 23 p. EPS 55.
Order from LC mi $2.70, ph $4.80 PB 130721

Quartermaster Research and Engineering Center, Natick, Mass.
VARIATIONS IN RESTING METABOLISM WITH CHANGES IN FOOD, EXERCISE AND CLIMATE, by E. R. Buskirk and P. F. Iampietro, May 1957. 24 p. EP-59.
Order from LC mi $2.70, ph $4.80 PB 130798

Quartermaster Research and Engineering Center, Natick, Mass.
WATER VAPOR LOSS FROM THE RESPIRATORY TRACT DURING OUTDOOR EXERCISE IN THE COLD, by D. R. Brebbia, R. F. Goldman, May 1957. 14 p. EP-57.
Order from LC mi $2.40, ph $3.30 PB 128400

Rochester U., N. Y.
THE EFFECT OF INTERMITTENT COURSE ILLUMINATION OF DIFFERING FREQUENCIES ON TRACKING PERFORMANCE, by Milton S. Katz and S. D. S. Spragge, Aug 1, 1955. 10 p. SDC TR 241-6-16 Contr. N6 onr-241,T.O. 6.
Order from LC mi $1.80, ph $1.80 PB 128148

Rome Air Development Center, N. Y.
THE INFLUENCE OF PRE-EXPOSURE LUMINANCE AND DURATION UPON SHORT-COURSE DARK ADAPTATIONS, by L. R. Pinneo, Feb 1958. 16 p. RADC TR 58-24. AD-148613.
Order from LC mi $2.40, ph $3.30 PB 133574

Rome Air Development Center, N. Y.
THE RADC VISUAL SENSITOMETER, by Lawrence Pinneo, July 1957. 11 p. RADC TN 57-256. AD-131185.
Order from LC mi $2.40, ph $3.30 PB 129517

St. Louis U., Mo.
MAGNITUDES VARIABILITY AND RELIABILITY OF REGIONAL SWEATING RATES IN HUMANS AT CONSTANT AMBIENT TEMPERATURES, by I. D. Ferguson, Feb 1956. 67 p. WADC TR 56-38 Contr. AF 18 (600)96.
AD-95418.
Order from LC mi $3.90, ph $10.80 PB 132252

School of Aviation Medicine, Randolph Air Force Base, Tex.
ACID-BASE CHANGES IN BRAIN AND BLOOD OF RATS EXPOSED TO HIGH CONCENTRATIONS OF CARBON DIOXIDE, by David A. Brodie and Dixon M. Woodbury, Sep 1957. 6 p. AF SAM 57-131.
Order from LC mi $1.80, ph $1.80 PB 132508

School of Aviation Medicine, Randolph Air Force Base, Texas.
ACTIVITY LEVELS AS A CONSEQUENCE OF RESERPINE ADMINISTRATION, by C. B. Elam and J. B. Reid, Dec 1956. 8 p. AF SAM 56-132.
AD-140627.
Order from LC mi $1.80, ph $1.80 PB 130053

School of Aviation Medicine, Randolph Air Force Base, Tex.
ARSENITE POISONING IN NORMAL AND IN ALTITUDE-ACCLIMATIZED MICE, by L. J. Berry, Feb 1957. 7 p. AF SAM 56-117.
Order from LC mi $1.80, ph $1.80 PB 130051

School of Aviation Medicine, Randolph Air Force Base, Tex.
AUDITORY ADAPTATION, by James F. Jerger, Ph.D. Jan 1957. 10 p. AF SAM 57-19.
AD-132268.
Order from LC mi $1.80, ph $1.80 PB 128471

School of Aviation Medicine, Randolph Air Force Base, Tex.
BLOOD ACTH AND PLASMA CORTICOSTEROIDS IN MAN DURING EXPOSURE TO SIMULATED ALTITUDE AND HIGH AMBIENT TEMPERATURE, by H. B. Hale and G. Sayers, Feb 1957. 17 p. AF SAM 57-55.
Order from LC mi $2.40, ph $3.30 PB 130082

School of Aviation Medicine, Randolph Air Force Base, Tex.
BLOOD GAS TRANSPORT AND ACID BASE BALANCE AT SEA LEVEL AND AT HIGH ALTITUDES, by Alberto Hurtodo and Tulio Velasquez, Oct 1956. 21 p. AF SAM 56-104.
Order from LC mi $2.70, ph $4.80 PB 129393

School of Aviation Medicine, Randolph Air Force Base, Tex.
BODY COMPARTMENTS IN HEALTHY ADULT MALES AT SEA LEVEL, by Emilio Picon-Reategui and Rodolfo Lozano, May 1957. 9 p. AF SAM 56-106.
Order from LC mi $1.80, ph $1.80 PB 130071

School of Aviation Medicine, Randolph Air Force Base, Tex.
CITRIC ACID CONTENT OF MOUSE TISSUES FOLLOWING ALTITUDE STRESS, by L. Joe Barry, Ph.D., Sep 1957. 5 p. AF SAM 57-152.
Order from LC mi $1.80, ph $1.80 PB 132513

School of Aviation Medicine, Randolph Air Force Base, Tex.
COMPARATIVE STUDIES WITH MURINE HEPATITIS VIRUS-CYTOLOGIC RESPONSE IN CHICK EMBRYOS, by Morris Pollard, Ph.D., and Lois Mendle, M.D., Aug 1957. 4 p. AF SAM 57-132.
Order from LC mi $1.80, ph $1.80 PB 134003

School of Aviation Medicine, Randolph Air Force Base, Tex.
COMPARATIVE STUDIES WITH MURINE HEPATITIS VIRUS-PREPARATION OF COMPLEMENT-FIXING ANTIGENS, by Morris Pollard, Ph.D., and Robert H. Bussell, Ph.D., Aug 1956. 6 p. AF SAM 57-125.
Order from LC mi $1.80, ph $1.80 PB 132510

School of Aviation Medicine Randolph Air Force Base, Tex.
COMPARISON OF BLOOD FLOW IN NORMALLY INNERVATED AND IN SYMPATHECTOMIZED LEGS OF DOGS AFTER EXPOSURE TO COLD, by H. M. Hines, et al. May 1956. 8 p. AF SAM 56-53.
Order from LC mi $1.80, ph $1.80 PB 127297

School of Aviation Medicine, Randolph Air Force Base, Tex.
A COMPARISON OF INTERNAL VS EXTERNAL REINFORCEMENT IN MOTOR AVOIDANCE SITUATIONS, by Philip J. Bersh, Apr 1957. 8 p. AF SAM 57-27.
Order from LC mi $1.80, ph $1.80 PB 132258

School of Aviation Medicine, Randolph Air Force Base, Tex.
CONTINUOUS VERSUS INTERRUPTED STIMULI IN AUTOMATIC AUDIOMETRY, by James F. Jerger, Ph.D. and Raymond T. Carhart, Ph.D. Mar 1957. 6 p. AF SAM 56-58. AD-132261.
Order from LC mi $1.80, ph $1.80 PB 128446

School of Aviation Medicine, Randolph Air Force Base, Tex.
CORTICAL pH CHANCE ACCOMPANYING SPREADING CORTICAL DEPRESSION AND CONVULSION, by R. D. Tschirgi and J. L. Taylor, June 1957. 7 p. AF SAM 57-101.
Order from LC mi $1.80, ph $1.80 PB 130080

School of Aviation Medicine, Randolph Air Force Base, Tex.
DESIGN AND CONSTRUCTION OF AN AUTOMATIC, SELF-TESTING, RECORDING, PULSE-TONE AUDIOMETER, by S. N. Reger and R. J. Voots, Apr 1957. 21 p. AF SAM 57-64.
Order from LC mi $2.70, ph $4.80 PB 130084

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE DEVELOPMENT AND VALIDATION OF A CHECKLIST FOR MEASURING SUBJECTIVE FATIGUE, by Richard G. Pearson and George E. Byars, Jr. Dec 1956. 16 p. AF SAM 56-115.
Order from LC mi $2.40, ph $3.30 PB 128449

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE DEVELOPMENT OF A METHOD FOR CONTINUOUS RECORDING OF ALVEOLAR CARBON DIOXIDE TENSION DURING HYPERVENTILATION TEST IN ROUTINE EEG WORK, by K. A. Blinn and W. K. Noell, Apr 1949. 17 p. AF SAM Proj. 21-02-068.
Order from LC mi $2.40, ph $3.30 PB 132225

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE DISCRIMINATIVE CONTROL OF A CONDITIONED HEART RATE RESPONSE, by P. J. Bersh and J. M. Notterman, Apr 1957. 14 p. AF SAM 57-29.
Order from LC mi $2.40, ph $3.30 PB 130063

School of Aviation Medicine, Randolph Air Force Base, Tex.
EFFECT OF ACUTE TOTAL-BODY GAMMA IRRADIATION ON PLASMA IRON AND IRON UPTAKE IN THE BURRO AND THE SHEEP, by G. S. Melville, Jr. and B. F. Trum, Aug 1957. 7 p. AF SAM 57-154.
Order from LC mi $1.80, ph $1.80 PB 132777

School of Aviation Medicine, Randolph Air Force Base, Tex.
EFFECT OF BODY TEMPERATURE ON PULMONARY GAS EXCHANGE, by O. B. Otis, Ph.D. and James Jude, M.D., Dec 1956. 7 p. AF SAM 57-12.
Order from LC mi $1.80, ph $1.80 PB 128476

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE EFFECT OF EXPERIMENTAL ANXIETY UPON VERBAL BEHAVIOR, by P. J. Bersh and J. M. Notterman, Apr 1957. 8 p. AF SAM 57-26.
Order from LC mi $1.80, ph $1.80 PB 130200

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE EFFECT OF ROUTINE STORAGE METHODS ON THE SUBSEQUENT TIME-FUNCTION UPTAKE OF POTASSIUM BY LACTOBACILLUS ACIDOPHILUS, by Norman O. Harris, Aug 1957. 11 p. AF SAM 57-129.
Order from LC mi $2.40, ph $3.30 PB 133707

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE EFFECT OF X-IRRADIATION ON PREFORMED ANTIBODY AND ITS ROLE IN THE PROTECTION OF X-IRRADIATED MICE, by E. H. Perkins and S. Marcus, Nov 1957. 7 p. AF SAM 58-18.
Order from LC mi $1.80, ph $1.80 PB 133557

School of Aviation Medicine, Randolph Air Force Base, Tex.
EFFECTS OF ALTITUDE, COLD, AND HEAT ON METABOLIC INTERRELATIONS IN RATS, by R. B. Mefferd and H. B. Hale, Aug 1957. 14 p. AF SAM 57-141.
Order from LC mi $2.40, ph $3.30 PB 132774

School of Aviation Medicine, Randolph Air Force Base, Tex.
EFFECTS OF CHLORPROMAZINE AND AUTONOMIC BLOCKING AGENTS ON SURVIVAL OF HEAT-STRESSED ADRENALECTOMIZED RATS, by Karl E. Paschkis, M.D., Aug 1957. 8 p. AF SAM 57-120.
Order from LC mi $1.80, ph $1.80 PB 132177

School of Aviation Medicine, Randolph Air Force Base, Tex.
EFFECTS OF EXPLOSIVE DECOMPRESSION ON DOGS DURING PRESSURE BREATHING, by R. W. Bancroft, July 1949. 6 p. AF SAN Proj. 21-02-075-Report No. 1.
Order from LC mi $1.80, ph $1.80 PB 132222

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE EFFECTS OF HYPOCAPNIA OF THE RHYTHMICITY OF THE ISOLATED DUODENUM, by W. J. Adelman, Jr. Feb 1957. 8 p. AF SAM 57-69.
Order from LC mi $1.80, ph $1.80 PB 132260

School of Aviation Medicine, Randolph Air Force Base, Tex.
EFFECTS OF HYPOTHERMIA ON THE BRAIN, by C. H. William Ruhe, M.D., July 1957. 15 p. AF SAM 57-104.
Order from LC mi $2.40, ph $3.30 PB 132265

School of Aviation Medicine, Randolph Air Force Base, Tex.
EFFECTS OF NORMAL AIR AND DEXTRO-AMPHETAMINE UPON WORK DECREMENT INDUCED BY OXYGEN IMPROVERISHMENT AND FATIGUE, by George T. Hauty and Robert B. Payne, Dec 1956. 7 p. AF SAM 56-12.
Order from LC mi $1.80, ph $1.80 PB 128463

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE EFFICIENCY OF PURSUIT-ROTOR PERFORMANCE DURING EXPERIMENTALLY INDUCED ANXIETY, by P. J. Bersh and J. M. Notterman, Apr 1957. 7 p. AF SAM 57-28.
Order from LC mi $1.80, ph $1.80 PB 130062

School of Aviation Medicine, Randolph Air Force Base, Tex.
ELECTROCARDIOGRAPHIC OBSERVATIONS ON TEN SUBJECTS AT SEA LEVEL AND DURING ONE YEAR OF RESIDENCE AT HIGH ALTITUDE, by Daute Penaloza, M. D., Nov 1956. 13 p. AF SAM 56-98.
Order from LC mi $2.40, ph $3.30 PB 128483

School of Aviation Medicine, Randolph Air Force Base, Tex.
ELECTROMYOGRAPHIC FACTORS IN AIRCRAFT CONTROL: A MUSCULAR ACTION POTENTIAL STUDY OF "CONFLICT", by J. W. Bowles, Jr., Ph.D., Dec 1956. 25 p. AF SAM 55-175.
Order from LC mi $2.70, ph $4.80 PB 128487

School of Aviation Medicine, Randolph Air Force Base, Tex.
ELECTROMYOGRAPHIC FACTORS IN AIRCRAFT CONTROL: DIFFERENTIAL MUSCLE TENSION DURING A DELAYED RESPONSE, by James D. Miller, Jan 1957. 9 p. AF SAM 55-129.
Order from LC mi $1.80, ph $1.80 PB 128486

School of Aviation Medicine, Randolph Air Force Base, Tex.
ELECTROMYOGRAPHIC FACTORS IN AIRCRAFT CONTROL: EXPERIMENTAL INVESTIGATION OF THE EFFECT OF A MUSCLE TENSION REFLEX UPON SIMPLE INSTRUCTED MOVEMENTS, by R. C. Davis, Ph.D., Dec 1956. 22 p. AF SAM 55-123.
Order from LC mi $2.70, ph $4.80 PB 128469

School of Aviation Medicine, Randolph Air Force Base, Tex.
ELECTROMYOGRAPHIC FACTORS IN AIRCRAFT CONTROL: MUSCULAR ACTIVITY DURING STEADY NOISE AND ITS RELATION TO INSTRUCTED RESPONSES EVOKED BY AUDITORY SIGNALS, by R. C. Davis, Ph.D. Dec 1956. 15 p. AF SAM 55-124.
Order from LC mi $2.40, ph $3.30 PB 128460

School of Aviation Medicine, Randolph Air Force Base, Tex.
ELECTROMYOGRAPHIC FACTORS IN AIRCRAFT CONTROL: MUSCULAR ACTIVITY DURING STEADY NOISE AND ITS RELATION TO INSTRUCTED RESPONSES EVOKED BY VISUAL SIGNALS, by R. C. Davis, Ph.D., Jan 1957. 10 p. AF SAM 55-126.
Order from LC mi $1.80, ph $1.80 PB 128470

School of Aviation Medicine, Randolph Air Force Base, Tex.
ELECTROMYOGRAPHIC FACTORS IN AIRCRAFT CONTROL: MUSCULAR TENSION IN THE LEARNING AND UNLEARNING OF A SIMPLE-CHOICE RESPONSE, by B. Gelber Jan 1957. 24 p. AF SAM 55-134.
Order from LC mi $2.70, ph $4.80 PB 130070

School of Aviation Medicine, Randolph Air Force Base, Tex.
ELECTROMYOGRAPHIC FACTORS IN AIRCRAFT CONTROL: MUSCULAR TENSION WHEN TASK REQUIREMENTS ARE CHANGED, by R. C. Davis, Ph.D., Jan 1957. 13 p. AF SAM 55-131.
Order from LC mi $2.40, ph $3.30 PB 128477

School of Aviation Medicine, Randolph Air Force Base, Tex.
ELECTROMYOGRAPHIC FACTORS IN AIRCRAFT CONTROL: MUSCULAR TENSIONS DURING SIMULTANEOUS PERFORMANCE OF TWO TASKS AND THEIR EFFECT ON PERFORMANCE, by R. C. Davis, Dec 1956. 14 p. AF SAM 55-128.
Order from LC mi $2.40, ph $3.30 PB 128452

School of Aviation Medicine, Randolph Air Force Base, Tex.
ELECTROMYOGRAPHIC FACTORS IN AIRCRAFT CONTROL: RESPONSE AND ADAPTION TO BRIEF NOISES OF HIGH INTENSITY, by R. C. Davis, Ph.D., Dec 1956. 8 p. AF SAM 55-127.
Order from LC mi $1.80, ph $1.80 PB 128474

School of Aviation Medicine, Randolph Air Force Base, Tex.
ELECTROMYOGRAPHIC FACTORS IN AIRCRAFT CONTROL: THE DEVELOPMENT AND LOSS OF A MUSCLE TENSION SET TO AN INCIDENTAL STIMULUS, by John Benson Fink, Ph.D., Dec 1956. 16 p. AF SAM 55-130.
Order from LC mi $2.40, ph $3.30 PB 128451

School of Aviation Medicine, Randolph Air Force Base, Tex.
ELECTROMYOGRAPHIC FACTORS IN AIRCRAFT CONTROL: THE EFFECT OF INDUCED TENSION UPON MUSCULAR ACTIVITY DURING SIMPLE VOLUNTARY MOVEMENT, by Rollin M. Patton, Jan 1957. 21 p. AF SAM 55-133.
Order from LC mi $2.70, ph $4.80 PB 128488

School of Aviation Medicine, Randolph Air Force Base, Tex.
ELECTROMYOGRAPHIC FACTORS IN AIRCRAFT CONTROL: THE RELATION OF MUSCULAR TENSION TO PERFORMANCE, by R. C. Davis, Dec 1956. 9 p. AF SAM 55-122.
Order from LC mi $1.80, ph $1.80 PB 128462

School of Aviation Medicine, Randolph Air Force Base, Tex.
ELECTROMYOGRAPHIC FACTORS IN AIRCRAFT CONTROL: THE ROLE OF MUSCLE POTENTIALS IN TRANSFER OF TRAINING, by John F. Brockmann, Jan 1957. 16 p. AF SAM 55-132.
Order from LC mi $2.40, ph $3.30 PB 128484

School of Aviation Medicine, Randolph Air Force Base, Tex.
ETHER-SOLUBLE SUBSTANCES ON THE SKIN OF THE HUMAN EXTERNAL AUDITORY CANAL, by S. P. Chiang, June 1957. 8 p. Rept. 56-114.
Order from LC mi $1.80, ph $1.80 PB 132257

School of Aviation Medicine, Randolph Air Force Base, Tex.
EXPERIMENTAL DETERMINATION OF THESHOLD RELIABILITES FOR FOUR METHODS OF AUTOMATIC SELF-TESTING, PULSE TONE AUDIOMETRY, by S. N. Reger and R. J. Voots, Mar 1957. 11 p. AF SAM 57-63.
Order from LC mi $2.40, ph $3.30 PB 130083

School of Aviation Medicine, Randolph Air Force Base, Tex.
EXPERIMENTAL MOTION SICKNESS IN DOGS, by S. C. Wang, and H. I. Chinn, June 1957. 5 p. AF SAM 57-112.
Order from LC mi $1.80, ph $1.80 PB 130081

School of Aviation Medicine, Randolph Air Force Base, Tex.
HEMATOCRIT CHANGE AS AN INDICATION OF ANAPHYLACTIC SHOCK IN THE MOUSE, by John D. Fulton, William E. Harris, et al, Apr 1957. 8 p. AF SAM 57-75.
AD-136284.
Order from LC mi $1.80, ph $1.80 PB 129390

School of Aviation Medicine, Randolph Air Force Base, Tex.
HUMAN STRESS RESPONSE IN JET AIRCRAT OPERATIONS, by T. J. Domanski, Dec 1956. 5 p. AF SAM 57-16.
Order from LC mi $1.80, ph $1.80 PB 128480

School of Aviation Medicine, Randolph Air Force Base, Tex.
INTRAVENOUS GLUCOSE TOLERANCE TEST AT SEA LEVEL AND AT HIGH ALTITUDES, by Emilio Picon-Reategui, Dec 1956. 8 p. AF SAM 56-105.
Order from LC mi $1.80, ph $1.80 PB 128475

School of Aviation Medicine, Randolph Air Force Base, Tex.
INVESTIGATIONS OF HANDWRITING-FORCES I. THE DEVELOPMENT OF THE TECHNIQUE, by Abraham A. G. Bingel and Heinz Maierleibnitz, Nov 1948. 11 p. AF SAM Proj. 21-02-070, Report No. 1.
Order from LC mi $2.40, ph $3.30 PB 132224

School of Aviation Medicine, Randolph Air Force Base, Tex.
LACTIC ACID ACCUMULATION AS A FACTOR IN DETERMINING WORK CAPACITY, by J. Gordon Wells, Bruno Balke, Nov 1956. 10 p. AF SAM 56-121.
Order from LC mi $1.80, ph $1.80 PB 128456

School of Aviation Medicine, Randolph Air Force Base, Tex.
LEUKOCYTE COUNT AND SUSCEPTIBILITY TO BACTERIAL INFECTION AS AFFECTED BY CONTINUOUS EXPOSURE TO LOW DOSE GAMMA RADIATION, by C. P. Miller and C. W. Hammond, May 1957. 11 p. AF SAM 57-91.
Order from LC mi $2.40, ph $3.30 PB 130087

School of Aviation Medicine, Randolph Air Force Base, Tex.
MAXIMAL DIFFUSING CAPACITY OF THE LUNGS AT HIGH ALTITUDES, by Tulio Velasquez, Nov 1956. 10 p. AF SAM 56-108.
Order from LC mi $1.80, ph $ 1.80 PB 128482

School of Aviation Medicine, Randolph Air Force Base, Tex.
MECHANISMS OF NATURAL ACCLIMATIZATION. PRELIMINARY REPORT ON ANATOMIC STUDIES AT HIGH ALTITUDES, by Jorge Campos Rey De Castro and Bartolome Iglesias, June 1956. 7 p. AF SAM 55-97.
Order from LC mi $1.80, ph $1.80 PB 128461

School of Aviation Medicine, Randolph Air Force Base, Tex.
MECHANISMS OF NATURAL ACCLIMATIZATION: TISSUE ENZYME STUDIES AND METABOLIC CONSTITUENTS IN ALTITUDE ADAPTATION, by Donald V. Tappan and Van R. Potter, Oct 1956. 14 p. AF SAM 55-98.
Order from LC mi $2.40, ph $3.30 PB 128491

School of Aviation Medicine, Randolph Air Force Base, Tex.
METABOLIC STUDIES OF GUINEA PIGS NATIVE TO THE HIGH ANDES AND TO THE PERUSIAN COASTAL PLAIN, by L. J. Berry and C. B. Ferro, Sept 1957. 16 p. AF SAM 57-134.
Order from LC mi $2.40, ph $3.30 PB 132773

School of Aviation Medicine, Randolph Air Force Base, Tex.
MODIFICATION IN TECHNIQUE OF PLACEMENT OF NEEDLE ELECTRODES IN BRAIN STUDIES, by H. A. Bartholomaeus, Sept 1948. 7 p. AF SAM Proj.-21-02-047 Report No. 1.
Order from LC mi $1.80, ph $1.80. PB 130991

School of Aviation Medicine, Randolph Air Force Base, Tex.
NEW TEST FOR EXAMINATION AND TRAINING OF COLOR VISION, by Schmidt, Apr 1949. 9 p. Proj. No. 21-02-044 Report No. 2.
Order from LC mi $1.80, ph $1.80 PB 130971

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE NORMAL BLOOD PICTURE OF THE MACACA MULATTA MONKEY, by George M. Krise, Jr. and Niel Wald, July 1957. 7 p. AF SAM 57-130.
Order from LC mi $1.80, ph $1.80 PB 132270

School of Aviation Medicine, Randolph Air Force Base, Tex.
OXYGEN CONSUMPTION AT LOW OXYGEN TENSIONS, by Seymour Korkes, Nov 1948. 6 p. AF SAM Proj. 21-02-101-Report No. 1.
Order from LC mi $1.80, ph $1.80 PB 132227

School of Aviation Medicine, Randolph Air Force Base, Tex.
PERCENTAGES OF LIPID AND PROTEIN IN CASUAL AND FRESH CERUMER, by S. P. Chiang, and D. H. Lowry, June 1957. 6 p. AF SAM 56-112.
Order from LC mi $1.80, ph $1.80 PB 132511

School of Aviation Medicine, Randolph Air Force Base, Tex.
PHYSIOLOGIC CHLORIDE LEVELS IN HUMAN WHOLE SALIVA COLLECTED WITHOUT EXOGENOUS STIMULATION, by Ira L. Shannon, Jan 1958. 5 p. AF SAM 58-26.
Order from LC mi $1.80, ph $1.80 PB 133712

School of Aviation Medicine, Randolph Air Force Base, Tex.
PHYSIOLOGICAL EFFECTS OF REFLECTIVE COLORED AND POLARIZING OPHTHALMIC FILTERS, by John L. Matthews, Aug 1949. 11 p. Proj. No. 21-02-040 Report No. 1.
Order from LC mi $2.40, ph $3.30 PB 130972

School of Aviation Medicine, Randolph Air Force Base, Tex.
PHYSIOLOGICAL RECOGNITION OF STRAIN IN FLYING PERSONNEL-1. THE SHORT-RANGE MISSION, by Thaddeus J. Domanski and Algernon G. Swan, Dec 1951. 13 p. AF SAM Proj. 21-32-030, Report No. 1.
Order from LC mi $2.40, ph $3.30 PB 132414

School of Aviation Medicine, Randolph Air Force Base, Tex.
PLASMA ELECTROLYTE COMPOSITION IN DOGS BREATHING HIGH CO_2 MIXTURES. SOURCE OF BICARBONATE DEFICIT IN SEVERE RESPIRATORY ACIDOSIS, by E. B. Brown, Jr., June 1957. 8 p. AF SAM 57-115.
Order from LC mi $1.80, ph $1.80 PB 132268

School of Aviation Medicine, Randolph Air Force Base, Tex.
POSTIRRADIATION CREATINURIA IN MACACA MULATTA MONKEYS, by G. M. Krise and C. M. Williams, Sept 1957. 4 p. AF SAM 57-150.
Order from LC mi $1.80, ph $1.80 PB 132776

School of Aviation Medicine, Randolph Air Force Base, Tex.
PRODUCING THE WEIGHTLESS STATE IN JET AIRCRAFT, by S. J. Gerathewohl, and O. L. Ritter, Aug 1957. 21 p. AF SAM 57-143.
AD-149703.
Order from LC mi $2.40, ph $3.30 PB 132775

School of Aviation Medicine, Randolph Air Force Base, Tex.
RAPID STANDARDIZATION OF VECTORCARDIOGRAPH AMPLITUDE COMPONENTS, by Julian E. Ward, July 1957. 9 p. AF SAM 57-127.
Order from LC mi $1.80, ph $1.80 PB 132509

School of Aviation Medicine, Randolph Air Force Base, Tex.
RECOGNITION OF RED AND GREEN POINT SOURCES OF COLOR-DEFICIENT OBSERVERS, by Louise L. Sloan and Adelaide Habel. May 1956. 7 p. AF SAM 55-145.
Order from LC mi $1.80, ph $1.80 PB 127303

School of Aviation Medicine, Randolph Air Force Base, Tex.
RENAL HEMODYNAMICS AND THE URINARY CONCENTRATING MECHANISM IN POLYCYTHEMIC DOGS, by Ernest L. Becker and Betty J. Joseph, July 1956. 6 p. AF SAM 55-140.
AD-129303.
Order from LC mi $1.80, ph $1.80 PB 127304

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE SARNOFF PHRENIC STIMULATION TECHNIC FOR PRODUCING EXPERIMENTAL HYPERVENTILATION IN ANIMALS, by W. J. Adelman, Jr. and Dominic Criscuolo, Feb 1957. 5 p. AF SAM 57-68.
Order from LC mi $1.80, ph $1.80 PB 132172

School of Aviation Medicine, Randolph Air Force Base, Tex.
SERUM TRANSAMINASE ACTIVITY IN X-IRRADIATED RABBITS, by Lawrence J. Milch and Harry G. Albaum, Feb 1957. 3 p. AF SAM 57-67.
Order from LC mi $1.80, ph $1.80 PB 132171

School of Aviation Medicine, Randolph Air Force Base, Tex.
SERUM TRANSAMINASE CHANGES AFTER LOCAL INJURY, by Harry G. Albaum and Lawrence J. Milch, June 1957. 5 p. AF SAM 57-108.
AD-136 287.
Order from LC mi $1.80, ph $1.80 PB 129386

School of Aviation Medicine, Randolph Air Force Base, Tex.
SODIUM AND POTASSIUM LEVELS OF HUMAN WHOLE STIMULATED SALIVA COLLECTED AT A LOW RATE OF FLOW FROM SUBJECTS IN A SELECT AGE GROUPING, by I. L. Shannon, June 1957. 13 p. AF SAM 57-80.
Order from LC mi $2.40, ph $3.30 PB 130060

School of Aviation Medicine, Randolph Air Force Base, Tex.
SODIUM AND POTASSIUM LEVELS OF HUMAN WHOLE STIMULATED SALIVA COLLECTED AT A MODERATE RATE OF FLOW FROM SUBJECTS IN A SELECT AGE GROUPING, by Ira L. Shannon. May 1957. 7 p. AF SAM 57-99.
AD-136 181.
Order from LC mi $1.80, ph $1.80 PB 129620

School of Aviation Medicine, Randolph Air Force Base, Tex.
STUDIES OF THE PHOTICALLY SIMULATED EEG, by L. C. Johnson and G. A. Vlett, Jan 1957. 17 p. AF SAM 57-54.
Order from LC mi $2.40, ph $3.30 PB 130069

School of Aviation Medicine, Randolph Air Force Base, Tex.
STUDIES ON ADAPTIVE RESPONSES TO HYPERVENTILATION, by B. Balke and J. P. Ellis, June 1957. 14 p. AF SAM 57-113.
Order from LC mi $2.40, ph $3.30 PB 130088

School of Aviation Medicine, Randolph Air Force Base, Tex.
STUDIES ON THE MECHANISM OF CORTICAL HORMONE ACTION IN STRESS SURVIVAL, by K. E. Paschkis and A. Cantarow et al. June 1956. 11 p. AF SAM 56-63.
Order from LC mi $2.40, ph $3.30 PB 127295

School of Aviation Medicine, Randolph Air Force Base, Tex.
STUDIES ON THE METABOLISM OF CARBOHYDRATES AT SEA LEVEL AND AT HIGH ALTITUDES, by Emilio Picon-Reategui, Nov 1956. 17 p. AF SAM 56-107.
Order from LC mi $2.40, ph $3.30 PB 128458

School of Aviation Medicine, Randolph Air Force Base, Tex.
STUDIES ON THE PHYSIOLOGIC BASIS OF CEREBRAL CONCUSSION, by Eldon L. Foltz, Richard P. Schmidt, et al, Apr 1957. 21 p. AF SAM 55-111.
AD-136 186
Order from LC mi $2.70, ph $4.80 PB 129394

School of Aviation Medicine, Randolph Air Force Base, Tex.
STUDIES WITH IN VITRO METHODS ON THE HYPOTHALAMIC CONTROL OF ACTH RELEASE, by Roger Guillemin, Mar 1957. 19 p. Rept. 57-56.
AD-136 184.
Order from LC mi $2.40, ph $3.30 PB 129391

School of Aviation Medicine, Randolph Air Force Base, Tex.
STUDY OF ACCLIMATIZATION DURING A TWO-WEEK EXPOSURE TO MODERATE ALTITUDE

(10,000 feet), by H. W. Rose, Mar 1949. 18 p. AF SAM Proj. 21-02-029-Report No. 1.
Order from LC mi $2.40, ph $3.30 PB 130981

School of Aviation Medicine, Randolph Air Force Base, Tex.
A STUDY OF EFFECTS OF ALTITUDE ANOXIA ON GLUCOSE METABOLISM, by Gale H. Keyes and Vincent C. Kelley, Mar 1949. 11 p. Proj. No. 21-02-030 Report No. 2.
Order from LC mi $2.40, ph $3.30 PB 130980

School of Aviation Medicine, Randolph Air Force Base, Tex.
TEMPORARY THRESHOLD SHIFT AS AN INDEX OF NOISE-SUSCEPTIBILITY, by James F. Jerger and Raymond T. Carhart, May 1956. 6 p. AF SAM 56-55.
Order from LC mi $1.80, ph $1.80 PB 127296

School of Aviation Medicine, Randolph Air Force Base, Tex.
THERMAL BEHAVIOR OF THE SUBNOURISHED AND PANTOTHENIC ACID-DEPRIVED RAT, by B. Weiss, Jan 1957. 6 p. Rept. 57-25.
AD-136 283.
Order from LC mi $1.80, ph $1.80 PB 130055

School of Aviation Medicine, Randolph Air Force Base, Tex.
TRACER STUDIES OF THE PHYSIOLOGY OF S^{35} LABELED S, BETA-AMINO-ETHYLISOTHIURONIUM DIBROMIDE, by Frank P. Conte and George S. Melville, July 1957. 6 p. AF SAM 57-122.
Order from LC mi $1.80, ph $1.80 PB 132273

School of Aviation Medicine, Randolph Air Force Base, Tex.
TRAUMATIC RENAL FAILURE-A POSSIBLE ETIOLOGY, by J. A. Stirman and B. J. Wilson, Sept 1957. 8 p. AF SAM 58-8.
Order from LC mi $1.80, ph $1.80 PB 132779

School of Aviation Medicine, Randolph Air Force Base, Tex.
VENTILATORY CHANGES PRODUCED BY ELECTRICAL STIMULATION OF THE CEREBRAL CORTEX OF THE CAT, by W. J. Adelman, Mar 1957. 17 p. AF SAM 57-31.
Order from LC mi $2.40, ph $3.30 PB 130073

Stanford U., Calif.
PHYSIOLOGICAL PROPERTIES OF PLASMA SUBSTITUTES, by G. A. Teigen and I. L. Trapani, 31 Dec 1956. 219 p. Contr. N6onr-25-137.
Order from LC mi $9.60, ph $33.30 PB 130916

University of Southern California, Los Angeles.
A STUDY OF RELATIONSHIPS BETWEEN TRUE AND RELATIVE MOTION AS PERCEPTUAL TASKS IN TWO DISPLAY CONTEXTS, by G. L. Bryan and C. Van Horn, May 1957. 43 p. Contr. Nonr-228(02).
Order from LC mi $3.30, ph $7.80 PB 133584

Project NR 153-093, Technical Report 20.

Washington State Coll., Pullman.
THE EFFECTS OF SOUNDS OF VARYING INTENSITIES ON CHICKENS AND HATCHING EGGS, by William G. Stadelman and Igor L. Kosin, Feb 1957. 54 p. WADC TR 57-87 Contr.AF-33(616)-2552. AD-118038.
Order from LC mi $3.60, ph $9.30 PB 132281

Washington U., St. Louis, Mo.
POPULATION GENETICS OF DROSOPHILA, by Hampton L. Carson et al. Oct 15, 1956. 3 p. Contr. Nonr 816(05).
Order from LC mi $1.80, ph $1.80 PB 130655

Wisconsin U., Madison.
THE EFFECT OF GRID LINES IN THE FIELD OF VIEW UPON PERCEPTION OF MOTION, by H. W. Leibowitz and J. F. Lomont, Mar 1954. 12 p. WADC TR 54-201. Contr.AF18(600)-54.
AD-38210.
Order from LC mi $2.40, ph $3.30 PB 130368

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
A METHOD FOR SIMULATED NIGHT FLYING DURING DAYLIGHT HOURS, by Richard E. Horn, Oct 1954. 22 p. WADC TR54-505.
AD-62283.
Order from LC mi $2.70, ph $4.80 PB 130352

Yale U., New Haven, Conn.
REFLEX EFFECTS OF ACUTE HYPERTENSION IN THE PULMONARY VASCULAR BED OF THE DOG, by S. E. Downing, 1955 or later, 16 p.
Order from LC mi $2.40, ph $3.30 PB 132549

Zurich U. (Switzerland).
EFFECTS ON LIVING TISSUES BY PRIMARY COSMIC RAY PARTICLES, by Jakob A. G. Eugster, Feb 1956. 35 p. Contr. AF 61(514)898; AFOSR TR-56-19.
AD-87528.
Order from LC mi $3.00, ph $6.30 PB 130206

Biochemistry

Army Medical Research Laboratory, Fort Knox, Kentucky.
DIFFUSION OF PROGESTERONE AND DESOXYCORTICOSTERONE INTO NITROCELLULOSE ("LUSTEROID"), by V. F. Westphal, 3 May 1957. 21 p. AMRL 274.
Order from LC mi $2.70, ph $4.80 PB 133567

Columbia U., New York.
STRUCTURE AND ANTIBIOTIC ACTIVITY OF PEPTIDES, by Bernard F. Erlanger, Dec 15, 1956. 4 p. Contr. N 6onr-271 T.O. 1. Subtask NR 124-260.
Order from LC mi $1.80, ph $1.80 PB 132317

Cornell U., Ithaca, N. Y.
CONFIGURATIONS OF MACROMOLECULES IN SOLUTIONS. Rept. on Contract N6onr-264(14). 14 Aug 1956, 77 p.
Order from LC mi $4.50, ph $12.30 PB 128390

Contents:
1. Thermodynamic considerations of protein reactions. II Modified reactivity of primary valence bonds, by M. Laskowski and H. A. Scheraga.
2. Hydrodynamic and thermodynamic properties of bovine serum albumin at low pH, by G. I. Loeb and H. A. Scheraga.

Inst. for Cancer Research, Philadelphia, Penn.
PROTEIN SYNTHESIS AND DEGRADATION IN LIVING BACTERIA, by Gerrit Tolnnies, 27 Dec 1956. 9 p. Contr. Nonr-244(00).
Order from LC mi $1.80, ph $1.80 PB 130571

Liege U. (Belgium).
STUDIES ON THE MINERAL FRACTION OF BONE AND TEETH, by M. J. Dallemagne, Claudine Fabry, et al. 31 May 1957. 81 p. AF OSR TN 57-405; Contr. AF 61 (514)-940. AD-132483.
Order from LC mi $3.80, ph $13.80 PB 130873

Minnesota U., Minneapolis.
INTERACTIONS OF CHLOROPHYLL IN ITS TRIPLET STATE WITH OXYGEN, CAROTENE, ETC., by E. Fujimori and R. Livington Aug 1957. 8 p. AF OSR TN57-510; Contr. AF 18 (600)—1458. AD-136496.
Order from LC mi $1.80, ph $1.80 PB 130234

Northwestern U., Evanston, Ill.
PROTEIN COMPLEXES, by I. M. Klotz. Rept. on Contract Nonr-1228(05). Sept 1956. 7 p.
Order from LC mi $1.80, ph $1.80 PB 128575

Nutritional Research Lab., St. Luke's Hospital, N. Y.
AMINO ACID METABOLISM OF MAN IN HEALTH AND DISEASE, by Anthony A. Albanese, 29 Nov 1956. 12 p. Annual Report 1956 on Contract Nonr-1167(00).
Order from LC mi $2.40, ph $3.30 PB 129954

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE BIOCHEMISTRY OF TISSUE TRAUMA, by Richard A. Seibert and Patricia Brooks, May 1957. 5 p. AF SAM 57-95.
Order from LC mi $1.80, ph $1.80 PB 132264

The Effect of Cold Injury on Muscle Protein in Rabbits.

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE CHEMICAL ESTIMATION OF ACYL GLUCURONIDES AND ITS APPLICATION TO STUDIES ON THE METABOLISM OF BENZOATE AND SALICYLATE IN MAN, by David Schachter, Jan 1957. 9 p. AF SAM 57-30.
Order from LC mi $1.80, ph $1.80 PB 128465

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE DETERMINATION OF CREATINE IN BIOLOGIC FLUIDS, by D. R. Anderson and R. M. Dowben, May 1957. 7 p. AF SAM 57-87.
Order from LC mi $1.80, ph $1.80 PB 130077

School of Aviation Medicine, Randolph Air Force Base, Tex.
INTEGRATION OF HUMAN SERUM AND SERUM FRACTION DIFFUSION PATTERNS, by W. G. Glenn and Anna C. Garner, Feb 1957. 8 p. AF SAM 57-51.
Order from LC mi $1.80, ph $1.80 PB 130068

A study of zonal characteristics and complex reactions.

School of Aviation Medicine, Randolph Air Force Base, Tex.
NITROGEN AND ELECTROLYTE EXCRETION OF RATS CHRONICALLY EXPOSED TO ADVERSE ENVIRONMENTS, by R. B. Mefferd and H. B. Hale, May 1957. 15 p. AF SAM 57-66.
Order from LC mi $2.40, ph $3.30 PB 130056

School of Aviation Medicine, Randolph Air Force Base, Tex.
OBSERVATIONS ON CYSTINE DEGRADATION AND BACTERIOTOXICITY OF PEPTONES, by Richard W. Traxler, Charles E. Lankford. Feb 1957. 7 p. AF SAM 57-48.
Order from LC mi $1.80, ph $1.80 PB 127939

School of Aviation Medicine, Randolph Air Force Base, Tex.
A TITRIMETRIC METHOD FOR THE DETERMINATION OF BLOOD AND PLASMA BICARBONATE AND BUFFER CAPACITY, by James P. Ellis, Jr. and Rodney B. Harvey, Dec 1956. 6 p. AF SAM 56-130. AD-132 570.
Order from LC mi $1.80, ph $1.80 PB 128485

Standford U. School of Medicine, Calif.
SELECTED PROBLEMS IN MOLECULAR BIOLOGY, by George A. Feigen, 1 Oct 1956. 99 p. Contract Nonr 225(22).
Order from LC mi $5.40, ph $15.30 PB 128378

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
A MODIFICATION OF TECHNICS FOR ASSAY OF ANTIDIURETIC SUBSTANCE IN URINE, by Neville P. Clarke, George I. Zuidema, et al. Oct 1956. 11 p. WADC TR-56-561. AD-110505.
Order from LC mi $2.40, ph $3.30 PB 129637

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
THE ROLE OF CARBON DIOXIDE IN ALTITUDE TOLERANCE, by F. G. Hall, Mar 1953. 34 p. WADC TR 53-57.
AD-23807.
Order from LC mi $3.00, ph $6.30 PB 133674

Botany

Florida University, Gainesville.
PRODUCTIVITY OF FLORIDA SPRINGS, by J. L. Yount and H. T. Odum, Jan 1, to Dec 31, 1955. 62 p. Contr. Nonr 580 (02).
Order from LC mi $3.90, ph $10.80 PB 127189

Third Annual Report to Biology Branch, ONR NR 163-106.

Naval Research Lab., Washington, D. C.
VOLATILE COMPOUNDS AS FUNGICIDES, by Walter L. Clark and John M. Leonard, July 1947. 31 p. NRL C-3114.
Order from LC mi $3.00, ph $6.30 PB 129158

Syracuse U., N. Y.
NUTRITIVE VALVE OF THE WOOD-ROTTING FUNGI AND THEIR SYNTHETIC PRODUCTS, by

M. W. Jennison, 1 Jan to 31 Dec 1956. 3 p. TR-6; Contr. Nonr-669(06).
AD-132099.
Order from LC mi $1.80, ph $1.80 PB 130564

Yale University, New Haven, Conn.
RESEARCH IN MARINE FUNGI, by Helen S. Vishniac, S. E. Mills, etc., 31 Aug 1956. 5 p. Contr. Nonr 609(07).
Order from LC mi $1.80, ph $1.80 PB 127865

General Biology

Control Systems Lab., U. of Illinois, Urbana.
INFORMATION THEORY IN BIOLOGY, by Henry Quastler and Leroy Augenstine, 1953. 279 p. Contr. DA-11-022-ord-721.
Order from LC mi $11.10, ph $42.60 PB 130742

Section 1. Definition and Measurement of "Information"
2a. Fundamental Biological Units: Structural Analysis.
2b. Fundamental Biological Units: Functional Analysis.
3. Bio-systems.

Naval Civil Engineering Research and Evaluation Lab., Port Hueneme, Calif.
HARBOR TESTS OF MARINE BORER INHIBITORS, by, H. Hochman and T. Roe, Jr., 24 July 1956. 6 p. NCEREL TN-N-271.
Order from LC mi $1.80, ph $1.80 PB 128725

Rhode Island U., Kingston.
BIOLOGICAL PRODUCTIVITY PROJECT, by David M. Pratt, Jan 1957. 4 p. NML 57-1.
Order from LC mi $1.80, ph $1.80 PB 130568

Stanford U., California.
SELECTED PROBLEMS IN MOLECULAR BIOLOGY, by George A. Feigen, 1 Oct 1956. 13 p. Contr. Nonr. 22522.
AD-107357.
Order from LC mi $2.40, ph $3.30 PB 128497

Contents:
Effects of ionic permutation on the contractility of the ventricle strip and on the potassium content of the perfused rat heart, by G. Bonar Sutherland and George A. Feigen.
Variables affecting the rate of decrement and their relation to the carbohydrate metabolism of the driven rat ventricle, by G. Bonar Sutherland and George A. Feigen.
Differential action of ammonium chloride on the response of the sensitized gut to ovalbumin, serotonin, and histamine, by G. A. Feigen and Christen B. Nielsen.

Medical Specialties and Equipment

School of Aviation Medicine, Randolph Air Force Base, Tex.
DEVELOPMENT OF LIGHTWEIGHT LEGS FOR LITTERS, PART I, DEVELOPMENT OF BACK-REST FOR LITTERS, PART II, by C. F. Schuessler, Nov 1948. 13 p. AF SAM Proj. 21-02-016-E. AF SAM Proj. 21-02-016-M.
Order from LC mi $2.40, ph $3.30 PB 130982

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE PROBLEM OF MEDICAL CARE AND HOSPITALIZATION UNDER AIR ATTACK, by K. R. Reissman, M.D. Sep 1948. 12 p. graphs, tables.
Order from LC mi $2.40, ph $3.30 PB 130973

Incidence of Air-Raid Casualties in Berlin, 1943-1944.

Microbiology

Delaware U., Newark.
STUDIES ON THE ENERGETICS OF CILIATED CELLS, by R. R. Ronkin, 1 Feb 1957. 6 p. Contr. Nonr-1506(00).
Order from LC mi $1.80, ph $1.80 PB 132490

Annual Progress Report-UD-DX-2(1956). Project NR 164-280/7-18-55. (R and L).

Kansas U., Lawrence.
A STUDY OF METHODS FOR CHEMICAL FRACTIONATION OF VIRUSES, by T. G. Metcalf and W. J. Hausler, Jr., Dec 31, 1956. 29 p.
Order from LC mi $2.70, ph $4.80 PB 132343

Final Report.

Maryland U., College Park, Md.
STUDIES ON THE SYSTEMATICS AND ECOLOGY OF LAELAPTID RODENT ECTOPARASITES IN EGYPT, WITH OBSERVATIONS ON THE EPIDEMIOLOGY OF HAEMATOGOAN JACULI BOLFOUR, by C. E. Yunker, Dec 31, 1956. 8 p. Contr. Nonr-1809 (00).
Order from LC mi $1.80, ph $1.80 PB 130345

Miami University, Coral Gables, Fla.
MARINE BORER INVESTIGATIONS, by F. G. Walton Smith, Dec 1956. 32 p. Contr. NOy 81879.
Order from LC mi $3.00, ph $3.60 PB 127286

Northern Utilization Research Branch, Dept. of Agriculture, Peoria, Ill.
DIFFERENTIATION OF MICRO-ORGANISMS BY INFRARED SPECTRA. FINAL REPORT PREPARED FOR BIOLOGICAL DEPT., ARMY CHEMICAL CORPS, CAMP DETRICK, MARYLAND, submitted by F. R. Senti, E. H. Melvin, etc. July 18, 1956. 189 p. Contracts CD 3-119 and CD 4-400.
Order from LC mi $8.40, ph $28.80 PB 128529

Quatermaster Food and Container Inst. for the Armed Forces, Chicago, Ill.
EFFECT OF IRRADATION ON CLOSTRIDIUM BOTULINUM TOXIN SUBJECTED TO ULTRACENTRIFUGATION, by G. M. Dack, 1 Apr 1954 to 30 Sept 1956. 19 p. 5505, Rept. 7.
Order from LC mi $2.40, ph $3.30 PB 127305

School of Aviation Medicine, Randolph Air Force Base, Tex.
A BACTERIOTOXIC SUBSTANCE IN AUTOCLAVED CULTURE MEDIA CONTAINING GLUCOSE AND PHOSPHATE, by Richard A. Finkelstein, Ph.D. and Charles E. Lankford, Ph.D. Dec 1956. 9 p. AF SAM 57-17.
Order from LC mi $1.80, ph $1.80 PB 128466

School of Aviation Medicine, Randolph Air Force Base, Tex.
EVALUATION OF A RAPID (HEMOGLOBIN REDUCTION) METHOD FOR DETERMINING ANTIBIOTIC SUSCEPTIBILITY OF MICROORGANISMS, by R. B. Mitchell and J. A. Bass, Dec 1956. 30 p. AF SAM 57-5 to 57-10.
Order from LC mi $2.70, ph $4.80 PB 128454

Contents:
57-5-Preliminary evaluation using stock organism.
57-6-Modifications in technic.
57-7-Application to chemical specimens from pyogenic, gastrointestinal and misc. infections processes.
57-8-Tube dilution determination in instances of disagreements between the rapid and standard disc. methods.
57-9-Application to chemical specimens from urinary tract infection.
57-10-Application to chemical specimens from ophthalmic infections.

School of Aviation Medicine, Randolph Air Force Base, Tex.
NEW ENRICHMENT AND PLATING MEDIA FOR THE ISOLATION OF SHIGELLA AND SALMONELLA ORGANISMS FROM STOOL SPECIMENS, by A. A. Hajna and S. R. Damon, Sept 1956. 8 p. AF SAM 56-128.
Order from LC mi $1.80, ph $1.80 PB 127291

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE USE OF PHOSPHORUS—, 32 TO EVALUATE PHOSPHORUS REQUIREMENTS OF LACTOBACILLUS, by Norman O. Harris, Apr 1957. 7 p. AF SAM 57-85.
Order from LC mi $1.80, ph $1.80 PB 132262

Scripps Institution of Oceanography, U., of California, La Jolla.
MARINE MICROBIOLOGY SEMI-ANNUAL PROGRESS REPORT No. 10, 1 July to 31 December 1957. by Claude E. ZoBell, 5 Jan 1956. 10 p. Contr. N6onr-275 (18). SIO Reference 56-1.
Order from LC mi $1.80, ph $1.80 PB 127188

Washington State Coll., Pullman.
ENZYMATIC STUDIES ON THERMOPHILIC BACTERIA, by L. Leon Campbell, Jr., and Gilbert B. Manning, Feb 1 to Dec 31, 1956. 30 p. Contr. Nonr-1856(00).
Order from LC mi $2.70, ph $4.80 PB 130593

Washington State Coll., Pullman.
PURIFICATION AND PROPERTIES OF A PROTEOLYTIC ENZYME FROM BACILLUS STEAROHTERMOPHILUS, by R. T. O. Brien and L. Leon Campbell, Jr., 1956. 26 p.
Order from LC mi $2.70, ph $4.80 PB 132344

Pathology

Brooke Army Medical Center, Fort Sam Houston, Tex.
A TYPICAL HEAT STROKE WITH HYPERNATREMIA, ACUTE RENAL FAILURE, AND FULMINATING POTASSIUM INTOXICATION, by C. R. Baxter and Paul E. Teschan, Mar 1958. 18 p. MEDEW RS 3-58.
Order from LC mi $2.40, ph $3.30 PB 133893

Chemical Warfare Labs., Army Chemical Center, Md.
COMPARISON OF PERMANENT AND TEMPORARY CAVITIES PRODUCED BY HIGH-VELOCITY RIFLE BULLETS IN SOFT TISSUE, by Max Krauss and John F. Miller, July 29, 1957. 68 p. CWLR 2144.
Order from LC mi $3.90, ph $10.80 PB 130012

Cornell U., Ithaca, N. Y.
DIETARY AND OTHER FACTORS CONCERNED IN MOUTH AND TOOTH DETERIORATION, by C. M. McCoy, 1 Jan 1957. 6 p. Contr. N6ori-91.
Order from LC mi $1.80, ph $1.80 PB 130922

Pennsylvania U., Phila.
PHYSIOPATHOLOGICAL STUDY OF IMMERSION FOOT (PROLONGED EXPOSURE OF A LIMB TO COLD SHORT OF FREEZING), by Hugh Montgomery, 15 Dec 1956. 5 p. Contr.Nonr-551(03). Supplement.
Order from LC mi $1.80, ph $1.80 PB 130339

School of Aviation Medicine, Randolph Air Force Base, Tex.
ANTITUBERCULOSIS THERAPY IN MACACA MULATTA MONKEYS, by Benjamin D. Fremming and Richard E. Benson, Dec 1956. 6 p. AF SAM 57-23.
AD-129 920.
Order from LC mi $1.80, ph $1.80 PB 128489

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE CEREBRAL SURVIVAL TIME OF RABBITS IN ANOXIA I. THE DEVELOPMENT AND EVALUATION OF A STANDARD PROCEDURE, by W. Noell and H. I. Chinn, Nov 1948. 18 p. AF SAM Proj. 21-02-071, Report No. 1.
Order from LC mi $2.40, ph $3.30 PB 132223

School of Aviation Medicine, Randolph Air Force Base, Tex.
EFFECT OF A CHRONIC EXPOSURE TO FAST NEUTRONS ON THE DEVELOPMENT OF TUMORS IN THE RAT, by Quentin L. Hartwig, July 1957. 6 p. AF SAM 57-126.
Order from LC mi $1.80, ph $1.80 PB 132178

School of Aviation Medicine, Randolph Air Force Base, Tex.
EFFECT OF MALONATE ON SELECTED BODY DEFENSE SYSTEMS, by L. Joe Berry, Ph.D., and Jane E. Derbyshire, Dec 1956. 5 p. AF SAM 57-21.
Order from LC mi $1.80, ph $1.80 PB 128472

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE EFFECT OF POSTMORTEM AUTOLYSIS ON CERTAIN HISTO-CHEMICAL REACTIONS, by Sidney P. Kent, Mar 1957. 5 p. AF SAM 57-71.
AD-132 263.
Order from LC mi $1.80, ph $1.80 PB 127623

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE EFFECT OF VARIOUS RESPIRATORY STIMULANTS ON DOGS DEPRESSED BY ANOXIA, by F. E. Snapp and H. F. Adler, Nov 1948. 9 p. Proj. No. 21-02-034, Report No. 1.
Order from LC mi $1.80, ph $1.80 PB 130987

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE EFFECTS OF BENADRYL AND DRAMAMINE ON PERCEPTUAL-MOTOR SKILL, by R. G. Pearson, Jan 1957. 4 p. AF SAM R 57-50.
Order from LC mi $1.80, ph $1.80 PB 127419

School of Aviation Medicine, Randolph Air Force Base, Tex.
EFFECTS OF HOUSING ON INCIDENCE AND SPREAD OF COMMON RESPIRATORY DISEASES AMONG AIR FORCE RECRUITS, by S. H. Bernstein, June 1957. 11 p. AF SAM 57-81.
Order from LC mi $2.40, ph $3.30 PB 130075

School of Aviation Medicine, Randolph Air Force Base, Tex.
EFFECTS OF OXYGEN AND DEXTROAMPHETAMINE ON WORK DECREMENT, by G. T. Hauty and R. B. Payne, Jan 1957. 11 p. AF SAM 57-127.
Order from LC mi $2.40, ph $3.30 PB 130052

School of Aviation Medicine, Randolph Air Force Base, Tex.
EVALUATION OF FACTORS WHICH MAY BE OF IMPORTANCE IN THE PRODUCTION OF EXTERNAL EAR INFECTIONS, by B. H. Senturia and F. M. Liebmaun, Oct 1956. 26 p. Rept. 56-135.
Order from LC mi $2.70, ph $4.80 PB 128464

School of Aviation Medicine, Randolph Air Force Base, Tex.
EXTENSIVE VENOUS OBSTRUCTION OF THE LABYRINTH, VESTIBULAR CHANGES, by R. Kimura and H. B. Perlman, Oct 1956. 16 p. AF SAM 56-131.
Order from LC mi $2.40, ph $3.30 PB 128455

School of Aviation Medicine, Randolph Air Force Base, Tex.
HEALING OF INCISED WOUNDS AT HIGH ALTITUDES, by Pablo Mori Chavez, Nov 1956. 10 p. AF SAM 56-102.
Order from LC mi $1.80, ph $1.80 PB 128459

School of Aviation Medicine, Randolph Air Force Base, Tex.
HYPERLIPORPROTEINEMIA AND CHOLESTEROL DEPOSITION AT THE ARTERIES OF I^{131}-TREATED DOGS, by Lawrence J. Milch and Alfred A. Renzi, et al, Aug 1957. 7 p. AF SAM 57-148.
Order from LC mi $1.80, ph $1.80 PB 133711

School of Aviation Medicine, Randolph Air Force Base, Tex.
HYPOTHERMIC MYOCARDIAL OXYGENATION, by J. R. Jude and R. Folse, May 1957. 13 p. AF SAM 57-13.
Order from LC mi $2.40, ph $3.30 PB 130072

School of Aviation Medicine, Randolph Air Force Base, Tex.
LETHAL EFFECTS OF GAMMA RADIATION ON NEUROSPORA CONIDIA, by Robert D. Gafford, July 1957. 21 p. AF SAM 57-61.
Order from LC mi $2.70, ph $4.80 PB 132259

School of Aviation Medicine, Randolph Air Force Base, Tex.
METABOLIC PATTERNS OF SELECTED MEMBERS OF THE GENUS LACTOBACILLUS-POTASSIUM UPTAKE STUDIES, by Ira L. Shannon and Norman O. Harris, Jan 1957. 7 p. AF SAM 57-18.
Order from LC mi $1.80, ph $1.80 PB 128450

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE PLASMA ERYTHROPOIETIC FACTOR IN THE POLYCYTHEMIA OF HIGH ALTITUDES, by Cesar F. Merino, Nov 1956. 6 p. AF SAM 56-103.
Order from LC mi $1.80, ph $1.80 PB 128467

School of Aviation Medicine, Randolph Air Force Base, Tex.
POSSIBLE ROLE OF PLASMA ULTRAFILTERABLE CALCIUM CONCENTRATION IN POSTHYPERCAPNIC VENTRICULAR FIBRILLATION, by E. B. Brown, Jr., and A. S. Prasad, July 1957. 6 p. AF SAM 57-109.
Order from LC mi $1.80, ph $1.80 PB 132173

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE PREVENTION OF SECONDARY INFECTION DUE TO PSEUDOMONAS AERUGINOSA IN FROSTBITTEN TISSUE, by Joseph Picholka, M.D., June 1949. 5 p. AF SAM Proj. 21-02-079-Report No. 2.
Order from LC mi $1.80, ph $1.80 PB 132221

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE ROLE OF HYPERPOTASSEMIA IN THE PRODUCTION OF VENTRICULAR FIBRILLATION FOLLOWING HYPERCAPNIA, by E. B. Brown, Jr. May 1956. 6 p. AF SAM 56-20.
Order from LC mi $1.80, ph $1.80 PB 127302

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE ROLE OF SPLANCHNIC AND LUMBAR SYMPATHETIC NERVES IN THE PHYSIOLOGIC RESPONSE TO FEVER AND HYPOXIA IN DOGS EITHER ANESTHETIZED OR UNANESTHETIZED, by W. G. Kubicek, June 1957. 59 p. AF SAM 56-66.
Order from LC mi $3.60, ph $9.30 PB 132256

School of Aviation Medicine, Randolph Air Force Base, Tex.
SERUM AGAR METHODS AND VARIABLES, by William G. Glenn, Nov 1956. 15 p. AF SAM 56-116.
Order from LC mi $2.40, ph $3.30 PB 128457

School of Aviation Medicine, Randolph Air Force Base, Tex.
A SIMPLE QUANTITATIVE DETERMINATION OF THE ANAPHYLACTIC REACTION IN MICE, by W. E. Harris and J. D. Fulton, Apr 1957. 4 p. AF SAM 57-76.
Order from LC mi $1.80, ph $1.80 PB 130058

School of Aviation Medicine, Randolph Air Force Base, Tex.
STUDIES IN AEROEMBOLISM, by John P. Marbarger, William E. Kemp, et al. Feb 1957. 12 p. AF SAM 57-44.
AD-132265.
Order from LC mi $2.40, ph $3.30 PB 127626

School of Aviation Medicine, Randolph Air Force Base, Tex.
A STUDY OF THE INCIDENCE OF PRIMARY ATYPICAL PNEUMONIA FOR A PERIOD OF ONE YEAR AT THE INDOCTRINATION CENTER, LACKLAND AIR FORCE BASE, by C. H. Morhouse, June 1949. 11 p. AF SAM Proj. 21-02-122.
Order from LC mi $2.40, ph $3.30 PB 132226

Pharmacology and Toxicology

Chemical Warfare Labs., Army Chemical Center, Md.
THE ACUTE TOXICITY OF VAPORS FROM A RED FUMING NITRIC ACID HYDROFLUORIC ACID MIXTURE, by Emil A. Pfitzer and Earle A. Greene, 23 July 1956. 10 p. CWLR-2043.
Order from LC mi $1.80, ph $1.80 PB 128858

Chemical Warfare Labs., Army Chemical Center, Md.
FIELD PROCEDURES FOR THE DETERMINATION OF BLOOD CHOLINESTERASE LEVELS. II VISUAL METHODS FOR ESTIMATION OF WHOLE BLOOD, RED BLOOD CELL, AND PLASMA CHOLINESTERASE, by Joseph H. Fleisher and G. Stanley Woodson, June 1956. 28 p. CWLR 2044.
Order from LC mi $2.70, ph $4.80 PB 129369

Chemical Warfare Labs., Army Chemical Center, Md.
PULMONARY EFFECTS OF SARIN, by R. P. Johnson, Oct 1957. 17 p. CWLR-2186.
Order from LC mi $2.40, ph $3.30 PB 133558

Chemical Warfare Labs., Army Chemical Center, Md.
A STUDY OF END-PLATE POTENTIALS OBSERVATIONS ON THE ACTIONS OF CERTAIN OXIMES, by P. F. Wagley, 12 July 1957. 16 p. CWLR-2145.
Order from LC mi $2.40, ph $3.30 PB 129514

Chemical Warfare Labs., Army Chemical Center, Md.
THE SUBACUTE AND CHRONIC TOXICITY OF AN ANILINE-FURFURYL ALCOHOL HYDRAZINE VAPOR MIXTURE, by William E. Rinehart and Martin A. Ross, 20 May 1957. 14 p. CWLR-2124.
Order from LC mi $2.40, ph $3.30 PB 128856

Industrial Test Lab., Philadelphia Naval Shipyard, Penn.
EVALUATION OF TOXICITY (HEAVY METALS) REQUIREMENT FOR MACHINE DISHWASHING COMPOUND, by M. Haftel and W. L. Reichel, Mar 1957, 11 p.
Order from LC mi $2.40, ph $3.30 PB 133743

Institute of Medical Research, Huntington Memorial Hospital, Pasadena, Calif.
PROPERTIES OF THE VENOM OF THE STINGRAY, by Findlay E. Russell, M. D., 1 Nov 1956. 20 p. Contr. Nonr 1708(00). Final Report.
Order from LC mi $2.40, ph $3.30 PB 129883

Louisiana State U., New Orleans.
PROGRESS REPORT ON CONTRACT NO. DA-18-108-CML-5473, by Charles S. Petty, 25 Feb 1957. 31 p.
Order from LC mi $3.00, ph $6.30 PB 130729

Public Health Service, Cincinnati, Ohio.
TOXICOLOGIC STUDIES OF TWO ALKYL DIAMINES AND AN ACETYLENIC DERIVATIVE, by Herbert E. Stokinger and William T. Rockhold. Rept. on Contract AF 33(616) 54-9. Apr 1955. 24 p. WADC TR-55-250;
AD-97535.
Order from LC mi $2.70, ph $4.80 PB 130357

School of Aviation Medicine, Randolph Air Force Base, Tex.
ANAPHYLACTIC SHOCK IN THE MOUSE PASSIVELY SENSITIZED WITH HOMOLOGOUS ANTISERUM, by Perry Morgan, Noble P. Sherwood, et al. Feb 1957. 5 p. AF SAM 57-60.
AD-132564.
Order from LC mi $1.80, ph $1.80 PB 127940

School of Aviation Medicine, Randolph Air Force Base, Tex.
INFLUENCE OF DIAMOX ON POSTHYPERCAPNIC SEQUELAE, by Royal Hayden and E. B. Brown, Jr., Mar 1957. 4 p. Rept. 57-38.
AD-136 183.
Order from LC mi $1.80, ph $1.80 PB 129392

School of Aviation Medicine, Randolph Air Force Base, Tex.
TOXICITY OF ANTI-MALARIAL DRUGS OF FLYING PERSONNEL, by H. I. Chinn and C. J. Ferber, Sept 1948. 12 p. AF SAM Proj.-21-02-062, Report No. 1.
Order from LC mi $2.40, ph $3.30 PB 130989

Radiobiology

Aviation Medical Acceleration Lab., Naval Air Development Center, Johnsville, Pa.
RESPONSES OF THE RAT TO THERMAL RADIATION, by James D. Hardy and Alice M. Stoll, Oct 30, 1956. 22 p. Proj. NM 001 103 301, Reptill; NACD MA 5613.
Order from LC mi $2.70, ph $4.80 PB 128145

Naval Research Lab., Washington, D. C.
DOSIMETRY OF X-RAYS AND GAMMA RAYS, by J. H. Schulman, 26 Sept 1950. 12 p. NRL 3736.
Order from LC mi $2.40, ph $3.30 PB 129135

Northwestern U., Chicago, Ill.
EFFECT OF IRRADIATION ON P^{32} UPTAKE BY BONE MARROW AND SPLEEN, by W. A. Ramboch Apr 1952. 7 p. AF SAM Proj.-21-23-029 Report No. 1, Contr. AF 33 (038)-17731.
Order from LC mi $1.80, ph $1.80 PB 132231

School of Aviation Medicine, Randolph Air Force Base, Tex.
BIPHASIC HYPERFERREMIA INDUCED IN RATS BY X-IRRADIATION, by G. S. Melville, Jr. and F. P. Conte, Mar 1957. 4 p. AF SAM 57-74.
AD-132 264.
Order from LC mi $1.80, ph $1.80 PB 127622

School of Aviation Medicine, Randolph Air Force Base, Tex.
CHANGE IN PLASMA CLEARANCE AND RED CELL UPTAKE OF RADIOACTIVE IRON IN PATIENTS FOLLOWING TOTAL-BODY X-RADIATION, by W. K. Sinclair, June 1957. 7 p. AF SAM 57-116.
Order from LC mi $1.80, ph $1.80 PB 132267

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE COMBINED EFFECTS OF IONIZING RADIATION AND LOW TEMPERATURE ON THE METABOLISM, LONGEVITY, AND SOFT TISSUES OF THE WHITE RAT, by L. D. Carlson and W. J. Scheyer, Mar 1957. 17 p. AF SAM 57-78-and 57-79.
AD-136285.
Order from LC mi $2.40, ph $3.30 PB 129389

Bound Together:
57-78 Part I-Metabolism and Longevity.
57-79 Part II-Histologic changes.

School of Aviation Medicine, Randolph Air Force Base, Tex.
COMPARATIVE ERYTHROPOIETIC INCORPORATION OF FERRIC AND FERROUS PREPARATIONS OF IRON 59 BY THE MACACA MULATTA MONKEY, by Quentin L. Hartwig and Thomas P. Leffingwell, Aug 1957. 5 p. AF SAM 58-5.
Order from LC mi $1.80, ph $1.80 PB 132514

School of Aviation Medicine, Randolph Air Force Base, Tex.
EFFECT OF INTRATRACHEAL INSTILLATION OF INFECTIOUS AND NONINFECTIOUS MATERIAL INTO THE LUNG OF THE X-IRRADIATED RAT, by E. H. Perkins and S. Marcus, Apr 1957. 8 p. AF SAM 57-32.
Order from LC mi $1.80, ph $1.80 PB 130064

School of Aviation Medicine, Randolph Air Force Base, Tex.
EFFECT OF RADIATION ON CREATIVE SYNTHESIS IN THE DOG, by Donald R. Anderson, July 1957. 8 p. Rept. 57-119.
Order from LC mi $1.80, ph $1.80 PB 132176

School of Aviation Medicine, Randolph Air Force Base, Tex.
EFFECT OF PRE-RADIATION IMMUNIZATION ON RESISTANCE TO AEROSOL-INDUCED INFECTION IN X-IRRADIATED MICE, by Eugene H. Perkins, Stanley Marcus. Mar 1957. 7 p. AF SAM 57-33.
AD-132 262.
Order from LC mi $1.80, ph $1.80 PB 127625

School of Aviation Medicine, Randolph Air Force Base, Tex.
EFFECT OF X-RADIATION ON SUSCEPTIBILITY TO INFECTION FOLLOWING ORAL CHALLENGE IN IMMUNIZED AND NONIMMUNIZED MICE, by Eugene H. Perkins, and Stanley Marcus, Feb 1957. 7 p. AF SAM 57-47.
AD-132 266.
Order from LC mi $1.80, ph $1.80 PB 127624

School of Aviation Medicine, Randolph Air Force Base, Tex.
EFFECTS OF IONIZING RADIATION ON ANAPHYLACTIC SHOCK IN THE MOUSE-SINGLE WHOLE-BODY X-IRRADIATION OF 300 ROENTGENS, by Perry Morgan, Ph.D., and Noble P. Sherwood M.D., Ph.D., et al. Feb 1957. 19 p. AF SAM 57-34.
AD-132568.
Order from LC mi 2.40, ph $3.30 PB 127937

School of Aviation Medicine, Randolph Air Force Base, Tex.
EFFECTS OF SINGLE AND OF SPACED, MULTIPLE DOSES OF COBALT-60 GAMMA AND FISSION NEUTRON RADIATION ON THE INCORPORATION OF IRON-59 INTO THE RAT ERYTHROPOIETIC SYSTEM, by W. A. Rambach and J. A. D. Cooper, Sept 1957. AF SAM 58-1.
Order from LC mi $2.40, ph $3.30 PB 132778

School of Aviation Medicine, Randolph Air Force Base, Tex.
FAILURE OF BETA-AMINOETHYLISOTHIOURONIUM DIBROMIDE TO PROTECT AGAINST LETHAL TOTAL BODY X-IRRADIATION IN DOGS, by R. E. Benson and J. W. Howland, Feb 1957. 6 p. AF SAM 57-42.
Order from LC mi $1.80, ph $1.80 PB 130066

School of Aviation Medicine, Randolph Air Force Base, Tex.
LOCALIZATION OF INTRAVENOUSLY INJECTED THORIUM DIOXIDE IN THE SPLEENS OF NORMAL AND X-IRRADIATED MICE, by K. K. Gyi and S. Marcus, Apr 1957. 9 p. AF SAM 57-41.
Order from LC mi $1.80, ph $1.80 PB 130065

School of Aviation Medicine, Randolph Air Force Base, Tex.
THE LOW DOSE Co^{60} FACILITY OF THE RADIOBIOLOGICAL LABORATORY, by Sanford C. Sigoloff, Henry M. Borella, et al, Mar 1957. 9 p. AF SAM 57-40.
AD-132569.
Order from LC mi $1.80, ph $1.80 PB 127938

School of Aviation Medicine, Randolph Air Force Base, Tex.
A METHOD FOR IMPROVING THE PRECISION OF INVERSE SQUARE MEASUREMENTS, by M. Slater and G. S. Melville, Jr., Apr 1957. 4 p. AF SAM 57-57.
Order from LC mi $1.80, ph $1.80 PB 130086

School of Aviation Medicine, Randolph Air Force Base, Tex.
NEOPLASMS IN MONKEYS (MACACA MULATTA): SPONTANEOUS AND IRRADIATION INDUCED, by S. P. Kent and J. E. Pickering, June 1957. 14 p. AF SAM 57-110.
Order from LC mi $2.40, ph $3.30 PB 132174

School of Aviation Medicine, Randolph Air Force Base, Tex.
OBSERVATIONS ON TISSUES FROM THE MONKEY HEAD IN CELL CULTURES WITH SPECIAL REFERENCE TO RADIATION EFFECTS, by C. M. Pomerat, Ph.D., and W. Hild, M.D., Dec 1956. 32 p. AF SAM 57-15.
Order from LC mi $3.00, ph $6.30 PB 128478

School of Aviation Medicine, Randolph Air Force Base, Tex.
PRELIMINARY STUDY OF THE EFFECTS OF X-IRRADIATION ON THE ANTIBODY-COMBINING CAPACITY OF HUMAN PROTEINS, by William G. Glenn and Iowa W. Marable, Dec 1957. 4 p. AF SAM 58-44.
Order from LC mi $1.80, ph $1.80 PB 133713

School of Aviation Medicine, Randolph Air Force Base, Tex.
RADIATION CREATINURIA IN THE RAT, by C. M. Williams and G. M. Krise, May 1957. 15 p. AF SAM 57-84.
Order from LC mi $2.40, ph $3.30 PB 130076

School of Aviation Medicine, Randolph Air Force Base, Tex.
SYSTEMIC AND CLINICAL EFFECTS INDUCED IN 263 CANCER PATIENTS BY WHOLE-BODY X-IRRADIATION WITH NOMINAL AIR DOSES OF 15 TO 20 R, by L. S. Miller and G. H. Fletcher, May 1957. 22 p. AF SAM 57-92.
Order from LC mi $2.70, ph $4.80 PB 130078

School of Aviation Medicine, Randolph Air Force Base, Tex.
TECHNIC AND DOSIMETRY FOR WHOLE-BODY X-IRRADIATION OF PATIENTS, by W. K. Sinclair and A. Cole, Mar 1957. 11 p. AF SAM 57-70.
Order from LC mi $2.40, ph $3.30 PB 130057

School of Aviation Medicine, Randolph Air Force Base, Tex.
URINARY COPROPORPHYRIN EXCRETION OF RATS FOLLOWING GAMMA IRRADIATION, by Elwood H. LaBrosse and Joe E. Smith, Feb 1956. 7 p. AF SAM 55-135.
Order from LC mi $1.80, ph $1.80 PB 127292

Surgery

PLASTIC TEXTILE ARTERIAL PROSTHESES, by Arthur H. Blakemore, 28 Dec 1956. 12 p. Contr. Nonr-266-31.
Order from LC mi $2.40, ph $3.30 PB 130609

School of Aviation Medicine, Randolph Air Force Base, Tex.
PHYSIOLOGIC AND MORPHOLOGIC EFFECTS OF LUNG RESECTION IN DOGS, by W. H. Massion and M. T. Lategola, Apr 1957. 9 p. AF SAM 57-65.
Order from LC mi $1.80, ph $1.80 PB 130085

School of Aviation Medicine, Randolph Air Force Base, Tex.
SOME THEORETICAL CONSIDERATIONS OF THE BLALOCK-TAUSSIG OPERATION, by A. B. Otis, Apr 1956. 5 p. AF SAM 56-29.
Order from LC mi $1.80, ph $1.80 PB 127301

CHEMISTRY

Analytical Chemistry

Aeronautical Materials Lab., Naval Air Experimental Station, Philadelphia, Pa.
ELECTRON MICROSCOPE INVESTIGATION OF CHROMIC ACID ANODIZING ON ALCLAD SURFACES-PARTIAL REPORT, by T. A. Renshaw, 4 Dec 1956. 33 p. NAMAML-AE-1012.
Order from LC mi $3.00, ph $6.30 PB 129402

Antioch College, Yellow Springs, Ohio.
STUDIES OF THE DETERMINATION OF GERMANIUM BY THE HETEROPOLY BLUE METHOD, by Elwood R. Shaw, 15 Apr 1957. 17 p. AFOSR-TN-57-159; Contract AF18(600)-1490.
Order from LC mi $2.40, ph $3.30 PB 127584

Boston U., Mass.
MEASUREMENT OF SOME THERMODYNAMIC FUNCTIONS OF ALKALI METAL BOROHYDRIDES IN LIQUID AMMONIA, by R. V. Coulter and J. B. Sinclair, 7 Jan 1957. 10 p. CCC-1024-TR-218.
Order from LC mi $1.80, ph $1.80 PB 129608

Brigham Young U., Provo, Utah.
THE PREPARATION AND CATALYTIC PROPERTIES OF RHENIUM BLACKS OBTAINED BY THE REDUCTION OF RHENIUM (VII) IN ANHYDROUS AMMONIA AND AMINES WITH ALKALI METALS, by David W. Seegmiller, 16 Mar 1958. 138 p. AF OSR TN 58-108; Contr. AF 18(600)-1164.
AD-50217.
Order from LC mi $6.90, ph $21.30 PB 133793

Callery Chemical Co., Pa.
PREPARATION AND ANALYSIS OF CALIBRATION GASES FOR BORANE MONITORING DEVICES, by L. J. Kuhns and R. H. Forsyth, 5 Dec 1955. 14 p. CCC-1024-TR-162.
Order from LC mi $2.40, ph $3.30 PB 129413

Chemical Warfare Labs., Army Chemical Center, Md.
METHODS OF MICROANALYSIS II THE DUMAS NITROGEN DETERMINATION: AN IMPROVED FILLING, by J. M. Corliss and Cecil A. Rush, 21 Aug 1957. 21 p. CWLR 2158.
Order from LC mi $2.70, ph $4.80 PB 130968

Chicago U., Ill.
CHEMICAL IDENTIFICATION OF SUBMICRON PARTICLES. FINAL REPORT OF RESEARCH, by Barbara J. Tufts, and Horace R. Byers, 1 Sept 1956. 3 p. Contr. N6ori-20, T. O. 20.
Order from LC mi $1.80, ph $1.80 PB 128543

Bureau of Mines, Washington, D. C.
X-RAY EMISSION SPECTROGRAPHIC ANALYSIS OF BASTNAESITE RARE EARTHS, by F. W. Lytle et al. Dec 1957. 18 p. RI-5378.
Order from LC mi $2.40, ph $3.30 PB 133763

Fairchild Engine and Airplane Corp., Oak Ridge, Tenn.
TITANIUM, by Doher, 23 Aug 1948. 129 p. NEPA 722-EMR-33.
Order from LC mi $6.30, ph $19.80 PB 130802

Henry Ford Hospital, Detroit, Mich.
DETERMINATION OF SUCCINIC DEHYDROGENASE ACTIVITY, by Thomas P. Singer and Edna B. Kearny, ND, 29 p. Contr. Nonr 1656(00).
Order from LC mi $2.70, ph $4.80 PB 127503

Holloman Air Development Center, Holloman Air Force Base, N. Mex.
DETERMINATION OF OXYGEN PERCENTAGES BY PRESSURIZATION TECHNIQUE, by Jerry L. Johnson, ND. 10 p. HADC TN-57-4.
AD-113034.
Order from LC mi $1.80, ph $1.80 PB 127972

Industrial Test Lab., Philadelphia Naval Shipyard, Pa.
AN IMPROVED PROCEDURE FOR DETERMINING SODIUM SILICOFLUORIDE AND SODIUM ACID FLUORIDE IN LAUNDRY SOUR, by R. Grant Nov 1956. 19 p. ITL 2924.
Order from LC mi $2.40, ph $3.30 PB 133902

Institute for the Study of Metals, U., of Chicago, Ill.
EXPERIMENTAL DETERMINATION OF THE ELECTRICAL RESISTIVITY OF THE LIOUID ALLOYS, Hg-In, Hg-T1, AND Ga-Sn, AND OF LIQUID GALLIUM, by L. G. Schulz and P. Spiegler, Mar 1958. 13 p. AFOSR TN-58-149; Contr. AF 18(600) 1489.
AD-152176.
Order from LC mi $2.40, ph $3.30 PB 133661

Institute of Optics, U., of Rochester, N. Y.
RESISTIVITY OF INTERSTITIALS IN COPPER, by R. J. Potter and D. L. Dexter, June 1957. 22 p. AFOSR TN-57-327, Contract AF18 (600)-688.
AD-132 399.
Order from LC mi $2.70, ph $4.80 PB 128755

Laboratories for Research and Development, Franklin Inst., Philadelphia, Pa.
MAGNETIC EXAMINATION OF THE INITIAL PRECIPITATION IN A GOLDNICKEL ALLOY, by Ami E. Berkowitz and P. J. Flanders, May 1957. 41 p. AFOSR-TN-57-314. Contract AF-49-(638)-159.
AD-132385.
Order from LC mi $3.30, ph $7.80 PB 128754

Metcalf Research Lab., Brown U., Providence, R. I.
THE RATE OF DISSOCIATION OF BROMINE IN SHOCK WAVES, by H. B. Palmer and D. F. Horning 15 Nov 1956. 31 p. Technical Report No. 3, Contr. Nonr 562(06),
Order from LC mi $3.00, ph $6.30 PB 130698

Missouri U., Columbia.
INFRARED ABSORPTION IN THIN FILMS OF BARIUM OXIDE, by Joseph W. Brouillette, Jr., 15 June 1956. 33 p. TR-19; Contr. N7onr-292(05).
Order from LC mi $3.00, ph $6.30 PB 130779

Naval Ordnance Test Station, China Lake, Calif.
ANALYTICAL ASPECTS OF HYDROXYLAMINE IN PROPELLANT CHEMISTRY PART I. SPECTROPHOTOMETRIC DETERMINATION OF TRIACETIN IN ETHYLCELLULOSE INHIBITORS, by William M. Ayers and Gerald C. Whitnack, 7 Jan 1957. 18 p. NOTS-1629; NAVORD 5382, Pt. 1.
Order from LC mi $2.40, ph $3.30 PB 130834

Naval Ordnance Test Station, China Lake, Calif.
ANALYTICAL PROCEDURES FOR 1,1-DIMETHYLHYDRAZINE, by W. R. McBride and H. W. Kruse, 23 May 1956. 21 p. NOTS-1475; NAVORD-5263.
Order from LC mi $2.70, ph $4.80 PB 130795

Naval Research Lab., Washington, D. C.
THE DETERMINATION OF SOME COMMON ALLOYING ELEMENTS IN ALUMINUM AND ITS ALLOYS, by William Zimmerman, III. 30 Sept 1947. 12 p. NRL M-3183.
Order from LC mi $2.40, ph $3.30 PB 129179

North Carolina U., Chapel Hill.
CHELOMETRIC TITRATIONS WITH POTENTIOMETRIC END POINT PART I, DETECTION, by C. N. Reilley and R. W. Schmid, June 1957. 24 p. AF OSR TN57-472, Contr. AF 18 (600)—1160.
AD-136464.
Order from LC mi $2.70, ph $4.80 PB 129938

North Carolina U., Chapel Hill.
DIRECT TITRATION OF CALCIUM IN BLOOD SERUM, by Robert L. Golby, Gary P. Hildebrand, et al. May 1957. 11 p. AF OSR TN 57-471, Contract AF 18(600)—1160.
AD-136363.
Order from LC mi $2.40, ph $3.30 PB 129586

Olin Mathieson Chemical Corp., Niagara Falls, N. Y.
A STUDY OF AMMONIUM PERCHLORATE SPECIFICATION ANALYSIS, by C. Guy and H. Hyer, 20 Jan 1956. 29 p.
Order from LC mi $2.70, ph $4.80 PB 129651

Picatinny Arsenal, Dover, N. J.
FLAME SPECTROPHOTOMETRIC METHOD FOR DETERMINING SODIUM CHLORATE IN POTASSIUM CHLORATE, by Michael Halik and Roscoe Croom, June 1957. 7 p. PATR 2430.
Order from LC mi $1.80, ph $1.80 PB 128977

Samuel Feltman Ammunition Laboratories, Picatinny Arsenal, Dover, N. J.
THE APPLICATION OF NONAQUEOUS TITRIMETRY TO THE DETERMINATION OF POTASSIUM SULFATE IN PROPELLANTS, by Henry L. Herman, Sept 1956. 15 p. PATR 2347.
Order from LC mi $2.40, ph $3.30 PB 129908

Samuel Feltman Ammunition Laboratories, Picatinny Arsenal, Dover, N. J.
DETERMINATION OF FREE METALLIC ALUMIUM IN ALUMINUM POWDER, by Seymour Lader and Milton Roth, Aug 1956. 16 p. PATR 2323.
Order from LC mi $2.40, ph $3.30 PB 127912

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
DETERMINATION OF SURFACE IMPURITY OF POWDERED MAGNESIUM, by Sol Weisberger, Oct 1956. 15 p. PATR 2351.
Order from LC mi $2.40, ph $3.30 PB 130825

School of Aviation Medicine, Randolph Air Force Base, Tex.
PRELIMINARY STUDY OF THE EFFECTS OF X-IRRADIATION ON THE ANTIBODY-COMBINING CAPACITY OF HUMAN PROTEINS, by William G. Glenn and Iowa W. Marable, Dec 1957. 4 p. AF SAM 58-44.
Order from LC mi $1.80, ph $1.80 PB 133713

School of Aviation Medicine, Randolph Air Force Base, Tex.
RADIATION CREATINURIA IN THE RAT, by C. M. Williams and G. M. Krise, May 1957. 15 p. AF SAM 57-84.
Order from LC mi $2.40, ph $3.30 PB 130076

School of Aviation Medicine, Randolph Air Force Base, Tex.
SYSTEMIC AND CLINICAL EFFECTS INDUCED IN 263 CANCER PATIENTS BY WHOLE-BODY X-IRRADIATION WITH NOMINAL AIR DOSES OF 15 TO 20 R, by L. S. Miller and G. H. Fletcher, May 1957. 22 p. AF SAM 57-92.
Order from LC mi $2.70, ph $4.80 PB 130078

School of Aviation Medicine, Randolph Air Force Base, Tex.
TECHNIC AND DOSIMETRY FOR WHOLE-BODY X-IRRADIATION OF PATIENTS, by W. K. Sinclair and A. Cole, Mar 1957. 11 p. AF SAM 57-70.
Order from LC mi $2.40, ph $3.30 PB 130057

School of Aviation Medicine, Randolph Air Force Base, Tex.
URINARY COPROPORPHYRIN EXCRETION OF RATS FOLLOWING GAMMA IRRADIATION, by Elwood H. LaBrosse and Joe E. Smith, Feb 1956. 7 p. AF SAM 55-135.
Order from LC mi $1.80, ph $1.80 PB 127292

Surgery

PLASTIC TEXTILE ARTERIAL PROSTHESES, by Arthur H. Blakemore, 28 Dec 1956. 12 p. Contr. Nonr-266-31.
Order from LC mi $2.40, ph $3.30 PB 130609

School of Aviation Medicine, Randolph Air Force Base, Tex.
PHYSIOLOGIC AND MORPHOLOGIC EFFECTS OF LUNG RESECTION IN DOGS, by W. H. Massion and M. T. Lategola, Apr 1957. 9 p. AF SAM 57-65.
Order from LC mi $1.80, ph $1.80 PB 130085

School of Aviation Medicine, Randolph Air Force Base, Tex.
SOME THEORETICAL CONSIDERATIONS OF THE BLALOCK-TAUSSIG OPERATION, by A. B. Otis, Apr 1956. 5 p. AF SAM 56-29.
Order from LC mi $1.80, ph $1.80 PB 127301

CHEMISTRY

Analytical Chemistry

Aeronautical Materials Lab., Naval Air Experimental Station, Philadelphia, Pa.
ELECTRON MICROSCOPE INVESTIGATION OF CHROMIC ACID ANODIZING ON ALCLAD SURFACES-PARTIAL REPORT, by T. A. Renshaw, 4 Dec 1956. 33 p. NAMAML-AE-1012.
Order from LC mi $3.00, ph $6.30 PB 129402

Antioch College, Yellow Springs, Ohio.
STUDIES OF THE DETERMINATION OF GERMANIUM BY THE HETEROPOLY BLUE METHOD, by Elwood R. Shaw, 15 Apr 1957. 17 p. AFOSR-TN-57-159; Contract AF18(600)-1490.
Order from LC mi $2.40, ph $3.30 PB 127584

Boston U., Mass.
MEASUREMENT OF SOME THERMODYNAMIC FUNCTIONS OF ALKALI METAL BOROHYDRIDES IN LIQUID AMMONIA, by R. V. Coulter and J. B. Sinclair, 7 Jan 1957. 10 p. CCC-1024-TR-218.
Order from LC mi $1.80, ph $1.80 PB 129608

Brigham Young U., Provo, Utah.
THE PREPARATION AND CATALYTIC PROPERTIES OF RHENIUM BLACKS OBTAINED BY THE REDUCTION OF RHENIUM (VII) IN ANHYDROUS AMMONIA AND AMINES WITH ALKALI METALS, by David W. Seegmiller, 16 Mar 1958. 138 p. AF OSR TN 58-108; Contr. AF 18(600)-1164.

Order from LC mi $2.40, ph $3.30 PB 129586

Olin Mathieson Chemical Corp., Niagara Falls, N. Y.
A STUDY OF AMMONIUM PERCHLORATE SPECIFICATION ANALYSIS, by C. Guy and H. Hyer, 20 Jan 1956. 29 p.
Order from LC mi $2.70, ph $4.80 PB 129651

Picatinny Arsenal, Dover, N. J.
FLAME SPECTROPHOTOMETRIC METHOD FOR DETERMINING SODIUM CHLORATE IN POTASSIUM CHLORATE, by Michael Halik and Roscoe Croom, June 1957. 7 p. PATR 2430.
Order from LC mi $1.80, ph $1.80 PB 128977

Samuel Feltman Ammunition Laboratories, Picatinny Arsenal, Dover, N. J.
THE APPLICATION OF NONAQUEOUS TITRIMETRY TO THE DETERMINATION OF POTASSIUM SULFATE IN PROPELLANTS, by Henry L. Herman, Sept 1956. 15 p. PATR 2347.
Order from LC mi $2.40, ph $3.30 PB 129908

Samuel Feltman Ammunition Laboratories, Picatinny Arsenal, Dover, N. J.
DETERMINATION OF FREE METALLIC ALUMIUM IN ALUMINUM POWDER, by Seymour Lader and Milton Roth, Aug 1956. 16 p. PATR 2323.
Order from LC mi $2.40, ph $3.30 PB 127912

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
DETERMINATION OF SURFACE IMPURITY OF POWDERED MAGNESIUM, by Sol Weisberger, Oct 1956. 15 p. PATR 2351.
Order from LC mi $2.40, ph $3.30 PB 130825

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
USE OF RAMAN SPECTROSCOPY IN THE INVESTIGATION OF PROPELLANTS, EXPLOSIVES AND RELATED MATERIALS, by Alexander H. Castelli and Frank Pristera, Dec 1956. 44 p. PATR 2322.
Order from LC mi $3.30, ph $7.80 PB 130469

School of Aviation Medicine, Randolph Air Force Base, Tex.
DIRECT PHOTOMETRY OF DIFFUSING PRECIPITIN SYSTEMS FOR CHARACTERIZING PROTEINS, by Wm. G. Glenn, Ph.D., Jan 1957. 6 p. AF SAM 57-37.
Order from LC mi $1.80, ph $1.80 PB 128479

Signal Corps Engineering Labs., Fort Monmouth, N. J.
RESONANCE POTENTIAL IN THIN FILMS OF POTASSIUM CHLORIDE, by H. Jacobs and A. Ramsa, 15 Sept 1956. 33 p. TM-1825.
Order from LC mi $3.00, ph $6.30 PB 130799

Stanford Research Inst., Calif.
MASS SPECTROMETER STUDIES OF ALKALI-METAL CHLORIDE VAPORS, by Thomas A. Milne, H. Michael Klein, etc., Feb 1958. 7 p. AFOSR TN-58-148; Contr. AF-49(638)50.
AD-152175.
Order from LC mi $1.80, ph $1.80 PB 133660

Texas A. and M. Coll., College Station.
ROTATIONAL ANALYSIS OF THE 3400–3900A ABSORPTION SYSTEM OF SULPHUR DIOXIDE, by R. K. Russel, Jan 1958. 18 p. AFOSR TN 58-122, Contr. 18(600)-439.
AD-152030.
Order from LC mi $2.40, ph $3.30 PB 133663

Watertown Arsenal Labs., Mass.
COOPERATIVE ANALYSIS OF NATIONAL BUREAU OF STANDARDS-STANDARD SAMPLE NO. 30e, by E. F. Jacobson, 10 Apr 1956. 11 p. WAL 121/16.
Order from LC mi $2.40, ph $3.30 PB 128101

Watertown Arsenal Labs., Mass.
MASS SPECTROMETRIC EXAMINATION OF GASES IN CHROMIUM-PLATED STEEL. I HYDROGEN, by Charles Levy and George A. Consolazio, 17 Mar 1955. 21 p. WAL 691 1/43.
Order from LC mi $2.70, ph $4.80 PB 127573

Watertown Arsenal Labs., Mass.
THE PHOTOMETRIC DETERMINATION OF COPPER IN TITANIUM, by A. J. Frank, A. B. Goulston, 30 July 1956. 29 p. WAL 401/253.
Order from LC mi $2.70, ph $4.80 PB 127687

Watertown Arsenal Labs., Mass.
THE VACUUM FUSION METHOD OF ANALYSIS FOR DETERMINATION OF MINUTE QUANTITIES OF CASES IN METALS, by William J. McMahon and Laurence S. Foster, 1 Nov 1952. 13 p. WAL 805/5-1.
Order from LC mi $3.00, ph $6.30 PB 127555

Inorganic Chemistry

American Potash and Chemical Corp., Henderson, Nev.
INDUSTRIAL PREPAREDNESS STUDY ON SYNTHETIC BATTERY GRADE MANGANESE DIOXIDE, by Jerome T. Muench and Roger W. Hoffman, 29 June-29 Sept 1956. 60 p. On Contract DA-36-039-SC-72715. Quarterly Progress Report No. I.
Order from LC mi $3.60, ph $9.30 PB 129659

Brigham Young U., Provo, Utah.
THE CATALYTIC HYDROGENATION ACTIVITY OF RHENIUM BLACKS PRODUCED BY THE ACTION OF SODIUM BOROHYDRIDE ON ANMONIUM PERRHENATE AND OF TETRAHYDROPYRAN ON RHEMIUM HEPTOXIDE, by J. H. Johnson, 16 Mar 1958. 108 p. AF OSR TN 58-107; Contr. AF 18(600)-1164.
Order from LC mi $5.70, ph $16.80 PB 133802

Calvin Coll., Grand Rapids, Mich.
STUDY OF THE OXIDES OF SILVER, by T. P. Dirkse, Technical rept. 3 on Contract Nonr 1682(01). 1 July 1956-31 Dec 1956. 15 p.
Order from LC mi $2.40, ph $3.30 PB 130343

Cornell U., Ithaca, N. Y.
THE DENSITY OF COLOR CENTERS IN BARIUM OXIDE AS A FUNCTION OF THE PRESSURE OF BARIUM, by Cornelis Timmer, 30 Oct 1956. 9 p. Contr. NONR-401.
Order from LC mi $1.80, ph $1.80 PB 130772

Fairchild Engine and Airplane Corp., Oak Ridge, Tenn.
OTHER SALINE HYDRIDES, by M. E. Lee, 13 July 1948. 57 p. NEPA 669 IHR-C-13.
Order from LC mi $3.60, ph $9.30 PB 130800

Hydrogen Peroxide Labs., Mass. Inst. of Tech., Cambridge.
QUARTERLY PERIODIC STATUS REPORT, by R. L. Wentworth, Rept. on Contract Nonr-1841(11). 30 Sept 1956. 14 p.
Order from LC mi $2.40, ph $3.30 PB 128573

Hydrogen Peroxide Labs., Mass. Inst. of Tech., Cambridge.
QUARTERLY PERIODIC STATUS REPORT, by W. C. Schumb, Rept. on Contract Nonr-1841 (11). 31 Dec 1956. 15 p.
Order from LC mi $2.40, ph $3.30 PB 130592

Illinois Inst. of Tech., Chicago.
INVESTIGATION OF METHODS FOR THE PREPARATION OF BORON COMPOUNDS, by A. G. Keenan and M. E. Runner, June 1954. 99 p. MCC 1023-TR-79.
Order from LC mi $5.40, ph $15.30 PB 130730

Illinois Inst. of Tech., Chicago.
THE RATE OF REACTION OF NITROGEN WITH HAFNIUM METAL, by Russell K. Edwards and Glenn T. Malloy, Dec 1956. 12 p. Contr. Nonr-1406.
Order from LC mi $2.40, ph $3.30 PB 130608

Technical Report 19 Based on part of a thesis.

Jet Propulsion Lab. Calif. Inst. of Tech., Pasadena.
STABILITY OF TITANIUM DIBORIDE AND ZIRCONIUM DIBORIDE IN AIR, OXYGEN AND NITROGEN, by Frank H. Brown, Jr., Feb 1955. 15 p. JPLPR-20-252; Contr. DA-04-495-ORD-18.
Order from LC mi $2.40, ph $3.30 PB 133895

Maine U., Orono.
THE MOLAR REFRACTION OF CARBON DIOXIDE AND ITS DEPENDENCE ON DENSITY AND AGE. PART II, by C. E. Bennett and V. H. Coffin 31 Aug 1956. 23 p. Contract NONR 1103(00).
Order from LC mi $2.70, ph $4.80 PB 127889

New Hampshire U., Durham.
THE PREPARATION OF ALKALI METAL AMMONIUM AND TETRA-ALKYLAMMONIUM FLUOBORATES, by C. M. Wheeler, Jr., and R. Sandstedt. 17 Jan 1955. 11 p. CCC-1024-TR-87.
Order from LC mi $2.40, ph $3.30 PB 128514

New York State Coll., of Ceramics, Alfred U.,
THE PRESSURE-CARBONIZATION OF CARBON BONDED SILICON FOR USE IN UNCOALED ROCKET NOZZLES, by T. L. Charland et al. 21 p. WADC TR 54-414, Contr. AF 233(616)-2007.
AD-75799.
Order from LC mi $2.70, ph $4.80 PB 133919

North Carolina U., Chapel Hill.
THE INFLUENCE OF INERT CATIONS ON THE REDUCTION OF COMPLEX ANIONS, by R. W. Schmid and C. N. Reilley, Aug 1951. 23 p. AF OSR TN-57-522; Contr. AF18(600)-1160.
AD-136506.
Order from LC mi $2.70, ph $4.80 PB 129944

North Carolina U., Chapel Hill.
SELECTIVE TITRATIONS OF METAL IONS WITH TRIETHYLENETETRAMINE, by C. N. Reilley, and M. V. Sheldon, July 1957. 9 p. AF OSR TN-57-174; Contr. AF18(600)-1160.
AD-136466.
Order from LC mi $1.80, ph $1.80 PB 129940

Ohio State U., Research Foundation, Columbus.
THE PURIFICATION OF DIBORANE, by G. E. MacWood and L. L. Paridon, 10 June 1955. 9 p. MCC-1023-TR-150.
Order from LC mi $1.80, ph $1.80 PB 130451

Oklahoma A. and M. College, Research Foundation, Stillwater.
INVESTIGATION OF THE THERMODYNAMIC PROPERTIES OF INORGANIC SALTS IN NONAQUEOUS SOLVENTS AND IN CONCENTRATED SALT MIXTURES, by Thomas E. Moore, July 1957. 50 p. AF OSR TR 57-47; Contr. AF18(600)-478.
AD-132477.
Order from LC mi $3.30, ph $7.80 PB 130756

Pennsylvania U., Philadelphia.
SYNTHESIS AND CHEMICAL PROPERTIES OF CERTAIN PHOSPHINOBORANES, by D. M. Gardner, Feb 1955. 72 p. MCC-1023-TR-104.
Order from LC mi $4.50, ph $12.30 PB 130453

Rensselaer Polytechnic, Inst., Troy, New York.
PREPARATION AND THERMAL STABILITY OF LITHIUM TITANIUM FLUORIDE, Feb 1958. 19 p. AFOSR TN 58-150; Contr. AF 49(638)-50.
AD-152207.
Order from LC mi $2.40, ph $3.30 PB 133662

Rochester U., New York.
FINE STRUCTURE IN THE EXCITON BANDS OF THE ALKALI HALIDES, by K. Teegarden, June 1957. 16 p. AF OSR TN-57-370; Contract AF-18 (600)-193.
AD-132442.
Order from LC mi $2.40, ph $3.30 PB 129476

Rock Island Arsenal Lab., Illinois.
THE DETECTION OF NITROGEN LEAKAGE IN A HYDROPNEUMATIC RECOIL MECHANISM BY MEANS OF A TRACER, by H. C. Muffley, 18 July 1956. 12 p. Lab. Rept. 56-2077.
Order from LC mi $2.40, ph $3.30 PB 130093

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
APPLICATIONS OF THE TITANOUS CHLORIDE-BUFFER METHOD TO THE DETERMINATION OF NITROGUANIDINE, by R. F. Wegman and M. Roth, July 1957. 13 p. PATR 2428.
Order from LC mi $2.40, ph $3.30 PB 129650

Samuel Feltman Ammunition Labs., Picatinny Arsonal, Dover, N. J.
AN ELECTRON MICROSCOPE STUDY OF CARBON BLACK, by Julius Kapash and Seymour M. Kaye, Nov 1956. 151 p. PATR 2379.
Order from LC mi $7.50, ph $24.30 PB 128801

Stanford U., Calif.
KINETICS OF THE FAST REACTION BETWEEN NITRYL FLUORIDE AND NITRIC OXIDE, by Henry Inami and H. S. Johnston. 5 p. Contr. N6onr-25131.
Order from LC mi $1.80, ph $1.80 PB 128156

Stanford U., Calif.
KINETICS OF THE FAST REACTION BETWEEN FLUORINE AND HYDROGEN BROMIDE, by Henry Inami and H. S. Johnston. 2 p. Contr. N6onr-25131.
Order from LC mi $1.80, ph $1.80 PB 128157

Tufts U., Medford, Mass.
FINAL REPORT-CONTRACT ONR 494 (04), by M. John Rice, Jr., 24 Aug 1956. 1 p. Contract Nonr 494(04).
Order from LC mi $1.80, ph $1.80 PB 127866

Tufts U., Medford, Mass., Dept. of Chemistry.
INVESTIGATIONS ON SOME MAGNESIUM HYDRIDES, by M. John Rice Jr., and P. J. Andrellos, 1 Aug 1956. 9 p. Contr. Nonr-494(04).
Order from LC mi $1.80, ph $1.80 PB 127928

Organic Chemistry

Aberdeen Proving Ground, Md.
SOLUTION RATES OF LEAD COMPOUNDS FOR CARBON SOLVENT LOOSENER STUDIES, by H. Kaplan and C. F. Pickett, Rept. 12 on Proj. TB4-821C. 28 Sept 1955. 7 p.
Order from LC mi $1.80, ph $1.80 PB 128394

Air Force Armament Center, Eglin Air Force Base, Fla.
SPECTROPHOTOMETRIC DETERMINATION OF MICROGRAM QUANTITIES OF ETHYL ACETOACETATE, by F. N. McMillan, Dec 1956. 17 p. AFAC-TR-56-90.
AD-110853.
Order from LC mi $2.40, ph $3.30 PB 129479

Ballistic Research Labs., Aberdeen Proving Ground, Md.
THE REACTION OF T-BUTYL PEROXIDE WITH ACETALS, by L. B. Kuhn and C. Wellman, 12 July 1956. 12 p. Rept. 1008.
Order from LC mi $2.40, ph $3.30 PB 128164

Bjorksten Research Labs., Inc., Madison, Wis.
STUDY OF CROSS LINKAGES IN GELATIN. Final research report on Contract AF 18(600)-1010. Mar 1957. 80 p. AFOSR TR-57-26;
AD-126444.
Order from LC mi $4.50, ph $12.30 PB 127966

California U.,
AR_1-5 AND AR_2-6 ARYL PARTICIPATION IN IONIC AND FREE RADICAL PROCESSES, by S. Winstein, 1955. 10 p.
Order from LC mi $1.80, ph $1.80 PB 127715

Chemical Warfare Labs., Army Chemical Center, Md.
ESTIMATION OF HYDRAZINE AND THREE OF ITS METHYL DERIVATIVES, by Leo Feinsilver and Joseph A. Perregrino, 11 July 1956. 15 p. CWLR 2045.
Order from LC mi $2.40, ph $3.30 PB 128857

Chemical Warfare Labs., Army Chemical Center, Md.
PREPARATION OF ANALOGS OF THE NITROGEN MUSTARDS, by A. M. Reeves and B. Witten, 29 Nov 1956. 29 p. CWLR-2092.
Order from LC mi $2.70, ph $4.80 PB 127610

Chemical Warfare Labs., Army Chemical Center, Md.
STUDIES ON THE MECHANISM OF THE GB-DIA REACTION ACTION OF BASE ON ESTERS OF DUSONITROSOACETONE, by J. R. Halum and C. N. Lieske, 6 Aug 1957. 22 p. CWLR-2135.
Order from LC mi $2.70, ph $4.80 PB 130724

Coating and Chemical Lab., Aberdeen Proving Ground, Md.
MICELLER SIZE OF AN ANIONIC-NONIONIC SURFACTANT MIXTURE, by A. Mankowich, 23 May 1957. 16 p. CCL R-22.
Order from LC mi $2.40, ph $3.30 PB 129486

Columbia U., New York.
POLYMERIZATION AT HIGH PRESSURES: INVESTIGATION OF THE INDIVIDUAL STEPS OF AN ADDITION POLYMERIZATION PROCESS, by Cheves Walling and Joseph Pellon. (Thesis) Technical rept. no. 1 on Contract Nonr-266(30). [1956] 155 p. CU-6-56-onr-266(30).
Order from LC mi $7.50, ph $24.30 PB 130010

Cornell U., Ithaca, N. Y.
NONIONIC DETERGENTS IN NONAQUEOUS SOLVENTS I: THE BEHAVIOR OF A-MONOGLYCERIDES, by P. Debye and W. Prins, Technical rept. no. 1 on Contract Nonr-401(17).
31 May 1957. 51 p.
Order from LC mi $3.60, ph $9.30 PB 133581

Delaware U., Newark.
STUDIES IN THE REACTIONS OF PHENYLBORANES, by W. C. Shar, June 1955. 38 p. MCC-1023-TR-135. Thesis.
Order from LC mi $3.00, ph $6.30 PB 130452

Dugway Proving Ground, Utah.
CRITERIA FOR DETERMINING GROUND LEVEL CONTAMINATION, by William G. Tank, Feb 1957. 32 p. SR-III.
Order from LC mi $3.00, ph $6.30 PB 127918

Duquesne U., Pittsburgh, Pa.
THE REDUCTION OF INORGANIC SUBSTANCES BY AROMATIC HYDROCARBON ANION FREE RADICALS IN NON-AQUEOUS SOLUTION, by Ting Li Chu and T. J. Weismann, Final Technical rept. for 1 Feb-31 July 56 on Contract DA 36-061-ORD-318. Aug 1956. 17 p.
Order from LC mi $2.40, ph $3.30 PB 128255

Enrico Fermi Inst., for Nuclear Studies, U., of Chicago, Ill.
C14 HOT ATOM CHEMISTRY OF N-PENTANE AND ISO-PENTANE, by C. F. MacKay and Willard F. Libby, May 1957. 17 p. AFOSR TN-57-217;
AD-126515.
Order from LC mi $2.40, ph $3.30 PB 127557

Florida State U., Tallahassee.
SALT EFFECTS IN THE DISSOCIATION OF ALPHA-NAPHTHOIC ACID IN 50.0 WT. % DIOXANE, by A. F. Butler and E. Grunwald. Rept. on Contract Nonr-988(02). 1 Aug 1956. 15 p.
Order from LC mi $2.40, ph $3.30 PB 128264

Harvard U., Cambridge, Mass.
CONVERSION OF METHYLTRICHLOROSILANE TO CHLOROMETHYL DERIVATIVES OF SILANE, by H. D. Kaesz and F. G. A. Stone. Rept. on Contract Nonr-1866(13). Dec 1956.
Order from LC mi $2.40, ph $3.30 PB 130632

Accepted for publication in the Journal of the Chemical Society, London.

Harvard U., Cambridge, Mass.
IONOGENIC BEHAVIOR OF ORGANIC COMPOUNDS OF SILICON, GERMANIUM, TIN, AND LEAD, by Alvin B. Thomas. Rept. on Contract Nonr-1866(13). Sept 1956. 21 p.
Order from LC mi $9.60, ph $33.30 PB 128938

Kentucky U., Lexington.
N-SULFINYL AMINES. REACTIONS WITH CARBOXYLIC ACIDS, by Walter T. Smith, Jr., and George G. King, Apr 1958. 7 p. Contr. AF 49(638)-49. AFOSR TN 58-258. AD-154162.
Order from LC mi $1.80, ph $1.80 PB 133675

Naval Ordnance Test Station, China Lake, Calif.
POLAROGRAPHIC DETERMINATION OF ALKYL PHTHALATE ESTERS IN CORDITE AND DOUBLE-BASE PROPELLANTS, by G. C. Whitnack and Robert D. Weaver, 21 Mar 1956. 15 p. NOTS-1361; NAVORD rept. 5022.
Order from LC mi $2.40, ph $3.30 PB 130044

Naval Powder Factory, Indian Head, Md.
THE ANALYSIS OF COMMERCIAL GRADES OF DIETHYL SULFATE, by A. C. Colley and A. J. Matuszko, 1 Apr 1957. 23 p. Memo rept. 130.
Order from LC mi $2.70, ph $4.80 PB 127597

Naval Powder Factory, Indian Head, Md.
POSSIBLE CHROMATOGRAPHIC FRACTIONATION OF CELLULOSE TRIACETATE, by P. Goodman and L. Fishbein, 15 Aug 1956. 17 p. Memo rept. 124.
Order from LC mi $2.40, ph $3.30 PB 127863

New Hampshire U., Durham.
ELECTROPHILIC DISPLACEMENT REACTIONS INVOLVING ORGANOBORON COMPOUNDS EFFECTS OF SUBSTITUENTS ON THE RATES OF REACTIONS BETWEEN HYDROGEN PEROXIDE AND BENZENEBORONIC ACID, by A. G. Armor and H. G. Kuivila 1 Dec 1956. 16 p. Contr. Nonr 806(01).
Order from LC mi $2.40, ph $3.30 PB 130692

New Hampshire U., Durham.
ELECTROPHILIC DISPLACEMENT REACTIONS INVOLVING ORGANOBORON COMPOUNDS. SOME PRELIMINARY OBSERVATIONS ON THE ACID CATALYZED HYDROLYSIS OF ARENEBORONIC ACIDS, by K. V. Nahabedian and H. G. Kuivila, 1 Dec 1956. 7 p. Contr. Nonr 806(01).
Order from LC mi $1.80, ph $1.80 PB 130565

New Hampshire U., Durham.
ELECTROPHILIC DISPLACEMENT REACTIONS INVOLVING ORGANOBORON. TWO NOVEL REACTIONS INVOLVING ARENEBORONIC ACIDS AND HALOGENS, by A. D. Price and L. E. Benjamin, 1 Dec 1956. 15 p. Contr. Nonr-806(01).
Order from LC mi $2.40, ph $3.30 PB 130691

New Hampshire U., Durham.
SUBSTITUTED TRIALKYLBORANES AND TRIALKENYLBORANES, by R. E. Lyle, E. J. Dewitt and others. 24 Nov 1954. 26 p. CCC-1024-TR-75.
Order from LC mi $2.70, ph $4.80 PB 128528

North Carolina U., Chapel Hill.
STABILITY OF METAL-TRIETHYLENETETRAMINE COMPLEXES, by C. N. Reilley and R. W. Schmid. UNC Chem. No. 14-CNR on Contract AF 18(600)-1160. July 1957. 12 p. AFOSR TN-57-475;
AD-136467.
Order from LC mi $2.40, ph $3.30 PB 129941

Pennsylvania Coll. for Women, Pittsburgh.
THE PREPARATION AND PROPERTIES OF TETRA-ALKYLAMMONIUM BOROHYDRIDE, by E. K. Wallace, J. Bridges and others. 12 Jan 1955. 9 p. CCC-1024-TR-85.
Order from LC mi $1.80, ph $1.80 PB 128515

Pennsylvania Salt Mfg. Co., Philadelphia.
THE PREPARATION OF SIMPLE AND POLYMERIC PRODUCTS FROM FLUORINATED OLEFINS, by M. Braid and F. Lawlor. Rept. on Contract Nonr-1614(00). Aug 1956. 26 p.
Order from LC mi $2.70, ph $4.80 PB 128392

Picatinny Arsenal, Dover, N. J.
INITIATION OF EXPLOSIVE IN SHELL THREADS, by Samuel D. Stein and Stanley J. Lowell, July 1957. 16 p. Technical rept. 2441.
Order from LC mi $2.40, ph $3.30 PB 128979

Princeton U., N. J.
ENTROPY CHANGE ASSOCIATED WITH HYDROTHERMAL SHRINKAGE OF COLLAGEN, by A. V. Tobalsky and R. Haselkorn. Rept. on Contract Nonr-1858(07). 12 Sept 1956. 4 p.
Order from LC mi $1.80, ph $1.80 PB 128574

Princeton U., N. J.
RESEARCH IN HIGH POLYMER CHEMISTRY RATES OF INITIATION IN VINYL POLYMERIZATION, by K. F. O'Driscoll and A. V. Tobolsky. Rept. on Contract DA-36-034-ORD-2190. 27 Nov 1956. 10 p.
Order from LC mi $1.80, ph $1.80 PB 130920

Rubber Research Lab., U. of Akron, Ohio.
THE BRANCHING REACTION. I. CHAIN TRANSFER OF STYRENE WITH THIOL, ALCOHOL AND NITRILE, by Maurice Morton and J. A. Cala, Jan 1956. 21 p. WADC TN-55-140.
Order from LC mi $2.70, ph $4.80 PB 129672

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
DILUTE SOLUTION PROPERTIES OF POLY-N-HEXYL METHACRYLATE, by Suresh N. Chinai, May 1957. 40 p. Technical rept. 2416.
Order from LC mi $3.00, ph $6.30 PB 128734

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
STREAMLINED METHOD FOR DETERMINING THE AVAILABLE DIPHENYLAMINE CONTENT OF PROPELLANTS, by W. D. Tullis and M. Roth, July 1957. 12 p. Technical rept. 2432.
Order from LC mi $2.70, ph $4.80 PB 130196

Stanford U., Calif.
THEORETICAL PRE-EXPONENTIAL FACTORS FOR HYDROGEN ATOM ABSTRACTION REACTIONS, by David J. Wilson and Harold S. Johnston. Rept. on Contract N6onr-251(31). 1956. 19 p.
Order from LC mi $2.40, ph $3.30 PB 128261

University of Southern Calif., Los Angeles.
CHEMICAL PROPERTIES OF PHENOXYACETIC ACIDS, by Ronald F. Brown, Elizabeth F. Claflin and others. Final technical rept. Sep 1956. 99 p.
Order from LC mi $5.40, ph $15.30 PB 133869

Wisconsin U., Madison.
ADDITION OF HYDROGEN BROMIDE TO 1-HALOCYCLOHEXANES AND THE REARRANGEMENT OF DIHALOCYCLOHEXANES IN THE PRESENCE OF FERRIC CHLORIDE, by H. L. Goering and L. L. Sims, 24 June 1957. 19 p. AF OSR TN-57-280; Contract AF18(600)10-37.
AD-132351.
Order from LC mi $2.40, ph $3.30 PB 128425

Wisconsin U., Madison.
THE SOLVOLYSIS OF CIS-AND TRANS-2-CHLOROCYCLOALKYL ARYL SULFIDES IN 80% AQUEOUS ETHANOE, by Harlan L. Goering and King L. Howe, 10 Sep 1957. 20 p. OSR rept. 7; AF OSR TN 57-495, Contr. AF18(600)-1037.
AD-136485.
Order from LC mi $2.40, ph $3.30 PB 130227

Physical Chemistry

Aerophysics Development Corp., Pacific Palisades, Calif.
NON-STATIONARY COMBUSTION STUDIES, by N. Bitondo and N. Thomas, Sep 1957. 42 p. AFOSR TN-57-454; Contr. AF18(600)-1509.
AD-136444.
Order from LC mi $3.30, ph $7.80 PB 130007

Air Force Cambridge Research Center, Mass.
QUARTERLY PROGRESS REPORTS NOS. III AND IV. RADIOCHEMISTRY SECTION, COMPONENTS AND TECHNIQUES LABORATORY, by C. D. Turner, B. Rubin, et al. 1 July to 31 Dec 1956.
AD-133758.
Order from LC mi $3.30, ph $7.80 PB 133625

American Potash and Chemical Corp., Henderson, Nev.
INDUSTRIAL PREPAREDNESS STUDY OF SYNTHETIC BATTERY GRADE MANGANSES DIOXIDE-QUARTERLY PROGRESS REPORT NO. 2, by Jerome T. Muench, 29 Sep 1956 to 29 Dec 1956. 41 p. Contr. DA-36-039-SC-72715.
Order from LC mi $3.30, ph $7.80 PB 129660

American Potash and Chemical Corp., Henderson, Nev.
INDUSTRIAL PREPAREDNESS STUDY ON SYNTHETIC BATTERY GRADE MANGANESE DIOXIDE-QUARTERLY PROGRESS REPORT NO. 3, by Jerome T. Muench, 29 Dec 1956 to 29 Mar 1957. 34 p. Contr. DA-36-039-SC-72715.
Order from LC mi $3.00, ph $6.30 PB 129661

Antioch College, Yellow Springs, Ohio.
THE PHYSICAL CHEMISTRY OF WATER SOLUTIONS AT HIGH PRESSURE AND TEMPERATURES, by R. G. Yolman and James F. Corwin, N.D. 154 p. AF OSR TN 57-428; Contr. AF 18(600)-1490.
AD-136417.
Order from LC mi $7.50, ph $24.30 PB 129471

Applied Physics Lab., Johns Hopkins U., Baltimore, Md.
THEORETICAL STUDY OF THE HYDROGEN-BROMINE FLAME, by E. S. Campbell, 6 Sep 1956. 33 p. WIS ONR CM-887; Contract NORD-15884.
Order from LC mi $3.00, ph $6.30 PB 128403

ARDE Associates, Newark, N. J.
REVIEW OF FLAME STABILIZATION ON BLUFF BODIES, by R. R. John and E. Mayer, Feb 1957. 47 p. AFOSR TN-57-228; Contract AF18(600)-1560.
AD-126526.
Order from LC mi $3.30, ph $7.80 PB 128276

Project Chem. 50-16, ARDE Associates TN 4555-5.

Armour Research Foundation, Chicago, Ill.
SHOT EFFECT AND NYQUIST NOISE FOR AN ELECTRON GAS, by Norman Rostoker, 27 Aug 1956. 13 p.
Order from LC mi $2.40, ph $3.30 PB 127905

Report No. 2.

Brigham Young U., Provo, Utah.
RHENIUM CATALYSIS, by T. G. Selin, 16 Mar 1958. 95 p. AF OSR TN 58-109; Contr. AF18(600)-1164.
AD-52018.
Order from LC mi $5.40, ph $15.30 PB 133796

Contents: I. Hydrogenation and Hydroformylation Using Rhenium Carbonyl Compounds. II. Hydrogenation Using Catalysts Obtained From The Reduction Of Perrhenates In Aqueous Solution With Metals.

Bureau of Mines, Pittsburgh, Pa.,
APPLICATIONS OF THE ELECTRONIC PROBE TO THE STUDY OF TURBULENT FLAMES, by D. W. Denniston and J. R. Oxendine, 26 Mar 1956. 26 p. AF OSR TN-56-173, RI-1201.
AD-86596.
Order from LC mi $2.70, ph $4.80 PB 129505

California Inst. of Tech., Pasadena.
DECOMPOSITION OF NITRYLCHLORIDE AT HIGH PRESSURES, by George Casaletto and H. S. Johnston. Rept. on Contract N6onr-251(31). 1953. 8 p.
Order from LC mi $1.80, ph $1.80 PB 128190

Dugway Proving Ground, Utah.
SURFACE AGENT DISTRIBUTION RESULTING FROM A CLOUD OF FALLING DROPLETS, by William G. Tank, Jan 1957. 38 p. RR 110.
Order from LC mi $3.00, ph $6.30 PB 128141

Engineering Research Inst., U., of Michigan, Ann Arbor.
EFFECT OF OZONE UPON FLAME SPEEDS OF SOME COMBUSTIBLE MIXTURES, by Robert J. Kelley, Richard L. Brehm, etc. Mar 1957. 24 p. 2279-10-F; AFOSR TR-57-33; Contr. AF18(600)-1186.
AD-126510.
Order from LC mi $2.70, ph $4.80 PB 128260

Engineering Research Inst., U. of Michigan, Ann Arbor.
THE EVAPORATION AND BURNING OF LIQUID FUEL DROPS, by Jay A. Bolt, Thomas A. Boyle, etc.

Aug 1954. 53 p. WADC TR 54-390; Contr. AF 33 (600)-5057.
AD-50567.
Order from LC mi $3.60, ph $9.30 PB 130870

Experiment, Inc., Richmond, Va.
AN APPARATUS FOR STUDYING THE BURNING OF DUST CLOUDS, by Lloyd E. Line, Jr. and Wendall J. Clark, 30 July 1956. 22 p. AF OSR TN 56-280; Contr. AF18(600)-1508.
AD-89490.
Order from LC mi $2.70, ph $4.80 PB 132305

Fairchild Engine and Airplane Corp., Oak Ridge, Tenn.
PROGRESS REPORT ON THE ELECTRICAL RESISTIVITY AND THERMAL EXPANSION DETERMINATIONS OF BERYLLIUM CARBIDE COMPACTS, by J. Dragnic, 23 Aug 1948. 31 p. NEPA-719-EMR-31.
Order from LC mi $3.00, ph $6.30 PB 130801

Illinois Inst., of Tech., Chicago.
FUNDAMENTAL PROCESSES OF FRICTIONAL WEAR IN ALKALI HALIDE CRYSTALS, by P. L. Copeland and E. Zwicker, Oct 1957. 81 p. AF OSR TN 57-85; Contr. AF18(600)-643.
AD-136675.
Order from LC mi $4.80, ph $13.80 PB 133797

Illinois Inst. of Tech., Chicago.
GALVANIC CELL MEASUREMENTS IN THE COPPER-SILVER SYSTEM, by Russell K. Edwards and James K. Downing, Aug 1956. 7 p. Contr. Nonr-1406(02).
Order from LC mi $1.80, ph $1.80 PB 127868

Illinois Inst. of Tech., Chicago.
THE PHOTOCHEMICAL SYNTHESIS OF ENDOTHERMIC COMPOUNDS FINAL REPORT, by Harry E. Gunning, 31 Aug 1956. 8 p. Contract N7onr-329 (15).
Order from LC mi $1.80, ph $1.80 PB 128067

Illinois Inst. of Tech., Chicago.
PHOTOCHEMICAL SYNTHESIS OF ENERGY-RICH COMPOUNDS, by Harry E. Gunning, 1 Feb 1957 to 31 Aug 1957. 7 p. AF OSR TN 57-588; Contr. AF 49(638)-39.
AD-136561.
Order from LC mi $1.80, ph $1.80 PB 130462

Illinois U., Urbana.
OBSERVATIONS ON THE RARE EARTHS: CHEMICAL AND ELECTROCHEMICAL STUDIES OF SOLUTIONS OF RARE EARTH METAL SALTS IN ANHYDROUS DIMETHYLFORMAMIDE, by Therald Moeller and Valentine David Galasyn. Rept on Contract AF 18(600)-1535, Apr 1958. 101 p. AFOSR TN 58-158.
AD-152184.
Order from LC mi $5.70, ph $16.80 PB 133656

Illinois U., Urbana.
TRANSIENT PHOTOCONDUCTIVITY IN AgCI AT ROOM TEMPERATURE, by Roger Van Heyningen, 1958. 103 p. AF OSR TN 58-124.
AD-152151.
Order from LC mi $5.70, ph $16.80 PB 133643

Industrial Test Lab., Philadelphia Naval Shipyard, Pa.
PERFORMANCE OF VARIOUS CHROMATE SUPPLEMENTARY FILMS ON ELECTRODEPOSITED ZINC COATINGS, by H. L. Katz, Jan 1957. 59 p. ITL 347-832.
Order from LC mi $3.60, ph $9.30 PB 133635

Institute for the Study of Metals, U. of Chicago, Ill.
VOLUME CHANGE OF INDIUM ANTIMONIDE DURING FUSION, by Norman H. Nachtrieb and Noriko Clement, Feb 1958. 15 p. AFOSR TN 58-71; Contr. AF 18(600)-1489. AD-148114.
Order from LC mi $2.40, ph $3.30 PB 133862

Instituto Nacional De Technica Aeronautica Esteban Terradas (Spain).
THE COMBUSTION OF DROPLETS INFLUENCE ON FORCED CONVECTION, by C. S. Tarifa and G. Millan, 20 Dec 1956. 60 p. AFOSR TN 57-303; Contract AF 61(514)-734C. AD-132374.
Order from LC mi $3.60, ph $9.30 PB 128597

Instituto Nacional de Tecnica Aeronautica Esteban Terradas (Spain).
COMPARISON OF ANALYTICAL METHODS FOR THE CALCULATION OF LAMINAR FLAME VELOCITY, by G. Millan and others, 25 Aug 1957. 69 p., Contr. AF 61(514)-997. AD-136658.
Order from LC mi $3.90, ph $10.80 PB 133761

James Forrestal Research Center, Princeton, N. J.
KINETICS OF THE OXIDATION OF WUSTITE AND MAGNETITE, by J. D. Mackenzie and C. E. Birchnall, 23 July 1957. 19 p. Contr. AF18(600)-967. AFOSR TN-57-451. AD-136441.
Order from LC mi $2.40, ph $3.30 PB 129936

James Forrestal Research Center, Princeton, N. J.
PROJECT SQUID SEMI-ANNUAL PROGRESS REPORT, 1 Oct 1956. 127 p. Contr. N6-ori-105(03).
Order from LC mi $6.30, ph $19.80 PB 130671

Contents:
I. Fluid Mechanics.
II. Fluid Properties.
III. Heat Transfer.
IV. Combustion Phenomena.

Jet Propulsion Lab., Calif. Inst. of Tech., Pasadena.
COMPOSITION DISTRIBUTION IN A FLAME HELD BY A BLUFF BODY FLAME HOLDER, by F. H. Wright, 1 Feb 1956. 14 p. CIT JPL 20-286; Contr. DA-04-495-ORD 18.
Order from LC mi $2.40, ph $3.30 PB 129961

Massachusetts Inst. of Tech., Cambridge.
QUARTERLY PROGRESS REPORT 22, by L. C. Allen and A. M. Karo, 15 Oct 1956. 62 p. Contr. N 5 ori-07856.

1. Polarization Effects in the Fluorine Ion and Electronic Wave Functions for the Hydrogen Fluoride Molecule.
2. The Lithium Hydride Molecule.
3. He Configuration Interaction.
4. Atomic Wave Functions Including $r_1 j$.
5. Energy Bands of Two Di-mensional Graphite.

6. Electronic Structure of KC 1 and KC 1 with V-Center.
7. Electron-Lattice Interactions.
8. Magnetic Hyperfine Structure of Lithium.
9. Spherical Harmonic Representations of the Point Groups.
10. Band Structure of MnO.
11. Ionic Starting Functions for an MnO Band Calculation.
12. Calculations on Atomic Iron.
13. An Augmented Plane Wave Method for Iron.
14. Ground State of the Hydrogen Molecule.

Order from LC mi $3.90, ph $10.80 PB 130024

Miami U., Coral Gables, Fla.
RELATIVISTIC EFFECTS IN THE COHESIVE ENERGIES OF THE ALKALI METALS, by Joseph Callaway, Roger D. Woods, etc., May 1957. 21 p. AF OSR-TN-57-208; Contr. AF 49(638)-62. AD-126505. File 40-37.
Order from LC mi $2.70, ph $4.80 PB 128221

Michigan U., Ann Arbor.
PIEZOBIREFRINGENCE IN STRONTIUM TITANATE, by Armando A. Giardini, 24 Sep 1956. 98 p.
Order from LC mi $5.40, ph $15.30 PB 128498

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
MICROWAVE PRECISION POWER STANDARD, by Leonard R. Sweet, 12 July 1956. 46 p. RADC TR 56-122; MRI R511-56; PIB-441; Contr. AF-30(602)-988. AD-97814.
Order from LC mi $3.30, ph $7.80 PB 129880

Missouri U., Columbia.
LUMINESCENCE FROM SODIUM CHLORIDE, by Wm. E. Spicer, 1 July 1956. 35 p. Contr. N7onr-292 T. O. 5.
Order from LC mi $3.00, ph $6.30 PB 128181

A study of X-ray induced luminescence spectra. ONR Tech. report No. 20.

Missouri U., Columbia.
PHOTOELECTRIC EMISSION FROM BARIUM OXIDE, by H. R. Philipp, 1 June 1956. 46 p. ONR TR-18; Contr. N7onr-292 T.O.5.
Order from LC mi $3.30, ph $7.80 PB 128404

Study on Sprayed Coatings of Ba O.

National Bureau of Standards, Washington, D. C.
ATOMIC FLAMES: SPECTRA, "TEMPERATURES," AND PRODUCTS, by R. G. Ferguson and H. P. Broida, May 1954. 37 p. WADC TR 54-553; Contr. AF 33(616)-53-3. AD-61307.
Order from LC mi $3.00, ph $6.30 PB 130868

Naval Ordnance Test Station, China Lake, Calif.
BURNING RATE STUDIES-EFFECTS OF CHEMICAL COMPOSITION ON THE CONSUMPTION RATE OF THE SYSTEM 2-NITROPROPANE-NITRIC ACID, 25 May 1956. 18 p. NOTS-1470; NAVORD-1999, pt. 7.
Order from LC mi $2.40, ph $3.30 PB 130907

Naval Radiological Defense Lab., San Francisco, Calif.,
A PHYSICOCHEMICAL SYSTEM FOR WATER AEROSOL MEASUREMENT, by N. H. Farlow, 25 May 1955. 28 p. TR-49; AD-71526.
Order from LC mi $2.70, ph $4.80 PB 128182

Naval Research Lab., Washington, D. C.
EFFECT OF SHIPBOARD EXPOSURE ON THE USEFUL LIFE OF PHOSPHORESCENT TAPE, by E. S. Estey and L. H. Dawson, Apr 1947. 22 p. NRL N-3076.
Order from LC mi $2.70, ph $4.80 PB 129414

Naval Research Lab., Washington, D. C.
MICROWAVE INSTRUMENTATION FOR MULTI-FREQUENCY ATTENUATION MEASUREMENTS THROUGH PROPELLANT GASES, by W. W. Balwanz and G. D. Morehouse, 13 Feb 1952. 43 p. NRL 3886.
Order from LC mi $3.30, ph $7.80 PB 129142

North Carolina U., Chapel Hill.
CHELOMETRIC TITRATIONS WITH POTENTIOMETRIC END-POINT, by D. W. Lamson and R. W. Schmid, June 1957. 19 p. AF OSR-TN-57-473; Contr. AF 18(600)-1160. AD-136465.
Order from LC mi $2.40, ph $3.30 PB 129939

Northwestern U., Evanston, Ill.
THE STRUCTURE AND ACTIVITY OF CATALYTICALLY ACTIVE SOLIDS, by P. W. Selwood, 1 Aug 1956. 42 p. Contr. Nonr-1228(08).
Order from LC mi $3.30, ph $7.80 PB 128269

Pennsylvania State U., University Park.
CHEMISTRY OF HYDRAZINE: FREEZING POINT MEASUREMENTS OF HYDRAZINE AND SOLUTIONS OF SALTS IN HYDRAZINE, by N. C. Deno and R. A. Baker, Technical rept. on Contract AF 18 (600)448. 1 Feb 1954. 48 p. AD-106446.
Order from LC mi $3.30, ph $7.80 PB 128069

Pennsylvania State U., University Park.
ELECTRIC DIPOLE MOMENTS OF THE METHYL FLUORO BORANES, by R. K. Uenishi and C. G. Haas, Jr., 18 Oct 1956. 41 p. CCC-1024-TR-206.
Order from LC mi $3.30, ph $7.80 PB 129673

Pennsylvania U., Philadelphia.
THE THERMAL EXPANSION OF THE LITHIUM FLUORIDE LATTICE AND ITS COMPARISON TO THE LINEAR MACROSCOPIC THERMAL EXPANSION, by E. A. Abramson, Technical Note no. 4 on Contract AF 18(600)-561. June 1957. 47 p. AFOSR TN-57-319; AD-132390.
Order from LC mi $3.30, ph $7.80 PB 128417

Picatinny Arsenal, Dover, N. J.
DETERMINING THE PARTICLE SIZE OF BARIUM NITRATE POWDER, by Anthony Taschler and Lester Rosen, Aug 1956. 27 p. diagrs., graphs, tables.
Order from LC mi $2.70, ph $4.80 PB 128983

Pitman-Dunn Labs., Frankford Arsenal, Philadelphia, Pa.
ABSORPTION SPECTROPHOTOMETRIC STUDIES OF CHEMICAL CHANGES IN PROPELLANTS, by H. Levitsky, Apr 1957. 28 p. graphs.
Order from LC mi $2.70, ph $4.80 PB 133894

Pittsburgh Consolidation Coal Co., Pa.
CONVERSION OF CARBONACEOUS FUELS TO ELECTRICAL ENERGY, by Howard L. Recht and Everett Gorin, 26 Aug 1955. 46 p. Contr. DA 36-039-SC-63090.
Order from LC mi $3.30, ph $7.80 PB 133906

Pittsburgh Consolidation Coal Co., Pa.
CONVERSION OF CARBONACEOUS FUELS TO ELECTRICAL ENERGY, by Howard L. Recht and Everett Gorin, 30 Nov 1955. 52 p. Contr. DA 36-039-SC-63090.
Order from LC mi $3.60, ph $9.30 PB 133907

Sixth Quarterly Report.

Pittsburgh Consolidation Coal Co. Pa.
CONVERSION OF CARBONACEOUS FUELS TO ELECTRICAL ENERGY, by Everett Gorin and Howard L. Recht, N. D. 23 p. Contr. DA 36-039-SC-63090.
Order from LC mi $2.70, ph $4.80 PB 133908

Seventh Quarterly Rept.

Pittsburgh Consolidation Coal Co., Pa.
CONVERSION OF CARBONACEOUS FUELS TO ELECTRICAL ENERGY, by E. Gorin and H. L. Recht, 28 May 1956. 29 p. Contr. DA-36-039-SC-63090.
Order from LC mi $2.70, ph $4.80 PB 133909

Eight Quarterly Rept.

Pittsburgh Consolidation Coal Co., Pa.
CONVERSION OF CARBONACEOUS FUELS TO ELECTRICAL ENERGY, by E. Gorin and H. L. Recht, 31 Aug 1956. 28 p. Contr. DA-36-039-SC-63090.
Order from LC mi $2.70, ph $4.80 PB 133910

Ninth Quarterly Rept.

Pittsburgh U., Pa.
SOME THERMODYNAMIC AND FLOW PROPERTIES OF CIS-AND TRANS-1, 4-AMINOCYCLOHEXANECARBOXYLIC ACIDS, by William O. Plummer. Doctoral thesis. Technical Rept. 3 on Contracts DA-36-061-ORD-295 and DA 36-061-ORD-472. 1956. 94 p.
Order from LC mi $5.40, ph $15.30 PB 128199

Princeton U., N. J.
ABSORPTION OF HYDROGEN ON GERMANIUM, by Kenzi Tamaree, 1955 or later, 12 p. Contr. N6onr-27018.
Order from LC mi $2.40, ph $3.30 PB 130918

Purdue U., Lafayette, Ind.
PHOTOCONDUCTIVITY IN GERMANIUM, SILICON AND INDIUM ANTIMONIDE, ANNUAL REPORT, by H. Y. Fan, N. D. 32 p. Contr. Nonr-1100(04).
Order from LC mi $3.00, ph $6.30 PB 128180

For period, July 1955 to 15 July 1956.

Redstone Arsenal, Huntsville, Ala.
STEADY-STATE TEMPERATURE DISTRIBUTION IN SOLID PROPELLANT GRAIN DUE TO ATMOSPHERIC TEMPERATURE VARIATIONS, by H. Hinrichs, L. T. Whitehead, et al. 16 Aug 1956. 64 p. OML-3R4P.
Order from LC mi $3.90, ph $10.80 PB 128784

Redstone Arsenal, Huntsville, Ala.
STRUCTURE AND STABILITY OF N-BUTANE-NITROGEN DIOXIDE FLAMES IN AIR, by E. Miller and H. J. Setzer, Oct 1956. 27 p. OML R2R 20F.
Order from LC mi $2.70, ph $4.80 PB 128382

Rensselaer Polytechnic Inst., Troy, N. Y.,
CONSTITUTION OF MOLTEN SALTS, by George J. Janz, May 1957. 59 p. Contract AF 49(638)-50 AF OSR TN-57-239. AD-126536.
Order from LC mi $3.60, ph $9.30 PB 128198

Rensselaer Polytechnic Inst., Troy, N. Y.
TRANSFERENCE NUMBERS IN MOLTEN SALTS, by Max R. Lorenz and George J. Janz, May 1957. 55 p. AF OSR TN 57-240; Contr. AF 49(638)-50. AD-126537. Technical Note No. 2.
Order from LC mi $3.60, ph $9.30 PB 128068

Research Inst., Temple U., Philadelphia, Pa.
STUDY OF ULTRA HIGH TEMPERATURES: DETONATION VELOCITY OF GASEOUS OZONE, by A. G. Streng and others. Rept. on Contract AF 18 (600)-1475. 5 Dec 1957. 17 p. AFOSR TN-58-14; AD-148052.
Order from LC mi $2.40, ph $3.30 PB 133646

Rhode Island U., Kingston.
MECHANISMS OF DECOMPOSITION OF POTASSIUM SUPEROXIDE, by Douglas Kraus, Ed. 1 June 1952 to 3 May 1956. 5 p. Contr. Nonr 810(00).
Order from LC mi $1.80, ph $1.80 PB 127734

Richmond U., Va.
STUDY OF THE SYSTEM NaCl-KCl-LiCl-$AlCl_3$ IN THE REGION OF MOLE RATIO 1:1:1:(3-6), by W. E. Trout, Jr. and W. J. Triner, Jr. 3 Oct 1955. 30 p. CCC-1024-TR-139.
Order from LC mi $2.70, ph $4.80 PB 128517

Rochester U., N. Y.
REACTION BETWEEN METHANOL AND BORON CONTAINING GLASSES, by R. P. Porter, 27 May 1957. 2 p. AF OSR-TN-57-262; AF 18(600)-1528. AD-126560.
Order from LC mi $1.80, ph $1.80 PB 128427

Rochester U., N. Y.
REACTIVITIES OF ELECTRONICALLY EXCITED KETONE MOECULES, by Julian Heicklen and W. Albert Noyes, Jr. Rept. on Contract AF 18(600)-1528. 20 June 1957. 11 p. AFOSR TN-57-342; AD-132415.
Order from LC mi $2.40, ph $3.30 PB 129560

Rock Island Arsenal Lab., Ill.
ELECTROPOLISHING 20 MM GUN BORES AT ACCELERATED RATES, by R. H. Wolff, 19 Oct 1956. 22 p. 56-3008.
Order from LC mi $2.70, ph $4.80 PB 130098

Rocketdyne, Canoga Park, Calif.
RESEARCH ON NITRIC ACID-SUPPORTED COMBUSTION, by G. Casaletto, 25 Aug 1957. 32 p. Contr. AF 49(638)-163.
Order from LC mi $3.00, ph $6.30 PB 130785

Rutgers U., New Brunswick, N. J.
PHASE SEPARATIONS IN THE WP-1 COMPOSITION, by E. R. Allen and S. M. Hirshfield, 6 July 1956. 71 p. Contr. Nonr 404 (07).
Order from LC mi $4.50, ph $12.30 PB 128000

St. Louis U., Mo.
SEMICONDUCTING PROPERTIES OF BORON. FINAL TECHNICAL REPORT, by Vincent P. Jacobsmeyer and Gene Braught, 16 Oct 1952 to 15 Sep 1956. 36 p. Contr. DA 23-072-ORD-(-471 and-585).
Order from LC mi $3.00, ph $6.30 PB 130827

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
DIELECTRIC PROPERTIES OF POLYETHYL METHACRYLATE AND POLYBUTYL METHACRYLATE, by S. Strella and R. Zand, Apr 1957. 51 p. Technical rept. 2414.
Order from LC mi $3.60, ph $9.30 PB 128607

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
SPECTROPHOTOMETRIC METHOD FOR THE SIMULTANEOUS DETERMINATION OF ACTUAL DIPHENYLAMINE AND ITS PRIMARY DEGRADATION PRODUCTS IN A PROPELLANT, by Mario A. Laccetti and Milton Roth, Apr 1957. 36 p. Technical rept. 2407.
Order from LC mi $3.00, ph $6.30 PB 133878

Southwest Research Inst., San Antonio, Tex.
FRICTIONAL ELECTRIFICATION EFFECTS IN FUEL FLOW, by F. M. Ernsberger, Nov 1956. 53 p. WADC TR 55-266; Contr. AF 33(616)-2441. AD-90288.
Order from LC mi $3.60, ph $9.30 PB 130402

Stanford U., Calif.
CARBON ISOTOPE EFFECT DURING OXIDATION OF CARBON MONOXIDE WITH NITROGEN DIOXIDE, by Harold S. Johnston, William A. Bonner, etc. 1956 or later 20 p. Contr. N6onr-25131.
Order from LC mi $2.40, ph $3.30 PB 128257

Texas U., Austin.
ADSORPTION FROM SOLUTION OF STEARIC ACID ON IRON. EFFECT ON ELECTRODE POTENTIAL, by Norman Hackerman and John J. Bordeaux. Rept. on Contract Nonr-375(02). 23 Nov 1956. 48 p.
Order from LC mi $3.30, ph $7.80 PB 130610

University of Southern California, Los Angeles.
ABSORPTION CROSS SECTIONS OF H_2 BETWEEN 550A AND 833A, by A. W. Ehler and G. L. Weissler, Apr 1957. 5 p. Contr. AF 19(604)-2049.
Order from LC mi $1.80, ph $1.80 PB 129356

University of Southern Calif., Los Angeles.
THE MECHANISMS OF THE EXCHANGE OF HYDROGEN GAS WITH SOLUTIONS OF POTASSIUM AMIDEIN LIQUID AMMONIA, by W. K. Wilmarth and June C. Dayton, Jan 1953. 19 p. Contract N6onr-238. AD-9967.
Order from LC mi $2.40, ph $3.30 PB 128567

Virginia Polytechnic Inst., Blacksburg.
ELECTROCHEMICAL PREPARATION OF BORON, by N. F. Murphy, R. S. Tinsley, etc. 25 Nov 1954. 13 p. CCC-1024-TR-76.
Order from LC mi $2.40, ph $3.30 PB 128516

Virginia Polytechnic Inst., Blacksburg.
STUDIES OF FLUIDITY IN THE SODIUM-SODIUM HYDRIDE SYSTEM, by J. E. Lastovica and N. F. Murphy, 8 Sep 1955. 13 p. CCC-1024-TR-136.
Order from LC mi $2.40, ph $3.30 PB 128513

Watertown Arsenal Lab., Mass.
ELECTROPLATING ON TITANIUM, by Charles Levy, 8 July 1952. 26 p. WAL 401/146.
Order from LC mi $2.70, ph $4.80 PB 127680

First Progress Report.

Watertown Arsenal Lab., Mass.
PHOTOELASTIC ANALYSIS OF A FLAT, FLANGED TENSION SPECIMEN, by F. B. Hyland and F. I. Baratta, 20 Oct 1953. 12 p. WAL 893/162.
Order from LC mi $2.40, ph $3.30 PB 127561

Watertown Arsenal Lab., Mass.
ULTRASONIC TESTING OF SPECIAL CAST ARMOR WITH THE WATERTOWN ARSENAL ULTRASONIC FLAW PLOTTING EQUIPMENT, by Ross W. Buchanan and S. A. Lopilato, 13 June 1955. 77 p. WAL 143/26.
Order from LC mi $4.50, ph $12.30 PB 127544

Wisconsin U., Madison.
HEAT CONDUCTIVITY IN POLYATOMIC ELECTRONICALLY EXCITED OR CHEMICALLY REACTING MIXTURES III, by Joseph O. Hirschfelder, 15 Aug 1956. 41 p. CM-880; Contr. NOrd 15884.
Order from LC mi $3.30, ph $7.80 PB 130961

Wisconsin U., Madison.
STRUCTURES AND THERMODYNAMIC PROPERTIES OF HIGH-TEMPERATURE GASEOUS SPECIES IN THE B_2O_3-H_2O SYSTEM, by J. L. Margrave, J. R. Soulen et al. 14 Mar 1957. 10 p. CCC-1024-TR-231.
Order from LC mi $1.80, ph $1.80 PB 128540

EARTH SCIENCES

American Meteorological Society, Boston, Mass.
THE EARTH'S SURFACE CHARGE, by E. A. Cherniavskii, 1948. 17 p. Contr. AF 19(604)-1936.
Order from LC mi $2.40, ph $3.30 PB 129382

Translated October 1955 by Michael M. Dane and David Kraus. Original title: "K voprosu o zariade poverkhnosti zemli," published in Izvestiia Akademil Nauk SSR, Seriia geograficheskaia i geofizicheskaia, 12(2): 169-176, 1948.

Louisiana State U., Baton Rouge.
GEOGRAPHICAL HISTORY OF THE CAROLING BANKS, by G. S. Dunbar. 15 Oct 1956. 261 p. Technical report 8, Part A. Contr. N7onr-35608.
Order from LC mi $11.10, ph $41.10 PB 130021

Climatology and Meteorology

Aeronautical Engine Lab., Naval Air Experimental Station, Philadelphia, Pa.
AN ANALYSIS OF THE EFFECTS OF CERTAIN VARIABLES IN DETERMINING THE FORM OF AN ICE ACCRETION, by T. A. Dickey, 29 May 1952. 20 p. AEL 1206.
Order from LC mi $2.40, ph $3.30 PB 130713

Air Force Cambridge Research Center, Bedford, Mass.
APPROXIMATION VALUES ON THE ZONAL VELOCITY IN THE ATLANTIC-EUROPEAN SECTOR FOR THE PERIOD OF 1881-1955, by H. Trenkle, May 1956. 14 p. AF CRC TN-56-696; Contr. AF61(514)-646-C. AD-98780.
Order from LC mi $2.40, ph $3.30 PB 130759

Air Force Cambridge Research Center, Bedford, Mass.
MEDIUM-RANGE FORECASTING TECHNIQUES FOR CENTRAL EUROPE PART 1, by Dr. P. Hess and A. Hofmann, June 1956. 46 p. AF CRC TR 57-250; Contr. AF 61 (514)-646-C. AD-110261.
Order from LC mi $3.30, ph $7.80 PB 130745

Air Force Cambridge Research Center, Bedford, Mass.
MONTHLY FORECASTS FOR GERMANY 6 YEARS VERIFICATIONS, by A. Hofmann, June 1956. 19 p. AF CRC TN-56-685; Contr. AF61(514)-646-C. AD-98754.
Order from LC mi $2.40, ph $3.30 PB 130760

Air Weather Service, Washington, D. C.
CLEAR—AIR TURBULENCE FROM 25,000 TO 45,000 FEET OVER THE UNITED STATES, by Leroy H. Clem, July 1957. 15 p. AWS TR 105-147.
Order from LC mi $2.40, ph $3.30 PB 129904

Air Weather Service, Washington, D. C.
A COMPENDIUM ON CIRRUS AND CIRRUS FORECASTING, by Robert G. Stone, March 1957. 159 p. AWS TR 105-130.
Order from LC mi $7.50, ph $24.30 PB 132399

American Meteorological Society, Boston, Mass.
INSTRUCTIONS FOR OBSERVATIONS OF NOCTILUCENT CLOUDS, by N. I. Grishin, 1957. 45 p. Contr. AF 19(604)-1936.
Order from LC mi $3.30, ph $7.80 PB 130661

"Instruktsiia dlia Nobliudenii Serebristykh oblakov" Translated by John Miller, June 1957.

American Meteorological Society, Boston, Mass.
PRELIMINARY DATA ON THE DRIFT OF THE SEDOV v 1937 i 1938, by A. N. Petrichenko, 1940. 31 p. Contr. AF 19(604)-1936.
Order from LC mi $3.00, ph $6.30 PB 130660

Translated by James Gough, Jr. and David Kraus, Apr. 1953. "Predvaritel Nye Dannye Dreifa 'Sedova' v 1937 i 1938 Godakh"

Bureau of Aeronautics, Navy Dept., Washington, D. C.
INTENSIFICATION OF TROPICAL CYCLONES, ATLANTIC AND PACIFIC AREAS. FOURTH RESEARCH REPORT, TASK 12, Oct 1956. 33 p. maps, charts.
Order from LC mi $3.00, ph $6.30 PB 129541

California U., Los Angeles.
A SYNOPTIC STUDY OF THE INTENSIFICATION MECHANISM OF A DIFFLUENT TROUGH, by Joseph B. Knox, March 1957. 175 p. AF CRC TN 57-270; Contr. AF 19(604)-1286. AD-117153.
Order from LC mi $4.50, ph $12.30 PB 128150

Scientific Report 5.

Chicago U., Ill.
BUDGET OF ANGULAR MOMENTUM AND ENERGY IN TROPICAL CYCLONES, by E. Palmen and H. Riehl, Sep 1956. 30 p. Contr. N6ori-02036.
Order from LC mi $2.70, ph $4.80 PB 128539

Chicago U., Ill.
THE EVOLUTION OF ENERGY GAIN BY THE ATMOSPHERE THROUGH CONTACT WITH THE GROUND OR OCEAN, by C. H. B. Priestley, Sep 1957. 58 p. AF CRC TN 57-239; Contr. AF 19(604)-2179. AD-133817.
Order from LC mi $3.60, ph $9.30 PB 132196

Chicago U., Ill.
JET STREAM AND LONG WAVES IN A STEADY ROTATING DISHPAN EXPERIMENT PART I: STRUCTURE OF THE CIRCULATION, by Herbert Riehl and Dave Fultz, Aug 1956. 23 p. Contract AF 19(604)-1292; Contract N6ori-02036. AFCRC TN-56-695.
Order from LC mi $2.70, ph $4.80 PB 128808

Scientific Report No. 1.

Chicago U., Ill.
ON SUMMER CYCLOGENESIS IN WESTERN CANADA ASSOCIATED WITH UPPER COLD LOWS, by Keith D. Hage, June 1957. 92 p. AF CRC TN-57-227; Contr. AF19(604)-2179. AD-133800.
Order from LC mi $5.70, ph $15.30 PB 130758

Cook Research Labs., Morton Grove, Ill.
A PRELIMINARY EVALUATION OF ISOMETRIC ANALYSIS AND FORECAST REPRESENTATION, by Albert Francis, 15 Aug 1957. 48 p. AF CRC TR-57-217; Contr. AF19(604)-1504. AD-133692.
Order from LC mi $3.30, ph $7.80 PB 130749

Coordinating Research Council, Inc., New York.
MAXIMUM VARIABILITY LEVEL OF WINDS, by Arnold Court. 31 May 1957. 22 p. AF CRC TN-57-478; Contr. AF 19(604)-2060. AD-117238.
Order from LC mi $2.70, ph $4.80 PB 129447

Scientific Report No. 2.

Coordinating Research Council, Inc., New York.
VERTICAL CORRELATIONS OF WIND COMPONENTS, by Arnold Court, 29 Mar 1957. 37 p. AF CRC TN 57-292; Contr. AF 19(604)-2060. AD-117182.
Order from LC mi $3.00, ph $6.80 PB 128118

Scientific Report No. 1.

Rocketdyne, Canoga Park, Calif.
RESEARCH ON NITRIC ACID-SUPPORTED COMBUSTION, by G. Casaletto, 25 Aug 1957. 32 p. Contr. AF 49(638)-163.
Order from LC mi $3.00, ph $6.30 PB 130785

Rutgers U., New Brunswick, N. J.
PHASE SEPARATIONS IN THE WP-1 COMPOSITION, by E. R. Allen and S. M. Hirshfield, 6 July 1956. 71 p. Contr. Nonr 404 (07).
Order from LC mi $4.50, ph $12.30 PB 128000

St. Louis U., Mo.
SEMICONDUCTING PROPERTIES OF BORON. FINAL TECHNICAL REPORT, by Vincent P. Jacobsmeyer and Gene Braught, 16 Oct 1952 to 15 Sep 1956. 36 p. Contr. DA 23-072-ORD-(-471 and-585).
Order from LC mi $3.00, ph $6.30 PB 130827

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
DIELECTRIC PROPERTIES OF POLYETHYL METHACRYLATE AND POLYBUTYL METHACRYLATE, by S. Strella and R. Zand, Apr 1957. 51 p. Technical rept. 2414.
Order from LC mi $3.60, ph $9.30 PB 128607

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
SPECTROPHOTOMETRIC METHOD FOR THE SIMULTANEOUS DETERMINATION OF ACTUAL DIPHENYLAMINE AND ITS PRIMARY DEGRADATION PRODUCTS IN A PROPELLANT, by Mario A. Laccetti and Milton Roth, Apr 1957. 36 p. Technical rept. 2407.
Order from LC mi $3.00, ph $6.30 PB 133878

Southwest Research Inst., San Antonio, Tex.
FRICTIONAL ELECTRIFICATION EFFECTS IN FUEL FLOW, by F. M. Ernsberger, Nov 1956. 53 p. WADC TR 55-266; Contr. AF 33(616)-2441. AD-90288.
Order from LC mi $3.60, ph $9.30 PB 130402

Stanford U., Calif.
CARBON ISOTOPE EFFECT DURING OXIDATION OF CARBON MONOXIDE WITH NITROGEN DIOXIDE, by Harold S. Johnston, William A. Bonner, etc. 1956 or later 20 p. Contr. N6onr-25131.
Order from LC mi $2.40, ph $3.30 PB 128257

Texas U., Austin.
ADSORPTION FROM SOLUTION OF STEARIC ACID ON IRON. EFFECT ON ELECTRODE POTENTIAL, by Norman Hackerman and John J. Bordeaux. Rept. on Contract Nonr-375(02). 23 Nov 1956. 48 p.
Order from LC mi $3.30, ph $7.80 PB 130610

University of Southern California, Los Angeles.
ABSORPTION CROSS SECTIONS OF H_2 BETWEEN 550A AND 833A, by A. W. Ehler and G. L. Weissler, Apr 1957. 5 p. Contr. AF 19(604)-2049.
Order from LC mi $1.80, ph $1.80 PB 129356

University of Southern Calif., Los Angeles.
THE MECHANISMS OF THE EXCHANGE OF HYDROGEN GAS WITH SOLUTIONS OF POTASSIUM AMIDEIN LIQUID AMMONIA, by W. K. Wilmarth and June C. Dayton, Jan 1953. 19 p. Contract N6onr-238. AD-9967.
Order from LC mi $2.40, ph $3.30 PB 128567

Virginia Polytechnic Inst., Blacksburg.
ELECTROCHEMICAL PREPARATION OF BORON, by N. F. Murphy, R. S. Tinsley, etc. 25 Nov 1954. 13 p. CCC-1024-TR-76.
Order from LC mi $2.40, ph $3.30 PB 128516

Virginia Polytechnic Inst., Blacksburg.
STUDIES OF FLUIDITY IN THE SODIUM-SODIUM HYDRIDE SYSTEM, by J. E. Lastovica and N. F. Murphy, 8 Sep 1955. 13 p. CCC-1024-TR-136.
Order from LC mi $2.40, ph $3.30 PB 128513

Watertown Arsenal Lab., Mass.
ELECTROPLATING ON TITANIUM, by Charles Levy, 8 July 1952. 26 p. WAL 401/146.
Order from LC mi $2.70, ph $4.80 PB 127680

First Progress Report.

Watertown Arsenal Lab., Mass.
PHOTOELASTIC ANALYSIS OF A FLAT, FLANGED TENSION SPECIMEN, by F. B. Hyland and F. I. Baratta, 20 Oct 1953. 12 p. WAL 893/162.
Order from LC mi $2.40, ph $3.30 PB 127561

Watertown Arsenal Lab., Mass.
ULTRASONIC TESTING OF SPECIAL CAST ARMOR WITH THE WATERTOWN ARSENAL ULTRASONIC FLAW PLOTTING EQUIPMENT, by Ross W. Buchanan and S. A. Lopilato, 13 June 1955. 77 p. WAL 143/26.
Order from LC mi $4.50, ph $12.30 PB 127544

Wisconsin U., Madison.
HEAT CONDUCTIVITY IN POLYATOMIC ELECTRONICALLY EXCITED OR CHEMICALLY REACTING MIXTURES III, by Joseph O. Hirschfelder, 15 Aug 1956. 41 p. CM-880; Contr. NOrd 15884.
Order from LC mi $3.30, ph $7.80 PB 130961

Wisconsin U., Madison.
STRUCTURES AND THERMODYNAMIC PROPERTIES OF HIGH-TEMPERATURE GASEOUS SPECIES IN THE B_2O_3-H_2O SYSTEM, by J. L. Margrave, J. R. Soulen et al. 14 Mar 1957. 10 p. CCC-1024-TR-231.
Order from LC mi $1.80, ph $1.80 PB 128540

EARTH SCIENCES

American Meteorological Society, Boston, Mass.
THE EARTH'S SURFACE CHARGE, by E. A. Cherniavskii, 1948. 17 p. Contr. AF 19(604)-1936.
Order from LC mi $2.40, ph $3.30 PB 129382

Translated October 1955 by Michael M. Dane and David Kraus. Original title: "K voprosu o zariade poverkhnosti zemli," published in Izvestiia Akademii Nauk SSR, Seriia geograficheskaia i geofizicheskaia, 12(2): 169-176, 1948.

Louisiana State U., Baton Rouge.
GEOGRAPHICAL HISTORY OF THE CAROLING BANKS, by G. S. Dunbar. 15 Oct 1956. 261 p. Technical report 8, Part A. Contr. N7onr-35608.
Order from LC mi $11.10, ph $41.10 PB 130021

Climatology and Meteorology

Aeronautical Engine Lab., Naval Air Experimental Station, Philadelphia, Pa.
AN ANALYSIS OF THE EFFECTS OF CERTAIN VARIABLES IN DETERMINING THE FORM OF AN ICE ACCRETION, by T. A. Dickey, 29 May 1952. 20 p. AEL 1206.
Order from LC mi $2.40, ph $3.30 PB 130713

Air Force Cambridge Research Center, Bedford, Mass.
APPROXIMATION VALUES ON THE ZONAL VELOCITY IN THE ATLANTIC-EUROPEAN SECTOR FOR THE PERIOD OF 1881-1955, by H. Trenkle, May 1956. 14 p. AF CRC TN-56-696; Contr. AF61(514)-646-C. AD-98780.
Order from LC mi $2.40, ph $3.30 PB 130759

Air Force Cambridge Research Center, Bedford, Mass.
MEDIUM-RANGE FORECASTING TECHNIQUES FOR CENTRAL EUROPE PART 1, by Dr. P. Hess and A. Hofmann, June 1956. 46 p. AF CRC TR 57-250; Contr. AF 61 (514)-646-C. AD-110261.
Order from LC mi $3.30, ph $7.80 PB 130745

Air Force Cambridge Research Center, Bedford, Mass.
MONTHLY FORECASTS FOR GERMANY 6 YEARS VERIFICATIONS, by A. Hofmann, June 1956. 19 p. AF CRC TN-56-685; Contr. AF61(514)-646-C. AD-98754.
Order from LC mi $2.40, ph $3.30 PB 130760

Air Weather Service, Washington, D. C.
CLEAR—AIR TURBULENCE FROM 25,000 TO 45,000 FEET OVER THE UNITED STATES, by Leroy H. Clem, July 1957. 15 p. AWS TR 105-147.
Order from LC mi $2.40, ph $3.30 PB 129904

Air Weather Service, Washington, D. C.
A COMPENDIUM ON CIRRUS AND CIRRUS FORECASTING, by Robert G. Stone, March 1957. 159 p. AWS TR 105-130.
Order from LC mi $7.50, ph $24.30 PB 132399

American Meteorological Society, Boston, Mass.
INSTRUCTIONS FOR OBSERVATIONS OF NOCTILUCENT CLOUDS, by N. I. Grishin, 1957. 45 p. Contr. AF 19(604)-1936.
Order from LC mi $3.30, ph $7.80 PB 130661

"Instruktsiia dlia Nobliudenii Serebristykh oblakov" Translated by John Miller, June 1957.

American Meteorological Society, Boston, Mass.
PRELIMINARY DATA ON THE DRIFT OF THE SEDOV v 1937 i 1938, by A. N. Petrichenko, 1940. 31 p. Contr. AF 19(604)-1936.
Order from LC mi $3.00, ph $6.30 PB 130660

Translated by James Gough, Jr. and David Kraus, Apr. 1953. "Predvaritel Nye Dannye Dreifa 'Sedova' v 1937 i 1938 Godakh"

Bureau of Aeronautics, Navy Dept., Washington, D. C.
INTENSIFICATION OF TROPICAL CYCLONES, ATLANTIC AND PACIFIC AREAS. FOURTH RESEARCH REPORT, TASK 12, Oct 1956. 33 p. maps, charts.
Order from LC mi $3.00, ph $6.30 PB 129541

California U., Los Angeles.
A SYNOPTIC STUDY OF THE INTENSIFICATION MECHANISM OF A DIFFLUENT TROUGH, by Joseph B. Knox, March 1957. 175 p. AF CRC TN 57-270; Contr. AF 19(604)-1286. AD-117153.
Order from LC mi $4.50, ph $12.30 PB 128150

Scientific Report 5.

Chicago U., Ill.
BUDGET OF ANGULAR MOMENTUM AND ENERGY IN TROPICAL CYCLONES, by E. Palmen and H. Riehl, Sep 1956. 30 p. Contr. N6ori-02036.
Order from LC mi $2.70, ph $4.80 PB 128539

Chicago U., Ill.
THE EVOLUTION OF ENERGY GAIN BY THE ATMOSPHERE THROUGH CONTACT WITH THE GROUND OR OCEAN, by C. H. B. Priestley, Sep 1957. 58 p. AF CRC TN 57-239; Contr. AF 19(604)-2179. AD-133817.
Order from LC mi $3.60, ph $9.30 PB 132196

Chicago U., Ill.
JET STREAM AND LONG WAVES IN A STEADY ROTATING DISHPAN EXPERIMENT PART I: STRUCTURE OF THE CIRCULATION, by Herbert Riehl and Dave Fultz, Aug 1956. 23 p. Contract AF 19(604)-1292; Contract N6ori-02036. AFCRC TN-56-695.
Order from LC mi $2.70, ph $4.80 PB 128808

Scientific Report No. 1.

Chicago U., Ill.
ON SUMMER CYCLOGENESIS IN WESTERN CANADA ASSOCIATED WITH UPPER COLD LOWS, by Keith D. Hage, June 1957. 92 p. AF CRC TN-57-227; Contr. AF19(604)-2179. AD-133800.
Order from LC mi $5.70, ph $15.30 PB 130758

Cook Research Labs., Morton Grove, Ill.
A PRELIMINARY EVALUATION OF ISOMETRIC ANALYSIS AND FORECAST REPRESENTATION, by Albert Francis, 15 Aug 1957. 48 p. AF CRC TR-57-217; Contr. AF19(604)-1504. AD-133692.
Order from LC mi $3.30, ph $7.80 PB 130749

Coordinating Research Council, Inc., New York.
MAXIMUM VARIABILITY LEVEL OF WINDS, by Arnold Court. 31 May 1957. 22 p. AF CRC TN-57-478; Contr. AF 19(604)-2060. AD-117238.
Order from LC mi $2.70, ph $4.80 PB 129447

Scientific Report No. 2.

Coordinating Research Council, Inc., New York.
VERTICAL CORRELATIONS OF WIND COMPONENTS, by Arnold Court, 29 Mar 1957. 37 p. AF CRC TN 57-292; Contr. AF 19(604)-2060. AD-117182.
Order from LC mi $3.00, ph $6.80 PB 128118

Scientific Report No. 1.

Cornell U., School of Electrical Engineering, Ithaca, N. Y.
COMMUNICATION ASPECTS OF V.A.F. AURORAL REFLECTIONS, by Rolf Buchanan Dyce, 1 June 1955. 122 p. Research rept. EE 249; Contr. DA 36-039-SC-56748.
Order from LC mi $6.30, ph $19.80 PB 127739

Technical Report No. 23.

Deutscher Wetterdienst, Aachen (Germany).
THE ATMOSPHERIC ELECTRICAL CLIMATE AT FOUR SELECTED STATIONS IN THE SWISS ALPS. I. SURVEY AND PROBLEMS, by H. Israel, H. Dolezalek and G. Fries, Feb 1956. 45 p. Technical note no. 6; AFCRC TN 57-2; Contr. AF 61(514)-640. AD-110226.
Order from LC mi $3.30, ph $7.80 PB 133623

Drexel Inst. of Tech., Centerton, N. J.
SUMMARY OF CLIMATIC OBSERVATIONS-1955, by C. W. Thornthwaite and J. R. Mather, 1956. 114 p. AF CRC TN-57-269; Contr. AF19(604)-1118. AD-117152.
Order from LC mi $6.00, ph $18.30 PB 130751

Dugway Proving Ground, Utah.
COMPARISON OF COMPUTED DOSAGES FOR POINT AND FOR CUBICAL VOLUME SOURCES, by Harvey Greenfield, 27 July 1956. 22 p. DPG SR 105.
Order from LC mi $2.70, ph $4.80 PB 127917

Florida State U., Tallahassee.
AN ANALYSIS OF SOME DETAILED DATA OBTAINED BY AIRCRAFT RECONNAISSANCE OF A HURRICANE, by N. E. LaSeur, 30 Sep 1957. 43 p. AF CRC TN-57-210; Contr. CWB 8822, Contr. CWB 9121, Contr. AF19(604)-753. AD-113674.
Order from LC mi $3.30, ph $7.80 PB 130762

Florida State U., Tallahassee.
A STATISTICAL STUDY OF SOME CARIBBEAN WIND DATA, by Douglas K. Lilly and N. E. La Seur, 1 Dec 1956. 52 p. AF CRC TN 56-679; Contr. AF 19(604)-753. Contrs. CWB-8586; CWB 8822.
Order from LC mi $3.60, ph $9.30 PB 127118

Scientific Report No. 3.

Free U., Berlin (Germany).
INVESTIGATION OF SOME SHORT-RANGE FORECAST RULES AND THEIR APPLICABILITY IN PRACTICAL FORECASTING, by R. Scherhag and M. Rodewald, 31 May 1955. 73 p. AF CRC TR 56-285; Contr. AF 61(514)-824. AD-110215.
Order from LC mi $4.50, ph $12.30 PB 130205

Geophysical Inst., U. of Alaska College.
A STUDY OF THE MORPHOLOGY OF MAGNETIC STORMS, MODERATE MAGNETIC STORMS, by M. Sugiura and S. Chapman, 30 June 1957. 59 p. AFCRC TR 57 295; Contract AF 19(604)-1732. AD-117295.
Order from LC mi $3.60, ph $9.30 PB 130008

Georgia Inst. of Tech., Engineering Experiment Station, Atlanta.
ON THE RELATIVE CONTRIBUTIONS OF VARIOUS SKY REGIONS TO METEOR-TRAIL COMMUNICATION, by Jesse C. James and M. L. Meeks, 30 June 1956. 70 p. Contr. NONR-991(02).
Order from LC mi $3.90, ph $10.80 PB 127161

Hawaii U., Honolulu.
SURFACE WEATHER CHART ANALYSIS IN LOW LATTITUDES, by C. S. Ramage, Aug 1957. 24 p. AF CRC TN 57-207; Contr. AF 19(604)-1942. AD-113618.
Order from LC mi $2.70, ph $4.80 PB 129903

Hawaii Inst. of Geophysics Scientific Report No. 2.

Holloman Air Development Center, Holloman AFB, N. Mex.
CRANE LAUNCH TECHNIQUES FOR POLYENE BALLOONS, by Bernard D. Gildenberg, May 1957. 25 p. HADC TN 57-3.
Order from LC mi $2.70, ph $4.80 PB 127894

Illinois State Water Survey, Urbana.
ANALYSIS OF 1952 RADAR AND RAINGAGE DATA, by J. C. Neill, July 1953. 26 p. Contr. DA-36-039-SC-42446.
Order from LC mi $2.70, ph $4.80 PB 127048

Research Report No. 2.

Illinois State Water Survey, Urbana.
RAINFALL-RADAR STUDIES OF 1951, by G. E. Stout, J. C. Neill, etc., May 1953. 46 p. Contr. DA-36-039-SC-42446.
Order from LC mi $3.30, ph $7.80 PB 127044

Research Report No. 1. Reprinted as the Illinois State Water Survey Report of Investigation No. 19.

Institute of Tech., U. of Minn., Minneapolis.
MIGRATION OF MOISTURE IN THE THERMAL REGIME, by R. C. Brasted, June 1954. 136 p. Contract DA-21-018-ENG-256.
Order from LC mi $6.90, ph $21.30 PB 129319

Laboratory of Climatology, Centerton, N. J.
SOIL MOISTURE MAPS FINAL REPORT, by C. W. Thornthwaite, 30 Sep 1957. 9 p. AF CRC TR-57-229; Contr. AF19(604)-1410. AD-133828.
Order from LC mi $1.80, ph $1.80 PB 132342

MacDonald Physics Lab., McGill U., (Canada).
A POSSIBLE ROLE OF HAIL IN THE FORMATION OF TORNADOES, by Walter Hitschfeld, J. S. Marshall, Mar 1957. 33 p. MW 25, AF CRC TN 57-281; Contr. AF 19(122)-217. AD-117166.
Order from LC mi $2.70, ph $4.80 PB 127693

McGill U., (Canada).
DYNAMICAL PREDICTION OF THE ARCTIC CIRCULATION, by M. A. Estoque, Oct 1957. 164 p. AF CRC TR 57-248; Contr. AF 19(604)-1141. AD-133826.
Order from LC mi $7.80, ph $25.80 PB 132575

McGill U., (Canada).
THE WADSWORTH ORTHOGONAL POLYNOMIAL TECHNIQUES OVER THE NORTH POLE AREA DURING 1955, by F. Kenneth Hare, Oct 1957. 21 p. AF CRC TN 56-460; Contr. AF 19(604)-1141. AD-110271.
Order from LC mi $2.70, ph $4.80 PB 132085

Massachusetts Inst. of Tech., Cambridge.
DEPARTMENT OF METEOROLOGY'S FINAL REPORT, FEBRUARY 28, 1951, ON WEATHER RADAR RESEARCH, 28 Feb 1951. 41 p. Contr. W 36-039-SC-32038.
Order from LC mi $3.30, ph $7.80 PB 127089

Massachusetts Inst., of Tech., Cambridge.
AN ELECTRIC PROBE DROP COUNTER MEASUREMENT OF DROP SIZE DISTRIBUTION AND LIQUID WATER CONTENT IN NATURAL CLOUDS, by D. P. Keily, 15 Sep 1955. 16 p. AFCRC-TN-57-484; Contr. AF19(604)-1287. AD-117248.
Order from LC mi $2.40, ph $3.30 PB 129877

Massachusetts Inst. of Tech., Cambridge.
EMPIRICAL ORTHOGONAL FUNCTIONS APPLIED TO THIRTY-DAY FORECASTING, by Donald L. Gilman, 30 June 1957, 141 p. Contr. AF19(604)-1283. AD-117249.
Order from LC mi $7.20, ph $22.80 PB 128328

Massachusetts Inst. of Tech., Cambridge.
THE INFORMATION CONTAINED IN WEATHER NOISE-PART B, by Aaron Fleisher, 21 Dec 1953. 18 p. Contr. DA-36-039-SC-42625.
Order from LC mi $2.40, ph $3.30 PB 130857

Massachusetts Inst. of Tech. Cambridge.
MEASUREMENT OF DROP SIZE AND LIQUID WATER CONTENT IN NATURAL CLOUDS, by D. R. Purdy and Roger Franklin, 1 Sep 1954. 37 p. AF CRC TN 57-472; Contr. AF 19(122)-245. AD-117232.
Order from LC mi $3.00, ph $6.30 PB 132232

Massachusetts Inst. of Tech., Cambridge.
RESEARCH ON ATMOSPHERIC PRESSURE CHANGES, by J. M. Austin, 31 Dec 1956. 14 p. Contr. N5-ori-07804.
Order from LC mi $2.40, ph $3.30 PB 130941

Massachusetts Inst. of Tech., Cambridge.
SOME STATISTICAL AND MATHEMATICAL APPROACHES TO METEOROLOGY, by George P. Wadsworth and Joseph G. Bryan, 30 Apr 1957. 111 p. AF CRC TR 57-207; Contr. AF19(604)-991. AD-113617.
Order from LC mi $6.00, ph $18.30 PB 130836

Massachusetts Inst. of Tech., Cambridge.
A STATISTICAL-DYNAMIC APPROACH TO NUMERICAL WEATHER PREDICTION, by William D. Sellers, June 1957. 153 p. AF CRC TN 57-471; Contr. AF 19(604)-1566. AD-117231.
Order from LC mi $7.50, ph $24.30 PB 127970

Statistical Forecasting Project.

Massachusetts Inst. of Tech. Cambridge.
WEATHER RADAR RESEARCH, by Alan C. Bemis, 15 Mar 1955. 18 p. Contr. DA-36-039-SC-42625.
Order from LC mi $2.40, ph $3.30 PB 130859

Final Report.

Naval Air Station, Norfolk, Va.
CLIMATOLOGY OF THREE DAY HURRICANE MOTION, Sep 1956. 19 p. Third research report on Project Arowa.
Order from LC mi $2.40, ph $3.30 PB 128712

Task 12.

Naval Air Station, Norfolk, Va.
THE PREDICTION OF CYCLONE INTENSITY OVER THE NORTH ATLANTIC, J. J. George and P. M. Wolff, Mar 1955. 57 p. Proj. AROWA.
Order from LC mi $3.60, ph $9.30 PB 127387

Naval Air Station, Norfolk, Va.
WEATHER DISPLAY AND PRESENTATION, Aug 1956. 27 p. Proj. AROWA.
Order from LC mi $2.70, ph $4.80 PB 128541

Naval Ordnance Test Station, China Lake, Calif.
A STUDY OF UPPER AIR TEMPERATURES AT THE NAVAL ORDNANCE TEST STATION, by P. H. Miller, 15 June 1956. 94 p. NOTS 1463, NAVORD 5256.
Order from LC mi $5.40, ph $15.30 PB 130436

Naval Proving Ground, Dahlgren, Va.
TESTING OF CINETHEODOLITES BY STARS, by E. J. Merritt, 29 May 1956. 57 p. NPG 1461.
Order from $3.60, ph $9.30 PB 127705

Naval Research Lab., Washington, D. C.
NIGHT SKY BRIGHTNESS MEASUREMENTS IN MARYLAND AND GREENLAND DURING 1949, by M. Koomen and C. A. Pearson, 4 Jan 1950. 14 p. NRL Report 3594.
Order from LC mi $2.40, ph $3.30 PB 129133

Naval Research Lab., Washington, D. C.
SKY RADIATION MEASUREMENTS AT WHITE SANDS, NEW MEXICO, by C. P. Butler and G. L. Harvey, Feb 1957. 28 p. NRL H-3069.
Order from LC mi $2.70, ph $4.80 PB 129280

New York U., N. Y.
A COMPOSITE ANALYSIS OF CYCLONIC PENETRATION IN THE EASTERN UNITED STATES, by Gunther Reiss, Apr 1955. 38 p. Contr. Nonr-285(09); Project SCUD, Technical Paper No. 3.
Order from LC mi $3.00, ph $6.30 PB 127078

New York U., N. Y.
DROPLET AND COLLISION EFFICIENCY, by R. M. Schotland, May 1957. 63 p. AF CRC TR 57-284; Contr. AF 19(604)-993. AD-117227.
Order from LC mi $3.90, ph $10.80 PB 130835

New York U., N. Y.
THE SEASONAL VARIATION OF THE VERTICAL OZONE DISTRIBUTION AT FLAGSTAFF, ARIZONA, by B. Haurwitz, J. London, et al., June 1957. 27 p. AF CRC TN 57-496; Contr. AF 19(604)-1738. AD-117269.
Order from LC mi $2.70, ph $4.80 PB 132165

New York U., N. Y.,
STUDIES OF WIND STRUCTURE IN THE LOWER ATMOSPHERE, by James E. Miller, May 1957. 174 p. AFCRC-TR-57-288; Contr. AF 19(604)-1368. AD-117288.
Order from LC mi $8.10, ph $27.30 PB 129344

Office of Naval Operations, Washington, D. C.
NUMERICAL WEATHER PREDICTION, by Albert L. Stickles II, and Milton B. Moreland, June 1956. 172 p. NAVAER 50-IP-541.
Order from LC mi $8.10, ph $27.30 PB 128117

Pennsylvania State U. Mineral Industries Experiment Station, University Park.
STRUCTURE OF TURBULENCE AT O'NEILL, NEBRASKA, AND ITS RELATION TO THE STRUCTURE AT BROOKHAVEN, by Raymond J. Deland, Hans A. Panopky, 1 Jan 1957. 91 p. Contr. AF 19 (604)-1027. AD-117126.
Order from LC mi $5.40, ph $15.30 PB 127701

Quarterncaster Research and Development Center, Natick, Mass.
TEMPERATURES OF NORTHERN NORTH AMERICA, by Donald W. Hogue, June 1956. (Revised Oct 1957). 63 p. RER-9.
Order from LC mi $3.90, ph $10.80 PB 128399

Saint Louis U., Mo.
INVESTIGATION OF STORM TRACKS OVER EXTENDED TIME PERIODS, by E. M. Brooks, et al. n.d. 44 p. Contract 19(604)-1294.
Order from LC mi $3.30, ph $7.80 PB 127360

Date is June 1956 or later.

Syracuse U., Research Inst., N. Y.
CLIMATE AND RELATED PHENOMENA OF THE EASTERN ANDEAN SLOPES OF CENTRAL PERU, by Wolfram U. Drewes and Arlene T. Drewes, June 1957. 92 p. Contr. DA 19-129-QM-466.
Order from LC mi $5.40, ph $15.30 PB 129381

Texas A and M Coll., College Station.
FORECASTING MICROMETEOROLOGICAL VARIABLES, by Halstead, M. H., Mar 1957. 279 p. AFCRC TR 57 275; Contr. AF 19(604)-1117. AD-117195.
Order from LC mi $11.10, ph $42.60 PB 128572

Texas A and M Research Foundation, College Station.
THE USE OF COMPOSITE RADAR PHOTOGRAPHS IN SYNOPTIC WEATHER ANALYSIS, by Gordon D. Smith, Aug 1957. 59 p. AF CRC TN 57-218; Contr. AF 19(604)-1564. AD-113687.
Order from LC mi $3.60, ph $9.30 PB 132056

Texas U., Austin.
SURVEY OF MICROWAVE REFRACTIVE INDEX ANALYSIS AND FORECASTINC TECHNIQUES, by V. E. Moyer and J. R. Gerhardt, 25 Mar 1957. 18 p. AF CRC-TN-57-18; EERL 6-18; Contr. AF 19(604)-494. AD-117022.
Order from LC mi $2.40, ph $3.30 PB 128745

Texas U., Austin.
AN UPPER AIR TRAJECTORY TECHNIQUE FOR THE CLIMATOLOGICAL ANALYSIS OF REFRACTOMETER SOUNDINGS, by V. E. Moyer, 15 Feb 1958. 25 p. AF CRC TN 58-1155; Contr.(SAF)-19(604)-2249. AD-146817.
Order from LC mi $2.70, ph $4.80 PB 133844

Washington U., Seattle.
AIR MOTIONS STUDY, IV. THEORETICAL AND EMPERICAL RELATIONS IN LARGE SCALE MOTIONS, by Robert G. Fleagle, June 1957. 36 p. AF CRC TR 57-203; Contr. AF 19(604)-314. AD-113605.
Order from LC mi $3.00, ph $6.30 PB 133752

Weather Services, Inc., Boston, Mass.
FREQUENCY DISTRIBUTIONS OF HOURLY TEMPERATURES AT MID-LATITUDE STATIONS, July 1957. 48 p. AF CRC TR 57-200; Contr. AF 19 (604)-1854. AD-117267.
Order from LC mi $3.30, ph $7.80 PB 129343

Weizmann Inst. of Science, Rehovot (Israel).
THE OSCILLATIONS OF THE EARTH, by C. L. Pekeris and H. Jarosch, Nov 1956. 27 p. Contr. NONR-1823(00).
Order from LC mi $2.70, ph $4.80 PB 129879

Interim Report.

Wisconsin U., Madison.
AN OBJECTIVE PRECIPITATION CLIMATOLOGY OF THE UNITED STATES, by Lyle H. Horn, Reid A. Bryson, et al., Mar 1957. 75 p. AF CRC TN 57-277; Contr. AF 19(604)-992. AD-117161.
Order from LC mi $4.50, ph $12.30 PB 127691

Scientific Report No. 6.

Wisconsin U., Madison.
PRELIMINARY REPORT ON THE LORENZ INTEGRATED WAVE NUMBER, by H. V. Senn and R. A. Bryson, Nov 1956. 36 p. AF CRC TN 56-480; Contr. AF 19(604)-992.
Order from LC mi $3.00, ph $6.30 PB 128586

Woods Hole Oceanographic Institution, Mass.
AN AUTOMATIC RAINDROP SAMPLER, by A. T. Spencer, D. C. Blanchard, Jan 1956. 15 p. WHOI 56-6; Contr. Nonr 798(00).
Order from LC mi $2.40, ph $3.30 PB 128580

Woods Hole Oceanographic Institution, Mass.
MARINE METEOROLOGY: ON THE STRUCTURE OF THE TRADE WIND HOIST LAYER, by Joanne S. Malkus, Jan 1957. 81 p. WHOI 57-9; Contr. Nonr-1721(00).
Order from LC mi $4.80, ph $13.80 PB 132558

Woods Hole Oceanographic Institution, Woods Hole, Mass.
MARINE METEOROLOGY: ON THE STRUCTURE OF TRADE WIND AIR BELAN CLOUD, by J. S. Malkus, Aug 1956. 43 p. WHOI Ref 56-52; Contr. Nonr-1721(00).
Order from LC mi $3.30, ph $7.80 PB 128564

Woods Hole Oceanographic Institution, Mass.
MARINE METEOROLOGY: STRESS TURBULENCE AND HEAT FLOW MEASUREMENTS OVER THE GULF OF MAINE AND SURROUNDING LAND, by A. F. Bunker, Nov 1956. 66 p. WHOI REF 56-55; Contr. Nonr 1721(00).
Order from LC mi $3.90, ph $10.80 PB 130789

Woods Hole Oceanographic Institution, Mass.
OBSERVATIONS SUPPORTING THE SALT-NUCLEI HYPOTHESIS OF RAINDROP FORMATION, by A. H. Woodcock and D. C. Blanchard, Apr 1955. 30 p. Contr. Nonr-798(00). WHOI Ref. 55-19,
Order from LC mi $2.70, ph $4.80 PB 127079

Frost Science

American Geographical Society, New York.
JUNEAU ICE FIELD RESEARCH REPORT Semiannual Status Rept., by E. R. La Chapelle et al., June 1956. 12 p. Contract N9 onr-830(01).
Order from LC mi $2.40, ph $3.30 PB 127352

American Geographical Society, New York.
THE THICKNESS OF LEMON CREEK GLACIER, ALASKA, AS DETERMINED BY GRAVITY MEASUREMENTS, by E. Thiel and E. La Chapelle, Mar 1957. 10 p. Contr. N9onr-830(01).
Order from LC mi $1.80, ph $1.80 PB 132637

American Meteorological Society, Boston, Massachusetts.
THE ICE DRIFT OF THE CENTRAL PART OF THE ARCTIC BASIN, by N. N. Zubov and M. M. Somov, 1940. 31 p. Contr. AF 19(604)-1936.
Order from LC mi $3.00, ph $6.30 PB 129433

Translated April 1953 by David Kraus. Original title: "Dreif l 'da tsentral 'noi chasti poliarnogo basseina" as published in Problemy Arktiki, (2): 51-68, 1940. Arctic Bibliography No. 19995.

Engineer Corps, Washington, D. C.
ANALYSIS OF FEBRUARY 1951 RAIN ON SNOW IN A DENSELY FORESTED AREA, 15 Apr 1955. 37 p.
Order from LC mi $3.00, ph $6.30 PB 128396

Snow Investigations Research Note No. 24.

Lamont Geological Observatory, Palisades, N. Y.
ISOTOPIC STUDIES ON THE GREENLAND CONTINENTAL GLACIER, by J. Laurence Kulp et al., 31 Oct 1957. 55 p. AF CRC TR 58-212; Contr. AF 19(604)-1891. AD-146863.
Order from LC mi $3.60, ph $9.30 PB 133788

Minnesota U. Engineering Experiment Station, Minneapolis.
PRELIMINARY INVESTIGATIONS OF SOME PHYSICAL PROPERTIES OF SNOW, by H. Bader and B. L. Hansen, June 1951. 89 p. SIPRE 7; Contracts DA-21-018-ENG-221 and DA-21-018-ENG-200.
Order from LC mi $4.80, ph $13.80 PB 129321

Minnesota U. Engineering Experiment Station, Minneapolis.
REVIEW OF THE PROPERTIES OF SNOW AND ICE, by H. Bader and J. A. Joseph, July 1951. 162 p. SIPRE-4.
Order from LC mi $7.80, ph $25.80 PB 129316

National Aeronautical Establishment (Canada).
ICING MEASUREMENTS WITH A SINGLE ROTATING CYLINDER, by C. K. Rush and R. L. Wardlaw, Sep 1957. 21 p. LR-206.
Order from LC mi $2.70, ph $4.80 PB 130037

Lab. Order 11950A.

Naval Civil Engineering Research and Evaluation Lab., Port Hueneme, Calif.
DEICING MATERIAL FOR MILITARY RUNWAYS, by Peter J. Hearst, 1 Mar 1957. 34 p. Technical memo. M-124.
Order from LC mi $3.00, ph $6.30 PB 130998

Snow Ice and Permafrost Research Establishment, Wilmette, Ill.
ADHESIVE PROPERTIES OF ICE, by H. H. G. Jellinek, Sep 1957. 24 p. SIPRE 38.
Order from LC mi $2.70, ph $4.80 PB 132565

Snow Ice and Permafrost Research Establishment, Wilmette, Ill.
BIBLIOGRAPHY ON SNOW ICE AND PERMAFROST, Jan 1957. 216 p. SIPRE RP 12.
Order from LC mi $9.30, ph $33.30 PB 130788

With Abstracts Volume XI.

Snow, Ice and Permafrost research Establishment, Wilmette, Illinois.
BIBLIOGRAPHY ON SNOW, ICE AND PERMAFROST, WITH ABSTRACTS, n.d. 238 p. SIPRE 12, Vol. XII.
Order from LC mi $10.20, ph $36.30 PB 133866

Snow, Ice and Permafrost Research Establishment, Wilmette, Ill.
ENERGY OF SNOW COMPACTION AND ITS RELATION TO TRAFFICABILITY, by J. K. Landauer and F. Royse, Oct 1956. 11 p. SIPRE RP-14.
Order from LC mi $2.40, ph $3.30 PB 132803

Snow, Ice, and Permafrost Research Establishment, Wilmette, Illinois.
SNOW COMPACTION, by Major Andrew Taylor, Jan 1953. 85 p. SIPRE 13.
Order from LC mi $4.80, ph $13.80 PB 129320

Snow, Ice and Permafrost Research Establishment, Wilmette, Ill.
STRENGTH STUDIES OF HIGH-DENSITY SNOW, by T. R. Butkovich, Oct 1956 23 p. SIPRE RP-18.
Order from LC mi $2.70, ph $4.80 PB 132802

Snow, Ice, and Permafrost Research Establishment, Wilmette, Ill.
STRENGTH STUDIES OF SEA ICE, by T. R. Butkovich, Oct 1956. 19 p. SIPRE RP 20.
Order from LC mi $2.40, ph $3.30 PB 128112

Snow Ice and Permafrost Research Establishment, Wilmette, Ill.
STRUCTURE OF ICE, by Rudolph Brill, 15 July 1957. 72 p. SIPRE 33.
Order from LC mi $4.50, ph $12.30 PB 132567

Snow Ice and Permafrost Research Establishment, Wilmette, Ill.
THIN SECTION ANALYSIS, by H. H. G. Jellinek, July 1957. 18 p. SIPRE-35.
Order from LC mi $2.40, ph $3.30 PB 132550

Snow, Ice, and Permafrost Research Establishment, Wilmette, Ill.
WHITE-OUT IN GREENLAND, by R. W. Gerdel and M. Diamond, Dec 1956. 16 p. SIPRE RP 21.
Order from LC mi $2.40, ph $3.30 PB 128113

Southwest Research Inst., San Antonio, Texas.
RESEARCH ON THE ELECTROMAGNETIC MEASUREMENT OF ICE PROPERTIES FROM AIRCRAFT, by John C. Cook, Aug 1957. 68 p. AF CRC TR 57-219; Contr. AF 19(604)-2137. AD-133698.
Order from LC mi $3.90, ph $10.80 PB 130747

Geodesy

Cornell U., Ithaca, N. Y.
RESEARCH INVESTIGATION INTO FACTORS AFFECTING LONG-RANGE PHOTOGRAPHY, by R. Strohl, H. Laster, et al. Sep 1955. 104 p. Contr. DA 36-039-SC-56727.
Order from LC mi $5.70, ph $6.80 PB 128166

Supplement to Final Report.

Engineer Research and Development Labs., Fort Belvoir, Va.
MAPPING WITH MINIMUM GROUND CONTROL, by B. J. Bodnar, 13 June 1957. 25 p. 1483-TR.
Order from LC mi $2.70, ph $4.80 PB 132527

Engineer Research and Development Labs., Fort Belvoir, Va.
SHORAN PHOTOGRAMMETRIC MAPPING INSTRUCTIONS, by A. M. Wilson, 15 May 1950. 153 p. R 1168.
Order from LC mi $7.50, ph $24.30 PB 127704

Geophysical Inst., U. of Alaska, College.
AN ANALYSIS OF THE SOLAR AND LUNISOLAR DAILY VARIATIONS IN THE GEOMAGNETIC FIELD AT SITKA, ALASKA 1902-1952, by Joseph C. Cain, Apr 1957. 135 p. Contr. AFCRC TR 57-272; AF 19(604)-503. Thesis.
Order from LC mi $6.90, ph $2.30 PB 128974

Naval Ordnance Test Station, China Lake, Calif.
MATHEMATICAL METHODS USED TO DETERMINE THE POSITION AND ATTITUDE OF AN AERIAL CAMERA, by Otto Neal Strand, Mar 1956. 49 p. NOTS 1585; NAVORD 5333.
Order from LC mi $3.30, ph $7.80 PB 130416

Office of Naval Research, Washington, D. C.
A REPORT ON THE THEORY AND APPLICATION OF SINGLE HEADING FLIGHT ADDITIONAL CONCLUSIONS AND POSSIBILITIES OF PRESSURE NAVIGATION. Mar 1946. 52 p. NAVEXOS P-371.
Order from LC mi $3.60, ph $9.30 PB 128759

Smithsonian Inst. Washington, D. C.
DYNAMICAL LIMITS ON A LUNAR ORIGIN FOR TEKTITES, by Carlos M. Varsavsky, 20 Nov 1957. 25 p. Contract 18(600)-1596.
Order from LC mi $2.70, ph $4.80 PB 132603

Geology

Astrophysical Observatory, Smithsonian Institution, Washington, D. C.
IMPACT EFFECTS AND TEKTITES, by John S. Rinehart, 30 Oct 1957. 12 p. AF OSR TN 57-659; Contr. AF 18(600)-1596. AD-136652.
Order from LC mi $2.40, ph $3.30 PB 132126

Bureau of Mines, Washington, D. C.
OIL YIELDS OF SECTIONS OF GREEN RIVER OIL SHALE IN COLORADO, 1952-54, by K. E. Stanfield et al., Apr 1957. 138 p. RI 5321.
Order from LC mi $6.90, ph $21.30 PB 127546

Louisiana State U., Baton Rouge.
QUATENARY GEOLOGY OF THE BENGAL BASIN, by J. P. Morgan and W. G. McIntire, 15 Dec 1956. 61 p. Contr. Nonr-35608.
Order from LC mi $3.90, ph $10.80 PB 130569

Wharton School of Finance and Commerce, U., of Pennsylvania, Philadelphia.
EMPTY AREAS WHICH ARE GENERALLY WELL-DRAINED AND OF LOW RELIEF IN PENNSYLVANIA AND NEW JERSEY, by James P. Latham, 1 Apr 1955. 60 p. maps. Contr. NONR-551 (01).
Order from LC mi $3.60, ph $9.30 PB 127035

Wisconsin U., Madison.
HALF-HEMISPHERIC 500 mb TOPOGRAPHY DESCRIPTION BY MEANS OF ORTHAGONAL POLYNOMIALS: PART II SPECIFICATION, by Askar Essenwanger, Mar 1958. 71 p. AF CRC TN 58-266; Contr. AF 19(604)-992. AD-152511.
Order from LC mi $3.90, ph $10.80 PB 133851

Mineralogy

Building Research Inst., National Academy of Sciences, Washington, D. C.
MODERN MASONRY: NATURAL STONE AND CLAY PRODUCTS. RESEARCH CORRELATION CONFERENCE, by Richard M. Bennett, Joseph P. Moore, et al., 19 Sep and 20 1956. 154 p. photos, dwgs, tables.
Order from LC mi $7.50, ph $24.30 PB 127075

Massachusetts Inst., of Technology, Cambridge.
SELF-DIFFUSION OF GOLD IN GOLD-NICKEL ALLOYS, by A. D. Kurtz and B. L. Averback, Oct 1954. 23 p. WADC TR 54-493; Contr. AF 33(038)-23281.
Order from LC mi $2.70, ph $4.80 PB 133563

Michigan U., Ann Arbor.
RESIDUAL RESISTIVITY OF GOLD ALLOYS: DEPENDENCE ON PERIODIC TABLE, by F. J. Blatt, 28 Aug 1957. 15 p. AFOSR TN 57-503; Contr. AF 49(638)-70. AD-136493.
Order from LC mi $2.40, ph $3.30 PB 130229

Princeton, U., N. J.
LARGE-SCALE TRIAXIAL "CELL" TESTS PROGRESS REPORT, by Gregory P. Tschebotarioff and Edward R. Ward, 2 Aug 1956. 176 p. Contr. Nonr-1009 (00).
Order from LC mi $8.10, ph $27.30 PB 128077

Contains two thesis.

Oceanography

American Meteorological Society, Boston, Mass.
THE WATER MASSES OF THE CENTRAL ZONE OF THE ARCTIC OCEAN, by V. T. Timofeev, 1948. 9 p. Contr. AF 19(604)-1936.
Order from LC mi $1.80, ph $1.80 PB 128649

Trans. from Russian by D. Kraus, Dec. 1956. From Vesesoiuznyi geograficheskii s'ezd. 2d, Leningrad, trudy, 2: 315-320, 1948.

California U., Berkeley.
ASYMPTOTIC DEVELOPMENTS FOR LONG SURFACE WAVES, by R. C. MacCamy, June 1956. 26 p. Contr. N onr 222(25).
Order from LC mi $2.70, ph $4.80 PB 128584

Chesapeake Bay, Inst., Johns Hopkins U., Annapolis, Md.
BLUE CRAB SURVEY, by D. W. Pritchard, June 1956. 114 p. Contract Nonr 248(20).
Order from LC mi $6.00, ph $18.30 PB 127407

Chesapeake Bay Inst., Johns Hopkins U., Annapolis, Md.
THE CHESAPEAKE BAY INSTITUTE CONDUCTIVITY-TEMPERATURE-INDICATOR, by E. W. Schiemer and D. W. Pritchard, Jan 1957. 46 p. CBI TR XII, Contr. Nonr-248(20); Contr. Nonr-248(30).
Order from LC mi $3.30, ph $7.80 PB 132626

Chesapeake Bay Inst., Johns Hopkins U., Annapolis, Md.
THE TRI-FILTER HYDROPHOTOMETER MR VIII, by Jerome Williams, June 1955. 45 p. JHU Ref. 55-4; Contr. Nonr 248(20). Contr. Nonr-248(30).
Order from LC mi $3.30, ph $7.80. PB 127100

Chesapeake Bay Inst., Johns Hopkins U., Annapolis, Md.
UPPER CHOPTANK RIVER SPRING CRUISE I. 5 Apr-8 1954, II. 24 May-28 1954, by D. W. Pritchard, Nov 1956. 32 p. Contr Nonr 248(20); Contr. Nonr 248(30).
Order from LC mi $3.00, ph $6.30. PB 129960

Data Report 28, reference 56-2.

Chicago U., Ill.
SEA SURFACE TEMPERATURES OF THE NORTH ATLANTIC, 1887-1936, by H. Riehl, Jan 1956. 131 p. Contr. N6ori-02036.
Order from LC mi $6.90, ph $21.30 PB 128708

Engineer Corps, Wash., D. C.
BIBLIOGRAPHY ON TIDAL HYDRAULICS SUPPLEMENTARY MATERIAL COMPILED FROM MAY 1955 TO MAY 1957. CWI ITEM NO. 816. TIDAL FLOWS IN RIVERS AND HARBORS, May 1957. 16 p. Committee on Tidal Hydraulics, Report No. 2, Supplement No. 2.
Order from LC mi $4.50, ph $12.30 PB 128684

Engineer Corps, Wash., D. C.
FRESH WATER-SALT WATER DENSITY CURRENTS, A MAJOR CAUSE OF SILTATION IN ESTUARIES, by E. A. Schultz and H. B. Simmons, Apr 1957. 35 p.
Order from LC mi $3.00, ph $6.30 PB 128115

Technical Bulletin 2.

Experimental Towing Tank, Stevens Inst. of Tech., Hoboken, N. J.
PLANNING FOR THREE-DIMENSIONAL RESEARCH IN WAVES, by E. V. Lewis, June 1956. 11 p. ETT TM 109.
Order from LC mi $2.40, ph $3.30 PB 128673

Hawaii U., Honolulu.
OBSERVATIONS ON THE ANATOMY, BOTH MACROSCOPICAL, OF THE INTESTINAL TRACT AND OF ACCOMPANYING ORGANS, AND ON THE PHYSIOLOGY OF DIGESTION IN HOLOTHURIA ATRA JAGER, WITH ADDITIONAL OBSERVATIONS ON THE ECOLOGY OF HOLOTHURIANS AND THEIR POSSIBLE ROLE IN THE DESTRUCTION OF CORAL REEFS, by S. M. Frefy, Dec 1956. 95 p. Contr. Nonr- 1501 (00).
Order from LC mi $5.40, ph $15.30 PB 130341

Hydrodynamics Lab., Calif. Inst. of Tech., Pasadena.
BREAKING WAVE FORCES ON PLANE BARRIERS, by J. H. Carr, Nov 1954. 58 p. CIT HL E-11.3; Contr. Noy-12561.
Order from LC mi$3.60, ph $9.30 PB 130667

Hydrodynamics Lab., Calif. Inst. of Tech., Pasadena.
FINAL REPORT ON CONTR NOy-12561, by John H. Carr, Nov 30, 1954. 15 p. CIT HL E-11 4; Contr. NOy-12561.
Order from LC mi $2.40, ph $3.30 PB 129401

Hydraulic model experiments to guide improvements at Apra Harbor Guam.

Hydrodynamics Lab., Calif. Inst. of Tech., Pasadena.
WAVE FORCES ON CURVED AND STEPPED BARRIERS, by John H. Carr, June 1954. 36 p. CIT HL E-11.2; Contr. NOY-12561.
Order from LC mi $3.00, ph $6.30 PB 130663

Institute of Engineering Research, U. of Calif., Berkeley.
CHARACTERISTICS OF WAVES GENERATED BY A LOCAL SURFACE DISTURBANCE, by J. E. Prins, Aug 1956. 104p. IER Series 99 Issue 1. Contr. Nonr-222(42).
Order from LC mi $5.70, ph $16.80 PB 128152

Marine Lab., U. of Miami, Coral Gables, Fla.
TROPICAL OCEANOGRAPHY, Frank Chew and Lansing P. Wagner, June 1956. 77 p. Contract Nonr 840(01).
Order from LC mi $4.50, ph $12.30 PB 127361

Marine Lab., U. of Miami, Coral Gables, Fla.
TROPICAL OCEANOGRAPHY. SEMI-ANNUAL REPORT OF INVESTIGATION FOR THE PERIOD OF 15 NOV 1955 TO 15 MAY 1956, by Frank Chew and L. P. Wagner, Mar 1957. 131 p. Contr. Nonr 840 (01).
Order from LC mi $6.90, ph $21.30 PB 130422

National Research Council of Canada. Div. of Mechanical Engineering.
THE DESIGN AND DEVELOPMENT OF A CAPACITIVE WAVE PROFILE RECORDER, by E. H. Bowler and R. J. Harron, Apr 1957. 28 p. MI-818.
Order from LC mi $2.70, ph $4.80 PB 128798

New York U., N. Y.
TIDAL OSCILLATIONS IN AN ATMOSPHERE WITH MERIDIONAL TEMPERATURE GRADIENT, by Manfred Siebert, July 1957. 19 p. Contr. AF 19 (604) - 1738.
AD 113609.
Order from LC mi $2.40, ph $3.30 PB 132201

Scientific Report No. 3.

New York U. Coll. of Engineering, N. Y.
A RANDOM MODEL OF THE SEA SURFACE GENERATED BY A HURRICANE, by Murray Rosenblatt, Sep 1956. 24 p. TR 56-1; Contr. Nonr-285(03).
Order from LC mi $2.70, ph $4.80 PB 128501

New York U., Coll. of Engineering, N. Y.
THE RATIO OF THE SEA-SURFACE WIND TO THE GRADIENT WIND, by Peter W. Johnson, n. d. 6 p. Contr. Nonr-285 (03).
Order from LC mi $1.80, ph $1.80 PB 127183

Scripps Institution of Oceanography, U. of Calif., Berkeley.
PROGRESS REPORT-JANUARY-MARCH 1956, by Robert F. Devereux, Sept 11, 1956. 16 p. S10 56-26 Contr. No. bsr-72512.
Order from LC mi $2.40, ph $3.30 PB 132218

Scripps Institution of Oceanography, U. of Calif., La Jolla.
PROGRESS REPORT APRIL-JUNE 1956, 31 Dec 1956. 19 p. S10 56-36; Contr. NObsr-72512.
Order from LC $2.40, ph $3.30 PB 130637

Scripps Institution of Oceanography, U. of Calif., La Jolla.
DATA COLLECTED BY SCRIPPS INSTITUTION VESSELS ON EASTROPIC EXPEDITION, SEPT DEC 1955. 15 Oct 1956. 150 p. SIO, Ref 56-28.
Order from LC mi $7.20, ph $22.80 PB 128757

Scripps Institution of Oceanography, U. of Calif., La Jolla.
MEASUREMENT OF SLOPES OF HIGH-FREQUENCY WIND WAVES, by Charles S. Cox, 18 Jan 1957. 40 p. AF CRC TR-57-282; Contr. AF19(604)-1053.
Order from LC mi $3.00, ph $6.30. PB 128615

Technical Information Div., Library of Congress, Washington, D. C.
OCEANOGRAPHIC REFERENCES FROM UNDERWATER SOUND. VOL. I (REFS. LI-L2000), by G. B. Ward and M. E. Schroder, Aug 1956. 16 p. Contr. NAonr 212-56.
Order from LC mi $2.40, ph $3.30 PB 128622

Texas A and M Coll., College Station.
NET WEEKLY VARIATION OF VERTICAL TEMPERATURE STRUCTURE IN THE UPPER OCEAN LAYERS (AUTUMN, NORTH ATLANTIC), by Robert A. Gilcrest, Jan 1957. 72 p. Contr. N7onr-48702; Contr. CWB-8727.
Order from LC mi $4.50, ph $12.30 PB 132468

Texas A and M Coll., College Station.
OCEANOGRAPHIC DATA, GULF OF MEXICO, by K. H. Drummond, Dec 1956. 86 p. Contr. N7onr-48702.
Order from LC mi $4.80, ph $13.80 PB 130768

Texas A and M Coll., College Station, Tex.
OCEANOGRAPHIC DATA, GULF OF MEXICO, by Kenneth H. Drummond, Feb 1957. 89 p. Contr. N7onr-48702.
Order from LC mi $4.80, ph $13.80 PB 132537

Texas A and M Coll., College Station, Texas.
THE ORIGIN AND EFFECTS OF LONG-PERIOD WAVES IN PORTS, by Basil W. Wilson, Aug 1956. 69 p.
Order from LC mi $3.90, ph $10.80 PB 128322

Texas A and M Coll., College Station.
PHYSICAL CHEMICAL GEOLOGICAL AND BIOLOGICAL OCEANOGRAPHY IN THE GULF OF MEXICO, D. F. Leipper et al., June 1956. 49 p. Contract N7onr 48702.
Order from LC $3.30, ph $7.80 PB 127408

Texas A and M Coll., College Station.
STRESS-STRAIN CHARACTERISTICS OF A DYNAMICALLY LATERAL LOADED PILE IN SOFT MARINE SEDIMENTS—A MODEL STUDY, by Roy D. Gaul, Oct 1956. 70 p. Contr. N7onr 48702, Ref 56-31T.
Order from LC mi $3.80, ph $10.80 PB 129987

Texas A and M Coll., College Station.
WIND STRESS MEASUREMENTS AT CAPLEN PIER, by William H. Clayton, Aug 1956. 54 p. Contr. N7onr-48702.
Order from LC mi $3.60, ph $9.30 PB 128413

Texas A and M Research Foundation, College Station.
THE DESIGN WAVE IN DEEP OR SHALLOW WATER, STORM TIDE, AND FORCES ON VERTICAL PILING AND LARGE SUBMERGED OBJECTS, by R. O. Reid and C. L. Bretschneider, Oct 1953. 63 p. Contr. NOy-27474. Contr. DA-49-055-eng-18; Contr. N7onr-48704.
Order from LC mi $3.90, ph $10.80 PB 132469

Texas A and M Research Foundation, College Station.
DISSIPATION OF WAVE ENERGY ON CONTINENTAL SHELF, GULF OF MEXICO, by Charles L. Bretschneider & Warren C. Thompson, Feb 28, 1955. 70 p. Contr. N7onr-487(06).
Order from LC mi $3.90, ph $10.80 PB 127140

Washington U., Seattle.
EASTERN NORTH PACIFIC AND GULF OF ALASKA OFFSHORE PHYSICAL AND CHEMICAL DATA APR 1954-JAN 1955, by Eugene E. Collias, Cuthbert M. Love, et al. June 1956. 40 p. OR 56-10; Contr. N8onr-520/III; Contr. Nonr-477(10); Contr. Nonr-477(01). Technical Report 49.
Order from LC mi $3.00, ph $6.30 PB 127718

Washington U., Seattle.
PHYSICAL AND CHEMICAL DATA FOR PUGET SOUND AND APPROACHES, JANUARY-DECEMBER, 1954, by Clifford A. Barnes and Eugene E. Collias, June 1956. 267 p. Contr. N 8 onr-520/III; Contr. Nonr - 477 (10); Contr. Nonr - 477 (01).
Order from LC mi $11.10, ph $41.10 PB 128146

Reference 56-7. Technical Report 46.

Washington U., Seattle.
PHYSICAL AND CHEMICAL DATA PUGET SOUND AND APPROACHES, Aug 1956. 150 p. TR 51 Contr. N8onr-520/III; Contr. Nonr-477 (10); Contr. Nonr-477 (01).
Order from LC mi $7.20, ph $22.80 PB 128411

Reference 56-13.

Washington U., Seattle.
A PRESSURE-PLATE CURRENT METER FOR MEASURING VELOCITIES NEAR THE BOTTOM OF WATERCOURSES, by John H. Lincoln, Nov 1956. 14 p. Contr. NONR-477(10); Contr. N8ONR-520/III.
Order from LC mi $2.40, ph $3.30 PB 129924

Special Report No. 26.

Woods Hole Oceanographic Institution, Mass.
AN AIRBORNE FLAME PHOTOMETER AND ITS USE IN THE SCANNING OF MARINE ATMOSPHERES FOR SEA-SALT PARTICLES, by A. H. Woodcock and A. T. Spenser, Nov 1956. 25 p. WHOI TR 14; Contr Nonr-798 (00).
Order from LC $2.70, ph $4.80 PB 129895

Reference No 56-63.

Woods Hole Oceanographic Institution, Mass.
BOTTOM TOPOGRAPHY FROM CRAWFORD CRUISE TEN OBTAINED FOR THE INTERNATIONAL GEOPHYSICAL YEAR OF 1957-58, by R. A. Lufburrow, Oct 1957. 54 p. WHOI ref-57-60.
Order from LC mi $3.60, ph $9.30 PB 132746

Woods Hole Oceanographic Institution, Mass.
CONSECUTIVE TEMPERATURE MEASUREMENTS AT 500 METERS OFF BERMUDA, by Henry Stommel and Sloat F. Hodgson, July 1956. 29 p. WHOI Ref. 56-43; Contr. Nonr - 769 (00).
Order from LC mi $2.70, ph $7.80 PB 128073

Woods Hole Oceanographic Institution, Mass.
OCEANOGRAPHIC DATA FROM CRAWFORD CRUISE TEN OBTAINED FOR THE INTERNATIONAL GEOPHYSICAL YEAR OF 1957-58, by F. C. Fuglister, Oct 1957. 141 p. WHOI ref.-57-54.
Order from LC mi $7.20, ph $22.80 PB 132747

Woods Hole Oceanographic Institution, Mass.
SOME RECENT OBSERVATIONS AND SLOPE, by H. G. Farmer, June 1956. 72 p. WHOI Ref. 56-37; Contr. Nonr 769 (00).
Order from LC mi $4.50, ph $12.30 PB 127149

Physics of the Atmosphere

Air Force Cambridge Research Center, Mass.
ACCURACY OF WIND DETERMINATION FROM THE TRACK OF A FALLING OBJECT, by Vincent E. Lally and Robert Leviton, Mar 1958. 21 p. AF CRC TN 58-213, GRD SG 93.
AD 146858.
Order from LC mi $ 2.70, ph $4.80 PB 133632

American Meteorological Society, Boston, Mass.
TURBULENCE AND THE VERTICAL PROFILE OF ELECTRIC FIELD INTENSITY IN THE LOWER LAYER OF THE ATMOSPHERE, by P. N. Tverskoi and M. P. Timofeev, 1948. 19 p. Contr. AF 19 (604) - 1936.
Order from LC mi $2.40, ph $3.30 PB 130784

Translated by N. Dane and V. Kraus, Oct 1955. 1. Turbulentnost i vertikal nyi profil napriazhennosti elektricheskogo polia v nizhnem Sloe atmosfery. 2. Tverskoi, P. N. and M. P. Timofeev. Izvestiia Cikadamii Nauk SSSR Seriia geograficheskaia i geofizicheskaia 12(5):377-386, 1948.

Blue Hill Meteorological Observatory, Harvard U., Mass.
ADVECTION AND THE MELTING LAYER, by Raymond Wexler. May 31, 1957. 14 p. AFCRC TN-57-479, MRS 4; Contr. AF 19 (604)-950. AD-117239.
Order from LC mi $2.40, ph $3.30 PB 129613

Blue Hill Meteorological Observatory, Harvard U., Mass.
MOISTURE SUPPLY AND GROWTH OF STRATIFORM PRECIPITATION, by Raymond Wexler and David Atlas. June 27, 1957. 21 p. MRS 6; AFCRC TN-57-491; Contract AF 19(604)-950.
AD 117259.
Order from LC mi $2.70, ph $4.80 PB 129593

California U., Los Angeles.
LARGE-SCALE SYNOPTIC PROCESSES. FINAL REPORT, by Jacob Bjerknes, Philip F. Clapp et al. June 30, 1957. 505 p. AF CRC TR 57-206; Contr. AF 19(604)-1286.
AD 113610
Order from LC mi $11.10, ph $77.40 PB 129633

Chicago U., Ill.
HURRICANE CLOUD PHYSICS RESEARCH, FINAL REPORT, by R. R. Braham, Jr., B. Ackerman, etc., Jan 1958. 72 p. Contr. Cwb-9021.
Order from LC mi $4.50, ph $12.30 PB 133868

Chicago U., Ill.
A PNEUMATICALLY OPERATED CLOUD DROPLET SAMPLER, by G. G. Owens, 1 June 1957. 23 p. Contr. Cwb-9021.
Order from LC mi $2.70, ph $4.80 PB 132799

Tech. Note No. 7.

Colorado U., Boulder.
SCIENTIFIC REPORT NO. 7, by J. W. Warwick and Harold Zirin, 26 June 1957. 11 p. AF CRC TN 57-568; Contr. AF 19 (604)-1491.
AD 117293.
Order from LC mi $2.40, ph $3.30 PB 132114

Cook Electric Company, Skokie, Ill.
STUDY OF THE USEFULNESS OF UNITARY DIFFERENTIAL NOTATION FOR STORING AND UTILIZING METEOROLOGICAL DATA, by Walter A. Bohan and Robert A. Payne, et al., 31 July 1957. 72 p. Contr. AF 19(604) 1106; AF CRC TN 57-489. AD 117235.
Order from LC mi $4.50, ph $12.30 PB 129664

Cooperative Research Foundation, San Francisco, Calif.
WIND CORRELATION AND REGRESSION, by Arnold Court, 19 Feb 1958. 19 p. AF CRC TN 58-230. AD 152460.
Order from LC mi $2.40, ph $3.30 PB 133748

Cornell U., School of Electrical Engineering, Ithaca, N. Y.
ANALYSIS OF THE FADING OF VERY HIGH FREQUENCY RADIO WAVES PROPAGATED BY THE AURORALLY DISTURBED IONOSPHERE, by Kenneth L. Bowles, 1 June 1954. 61 p. Research Report EE 204; Contr. DA36-039-SC-56748.
Order from LC mi $3.90, ph $10.80 PB 127666

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
A CROSSCORRELATOR FOR AN IONOSPHERIC SOUNDER AT THIRTY MEGACYCLES, by David W. Clark. 35 p. Research Report EE 275; Contr. DA 36-039-SC-56748.
Order from LC mi $3.00, ph $6.30 PB 127747

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
THE FADING OF IONOSPHERIC SIGNALS, by Walter Aloyisius Flood Jr., 15 Aug 1954. 114 p. TR 17 (Rsch Report EE 214); Contr. DA36-039-SC-56748.
Order from LC mi $6.00, ph $18.30 PB 127665

Thesis for PhD.

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
EXTENSION OF THE MAGNETO-IONIC THEORY-WAVE PROPAGATION IN THE IONOSPHERE INCLUDING ANTENNA RADIATION AND PLANE-WAVE SCATTERING, by L. G. Abraham, Jr., Aug 1, 1953. 136 p. Research Report EE 168; Contr. DA 36-039-SC-15547.
Order from LC mi $6.90, ph $21.30 PB 127936

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
A RADIO-ECHO STUDY OF ATMOSPHERE TURBULENCE IN THE LOWER ATMOSPHERE, by Robert Cohen, 25 May 1956. 56 p. Research Report EE 293; Contr. DA36-039-SC-56748.
Order from LC mi $3.60, ph $9.30 PB 127740

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
THE SCATTERING OF RADIO WAVES IN THE ATMOSPHERE BY THE TURBULENT FLUCTUATIONS IN REFRACTIVE INDEX, by G. K. Batchelor, 15 Sep 1955. 17 p. Research Report EE 262; Contr. DA36-039-SC-56748.
Order from LC mi $2.40, ph $3.30 PB 127743

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
SOME PRACTICAL ASPECTS OF AURORAL PROPAGATION, by H. G. Booker, 10 Dec 1955. 5 p. Research Report EE 274; Contr. DA36-039-SC-56748.
Order from LC mi $1.80, ph $1.80 PB 127746

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
SOME RECENT EXPERIMENTS WITH VHF RADIO ECHOES FROM AURORA AND THEIR POSSIBLE SIGNIFICANCE IN THE THEORY OF MAGNETIC STORMS AND AURORAS, by Kenneth L. Bowles, 1 June 1955. 66 p. TR-22; Research Report EE 248; Contr. DA 36-039-SC-56748.
Order from LC mi $3.90, ph $10.80 PB 127664

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
STUDIES ON PROPAGATION IN THE IONOSPHERE, PROGRESS REPORT NO. 1, by W. A. Flood, L. G. Abraham, Jr., et al. Sep 30, 1952. 32 p. Contr. DA-36-039-SC-15547.
Order from LC mi $3.00, ph $6.30 PB 127974

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
STUDIES ON PROPAGATION IN THE IONOSPHERE, PROGRESS REPORT NO. 2, by H. G. Booker, W. A. Flood, et al. Dec 31, 1952. 33 p. Research Report EE135; Contr. DA-36-039-SC-15547.
Order from LC mi $3.00, ph $6.30 PB 127975

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
STUDIES ON PROPAGATION IN THE IONOSPHERE. PROGRESS REPORT NO. 4, by W. Flood, R. Cohen, et al. June 30, 1953. 59 p. Research Report EE 156; Contr. DA-36-039-SC-15547.
Order from LC mi $3.60, ph $9.30 PB 127977

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
STUDIES ON PROPAGATION IN THE IONOSPHERE. PROGRESS REPORT NO. 5, by K. Bowles, R. Dyce, et al. 30 Sep 1953. 39 p. Research Report EE 176; Contr. DA-36-039-SC-15547.
Order from the LC mi $3.00, ph $6.30 PB 127933

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
STUDIES ON PROPAGATION IN THE IONOSPHERE. PROGRESS REPORT NO. 6, by H. G. Booker, C. W. Gartlein, et al, 31 Dec 1953. 44 p. Research Report EE 191; Contr. DA-36-039-SC-15547
Order from LC mi $3.30, ph $7.80 PB 127932

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
STUDIES ON PROPAGATION IN THE IONOSPHERE. PROGRESS REPORT NO. 7, by Henry G. Booker and R. Cohen. 31 Mar 1954. 23 p. Research Report EE-198; Contr. DA 36-039-SC-15547.
Order from LC mi $2.70, ph $4.80 PB 127935

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
STUDIES ON PROPAGATION IN THE IONOSPHERE. PROGRESS REPORT NO. 8, (Final) by C.W.Gartlein, K. L. Bowles, et al, 30 June 1954. 49 p. Research Report EE 213; Contr. DA-36-039-SC-15547.
Order from LC mi $3.30, ph $7.80 PB 127934

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
STUDIES ON PROPAGATION IN THE IONOSPHERE. PROGRESS REPORT NO. 1, 30 June 1954, by R.Dyce. 23 p. Research Report EE 209; Contr. DA36-039-SC-56748.
Order from LC mi $2.70, ph $4.80 PB 127676

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
STUDIES ON PROPAGATION IN THE IONOSPHERE. PROGRESS REPORT NO. 2, 30 Sep 1954. 36 p. Research Report EE 224; Contr. DA36-039-SC-56748.
Order from LC mi $3.00, ph $6.30 PB 127675

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
STUDIES ON PROPAGATION IN THE IONOSPHERE, PROGRESS REPORT NO. 3. 30 Dec 1954. 49 p. Research Report EE 237; Contr. DA 36-039-SC-56748.
Order from LC mi $3.30, ph $7.80 PB 127674

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
STUDIES ON PROPAGATION IN THE IONOSPHERE. PROGRESS REPORT NO. 4. 31 Mar 1955. 27 p. Research Report EE 244; Contr. DA36-039-SC-56748.
Order from LC mi $2.70, ph $4.80 PB 127673

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
STUDIES ON PROPAGATION IN THE IONOSPHERE. PROGRESS REPORT NO. 5, 30 June 1955. 42 p. Research Report EE 256; Contr. DA3o-039-SC-56748.
Order from LC mi $3.30, ph $7.50 PB 127672

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
STUDIES ON PROPAGATION IN THE IONOSPHERE. PROGRESS REPORT NO. 6. 30 Sep 1955. 15 p. Research Report EE 267; Contr. DA36-039-SC-56748.
Order from LC mi $2.40, ph $3.30 PB 127671

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
STUDIES ON PROPAGATION IN THE IONOSPHERE. PROGRESS REPORT NO. 7. 31 Dec 1955. 15 p. Research Report EE 281; Contr. DA36-039-SC-56748.
Order from LC mi $2.40, ph $3.30 PB 127670

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
STUDIES ON PROPAGATION IN THE IONOSPHERE. PROGRESS REPORT NO. 8, by Henry Booker and W. Klemperer, 31 Mar 1956. 2 p. Research Report EE 290; Contr. DA 36-039-SC-56748.
Order from LC mi $2.70, ph $4.80 PB 127669

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
STUDIES ON PROPAGATION IN THE IONOSPHERE. PROGRESS REPORT NO. 9, by W. Klemperer and P. Weaver, 30 June 1956. 23 p. Research Report EE 300; Contr. DA36-039-SC-56748.
Order from LC mi $2.70, ph $4.80 PB 127668

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
STUDIES ON PROPAGATION IN THE IONOSPHERE. 30 Sep 1956. 27 p. Final Report. Research Report EE 309; Contr. DA36-039-SC-56748.
Order from LC mi $2.70, ph $4.80 PB 127667

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
A THEORY OF SCATTERING BY NON-ISOTROPIC IRREGULARITIES WITH APPLICATION TO RADAR REFLECTIONS FROM THE AURORA, by H. G. Booker. 30 Oct 1955. 23 p. Research Report EE-269; Contr. DA36-039-SC-56748.
Order from LC mi $2.70, ph $4.80 PB 127745

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
TURBULENCE IN THE IONOSPHERE WITH APPLICATION TO METEOR TRAILS, RADIO STAR SCINTILLATION, AURORAL RADAR ECHOES, AND OTHER PHENOMENA, by H. G. Booker. 10 June 1956. 72 p. Research Report EE 296; Contr. DA 36-039-SC-56748.
Order from LC mi $4.50, ph $12.30 PB 127742

Denver, U., Colorado.
HIGH ALTITUDE INFRARED STUDIES OF THE ATMOSPHERE, by David Murcray, Aug 1956 or later. 25 p. AF CRC TN 57-295; Contr. AF 19 (604)-1005. AD 117186.
Order from LC mi $2.70, ph $4.80 PB 128326

Deutscher Wetterdienst, Aachen (Germany.)
CONDENSATION NUCLEI AS CONNECTING LINK FOR METEOROLOGICAL-ELECTRICAL RELATIONS. PART II, by H. Israel, Nov 1956. 41 p. AFCRC TN 57-215; Contr. AF 61(514)-640. AD 133682.
Order from LC mi $3.30, ph $7.80 PB 133622

Technical Note No. 11 (Part II to Technical Note No. 1).

Durham U. (Great Britain).
THE DOUBLE FIELD MILL, by J. A. Chalmers and M. S. Middy, 15 Oct 1955 to 14 Oct 1956. 18 p. AF CRC TN-56-885; Contr. AF61(514)-891. AD 110251.
Order from LC mi $2.40, ph $3.30 PB 130761

Technical Note 1. Measurement of space charge in the lower atmosphere.

Durham U. (Great Britain).
RESEARCH ON POINT DISCHARGE IN THE ATMOSPHERE BOTH FROM NATURAL AND ARTIFICIAL POINTS, by J. Alan Chalmers and J. R. Kirkman, 1 Oct 1954 -30 Sep 1956. 33 p. AF CRC TR 56-464; Contr. AF 61(514)743-C. AD 110250.
Order from LC mi $3.00, ph $6.30 PB 130757

Durham U. (Great Britain).
RESEARCH ON POINT DISCHARGE IN THE ATMOSPHERE BOTH FROM NATURAL AND ARTIFICIAL POINTS, by J. A. Chalmers and J. R. Kirkman, 1 July 1955 to Apr 30, 1956. 9 p. AF CRC TN 56-496; Contr. AF61(514)-743-C.
Order from LC mi $1.80, ph $1.80 PB 130763

Technical Note 2.

Geophysical Inst., U. of Alaska College.
AURORAL ZONE ABSORPTION OF RADIO WAVES TRANSMITTED VIA THE IONOSPHERE, by L. Owren and R. Stark. 29 Feb 1956. 81 p. Contr. DA36-039-SC-5739.
Order from LC mi $4.80, ph $13.80 PB 127700

Geophysical Inst., U. of Alaska, College.
AURORAL ZONE ABSORPTION OF RADIO WAVES TRANSMITTED VIA THE IONOSPHERE, by C. T. Elvey, n. d. Final Report. Tasks A, B, and C. 60 p. Contr. DA 36-039-SC-5512.
Order from LC mi $3.60, ph $9.30 PB 128238

Ionosphere Research Lab., Pennsylvania State U., University Park.
CALCULATION OF GROUP INDICES AND GROUP HEIGHTS AT LOW FREQUENCIES, by J. J. Gibbons and G. R. Rao, 1 Apr 1957. 38 p. AF CRC TN 57-454; Contr. AF 19(604)-1304, IRL-92.
AD 117202.
Order from Lc mi $3.00, ph $6.30 PB 128587

Ionosphere Research Lab., Pennsylvania State U., University Park.
THE REDUCTION OF H^0 -F RECORDS TO ELECTRON - DENSITY - HEIGHT PROFILES, by E. R. Schmerling, June 1, 1957. 55 p. AF CRC - TN - 57 - 481, IRL 94; Contract AF 19 (604) - 1304.
AD 117245.
Order from LC mi $3.60, ph $9.30 PB 128799

Ionosphere Research Lab., Pennsylvania State U., University Park.
75KC/S CHANGE IN PHASE HEIGHT INSTRUMENTATION AND DATA. Robert E. Houston, Jr., may 1 1957. 73 p. AFCRC-TN-57-455; Contr. AF 19 (604)-1304; IRL-93.
AD 117203.
Order from LC mi $4.50, ph $12.30 PB 128049

Scientific Report No. 93.

Ionosphere Research Lab., Pennsylvania State U., University Park.
TIME AND HEIGHT VARIATIONS OF THE DAYTIME DISSIPATIVE PROCESSES IN THE IONOSPHERE, by A. P. Mitra, Jan 1958. 75 p. AFCRC TN-58-217; IRL 99; Contr. AF 19(604)-1304.
AD 146867.
Order from LC mi $4.50, ph $12.30 PB 133640

Institute of Geophysics, U. of California, Los Angeles.
A LABORATORY SPECTROSCOPIC STUDY IN CHEMICAL AERONOMY, by C. A. Barth, 30 June 1957. 58 p. AF CRC TR 57-223; Contr. AF 19(122)-453.
Order from LC mi $3.60, ph $9.30 PB 133561

Final Report.

Little, Arthur D., Inc., Cambridge, Mass.
PRELIMINARY INVESTIGATION OF THE DISTRIBUTION OF SPACE CHARGE IN THE LOWER ATMOSPHERE. PARTIAL FINAL REPORT NO. 1, May 1956. 23 p. Contr. Nonr-1684(00); C-59667.
Order from LC mi $2.70, ph $4.80 PB 127172

Massachusetts Inst. of Tech., Cambridge.
CERTAIN QUESTIONS OF THE PHYSICS OF THE IONOSPHERE, by Ia. L. Al'pert, Oct 1957. 51 p. Contr. AF 19(122)-458.
AD 133748.
Order from LC mi $3.60, ph $9.30 PB 133789

Translated by Morris Friedman from Usp. Fiz. Nauk 61(No. 3): 423-450 1957.

Massachusetts Inst. of Tech., Cambridge.
EMPIRICAL ORTHOGONAL FUNCTIONS APPLIED TO PREDICTION OF THE SEA-LEVEL PRESSURE FIELD, by Bernard Shorr, Nov 1957. 92 p. AF CRC TN-57-623; Contr. AF19(604)-1566.
AD 146767.
Order from LC mi $5.40, ph $15.30 PB 132790

Scientific Report No. 3.

Massachusetts Inst. of Tech., Cambridge.
MEASUREMENT OF DROP SIZE DISTRIBUTION AND LIQUID WATER CONTENT IN NATURAL CLOUDS. SCIENTIFIC REPORT NO. 3: AN AIRBORNE CLOUD DROP IMPACTOR, by L. Aldaz-Isanta and D. P. Keily, June 1957.31 p. AFCRC TN-58-223; Contr. AF 19(604)-1287.
AD 146881.
Order from LC mi $3.00, ph $6.30 PB 133631

Massachusetts Inst. of Tech., Cambridge.
STUDIES OF FORCED AND FREE SYMMETRIC CONVECTION IN A ROTATING FLUID WITH APPLICATION TO THE ATMOSPHERE, by Hsiao-Lan Kuo, 29 Jan 1956. 38 p. General Circulation Proj.; Contr. AF 19 (604)-1000.
Order from LC mi $3.00, ph $6.30 PB 127081

New York U., N. Y.
THE OBSERVED MEAN MONTHLY WIND FIELDS IN THE LOWER STRATOSPHERE AND UPPER TROPOSPHERE OVER NORTH AMERICA. Wan-Cheng Chiu. Apr 1957. 44 p. AFCRC TN 57 289; Contr. AF 19(604)-1755.
AD 117177.
Order from LC mi $3.30, ph $7.80 PB 129611

Scientific Report No. 1.

New York U. Coll. of Engineering, N. Y.
DIFFERENTIAL ADVECTION AS A FACTOR IN CLEAR AIR TURBULENCE, by Edwin L. Keity, Mar 1957. 40 p. AF CRC-TN-57-284; Contr. AF 19 (604)-1367.
AD 117150.
Order from LC mi $3.00, ph $6.30 PB 128154

New York U. Coll. of Engineering, N. Y. ,
A STUDY OF THE ATMOSPHERIC HEAT BALANCE. FINAL REPORT, by Julius London, July 1957. 108 p. AF CRC TR-57-287; Contr AF (19)-122-165.
AD-117227.
Order from LC mi $5.70, ph $16.80 PB 129551

Ohio State U., Columbus.
THE ABUNDANCE OF ATMOSPHERIC CO. ABOVE COLUMBUS, OHIO, by J. H. Shaw, Mar 1957. 56 p.

AF CRC TN 57-212; Contr. AF 19(604)-1003.
AD-113679.
Order from LC mi $3.60, ph $9.30 PB 132102

Puerto Rico U. Coll. of A and M Arts, Mayaguez.
FURTHER OBSERVATIONS OF IONOSPHERIC DRIFTS AND RELATED PHENOMENA WITH SPACED RADIO RECEIVERS, by Miguel Wiewall, Jr., Jan 1957. 171 p. AF CRC TR 57-202; Contr. AF 19(122)-476. AD-113603.
Order from LC mi $8.10, ph $27.30 PB 132584

Woods Hole Oceanographic Institution, Mass.
A PRELIMINARY REPORT ON ATMOSPHERIC ELECTRIC FIELDS AT AND NEAR ST. THOMAS, VIRGIN ISLANDS, by D. C. Blanchard. 28 p. WHOI 56-55; Contr. Nonr 798(00).
Order from LC mi $2.70, ph $4.80 PB 128581

Yerkes Observatory, Williams Bay, Wis.
SYMPOSIUM ON AURORAL OBSERVATIONS DURING THE INTERNATIONAL GEOPHYSICAL YEAR, by Joseph W. Chamberlain and Vidya Pesch, 17-26 Sep 1956. 46 p. AF CRC TN 56-883; Contr. AF 19 (122)-480.
Order from LC mi $3.30, ph $7.80 PB 128052

Technical Report No. 22.

ENGINEERING

Aeronautical Engineering

Aeroelastic and Structures Research Lab., Mass. Inst. of Tech., Cambridge.
ASSUMED TIME FUNCTIONS AS A MEANS FOR DETERMINING THE TRANSIENT RESPONSES OF CONTINUOUS STRUCTURES, by T. F. O'Brien and T. H. H. Pian, Aug 1956. 44 p. Contr. N5ori-07833.
Order from LC mi $3.30, ph $7.80 PB 128124

Aerolastic and Structures Research Lab., Mass. Inst. of Tech., Cambridge.
ON THE VIBRATIONS OF THERMALLY BUCKLED BARS AND PLATES, by R. L. Bisplinghoff and T. H. H. Pian, Sep 1956. 18 p. TR 25-22; Contr. N5ori-07833.
Order from LC mi $2.40, ph $3.30 PB 128387

Aeronautical Engineering Lab., Princeton U., N. J.
AN ECONOMICAL TECHNIQUE FOR THE CONSTRUCTION AND HOVERING FLIGHT EVALUATION OF DYNAMICALLY SIMILAR HELICOPTER MODELS, by David F. Gebhard, Nov 1956. 38 p. AEL-373; Contr. N6onr-27015.
Order from LC mi $3.00, ph $6.30 PB 129910

Aeronautical Engineering Lab., Princeton U., N. J.
TANDEM HELICOPTER LATERAL STABILITY AND CONTROL, by E. Seckel and G. Graziani, Oct 1956. 31 p. AEL 363; Contr. N6ONR-27024.
Order from LC mi $3.00, ph $6.30 PB 128409

Aeronautical Research Inst. of Sweden.
SCATTER OF FATIGUE LIFE AND FATIGUE STRENGTH IN AIRCRAFT STRUCTURAL MATERIALS AND PARTS, by Waloddi Weibull, 1957. 24 p. FFA 73.
Order from LC mi $2.70, ph $4.80 PB 134209

Aeronautical Structures Lab., Naval Air Experimental Station, Phila., Pa.
A PROTOTYPE VISUAL AIRSPEED ACCELERATION INDICATOR, by J. H. Towle, 11 Jan 1955. 20 p. NAES ASL AD-250.7.
Order from LC mi $2.40, ph $3.30 PB 128949

Air Force Flight Test Center, Edwards, Calif.
EFFECTS OF GROSS WEIGHT AND CENTER OF GRAVITY LOCATION ON DYNAMIC STABILITY OF A TANDEM ROTOR HELICOPTER IN FORWARD FLIGHT, by Gilbert Chuck, June 1957. 61 p. AFFTC TN 57-13. AD-124107.
Order from LC mi $3.90, ph $10.80 PB 133739

Air Force Inst. of Tech. Wright-Patterson Air Force Base, Ohio.
A STUDY OF THE EFFECTS OF A WIND GRADIENT ON A LANDING AIRCRAFT, by Paul C. Dow, Jr. 2 May 1955. 7 p.
Order from LC mi $1.80, ph $1.80 PB 128082

Air Force Missile Development Center, Holloman Air Force Base, N. Mex.
A TECHNIQUE FOR INSTRUMENTING SUBGRAVITY FLIGHTS, by G. J. D. Schock and D. G. Simons, Feb 1958. 17 p. AFMDC TN 58-4. AD-135008.
Order from LC mi $2.40, ph $3.30 PB 133654

Air Force Special Weapons Center, Kirtland Air Force Base, N. Mex.
RADIOACTIVE CONTAMINATION OF AIRCRAFT, by John W. Lane, 26 May 1956. 13 p. AF SWC TN-56-26.
Order from LC mi $2.40, ph $3.30 PB 128402

Aircraft Committee, Munitions Board, Washington, D. C.
DESIGN OF WOOD AIRCRAFT STRUCTURES, June 1951. (2nd Ed.), 243 p.
Order from LC mi $11.10, ph $37.80 PB 130634

American Ski Co., Clare, Mich.
THE AIRCRAFT SKI, by T. H. McConica, III, July 1953. 211 p. AF WADC TR-53-153; Contr. AF 33 (600)-21341, Project SOIAS. AD-51393.
Order from LC mi $9.60, ph $33.30 PB 129658

Armour Research Foundation, Chicago, Ill.
STUDY OF HIGH-ENERGY-AIR ANTI-ICING SYSTEMS FOR FLIGHT SURFACES, by R. A. Budenbolzer and I. B. Fieldhouse, et al. Oct 1953. 107 p. WADC TR 54-35; Contr. AF 18(600)-195. AD-43759.
Order from LC mi $5.70, ph $16.80 PB 133913

Boeing Airplane Co., Seattle, Wash.
THE DEVELOPMENT OF IMPACT RUBBER FORMING, by Dick Sipe, 3 July 1956. 103 p. Document D-14460F-13; Contract AF 33(600)-23223. AD-111963.
Order from LC mi $5.70, ph $16.80 PB 128327

Bureau of Aeronautics, Navy Department, Washington, D. C.
FUNDAMENTAL OF DESIGN OF PILOTED AIRCRAFT FLIGHT CONTROL SYSTEMS. May 1953. 235 p. NAVAER AE-61-4.
Order from LC mi $10.20, ph $36.30 PB 130740

Contents: Vol. IV the Hydraulic System.

California Inst. of Tech., Pasadena.
THEORETICAL AND EXPERIMENTAL EFFECT OF SWEEP UPON THE STRESS AND DEFLECTION DISTRIBUTION IN AIRCRAFT WINGS OF HIGH SOLIDITY, by N. L. Williams, and W. M. Beebe, July 1952. 71 p. WADC TR 5761-Part 15; Contr. W33-038-ac-16961. AD-20542.
Order from LC mi $4.50, ph $12.30 PB 130815

California Inst. of Tech., Pasadena.
THEORETICAL AND EXPERIMENTAL EFFECT OF SWEEP UPON THE STRESS AND DEFLECTION DISTRIBUTION IN AIRCRAFT WINGS OF HIGH SOLIDITY, by E. E. Sechler and W. M. Beebe, July 1952. 108 p. WADC TR 5761-Part 16; Contr. W33-0380-ac-16961.AD-7157.
Order from LC mi $5.70, ph $16.80 PB 130812

California Inst. of Tech., Pasadena.
THEORETICAL AND EXPERIMENTAL EFFECT OF SWEEP UPON THE STRESS AND DEFLECTION DISTRIBUTION IN AIRCRAFT WINGS OF HIGH SOLIDITY, by R. H. Korkegi and M. L. Williams, July 1952. 26 p. WADC TR 5761 Part 17; Contr. W33-038-ac-16961. AD-27443.
Order from LC mi $2.70, ph $4.80 PB 130813

California Inst. of Tech., Pasadena.
THEORETICAL AND EXPERIMENTAL EFFECT OF SWEEP UPON THE STRESS AND DEFLECTION DISTRIBUTION IN AIRCRAFT WINGS OF HIGH SOLIDITY, by E. E. Sechler and M. L. Williams, Jan 1953. 164 p. WADC TR 5761 Part 18; Contr. W33-038-ac-16961. AD-27442.
Order from LC mi $7.80, ph $25.80 PB 130814

Colorado A. and M. Coll., Fort Collins.
MODEL TEST TO PREDICT THE SEAWORTHINESS OF SEAPLANE HULLS, by E. F. Schuly, Jan 1957. 65 p. CER No. 57EFS1; Contr. NOAS54-908C.
Order from LC mi $3.90, ph $10.80 PB 128619

Cook Research Labs., Morton Grove, Ill.
DEVELOPMENT OF OPTIMUM FLIGHT PLANNING TECHNIQUES, by Albert Francis, 15 Aug 1957. 19 p. AF CRC TR 57-299; Contr. AF 19(604)-1504. AD-117266.
Order from LC mi $2.40, ph $3.30 PB 130748

Cornell Aeronautical Lab., Inc., Buffalo, N. Y.
ARTIFICIAL STABILITY INSTALLATION IN B-26 AND F-94 AIRCRAFT, by E. A. Kidd, Sep 1954. 73 p. WADC TR 54-441; Contr. AF 33-038-20659. AD-66527.
Order from LC mi $4.50, ph $12.30 PB 130386

Cornell Aeronautical Lab., Inc., Buffalo, N. Y.
EFFECT OF CYCLIC LOAD FREQUENCY AND FATIGUE PROPERTIES OF JET ENGINE MATERIALS, by L. A. Zerkovish and G. T. Guarnieri, Dec 1955. 82 p. WADC TR 55-226; Contr. AF 33(616)-42. AD-92492.
Order from LC mi $4.80, ph $13.80 PB 133925

Cornell Aeronautical Lab., Inc., Buffalo, N. Y.
EVALUATIONS OF ELEVATOR FORCE GRADIENTS AND TYPES OF FORCE FEEL IN A B-26, by F. Newell and G. Campbell, Nov 1954. 67 p. WADC TR 54-442; Contr: AF 33(038)-20659. AD-73442.
Order from LC mi $3.90, ph $10.80 PB 130387

Cornell Aeronautical Lab., Inc., Buffalo, N. Y.
INTERMITTENT STRESSING AND HEATING TESTS OF AIRCRAFT STRUCTURAL METALS, by G. J. Guarnieri, May 1954. 78 p. WADC TR 53-24, Part 1; Contr. AF 33(038)-10958. AD-40138.
Order from LC mi $4.50, ph $12.30 PB 133693

Cornell Aeronautical Lab., Inc., Buffalo, N. Y.
INTERMITTENT STRESSING AND HEATING TESTS OF AIRCRAFT STRUCTURAL METALS, by G. J. Guarnieri, Sep 1954. 99 p. WADC TR 53-24, Part 2; Contr. AF 33(038)-10958. AD-36036.
Order from LC mi $5.40, ph $15.30 PB 133694

Cornell Aeronautical Laboratory, Inc., Buffalo, N. Y.
INVESTIGATION OF LATERAL STABILITY AT STALL, by G. Bull, Feb 1954. 121 p. WADC TR 54-498; Contr. AF 33(038)-10480.
Order from LC mi $6.30, ph $19.80 PB 133564

Cornell Aeronautical Lab., Inc., Buffalo, N. Y.
AN INVESTIGATION OF THE EXPERIMENTAL DETERMINATION OF AIRCRAFT INERTIA CHARACTERISTICS, by Charles B. Notess and Claude R. Woodard, July 1953. 122 p. WADC TR 53-207; Contr. AF 33(616)-182. AD-73858.
Order from LC mi $6.30, ph $19.80 PB 133697

Escher Wyss and Cie., Zuerich (Switzerland).
CLOSED CYCLE AIRCRAFT PROPULSION SYSTEMS. VOL. VI. GENERAL Ne-NAP CONSIDERATIONS, by A Burgdorfer, R. Tognoni, etc., 21 July 1957. 41 p. EW Report Sp-AK-57-045. AFOSR TR-58-30; Contr. AF 61(514)-985. AD-152239.
Order from LC mi $3.30, ph $7.80 PB 133664

Escher Wyss and Cie, Zuerich (Switzerland).
CLOSED CYCLE AIRCRAFT PROPULSION SYSTEMS VOL. VII. GASEOUS WORKING MEDIA FOR CLOSED CYCLE POWER PLANTS, by W. Spillman and B. Speckert, 21 July 1957. 31 p. EW Report Sp-AK-57-046. AF OSR TR 58-31; Contr. AF 61-(514)-985. AD-152240.
Order from LC mi $3.00, ph $6.30 PB 133665

Escher Wyss and Cie., Zuerich (Switzerland).
CLOSED CYCLE AIRCRAFT PROPULSION SYSTEMS. VOL. VIII. SIZING OF THE COMPONENTS OF A CLOSED-CYCLE He-NAP System, by A. Burgdorfer, and R. Tognoni, 21 July 1957. 49 p. EW Report Sp-AK-57-047. AF OSR TR 58-32; Contr. AF 61(514)-985. AD-152241.
Order from LC mi $3.30, ph $7.80 PB 133666

Escher Wyss and Cie., Zuerich (Switzerland).
CLOSED CYCLE AIRCRAFT PROPULSION SYSTEMS. VOL. IX. DIRECT AND INDIRECT ADDITION OF HEAT AND PUMPING POWER, by R. Tognoni, 21 July 1957. 61 p. EW Report Sp-AK-57-041. AF OSR TR 58-33; Contr. AF 61(514)-985. AD-152242.
Order from LC mi $3.90, ph $10.80 PB 133667

Flettner Aircraft Corp. Kew Gardens, N. Y.
RESUME OF FEASIBILITY BENCH TEST HELICOPTER TRANSMISSIONS SIMULATING FLIGHT LOADS, by E. K. Liberatore, 6 Jan 1956. 142 p. Contr. DA 44-177-TC-329. AD-109214.
Order from LC mi $7.20, ph $22.80 PB 128609

Revised 24 Feb. 1956.

Goodyear Aircraft Corp., Akron, Ohio.
A STUDY OF CANOPY SHAPES AND STRESSES FOR PARACHUTES IN STEADY DESCENT, by A. D. Topping, J. D. Marketos, etc. Oct 1955. 285 p. WADC TR 55-294; Contr. AF 33(616)-2445. AD-103963.
Order from LC mi $11.10, ph $44.10 PB 130358

Grimes Mfg. Co. Urbana, Ohio.
STUDY TO DETERMINE OPTIMUM EXTERIOR LIGHTING FOR AIRCRAFT, by M. K. Kaufer. N. D. 33 p. WADC TR 55-309; Contr. AF 33(616)-2141. AD-93164.
Order from LC mi $3.00, ph $6.30 PB 133926

Guggenheim Aeronautical Lab., Calif. Inst. of Tech., Pasadena.
FLEXURE VIBRATION OF UNIFORM BEAMS SIMPLY SUPPORTED AT EQUAL INTERVALS—NORMAL MODES AND FREQUENCIES, by Che-Min Chang, July 1955. 18 p. AF OSR TN 55-235; Contr. AF 18(600)-1142. AD-101501.
Order from LC mi $2.40, ph $3.30 PB 128228

Report 3 - Calcit 86.

Guggenheim Aeronautical Lab., Calif. Inst. of Tech., Pasadena.
RESISTANCE THERMOMETER FOR HEAT TRANSFER MEASUREMENT IN A SHOCK TUBE, by J. Rabinowicz and M. E. Jessey, 2 July 1956. 33 p. CIT GAL/M 33; Contr. DA-04-495-ORD-19.
Order from LC mi $3.00, ph $6.30 PB 128006

Holloman Air Development Center, Holloman Air Force Base, N. Mex.
DAISY TRACK AND SUPPORTING SYSTEMS, by Eli F. Beeding, Jr. June 1957. 89 p. HADC TN 57-8. AD-113038.
Order from LC mi $4.80, ph $13.80 PB 129536

Appendix B and its four drawings are included in a separate package.

Holloman Air Development Center, Holloman Air Force Base, N. Mex.
IMPROVEMENT OF THE LATERAL CONTROL SYSTEM OF THE Q-2 TARGET DRONE PROVIDING AUTOMATIC TRIM CORRECTION, by Joachim Gengelbach, June 1957. 21 p. HADC TR 57-4. AD-113040.
Order from LC mi $2.70, ph $4.80 PB 129601

Holloman Air Development Center, Holloman Air Force Base, N. Mex.
A STUDY OF THE ACCURACY OF SPACE-TIME SYSTEMS, by H. T. Schwinge, June 1957. 27 p. HADC-TR 57-5. AD-123734.
Order from LC mi $2.70, ph $4.80 PB 128331

Illinois Inst. of Tech., Chicago, Ill.
AIRCRAFT WINDSHIELD HEAT AND MASS TRANSFER. Part 5, by Max Jakob and S. P. Kezios, June 1952. 451 p. WADC TR 6120, Part 5; Contr. AF 33(038)-15941. AD-12161.
Order from LC mi $11.10, ph $69.60 PB 130820

National Aeronautical Establishment (Canada).
DUAL-OPERATION POWERPLANTS FOR VERTICAL TAKE-OFF TRANSPORT AIRCRAFT: A PRELIMINARY ANALYSIS OF SEVERAL GAS-TURBINE CYCLES, by E. P. Cockshutt, 30 July 1957. 24 p. LR-201.
Order from LC mi $2.70, ph $4.80 PB 129188

Naval Ordnance Test Station, China Lake, Calif.
A QUICK METHOD OF ESTIMATING ROCKET-SLED PERFORMANCE, by James P. Judin, 4 Apr 1957. 14 p. NOTS 1705 NAVORD 5437.
Order from LC mi $2.40, ph $3.30 PB 133904

Naval Ordnance Test Station, China Lake, Calif.
THE SLED POSITION-AND-TIME MEASURING (TRACK-COIL) SYSTEM OF SNORT, by B. W. Pike, Sep 1955. 26 p. NOTS 1202.
Order from LC mi $2.70, ph $4.80 PB 133897

Naval Research Lab., Washington, D. C.
THE MEASUREMENT OF AIR TEMPERATURE IN FLIGHT, by J. B. Peterson and J. E. Dinger, 13 Oct 1948. 15 p. NRL P-3370.
Order from LC mi $2.40, ph $3.30 PB 129299

Naval Research Lab., Washington, D. C.
VIBRATION ISOLATOR FOR AIRCRAFT VOLTAGE REGULATOR, by Carl J. Bastien, July 1947. 14 p. NRL S-315B.
Order from LC mi $2.40, ph $3.30 PB 129169

Northrop Aircraft, Inc., Hawthorne, Calif.
POWER PLANT INSTALLATION COOLING STUDY—PART II. AUTOMATIC MACHINE CALCULATION TECHNIQUE, by K. E. Smith and R. S. Leith, etc. Sep 1954. 114 p. WADC TR 55-414; Contr. AF 33(616)-2001. AD-101275.
Order from LC mi $6.00, ph $18.30 PB 130360

Ohio State U., Columbus.
INVESTIGATION OF MECHANICAL PROPERTIES AND PHYSICAL METALLURGY OF AIRCRAFT ALLOYS AT VERY LOW TEMPERATURES, by J. W. Spretnak and M. G. Fontana, Apr 1950. 63 p. AFTR 5662, Part 3; Contr. W33-038-ac-15698. AD-107800.
Order from LC mi $3.90, ph $10.80 PB 129363

Part 3 Effect of Notches on Static Tensile and Fatigue Strength at -320^0F-(-196^0C).

Ordnance Research Center, Aberdeen Proving Ground, Md.
INVESTIGATIONS ON BEARING DEVICES WITH SMALL FRICTION, by Dr. Ing F. Gottwald, Apr 1943. 11 p. dwgs.
Order from LC mi $2.40, ph $3.30 PB 132015

Proposal for an Air Supported Course Gyroscope. A Misc. Translation.

Park Mathematical Labs., Inc., Concord, Mass.
BIBLIOGRAPHY OF THE LITERATURE ON AIR TRAFFIC CONTROL, 1952-1957, by Paul Sally, Sep 1957. 33 p. AF CRC TN 57-776; Contr. AF 19(604)-1399. AD-133723.
Order from LC mi $3.00, ph $6.30 PB 132352

Technical Report No. 5.

Pennsylvania State U., University Park.
REFRACTORY MATERIALS FOR USE IN HIGH TEMPERATURE AREAS OF AIRCRAFT, by Norman R. Thielke, Jan 1953. 52 p. WADC TR 53-9, Pt. 1, Contr. W3(038)-ac-16374. AD-9729.
Order from LC mi $3.60, ph $9.30 PB 130819

Propulsion Research Corp., Inglewood, Calif.
ESCHER WYSS CLOSED CYCLE AIRCRAFT POWERPLANT STUDY PART I, by R. D. Buhler, 8 May 1957. 67 p. PRC R-258. AF OSR TR 57-36; Contr. AF 18(603)-27. AD-126569.
Order from LC mi $3.90, ph $10.80 PB 129945

Rochester U., N. Y.
BUILDING "FEEL" INTO CONTROLS: THE EFFECT ON MOTOR PERFORMANCE OF DIFFERENT KINDS AND AMOUNTS OF FEEDBACK, by B. Weiss, 14 Oct 1953. 22 p. Contr. N6onr-241, T.O.6.
Order from LC mi $2.70, ph $4.80 PB 128975

Rome Air Development Center, N. Y.
THE EFFECT OF NUMBER OF SIGNAL PULSES UPON SIGNAL DETECTABILITY ON PPI SCOPES, by Robert L. Erdmann and Robert D. Myers, Mar 1958. 21 p. RADC TR 58-43. AD-148666.
Order from LC mi $2.70, ph $4.80 PB 133706

Texas Co., N. Y.
LOW TEMPERATURE OPERATION OF AIRCRAFT ACCESSORIES, by E. A. Baniok, Mar 1954. 73 p. WADC TR 53-472; Contr. AF 33(038)-15495. AD-31105.
Order from LC mi $4.50, ph $12.30 PB 130347

White Sands Proving Ground, N. Mex.
THE MIRAN POSITION SOLUTION BY THE METHOD OF LEAST SQUARES, SPECIAL REPORT, by Th. W. Schmidt and John G. Wozencraft, Aug 1956. 26 p.
Order from LC mi $2.70, ph $4.80 PB 128083

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
AIRCRAFT WINDSHIELD HEAT AND MASS TRANSFER, PART III, by Max Jacob and Stothe P. Kezios, July 1949. 358 p. WADC TR 6120, Part 3; Contr. W33-038-ac-16808. AD-93865.
Order from LC mi $11.10, ph $54.60 PB 130398

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
AISI 98 B40 IN THE J-47 TURBINE HUB AND SHAFT APPLICATION, by Robert C. Downey and George J. Wile, May 1953. 55 p. WADC TR 53-60. AD-26351.
Order from LC mi $3.60, ph $9.30 PB 133848

Wright Air Development Center, Wright-Patterson Air Force, Base Ohio.
COMPRESSIBILITY EFFECTS ON THE LATERAL FREQUENCY RESPONSE OF A SWEPT-WING AIRPLANE, by N. Leonard Wener. May 1956. 63 p. WADC TN 55-730.
Order from LC mi $3.90, ph $10.80 PB 127694

M.S. Thesis, Ohio State U.

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
DEVELOPMENT OF A WORKSPACE MEASURING DEVICE, by Charles A. Dempsey, Mar 1953. 8 p. WADC TR 53-53. AD-13296.
Order from LC mi $1.80, ph $1.80 PB 133670

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
DEVELOPMENT OF ELECTRICALLY-CONDUCTING TRANSPARENT COATINGS FOR ACRYLIC PLASTIC, by Robert J. Roth and Peter R. Girardot, Jan 1953. 97 p. WADC TR-52-319; Contr. AF 33(038)-23319. AD-49091.
Order from LC mi $5.40, ph $15.30 PB 130391

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
DEVELOPMENT OF FIXED TWO-WAY RESTRICTOR VALVES FOR USE ON MILITARY AIRCRAFT, by R. L. Vick, July 1952. 61 p. WADC TR 52-153. AD-167644.
Order from LC mi $3.90, ph $10.80 PB 129480

E. O. No. R452-495.

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
DEVELOPMENT OF LOW-ELONGATION, HIGH-STRENGTH WEBBING FOR USE IN SAFETY HARNESS APPLICATION, by Russell J. Neff, May 1955. 35 p. WADC TR 55-3; Contr. AF 33(616)-2361. AD-80126.
Order from LC mi $3.00, ph $6.30 PB 130390

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
THE EFFECTS OF ENGINE ANGULAR MOMENTUM ON AN AIRPLANE'S LONGITUDINAL AND LATERAL-DI-ECTIONAL DYNAMIC STABILITY, by Bernard H. Paiewonsky, June 1956. 26 p. WADC TR-56-225. AD-97286.
Order from LC mi $2.70, ph $4.80 PB 128138

Wright Air Development Center Wright-Patterson Air Force Base, Ohio.
FIFTH PHASE HOT WEATHER FLIGHT TEST CRITERIA, by James K. Thompson, Nov 1957. 16 p. WADC TN 57-387. AD-142155.
Order from LC mi $2.40, ph $3.30 PB 133840

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
FORMATION LIGHTS FOR FIGHTER AIRCRAFT, by Charles A. Baker, Mar 1955. 21 p. WADC TR 55-124. AD-61751.
Order from LC mi $2.70, ph $4.80 PB 130355

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
INSECTICIDE SPRAY EQUIPMENT FOR AN L-20 TYPE AIRCRAFT, by George G. Dickson, Mar 1956. 41 p. WADC TN 55-739.
Order from LC mi $3.30, ph $7.80 PB 130817

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
LIGHT TRANSMISSION AND HAZE REQUIREMENTS FOR TRANSPARENT ENCLOSURES, by Harold C. Glover, Apr 1955. 9 p. WADC TR-55-55. AD-75479.
Order from LC mi $1.80, ph $1.80 PB 130354

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
A METHOD FOR MORE ACCURATE DESIGN ESTIMATION OF AIR LEAKAGE FROM CABINS AND COCKPITS OF PRESSURIZED AIRCRAFT, by A. B. Nutt, Sep 1954. 28 p. WADC TR 54-446. AD-67362.
Order from LC mi $2.70, ph $4.80 PB 130404

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
ON WIND-TUNNEL CORRECTIONS IN THE LOWER-TRANSONIC RANGE, by G. Guderley, 1954. 19 p. WADC TR 53-506. AD-29972.
Order from LC mi $2.40, ph $3.30 PB 130349

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
RESEARCH ON EXPLOSION-AND FIRE-SUPPRESSION SYSTEMS UTILIZING A VISUAL TYPE REFLECTOR, by Bradford J. Joyce, July 1955. 59 p. WADC TR-55-405; Contr. AF 33(616)-2523.
Order from LC mi $3.60, ph $9.30 PB 129546

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
ROUTINE MANEUVERS UNDER DAY AND NIGHT CONDITIONS, USING AN EXPERIMENTAL PANEL ARRANGEMENT, by Edward L. Cole, John L. Milton and Billy B. McIntosh, Mar 1954. 58 p. WADC TR 53-220. AD-35161.
Order from LC mi $3.60, ph $9.30 PB 133698

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
A STRAIN METHOD OF MEASURING WINDBLAST ON FLIGHT HEADGEAR, by R. E. Lafferty and R. Graetzer, Apr 1957. 11 p. WADC TR 57-204. AD-118169.
Order from LC mi $2.40, ph $3.30 PB 130400

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
STUDY OF FUNDAMENTALS AND CHARACTERISTICS OF MAGNETIC AMPLIFIERS FOR FLIGHT CONTROL SYSTEMS. PART V LOW LEVEL MAGNETIC AMPLIFIERS, by James R. Walker, and Douglas G. Wilson, 17 July 1954. 36 p. WADC TR-5881; Contr. AF 33(038)-14094. AD-95553.
Order from LC mi $3.00, ph $6.30 PB 129599

Chemical Engineering

Boynton Associates, LaCanada, Calif.
FINAL REPORT ON PRELIMINARY DESIGN FOR AN AIR BLAST SIMULATOR, by W. W. Boynton & V M. Carter, 8 Aug 1955, 88p. Contr Noy 73262.
Order from LC mi $4.80, ph $13.80 PB 128323

Chemical and Radiological Labs., Army Chemical Center, Md.
DEVELOPMENT OF FACEPIECE AMPHIBIOUS RESPIRATOR D60R3, A. V. Motsinger. 18 June 1956, 34 p. CRLR 448.
Order from LC mi $3.00, ph $6.30 PB 127307

Chemical Warfare Labs., Army Chemical Center, Md.
ADSORPTION OF VAPORS ON SOLID AEROSOLS (DUSTS), by V. Alexander Gordieyeff, 17 Aug 1956, 57 p. CWLR 2051.
Order from LC mi $3.60, ph $9.30 PB 128109

Chemical Warfare Labs., Army Chemical Center, Md.
DEPOSITION OF WINDBORNE DROPLETS OF DIBUTYL PHTHALATE ON COATED GLASS MICROSCOPE SLIDES, by Gabrielle Asset & John E. Eipper, 23 Aug 1957, 14 p. CWLR 2163.
Order from LC mi $2.40, ph $3.30 PB 130854

Chemical Warfare Labs., Army Chemical Center, Md.
A PRELIMINARY INVESTIGATION OF SULFAMIC ACID FOR NEW SCREENING SMOKE MIXTURES, by Sidney J. Magram and James D. Wilcox, 3 July 1957, 15 p. CWLR 2138.
Order from LC mi $2.40, ph $3.30 PB 130823

Chemical Warfare Labs., Army Chemical Center, Md.
SMOKE DEVICES FOR COMBAT VEHICLES, by Louis H. Totaro, 12 Apr 1957, 54 p. CWLR 2105.
Order from LC mi $3.60, ph $9.30 PB 128855

Cornell Aeronautical Lab., Inc., Buffalo, New York.
SINGLE-PULSE SHOCK TUBE STUDIES OF THE KINETICS OF REACTION N_2 & O_2 NO BETWEEN 2000-3000° K, H. Glick & J. J. Klein, Sept 1957, 27 p. AF OSR-TN-57-407, Contr. AF 18 (600)-1332. AD-132485.
Order from LC mi $2.70, ph $4.80 PB 130455

Dugway Proving Ground, Utah.
CRITERIA FOR DETERMINING GROUND LEVEL CONTAMINATION, by William G. Tank, Feb 1957, 32 p. SR 111.
Order from LC mi $3.00, ph $6.30 PB 127918

Dugway Proving Ground, Utah.
SURFACE AGENT DISTRIBUTION RESULTING FROM A CLOUD OF FALLING DROPLETS, by William G. Tank, Jan 1957, 38 p. RR 110.
Order from LC mi $3.00, ph $6.30 PB 128141

Guggenheim Jet Propulsion Center, Calif. Inst. of Tech., Pasadena.
ON THE PRODUCTION OF CHEMICALS AND CARBON FORMATION IN THE SHOCK TUBE, by F. Harshbarger, Aug 1956, 103 p. TR-4, Contr. AF 18(603)2; TR-22, Contr. Nonr-220(03).
Order from LC mi $5.70, ph $16.80 PB 127919

Holloman Air Development Center, Holloman Air Force Base, N. Mex.
SURVEY OF LITERATURE ON CHEMICAL TRACKING AIDS, by E. Grundemeir, Aug 1957, 122 p. HADC TR 57-7. AD 135001.
Order from LC mi $6.30, ph $19.80 PB 130048

Institute for Fluid Dynamics and Applied Mathematics, U. of Maryland, College Park.
THE MEAN FIRST PASSAGE TIME FOR A RANDOM WALKER AND ITS APPLICATION TO CHEMICAL BINFTICS, by Shoon Kyung Kim, June 1957, 38 p. Technical Note BN-100, AF OSR TN-57-326, Contr. AF 18-(600)-1315. AD 132398.
Order from LC mi $3.00, ph $6.30 PB 128934

Massachusetts Inst. of Tech., Cambridge.
QUARTERLY PERIODIC STATUS REPORT OF THE HYDROGEN PEROXIDE LABORATORIES, by R. L. Wentworth, 31 Mar 1957, 15 p. Contr. Nonr 1841(11).
Order from LC mi $2.40, ph $3.30 PB 132641

Naval Research Lab., Washington, D. C.
ANALYSIS OF INSECTICIDE "666" (1,2,3,4,5,6-HEXACHLOROCYCLOHEXANE) BY INFRARED SPECTROSCOPY, by L. W. Daasch & D. C. Smith, Feb 1947, 38 p. NRL P-3033.
Order from LC mi $3.00, ph $6.30 PB 129271

Picatinny Arsenal, Dover, N. J.
USE OF PERLITE TO IMPROVE CALCINED GYPSUM/WATER INERT FILLER, by Irving L. Kintish & Norman D. Baron, Oct 1956. 17 p. TR 2340.
Order from LC mi $2.40, ph $3.30 PB 129448

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
USE OF UNPULVERIZED BARIUM NITRATE IN THE MANUFACTURE OF 67/33 BARATOL, Samuel D. Stein, Sep 1956, 17 p. PATR 2361.
Order from LC mi $2.40, ph $3.30 PB 127899

Watertown Arsenal, Mass.
ATTEMPTS AT PURIFICATION OF CHROMIUM METAL BY ZONE REFINING, by Charles Stein, 28 Aug 1956, 20 p. WAL 349/56.
Order from LC mi $2.40, ph $3.30 PB 127551

Civil Engineering

Academy of Technical Sciences (Denmark).
CALCULATION OF SETTLEMENTS BY MEANS OF PORE PRESSURE COEFFICIENTS, by J. Brinch Hansen, 1957, 17 p. Acta Polytechnica 235 (1957).
Order from LC mi $2.40, ph $3.30 PB 134218

Civil Engineering and Building Construction Series Vol. 4, No. 8.

Brown U. Div. of Applied Mathematics, Providence, R. I.
ON THE PROBLEM OF THE ELASTIC HALF-SPACE WITH SURFACE LAYER, by J. R. M. Radok, June 1956, 51 p. Contr. DA-19-020-ORD-3648.
Order from LC mi $3.60, ph $9.30 PB 132330

Bureau of Yards and Docks, Washington, D. C.
DESIGN OF PROTECTIVE STRUCTURES (A NEW CONCEPT OF STRUCTURAL BEHAVIOR), by Arsham Amirikian, Oct 11, 1950, 74 p. NAVDOCKS P-51
Order from LC mi $4.50, ph $12.30 PB 128728

California Inst. of Tech., Pasadena.
FURTHER STUDIES ON VIBRATION COMPACTION OF COHESIVE SOILS, by Frederick J. Converse et al. Sept 1955, 95 p. Contr. Noy-22271.
Order from LC mi $5.40, ph $15.30 PB 130673

Harvard U., Cambridge, Mass.
REVIEW OF PAST AND CURRENT WORK ON ELECTRO-OSMOTIC STABILIZATION OF SOILS, by Leo Casagrande, June 1957, 22 p. Contr. NOy-76-303.
Order from LC mi $2.70, ph $4.80 PB 127997

(Supplement to Review of December, 1953).

Land Locomotion Research Branch, Detroit Arsenal, Center Line, Michigan.
AN ANALYSIS OF NEW TECHNIQUES FOR THE ESTIMATION OF FOOTING SINKAGE IN SOILS, by L. Karafiath, Oct 1957, 37 p.
Order from LC mi $3.00, ph $6.30 PB 133880

Naval Civil Engineering Research and Evaluation Lab., Port Hueneme, Calif.
A PROPOSED SYSTEM OF BUILDING CONSTRUCTION OF SNOW, ICE AND PERMAFROST, by Stuart Giles 16 Jan 1956, 16 p. TN N-239.
Order from LC mi $2.40, ph $3.30 PB 128726

Texas U., Austin.
MEASUREMENTS OF THE DRIVING POINT IMPEDANCE OF VARIOUS SOILS, by E. L. Hixson and J. F. Mifsud, 20 Feb 1956, 66 p. TU DRL A-103; Contr. DA-44-009-eng-2073.
Order from LC mi $3.90, ph $10.80 PB 130614

Waterways Experiment Station, Vicksburg, Miss.
EFFECT OF LIFT THICKNESS AND TIRE PRESSURE, by G. W. Leese, Oct 1957, 111 p. TR 3-271.
Order from LC mi $6.00, ph $18.30 PB 132481

Soil Compaction Investigation Report 8.

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
A DISCUSSION OF METHODS USED FOR GROUND FLOTATION EVALUATION, by R. A. Hoefle, June 1952. 9 p. WCNS [illegible]-52-1.
Order from LC mi [illegible].80 ph $1.80 PB 130805

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
EVALUATION OF EXPERIMENTAL RUNWAY DISTANCE MARKERS, by Clayton S. Hoffman, Jan 1957, 24 p. WADC TN 56-393. AD 97267.
Order from LC mi $2.70, ph $4.80 PB 129550

Electrical and Electronic Engineering

Academy of Technical Sciences (Denmark).
ELECTROMECHANICAL AND ELECTRO-ACCOUSTICAL ANALOGIES AND THEIR USE IN COMPUTATIONS AND DIAGRAMS OF OSCILLATING SYSTEMS, by Bent Gehlshøj, 1957. 141 p. Acta Polytechnica 223 (1957).
Order from LC mi $7.20, ph $22.80 PB 134219

Aerovox Corp., New Bedford, Mass.
HIGH TEMPERATURE FEEDTHROUGH CAPACITORS, by Anthony Marchetti, 15 June 1956. 69 p. Contr. DA 36-039-SC-52582.
Order from LC mi $3.90, ph $10.80 PB 129955

Aerovox Corp., New Bedford, Mass.
RESULTS OF STUDY OF THE ELECTRICAL AND PHYSICAL CHARACTERISTICS OF VARIOUS CAPACITATOR TYPES DESIGNED FOR USE AS SUB-MINIATURE CAPACITATORS. FINAL REPORT, by Ernest Ganz, Feb 25, 1953 to 15 Apr 1956. 100 p. Contr. DA 36-039-SC-42722.
Order from LC mi $5.40, ph $15.30 PB 128252

Air Force Cambridge Research Center, Mass.
BIBLIOGRAPHY ON THE THEORY OF DIFFRACTION AND PROPAGATION OF RADIO WAVES, by Nelson A. Logan and Murray E. Sherry, Apr 1957. 115 p. AFCRC TR-57-102.
Order from LC mi $6.00, ph $18.30 PB 130755

Air Force Cambridge Research Center, Mass.
QUARTERLY SCIENTIFIC REPORT NO. 14, COVERING PERIOD OCT 1, 1956-JAN 1, 1957, by C. Tang & L. Wetzel, Jan 1, 1957. 4 p. AF CRC TN 57-150. AD-110281.
Order from LC mi $1.80, ph $1.80 PB 128050

Air Force Cambridge Research Center, Mass.
STUDY OF INTERFERENCE CAUSED BY VHF FORWARD SCATTER CIRCUITS, Everett F. Dogle, Mar 1957. 34 p. AF CRC TR-57-01. AD-117029.
Order from LC mi $3.00, ph $6.30 PB 128814

Air Force Cambridge Research Center, Mass.
TRANSMIT-RECEIVE PASSIVE ANTENNA MULTICOUPLER BY HARVEY-WELLS ELECTRONICS, INC., by G. A. Lindsay, 31 Mar 1957. 4 p. AFCRC-TN-57-185, Contr. AF 19(604)-1828. AD-117027.
Order from LC mi $1.80, ph $1.80 PB 128562

Scientific Report No. 4, Jan 1 to Mar 31, 1957.

Air Force Missile Test Center, Patrick Air Force Base, Florida.
THE CAPE CANAVERAL TELEMETRY RECEIVER BUILDING NO 2., by E. H. Broome, Sept 25, 1956. 65 p. AF MTC TR 56-18. AD-96621.
Order from LC mi $3.90, ph $10.80 PB 132038

Air Force Missile Test Center, Patrick Air Force Base, Florida.
DIVERSITY RECEPTION SITES FLORIDA MAINLAND TELEMETRY VANS, by D. E. Garee, 4 Mar 1957. 41 p. AF MTC TR 57-1. AD-110777.
Order from LC mi $3.30, ph $7.80 PB 132037

Air Force Missile Test Center, Patrick Air Force Base, Florida.
INCREASED TELEMETRY INSTRUMENTATION GRAND BAHAMA ISLAND RECEIVER BUILDING, by J. G. Notaras and D. E. Garee, 30 Nov 1956. 31 p. AF MTC TR 56-21. AD 110752.
Order from LC mi $3.30, ph $6.30 PB 132036

Air Force Missile Test Center, Patrick Air Force Base, Fla.
SOME ASPECTS OF THE PERFORMANCE OF RADAR-PLOTTING BOARD SYSTEMS, by R. J. Nichol and A. E. Hoffmann-Heyden, June 1956, 41 p. AF MTC TN 56-51.
Order from LC mi $3.30, ph $7.80 PB 129315

Air Force Personnel and Training Research Center, Lackland Air Force Base, Tex.
DEVELOPMENT OF A TROUBLE LOCATOR AND EVALUATION OF A GENERALIZED ELECTRONIC TROUBLESHOOTING COURSE, by N. D. Warren, J. S. Ford and Donald H. Schuster, Jan 1958, 13p. AF PTRC TR 58-1. Contr. AF 41(657)-44. AD 152103.
Order from LC mi $2.40, ph $3.30 PB 133703

Air Force Personnel and Training Research Center, Lackland Air Force Base, Tex.
RADAR OBSERVER TRAINING DEVICES: I. DEVELOPMENT OF AN AIRBORNE VIDEO RECORDING SYSTEM, by R. M. Heintz, Jr., July 1957. 61 p. AFPTRC TR-57-3, Pt I. Contr. AF 18(600)-550. AD 134245.
Order from LC mi $3.90, ph $10.80 PB 133738

Air Force Personnel and Research Center, Lackland Air Force Base, Tex.
RADAR OBSERVER TRAINING DEVICES: II. INSTRUCTIONS FOR OPERATION AND MAINTENANCE OF VIDEO PLAYBACK CONSOLE, by R. M. Heintz, Jr., July 1957, 56 p. AFPTRC TR 57-3, Pt II. Contr. AF 18(600)-550.
Order from LC mi $3.60, ph $9.30 PB 133744

Air Force Personnel and Training Research Center, Lackland Air Force Base, Tex.
RESEARCH ON GENERAL SKILLS AND CONCEPTS IN ELECTRONIC MAINTENANCE TRAINING, by Douglas S. Ellis, Jan 1958, 24 p. AF PTRC TR 58-4. AD 152106.
Order from LC mi $2.70, ph $4.80 PB 133704

Airborne Instruments Lab., Inc., Mineola, N. Y.
FINAL REPORT ON FURTHER INVESTIGATIONS OF PRINTED ANTENNAS, by J. A. McDonough and R. G. Malech, Nov 1956, 69 p. Contr. DA 36-039-sc-70158.
Order from LC mi $3.90, ph $10.80 PB 133746

Airborne Instruments Lab., Mineola, N. Y.
THIRD SCIENTIFIC REPORT ON STUDY OF STRIP TRANSMISSION, LINES, by H. S. Keen, Dec 3, 1956. 68 p. Contr. AF 19(604)-708. AD 110153.
Order from LC mi $3.90, ph $10.80 PB 127502

Aircraft Armaments, Inc., Cockeysville, Maryland.
FINAL ENGINEERING REPORT ON WAVEMETER FR-96(0W-1)/U Aug 1956, 28 p. RADC TR-56-128. Contr. AF 30(635)-2848. AD 97845.
Order from LC mi $2.70, ph $4.80 PB 129970

Report ER915.

American Potash & Chemical Corp., Henderson, Nevada.
INDUSTRIAL PREPAREDNESS STUDY ON SYNTHETIC BATTERY GRADE MANGANSES DIOXIDE-QUARTERLY PROGRESS REPORT NO. 2, by Jerome T. Muench, Sept 29, 1956 to Dec 29, 1956. 41 p. Contr. DA-36-039-SC-72715.
Order from LC mi $3.30, ph $7.80 PB 129660

Andersen Labs., Inc., West Hartford, Conn.
FINAL ENGINEERING REPORT ON FILTER, BAND PASS, F-226 (XW-1)/G, June 7, 1954. 33 p. AF Contract 30 (120)-436. AD 712441.
Order from LC mi $3.00, ph $6.30 PB 128253

Partly photostated.

Andersen Labs., Inc., West Hartford, Conn.
SOLID DELAY LINE. INDUSTRIAL PREPAREDNESS STUDY. FINAL ENGINEERING REPORT: DEVELOPMENT OF 2500 MICROSECOND DELAY LINE, by D. J. Whitney and R. P. Katz, May 1953 to June 1954, 22 p. Contr. DA-36-039-SC-30254.
Order from LC mi $2.70, ph $4.80 PB 130586

Andrew Corp., Chicago, Ill.
FINAL DEVELOPMENT REPORT FOR A COAXIAL MAST. 21 Feb 1956, 11 p. Contr. NObsr-52581.
Order from LC mi $2.40, ph $3.30 PB 130739

Antenna Lab., Ohio State U., Research Foundation, Columbus.
ECHO AREA OF ACUTE-ANGLE DIHEDRAL CORNER REFLECTORS, by J. N. Hines and J. U. McEntee, 31 Oct 1956. 23 p. AF RADC-TN-57-25. Contr. AF 30 (635)-2811. AD 114242.
Order from LC mi $2.70, ph $4.80 PB 128746

Antenna Lab., Ohio State U. Research Foundation, Columbus.
POLARIZATION DEPENDENCE OF RADAR ECHOES, 1 Oct 1956, 12 p. RADC TN 56-436. Contr. AF 30 (635)-2811. AD 97930.
Order from LC mi $2.40, ph $3.30 PB 129930

Annual Engineering Report Vol. II.

A. R. F. Products, Inc., River Forest, Ill.
ENVELOPE DELAY MEASURING AND EQUALIZING APPARATUS, by S. W. Torode, 25 Feb 1957. 51 p. Contr. DA-36-039-SC-64726.
Order from LC mi $3.60, ph $9.30 PB 133881

Final Report.

Armour Research Foundation, Chicago, Ill.
STUDY OF ELECTROMAGNETIC GUN, by K. W. Miller and R. M. Bergslien, July 1957. 42 p. AFOSR TN 57-244. Contr. AF 18(603)-56. AD 126541.
Order from LC mi $3.30, ph $7.80 PB 128613

Army Signal Supply Agency, Philadelphia, Pa.
PRECISION HIGH STABILITY RESISTORS, by Nathan Pritikin, 15 Oct 1956. 7 p. 1st Quarterly progress report for 30 June-Sept 30, 1956; Contr. DA36-039-S.C. 1061-72723.
Order from LC mi $1.80, ph $1.80 PB 128971

Army Signal Supply Agency, Philadelphia, Pa.
PRECISION HIGH STABILITY RESISTORS, by Nathan Pritikin, Apr 15, 1957. 7 p. 3rd Quarterly progress report for Jan 1-Mar 31, 1957; Contr. DA 36-039-SC-(-72722 and -72723).
Order from LC mi $1.80, ph $1.80 PB 127485

Arnold Engineering Development Center, Tullahoma, Tenn.
INSULATION TESTING OF A HYDROGEN-COOLED SYNCHRONOUS CONDENSER, by D. J. Goodman, Feb 1957. 12 p. AEDC TN 57-1. Contr. AF 40 (600)--700. AD 110831.
Order from LC mi $2.40, ph $3.30 PB 132063

A. S. Thomas Inc., Boston, Mass.
STUDY OF GAIN LIMITATIONS AND PATTERN SYNTHESIS OF TRAVELING WAVE ANTENNAS, by A. S. Thomas & F. J. Zucker, 26 April 1957. 30 p. AFCRC TN-57-374. Contr. AF 19-(604)-1714. AD 117076.
Order from LC mi $2.70, ph $4.80 PB 128793

Ballistic Research Labs., Aberdeen Proving Ground, Md.
AN EMITTER CHARACTERISTICS CURVE TRACER FOR POINT CONTACT TRANSISTORS, by D. O. Miles & R. K. Gerlach, April 1955. 8 p. BRL TN 1002.
Order from LC mi $1.80, ph $1.80 PB 129507

Battelle Memorial Inst., Columbus, Ohio.
CARBON-FILM RESISTOR FAILURE RATES, TASK 31. FINAL REPORT ON COMPONENT EVALUATION AND SPECIFICATION ENGINEERING, by C. A. Shearer, Hall Cary, et al, Oct 18, 1957. 51 p. Contr. DA-36-039-SC-63136.
Order from LC mi $3.60, ph $9.30 PB 133882

Battelle Memorial Inst., Columbus, Ohio.
INVESTIGATIONS OF RHENIUM FOR ELECTRON TUBE APPLICATIONS, C. T. Sims & E. F. Adkins, 1 Jan 1957. 18 p. Contract AF19 (604)-1741. AFCRC-TN-57-158. AD 110292.
Order from LC mi $2.40, ph $3.30 PB 128750

Bays, Carl A., and Associates, Inc., Urbana, Ill.
STUDY OF THE PROPAGATION OF ELECTROMAGNETIC WAVES THROUGH LITHOLOGIC FORMATION, 236 p. Contr. DA36-039-SC-5454.
Order from LC mi $9.90, ph $34.80 PB 128185

Final Progress report for Period 20 Jan 1951-31 Dec 1953.

Bell Telephone Labs., Inc., New York.
100-KILOCYCLE HIGH-PRECISION STANDARD OF FREQUENCY, by F. G. Merrill & A. W. Warner, Sept 1, 1956. 148 p. BTL 101-E. RADC TR 57-1. Contr. AF 30 (602)-13. AD 114205.
Order from LC mi $7.20, ph $22.80 PB 130460

Bliley Electric Co., Erie, Penn.
FACILITIES AND MATERIALS TO CONDUCT RESEARCH AND INVESTIGATION INTO THE ORIGIN OF ACTIVITY DIPS IN THE RESPONSE OF AT CUT LOW FREQUENCY RESONATORS FIRST QUARTERLY PROGRESS REPORT OF SERVICES, MAY 4, 1954 TO SEPT 15, 1954, by J. M. Wolfskill & R. H. Tuznik, 14 p. Contr. DA 36-039-sc-63105. AD-52426.
Order from LC mi $2.40, ph $3.30 PB 130615

Bliley Electric Co., Erie, Pa.
FACILITIES AND MATERIALS TO CONDUCT RESEARCH AND INVESTIGATION INTO THE ORIGIN OF ACTIVITY DIPS IN THE RESPONSE OF AT CUT LOW FREQUENCY RESONATORS: THIRD QUARTERLY PROGRESS REPORT ON SERVICES, APR 15, 1955 TO OCT 15 1955, by J. M. Wolfskill and R. H. Tuznik, 177 p. Contr. DA 36-039-sc-63105. AD 82619.
Order from LC mi $8.10, ph $27.30 PB 130616

Bliley Electric Co., Erie, Pa.
FACILITIES AND MATERIALS TO CONDUCT RESEARCH AND INVESTIGATION INTO THE ORIGIN OF ACTIVITY DIPS IN THE RESPONSE OF AT CUT LOW FREQUENCY RESONATORS: FIFTH QUARTERLY PROGRESS REPORT OF SERVICES--JAN 15, 1956 TO MAR 15, 1956, by J. M. Wolfskill and R. H. Tuznik, 39 p. Contr. DA 36-029-sc-63105. AD 99991.
Order from LC mi $3.00, ph $6.30 PB 130618

Boeing Airplane Co., Seattle, Wash.
EVALUATION OF MINIATURE INDUCTION POTENTIOMETERS, by F. H. John, May 10, 1955, 31 p. D-16914. Contr. AF 33 (038) 19589.
Order from LC mi $3.00, ph $6.30 PB 129331

Bogen, David, Co., Inc., New York.
U. S. NAVY INTERCOMMUNICATING SYSTEM TYPE 1A, No Date, 76 p. NAVSHIPS 365-0514. Contr. NXss31447.

Available Free thru Navships l. C. Instruction Book No. 92A

Bright Star Industries, Clifton, N. J.
JAN-TYPE PAPERLINED BATTERIES, TYPE BA270/UXPL INDUSTRIAL PREPAREDNESS STUDY. FINAL REPORT, by Edward Koplitz, June 20, 1957. 76 p. Contr. DA-36-039-SC-302-57.
Order from LC mi $4.50, ph $12.30 PB 129397

Burgess Battery Co., Freeport, Ill.
INDUSTRIAL PREPAREDNESS STUDY ON DRY BATTERIES, LOW TEMPERATURE TYPE, BA-2000 SERIES, by Thomas H. Loverude, J. J. Coleman, etc., 3 June 1957. 7 p. Contr. DA-36-039-SC-30281.
Order from LC mi $1.80, ph $1.80 PB 128172

Quarterly Report XV.

California Inst. of Tech., Pasadena.
ELECTROMAGNETIC SCATTERING PROPERTIES OF A RESONANT PLASMA, by Haskell Shapiro, May 31, 1957. 63 p. AF OSR-TN-57-300. Contr. AF18(600)-1113. AD-132371.
Order from LC mi $3.90, ph $10.80 PB 128749

California Inst. of Tech., Pasadena.
A VLF ANTENNA FOR GENERATING A HORIZONTALLY POLARIZED RADIATION FIELD, by R. M. Golden, R. S. MacMillan, 10 July 1957. 21 p. AFOSR TN 57-9; Contr. AF18(600) 1552, TR-2. AD 115041.
Order from LC mi $2.70, ph $4.80 PB 129317

California U., Berkeley.
DYNAMIC OPERATION OF MAGNETIC AMPLIFIERS FOR FEEDBACK CONTROL SYSTEMS, by T. T. Kadota and D. Nitzan, 28 Feb 1957. 101 p. AFCRC TR 57-167; IER 60; Contract AF19 (604)-1813. AD 117064.
Order from LC mi $5.70, ph $16.30 PB 128282

California U., Berkeley.
FUNDAMENTALS OF JUNCTION TRANSISTOR SWITCHING CIRCUITS, by D. O. Pederson, 10 Sept 1956. 25 p. Contr. N7ONR-29529.
Order from LC mi $2.70, ph $4.80 PB 129342

Carnegie Inst. of Tech., Pittsburgh, Pa.
HALF-PLANE DIFFRACTION WITH LINE-SOURCE EXCITATION, by Robert C. Gast, May 1956. 51 p. Technical Report 24. Contr. DA 36-061-ORD-490.
Order from LC mi $3.60, ph $9.30 PB 130622

Central Sales and Mfg. Corp., Denville, N. J.
AN INVESTIGATION OF HIGH POWER TRIODE SWITCH TUBES FINAL REPORT, 31 Sept 1956. 27 p. AF CRC TR-56-172; Contr. AF 19(604)-1389. AD 110122.
Order from LC mi $2.70, ph $4.80 PB 128948

For period 1 Aug thru 1 Sept 1956.

Centro di Studio per la Fisica delle Microonde (Italy).
ELECTROMAGNETIC CROSS SECTION OF A SMALL CIRCULAR DISC WITH UNIDIRECTIONAL CONDUCTIVITY, G. Toraldo di Francia, 22 Mar 1956. 12 p. Contr. AF 61(514)-903, TN-2; AFCRC-TN-56-577; AD-98797.
Order from LC mi $2.40, ph $3.30 PB 128576

Centro di Studio per la Fisica delle Microonde (Italy).
MECHANICAL TORQUE EXERTED BY AN ELECTROMAGNETIC WAVE ON A CONDUCTING LOOP, by Nello Carrara, Jan 1957. 9 p. AFCRC-TN-57-577; Contr. AF 61 (514)-903. AD 133627.
Order from LC mi $1.80, ph $1.80 PB 129361

Centro di Studio per la Fisica delle Microonde (Italy).
ON THE ANGULAR MOMENTUM CROSS SECTION OF UNIDIRECTIONAL CONDUCTORS. THE CASE OF A SMALL ELLIPSOID, by G. Toraldo di Francia, 24 May 1956. 19 p. Contr. AF 61 (514)-903, TN-3; AFCRC-TN-56-782; AD-110118.
Order from LC mi $2.40, ph $3.30 PB 128577

Centro di Studio per la Fisica delle Microonde (Italy).
A PROBLEM ON THE GEODESICS OF A SURFACE OF REVOLUTION WHICH IS OF INTEREST IN MICROWAVE OPTICS, by G. Toraldo di Francia, 2 Apr 1957. 29 p. Technical Note 9. Contr. AF61 (514)-903; AFCRC TN-57-578. AD 133628.
Order from LC mi $2.70, ph $4.80 PB 129509

Collins Radio Co., Burbank, Calif.
DEVELOPMENT OF ELECTROMECHANICAL FILTERS, by J. C. Hathaway and L. M. Ibsen, 30 Apr 1954. 32 p. Contr. DA 36-039-SC-56636. AD 111698.
Order from LC mi $3.00, ph $6.30 PB 130684

Final technical report, from 7/1/53 to 4/30/54.

Colorado U., Boulder.
ASPECT SYSTEM, by Fred Wilshusen, 1 May 1955 to 31 Dec 1956. 27 p. AF CRC TN 57-237; Proj. ROBOAT; Contr. AF 19(604)-1421. AD 133845.
Order from LC mi $2.70, ph $4.80 PB 132586

Final report.

Colorado U. Engineering, Experiment Station, Boulder.
DISTORTION DUE TO SPACE-CHARGE FORCES IN MAGNETICALLY CONSTRAINED ELECTRON SHEET BEAMS, W. Reese Turner, Aug 1956. 52 p. Contr. Nonr 1147-01.
Order from LC mi $3.60, ph $9.30 PB 128263

Technical Report 5--MS Thesis.

Columbia Radiation Lab., New York.
RESEARCH INVESTIGATION DIRECTED TOWARD EXTENDING THE USEFUL RANGE OF THE ELECTROMAGNETIC SPECTRUM, THIRD QUARTERLY PROGRESS REPORT, prepared by P. Kusch, 15 Sept 1956. 37 p. Contr. DA-36-039-SC-64630; Cu-5-56.
Order from LC mi $3.00, ph $6.30 PB 128193

Columbia U., N. Y.
DIGITAL CONTROLLERS IN FEEDBACK SYSTEMS, John R. Ragazzini, 15 Mar 1957. 32 p. AF OSR TN-57-205; Contr. AF 18 (600)-677. AD 126502.
Order from LC mi $3.00, ph $6.30 PB 128054

Technical Report T-18/B.

Columbia U., N.Y.
INVESTIGATION OF NONLINEAR CONTROL SYSTEMS OPERATING ON SAMPLED DATA, by R. E. Kalman, 31 July 1956. 71 p. RADC TN 56-385. CU-21-56-AF-2815-EE; Contr. AF 30(635)-2815. AD 97880.
Order from LC mi $4.50, ph $12.30 PB 130951

Compagnie Générale de Télégraphie sans Fil (France).
DESIGN AND DEVELOPMENT OF 4 MILLIMETER PROTOTYPE CARCINOTRON TUBES WITH MAGNETS. QUARTERLY TECHNICAL STATUS REPORT NO. 1. MARCH 1, 1956 TO JUNE 30, 1956, 1957. 5 p. RADC TN 57-143; Contr. AF61(514)-919. AD 114418.
Order from LC mi $1.80, ph $1.80 PB 129443

Compagnie Générale de Télégraphie sans Fil (France).
DESIGN AND DEVELOPMENT OF 4 MILLIMETER PROTOTYPE CARCINOTRON TUBES WITH MAGNETS. QUARTERLY TECHNICAL STATUS REPORT NO. 2, 1 JULY 1956 TO 31 OCT 1956, 1957. 3 p. RADC TN 57-142. Contr. AF61(514)-919. AD-114417.
Order from LC mi $1.80, ph $1.80 PB 129444

Compagnie Générale de Télégraphie sans Fil (France).
DESIGN AND DEVELOPMENT OF 4 MILLIMETER PROTOTYPE CARCINOTRON TUBES WITH MAGNETS. QUARTERLY TECHNICAL STATUS REPORT NO. 3, 1 NOV 1956 TO 2 FEB 1957. 3 p. RADC TN 57-195; Contr. AF61(514)-919. AD-114487.
Order from LC mi $1.80, ph $1.80 PB 129438

Compagnie Générale de Télégraphie sans Fil (France).
DESIGN AND DEVELOPMENT OF 8 MILLIMETER PROTOTYPE CARCINOTRON TUBES WITH MAGNETS. QUARTERLY TECHNICAL STATUS REPORT NO. 1, MARCH 1, 1956 TO JUNE 30, 1956, 1957. 5 p. RADC TN 57-141. Contr. AF61(514)-920. AD-114416.
Order from LC mi $1.80, ph $1.80 PB 129445

Compagnie Générale de Télégraphie sans Fil (France).
DESIGN AND DEVELOPMENT OF 8 MILLIMETER PROTOTYPE CARCINOTRON TUBES WITH MAGNETS. QUARTERLY TECHNICAL STATUS REPORT NO. 2, 1 JULY 1956 TO 31 OCT 1956, 1957. 5 p. RADC TN 57-140. Contr. AF61(514)-920. AD-114415.
Order from LC mi $1.80, ph $1.80 PB 129446

Compagnie Générale de Télégraphie sans Fil (France).
DESIGN AND DEVELOPMENT OF 8 MILLIMETER PROTOTYPE CARCINOTRON TUBES WITH MAGNETS. QUARTERLY TECHNICAL STATUS REPORT NO. 3, 1 NOV 1956 TO 28 FEB 1957. 6 p. RADC TN 57-196. Contr. AF61(514)-920. AD-114488.
Order from LC mi $1.80, ph $1.80 PB 129437

Compagnie Générale de Télégraphie sans Fil (France).
DESIGN AND DEVELOPMENT OF L BAND PROTOTYPE CARCINOTRON TUBES WITH MAGNETS. QUARTERLY TECHNICAL STATUS REPORT NO. 1, MARCH 1, 1956 TO JUNE 30, 1956, 1957. 14 p. RADC TN-57-145. Contr. AF61(514)-918. AD-114420.
Order from LC mi $2.40, ph $3.30 PB 129441

Compagnie Générale de Télégraphie sans Fil (France).
DESIGN AND DEVELOPMENT OF L BAND PROTOTYPE CARCINOTRON TUBES WITH MAGNETS. QUARTERLY TECHNICAL STATUS REPORT NO. 2. JULY 1, 1956 TO 31 OCT 1956, 1957. 3 p. RADC TN 57-142; Contr. AF61(514)-919. AD-114419.
Order from LC mi $2.70, ph $4.80 PB 129442

Compagnie Générale de Télégraphie sans Fil (France).
DESIGN AND DEVELOPMENT OF UHF PROTOTYPE CARCINOTRON TUBES WITH MAGNETS, QUARTERLY TECHNICAL STATUS REPORT NO. 1,

MARCH 1, 1956-JUNE 30, 1956. 22 p. RADC TN-57-147. Contr. AF61(514)-917. AD-114422.
Order from LC mi $2.70, ph $4.80 PB 129440

Compagnie Générale de Télégraphie sans Fil (France).
DESIGN AND DEVELOPMENT OF UHF PROTOTYPE CARCINOTRON TUBES, WITH MAGNETS, QUARTERLY TECHNICAL STATUS REPORT NO. 2. 31 Oct 1956. 15 p. RADC TN57-146. Contr. AF 61(514)-917. AD-11421.
Order from LC mi $2.40, ph $3.30 PB 129931

Compagnie Générale de Télégraphie sans Fil (France).
DESIGN AND DEVELOPMENT OF UHF PROTOTYPE CARCINOTRON TUBES WITH MAGNETS. QUARTERLY TECHNICAL STATUS REPORT NO. 3, 1 NOV 1956 to 28 FEB 1957. 6 p. RADC TN-57-194. Contr. AF61(514)-917. AD 114486.
Order from LC mi $1.80, ph $1.80 PB 129439

Compagnie Générale de Télégraphie sans Fil (France).
RADIATION PERFORMANCE OF ENDFIRE SURFACE WAVE ANTENNAS, by J. Robieux, 14 Nov 1956. 105 p. AF CRC TN-57-164. Contr. AF 61 (514)-933. AD-117106.
Order from LC mi $5.70, ph $16.80 PB 128739

Computation Lab., Harvard U., Cambridge, Mass.
THE APPLICATION OF GRAPH THEORY TO THE SYNTHESIS OF CONTACT NETWORKS, by Roderick Gould, May 1957. 248 p.
Order from LC mi $11.10, ph $37.80 PB 128021

Theory of Switching, Report BL-18 by the staff of the computation Lab. to Bell Telephone Labs.
Pagination faulty. Pages iii and iv bound ahead of p.v.

Computation Lab., Harvard U., Cambridge, Mass.
THEORY OF SWITCHING. REPORT TO BELL TELEPHONE LABS. AN INVESTIGATION OF NON-OHMIC RESISTIVE SWITCHING NETWORKS, by Albert Lafayette Hopkins, Jr. 1 May 1957, 191 p. Report BL-17.
Order from LC $8.70, ph $30.30. PB 128020

Cornell U., Ithaca, N. Y.
ELECTRICAL CONDUCTIVITY OF BARIUM OXIDE. SINGLE CRYSTALS AS A FUNCTION OF TEMPERATURE AND EXCESS BARIUM, by R. T. Dolloff, 30 Oct 1956. 10 p. Contr. NONR-401 (08).
Order from LC mi $1.80, ph $1.80. PB 130771

Cornell U., Ithaca, N. Y.
THE INSTRUMENTATION OF A PRECISION RADIO FREQUENCY INTERFEROMETER USED TO DETERMINE IONOSPHERIC REFRACTION AT 53 MEGACYCLES, by R. B. Buntschuh 15 Sept 1956. 59 p. RADC TR 56-147. Contr. AF 30 (635)-2886. AD-97889
Order from LC mi $3.60, ph $9.30. PB 132119

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
THE DESIGN OF A VARIABLE BANDWIDTH, CONSTANT GAIN RECEIVER FOR USE IN IONOSPHERIC SOUNDING AT 30 MC/SEC, by Stuart Bruce Dunn, 10 Oct 1954. 52 p. TR-19; Research rept. EE 220; Contr. DA36-039-SC-56748.
Order from LC mi $3.60, ph $9.30. PB 127663

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
A DUPLEXER FOR A PULSED TRANSMITTER OPERATED AT FREQUENCIES NEAR 30 MC/SEC, by Gian-Carolo Rumi, 2 Oct 1954. 33 p. Techincal Report 18 (Research report EE 210. Contr. DA 36-039-SC-56748.
Order from LC mi $3.00, ph $6.30 PB 127662

Thesis for Master Degree.

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
SIGNAL CORPS TUBE ANALYSIS PROGRAM. 1 May 1955. 59 p. Research Report EE 239. Contr. DA 36-039-SC-15342.
Order from LC mi $3.60, ph $9.30 PB 130769

Contents:
Section I. Envelope Defects.
Section II. Mechanical Failures.
Section III. Heater Growth.
Section IV. Fused and Melted Elements.

QUARTERLY SCIENTIFIC REPORT NO. 15 COVERING PERIOD JAN 1957 TO 1 APRIL 1957. 4 p. AF CRC TN-57-390. Contr. AF 19 (604)-786. 1 Apr 1957. AD-146808.
Order from LC mi $1.80, ph $1.80 PB 128935

Cruft Lab., Harvard U., Cambridge, Mass.
QUARTERLY SCIENTIFIC REPORT NO. 18, COVERING PERIOD OCT 1, 1957-JAN 1, 1958, by S. Seshadri and T. T. Wu, et al, 1 Jan 1958, 4 p. AFCRC-TN-58-109. Contr. AF 19(604) 786. AD-146808.
Order from LC mi $1.80, ph $1.80 PB 133637

Cubic Corp., San Diego, Calif.
DISTANCE-MEASURING EQUIPMENT. FINAL ENGINEERING REPORT, Feb 1956. 262 p. Contr. AF 18 (600)-705. AD-95579.
Order from LC mi $11.10, ph $41.10. PB 130009

David Sarnoff Research Center, Princeton, N. J.
INVESTIGATION AND STUDY OF PRACTICAL UTILIZATION OF MOLECULAR ABSORPTION PHENOMENA FOR FREQUENCY CONTROL, by L. E. Norton, May 1, 1952 to Feb 28, 1955. 147 p. Contr. DA36-039-SC-15525.
Order from LC mi $7.20, ph $22.80. PB 130585

David Talyor Model Basin, Washington, D. C.
TIME CONSTANTS AND FREQUENCY RESPONSE OF COATED HOT WIRES USED AS TURBULENCE-SENSING ELEMENTS, by A. Borden, June 1957, 55 p. R 952.
Order from LC mi $3.60, ph $9.30. PB 133572

Detroit Arsenal, Center Line, Mich.
AIR FLOW CHARACTERISTICS OF 300 AMPERE GENERATOR, (CODE M-15) ORDNANCE NO. 7358630, by John F. Scarpelli, 2 July 1956. 23 p. R 3641. AD-102729. Final Report.
Order from LC mi $2.70, ph $4.80. PB 129957

Deutscher Wetterdienst, Aachen (Germany).
ON ANTENNAS FOR ATMOSPHERIC ELECTRICAL MEASUREMENTS, by H. Dolezalek, Oct 1956, 93 p. AFCRC TN 57-2. Contr. AF 61(514)-640. AD-133687.
Order from LC mi $5.40, ph $15.30. PB 133624

Technical Note No. 4.

Diamond Ordnance Fuze Labs., Washington, D. C.
BIREFRINGENCE OF FERRITES IN CIRCULAR WAVEGUIDE, by N. Karayianis and J. C. Cacheris, 23 April 1956. 25 p. TR-347.
Order from LC mi $2.70, ph $4.80. PB 128847

Diamond Ordnance Fuze Labs., Washington, D. C.
THE BROADBANDING OF MICROWAVE NON-RECIPROCAL FERRITE PHASE SHIFTERS, by R. Van Wolfe & J. C. Cacheris, 23 April 1956. 18 p. DOFL TR-348.
Order from LC mi $2.40, ph $3.30. PB 127979

Diamond Ordnance Fuze Labs., Washington, D. C.
ELECTRON TUBE GAS, by S. J. Stoll, 1 April 1955. 12 p. DOFL TR-152.
Order from LC mi $2.40, ph $3.30 PB 130850

Diamond Ordnance Fuze Labs., Washington, D. C.
FERRO RADIATOR SYSTEMS, by F. Reggia, and E. G. Spencer, 15 June 1956. 44 p. DOFL TR-357.
Order from LC mi $3.30, ph $7.80 PB 128845

Diamond Ordnance Fuze Labs., Washington, D. C.
FORMULAS AND APPROXIMATIONS FOR SPECTRA OF SOME COMMON FM FUNCTIONS, by H. E. Salzer, 15 Jan 1956. 45 p. DOFL TR 324.
Order from LC mi $3.30, ph $7.80. PB 133570

Diamond Ordnance Fuze Labs., Washington, D. C.
THE GAIN-BANDWIDTH RELATIONS IN TRANSISTOR VIDEO AMPLIFIERS, by T. A. Prugh, 18 Oct 1956. 16 p. DOFL TR 399.
Order from LC mi $2.40, ph $3.30. PB 130935

Diamond Ordnance Fuze Labs., Washington, D. C.
HIGH-SPEED, HIGH-REPETITION-RATE FERRITE MICROWAVE SWITCH, by H. B. Burns & R. C. LeCraw, June 28, 1956. 11 p. DOFL TR 361.
Order from LC mi $2.40, ph $3.30. PB 129506

Diamond Ordnance Fuze Labs., Washington, D. C.
MAGNETIC TUNING OF RESONANT CAVITIES AND WIDEBAND FREQUENCY MODULATION OF KLYSTRONS, by G. Jones and J. C. Cacheris, 26 April 1956. 27 p. DOFL TR-349.
Order from LC mi $2.70, ph $4.80. PB 128846

Diamond Ordnance Fuze Labs., Washington, D. C
MICROWAVE SEMICONDUCTER SWITCH, by Mary A. Armistead & E. G. Spencer, Sept 25, 1956. 9 p. DOFL TR-390.
Order from LC mi $1.80, ph $1.80. PB 129349

Diamond Ordnance Fuze Labs., Washington, D. C.
A RADAR VIDEO SIMULATOR FOR RANGE AND ANGLE, by K. J. Young, 10 June 1957. 7 p. DOFL TM 57-3.
Order from LC mi $1.80, ph $1.80. PB 133571

Diamond Ordnance Fuze Labs., Washington, D. C.
A SIMPLE SHORT PULSE RADAR REFLECTOMETER, by Harold A. Conklin, Jr. and Henry B. Burns, 15 Nov. 1956. 26 p. DOFL TR-398.
Order from LC mi $2.70, ph $4.80. PB 130934

Diamond Ordnance Fuze Labs., Washington, D. C.
THIN WIRE LOOP AND THIN BICONICAL ANTENNAS IN FINITE SPHERICAL MEDIA, by Julius Herman. N. D. 103 p. DOFL TR-462.
Order from LC mi $5.70, ph $16.80. PB 128274

Diamond Ordnance Fuze Labs., Washington, D. C.
VHF FERRITE ANTENNA RADIATION MEASUREMENTS, by H. A. Dropkin & E. Metzger, July 10, 1957. 24 p. DOFL TR-484.
Order from LC mi $2.70, ph $4.80. PB 129640

Diamond Ordnance Fuze Labs., Washington, D. C.
WAVE PROPAGATION IN THE FERROD RADIATOR, by John E. Tomkins and Marie D. Prytulak, 15 Mar 1957. 12 p. DOFL TR 432.
Order from LC mi $2.40, ph $3.30. PB 133769

Dumont, Allen B., Labs., Inc., Passaic, N. J.
DIRECT-VIEWING STORAGE TUBES. INDUSTRIAL PREPAREDNESS STUDY COVERING THE PERIOD 1-1-57 TO 3-31-57, by M. P. Wilder. 7 p. Contr. DA-36-039-SC-72717.
Order from LC mi $1.80, ph $1.80. PB 128267

DuMont, Allen B., Labs., Inc., Passaic, N. J.
DIRECT VIEWING STORAGE TUBES INDUSTRIAL PREPAREDNESS STUDY, by M. P. Wilder & R. E. Rutherford, April 20, 1957. 4 p. Contr. DA-36-039-SC-72717.
Order from LC mi $1.80, ph $1.80. PB 128271

DuMont, Allen B., Labs., Inc., Clifton, N. J.
DIRECT VIEWING STORAGE TUBES, INDUSTRIAL PREPAREDNESS STUDY by M. P. Wilder, April 1 to June 30, 1957. 18 p. Contr. DA-36-039-SC-72717.
Order from LC mi $2.40, ph $3.30. PB 130620

DuMont, Allen B., Labs., Inc., Passaic, N. J.
DIRECT VIEWING STORAGE TUBES, INDUSTRIAL PREPAREDNESS STUDY, COVERING THE PERIOD 4-30-57 TO 5-31-57, by M. P. Wilder. 10 p. Contr. DA-36-039-SC-72717.
Order from LC mi $1.80, ph, $1.80. PB 128266

DuMont, Allen B., Labs., Inc., Clifton, N. J.
DIRECT-VIEWING STORAGE TUBES, by M. P. Wilder. June 30 to July 31, 1957. 15 p. Contr. DA-36-039-SC-72717.
Order from LC mi $2.40, ph $3.30 PB 130650

Eaton Electronics, Research Labs., McGill U. (Canada).
STUDIES IN MICROWAVE OPTICS, G. Bekefi, March 1957. 322 p. E.E.R.L. Technical Report No. 38. AF CRC TR-56-179; Contr. AF 19(122)-81. AD-110152.
Order from LC mi $11.10, ph $50.10 PB 128813

Electrical Engineering Research Lab., U. of Illinois, Urbana.
BEARING COMPUTERS FOR USE WITH SPINNING GONIOMETERS RADIO DIRECTION FINDERS, by

R. R. Sydnor, 30 Sept. 1956. 31 p. Contr. NONR 1834(02).
Order from LC mi $3.00, ph $6.30. PB 128731

Tech. Report No. 3.

Electrical Engineering Research Lab., U. of Illinois, Urbana.
DIRECTION OF ARRIVAL OF RADIO WAVES, by H. D. Webb & A. D. Bailey, 31 Jan 1956. 16 p. Contr. N6ORI-07115.
Order from LC mi $2.40, ph $3.30. PB 128785

Electrical Engineering Research Lab., U. of Illinois, Urbana.
A PANORAMIC RDF AND BEARING AVERAGING COMPUTER, USING LINEAR CONVERSION OF RDF BEARINGS, by H. D. Webb and D. L. Bitzer, 20 Dec 1956. 61 p. Contr. Nonr 1834 (02).
Order from LC mi $3.90, ph $10.80. PB 130702

Electrical Engineering Research Lab., U. of Illinois, Urbana.
SYNTHESIS OF VOLTAGE TRANSFER FUNCTIONS WITH RIGHT HALF PLANE ZEROS BY RC FEEDBACK NETWORKS, by James J. Mikulski, 15 Mar 1957. 20 p. AF OSR TN 57-168. Contr. AF 49(638)-63. AD-126461.
Order from LC mi $2.40, ph $3.30 PB 128251

Electrical Engineering Research Lab., U. of Illinois, Urbana.
TRANSFER FUNCTION SYNTHESIS WITH ACTIVE ELEMENTS, by Franklin F. Kuo, April 15, 1957. 22 p. AF OSR TN 57-200. Contr. AF 49(638)-63. AD-126503.
Order from LC mi $2.70, ph $4.80 PB 128250

Electrical Engineering Research Lab., U. of Texas, Austin.
FINAL REPORT, 31 Mar 1957. 18 p. AF CRC TR-57-163. Contr. AF 19 (604)-494. AD-117023.
Order from LC mi $2.40, ph $3.30. PB 128760

Electronics Research Lab., U. of Calif., Berkeley.
DYNAMIC OPERATION OF MAGNETIC AMPLIFIERS FOR FEEDBACK CONTROL SYSTEMS, by H. C. Bourne, Jr. and T. T. Kadota, May 31, 1957. 28 p. Scientific Report No. 4. IER-60-181; AFCRC TN-57-398; Contr. AF 19(604)-1813. AD-117116.
Order from LC mi $2.70, ph $4.80. PB 129587

QUARTERLY PROGRESS REPORT, SERIES 60, REPORT NO. 13. 22 p. N. D. Contr. N7-onr-29529.
Order from LC mi $2.70, ph $4.80. PB 127944

Covers period 1 Apr—30 June 1956.

Electronics Research Lab., U. of Calif., Berkeley.
QUARTERLY PROGRESS REPORT, JULY TO 30 SEPT 1956, by S. Silver and J. S. Honda, et al., Oct 15, 1956. 21 p. IER-60-14; Contr. N7onr-29529.
Order from LC mi $2.70, ph $4.80. PB 129654

Electronics Research Lab., U. of Calif., Berkeley.
REALIZATION TECHNIQUES FOR LOSSLESS LADDER INTERSTAGE NETWORKS, by D. O. Pederson, Oct 1956. 32 p. IER Series 60, Issue 163. Contr. N7onr-29529, Report No. 55.
Order from LC mi $3.00, ph $6.30. PB 129324

Electronics Research Lab., U. of Calif., Berkeley.
TRANSISTOR BLOCKING OSCILLATOR ANALYSIS, by D. O. Pederson, 10 Sept 1956. 18 p. Contr. N7ONR-299529.
Order from LC mi $2.40, ph $3.30. PB 128653

Electronics Research Labs., Columbia U., N. Y.
PROJECT LION SIMULATION STUDY, 1 Nov 1956. 65 p. Progress Report P-8/133 CU-8-56-AF-1572-EE. Contract AF 19 (604) 1572. AFCRC-TN-57-174. Project Lion. AD-117128.
Order from LC mi $3.90, ph $10.80. PB 128752

Electronics Research Labs., Columbia U., N. Y.
PROJECT LION SIMULATION STUDY, 1 Feb 1957. 38 p. Progress Report P-9/133 CU-9-57-AF-1572-EE. AFCRC-TN-57-381. Contract AF 19 (604)-1572 Project Lion. AD-117080.
Order from LC mi $3.00, ph $6.30. PB 128753

Engineering Research Institute, U. of Michigan, Ann Arbor.
CONFERENCE ON HIGH POWER ELECTRICAL IMPULSE TECHNIQUES, by W. G. Dow and H. C. Early, May 1957, 54 p. AF CRC TN 57-488. Contr. AF 19(604)-1740. AD-117254.
Order from LC mi $3.60, ph $9.30. PB 133799

Engineering Research Inst., U. of Michigan, Ann Arbor.
USE OF HEWLETT-PACKARD MODEL 522B ELECTRONIC COUNTER AS A "SPINNING DISC" RANDOM NUMBER SELECTOR, by R. R. McPherson, July 10, 1956. 12 p. TM 29. Contr. DA-36-039-SC-63203. AD-109266.
Order from LC mi $2.40, ph $3.30. PB 129889

Executone, Inc., N. Y.
U. S. NAVY INTERCOMMUNICATING UNITS TYPE 1A-TW (EXECUTION MODEL NV-15), n.d. 52 p. NAVSHIPS IC IB 940. NAVSHIPS 365-0126. Contr. NObs-12232.
Order from LC mi $3.60, ph $9.80. PB 130323

Fairchild Engine Div., Deer Park, N. Y.
MAGNETOHYDRODYNAMIC EFFECTS IN COMBUSTION, by R. A. Gross, W. Chinitz and T. J. Rivlin, Feb 15, 1958. 37 p. AF OSR TN 58-120. Contr. AF 49(638)-15. AD-152028.
Order from LC mi $3.00, ph $6.30. PB 133645

Florence U. (Italy).
COMPLEX AMPLITUDE DISTRIBUTION ON THE AXIS OF A SPHERICAL MIRROR USED FOR RAPID SCANNING, by L. Abbozzo Ronchi and V. Russo, 10 June 1956. 20 p. Technical Note 4. AF CRC TN 56-783. Contr. AF 61 (514)-903. AD-110119.
Order from LC mi $2.40, ph $3.30. PB 128218

Florence U. (Italy).
FUNDEMENTAL RESEARCH ON ELECTROMAGNETIC THEORY AND MICROWAVE SPECTROSCOPY. TECHNICAL NOTE NO. 7, 15 Dec 1956. 27 p. AF CRC TN-57-191. Contract AF61 (514)-903. AD-117108.
Order from LC mi $2.70, ph $4.80 PB 128740

Florence U. (Italy).
ON A MACROSCOPIC MEASUREMENT OF THE SPIN OF ELECTROMAGNETIC RADIATION, by Giuliano Toraldo Di Francia, April 1957. 23 p. Technical note No. 11; AF Contr. 61(514) 903; AFCRC TN 57-580. AD-133630.
Order from LC mi $2.70, ph $4.80. PB 129371

Florence U. (Italy).
RESIDUAL ABERRATIONS OF CONFLECTION DOUBLETS FOR HIGH SPEED SCANNING, by L. Abbozzo Ronchi and A. M. Scheggi Verga 10 Feb 1956. 17 p. Technical Note 1. AF CRC-TN-56-576. Contr. AF61(514)903. AD-98796.
Order from LC mi $2.40, ph $3.30. PB 128224

General Dry Batteries, Inc., Cleveland, Ohio.
LOW TEMPERATURE BATTERIES, INDUSTRIAL PREPAREDNESS STUDY: FINAL & SIXTEENTH QUARTERLY, PROGRESS REPORT PREPARED by J. R. Pischel Feb 1 to June 19, 1957. 26 p. Contract DA-36-039-SC-30279.
Order from LC mi $2.70, ph $4.80 PB 128201

General Electric Co., Syracuse, N. Y.
SYNCHRONOUS COMMUNICATIONS SYSTEM, 31 May 1956. 111 p. RADC TR-56-96; Contr. AF 30 (602)-584. AD-97750.
Order from LC mi $6.00, ph $18.30 PB 130475

Final Report.

General Electric Research Lab., Schenectady, N. Y.
TERMINAL REPORT ON MICROWAVE RESEARCH, by S. E. Webber et al. N. D. 681 p. Contr. NObsr-42463.
Order from LC mi $11.10, ph $104.40 PB 133921

Göttingen U. (Germany).
ABSORPTION AND TRANSMISSION OF ELECTROMAGNETIC WAVES, by H-Severin, 31 July 1956. 49 p. RADC TR-56-167; Contr. AF 61(514)-876. AD-97962.
Order from LC mi $3.30, ph $7.80 PB 129333

Phase B: Diffraction of Electromagnetic Waves at a Rectangular Aperture in a Completely Conducting Plane Screen.

Göttingen U. (Germany).
ABSORPTION AND TRANSMISSION OF ELECTROMAGNETIC WAVES, by F. Wiekhorst, 31 July 1956. 15 p. Contr. AF 61(514)-876; RADC-TR-56-168. AD-97963.
Order from LC mi $2.40, ph $3.30 PB 129335

Phase C: Absorption of Microwaves by Magnetic Resonance Absorbers.

Göttingen U. (Germany).
ABSORTION AND TRANSMISSION OF ELECTROMAGNETIC WAVES, by R. Pottel, 31 July 1956. 31 p. RADC-TR-56-169; Contr. AF 61(514)-876. AD-97964.
Order from LC mi $3.00, ph $6.30 PB 129334

Phase D: Absortion of Electromagnetic cm-Waves in Anisotropic Media.

Hughes Aircraft Co., Culver City, Calif.
DOUBLE SLAB ARBITRARY POLARIZATION SURFACE—WAVE STRUCTURE, by R. E. Plummer and R. C. Hansen, 26 June 1956. 52 p. Scientific report no. 10; AF CRC TN-56-768; Contr. AF 19(604)-1317.
Order from LC mi $3.60, ph $9.30 PB 128955

Illinois U. Engineering Experiment Station, Urbana.
THE KERR CELL AS A MICROWAVE FREQUENCY OPTICAL SHUTTER 2, EXPERIMENTAL INVESTIGATION, by G. L. Clark and D. F. Holshouser, Mar 1957. 178 p. AFOSR-TN-57-114; Contr. AF 18(600)-1018. AD-120467.
Order from LC mi $8.00, ph $27.30 PB 128093

Ingeniors Vetenskaps Akademien (Sweden).
THE DEVELOPMENT AND DECAY OF THE MAGNETIC FLUX IN A NON-DELAYED TELEPHONE RELAY, by Stig Ekelof, 1957. 54 p. A Study of Telephone Relays (3); Acta Polytechnica 240 (1957).
Order from LC mi $3.60, ph $9.30 PB 134211

Ingeniors Vetenskaps Akademien (Sweden).
FRACTIONAL-SLOT WINDINGS FOR THREE-PHASE SYNCHRONOUS MACHINES AND THEIR PROPERTIES AT LOAD, by Emil Alm, 1957. 42 p. Electrical Engineering Series Vol. 8 No. 3; Acta Polytechnica 227 (1957).
Order from LC mi $3.30, ph $7.80 PB 134220

Ingeniors Vetenskaps Akademien (Sweden).
GENERAL PHYSICAL LOWS FOR THE ELECTRICAL FILTER LADDER, by Torbern Laurent, 1957. 23 p. Electrical Engineering Series Vol. 8 No. 5; Acta Polytechnica 231 (1957).
Order from LC mi $2.70, ph $4.80 PB 134213

Institute for The Study of Rate Processes, U. of Utah, Salt Lake City.
STRAIN ELECTROMETRY, by Albert G. Funk and Henry Eyring, 30 Nov 1956. 79 p. Technical report. 19 on Contr. N7onr-45101 and N7onr-45103.
Order from LC mi $4.50, ph $12.30 PB 129913

Institute of Mathematical Sciences, New York U., N. Y.
BOUNDS ON SCATTERING PHASE SHIFTS, by Larry Spruch, May 1957. 29 p. AFCRC-TN-57-483; CX-30; Contr. AF 19(604)1705. AD 117247.
Order from LC mi $2.70, ph $4.80 PB 128763

Institute of Mathematical Sciences, New York U., N. Y.
PROPAGATION OF ELECTROMAGNETIC PULSES AROUND THE EARTH, by B. R. Levy and J. B. Keller, Feb 1957. 21 graphs. AFCRC TN 57-383, EM-102; Contr. AF 19(604)1717. AD 117082.
Order from LC mi $2.70, ph $4.80 PB 128791

Institute of Mathematical Sciences, New York U., N. Y.
THEORY OF ELECTROMAGNETIC RESEARCH—ON SOLUTIONS OF NONLINEAR WAVE EQUATIONS, by J. B. Keller, Apr 1957. 13 p. MME-3; Contr. DA 49-170-sc-2253.
Order from LC mi $2.40, ph $3.30 PB 128688

International Resistance Co., Philadelphia, Pa.
INDUSTRIAL PREPAREDNESS STUDY FOR PRECISION, HIGH STABILITY RESISTORS: QUARTERLY PROGRESS REPORT, JAN 1, 1957 to MAR 31, 1957, by William F. Stark. 21 p. Contr. DA 36-039 sc 72726.
Order from LC mi $2.70, ph $4.80 PB 127493

International Resistance Co., Philadelphia, Pa.
INDUSTRIAL PREPARDNESS STUDY FOR PRECISION, HIGH STABILITY RESISTORS, by William F. Stark and George Hoopes, 30 June 1957. 24 p. Contr. DA-36-039-SC-72726.
Order from LC mi $2.70, ph $4.80 PB 129920

Quarterly Progress Report.

International Resistance Co., Philadelphia, Pa.
RESISTORS, FIXED, HIGH STABILITY, INSULATED, by Sidney J. Stein, John J. Bohrer, et al, 15 July 1955. 52 p. Contr. DA-36-039-SC-64665.
Order from LC mi $3.60, ph $9.30 Ph 129891

International Resistance Co., Philadelphia, Pa.
RESISTORS, FIXED, HIGH STABILITY, INSULATED, by Sidney J. Stein, John J. Bohrer, 15 Jan 1956. 41 p. Contr. DA-36-039-SC-64665.
Order from LC mi $3.30, ph $7.80 PB 129893

Third Quarterly Progress Report.

International Resistance Co., Philadelphia, Pa.
RESISTORS, FIXED, HIGH STABILITY, INSULATED, by Sidney J. Stein and John L. Bohrer, 15 April 1955 to 15 April 1956, 62 p. Contr. DA-36-039-SC-64665.
Order from LC mi $3.90, ph $10.80 PB 129894

Johns Hopkins U., Baltimore, Md.
A STUDY OF OSCILLATING CIRCUITS FOR TELEMETERING SYSTEMS, by J. W. Gibson et al, Sept 1954. 143 p. WADC TR-54-408; Contr. AF 33(616)153.
Order from LC mi $7.20, ph $22.80 PB 130930

Kansas U., Lawrence.
RESEARCH AND DEVELOPMENT STUDIES OF ELECTRETS, First Quarterly Progress Report, by G. G. Wiseman, J. R. Beeler, etc., 30 Nov 1954. 33 p. Contr. DA-36-039-SC-63111.
Order from LC mi $3.00, ph $6.30 PB 127678

Kansas U., Lawrence
RESEARCH AND DEVELOPMENT STUDIES OF ELECTRETS, FINAL REPORT, by G. G. Wiseman and J. W. Coffman, 30 Nov 1955. 82 p. Contr. DA36-039-SC-6311.
Order from LC mi $4.80, ph $13.80 PB 128965

Kansas U., Lawrence.
RESEARCH STUDIES ON ELECTRETS, First Quarterly Progress Report, by Gordon G. Wiseman, Gene Flaster, et al. May 15, 1951. 29 p. Contr. DA-36-039-sc-5467.
Order from LC mi $2.70, ph $4.80 PB 127999

Kansas U., Lawrence.
RESEARCH STUDIES ON ELECTRETS. SECOND QUARTERLY PROGRESS REPORT MAY 15, 1951 TO AUG 15, 1951, Contract DA 36-039-SC-5467, by Gorden Wiseman and Gene Feaster, 15 Aug 1951.
Order from LC mi $2.40, ph $3.30 PB 128114

Kansas U., Lawrence.
RESEARCH STUDIES ON ELECTRETS, 3rd QUARTERLY PROGRESS REPORT, by N. Baumann and R. Moon, 15 Nov 1951. 23 p. Contr. DA36-039-SC-5467.
Order from LC mi $2.70, ph $4.80 PB 127931

Kansas U., Lawrence.
RESEARCH STUDIES ON ELECTRETS. FIFTH QUARTERLY PROGRESS REPORT, by N. Baumann, Feb 15, 1952 to May 15, 1952. 39 p. Contr. DA 36-039-SC-5467.
Order from LC mi $3.00, ph $6.30 PB 127643

Kansas U., Lawrence
RESEARCH STUDIES ON ELECTRETS, Tenth Quarterly Progress Report, by G. G. Wiseman, W. R. Alexander, et al, 31 Aug 1953. 68 p. Contr. DA 36-039-SC-5467.
Order from LC mi $3.90, ph $10.80 PB 128194

Kansas U., Lawrence.
RESEARCH STUDIES ON ELECTRETS, Thirteenth Quarterly Progress Report, by G. G. Wiseman, D. H. Byers, et al. May 31, 1954. 47 p. Contr. DA 36-039-SC-5467.
Order from LC mi $3.30, ph $7.80 PB 127698

Kansas U., Lawrence.
RESEARCH STUDIES ON ELECTRETS, Final Report, by G. G. Wiseman, 31 Aug 1954. 95 p. Contr. DA 36-039-SC-5467.
Order from LC mi $5.40, ph $15.30 PB 128195

Keystone Electronics Co., Newark, N. J.
TIGHTER TOLERANCE CR-18/U CRYSTAL UNITS. 28 Feb 1957. 3 p. Quarterly Report. Contr. DA 36-039-SC-72691.
Order from LC mi $1.80, ph $1.80 PB 127686

Kuthe Labs., Inc., Newark, N. J.
INDUSTRIAL PREPAREDNESS STUDY ON HYDROGEN THYRATRON TUBES TYPE VC 1257, by A. E. Gordon, April 1-30, 1957. 2 p. Report No. 10. Contr. DA 36-039-SC-70288.
Order from LC mi $1.80, ph $1.80 PB 128065

Kuthe Labs, Inc., Newark, N. J.
INDUSTRIAL PREPAREDNESS STUDY ON HYDROGEN THYRATRON TUBES TYPE VC 1257, by A. E. Gordon, April 1, 1957 to June 30, 1957. 13 p. 4th Quarterly Progress Report. Contr. DA 36-039-SC-70288.
Order from LC mi $2.40, ph $3.30 PB 132080

Kuthe Labs., Inc., Newark, N. J.
INDUSTRIAL PREPAREDNESS STUDY ON HYDROGEN THYRATHONS TUBE TYPE VC 1257, by A. E. Gordon, Sept 1957. 4 p. Report No. 16, for period 1 Oct-31 Oct 1957. Contr. DA 36-039-SC-70288.
Order from LC mi $1.80, ph $1.80 PB 132757

Laboratory for Insulation Research, Mass. Inst. of Tech., Cambridge.
ELECTRIC BREAKDOWN AND CONDUCTION THROUGH MYLAR FILMS, by Y. Inuishi and D. A. Powers, Dec 1956. 21 p. TR 112. Contr. Nonr-1841 (10). Contr. DA-1-49-186-502-ORD (P)-334.
Order from LC mi $2.70, ph $4.80 PB 130731

Laboratory for Insulation Research, Mass. Inst. of Tech., Cambridge.
PROGRESS REPORT XX, by L. R. Schissler and R. Coelho. Rept. on Contract Nonr-1841(10). Dec 1956. 47 p.
Order from LC mi $3.30, ph $7.80 PB 130605

Leece-Neville Co., Cleveland, Ohio.
RECTIFIED A. C. GENERATING SYSTEM, by William Herridge, Mar 1956. 14 p. Contr. DA 20-089-ORD-37210. AD 99176.
Order from LC mi $2.40, ph $3.30 PB 129365

Levinthal Electronic Products, Inc., Redwood City, Calif.
ENERGY DISSIPATION AND ELECTRODE EROSION IN ARCS. TECHNICAL REPORT NO. 1, by Harry G. Heard, Oct 6, 1956. 100 p. AFCRC TN-57-188. Contr. AF 19 (604)-1856. AD 117031.
Order from LC mi $5.70, ph $15.30 PB 128254

Levinthal Electronic Products, Inc., Redwood City, Calif.
HIGH VOLTAGE TRIGGERED SPARK GAP MODULATOR SWITCH PROGRAM, by Eli M. Goldfarb, 25 Feb 1957. 114 p. Final Report; Levinthal Report 103; AF CRC TR-57-165; Contr. AF19(604)-1856. AD 117048.
Order from LC mi $6.00, ph $18.30 PB 130754

Lincoln Lab., Mass. Inst. of Techn., Lexington.
COMMUNICATION THROUGH NOISY RANDOM-MULTIPATH CHANNELS, by G. Turin, May 14, 1956. 106 p. TR 116. Contr. AF 19 (122) 458.
Order from LC mi $5.70, ph $16.80 PB 130885

Lincoln Lab., Mass. Inst. of Tech., Cambridge
GYROTROPIC PERTURBATION OF A WAVEGUIDE, by V. V. Nikol' skii, Aug 1957. 29 p. Contr. AF 19 (122)-458. AD 133669.
Order from LC mi $2.70, ph $4.80 PB 132095

From an article originally appearing in Russian in Radiotekh i Elektr An USSR 2, 157-172, 1957.

Louisiana State U., Baton Rouge.
VOLTAGE STEP METHOD FOR THE KINETIC STUDY OF FAST ELECTRODE REACTIONS, by Wolf Vielstich, and Paul Delahay July 1956. 10 p. Contr. NONR 300(00).
Order from LC mi $1.80, ph $1.80 PB 127536

Report No. 24.

McCord Corp., Detroit, Mich.
ALUMINUM "TALKER" HELMET, by W. T. Meredith April 1957. 27 p. Contr. DA 19-129-qm-673.
Order from LC mi $2.70, ph $4.80 PB 133901

Magnavox Co., Fort Wayne, Ind.
INDUSTRIAL PREPAREDNESS STUDY OF ANODE GEL BATTERY, June 28, 1957. 84 p. Contr. DA-36-039-SC-46627.
Order from LC mi $4.80, ph $13.80 PB 130783

Final Quarterly Report.

Mallory, P. R. & Co. Inc., Tarrytown, N. Y.
INDUSTRIAL PREPAREDNESS STUDY ON RM-650-R CELL, RM-42-R CELL & BA-1282/U BATTERY FINAL AND FOURTH QUARTERLY REPORT, by R. J. Lee, 15 Mar 1957. 37 p. RM-650-R; RM-42-R; BA-1282/U; Contr. DA-36-039-SC-46637.
Order from LC mi $3.00, ph $6.38 PB 127590

Marathon Battery Co., Wausau, Wis.
INDUSTRIAL PREPAREDNESS STUDY ON MAGNESIUM BATTERIES DRY CELL TYPE BA-270/U-XM, by G. H. Schroeder, 7 Sept 1956. 10 p. Contr. DA-36-039-SC-66081.
Order from LC mi $1.80, ph $1.80 PB 130253

Marathon Battery Co., Wausau, Wis.
INDUSTRIAL PREPAREDNESS STUDY ON MAGNESIUM BATTERIES DRY CELL TYPE BA-270/U-XM, by G. H. Schroeder, 8 Sept 1956 to 7 Dec 1956. 12 p. Contr. DA 36-039-SC-66081.
Order from LC mi $2.40, ph $3.30 PB 130029

Marathon Battery Co., Wausau, Wis.
INDUSTRIAL PREPAREDNESS STUDY ON MAGNESIUM BATTERIES, DRY CELL TYPE BA-270/U-XM, by George H. Schroeder, Mar 7, 1957. 14 p. Contr DA-36-039-Sc-66081.
Order from LC mi $2.40, ph $3.30 PB 129922

Ninth Quarterly Progress Report.

Marathon Battery Co., Wausau, Wis.
INDUSTRIAL PREPAREDNESS STUDY ON PAPER LINED BATTERIES, FOURTEENTH QUARTERLY PROGRESS REPORT, by Geo. H. Schroeder. 19 p. Contr. DA36-039-SC-30270.
Order from LC mi $2.40, ph $3.30 PB 128160

Period 26 Sept to 25 Dec 1956.

Marathon Battery Co., Wausau, Wis.
INDUSTRIAL PREPAREDNESS STUDY ON PAPER LINED BATTERIES TYPE BA-270/U-XPL, Fifteenth Quarterly Progress, by George H. Schroeder. Mar 25, 1957. 19 p. Contr. DA-36-039-sc-30270.
Order from LC mi $2.40, ph $3.30 PB 128014

Massachusetts Inst. of Tech., Cambridge
RADAR SIGNAL INTENSITY FROM DIFFERENT LEVELS IN STEADY SNOW, by R. Wexler and P. M. Austin, Mar 1, 1954. 31 p. RR 23; Contr. DA-36-039-SC-4265.
Order from LC mi $3.00, ph $6.30 PB 130856

Material Lab., New York Naval Shipyard, Brooklyn.
RESEARCH ON METHODS OF SPECIFYING THE NOISE CANCELLING CHARACTERISTICS OF NOISE CANCELLING MICROPHONES, by L. Levine and J. Hershkowitz, 30 April 1956. 14 p. AD 109283.
Order from LC mi $2.40, ph $3.30 PB 133617

Material Lab., New York Naval Shipyard, Brooklyn.
RESEARCH REPORT ON TRANSIENT DISTORTION IN LOUDSPEAKERS, by A. L. Seligson, 29 June 1956. 31 p.
Order from LC mi $3.00, ph $6.30 PB 133615

Mellon Inst. of Industrial Research, Pittsburgh, Pa.
COMPUTER COMPONENTS FELLOWSHIP No. 341. QUARTERLY REPORT No. 1 THIRD SERIES, by J. R. Bowman, C.H.T. Wilkins, et al. Oct 1, 1956 to Dec 31, 1956. 71 p. AFCRC TN 57 193; Contr. AF 19 (604)-1959. AD 117034.
Order from LC mi $4.50, ph $12.30 PB 129597

Mellon Inst. of Industrial Research, U. of Pittsburgh, Pa.
QUARTERLY REPORT NO. 4, THIRD SERIES OF THE COMPUTER COMPONENTS FELLOWSHIP NO. 347. HIGH TEMPERATURE PRINTED CIRCUITRY, by G. H. Young, C. H. T. Wilkins, et al, July 1-Sept 30, 1957. 41 p. AFCRC TN 58-118. Contr. AF 19 (604)-1959. AD 146821.
Order from LC mi $3.30, ph $7.80 PB 133639

Metals Research Lab., Brown U., Providence, R. I.
ULTRASONIC ATTENUATION PROPERTIES OF SEMI-CONDUCTORS, by Rohn Truell, N. D. 4 p. Contr. DA-36-039-SC-52623.
Order from LC mi $1.80, ph $1.80 PB 128273

Microwave Associates, Inc., Boston, Mass.
INDUSTRIAL PREPAREDNESS STUDY ON SUPER "X" BAND DIODES, by H. Ellowitz and A. Bruno, 26 Dec 1956 to 25 Mar 1957. 22 p. Eighth Quarterly Progress Report. Contr. DA-36-039-SC-66039.
Order from LC mi $2.70, ph $4.80 PB 128063

Microwave Lab., Stanford U., Calif.
ANALYSIS OF A RESONANTCAVITY MEASUREMENT OF THE VELOCITY OF LIGHT, by D. H. Janney, Oct 1956. 133 p. AF OSR TN-56-325. Contr. AF18(600)-1593. AD 92501.
Order from LC mi $6.90, ph $21.30 PB 129965

Microwave Lab., Stanford U., Calif.
DEVELOPMENT OF HIGH POWER TRAVELING-WAVE AND HYBRID TUBES, M. Chodorow and E. L. Ginzton, Nov 1956. 20 p. AF CRC TN-56-991. Contr. AF19(604)-1924; ML 357. AD 110191.
Order from LC mi $2.40, ph $3.30 PB 128963

Microwave Lab., Stanford U., Calif.
DEVELOPMENT OF HIGH-POWER TRAVELING-WAVE AND HYBRID TUBES, Feb 1958. 18 p. AFCRC AFCRC TN 57-965; ML-6. Contr. (AF-19(604)-1924. AD 133787.
Order from LC mi $2.40, ph $3.30 PB 133843

Microwave Lab., Stanford U., Calif.
RESEARCH IN HIGH-POWER BEAM TUBES, by E. L. Binzton and M. Chodorow, Dec 1956. 16 p. AF CRC TN-56-973; ML-378. AD 110164.
Order from LC mi $2.40, ph $3.30 PB 128967

Scientific report No. 6 for period 15 Sept to 15 Dec 1956.
Contents: 1. Investigation of the properties of connected-ring structures for use in traveling wave tubes. 2. Experimental studies of space-charge effects in gridless klystrons. 3. Electron-velocity spectrograph project.

Microwave Lab., Stanford U., Calif.
RESEARCH IN HIGH-POWER BEAM TUBES, by M. Chodorow and E. L. Binzton, Apr 1957. 16 p. Scientific Report-9, ML Report-389. AFCRC TR 57-175. Contr. AF 19 (604)-1494. AD 117088.
Order from LC mi $2.40, ph $3.30 PB 130447

Microwave Lab., Stanford U., Calif.
THEORY OF A MOLECULAR OSCILLATOR, by J. C. Helmer, June 1956. 32 p. ML 311; Contr. DA-36-039-SC-71178. AD 103566.
Order from LC mi $3.00, ph $6.30 PB 133582

Microwave Lab., Stanford U., Calif.
A TRAVELING-WAVE FREQUENCY MULTIPLIER, by David J. Bates, April 1957. 124 p. Contr. N6onr-25123. Contr. AF33(600) 27784. ML R 381.
Order from LC mi $6.30, ph $19.80 PB 128278

Microwave Lab., Stanford U., Calif.
VELOCITY DISTRIBUTION OF ELECTRONS IN GAP-MODULATED ELECTRON BEAMS, by Perry B. Wilson, Feb 1958. 112 p. Scientific Report No. 1. AFCRC TN 58-102. ML 438. Contr. AF 19 (604)-1930. AD 146799.
Order from LC mi $6.00, ph $18.30 PB 133837

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
ANALYSIS OF THE DOUBLES MAGNETIC-AMPLIFIER CIRCUIT WITH SIMULATED EDDY-CURRENT EFFECT, by D. Doody, 18 Sept 1956. 32 p. R-517-56; Contr. Nonr-839(05).
Order from LC mi $3.00, ph $6.30 PB 128770

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
AN ANALYSIS OF THE FULL WAVE MAGNETIC AMPLIFIER CIRCUIT, Tadashi Kikuchi, 30 Oct 1956. 47 p. PIB-460; Contr. Nonr-839 (05).
Order from LC mi $3.30, ph $7.80 PB 129649

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
BROAD BAND UHF AMPLIFIER FOR ANTENNA MULTIPLEXING, by S. Greenblatt, 3 July 1956. 19 p. RADC TN-56-364. R-508-56 PIB438. Contr. AF-30 (602)-1448. AD 97843.
Order from LC mi $2.40, ph $3.30 PB 129876

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
A CLASS OF ALTERNATIVE MODAL REPRESENTATIONS FOR UNIFORM WAVEGUIDE REGIONS, by H. M. Altschuler and L. O. Goldstone, 27 Feb 1957. 30 p. R-557-57; PIB 485; AFCRC TN-57-368; Contr. AF 19(604)2031. AD 117062.
Order from LC mi $2.70, ph $4.80 PB 128044

Microwave Research Inst., Polytechnic Inst. of Brooklyn, New York
DELAY CHARACTERISTICS OF BASIC STRIP TRANSMISSION LINE STRUCTURES, by L. Coltun and E. N. Torgow, 13 Mar 1956. 24 p. RADC TN 56-264. PIB-402. R-472-56. Contr. AF-30 (602)-98. AD 99013.
Order from LC mi $2.70, ph $4.80 PB 130701

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
A GENERAL THEORY OF WIDEBAND MATCHING WITH DISSIPATIVE 4-POLES, by R. LaRose and H. J. Carlin, 17 Feb 1953. 42 p. PIB-247. Contr. Nonr-292 (00); MRI-R-308-53. AD 2980.
Order from LC mi $3.30, ph $7.80 PB 130797

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
IMPEDANCE OF A HORIZONTAL POST IN A THROUGH WAVEGUIDE, PART II, by Machio Suzuki, 19 Nov 1956. 40 p. MRI R-529-56. PIB-459. Contr. AF-19(604)-2031. AFCRC-TN-56-988. AD 110188.
Order from LC mi $3.00, ph $6.30 PB 127883

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
IMPEDANCE OF A TUNING POST IN A CLOSED GUIDE AND A HORIZONTAL POST IN A THROUGH GUIDE, by Michio Suzuki, 30 Oct 1956. 27 p. R-528-56; PIB 458; AF CRC TN 56-987; Contr. AF 19 (604)-2031. AD 110187.
Order from LC mi $2.70, ph $4.80 PB 128045

Microwave Research Institute Polytechnic Institute of Brooklyn, New York.
LEAKY WAVE ANTENNAS, I: RECTANGULAR WAVEGUIDES, by L. O. Goldstone and A. A. Oliner, 11 Aug 1957. 52 p. R-606-57; PIB-534; Contr. AF 19(604)2031. AFCRC-TN-58-111. AD 146810.
Order from LC mi $3.60, ph $9.30 PB 133638

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
MICROWAVE STRIP LINE FILTER PROGRAM, by E. N. Torgow, 2 April 1956. 58 p. RADC TR-56-87; R-476-56; PIB-406; Contr. AF 30 (602) 980. AD 97731.
Order from LC mi $3.60, ph $9.30 PB 130199

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
MULTISECTION MICROWAVE TERMINATING STRUCTURES, by Louis Coltun, 24 April 1957. 51 p. R-573-57; PIB 501; AF OSR TN-57-286; Contr. AF-18 (603)-105. AD 132357.
Order from LC mi $3.60, ph $9.30 PB 128803

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
A TRANSIENT ANALYSIS OF A BISTABLE MAGNETIC AMPLIFIER, by Altert Aronowitz, 10 July 1957. 49 p. R-592-57; PIB-520; Contr. AF 18(600) 1505; AF OSR TN-57-593. AD 136579.
Order from LC mi $3.30, ph $7.80 PB 132303

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
TRANSIENT ANALYSIS OF SECOND ORDER FLIP-FLOPS, by L. M. Vallese, 28 Sept 1956. 22 p. MRI R-513-56; Contr. NONR-839(15).
Order from LC mi $2.70, ph $4.80 PB 128732

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
TRANSIENT BEHAVIOR OF THE IDEAL FULL-WAVE MAGNETIC AMPLIFIER CIRCUIT, by T. Kikuchi, 30 Oct 1956. 13 p. Research Report R-531-56; PIB 461; Contr. Nonr-839 (05).
Order from LC mi $2.40, ph $3.30 PB 129504

Minneapolis-Honeywell Regulator Co., Minn.
INDUSTRIAL PREPAREDNESS STUDY ON GERMANIUM POWER TRANSISTOR x H25, by John P. Podolinsky, 30 April 1957. 42 p. Contr. DA-36-039-SC-66044.
Order from LC mi $3.30, ph $7.80 PB 127879

Minnesota U., Minneapolis.
SURVEY AND EVALUATION OF POWER SOURCES SYSTEMS PART V. CHEMICAL COMPONENTS (BATTERIES), by Robert C. Brasted and Newman A. Hall, 15 Sept through 1 Dec 1955. 67 p. Contr. DA-36-039-SC-56649.
Order from LC mi $3.90, ph $10.80 PB 130476

Monroe Calculating Machine Company, Inc., Orange, N. J.
RESEARCH AND DEVELOPMENT OF MINIATURE PRINTED CIRCUIT CONNECTORS, by F. M. Raddin. 28 p. AF CRC TR 57-168; Contr. AF 19(604)-1737. AD 117,065.
Order from LC mi $2.70, ph $4.80 PB 133630

Final report.

National Aeronautical Establishment, Canada.
A VOLTAGE REFERENCE SYSTEM FOR USE WITH GALVANOMETERS IN FLIGHT TESTING, by D. F. Daw, May 1957. 23 p. LR-191.
Order from LC mi $2.70, ph $4.80 PB 128795

National Co., Inc., Malden, Mass.
ATOMIC FREQUENCY STANDARD, by R. T. Daly and E. F. Grant, 15 Sept 1956. 73 p. Contr. NONR 1707(00).
Order from LC mi $4.50, ph $12.30 PB 129882

Naval Air Development Center, Johnsville, Pa.
DEVELOPMENT OF IMPROVED ELECTRONIC EQUIPMENT RADIO FREQUENCY INTERFERENCE SUSCEPTIBILITY REQUIREMENTS, by G. Lamelza, 26 Apr 1957. 92 p. NADC EL N-5699.
Order from LC mi $5.40, ph $15.30 PB 130643

Naval Air Development Center, Johnsville, Pa.
ELECTRONIC EQUIPMENT COOLING BY SIMULTANEOUS HEAT AND MASS TRANSFER, by A. R. Saltzman and P. T. Plizak, 18 June 1957. 60 p. NADC EL-56106.
Order from LC mi $3.60, ph $9.30 PB 130791

Naval Air Development Center, Johnsville, Pa.
PROBLEMS OF RADIO INTERFERENCE MEASUREMENTS, by William Jarva, 11 Feb 1955. 45 p. NADC-EL-N54149.
Order from LC mi $3.30, ph $7.80 PB 127633

Naval Air Development Center, Johnsville, Pa.
SIMULTANEOUS HEAT AND MASS TRANSFER AND ITS APPLICATION TO AIRBORNE ELECTRONIC COOLING, A. Saltzman, 4 May 1956. 30 p. NADC EL N56-26.
Order from LC mi $2.40, ph $4.80 PB 128640

Naval Air Development Center, Johnsville, Pa.
TECHNIQUES FOR THE MEASUREMENT OF SPURIOUS RADIATIONS AND HARMONICS FROM TRANSMITTERS, by William Jarva, 12 May 1955. 13 p. NADC EL N-5506.
Order from LC mi $2.40, ph $3.30 PB 130642

Naval Air Test Center, Patuxent River, Md.
EVALUATION OF THE 900 TO 10,500 MC PRD SIGNAL GENERATOR-RECEIVER FOR ANTENNA PATTERN MEASUREMENTS, by D. B. Decker, 24 Sept 1957. 21 p. ET 315-239.
Order from LC mi $2.70, ph $4.80 PB 130992

Naval Air Test Center, Patuxent River, Md.
SCALE MODEL RF ANTENNA RADIATION RANGE FOR FREQUENCIES IN THE REGION OF 1000 MC, REPORT NO. 1, FINAL REPORT, by C. H. Duerfeldt, 6 Nov 1956. 23 p. Proj. EL 41086; Serial ET315-229.
Order from LC mi $2.70, ph $4.80 PB 129432

Naval Ordnance Lab., Corona, Calif.
A METHOD FOR AMPLITUDE ANALYSIS OF VIBRATION DATA, by J. B. Whiteley, 10 Jan 1956. 18 p. TM 65-100.
Order from LC mi $2.40, ph $3.30 PB 128223

Naval Ordnance Lab., Corona, Calif.
MULTICHANNEL HIGH-FREQUENCY RESPONSE TELEMETER. INTERIM REPORT, by H. S. McGaughan and J. M. Sacks, Nov 1955. 10 p. TM 73-2.
Order from LC mi $1.80, ph $1.80 PB 128832

Naval Ordnance Lab., Corona, Calif.
MULTICHANNEL WIDE-BAND TELEMETERING OF VIBRATION DATA, May 1956. Technical Memorandum 73-7. 3 p.
Order from LC mi $1.80, ph $1.80 PB 127645

Naval Ordnance Lab., Corona, Calif.
RAPID REDUCTION OF TELEMETRIC DATA, by E. D. Heberling, July 1956. 11 p. NOL Corona-TM-73-11.
Order from LC mi $2.40, ph $3.30 PB 128724

Naval Ordnance Lab., Corona, Calif.
TRANSISTORIZED TIME MULTIPLEXER FOR TELEMETERING, by I. M. Sacks and E. R. Hill, July 1956. 19 p. TM 73-12.
Order from LC mi $2.40, ph $3.30 PB 128723

Naval Ordnance Lab., White Oak, Md.
BASIC EXPERIMENTAL STUDIES OF THE MAGNETIC FIELD FROM ELECTROMAGNETIC SOURCES IMMERSED IN A SEMI-INFINITE CONDUCTING MEDIUM, by M. B. Kraichman, 1 Oct 1956. 21 p. NAVORD 4374.
Order from LC mi $2.70, ph $4.80. PB 129511

Naval Ordnance Lab., White Oak, Md.
A COMBINED SIMPLE AND ELECTRO-MECHANICAL R.M.S. LINE-VOLTAGE REGULATOR, by Albert D. Krall, George Schohan, etc., 4 Nov 1957. 18 p. NAVORD 5756.
Order from LC mi $2.40, ph $3.30 PB 133872

Naval Ordnance Lab., White Oak, Md.
DIELECTRIC INTEGRATOR AND DELAY MECHANISM XD-1A, by B. L. Snavely, 25 Oct 1956. 26 p. NAVORD 4243.
Order from LC mi $2.70, ph $4.80 PB 130736

Naval Ordnance Lab., White Oak, Md.
THE NOL XS-2A MULTIPLE POLARITY COINCIDENCE CORRELATOR, prepared by John C. Munson, 4 Sept 1956. 47 p. NAVORD 3712.
Order from LC mi $3.30, ph $7.80 PB 129510

Naval Ordnance Lab., White Oak, Md.
RELIABILITY IN COMMUNICATIONS SYSTEMS, by George H. Weiss, June 1957. 18 p. NAVORD 5664.
Order from LC mi $2.40, ph $3.30 PB 133874

Naval Ordnance Test Station, China Lake, Calif.
THE GRID-CLAMPED DELAY MULTIVIBRATOR, A SIMPLE PULSE GENERATOR, by R. B. Purcell, 1 Dec 1956. 19 p. NOTS 1521; NAVORD 5294.
Order from LC mi $2.40, ph $3.30 PB 130832

Naval Ordnance Test Station, China Lake, Calif.
SPECTROGRAPHIC AND PHOTOGRAPHIC TESTS OF GLOW LAMPS FOR RECORDING PURPOSES, by C. L. Evans, 1 Apr 1956. 14 p. NOTS 144, NAVORD 5242.
Order from LC mi $2.40, ph $3.30 PB 130651

Naval Research Lab., Washington, D. C.
AN AID TO THE CALCULATION OF ELECTRIC FIELD STRENGTHS IN THE INTERFERENCE REGION, by H. J. Peake, 13 Jan 1948. 142 p. NRL R 3222.
Order from LC mi $7.20, ph $22.80 PB 129185

Naval Research Lab., Washington, D. C.
ALKALINE STORAGE BATTERIES: A PRELIMINARY INVESTIGATION OF THE IRON-NEGATIVE-PLATE CHARACTERISTICS, by Guy W. Work, 10 Dec 1951. 16 p. NRL 3881.
Order from LC mi $2.40, ph $3.30 PB 129426

Naval Research Lab., Washington, D. C.
ALKALINE STORAGE BATTERIES A CRITICAL EVALUATION OF THEIR CHARACTERISTICS, by A. L. Pitman, 31 Jan 1950. 44 p. NRL 3618.
Order from LC mi $3.30, ph $7.80 PB 129418

Naval Research Lab., Washington, D. C.
ALKALINE STORAGE BATTERIES: FACTORS AFFECTING THE HYDROGEN EVOLUTION OF NICKEL-IRON BATTERIES WHILE STANDING CHARGED, by A. L. Pitman, 9 Nov 1951. 24 p. NRL 3877.
Order from LC mi $2.70, ph $4.80 PB 129424

Naval Research Lab., Washington, D. C.
AN AMPLITUDE-DISTRIBUTION ANALYZER, by Arno M. King, 29 Dec 51. 23 p. NRL 3890.
Order from LC mi $2.70, ph $4.80 PB 129143

Naval Research Lab., Washington, D. C.
AMPLITUDE LIMITERS, by E. Toth, 26 Oct 1948. 25 p. NRL-R-3375.
Order from LC mi $2.70, ph $4.80 PB 129301

Naval Research Lab., Washington, D. C.
THE BEHAVIOR OF THE KLYSTRON AMPLIFIER AS AN ELECTRONIC PHASE-SHIFTING ELEMENT, by Irwin D. Olin, 30 Nov 1951. 11 p. NRL 3895.
Order from LC mi $2.40, ph $3.30 PB 129144

Naval Research Lab., Washington, D. C.
BIBLIOGRAPHY OF ANTENNA REPORTS, by Antenna Research Section, July 1947. 58 p. NRL R-3122.
Order from LC mi $3.60, ph $9.30 PB 129160

Naval Research Lab., Washington, D. C.
CALCULATION OF DOUBLY CURVED REFLECTORS FOR SHAPED BEAMS, by A. S. Dunbar, 3 Nov 1947. 23 p. NRL R-3193.
Order from LC mi $2.70, ph $4.80 PB 129180

Naval Research Lab., Washington, D. C.
CHARACTERISTICS OF EXPERIMENTAL MODEL CXKB FREQUENCY SHIFT RECEIVER CONVERTER EQUIPMENT, by R. W. Zeek, Apr 1947. 34 p. NRL R-3072.
Order from LC mi $3.00, ph $6.30 PB 129415

Naval Research Lab., Washington, D. C.
COMPARISON OF METHODS OF PARALLEL OPERATION OF AIRCRAFT GENERATORS IN AN ELECTRICAL SYSTEM, by B. G. Bingham, 23 Dec 1946. 48 p. NRL E-3035.
Order from LC mi $3.30, ph $7.80 PB 129272

Naval Research Lab., Washington, D. C.
CONVERGING LENS DIELECTRIC ANTENNAS, by F. E. Boyd, 29 Dec 1950. 13 p. NRL Report 3780.
Order from LC mi $2.40, ph $3.30 PB 129137

Naval Research Lab., Washington, D. C.
DEMODULATORS FOR MODULATED REPETITIVE PULSES, by J. P. Spalding and A. E. Hastings, June 1947. 22 p. NRL R-3129.
Order from LC mi $2.70, ph $4.80 PB 129162

Naval Research Lab., Washington, D. C.
DEVELOPMENT AND PERFORMANCE OF A RATIO-TYPE F M DETECTOR AS APPLIED TO THE MODEL RDO RECEIVING EQUIPMENT, by D. R. Maxson, 3 Nov 1947. 27 p. NRL R-3194.
Order from LC mi $2.70, ph $4.80 PB 129181

Naval Research Lab., Washington, D. C.
DEVELOPMENT OF METHOD OF OBTAINING A UNIFORM ABRASION TEST FOR AIRCRAFT ELECTRICAL CABLE, by William A. Ritchie, 3 Feb 1948. 14 p. NRL E-3228.
Order from LC mi $2.40, ph $3.30 PB 129186

Naval Research Lab., Washington, D. C.
DEVELOPMENT OF A SHOCK RESISTANT INDICATOR LIGHT, by J. D. Haynsworth, 9 June 1948. 7 p. NRL E-3295.
Order from LC mi $1.80, ph $1.80 PB 129289

Naval Research Lab., Washington, D. C.
DEVELOPMENT OF A VHF FREQUENCY CONVERTER UNIT FOR THE AN/MRK-4 TELEMETER RECEIVING EQUIPMENT, by P. T. Steve and K. A. Morgan, 22 June 1948. 38 p. NRL R-3324.
Order from LC mi $3.00, ph $6.30 PB 129293

Naval Research Lab., Washington, D. C.
DEVELOPMENT OF AN IMPROVED RADIO-FREQUENCY-FILTER SYSTEM, FOR MODEL RDZ/RDZ-1 RECEIVING EQUIPMENT, n.d. 19 p. NRL R-3127.
Order from LC mi $2.40, ph $3.30 PB 130101

Naval Research Lab., Washington, D. C.
DEVELOPMENT OF ANTENNAS FOR USE WITH RINK VERIFICATION SYSTEM, A. M. Winzemer, 24 Sept 1947. 11 p. NRL R-3179.
Order from LC mi $2.40, ph $3.30 PB 129177

Naval Research Lab., Washington, D. C.
DEVELOPMENT OF FREQUENCIES FOR Xa FREQUENCIES BAND, by R. G. Fellers, May 1947. 13 p. NRL R-3089.
Order from LC mi $2.40, ph $3.30 PB 129149

Naval Research Lab., Washington, D. C.
DIELECTRIC-GUIDE ANTENNAS FOR AIRCRAFT, by F. E. Boyd and D. H. Russell, 19 Oct 1951. 55 p. NRL Report 3814.
Order from LC mi $3.60, ph $9.30 PB 129139

Naval Research Lab., Washington, D. C.
DIRECTION FINDER BAND WIDTH REQUIREMENTS, by S. F. George, 1 Oct 1947. 44 p. NRL R-3182.
Order from LC mi $3.30, ph $7.80 PB 129178

Naval Research Lab., Washington, D. C.
A DYNAMIC STANDING-WAVE INDICATOR, by P. J. Allen, June 1947. 9 p. NRL R-3110.
Order from LC mi $1.80, ph $1.80 PB 129157

Naval Research Lab., Washington, D. C.
ELECTROMAGNETIC WAVE PROPAGATION IN A COMPOSITE MEDIUM PRELIMINARY REPORT, by W. S. Ament, 10 Feb 1948. 15 p. NRL R-3238.
Order from LC mi $2.40, ph $3.30 PB 129187

Naval Research Lab., Washington, D. C.
THE ELECTRON WAVE TUBE, A NOVEL METHOD OF AMPLIFICATION AND GENERATION OF MICROWAVE ENERGY, by A. V. Haeff, 24 June 1948. 16 p. NRL R-3306.
Order from LC mi $2.40, ph $3.30 PB 129291

Naval Research Lab., Washington, D. C.
ELECTROSTATIC DEFLECTION SYSTEMS FOR PLAN POSITION INDICATORS, by Edward V. Phillips, 22 Aug 1947. 15 p. NRL R-3161.
Order from LC mi $2.40, ph $3.30 PB 129173

Naval Research Lab., Washington, D. C.
ELECTROSTATIC DEFLECTION SYSTEMS FOR PLAN POSITION INDICATORS-II, by C. B. Dobbie, 11 Oct 1948. 11 p. NRL R-3367.
Order from LC mi $2.40, ph $3.30 PB 129300

Naval Research Lab., Washington, D. C.
EQUIPMENT FOR MEASUREMENT OF RADAR AREA OF V-2 ROCKET, by D. L. Ringwalt and W. F. Main, June 1947. 12 p. NRL R-3109.
Order from LC mi $2.40, ph $3.30 PB 129156

Naval Research Lab., Washington, D. C.
THE EQUIVALENT SELECTIVITY OF TRANSFORMER COUPLED LOOP-ANTENNA INPUT

CIRCUITS, by S. V. Fratianni, 13 May 1949. 14 p. NRL R-3464.
Order from LC mi $2.70, ph $4.80 PB 129308

Naval Research Lab., Washington, D. C.
EXPERIMENTALLY DETERMINED CHARACTERISTICS OF CYLINDRICAL SLEEVE ANTENNAS, by A. W. Walters and L. C. Huffman, 13 Sept 1948. 65 p. NRL R-3354.
Order from LC mi $3.90, ph $10.80 PB 129296

Naval Research Lab., Washington, D. C.
FACTORS INFLUENCING THE DESIGN OF VIRTUAL PPI REFLECTOSCOPES, by C. A. Smith, 16 Sept 1948. 22 p. NRL R-3356.
Order from LC mi $2.70, ph $4.80 PB 130102

Naval Research Lab., Washington, D. C.
FIELD METHOD OF AMPLITUDE BALANCE CHANGES OF LORAN RECEIVERS AND THE EFFECT ON OPERATION, by A. E. Craig and J. W. Brogden, Oct 1946. 49 p. NRL 3024.
Order from LC mi $3.30, ph $7.80 PB 129270

Naval Research Lab., Washington, D. C.
FIXED AND VARIABLE FREQUENCY OSCILLATORS WITH IMPROVED FREQUENCY STABILITY, by J. M. Gager and J. M. Headrick, May 1947. 9 p. NRL R-3082.
Order from LC mi $1.80, ph $1.80 PB 129148

Naval Research Lab., Washington, D. C.
A GRAPHICAL METHOD FOR COMPUTING SHORT IMPEDANCE MATCHING TRANSFORMERS, by C. B. Barker, 5 Jan 1948. 13 p. NRL R-3215.
Order from LC mi $2.40, ph $3.30 PB 129182

Naval Research Lab., Washington, D. C.
THE IMAGE-INTENSIFIER MEMORY TUBE, by S. T. Smith, 11 Aug 1950. 25 p. NRL 3718.
Order from LC mi $2.70, ph $4.80 PB 129421

Naval Research Lab., Washington, D. C.
AN IMPROVED CRYSTAL CONTROLLED PRESELECTOR AND 1-F AMPLIFIER FOR 225-400 MC RECERTION, by R. P. Smith, 7 Oct 1948. 52 p. NRL R-3366.
Order from LC mi $3.60, ph $9.30 PB 129298

Naval Research Lab., Washington, D. C.
THE INPUT AND OUTPUT ADMITTANCES OF THE 6AG5 TUBE IN THE V.H.F. RANGE, by E. H. Hurlburt, n.d., 50 p. NRL R-3054.
Order from LC mi $3.30, ph $7.80 PB 129276

Date is 1946 or later

Naval Research Lab., Washington, D. C.
INTERFERENCE ANALYSIS OF 100 PRIMARY COMMUNICATION CHANNELS AND GUARD CHANNELS 225-400 Mc (MAR-RDZ EQUIPMENTS), by Andrew W. Walters, May 1947. 31 p. NRL R-3051.
Order from LC mi $3.00, ph $6.30 PB 129274

Naval Research Lab., Washington, D. C.
INTERFERENCE ANALYSIS OF 100 PRIMARY COMMUNICATION CHANNELS AND GUARD CHANNEL, 225-400 Mc (RDR-MAR EQUIPMENTS), by Andrew W. Walters, June 1947. 28 p. NRL R-3052.
Order from LC mi $2.70, ph $4.80 PB 129275

Naval Research Lab., Washington, D. C.
INVESTIGATION AND ANALYSIS OF "CAPTURE EFFECT" IN F-M AND A-M COMMUNICATION SYSTEMS, by R. W. Zeek, 18 Feb 1949. 57 p. NRL R-3432.
Order from LC mi $3.60, ph $9.30 PB 129305

Naval Research Lab., Washington, D. C.
AN INVESTIGATION AND ANALYSIS OF THE RADIATION SPECTRUM OF THE MODEL TDP-1 LORAN TRANSMITTER, by A. W. Coven and J. W. Brogden, 29 Mar 1948. 11 p. NRL R-3269.
Order from LC mi $2.40, ph $3.30 PB 129285

Naval Research Lab., Washington, D. C.
INVESTIGATION OF CHARACTERISTICS OF MODEL CXKQ RADIO CONTROL EQUIPMENT FOR NAVAL AIR STATION CONTROL TOWERS, by C. R. Neth, Jan 1947. 66 p. NRL 3043.
Order from LC mi $3.90, ph $10.80 PB 129273

Naval Research Lab., Washington, D. C.
AN INVESTIGATION OF HIGH RESOLUTION RADAR PHENOMENA PART II, HIGH-SPEED OSCILLOSCOPY, by Neil L. Davis, 10 Nov 1949. 26 p. NRL 3568.
Order from LC mi $2.70, ph $4.80 PB 129417

Naval Research Lab., Washington, D. C.
INVESTIGATION OF NON-LINEAR RECEIVING CIRCUITS UNDER TWO SIGNAL CONDITIONS, by W. E. W. Howe and R. W. Zeek, Nov 1949. 32 p. NRL R-3460.
Order from LC mi $3.00, ph $6.30 PB 129307

Naval Research Lab., Washington, D. C.
A MAGNETIC AMPLIFIER CONTROL UNIT FOR CONSTANT FREQUENCY, by H. G. Schafer and L. J. Johnson, 27 June 1949. 56 p. NRL E-3482.
Order from LC mi $3.60, ph $9.30 PB 129310

Naval Research Lab., Washington, D. C.
A MICROWAVE ICONOSCOPE, by O. A. Tyson and T. K. Burton 28 Feb 1949. 12 p. NRL R-3425.
Order from LC mi $2.40, ph $3.30 PB 129306

Naval Research Lab., Washington, D. C.
A MINIATURE MICROWAVE PULSED-TRIODE OSCILLATOR, by D. O. Collup, 20 May 1949. 19 p. NRL R-3469.
Order from LC mi $2.40, ph $3.30 PB 129309

Naval Research Lab., Washington, D. C.
MINIATURE S-BAND TELEMETERING TRANSMITTER FOR GUIDED MISSILES, by V. J. Guethlen and A. J. Stecca, 16 Feb 1948. 13 p. NRL R-3241.
Order from LC mi $2.40, ph $3.30 PB 129281

Naval Research Lab., Washington, D. C.
A MODEL TECHNIQUE FOR THE MEASUREMENT OF THE RADAR CHARACTERISTICS OF TARGETS, by David L. Ringwalt, 29 June 1951. 18 p. NRL 3800.
Order from LC mi $2.40, ph $3.30 PB 129423

Naval Research Lab., Washington, D. C.
A NETWORK PERFORMANCE ANALYZER, by C. F. White and L. A. Marzetta, 30 Mar 1948. 9 p. NRL R-3272.
Order from LC mi $1.80, ph $1.80 PB 129286

Naval Research Lab., Washington, D. C.
NOTES ON DEVELOPMENT OF SYSTEM FOR COMMON ANTENNA WORKING (230 TO 390 Mc), by L. G. Robbins and Oscar Norgorden, Jun 1947. 35 p. NRL R-3058.
Order from LC mi $3.00, ph $6.30 PB 129277

Naval Research Lab., Washington, D. C.
PANORAMIC RECEIVER THRESHOLDS, H. M. Beck and W. R. Faust, 17 Aug 1948. 17 p. NRL R-3336.
Order from LC mi $2.40, ph $3.30 PB 129294

Naval Research Lab., Washington, D. C.
PRELIMINARY DESIGN OF THE DIRECTION FINDER UNIT FOR THE AN/SPR-4 SUBMARINE EQUIPMENT, by Frederick Harris and John R. Gruber, June 1947. 20 p. NRL R-3115.
Order from LC mi $2.40, ph $3.30 PB 129159

Naval Research Lab., Washington, D. C.
A PROTECTIVE CIRCUIT FOR AIRCRAFT D. C. GENERATOR SYSTEMS, by M. Trobovich, 19 Nov 1948. 22 p. NRL E-3387.
Order from LC mi $2.70, ph $4.80 PB 129302

Naval Research Lab., Washington, D. C.
PULSE SHAPE IN THE LORAN SYSTEM, by A. W. Coven, June 1947. 10 p. NRL R-3099.
Order from LC mi $1.80, ph $1.80 PB 129153

Naval Research Lab., Washington, D. C.
RADAR AREA MEASUREMENTS V-2 ROCKETS, by F. C. Macdonald, 9 Jan 1948. 23 p. NRL R-3220.
Order from LC mi $2.70, ph $4.80 PB 129184

Naval Research Lab., Washington, D. C.
RAPID IMPEDANCE MATCHING WITH A VARIABLE ASYMMETRICAL IRIS, by M. D. Adcock, June 1947. 12 p. NRL R-3126.
Order from LC mi $2.40, ph $3.30 PB 129161

Naval Research Lab., Washington, D. C.
REDUCTION OF CROSS MODULATION AT DAJ STATIONS BY THE USE OF ANTENNA COUPLING TRANSFORMERS, by R. L. Haskins and M. L. Musselman Aug 1946. 32 p. NRL R-3156.
Order from LC mi $3.00, ph $6.30 PB 129170

Naval Research Lab., Washington, D. C.
AN S-BAND SWEEP GENERATOR AND TEST SET, by J. H. Kluck, 29 Apr 1952. 9 p. NRL 3986.
Order from LC mi $1.80, ph $1.80. PB 129428

Naval Research Lab., Washington, D. C.
SHIPBORNE RADAR FIRE CONTROL FROM THE SYSTEM VIEWPOINT, by Robert M. Page and John B. Trevor, Jr., May 1947. 18 p. NRL R-3091.
Order from LC mi $2.40, ph $3.30 PB 129151

Naval Research Lab., Washington, D. C.
SINGLE TUBE HARMONIC GENERATOR DESIGN, by H. H. Grimm, Sept 1947. 14 p. NRL R-3166.
Order from LC mi $2.40, ph $3.30 PB 129175

Naval Research Lab., Washington, D. C.
SLIDING CONTACTS AT HIGH ALTITUDES: EXPERIMENTAL SYSTEM FOR CARBON BRUSH INVESTIGATIONS, Elise F. Harmon, 23 Sept 1947. 18 p. NRL E-3176.
Order from LC mi $2.40, ph $3.30 PB 129176

Naval Research Lab., Washington, D. C.
SOME SERVO SYSTEM SINUSODIAL STUDIES, by C. F. White, 22 June 1948. 9 p. NRL 3303.
Order from LC mi $1.80, ph $1.80 PB 129290

Naval Research Lab., Washington, D. C.
SOME THEORETICAL CONSIDERATIONS IN THE DESIGN OF DIRECTIONAL-NULL-TYPE ANTENNAS, by C. V. Parker, 1 Aug 1947. 31 p. NRL R-3162.
Order from LC mi $3.00, ph $6.30 PB 129174

Naval Research Lab., Washington, D. C.
SPECTRAL EMISSIVITY AND ELECTRON EMISSION CONSTANTS OF THORIA CATHODES FORMED BY CATAPHORESIS, by T. E. Hanley, 12 Aug 1947. 16 p. NRL R-3157.
Order from LC mi $2.40, ph $3.30 PB 129171

Naval Research Lab., Washington, D. C.
STEADY-STATE ANALYSIS OF AIRCRAFT D. C. GENERATORS, by E. S. Van Valkenburg, June 1947. 18 p. NRL E-3130.
Order from LC mi $2.40, ph $3.30 PB 129163

Naval Research Lab., Washington, D. C.
A SUBMARINE RADIO RESCUE BUOY, by F. C. Kahler, 20 June 1949. 9 p. NRL R-3490.
Order from LC mi $1.80, ph $1.80 PB 129311

Naval Research Lab., Washington, D. C.
TECHNIQUES FOR ELECTRONIC CONTROL OF UHF OSCILLATORS, by John K. Steckel, 4 Jan 1951. 11 p. NRL 3784.
Order from LC mi $2.40, ph $3.30 PB 129138

Naval Research Lab., Washington, D. C.
TESTS OF 200 MEGACYCLE ECHO BOXES AND IMPROVEMENTS IN MODEL OAA-2, by Walter J. Brinks, 7 Jan 1948. 16 p. NRL R-3218.
Order LC mi $2.40, ph $3.30 PB 129183

Naval Research Lab., Washington, D. C.
THEORETICAL NOTES ON A METHOD OF COMMON ANTENNA WORKING IN THE HIGH FREQUENCY BAND, by L. R. White, 22 Nov 1950. 19 p. NRL 3760.
Order from LC mi $2.40, ph $3.30 PB 129136

Naval Research Lab., Washington, D. C.
THEORY AND DESIGN OF RESONANT TRANSFORMER-COUPLED LOOP ANTENNA INPUT SYSTEMS FOR VLF RECEPTION, by S. V. Fratianni, 28 April 1958. 34 p. NRL R-3281.
Order from LC mi $3.00, ph $6.30 PB 129287

Naval Research Lab., Washington, D. C.
THEORY AND PROBLEMS OF RADAR VISIBILITY: INTENSITY-MODULATED SCOPES, by Clifford T. Morgan, 14 Apr 1952. 22 p. JHU Report 166-I-148; Contr. N5ori 16601; NRL 3965.
Order from LC mi $2.70, ph $4.80 PB 129147

Naval Research Lab., Washington, D. C.
TIME SEQUENTAL FREQUENCY INDICATORS, by H. M. Beck, 30 Mar 1950. 15 p. NRL 3644.
Order from LC mi $2.40, ph $3.30 PB 129134

Naval Research Lab., Washington, D. C.
VARIABLE SPEED CONSTANT FREQUENCY ALTERNATES, by E. L. Brancato, 5 Sept 1947. 16 p. NRL E-3169.
Order from LC mi $2.40, ph $3.30 PB 130103

Naval Research Lab., Washington, D. C.
VERTICAL PATTERNS OF CYLINDRICAL SLEEVE ANTENNAS, by A. W. Walters and L. C. Huffman, 2 Feb 1949. 28 p. NRL R-3411.
Order from LC mi $2.70, ph $4.80 PB 129304

Naval Research Lab., Washington, D. C.
A WIDE-RANGE LOOK-THROUGH RECEIVER, by I. H. Page and R. E. Ellis, July 1947. 14 p. NRL R-3087.
Order from LC mi $2.40, ph $3.30 PB 129150

Navy Electronics Lab., San Diego, Calif.
DECODING MATRIXATRON DEVELOPMENT, by C. H. Cash and W. R. Dawirs, June 1955. 31 p. NEL R 605.
Order from LC mi $3.00, ph $6.30 PB 133864

Navy Experimental Diving Unit, Naval Gun Factory, Washington, D. C.
SUBJECTIVE AND ARTICULATION TEST OF DEEP AND SHALLOW WATER DIVERS COMMUNICATION, by W. F. Searle, 19 Aug 1957. 41 p. Research rpt. 1-58.
Order from LC mi $3.30, ph $7.80 PB 130433

Navy Underwater Sound Lab., Fort Trumbull, New London, Conn.
RESPONSE OF ELECTRICAL PROJECTORS TO TRANSIENT EXCITATION BY CONDENSER DISCHARGE, by Harvey A. Alperin, 22 Nov 1955. 25 p. USL Technical Memo. 1150-82-55.
Order from LC mi $2.70, ph $4.80 PB 128081

Navy Underwater Sound Reference Lab., Orlando, Fla.
DIMENSIONS OF TEST TANKS FOR UNDERWATER TRANSDUCER MEASUREMENTS, by Robert J. Bobber, 23 Aug 1956. 18 p. RR 39.
Order from LC mi $2.40, ph $3.30 PB 128395

New Mexico College of A and M. A., State College.
INTERFERENCE PHENOMENA IN A CIRCULAR WAVEGUIDE CONTAINING A COAXIAL FERRITE CYLINDER OF FINITE LENGTH, by Ralph Dressel, Jan 1958. 46 p. AFOSR TN 58-135; Contr. AF 18(600)-1597. AD 152162.
Order from LC mi $3.30, ph $7.80 PB 133792

New York U., N. Y.
A STUDY OF THE GENERATION AND DETECTION OF ELECTROMAGNETIC WAVES IN THE MILLIMETER WAVE REGION, 1 Mar 1957. 34 p. Scientific Report No. 7. AFCRC-TN-57-359; Contract AF 19 (604)-1115. AD 117053.
Order from LC mi $3.00, ph $6.30 PB 128737

New York U., N. Y.
A STUDY OF THE GENERATION AND DETECTION OF ELECTROMAGNETIC WAVES IN THE MILLIMETER WAVE REGION, by J. H. Rohrbaugh, 1 Dec 1957. 23 p. Scientific Report No. 1, for Sept 1 to Nov 30, 1957. AFCRC TN 58-119; Contr. AF 19(604)-2673. AD 146824.
Order from LC mi $2.70, ph $4.80 PB 133634

New York U. Coll of Engineering, N. Y.
SUPPLEMENTARY NOTES ON EVALUATION AND OPTIMIZATION OF DIGITAL COMMUNICATION SYSTEMS, PART II. First Scientific Report, 15 Jan-15 Apr 1957. 88 p. AF CRC TN-57-355; Contract 19(604)-1964. AD 117047.
Order from LC mi $4.80, ph $13.80 PB 128736

Notre Dame U., Indiana
ANALYSIS OF ELECTRICAL NON-LINEAR ELEMENTS AND CIRCUITS: ESPECIALLY PHASE PLANE ANALYSIS, by H. E. Ellithorn, and R. C. McCollum, Dec 1955. 82 P. WADC TN-55-487; Contr. AF 33(616)2354.
Order from LC mi $4.80, ph $13.80 PB 129634

Office of Naval Research, Washington, D. C.
AUTOMATIC ELECTRONIC RECORDING INTERFEROMETER PART I: DESIGN AND CONSTRUCTION, by Raymond Jonnard, Aug 1956. 109 p. Contr. Nonr-1516(00).
Order from LC mi $5.70, ph $18.80 PB 128087

Final Technical Report on work done at Paterson General Hospital, N. J.

Ohio State U., Columbus.
A HIGH-PERVEANCE ELECTRON GUN OF TOROIDAL DESIGN, by Walter E. Hoovler, May 1957. 28 p. AF OSR TN-57-334; Contr. AF18(600)-980. AD 132403.
Order from LC mi $2.70, ph $4.80 PB 129585

Ohio State U. Research Foundation, Columbus.
BACK-SCATTERING FOR ARBITRARY ANGLES OF INCIDENCE OF PLANE ELECTROMAGNETIC WAVE ON A PERFECTLY CONDUCTING SPHEROID WITH SMALL ECCENTRICITY, by Y. Mushiake, 16 Apr 1956. 50 p. OSURF 662-3; Contr. DA 36-039 SC 70174.
Order from LC mi $3.60, ph $9.30 PB 130466

Ohio State U. Research Foundation, Columbus
THE BACK-SCATTERING FROM A CIRCULAR LOOP, by R. G. Kouyoumjian. 30 Apr 1956. 37 p. OSURF 662-5; Contr. DA-36-039-SC-70174.
Order from LC mi $3.00, ph $6.30 PB 130578

Ohio State U. Research Foundation, Columbus
EFFECT OF A HALF-PLANE SHEET UPON THE RADIATION PATTERN OF A DOLPH-TCHEBYSCHEFF ARRAY, by R. I. Barnett, Jr., C. T. Tai. 15 Nov 1956. 15 p. AFCRC TN 56-953; Contr. AF 19(604)-1725. AD 110146.
Order from LC mi $2.40, ph $3.30 PB 127490

Ohio State U. Research Foundation, Columbus
ELECTROMAGNETIC WAVE-GUIDING ON CORRUGATED AND PERIODIC SURFACES, by C. T. Tai and R. Justice, 1 Dec 1956, 11 p. Final Engineering Report 1 Feb to 30 Nov. Contr. AF 19(604)-1725; AFCRC TR-56-177. AD 110147.
Order from LC mi $2.40, ph $3.30 PB 128125

Ohio State U. Research Foundation, Columbus
IMPEDANCE OF A CYLINDRICAL ANTENNA BASED ON A REFINED VARIATIONAL CALCULATION, by R. I. Barnett, Jr., 31 May 1956. 23 p. OSURF 662-7; Contr. DA-36-039-SC-70174.
Order from LC mi $2.70, ph $4.80 PB 130581

Ohio State U. Research Foundation, Columbus
AN INDOOR ECHO-AREA MEASURING SYSTEM, by J. Upson and J. N. Hines, 1 Nov 1956. 12 p. Report 612-11. RADC-TN-57-62; Contr. AF 30(635)2811. AD 114303.
Order from LC mi $2.40, ph $3.30 PB 129610

Errata sheet as p. (10).

Ohio State U. Research Foundation, Columbus
A METHOD OF PRODUCING BROADBAND CIRCULAR POLARIZATION EMPLOYING AN ANISOTROPIC DIELECTRIC, by H. S. Kerschbaum and Sinclair Chen, 16 July 1956. 21 p. OSURF 662-2; Contr. DA-36-039-SC-70174.
Order from LC mi $2.70, ph $4.80 PB 130579

Ohio State U. Research Foundation, Columbus.
PREDICTION OF TRANSIENT COMPONENT TEMPERATURES AND THEIR EFFECTS ON THE LIFE OF BLAST-COOLED ELECTRICAL ENGINES, by W. Robinson and J. R. Mayfield, April 1956. 109 p. WADC TN-56-122; Contr. AF 33(038)19842. AD 110417.
Order from LC mi $5.70, ph $16.80 PB 129591

Oklahoma A. and M. Coll. Research Foundation, Stillwater.
RESEARCH DIRECTED TOWARD "ENGINEERING SERVICES AND RESEARCH IN INSTRUMENTATION CIRCUITRY", Marvin T. Edmison, July 1957. 19 p. Final Technical Report; AFCRC TR-57-214; Contr. AF19(604)-363. AD 133689.
Order from LC mi $2.40, ph $3.30 PB 130750

Olin Mathieson Chemical Corp., New Haven, Conn.
INDUSTRIAL PREPAREDNESS STUDY ON PAPER LINED BATTERIES TYPE BA-270/U-XPL, Fifteenth Progress Report, by S. J. Wajnowski, 31 Mar 1957. 12 p. Contr. DA-36-039-SC-30266.
Order from LC mi $2.40, ph $3.30 PB 128200

Olin Mathieson Chemical Corp., New Haven, Conn.
PAPER-LINED BATTERIES TYPE BA-270/U-XPL INDUSTRIAL PREPAREDNESS STUDY. 16th PROGRESS REPORT, 1 MAR 1957 TO 31 MAY 1957, by S. M. Wajnowski, June 1957. 16 p. Contr. DA-36-039-SC-30266.
Order from LC mi $2.40, ph $3.30 PB 129407

Owens-Illinois Glass Co., Toledo, Ohio.
DEVELOPMENT AND FABRICATION OF INORGANIC SANDWICH RADOMES, by George L. Kalousek and Richard B. Dence, Apr 1954. 39 p. WADC TR 54 197; Contr. AF 33(600)-22323. AD 39670.
Order from LC mi $3.00, ph $6.30 PB 133914

Pacific Semiconductors, Inc., Culver City, Calif.
DIFFUSED-FUNCTION SILICON HIGH-SPEED COMPUTER DIODES, by S. H. Barnes and P. H. Dirnbach, Feb 1957 to 30 Apr 1957. 41 p. Contr. DA-36-039-SC-70274.
Order from LC mi $3.30, ph $7.80 PB 130636

Fourth quarterly Progress Report.

Philco Corp., Philadelphia, Pa.
INDUSTRIAL PREPAREDNESS STUDY ON SURFACE-ALLOY SILICON TRANSISTORS. THIRD QUARTERLY PROGRESS REPORT. 63 p. Covers period 1 Dec 1956 to 28 Feb 1957. Contr. DA36-039-SC-72686.
Order from LC mi $3.90, ph $10,80 PB 128768

Philco Corp., Philadelphia, Pa.
TRANSISTOR CIRCUITRY FOR DIGITAL DATA HANDLING: PART I, by W. H. Foster, 7 Feb 1957. 87 p. AFCRC-TR 57-171; Contr. AF 19(604)-1586.
Order from LC mi $4.80, ph $13.80 PB 128338

Philco Corp., Philadelphia, Pa.
TRANSISTOR CIRCUITRY FOR DIGITAL DATA HANDLING: PART II, by W. H. Foster, 7 Feb 1957. 65 p. AFCRC-TR-57-172; Contr. AF-19(604)-1586.
Order from LC mi $3.90, ph $10.80 PB 128339

Physical Science Lab., New Mexico Coll. of A. and M. A. State College.
580/600 MC NOTCH-EXCITED FIN ANTENNA FOR AEROBEE-HI ROCKET, by C. C. Post, 9 July 1957. 21 p. AF CRC TN 57-203; Contr. AF 19 (604)-409. AD 113613.
Order from LC mi $2.70, ph $4.80 PB 129662

Physical Science Lab., New Mexico Coll. of A and MA, State College.
FINAL REPORT FOR CONTRACT AF 19(604)-409, by Harold D. Smith, 26 Aug 1957. 11 p. AF CRC TR 57-221; Contr. AF 19 (604)-409. AD 133808.
Order from LC mi $2.40, ph $3.30 PB 130746

Physical Science Lab., New Mexico Coll. of A. and M. A., State College.
SPLIT-MISSILE ANTENNA, by Harold D. Smith, 1 July 1957. 27 p. Scientific Report No. 6. Contr. AF19(604)-409; AFCRC TN-57-204. AD 113614.
Order from LC mi $2.70, ph $4.80. PB 129663

Pickard and Burns, Inc., Needham, Mass.
THE IMPROVEMENT OF SIGNAL-TO-NOISE RATIOS OF THE COZI EQUIPMENT, by W. Kostecki, 9 Aug 1957. 8 p. Interim status report, AFCRC TN 57-763; Contr. AF 19 (604)-1502. AD 133703.
Order from LC mi $1.80, ph $1.80 PB 130448

Polytechnic Research and Development Co., Inc., Brooklyn, N. Y.
INDUSTRIAL PREPAREDNESS STUDY FOR PRECISION HIGH STABILITY RESISTORS, by Clifford T. Graham, 16 Aug 1957. 17 p. Contr. DA36-039-SC-72730.
Order from LC mi $2.40, ph $3.30 PB 129919

Fourth Quarterly Progress Report.

Princeton U., N. J.
TRANSITION PROBABILITIES FOR THE ROTATING MORSE OSCILLATOR WITH AN EXPONENTIAL DIPOLE MOMENT, by David Garvin, 5 Feb 1958. 6 p. AF OSR TN 58-95; Contr. AF 18(600)-134. AD 148144.
Order from LC mi $1.80, ph $1.80 PB 133760

Purdue Research Foundation, Lafayette, Ind.
HIGH POWER COAXIAL LINE PULSE NOISE GENERATORS FOR THE FREQUENCY RANGE FROM 1000 TO 3000 MEGACYCLES, by R. H. George and E. B. Hunt, 31 May 1956. 65 p. RADC TN-56-309; Contr. AF 30(602)-402. AD 97764.
Order from LC mi $3.90, ph $10.80 PB 130428

Purdue Research Foundation, Lafayette, Ind.
A STUDY AND INVESTIGATION OF MICROWAVE NOISE SOURCES, by R. H. George and H. J. Heim, 31 May 1956. 31 p. Final Report; RADC TR-56-88; Contr. AF 30(602) 402. AD 97734.
Order from LC mi $3.00, ph $6.30 PB 130197

Radiation Lab., Johns Hopkins U., Baltimore, Md.
SOME FUNDAMENTAL PROPERTIES OF DIELECTRIC IMAGE LINE, by S. P. Schlesinger and D. D. King, Dec 1956. 129 p. AF CRC-56-195; Contr. AF19 (604)-1559. AD 98814.
Order from LC mi $6.30, ph $19.80 PB 127973

Radio Corp. of America, Harrison, N. J.
INDUSTRIAL PREPAREDNESS STUDY. LOW-NOISE TRAVELING WAVE AMPLIFIER, by M. Nowogrodzki, 30 Sept 1956. 10 p. Quarterly Progress Report No. 1, 1 July to 30 Sept 1956.
Order from LC mi $1.80, ph $1.80 PB 128106

Radio Corp. of America, Harrison, N. J.
INDUSTRIAL PREPAREDNESS STUDY. LOW-NOISE TRAVELING-WAVE AMPLIFIER, by M. Nowogrodzki Mar 1957. 31 p. Quarterly Progress Report No. 3 1 Jan to 1 Mar 1957.
Order from LC mi $3.00, ph $6.30 PB 128116

Radio Corp. of America, Harrison, N. J.
INDUSTRIAL PREPAREDNESS STUDY. LOW-NOISE TRAVELING WAVE AMPLIFIER, by M. Nowogrodzki, Quarterly Progress Report No. 4, 1 Apr 1951 to 1 June 1957. 24 p. Contr. DA 36-039-SC-72733.
Order from LC mi $2.70, ph $4.80 PB 130613

Rayovac Co., Madison, Wis.
LOW TEMPERATURE TYPE, DRY BATTERIES BA-2000 SERIES INDUSTRIAL PREPAREDNESS STUDY. FINAL REPORT, by Harold H. Spengler, 30 Dec 1955. 74 p. Contr. DA 36-039-SC-30280.
Order from LC mi $4.50, ph $12.30 PB 130423

Rayovac Co., Madison, Wis.
PAPER-LINED BATTERIES TYPE BA-270/U-XPL. INDUSTRIAL PREPAREDNESS STUDY. FINAL TECHNICAL REPORT, by R. F. Udell, 31 Dec 1955. 36 p. Contr. DA-36-039-SC-30269.
Order from LC mi $3.00, ph $6.30 PB 130425

Raytheon Mfg. Co., Newton, Mass.
FEASIBILITY STUDY OF DIFFUSED SEMICONDUCTOR DEVICES. FINAL REPORT ON SILICON VIDEO AMPLIFIER (DEVICE 25), by Barbara Griffin, 1 Jan to 1 May 1957. 69 p. Contr. DA-36-039-SC-72710.
Order from LC mi $3.90, ph $10.80 PB 129412

Raytheon Mfg. Co., Newton, Mass.
INVESTIGATION OF EMISSIVE MATERIALS FOR ELECTRON TUBES, by C. J. Bardsley and F. T. Hill, 31 Mar 1957. 41 p. AFCRC TN 57-358; Contract AF 19 (604)-1822. AD 117052.
Order from LC mi $3.30, ph $7.80 PB 128324

Raytheon Mfg. Co., Newton, Mass.
TRANSISTORS AND AUTOMATIC MACHINERY FOR THEIR MANUFACTURE. INDUSTRIAL PREPAREDNESS STUDY. QUARTERLY REPORT NO. 6, 28 June to 28 Sept 1956. 94 p. Contr. DA 36-039-SC-66038.
Order from LC mi $5.40, ph $15.30 PB 128144

Raytheon Mfg. Co., Newton, Mass.
TRANSISTORS AND AUTOMATIC MACHINERY FOR THEIR MANUFACTURE. INDUSTRIAL PREPAREDNESS STUDY. QUARTERLY REPORT NO. 7, 28 Sept 1956 to 28 Dec 1956, by Barbara Griffin. 69 p. Contr. DA-36-039-SC-66038.
Order from LC mi $3.90, ph $10.80 PB 129406

Redstone Arsenal, Huntsville, Ala.
THE EFFECTS OF NON-LINEAR CIRCUIT ELEMENTS ON NOISE SPECTRA, by E. Pieruschka, 1 Nov 1956. 39 p. OML R 2R18F.
Order from LC mi $3.00, ph $6.30 PB 129513

Redstone Arsenal, Huntsville, Ala.
PRODUCTION ENVIRONMENTAL TESTING, by Robert Lusser, Nov 1957, 4 p. graphs.
Order from LC mi $1.80, ph $1.80 PB 132547

Remington Rand Univac Div., Sperry Rand Corp.
FINAL ENGINEERING REPORT CONTRACT AF 19 (604)-1376, Feb 1957. 90 p. AFCRC TR 56-191; Contr. 19 (604)-1376. AD 110194.
Order from LC mi $4.80, ph $13.80 PB 128330

Report on extending the frequency range of magnetic, transistor and transistor core amplifiers.

Remington Rand Univac Div., Sperry Rand Corp., Philadelphia, Pa.
INVESTIGATION OF TRANSISTOR AND TRANSISTOR/MAGNETIC-CORE CIRCUITRY FOR HIGH SPEED DIGITAL COMPUTER APPLICATIONS, by H. J. Gray and D. M. Lipkin, 30 Apr 1956. 64 p. AFCRC-TN-56-184; Contr. AF 19 (604)-1376.
Order from LC mi $3.90, ph $10.80 PB 129466

Remington Rand Univac Div., Sperry Rand Corp., Philadelphia, Pa.
SERIES PULSE MAGNETIC AMPLIFIERS, by R. D. Tarrey and A. L. Krell, 1 Feb 1951. 63 p. AFCRC TN 56-186; AF 19(604)-1376. AD 110190.
Order from LC mi $3.90, ph $10.80 PB 129481

Scientific Report No. 3.

Research, Inc., Hopkins, Minn.
COMPARISON OF RADIOSONDE AND MICROWAVE REFRACTOMETER IN RADIO PROPAGATION STUDY, by M. M. Mitchell. 45 p. WADC TR 55 81; Contr. AF 33(616)85. AD 76797.
Order from LC mi $3.30, ph $7.80 PB 133922

Research, Inc., Minneapolis, Minn.
DEVELOPMENT OF A UNITIZED STATISTICAL ACCELEROMETER AND RECORD ASSEMBLY, by H. C. Johnson, Aug 1954. 55 p. WADC TR 55-14; Contr. AF 33(600)-26175. AD 65354.
Order from LC mi $3.60, ph $9.30 PB 133916

Research, Inc., Hopkins, Minn.
A STUDY OF HEAT REQUIREMENTS FOR ANTI-ICING RADOME SHAPES WITH DRY AND WET SURFACES, by W. L. Torgeson and A. E. Abramson, Sept 1953. 135 p. AF WADC TR 53-284; Contr. AF 33(616)-85. AD 25909.
Order from LC mi $6.90, ph $21.30 PB 133692

Research Lab. of Electronics, Mass. Inst. of Tech., Cambridge.
NOISE IN ELECTRON BEAMS, by Charles Fried, 2 May 1955. 46 p. TR 294.
Order from LC mi $3.30, ph $7.80 PB 133854

Research Lab. of Electronics, Mass. Inst. of Tech., Cambridge.
QUARTERLY PROGRESS REPORT, by G. G. Harvey, et al, 15 Jan 1956. 169 p. Contr. DA 36-039-SC-42607.
Order from LC mi $7.80, ph $25.80 PB 133741

Research Lab. of Electronics, Mass. Inst. of Tech., Cambridge.
QUARTERLY PROGRESS REPORT, by J. B. Wiesner, et al, 15 Apr 1956. 135 p. Contr. DA 36-039-SC-42607.
Order from LC mi $6.90, ph $21.30 PB 133740

Research Lab. of Electronics, Mass. Inst. of Tech., Cambridge.
QUARTERLY PROGRESS REPORT, by J. A. Stratton and A. G. Hill, 15 Oct 1946. 58 p. Contr. W-36-039-SC-32037.
Order from LC mi $3.60, ph $9.30 PB 130333

Research Lab. of Electronics, Mass. Inst. of Tech., Cambridge.
QUARTERLY PROGRESS REPORT, by J. A. Stratton and A. G. Hill, 15 Jan 1947. 101 p. Contr. W-36-039-SC-32037.
Order from LC mi $5.70, ph $16.80 PB 130335

Research Lab. of Electronics, Mass. Inst. of Tech., Cambridge.
QUARTERLY PROGRESS REPORT, by J. A. Stratton and A. G. Hill, 15 Apr 1947. 92 p. Contr. W.-36-039-SC-32037.
Order from LC mi $5.40, ph $15.30 PB 130334

Research Lab. of Electronics, Mass. Inst. of Tech., Cambridge.
QUARTERLY PROGRESS REPORT, by J. A. Stratton and A. G. Hill, 15 July 1947. 65 p. Contr. W-36-039-SC-32037.
Order from LC mi $3.90, ph $10.80 PB 130336

Research Lab. of Electronics, Mass. Inst. of Tech., Cambridge.
QUARTERLY PROGRESS REPORT, by J. A. Stratton and A. G. Hill, 15 Oct 1947. 57 p. Contr W-36-039-SC-32037.
Order from LC mi $3.60, ph $9.30 PB 130338

Research Lab. of Electronics, Mass. Inst. of Tech., Cambridge.
QUARTERLY PROGRESS REPORT, by J. A. Stratton and A. G. Hill, 15 Jan 1948. 71 p. Contr. W-36-039-SC-32037.
Order from LC mi $4.50, ph $12.30 PB 130337

Research Lab. of Electronics, Mass. Inst. of Tech., Cambridge.
QUARTERLY PROGRESS REPORT, by J. B. Wiesner and G. G. Harvey, 15 Apr 1957. 178 p. Contr. DA 36-039-SC-64637.
Order from LC mi $8.10, ph $27.30 PB 133404

Roger White Electron Devices, Inc. Haskell, N. J.
ELECTRONIC PHASE SHIFTER EMPLOYING HIGH FREQUENCY GAS DISCHARGE TECHNIQUES, by R. H. Geiger and P. Parzen, 30 Oct 1956. 48 p. Scientific Report No. 1. AF CRC TN-56-969; Contr. AF 19 (604)-1592. AD 110162.
Order from LC mi $3.30, ph $7.80 PB 128216

Rome Air Development Center, N. Y.
AIR FORCE COMMUNICATIONS EQUIPMENT: A LOOK INTO THE FUTURE, by Joseph H. Vogelman, Mar 1958. 15 p. RADC TN 58-96. AD 148676.
Order from LC mi $2.40, ph $3.30 PB 133710

Rome Air Development Center, N. Y.
AIR FORCE GROUND ELECTRONIC EQUIPMENT RELIABILITY IMPROVEMENT PROGRAM, by J. J. Naresky, July 1957. 32 p. RADC TN 57-244. AD 131152.
Order from LC mi $3.00, ph $6.30 PB 129518

Rome Air Development Center, N. Y.
ALPHA-NUMERIC CHARACTER READER, by W. P. Stone, June 1956. 18 p. RADC TN 56-194. AD 103237.
Order from LC mi $2.40, ph $3.30 PB 129890

Rome Air Development Center, N. Y.
DESIGN CHARACTERISTICS OF HIGH POWER RF DUMMY LOADS IN SILICONE BOND, by Eric H. Winkler, May 1957. 57 p. RADC TR-57-5. AD 114219.
Order from LC mi $3.60, ph $9.30 PB 128055

Rome Air Development Center, N. Y.
DESIGN OF A HIGHLY MOBILE VHF-UHF DIRECTIONAL ANTENNA ARRAY (DIPOLARADOME), by Albert A. Ondrejka and Mark Rudensey, Mar 1958. 74 p. RADC TR 58-30. AD 148635.
Order from LC mi $4.50, ph $12.30 PB 133705

Rome Air Development Center, N. Y.
FIRST ARTICLE APPROVAL OF ELECTRON TUBE TYPE (KLYSTRON) L-3035, by Roger O. Convertino, Mar 1957. 72 p. RADC TR 57-60. AD 97,900.
Order from LC mi $4.50, ph $12.80 PB 127683

Rome Air Development Center, N. Y.
FIRST ARTICLE APPROVAL OF ELECTRON TUBE TYPES (KYLSTRON) VA-87B and VA-87C, by Roger O. Convertino, July 1957. 65 p. RADC TR-56-152. AD 97899.
Order from LC mi $3.90, ph $10.80 PB 129332

Rome Air Development Center, N. Y.
HIGH POWER RADAR SPURIOUS FREQUENCY OUTPUTS, by M. Morelli, July 1957. 23 p. RADC TN 57-225. AD 131126.
Order from LC mi $2.70, ph $4.80 PB 129520

Rome Air Development Center, N. Y.
MEASUREMENT OF RECEIVER SENSITIVITY (PARTICULAR APPLICATION TO SINGLE SIDEBAND AND OTHER LINEAR RECEIVERS), by Capt. Donald E. Lebrun, Apr 1957. 11 p. RADC-TN-57-125. AD 114393.
Order from LC mi $2.40, ph $3.30 PB 128053

Rome Air Development Center, N. Y.
A SELF-CONTAINED INTERFERENCE BLANKER FOR RADAR RECEIVERS, by D. L. Hofmockel, July 1957. 11 p. RADC TN-57-232. AD 131135.
Order from LC mi $2.40, ph $3.30 PB 129519

Rome Air Development Center, N. Y.
A TECHNIQUE FOR ESTIMATING BALLPARK RELIABILITY FIGURES BY TUBE COUNTING, by Joseph J. Naresky, Mar 1958. 21 p. RADC TN 58-81. AD 148647.
Order from LC mi $2.70, ph $4.80 PB 133709

Rome Air Development Center, N. Y.
TECHNIQUES OF TRANSPONDER RESPONSE DISCRIMINATION, by Frederick Marschall, Feb 1956. 28 p. RADC-TN-56-1.
Order from LC mi $2.70, ph $4.80 PB 127965

Rome Air Development Center, N. Y.
TEST AND EVALUATION OF SERVO-CONTROLLED VHF PREAMPLIFIER QRC-46(T), by James B. Hickey, Feb 1958. 16 p. RADC TN 58-54. AD 148604.
Order from LC mi $2.40, ph $3.30 PB 133708

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
DESIGN AND CONSTRUCTION OF THE CAVITY-TYPE TRANSDUCERS, Charles L. Pataky, Aug 1956. 14 p. PATR 2321.
Order from LC mi $2.40, ph $3.30 PB 127882

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
DETERMINATION OF THE ENERGY OUT PUT OF THE XD SERIES COLD-CATHODE TUBE, Leonard Fogel, Sept 1956. 15 p. PATR-2343.
Order from LC mi $2.40, ph $3.30 PB 128048

School of Aviation Medicine, Randolph Air Force Base, Tex.
ANOXIA WARNING DEVICE, by J. W. Prost and W. K. Noell, Mar 1949. 11 p. Proj. No. 21-02-050 Report No. 1.
Order from LC mi $2.40, ph $3.30 PB 130990

School of Aviation Medicine, Randolph Air Force Base, Tex.
BRIGHTNESS AND BRIGHTNESS CONTRAST ON THE INTENSITY MODULATED RADAR SCOPE, by Siegfried Gerathewohl, June 1957. 39 p. AF SAM 56-68.
Order from LC mi $3.00, ph $6.30 PB 132170

School of Aviation Medicine, Randolph Air Force Base, Tex.
A SPECIAL AMPLIFIER FOR PHOTOELECTRIC ANALYSIS OF OXYGEN SATURATION OF BLOOD, by H. Maier-Leibnitz and E. O. Richey, July 1948. 7 p. Proj. No. 21-02-080, Report No. 1.
Order from LC mi $1.80, ph $1.80 PB 130974

School of Aviation Medicine, Randolph Air Force Base, Tex.
A STUDY OF RUNWAY MARKINGS, by S. S. Gerathewohl and H. Hober, Apr 1949. 5 p. AF SAM Proj. 21-02-007-Report No. 2-3.
Order from LC mi $1.80, ph $1.80 PB 130978

Report 3 A proposed Runway Indentification Lighting System.

Signal Corps Engineering Labs., Fort Monmouth, N. J.
BENDS IN SURFACE WAVE TRANSMISSION LINES, by Georg Gorbau, Aug 1956. SCEL TM M-1597.
Order from LC mi $3.00, ph $6.30 PB 127660

Signal Corps Engineering Labs., Fort Monmouth, N. J.
CHARACTERISTICS OF TANTALUM ELECTROLYTIC CAPACITORS, by Albert Lunchick and Emanual Gikow, 16 Mar 1956. 30 p. TM M-1744.
Order from LC mi $2.70, ph $4.80 PB 127552

Signal Corps Engineering Labs., Fort Monmouth, N. J.
A COMPARISON SYSTEM FOR FREQUENCY STANDARDS, by Herbert D. Tanzman, 15 Oct 1956. 21 p. SCEL TM 1829.
Order from LC mi $2.70, ph $4.80 PB 130913

Signal Corps Engineering Labs., Fort Monmouth, N. J.
DESIGN OF WIDE-BAND R-F TRANSFORMERS UTILIZING A SYNTHESIZED EQUIVALENT NETWORK, by H. H. Kajihara, 15 July 1956. 15 p. SCEL E-1180.
Order from LC mi $2.40, ph $3.30 PB 133842

Signal Corps Engineering Labs., Fort Monmouth, N. J.
EVALUATION OF CONTROLLED RECOVERY TIME S-BAND ATR TUBES, by Edward E. Decamp, Jr. and John L. Carter, 16 Apr 1956. 10 p. SCEL TM-1759.
Order from LC mi $1.80, ph $1.80 PB 127644

Signal Corps Engineering Labs., Fort Monmouth, N. J.
FREQUENCY MODULATION FOR RADIOSONDE TRANSMITTERS, by L. L. Mlynczak, 15 June 1956. 17 p. SCEL ER E-1181.
Order from LC mi $2.40, ph $3.30 PB 129482

Signal Corps Engineering Labs., Fort Monmouth, N. J.
FREQUENCY MONITORING EQUIPMENT, by Frank K. Priebe, 30 July 1956. 18 p. SCEL TM 1815.
Order from LC mi $2.40, ph $3.30 PB 130914

Signal Corps Engineering Labs., Fort Monmouth, N. J.
GROUND EFFECTS IN THE NEAR FIELD, by Kurt Ikrath, 4 Feb 1957. 24 p. SCEL TM-1857.
Order from LC mi $2.70, ph $4.80 PB 127723

Signal Corps Engineering Labs., Fort Monmouth, N. J.
HIGH FREQUENCY MODEL TEST SET, by W. Orloff and E. Chatterton, 15 Feb 1956. 19 p. SCEL TM-1769.
Order from LC mi $2.40, ph $3.30 PB 130901

Signal Corps Engineering Labs., Fort Monmouth, N. J.
A HIGH REPETITION RATE SWITCHING ELEMENT FOR RADIO FREQUENCY IMPULSE GENERATORS, by A. H. Gottfried and K. Ikrath, 10 Aug 1956. 48 p. SCEL TM-M-1816.
Order from LC mi $3.30, ph $7.80 PB 129653

Signal Corps Engineering Labs., Fort Monmouth, N. J.
THE INFORMATION BEARING ELEMENTS IN BAND WIDTH LIMITED SIGNALS, by F. E. Bond, June 1956. 77 p. SCEL ER E-1184.
Order from LC mi $4.50, ph $12.30 PB 129512

Signal Corps Engineering Labs., Fort Monmouth, N. J.
MEASUREMENT OF THE TEMPERATURE COEFFICIENT OF CAPACITANCE AND INDUCTANCE AT FREQUENCIES UP TO 50 MEGOCYCLES, by I. Bady, 5 Oct 1956. 56 p. ER-1189.
Order from LC mi $3.60, ph $9.30 PB 130900

Signal Corps Engineering Labs., Fort Monmouth, N. J.
A NOVEL APPROACH TO THE PROBLEM OF HIGH-POWER MICROWAVE DUPLEXER TUBE DESIGN, by Irving Reingold and Edward V. Edwards, et al, Mar 1957. 44 p. SCEL TM M-1865.
Order from LC mi $3.30, ph $7.80 PB 133890

Signal Corps Engineering Labs., Fort Monmouth, N. J.
A NOVEL CONSTRUCTION CONCEPT FOR LINEAR DELAY LINES, by Daniel Elders, 17 Oct 1956. 21 p. SCEL E 1194.
Order from LC mi $2.70, ph $4.80 PB 133850

Signal Corps Engineering Labs., Fort Monmouth, N. J.
OPEN WIRE TRANSMISSION LINE SUPPORT (IN STRAIGHT RUNS), by H. Brueckmann and H. Schiff Apr 1957. 23 p. SCEL TM M-1879.
Order from LC mi $2.70, ph $4.80 PB 130652

South Carolina U., Columbia.
NON-WAVEGUIDE TRANSMISSION OF MILLIMETER WAVES, by R. G. Fellers and W. E. Propst, 15 Apr 1957. 15 p. AF OSR TN-57-188; Contr. AF 18 (603)-43. AD 126483.
Order from LC mi $2.40, ph $3.30 PB 127968

Spectroscopy Lab., Pennsylvania State U., University Park.
TECHNICAL REPORT FOR THE PERIOD JANUARY 1, 1955-JULY 1, 1956, by D. H. Rank and H. E. Bennett, 1 July 1956. 167 p. Contr. Nonr-656 (12).
Order from LC mi $7.80, ph $25.80 PB 128236

Sperry Gyroscope Co., Great Neck, N. Y.
FINAL REPORT ON DEVELOPMENT OF BROADBAND WAVEGUIDE COMPONENTS. 311 p. Contr. DA 36 039 SC 166.
Order from LC mi $11.10, ph $48.60 PB 133920

Stanford Electronics Labs., Stanford U., Calif.
A GUN AND FOCUSING SYSTEM FOR CROSSED-FIELD TRAVELING-WAVE TUBES, by O. L. Hoch, 28 June 1957. 85 p. Technical Report No. 383-1. Contr. AF 33 (600)-27784.
Order from LC mi $4.80, ph $13.80 PB 128678

Stanford Electronics Labs., Stanford U., Calif.
MICROWAVE NOISE FLUCTUATIONS IN THE POTENTIAL-MINIMUM REGION OF AN ELECTRON BEAM, by A. E. Siegman, 22 Apr 1957. 266 p. TR 401-1; Contr. Nonr 225(25); Contr. Nonr 225(24).
Order from LC mi $11.10, ph $41.10 PB 133580

Stanford Electronic Labs., Stanford U., Calif.
NEON LAMPS AS CIRCUIT ELEMENTS, by W. R. Kincheloe, Jr., 26 May 1957. 37 p. TR 10; Contr. N6onr-25132.
Order from LC mi $3.00, ph $6.30 PB 133687

Stanford Electronics Labs., Stanford U., Calif.
RESONANCE EFFECTS IN SERRODYNE MODULATION OF TRAVELING-WAVE TUBES, by R. C. Cumming, 1 May 1956. 41 p. RADC TN-56-312; TR262-1; Contr. AF19(604)-1065. AD 97770.
Order from LC mi $3.30, ph $7.80 PB 129881

Stanford Electronics Labs., Stanford U., Calif.
SOME PROPERTIES OF A SHEATH HELIX WITH A CENTER CONDUCTOR OR EXTERNAL SHIELD, by G. W. C. Mathers and G. S. Kino, 17 June 1953. 37 p. TR-65; Contr. N6onr-251(07).
Order from LC mi $3.00, ph $6.30 PB 128153

Stanford Electronics Labs., Stanford U., Calif.
THEORY OF THE SERRODYNE AT LOW TRANSLATION FREQUENCIES, by R. C. Cumming, 1 May 1956. 48 p. RADC TN-56-313; TR262-2; Contr. AF 19(604)-1065. AD 97771.
Order from LC mi $3.30, ph $7.80 PB 129875

Stanford Research Inst., Menlo Park, Calif.
THE PROLATE SPHERODIAL MONOPOLE ANTENNA, by Carson Flammer, June 1957. 48 p. AFCRC TN 57-581; Contr. AF 19 (604)-1296. AD 133621.
Order from LC mi $3.30, ph $7.80 PB 130449

Stanford Research Inst., Menlo Park, Calif.
SHUNT-FED AND NOTCH-FED H-F AIRCRAFT ANTENNAS, by R. L. Tanner, July 1957. 64 p. AF CRC TN 57-582; Contr. AF 19(604)-1296. AD 133622.
Order from LC mi $3.90, ph $10.80 PB 133745

Stanford Research Inst., Menlo Park, Calif.
A STUDY OF PRECIPITATION-STATIC NOISE GENERATION IN AIRCRAFT CANOPY ANTENNAS, by Joseph E. Nanevicz, Dec 1957. 35 p. AF CRC TN 57-583; Contr. AF 19(604)-1296. AD 133623.
Order from LC mi $6.90, ph $21.30 PB 133747

Stanford Research Inst., Menlo Park, Calif.
VARIATIONAL FORMULAE FOR DOMAIN FUNCTIONALS IN ELECTROMAGNETIC THEORY. Carson Flammer, Jan 1957. 30 p. AF CRC TN-57-152; Contr. AF 19 (604) 1296. AD 110284.
Order from LC mi $2.70, ph $4.80 PB 128742

Stanford U., Calif.
THEORETICAL AND EXPERIMENTAL CHARACTERISTICS OF CONNECTED-RING STRUCTURES FOR USE IN HIGH-POWER TRAVELING-WAVE TUBES, W. R. Ayers and P. T. Kirstein, Jan. 1957. 111 p. AFCRC TN 57 178; Contr. 19(604) 1494. AD 117017.
Order from LC mi $6.00, ph $18.30 PB 127474

Stromberg-Carlson Co., Rochester, N. Y.
U. S. NAVY PORTABLE ANNOUNCING EQUIPMENT TYPE PAM-1, n.d. 68 p. NAVSHIPS 365-0199; NAVSHIPS IC IB 105; Contr. NObs-20002.
Order from LC mi $3.90, ph $10.80 PB 130329

Sylvania Electric Products, Inc., Bayside, N. Y.
HEATER-CATHODE LEAKAGE INVESTIGATION, by Julius Cohen, 1 Feb 1957. 29 p. Report No. YF57 (B7-3028-4P); AFCRC TN-57-187; Contr. AF19(604)-1734. AD 117030.
Order from LC mi $2.70, ph $4.80 PB 128046

Sylvania Electric Products, Inc., Kew Gardens, N. Y.
THE DEVELOPMENT OF A LOW HEATER POWER CATHODE RAY TUBE, by George Poletti, Dec 1957. 94 p. Final report for 1 July 1956 to 30 Sept 1957. Contr. DA 36-039-SC-73077.
Order from LC mi $5.40, ph $15.30 PB 133758

Sylvania Electric Products, Inc., Woburn, Mass.
INDUSTRIAL PREPAREDNESS STUDY, TRANSISTOR MANUFACTURING, ENGINEERING DEVELOPMENT, FINAL REPORT, by C. Huang, 3 May 1957. 245 p. Contr. DA36-039-SC-54661.
Order from LC mi $11.10, ph $37.80 PB 128159

Syracuse U. Research Inst., New York.
INTERIM REPORT ON THE LEXINGTON-SYRACUSE TROPOSPHERIC SCATTER PROPAGATION LINK, by Joseph Dienst, et al, Nov 1956. 68 p. AFCRC TN-57-163; Contr. AF 19(604)-1179.
Order from LC mi $3.90, ph $10.80 PB 127501

Technical Research Group, N. Y.
MICROWAVE FILTERS PART I: THE EFFECT OF SMALL LOSS IN THE COUPLING VISES ON THE SHUNT-COUPLED CAVITY. PART II: NARROW PASS BAND LOW INSERTION LOSS FILTERS EMPLOYING RESONANT OBSTACLE COUPLING ELEMENTS, by Rosalind Oppenheim, 15 Jan 1957. 47 p. AF CRC TN-56-777; AF 19(604)-1307.
Order from LC mi $3.30, ph $7.80 PB 128810

Technical Research Group, N. Y.
SOME CONSIDERATIONS OF FAR FIELD MEASUREMENTS IN THE FRESNEL ZONE, by A. F. Kay, 7 Oct 1956. 17 p. AF CRC TN 775; Contr. AF 19(604)-1307.
Order from LC mi $2.40, ph $3.30 PB 128809

Technical Research Group, N. Y.
A TRAVELING WAVE GAS CELL, by M. Newstein and R. T. Daly, 27 Feb 1957. 31 p. AF OSR TN-57-111; Contract AF 18 (600)-1313. AD 120464.
Order from LC mi $3.00, ph $6.30 PB 128802

Teletype Corp., Chicago, Ill.
DESIGN AND DEVELOPMENT OF TEST SET, TELETYPEWRITER, TS-799 ()/UGM-1 FINAL REPORT, by Joseph Gardberg, 19 May 1954-15 Apr 1956. 38 p. Contr. DA-36-039-SC-63215.
Order from LC mi $3.00, ph $6.30 PB 128946

Transitron Electronic Corp., Melrose, Mass.
INDUSTRIAL PREPAREDNESS STUDY SILICON HIGH POWER RECTIFIERS, by Robert House, Joseph McDermott, etc., 31 Jan 1957. 144 p. Final Progress Report; Contr. DA-36-039-SC-66036.
Order from LC mi $7.20, ph $22.80 PB 128151

Transitron Electronic Corp., Melrose, Mass.
INDUSTRIAL PREPAREDNESS STUDY, SILICON POWER RECTIFIERS, 30 June 1956. 26 p. Contr. DA-36-039-SC-46638.
Order from LC mi $2.70, ph $4.80 PB 129952

Tufts U., Medford, Mass.
SURFACE WAVES IN YAGI ANTENNAS AND DIELECTRIC WAVEGUIDES, by Albert D. Frost, Nov 1957. 31 p. AF CRC TR 57-368; Contr. AF 19(604)-2154. AD 133788.
Order from LC mi $3.00, ph $6.30 PB 133753

University of Southern California, Los Angeles.
TIME REQUIRED TO TROUBLE SHOOT A RADIO RECEIVER AS A FUNCTION OF TYPE OF INFORMATION PROVIDED, by G. L. Bryan and L. S. Hoffman, Apr 1957. 41 p. Technical Report 21. Contr. Nonr-228(02).
Order from LC mi $3.30, ph $7.80 PB 133585

Utah U., Salt Lake City.
LADDER AND SIMILAR NETWORKS USED FOR PROJECTILE ACCELERATION BY ELECTROMAGNETIC METHODS, by L. D. Harris and D. S. Humpherys. May 1957. 79 p. AF OSR TN-57-301; Contr. AF 18 (600) 1217. AD 132372.
Order from LC mi $4.50, ph $12.30 PB 128421

Utah U., Salt Lake City.
A MULTI-STAGE ELECTROMAGNETIC ACCELERATOR MODEL, by Allen S. Jones and L. Dale Harris, Sept 1957. 32 p. AF OSR TN 57-551. Contr. AF 18(600)-1217. AD 136535.
Order from LC mi $3.00, ph $6.30 PB 132304

Utah U., Salt Lake City
A VECTOR ANALYSIS OF A SOLENOID-TYPE ELECTROMAGNETIC ACCELERATOR, by Blair E. Bona and L. Dale Harris, May 1957. 40 p. AF OSR TN-57-292; Contract AF 18 (600) 1217. AD 132363.
Order from LC mi $3.00, ph $6.30 PB 128804

Varian Associates, Palo Alto, Calif.
CREVASSE DETECTION STUDIES, by R. C. Rempel and R. Gang, 21 Feb 1956. 39 p. Engineering Report 165-4. Contr. DA-44-009 eng-2570.
Order from LC mi $3.00, ph $6.30 PB 129958

Varian Associates, Palo Alto, Calif.
GRID CONTROL OF HIGH-POWER KLYSTRON SCIENTIFIC REPORT, by E. J. Murphy, July 1955-March 1957. 16 p. Engineering Report 167-7. AF CRC TN 57-575; Contr. AF 19 (604)-1521. AD 117299.
Order from LC mi $2.40, ph $3.30 PB 129568

Victoreen Instrument Co., Cleveland, Ohio.
BIBLIOGRAPHY ON PHOTOCONDUCTIVITY FOR X AND GAMMA RAY DETECTION, by Lewis E. Hollander, Nov 1956. 10 p. 118 refs.
Order from LC mi $1.80, ph $1.80 PB 130658

Virginia U., Charlottesville.
THE INFLUENCE OF THE SENSORY REQUIREMENTS OF THE DISTRACTING TASK, by Richard H. Henneman, Penelope Lewis et al, Nov 1953. 24 p. WADC TR 53-309; Contr. W33-038-AC-21269. AD 50,075.
Order from LC mi $2.70, ph $4.80 PB 129580

The first of a series of reports on auditory and visual message presentation under distracting task conditions.

Wachtler, M.
INVESTIGATIONS ON COMPENSATORS FOR THE QUICK REVOLUTION OF THE DIRECTIONAL PATTERN OF FIXED ANTENNA ARRANGEMENTS CIRCULAL (ARRAYS) IN THE CENTIMETER WAVEBAND, by M. Wachtler and U. Rode, N. D. 88 p. Contr. AF61 (514)-909, AFCRC-TR-57-178. AD 117098.
Order from LC mi $4.80, ph $13.80 PB 128756

Washington U., Seattle.
THE IMPEDANCE OF A SLOT IN A WAVEGUIDE, by Gedalia Held 1 May 1956. 17 p. AF CRC TN-56-585; Contr. AF 19 (604)-1381.
Order from LC mi $2.40, ph $3.30 PB 128807

Wayne Engineering Research Inst., Detroit, Mich.
MAGNETIC SERVO AMPLIFIERS FOR FLIGHT CONTROL SYSTEMS, by Max Frank and J. R. Walker, 15 Oct 1956. 154 p. WADC-TR-56-271; Contr. AF 33 (616)-2420. AD 110457.
Order from LC mi $7.50, ph $24.30 PB 129638

Weizmann Inst. of Science (Israel).
RADIATION DUE TO AN IMPULSIVE CURRENT IN A VERTICAL ANTENNA PLACED ON A DIELECTRIC GROUND, by C. L. Pekeris, Z. Alterman, 31 Oct 1956. 24 p. Contr. AF 61(514)-899; AFOSR TN-57-247. AD 126545.
Order from LC mi $2.70, ph $4.80 PB 127941

Western Electric Co., Laureldale, Pa.
ESTABLISHMENT OF PRODUCTION DESIGNS AND THE PILOT LINE PRODUCTION OF THE FOLLOWING DEVICES: 1. LOW, MEDIUM AND HIGH VOLTAGE REFERENCE DIODES 2. LOW AND MEDIUM CURRENT RECTIFIERS, by R. F. Lipscomb and W. D. Boynton, 1 Apr 1957 to 30 June 1957. 77 p. Quarterly Progress Report No. 8. Contr. DA-36-039-SC-70243.
Order from LC mi $4.50, ph $12.30 PB 129921

Western Electric Co., Laureldale, Pa.
INDUSTRIAL PREPAREDNESS STUDY SILICON DIODES, by R. F. Lipscomb, W. D. Boynton, et al, 31 Mar 1957. 85 p. Quarterly Progress Report No. 7 Contr. DA-36-039-SC-70243.
Order from LC mi $4.80, ph $13.80 PB 128015

Western Electric Co., N. Y.
INSTRUCTION BOOK-ANNOUNCING SYSTEMS, N.D. 222 p. NAVSHIPS 365-0261.
Order from LC mi $9.90, ph $34.80 PB 130456

Date is 1942 or later.

Western Electric Co., N. Y.
MCG GENERAL AND ENGINEERS ANNOUNCING SYSTEM CIRCUITS 1MC AND 2 MC-MCA, ANTI-AIRCRAFT ANNOUNCING SYSTEM CIRCUIT 17MC, N.D. 203 p. NAVSHIPS 365-1196; NAVSHIPS IC IB 28R; Contr. NObs-11130.
Order from LC mi $9.30, ph $31.80 PB 130325

Western Electric Co., N. Y.
MCG GENERAL AND ENGINEERS ANNOUNCING SYSTEM CIRCUITS 1MC AND 2MC-MCA, ANTI-AIRCRAFT ANNOUNCING SYSTEM CIRCUIT 17MC-MC7, TURRET ANNOUNCING SYSTEM CIRCUITS 11MC, 12MC AND 13 MC, N. D. 265 p. NAVSHIPS 365 0334; NAVSHIPS IC IB 28K; Contr. NObs-316; Contr. NObs-321.
Order from LC mi $11.10, ph $41.10 PB 130326

Western Electric Co., N. Y.
MCG GENERAL, AVIATORS AND FLIGHT DECK ANNOUNCING SYSTEM CIRCUITS 1MC, 3MC AND 5MC, N.D. 221 p. NAVSHIPS 365-1636; NAVSHIPS IC IB 28S; Contr. NObs-11130.
Order from LC mi $9.90, ph $34.80 PB 130327

Western Electric Co., N. Y.
MCG GENERAL, AVIATORS AND FLIGHT DECK ANNOUNCING SYSTEM CIRCUITS 1MC, 3MC AND 5MC-AUXILIARY AIRCRAFT CARRIERS CVE 105 TO CVE 119, N. D. 251 p. NAVSHIPS 365-1119; NAVSHIPS IC IB 28M; Contr. NXss-27175.
Order from LC mi $11.10, ph $39.60 PB 130324

Western Electric Co., N. Y.
MCG GENERAL, ENGINEERS AND AVIATORS ANNOUNCING SYSTEM CIRCUITS 1MC, 2MC, AND 3MC-MCF. FLIGHT DECK ANNOUNCING SYSTEM CIRCUIT 5MC-MCA ANTI-AIRCRAFT ANNOUNCING SYSTEM CIRCUIT 17 MC, N.D. 359 p. NAVSHIPS 365-1613; NAVSHIPS IC IB 28T; Contr. NXss-28013;
Order from LC mi $11.10, ph $54.60 PB 130328

Western Electrochemical Co., Culver City, Calif.
STUDY TO FORMULATE CHEMICAL PROCESS FOR THE PRODUCTION OF BATTERY GRADE MANGANESE DIOXIDE, by R. W. Hoffman and M. A. Prieto, 28 Feb 1955. 119 p. Contr. DA36-039-SC-42694.
Order from LC mi $6.00, ph $18.30 PB 128947

Westinghouse Electric Corp., Baltimore, Md.
CONTROLLED CARRIER COMMUNICATIONS, by L. P. Yeh et al. 128 p. AF CRC TR-57-193; Contr. AF 19(604)2194. AD 133652.
Order from LC mi $6.30, ph $19.80 PB 133849

Westinghouse Electric Corp., East Pittsburgh, Pa.
RELATION OF MAGNETIC STRUCTURE TO ELECTRICAL CONDUCTIVITY IN NiO AND RELATED COMPOUNDS, by R. R. Heikes, Jan 1955. 11 p. WADC TR55-174; Contr. AF 33(616) 309.
Order from LC mi $2.40, ph $3.30 PB 130356

Westinghouse Electric Corp., Elmira, N. Y.
WL-6285 CATHODE IMPROVEMENT PROGRAM, 21 Aug 1956. 37 p. Contr. NObSR-64696. AD 111997.
Order from LC mi $3.00, ph $6.30 PB 130332

White Metal Rolling and Stamping Corp., Brooklyn, N. Y.
INDUSTRIAL PREPAREDNESS STUDY ON MAGNESIUM CANS (FOR MAGNESIUM DRY CELL BATTERY TYPE BA-270/U-XM), by R. Gastowich, 31 Apr 1957. 4 p. Contr. DA-36-039-SC-66083.
Order from LC mi $1.80, ph $1.80 PB 130252

White Sands Signal Corps. Agency, N. Mex.
INTERMODULATION IN TELEMETERING RECEIVER SYSTEMS, by G. E. Johnson and M. N. Lustgarten, 21 Sept 1955. 22 p. AFC rept. AFC-T-21-9-55.
Order from LC mi $2.70, ph $4.80 PB 129364

White Sands Signal Corps Agency, N. Mex.
LABORATORY INVESTIGATION OF ASCOP TK-M4/DC-M4 TELEMETRY, 15 July 1957. 34 p. AFC TM-15-7-57-T.
Order from LC mi $3.00, ph $6.30 PB 130694

White Sands Signal Corps Agency, N. Mex.
LABORATORY INVESTIGATION OF TOW TARGET RECEIVER BCR-17A, 15 Aug 1957. 32 p. AFC C-15-8-57-R.
Order from LC mi $3.00, ph $6.30 PB 130693

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
ANALYSIS OF SWISS ETK TELETYPEWRITER, by C. P. Seymor and L. B. Rosenberg, Sept 1952. 35 p. WADC TR-52-266.
Order from LC mi $3.00, ph $6.30 PB 128602

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio
ANTOGENOUS ELECTRIFICATION OF A B-45A AIRCRAFT, PART 1. PRELIMINARY INVESTIGATION, by C. A. Bartelt, Dec 1951. 51 p. WADC TR-52-34.
Order from LC mi $3.60, ph $9.30 PB 129947

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
CRYSTAL AND ANTENNA MODIFICATION OF RADIO TRANSMITTER BC-902-B (MARKER BEACON), by Lloyd D. Higginbotham, Mar 1953. 31 p. WADC TR53-275.
Order from LC mi $3.00, ph $6.30 PB 129338

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
DESIGN OF MULTIPLE VIDEO MAPPING SYSTEM, by Edward W. Hauer, Jan 1957. 27 p. WADC TN 56-415. AD 97346.
Order from LC mi $2.70, ph $4.80 PB 128234

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
DYNAMIC MEASUREMENTS OF AIRCRAFT RADAR REFLECTION CHARACTERISTICS, Pt 1: MEASUREMENT EQUIPMENT AND TECHNIQUES, by William F. Bahret, Apr 1953. 34 p. WADC TR 53-148. AD 18710.
Order from LC mi $3.00, ph $6.30 PB 133689

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
FIELD EMISSION MICROSCOPY, by R. Gomer, Dec 1953. 28 p. WADC TR 53-496; Contr. AF 33 (616)-2090. AD 44599.
Order from LC mi $2.70, ph $4.80 PB 130348

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
A FOURTEEN CHANNEL VIDEO MIXER, by K. R. Smith, Jr., Nov 1956. 17 p. WADC TN-56-470. AD 110538.
Order from LC mi $2.40, ph $3.30 PB 129337

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
FREQUENCY CONTROL BY MAGNETOSTRICTION 300 to 2000 KILOCYCLES, by Victor J. Carpantier, Mar 1954. 24 p. WADC TR 54-512; Contr. AF 33 (038)-12476.
Order from LC mi $2.70, ph $4.80 PB 129340

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
INTERFERENCE BLANKER MX-(XA 115)/U, FOR REDUCING THE EFFECTS OF PRECIPITATION STATIC IN RADIO RECEIVERS, Howard C. Storck, Feb 1952. 111 p. WADC TR 52-65.
Order from LC mi $6.00, ph $18.30 PB 129584

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
LABORATORY TESTS OF INTERFERENCE BLANKER MX-(XA-115)/U WITH NAVIGATIONAL EQUIPMENTS, by Raymond R. Holberger and Herbert M. Bartman, July 1952. 28 p. WADC TR 52-137.
Order from LC mi $2.70, ph $4.80 PB 129946

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
PRECIPITATION STATIC EVALUATION OF A RELOCATED AN/ARN-6 RADIO COMPASS ON B47 No. 51-2046, by Quentin J. Porter, Apr 1953. 38 p. WADC TR 53-144.
Order from LC mi $3.00, ph $6.30 PB 129581

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
PROPAGATION CONSTANT AND THE RADOME, by Charles K. Schramm, Jr., Aug 1953. 21 p. WADC TR 53-297. AD 21967.
Order from LC mi $2.70, ph $4.80 PB 133701

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
A RECORDING MAGNETIC FLUXMETER, by R. I. Berge and C. A. Guderjahn, Jan 1954. 16 p. WADC TR 54-50.
Order from LC mi $2.40, ph $3.30 PB 133577

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
RF OSCILLATOR, William S. Swinell, Sept 1952. 29 p. WADC TR 52-239.
Order from LC mi $2.70, ph $4.80 PB 129582

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
SURFACE HEAT TRANSFER COEFFICIENTS OF SALIENT POLES IN A BLAST-COOLED ALTERNATOR, by F. S. Tse and W. Robinson, Apr 1956. 131 p. WADC TN-56-123; Contr. AF 33(038) 19842. AD 110418.
Order from LC mi $6.90, ph $21.30 PB 129592

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
THERMAL STUDY AND RATING OF BLAST-COOLED AIRCRAFT ELECTRICAL GENERATORS, by W. Robinson, Apr 1956. 160 p. WADC TN-56-121; Contr. AF 33(038) 19842. AD 110416.
Order from LC mi $7.50, ph $24.30 PB 129528

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
THERMAL STUDY OF A BLAST-COOLED, DIRECT CURRENT AIRCRAFT GENERATOR, by W. Robinson, J. R. Barnum, Dec 1953. 85 p. WADC TR-53-368; Contr. AF 33(038) 19842. AD 32536.
Order from LC mi $4.80, ph $13.80 PB 129540

Yale U., New Haven, Conn.
THE APPLICATION OF TRANSISTORS TO MILITARY ELECTRONICS EQUIPMENT. PROCEEDINGS OF A SYMPOSIUM, SPONSORED BY COMMITTEE ON ELECTRONICS (R&D), OFFICE OF THE SECRETARY OF DEFENSE, by U. Kublin, G. B. Ellis, 2 and 3 Sept 1953. 508 p. MON-500-53.
Order from LC mi $11.10, ph $77.40 PB 130633

Mechanical Engineering

American Society of Mechanical Engineers, New York.
ENGINEERS STUDY ADMINISTRATION, by K. C. Harder, Aug 1956. 5 p.
Order from LC mi $1.80, ph $1.80 PB 133619

ASME paper 56-A-96, for presentation at the ASME Annual Meeting in N. Y. C., 25-30 Nov 1956.

Battelle Memorial Inst., Columbus, Ohio.
SHORT-TIME CREEP PROPERTIES OF STRUCTURAL SHEET MATERIALS FOR AIRCRAFT AND MISSILES, J. A. VanEcho and W. F. Simmons, May 1953. 19 p. AF Technical rept. 6731, Pt. 2; Contr. AF 33(038) 8743. AD 13774.
Order from LC mi $2.40, ph $3.30 PB 129515

Brown U., Providence, R. I.
DISPERSION EFFECTS OF STRESS PROPAGATION, by Din-Yu Hsieh, Apr 1957. 87 p. Technical Report 2; Contr. Nonr 562 (14).
Order from LC mi $4.80, ph $13.80 PB 133552

Brown U. Div. of Applied Mathematics, Providence, R. I.
EDGE STRAINS OF A STRIP IN TENSION WITH A CENTRAL HOLE, by J. Duffy and C. Mylonas, June 1957. 18 p. TR-31; Contr. DA 19-020-ORD-798.
Order from LC mi $2.40, ph $3.30 PB 129345

Brown U. Div. of Applied Mathematics, Providence, R. I.
ON THE MINIMUM WEIGHT DESIGN PROBLEM FOR CYLINDRICAL SANDWICH SHELLS, by Walter F. Freiberger, June 1957. 8 p. TR 32; Contr. DA 19-020-ORD-798.
Order from LC mi $1.80, ph $1.80 PB 129543

California Inst. of Tech., Pasadena.
VIBRATION-COMPACTION OF SAND, Jan 1952, 127 p. Contr. NOy-22271.
Order from LC mi $6.30, ph $19.80 PB 130256

Contents: I. Design testing and Evaluation of a six ton Vibrator. II. A Rational analysis of Vibrator-Soil Systems.

Carnegie Inst. of Tech., Pittsburgh, Pa.
SOME EFFECTS OF THE ADDITION OF MASS TO VIBRATING SYSTEMS, by Hirsh Cohen and George Handelman, Aug 1954. 32 p. WADC TR 54-397; Contr. AF 33(616) 294-S2(54-472. AD 60096.
Order from LC mi $3.00, ph $6.30 PB 133915

Columbia U., New York.
STRESS AND SECONDARY EFFECTS IN THERMALLY-INDUCED BEAM VIBRATIONS, by B. A. Boley and G. P. Smith, Dec 1956. 14 p. Contr. Nonr 266 (20).
Order from LC mi $2.40, ph $3.30 PB 132067

David Taylor Model Basin, Washington, D. C.
A GRAPHICAL METHOD FOR DETERMINING THE GENERAL INSTABILITY STRENGTH OF STIFFENED CYLINDRICAL SHELLS, by T. E. Reynolds, Sept 1957. 21 p. DTMB 1106.
Order from LC mi $2.70, ph $4.80 PB 130966

David Taylor Model Basin, Washington, D. C.
OBSERVATIONS OF SNAP-THROUGH ACTION IN THIN CYLINDRICAL SHELLS UNDER EXTERNAL PRESSURE, by A. F. Kirstein and E. Wenk, Jr., Nov 1956. 16 p. R 1062.
Order from LC mi $2.40, ph $3.30 PB 130848

Detroit Arsenal, Center Line, Mich.
PERFORMANCE OF A CODE "A" BLOW TORCH HEATER AT EXTREMELY LOW TEMPERATURES, by S. J. Grabowski, 12 Oct 1956. 17 p. R 3736. AD 111536.
Order from LC mi $2.40, ph $3.30 PB 130257

Detroit Arsenal, Center Line, Mich.
PERFORMANCE TEST OF EXPERIMENTAL AIR CLEANER (CODE A-130) AT AN AIR FLOW RATE OF 900 CFM, by Daniel Zwashenko, 10 Aug 1956. 12 p. Report 3639 (Final).
Order from LC mi $2.40, ph $3.30 PB 128233

Engineer Research and Development Labs., Fort Belvoir, Va.
ACCELERATED MARINE ENVIRONMENTAL TEST OF FIVE DIFFERENT METALLIC AIR CONDITIONER COILS, D. B. Feder, 31 May 1956. 22 p. ERDL R 1449.
Order from LC mi $2.70, ph $4.80 PB 129501

Engineer Research and Development Labs., Fort Belvoir, Va.
SPRAYER, INSECTICIDE, PUSHCARTMOUNTED GASOLINE-ENGINE-DRIVEN, MIST-TYPE, 30-GPH, by Carl Wesley, Jr., 6 Aug 1957. 46 p. ERDL R-1489-TR.
Order from LC mi $3.30, ph $7.80 PB 130821

Engineer Research and Development Labs., Fort Belvoir, Va.
SUMMARY OF ARCTIC TESTS-WINTER 1955-1956-CONDUCTED BY CORPS OF ENGINEERS FIELD TEST TEAM (ARCTIC) FORT CHURCHILL, MANITOBA, CANADA, 19 Sept 1957. 44 p. ERDL TR 1502.
Order from LC mi $3.30, ph $7.80 PB 132524

Experiment Towing Tank, Stevens Inst. of Tech., Hoboken, N. J.
METHODS FOR ESTIMATING IMPACT FORCES ON SHIP APPENDAGES, by L. W. Ward, Dec 1956. 46 p. Contr. NObs 47790.
Order from LC mi $3.30, ph $7.80 PB 133853

Florida U. Engineering and Industrial Experiment Station, Gainesville.
BIBLIOGRAPHY ON SHELLS AND SHELL-LIKE STRUCTURES (1954-1956), June 1957, by Wm. A. Nash. 46 p. Contr. DA 01-009-ORD-404.
Order from LC mi $3.30, ph $7.80 PB 129488

Forest Products Lab., Madison, Wis.
ELASTIC BUCKLING OF A SIMPLY SUPPORTED RECTANGULAR SANDWICH PANEL SUBJECTED TO COMBINED EDGEWISE BENDING AND CONPRESSION, By W. R. Kimel, Nov 1956. 28 p. FPL 1857A. AD 112296.
Order from LC mi $2.70, ph $4.80 PB 130703

Supplement:
This Report is one of a series Issued in cooperation with the ANC-23 panel on Sandwich construction of the Departments of the Air Force, Navy and Commerce.

Frankford Arsenal, Philadelphia, Pa.
SHOCK STUDIES FOR FIRE CONTROL MATERIAL MEASUREMENT OF WRIST WATCH SHOCK, by V. Ames, 15 Mar 1957. 24 p. FALR-T57-2-1.
Order from LC mi $2.70, ph $4.80 PB 132636

Franklin Inst., Philadelphia, Pa.
NONLINEAR ASPECTS OF ANGULAR RATE MEASURING GYROSCOPIC AND SERVA SYSTEMS, by H. H. Brown, Mar 1956. 116 p. WADC TR 55-118; Contr. AF 33(616)-2385. AD 95234.
Order from LC mi $6.00, ph $18.30 PB 133929

Fritz Engineering Lab., Lehigh U., Bethlehem, Pa.
BUCKLING OF UNIFORMLY COMPRESSED STEEL PLATES IN THE STRAIN HARDENING RANGE, by G. Haaijer, Aug 1956. 66 p. Fritz Lab. Report No. 205E.7.
Order from LC mi $3.90, ph $10.80 PB 128130

Illinois U., Urbana.
EULER CRITICAL PRESSURES FOR HYDROSTATICALLY LOADED CYLINDRICAL SHELLS THAT ARE SIMPLE-SUPPORTED AND THAT HAVE FLEXIBLE END PLATES, by H. L. Langhaar, A. P. Boresi. Oct 1956. 11 p. Contr. N6ori-071(52). TAM 536, TAM 93.
Order from LC mi $2.40, ph $3.30 PB 129986

Ingeniors Vetenskaps Akademien (Sweden).
CREEP BUCKLING OF CYLINDRICAL SHELLS, by Erik Sundstrom 1957. 34 p.
Order from LC mi $3.00, ph $6.30 PB 134214

Civil Engineering and Building Construction Series Vol. 4, No. 5; Acta Polytechnica 230 (1957).

Institute of Engineering Research, U. of Calif., Berkeley.
OBLIQUE IMPACT OF SPHERES UPON BEAMS II. ANALYSIS OF TEST RESULTS, by D. M. Cunningham and Werner Goldsmith, 14 May 1956. 73 p. NAVORD 3409-Part 2; Contr. N-123s-6874; NOTS 1456.
Order from LC mi $4.50, ph $12.30 PB 129679

Institute of Mathematical Science, New York U., N. Y.
ACOUSTIC TORQUES AND FORCES ON DISKS, Joseph B. Keller, Apr 1957. 18 p. AFCRC TN 57 376; EM 104; Contr. AF 19(604)-1717. AD 117078.
Order from LC mi $2.40, ph $3.30 PB 129612

Johns Hopkins U., Baltimore, Md.
BENDING OF ORTHOGONALLY STIFFENED PLATES WITH LARGE ELASTIC DEFLECTIONS, by W. G. Soper, Sept 1956. 23 p. Mechanics of Solids Technical Report No. 12; Contr. Nonr-248-12.
Order from LC mi $2.70, ph $4.80 PB 128509

Johns Hopkins U., Baltimore, Md.
EXPERIMENTAL STUDY OF THE TRANSVERSE IMPACT OF A MASS ON A COLUMN, William H. Hoppmann, 2nd June 1949. 19 p. Technical Report No. 2; Contr. N6onr-243; Task Order VIII.
Order from LC mi $2.40, ph $3.30 PB 129647

Johns Hopkins U., Baltimore, Md.
FLEXURAL VIBRATIONS OF ORTHOGONALLY STIFFENED CYLINDRICAL SHELLS, by W. H. Hoppman II. July 1956. 27 p. Contr. Nonr 248(12).
Order from LC mi $2.70, ph $4.80 PB 127535

Minnesota U., Minneapolis.
SURVEY AND EVALUATION OF POWER SOURCES SYSTEMS, by Adolph O. Lee, et al. 15 Sept 1953 to 1 Dec 1955. 131 p. Contr. DA-36-034 SC-56649.
Order from LC mi $6.90, ph $21.30 PB 132877

Minnesota U., Minneapolis.
SURVEY AND EVALUATION OF POWER SOURCES SYSTEMS. PART II: HEAT POWER COMPONENTS, by Warren E. Ibele, 15 Sept 1953 to 1 Dec 1955. 763 p. Contr. DA 36-039-SC-56649.
Order from LC mi $11.10, ph $116.70 PB 130477

National Aeronautical Establishment (Canada).
NORMAL MODE ANALYSIS OF BEAMS OF NON-UNIFORM CROSS-SECTION WITH TABULATED RESULTS FOR SOME LINEARLY TAPERED CLAMPED-PINNED BEAMS, by R. S. Julius and S. Ranta, Sept 1957. 48 p. LR-210.
Order from LC mi $3.30, ph $7.80 PB 134224

Naval Gun Factory, Washington, D. C.
MACHINING OF ELGILOY AND HAYNES No. 25 ALLOYS, by W. N. Jolly and Paul Tarver, 8 Oct 1956. 9 p. NGF T-47-56; NAVORD 5195.
Order from LC mi $1.80, ph $1.80 PB 128007

Naval Postgraduate School, Monterey, Calif.
COMPRESSOR TEST RIG FOR INVESTIGATION OF FLORO PHENOMENA IN TURBO-MACHINES, by M. H. Vavra and T. H. Gawain, Feb 1955. 80 p. Tech. Report 12.
Order from LC mi $4.50, ph $12.30 PB 127733

Naval Research Lab., Washington, D. C.
EVALUATION OF A NOVEL TORQUE REDUCING DEVICE, by H. M. Forkois and I. Vigness, 30 June 1949. 17 p. NRL F-3495.
Order from LC mi $2.40, ph $3.30 PB 129131

Naval Research Lab., Washington, D. C.
A LUMPED-CONSTANT ELECTRICAL ANALOG OF A BEAM VIBRATING IN FLEXURE, by H. M. Trent and E. S. Hoffer, 1 Oct 1948. 14 p. NRL P-3362.
Order from LC mi $2.40, ph $3.30 PB 129297

Northwestern Technological Inst., Evanston, Ill.
APPARATUS FOR PRECISE DETERMINATION OF DYNAMIC YOUNG MODULUS AND INTERNAL FRICTION AT ELEVATED TEMPERATURES, by M. E. Fine, 16 May 1957. 11 graphs. AF OSR TN-57-267; Contr. AF 18(600)-1468. AD 126566.
Order from LC mi $2.40, ph $3.30 PB 128426

Oregon State Coll., Corvallis.
REVIEW FOR ENGINEERING REGISTRATION 3. MECHANICAL ENGINEERING, by Charles O. Heath, Jr., 137 p. Feb 1957. Circular No. 22.
Order from LC mi $6.90, ph $21.30 PB 128362

Picatinny Arsenal, Dover, N. J.
EVALUATION OF THE REPRODUCIBILITY AND SELECTIVITY OF THE GREASEPROOFNESS TEST FOR BARRIER MATERIALS, by John H. Mazzei and Milton Roth, Oct 1956. PATR 2352.
Order from LC mi $1.80, ph $1.80 PB 128982

Polytechnic Inst. of Brooklyn, N. Y.
INTERACTION CURVES FOR SHEAR AND BENDING OF PLASTIC BEAMS, by P. G. Hodge, Jr., June 1956. 18 p. PIB AL Rpt. 352; Contr. Nonr 839 (11).
Order from LC mi $2.40, ph $3.30 PB 128147

Polytechnic Inst. of Brooklyn, N. Y.
PILE AND DRIVER ANALOG CIRCUIT INCLUDING THE NON-LINEAR CASE, by William R. MacLean, Aug 1956. 34 p. PIB AL Rpt. 363; Contr. Nonr 839 (18).
Order from LC mi $3.00, ph $6.30 PB 128142

Polytechnic Inst. of Brooklyn, N. Y.
TORSION OF CYLINDRICAL AND PRISMATIC BARS IN THE PRESENCE OF STEADY CREEP, by Sharad A. Patel and B. Venkatraman, Dec 1956. 22 p. PIBAL Rept. 351; Contr. Nonr-839(18).
Order from LC mi $2.70, ph $4.80 PB 130852

Rensselaer Polytechnic Inst., Troy, N. Y.
ON THE EFFECTS OF THE ADDITION OF MASS TO VIBRATING SYSTEMS, by G. Handelman and H. Cohen, 1 Sept 1956. 15 p. AF OSR TN 56-387; Contr. AF 18 (600)-1586. AD 96045.
Order from LC mi $2.40, ph $3.30 PB 128598

Rensselaer Polytechnic Inst., Troy, N. Y.
ON THE VIBRATION OF A CIRCULAR MEMBRANE WITH ADDED MASS, by H. Cohen and G. Handelman, July 31, 1956. 17 p. AF OSR TN 56-403; Contr. AF 18 (600) 1586. AD 96211.
Order from LC mi $2.40, ph $3.30 PB 128603

Rensselaer Polytechnic Inst., Troy, N. Y.
THEORETICAL AND EXPERIMENTAL ASPECTS OF IMPACT PROBLEMS, by Cliff S. Barton, 5 Sept 1957. 71 p. AFOSR TR 57-84; Contr. AF49(638)-19. AD 136674.
Order from LC mi $4.50, ph $12.30 PB 133838

Rock Island Arsenal Lab., Ill.
INVESTIGATION OF THE EFFECT OF SHOT PEENING ON THE FATIGUE LIFE OF TORSION BAR SPRINGS, F. K. Blessin, 1 Aug 1956. 21 p. RIALR 56-2188.
Order from LC mi $2.70, ph $4.80 PB 128017

Rock Island Arsenal Lab., Ill.
INVESTIGATION OF THE FACTORS WHICH AFFECT THE LIFE OF TORSION BAR SPRINGS, by W. E. Peterson, 8 June 1956. 46 p. RIALR 56-1701.
Order from LC mi $3.30, ph $7.80 PB 128018

Rodman Lab., Watertown Arsenal, Mass.
INVESTIGATION OF CENTRIFUGALLY CAST CYLINDERS FOR ARTILLERY RECOIL MECHANISM APPLICATIONS, by A. Ayvazian, 25 Feb 1957. 23 p. RPL 31/4.
Order from LC mi $2.70, ph $4.80 PB 127695

School of Aviation Medicine, Randolph Air Force Base, Tex.
LEAK DETECTION IN THERMOS JUGS, by C. A. Morhouse and F. A. Rodewald, Aug 1949. 5 p. Proj. 21-02-087.
Order from LC mi $1.80, ph $1.80 PB 132230

Stanford U., Div. of Engineering Mechanics, Calif.
A LARGE DEFORMATION THEORY OF SHELL MEMBRANES, by W. Flugge and P. M. Riplog, 10 Sept 1956. 107 p. Technical Report 102; Contr. NONR 225(16).
Order from LC mi $5.70, ph $16.80 PB 128503

Stanford U. Div. of Engineering Mechanics, Calif.
SINGULAR SOLUTIONS IN THE THEORY OF SHALLOW SHELLS, by W. Fliigge and D. A. Conrad, 10 Sept 1956. 107 p. TR-101; Contr. Nonr-225(16).
Order from LC mi $5.70, ph $16.30 PB 128709

Syracuse U. Research Inst., N. Y.
RELATION BETWEEN DIRECT-STRESS AND BENDING FATIGUE OF HIGH-STRENGTH STEELS, by G. Scheven and G. Sachs, Sept 1936. 35 p. Interim rept. no. 6; Contr. DAI-30-115-505-ORD(P)613; WAL 313/48; MET345-574T6.
Order from LC mi $3.00, ph $6.30 PB 133938

Underwater Explosions Research Div., Norfolk Naval Shipyard, Portsmouth, Va.
THE EFFECT/s OF AUTOMATICALLY AND MANUALLY WELDED STUDS ON EXPLOSION RESISTANCE OF ALLOY STEELS, by Richard E. Oliver, Dec 1955. 35 p. UERD Report 10-55.
Order from LC mi $3.00, ph $6.30 PB 128196

Washington U., St. Louis, Mo.
THE BASIC EQUATIONS OF ELASTICITY AND METHODS OF ATTACK, by K. F. Marguerre, June/July 1955. 52 p. AF OSR TN-57-163; Contr. AF 18 (600)-568. AD 126455.
Order from LC mi $3.60, ph $9.30 PB 128674

Trans. from Zeitschrift fur Angewandte Mathematik und Mechanik, Juni/Juli 1955.

Watertown Arsenal Lab., Mass.
EFFECT OF CRACK LENGTH ON THE RUPTURE STRESS FOR BRITTLE FAILURE OF HOLLOW CYLINDERS CONTAINING RADIAL CRACKS AT THE BORE, by O. L. Bowie, 5 Aug 1954. 21 p. WAL 893/167.
Order from LC mi $2.70, ph $4.80 PB 127562

Watertown Arsenal Lab., Mass.
EFFECT OF THE SMALL DISPLACEMENT APPROXIMATION IN ELASTICITY ON THE SOLUTION OF AN ELLIPTICAL HOLE, by O. L. Bowie, 1 Dec 1955. 9 p. WAL 893/185.
Order from LC mi $1.80, ph $1.80 PB 127707

Watertown Arsenal Lab., Mass.
ENGRAVING PRESSURES FOR CANNELURED ROTATING BANDS: THEORETICAL INVESTIGATION OF THE INDENTATION PRESSURE FOR RECTANGULAR METAL BANDS UNEQUALLY SUPPORTED ON THE TWO SIDES, by E. W. Ross, Jr., 16 Mar 1955. 14 p. WAL 880/51.
Order from LC mi $2.40, ph $3.30 PB 127559

Watertown Arsenal, Labs., Mass.
EXPERIMENT ON THE NORMAL ENGRAVING OF RECTANGULAR COPPER BANDS, by John Campo and E. W. Ross, Jr., 5 June 1956. 62 p. WAL 760/534.
Order from LC mi $3.90, ph $10.80 PB 127592

Watertown Arsenal, Lab., Mass.
ON THE LOADING OF ROLLER BEARINGS, PHASE II, PHOTOELASTIC STUDY OF ROLLER BEARINGS, by J. I. Bluhm, 1 Aug 1949. 25 p. WAL 232/6.
Order from LC mi $2.70, ph $4.80 PB 127550

Watertown Arsenal Lab., Mass.
PROCEDURE FOR INVESTIGATION OF MACHINE, AND INSPECTION AND TESTING OF STANDARD V-NOTCH CHARPY IMPACT TEST SPECIMENS, by D. E. Driscoll, May 1952. 26 p. WALR 112/84.
Order from LC mi $2.70, ph $4.80 PB 128103

Watertown Arsenal Lab., Mass.
STRESS CONCENTRATION IN PLATES CONTAINING TWO CIRCULAR HOLES WITH UNEQUAL RADII, by O. L. Bowie, 16 Sept 1955. 12 p. WAL 893/178.
Order from LC mi $2.40, ph $3.30 PB 127566

Watertown Arsenal Lab., Mass.
TENSILE FILLET STRESSES IN T-80 RECUPERATOR REAR HEAD RETAINER THREADS, by J. H. Flanagan, 10 July 1953. 14 p. WAL 893/159.
Order from LC mi $2.40, ph $3.30 PB 127560

Watertown Arsenal Lab., Mass.
THEORETICAL EVALUATION OF THE RUPTURE STRESS FOR BRITTLE FAILURE OF HOLLOW CYLINDERS CONTAINING A SINGLE RADIAL CRACK AT THE BORE, by O. L. Bowie, 16 Sept 1955. 17 p. WAL 893/183.
Order from LC mi $2.40, ph $3.30 PB 127568

Watertown Arsenal Lab., Mass.
TRANSITION BEHAVIOR IN V NOTCH CHARPY SLOW BEND AND IMPACT TESTS, by Carl E. Hartbower, 29 May 1956. 16 p. WALR 112/87-1.
Order from LC mi $2.40, ph $3.30 PB 128102

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
FLUID-PRESSURE QUICK-DISCONNECT COUPLING, by Henry Seeler, May 1958. 9 p. WADC TR 53-263. AD 21965.
Order from LC mi $1.80, ph $1.80 PB 133691

Yale U., New Haven, Conn.
AN EXPERIMENTAL INVESTIGATION ON PLASTIC STRESS-STRAIN RELATIONS, by Aris Phillips, Sept 1956. 17 p. Contract Nonr-609(12).
Order from LC mi $2.40, ph $3.30 PB 128351

Ordnance, Missiles, and Satellite Vehicles

Aberdeen Proving Ground, Md.
TEST OF MAGNESIUM AND TITANIUM TRAILS FOR CARRIAGE GUN, 76 MM, T66, by S. M. Keithley, Nov 1956. 74 p. Ord Project TR1-1025, 1st rept.
Order from LC mi $4.50, ph $12.30 PB 130638

Air Force Missile Development Center, Holloman Air Force Base, N. Mex.
THE HOLLOMAN TRACK, Sept 1957. 18 p. AF MDC TR 57-1.
Order from LC mi $2.40, ph $3.30 PB 130765

A Brochure.

Air Force Missile Test Center, Patrick Air Force Base, Florida.
AFMTC TIMING SYSTEM, by P. G. Shupe, 15 July 1957. 12 p. AFMTC -TR-57-16. AD 124137.
Order from LC mi $2.40, ph $3.30 PB 128343

Applied Psychology Corp., Washington, D. C.
THE RELATION OF TOXIC GASES TO EQUIPMENT DESIGN, by H. D. Lerner and H. J. Bond, Dec 1954. 117 p. Contr. DA 36-034-ORD-1638.
Order from LC mi $6.00, ph $18.30 PB 129915

Ballistic Research Labs., Aberdeen Proving Ground, Md.
COMPARISON OF FOWLER'S MAGNUS MOMENT COEFFICIENTS WITH THOSE RECENTLY OBTAINED, by H. P. Hitchcock, July 1956. 9 p. BRLR-986.
Order from LC mi $1.80, ph $1.80 PB 128761

Ballistic Research Labs., Aberdeen Proving Ground, Md.
A STATISTICAL DISTRIBUTION APPLICABLE TO CERTAIN REDUNDANT SYSTEMS, by Helen J. Coon and Frank E. Grubbs, Sept 1957. 21 p. BRLM 1099.
Order from LC mi $2.70, ph $4.80 PB 132429

Chemical Warfare Labs., Army Chemical Center, Md.
BALLISTIC VELOCITY INSTRUMENTATION SYSTEM DEVISED FOR USE AT THE BIOPHYSICS DIVISION, ARMY CHEMICAL CENTER, by David Grossman, 20 Dec 1956. 55 p. CWL R 2081.
Order from LC mi $3.60, ph $9.30 PB 127609

Diamond Ordnance Fuze Labs., Washington, D. C.
AN ELECTROMECHANICAL CONSTANT VOLTAGE PUSHER, by Milton Lipmick and John Gibbons, 15 Sept 1956. 17 p. DOFL TR 378.
Order from LC mi $2.40, ph $3.30 PB 128844

Franklin Inst. Philadelphia, Pa.
FRICTIONAL RESISTANCE HEATING AND WEAR AT HIGH SLIDING SPEED, by W. W. Shugarts, Jr., H. C. Rippel, 31 Aug 1956. 32 p. RR-248; Contr. DA-36-034-ORD-1634RD. Final report. AD 112365.
Order from LC mi $3.00, ph $6.30 PB 130893

Human Resources Research Office, George Washington U., Washington, D. C.
TRAINFIRE II. A NEW COURSE IN BASIC TECHNIQUE OF FIRE AND SQUAD TACTICS, by John A. Hammes and Henry E. Kelly, July 1957. 37 p. HRRO TR 41; Contr. DA-49-106-qm-1.
Order from LC mi $3.00, ph $6.30 PB 129411

Institute for the Study of Rate Processes, U. of Utah, Salt Lake City.
SOME FRAMING CAMERA STUDIES OF PHENOMENA ASSOCIATED WITH THE DETONATION OF HIGH EXPLOSIVES, 7 May 1956. 46 p. Contr. N7onr-45107, TR-49.
Order from LC mi $3.30, ph $7.80 PB 128158

Naval Gun Factory, Washington, D. C.
METALLURGICAL INVESTIGATION OF 5"/38 PROJECTILES (HC), COLD FORMED, PROCURED UNDER NOrd 15896, by K. L. Kojola, June 1957. 20 p. NGF TR 24-57; NAVORD 5514, Pt. 2.
Order from LC mi $2.40, ph $3.30 PB 133903

Naval Ordnance Test Station, China Lake, Calif.
RANDSBURG WASH TEST ACTIVITIES, Mar 1956. 25 p. photos.
Order from LC mi $2.70, ph $4.80 PB 130427

Naval Ordnance Test Station China Lake, Calif.
WINDMILLING CHARACTERISTICS OF PROPELLERS, Thomas G. Lang, 10 May 1956. 23 p. NAVORD 5252; NOTS 1455.
Order from LC mi $2.70, ph $4.80 PB 129598

Naval Postgraduate School, Monterey, Calif.
GENERALIZATION OF CONSTANT ABSOLUTE VORTICITY TRAJECTORIES, by F. L. Martin, 15 Feb 1955. 31 p. Research Paper No. 7.
Order from LC mi $3.00, ph $6.30 PB 130905

Naval Research Lab., Washington, D. C.
THE DEVELOPMENT OF A GUIDED MISSILES TELEMETERING SYSTEM FOR KUW-1, by A. J. Stecca and V. J. Guethlen, July 1947. 19 p. NRL R-3101.
Order from LC mi $2.40, ph $3.30 PB 129154

Naval Research Lab., Washington, D. C.
ELECTRICALLY INDUCED HEATING OF 20-MM AIRCRAFT MACHINE GUN, by J. M. Marzolf, June 1947. 35 p. NRL E-3095.
Order from LC mi $3.00, ph $6.30 PB 129152

Naval Research Lab., Washington, D. C.
ROCKET RESEARCH REPORT NO. VII. THE ROCKET IMPACT POINT COMPUTER, by Thor A. Bergstrahl, 26 Oct 1951. 45 p. NRL Report 3851.
Order from LC mi $3.30, ph $7.80 PB 129027

Naval Research Lab., Washington, D. C.
ROCKET RESEARCH REPORT NO. IX. THE VIKING 6 FIRINGS, by Milton W. Rosen and James M. Bridger, 21 Sept 1951. 49 p. NRL Report 3854.
Order from LC mi $3.30, ph $7.80 PB 129028

Naval Research Lab., Washington, D. C.
ROCKET RESEARCH REPORT NO. X. THE VIKING 7 FIRINGS, by Milton W. Rosen and J. W. Bridger, 25 Mar 1952. 41 p. NRL Report 3946.
Order from LC mi $3.30, ph $7.80 PB 129029

Naval Research Lab., Washington, D. C.
ROCKET RESEARCH REPORT NO. XIX, THE VIKING 10 FIRINGS, by Milton W. Rosen and James M. Bridger, 5 May 1955. NRL 4513.
Order from LC mi $3.00, ph $6.30 PB 129025

Naval Research Lab., Washington, D. C.
TELEMETERING EQUIPMENT DEVELOPED AND PROVIDED BY THE NAVAL RESEARCH LABORATORY FOR GENERAL USE IN THE V-2 FIRINGS, by V. L. Heeren and C. H. Hoeppner, 1 Oct 1946. 47 p. NRL R-3013.
Order from LC mi $3.30, ph $7.80 PB 129269

Taken from NRL R-2955.

Navy Underwater Ordnance Station, Newport, R. I.
A CALCULATION OF STRESSES IN THICK-WALLED PIPES, prepared by Donald Tryk and Thomas Kee, 20 June 1956. 11 p. TM 157.
Order from LC mi $2.40, ph $3.30 PB 127909

Office of Ordnance Research, Durham, North Carolina.
PROCEEDINGS OF THE FIRST CONFERENCE ON THE DESIGN OF EXPERIMENTS IN ARMY RESEARCH, DEVELOPMENT AND TESTING, OCT 19-21, 1955, June 1957. 239 p. ODR 57-1.
Order from LC mi $10,20, ph $36.30 PB 130203

Picatinny Arsenal, Dover, N. J.
INVESTIGATION OF THE SAFETY OF FIRING COMPOSITION B-LOADED 120 MM T15E2 HE and

T15E3 HE-T SHELL, by Samuel D. Stein and Edward A. Skettini, Oct 1957. 17 p. PATR 2456.
Order from LC mi $2.40, ph $3.30 PB 132570

Picatinny Arsenal, Dover, N. J.
PENETRATION OF EXPLOSIVES BY HEAVY NUCLEAR PARTICLES, by Rufus C. Ling, Apr 1957. 24 p. PATR 2393.
Order from LC mi $2.70, ph $4.80 PB 127714

Picatinny Arsenal, Dover, N. J.
THE SAND BOMB TEST CONSIDERED AS A TRAGMENTATION PROBLEM, by M. M. Jones and O. E. Sheffield, July 1957. 24 p. PATR 2424.
Order from LC mi $2.70, ph $4.80 PB 133942

Picatinny Arsenal, Dover, N. J.
STORAGE STABILITY OF CELLULOSE NITRATE PLASTICS, by Kenneth T. Carolan and Mitchel Chmura, July 1957. 17 p. Technical rept. 2440.
Order from LC mi $2.40, ph $3.30 PB 128978

Picatinny Arsenal, Dover, N. J.
VOLUMETRIC LOADER FOR NON-FLOWING POWDERS, by E. Jescerzewski, Mar 1958. 21 p. DB-TR 3-58.
Order from LC mi $2.70, ph $4.80 PB 133879

Rem-Cru Titanium, Inc., Midland, Penn.
THE DEVELOPMENT OF STRONG, TOUGH TITANIUM ALLOYS FOR ORDNANCE USE. 71 p. WAL 401/163-14; Contr. DA 19-059-ord-1007.
Order from LC mi $4.50, ph $12.30 PB 133935

Rock Island Arsenal Lab., Ill.
EVALUATION OF HEAT AND OIL RESISTANCE SPECIALTY POLYMERS FOR ORDNANCE APPLICATIONS, by R. R. Freeman, 25 Dec 1956. 17 p. RIAL 56-3730.
Order from LC mi $2.40, ph $3.30 PB 130097

Rock Island Arsenal Lab., Ill.
FUNGUS-PROOFING OF BARRIER MATERIALS, by Evelyn S. Burke, 23 July 1956. 31 p. RIAL 56-1664.
Order from LC mi $3.00, ph $6.30 PB 128683

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
DEVELOPMENT OF SHALLOW-CAVITY GREEN MARKER SHELL FOR 90 MM GUNS, by Samuel D. Stein, Paul B. Tweed, etc., June 1957. 23 p. PATR 2437.
Order from LC mi $2.70, ph $4.80 PB 129330

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
DEVELOPMENT OF SHALLOW-CAVITY YELLOW MARKER SHELL FOR 90 MM GUNS, by Samuel D. Stein, Paul B. Tweed, etc., June 1957. 31 p. PATR 2417.
Order from LC mi $3.00, ph $6.30 PB 129329

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
EFFECT OF NITROCELLULOSE STABILIZATION CYCLE ON STABLE LIFE OF PROPELLANTS, by Robert S. Musgrave and Russell L. Trask, Aug 1957. 28 p. Technical rept. 2444.
Order from LC mi $2.70, ph $4.80 PB 129909

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
FEASIBILITY STUDY OF A 90 MM T91 HE WHITE MARKER SHELL, by Kathleen G. Sheffield, Charles E. Jacobson, etc., July 1957. 29 p. PATR 2410.
Order from LC mi $2.70, ph $4.80 PB 129350

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
IMPROVED METHODS AND TECHNIQUES FOR TESTING IMPACT SENSITIVITY OF EXPLOSIVES, by Alonzo Bulfinch, July 1956. 59 p. PATR-2282.
Order from LC mi $3.60, ph $9.30 PB 128225

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
NONAQUEOUS TITRIMETRIC ANALYSIS OF AMMONIUM NITRATE, SODIUM NITRATE AND TNT(CRATERING EXPLOSIVE), by Henry L. Herman, Dec 1956. 15 p. Technical rept. 2384.
Order from LC mi $2.40, ph $3.30 PB 130841

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
PYROTECHNICS LAUNCHER AND SEQUENCE FLASH CARTRIDGE AS A MISSILE BORNE TRACKING AID, by Paul A. Larsen, June 1957. 20 p. PATR 2426.
Order from LC mi $2.40, ph $3.30 PB 128815

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
RISKS ARISING FROM MISFIRES, by Yngne Rollof, Apr 1957. 9 p.
Order from LC mi $1.80, ph $1.80 PB 128642

Translated from Memorial de l'Artillerie Francaise V. 29, No. 2, 1955. Picatinny Arsenal Translation No. 11.

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
SLIP-ON-CAP FIBER CONTAINER, by Roswell H. Evans and Howard M. Weiner, May 1957. 26 p. PATR 2420.
Order from LC mi $2.70, ph $4.80 PB 128735

Samuel Feltman Ammunion Labs., Picatinny Arsenal, Dover, N. J.
A STUDY OF THE GREASEPROOFNESS TEST OF SPECIFICATION MIL-B-121 A, by Howard M. Weiner, Oct 1956. 19 p. PATR-2312.
Order from LC mi $2.40, ph $3.30 PB 128047

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
A SURVEY OF FIELD FORCES CRITERIA FOR AMMUNITION PACKAGING, by H. M. Weiner, Aug 1957. 25 p. PATR 2436.
Order from LC mi $2.70, ph $4.80 PB 130710

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
VISUAL DETECTION OF TRIPWIRES FOR ANTI-PERSONNEL MINES, by G. A. Peters and L. R. Drumm, June 1957. 19 p. PATR 2415.
Order from LC mi $2.40, ph $3.30 PB 129322

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
WIREBOUND BOXES AS A SUBSTITUTE FOR NAILED WOODEN BOXES FOR DOMESTIC SHIPMENT OF AMMUNITION, by Roy M. Dennis, Aug 1956. 45 p. PATR 2308.
Order from LC mi $3.30, ph $7.80 PB 128717

Tulane U., New Orleans, La.
THE USE OF APPROXIMATIONS TO THE ROCKET FUNCTIONS, by Robert R. Newton, 15 July 1956. 14 p. Contr. DA 01-021-506-ORD(P)-259.
Order from LC mi $2.40, ph $3.30 PB 133742

Utah U., Salt Lake City.
AN INVESTIGATION OF CRATERS FORMED BY HIGH-VELOCITY PELLETS, by W. S.Partridge and C. R. Whited, May 1957. 48 p. Tech. report No. OSR-9, AF OSR TN-57-293; Contr. AF 18 (600) 1217.
Order from LC mi $4.50, ph $12.30 PB 128423

Utah U., Salt Lake City.
PROJECTILE DECELERATION BY ELECTROMAGNETIC FIELDS, by L. D. Harris and L. E. Jenkins, May 1957. 46 p. Tech. report No. OSR-10, AF OSR TN-57-294; Contr. AF 18 (600) 1217.
Order from LC mi $3.30, ph $7.80 PB 128422

Watertown Arsenal Lab., Mass.
CERAMIC NOZZLES, A METALLOGRAPHIC EXAMINATION OF ERODED HOT-PRESSED CERAMIC NOZZLES FOR RECOILLESS WEAPONS, by E. L. Reed and H. G. Carter, 30 July 1951. 74 p. WAL 371/39.
Order from LC mi $4.50, ph $12.30 PB 128095

Watertown Arsenal Lab., Mass.
DEFLECTIONS AND STRESSES OF A HEMISPHERICALLY-BASED PROJECTILE ACTED ON BY BAND PRESSURE ALONE, by B. T. Caldwell, 21 May 1956. 47 p. WAL 893/186.
Order from LC mi $3.30, ph $7.80 PB 127708

Watertown Arsenal Lab., Mass.
DEFLECTIONS OF A HEMISPHERICALLY-BASED PROJECTILE ACTED ON BY GAS PRESSURE AND A BAND OF SHEAR, by E. F. Assmus and R. F. Julian, 21 May 1956. 38 p. WAL 893/187.
Order from LC mi $3.00, ph $6.30 PB 127709

Watertown Arsenal Lab., Mass.
TEMPERATURE DISTRIBUTION IN A HOLLOW CYLINDER HEATED BY INDUCTION, by P. P. Rodkowski, 23 Sept 1955. 17 p., Glossary. WAL 893/181.
Order from LC mi $2.40, ph $3.30 PB 127567

Watertown Arsenal Lab., Mass.
THE VACUUM FUSION METHOD OF ANALYSIS FOR DETERMINATION OF MINUTE QUANTITIES OF GASES IN METALS; GUN EROSION, by Wm. J. McMahon and Laurence S. Foster 26 June 1951. 27 p. WAL 805/5.
Order from LC mi $2.70, ph $4.80 PB 127554

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
MISSILE ROLL STABILIZATION BY A FLICKER-TYPE CONTROL SYSTEM, by Martin W. Ruhnke, Ph.D. and Charles J. Zoet, Apr 1953. 172 p. WADC TR-53-202. AD 20340.
Order from LC mi $8.10, ph $27.30 PB 130374

Sanitation and Safety Engineering

Academy of Technical Sciences (Denmark).
ON THE THEORY OF MULTIPLE-WELL SYSTEMS, by Frank Engelund, 1957. 14 p.
Order from LC mi $2.40, ph $3.30 PB 134217

Civil Engineering and Building Construction Series Vol. 4, No. 7; Acta Polytechnica 234 (1957).

Air Force Missile Development Center, Holloman Air Force Base, N. Mex.
PRELIMINARY INVESTIGATIONS OF A HYDRAULIC BUMPER AND ROLL-OVER STRUCTURE, by J. J. Ryan, et al, Feb 1958. 27 p. AF MDC TN 58-5; Minnesota U.; Contr. AF 29(600)-831. AD 135007.
Order from LC mi $2.70, ph $4.80 PB 133755

Arctic Aeromedical Lab., Ladd Air Force Base, Alaska.
STERILIZATION OF WATER BY OZONE UNDER ARCTIC CONDITIONS, by R. S. Ingols and R. H. Fetner, Sept 1956. 27 p. Proj. No. 8-7955.
Order from LC mi $2.70, ph $4.80 PB 130659

Enrico Fermi Inst. for Nuclear Studies, U. of Chicago, Ill.
TRITIUM ASSAYS OF NATURAL WATERS MEASURED IN 1956-1957, by F. Begemann and Anthony Turkevich, 31 Dec 1957. 71 p. AF OSR TR 58-41; Contr. AF 18(600)-564. AD 154131.
Order from LC mi $4.50, ph $12.30 PB 133669

Hostrup Lyons, and Associates, Los Angeles, Calif.
ENGINEERING DEVELOPMENT STUDY OF SANITARY FACILITIES IN ARID REGIONS PROGRESS REPORT, 2D QUARTER, 7 July 1952. 88 p. Contr. NOy 27480. AD 17671.
Order from LC mi $4.80, ph $13.80 PB 129405

Hostrup, Lyons, and Associates, Los Angeles, Calif.
SANITARY FACILITIES IN ARID REGIONS. ENGINEERING DEVELOPMENT STUDY. QUARTERLY PROGRESS REPORT, Ivor A. Lyons, 7 Apr 1952. 61 p. Contr. NOy 27480.
Order from LC mi $3.90, ph $10.80 PB 129648

Industrial Test Lab., Philadelphia Naval Shipyard, Pa.
USE OF RADIOISOTOPE TECHNIQUES IN STUDIES OF ZINC SEPARATIONS IN THE DETERMINATION OF ZINC IN DRINKING WATER, by T. F. Boyd, Sept 1956. 31 p. ITL-6200B-4. AD 107734.
Order from LC mi $3.00, ph $6.30 PB 129646

Institute of Tech., U. of Minn., Minneapolis.
INVESTIGATION OF FREEZING AS A MEANS OF OBTAINING FRESH WATER FROM SALT WATER, by Emory N. Kemler, et al. 26 May 1954. 89 p. Contr. NOY-73248.
Order from LC mi $4.80, ph $13.80 PB 127998

Report I-Summary of Patent Information Mechanical Engineering.

Material Lab, New York Naval Shipyard, Brooklyn.
RESEARCH AND DEVELOPMENT ON PLASTIC FILTER LENSES FOR WELDERS' GOGGLES AND HELMETS, by L. Banet and P. A. Proscia, 20 Aug 1956. 38 p. Lab. Project 5580, Final Rept. AD 109050.
Order from LC mi $3.00, ph $6.30 PB 133616

Naval Civil Engineering Research and Evaluation Lab., Port Hueneme.
TEST AND EVALUATION OF A SEWAGE TREATMENT PLANT, by J. E. Halton, 10 July 1956. 57 p. Technical memo, M-112.
Order from LC mi $3.60, ph $9.30 PB 129467

Naval Research Lab., Washington, D. C.
DEVELOPMENT OF FIRE ALARM THERMOSTAT OTHER THAN MERCURY-IN-GLASS, by R. Gareau, 7 Oct 1948. 15 p. NRL E-3365.
Order from LC mi $2.40, ph $3.30 PB 130107

Rock Island Arsenal Lab., Illinois.
DISPOSAL OF CYANIDE WATERS AT ROCK ISLAND ARSENAL, by A. W. Anderson, 31 Aug 1956. 15 p. RIAL 56-2542.
Order from LC mi $2.40, ph $3.30 PB 130090

Snow Ice, and Permafrost Research Establishment, Wilmette, Ill.
SEWAGE DISPOSAL AT ICE CAP INSTALLATIONS, by H. Bader and F. A. Small, Apr 1955. 5 p. SIPRE 21.
Order from LC mi $1.80, ph $1.80 PB 128111

Corps of Engineers Greenland Proj. 15.

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
TESTS OF THE USAF TYPE MA-1 RUNWAY OVERRUN BARRIER, by Roy J. Cochran, Mar 1956. 52 p. WADC TN-56-110. AD 94656.
Order from LC mi $3.60, ph $9.30 PB 133832

Ship Building

David Taylor Model Basin, Washington, D. C.
PROPELLER DYNAMOMETER INSTRUMENTATION AT THE DAVID TAYLOR MODEL BASIN, by G. J. Norman, M. W. Wilson, et al, July 1956. 40 p. DTMB-1068.
Order from LC mi $3.00, ph $6.30 PB 128730

David Taylor Model Basin, Washington, D. C.
SCALE EFFECTS IN SEAWORTHINESS, by J. G. Szebehely and M. D. Bledsoe, July 1956. 42 p. DTMB-1070.
Order from LC mi $3.30, ph $7.80 PB 130956

Experimental Towing Tank, Stevens Inst. of Tech., Hoboken, N. J.
NEW EQUIPMENT FOR MODEL TEST AT ALL HEADINGS TO WAVES, by E. V. Lewis, June 1956. 16 p. TM 110.
Order from LC mi $2.40, ph $3.30 PB 128672

Wave Research Lab., U. of Calif., Berkeley.
MODEL STUDY OF SHIP MOORING FORCES: AFDL-1, by R. L. Wiegel and R. W. Clough, Mar 1956. 37 p. IER Series 92, Issue 4; Contr. NOy-73260.
Order from LC mi $3.00, ph $6.30 PB 128775

Wave Research Lab., U. of Calif., Berkeley.
MODEL STUDY OF SHIP MOORING FORCES: ARD-12, by R. A. Dilley and R. L. Wiegel, July 1956. 33 p. IER Series 92, Issue 5; Contr. NDY-73260.
Order from LC mi $3.00, ph $6.30 PB 128776

Wave Research Lab., U. of Calif., Berkeley.
MODEL STUDY OF SHIP MOORING FORCES: ARG-11, by R. A. Dilley, J. B. Williams, et al, Aug 1956. 23 p. Series 92, Issue 7; Contr. NOy-73260.
Order from LC mi $2.70, ph $4.80 PB 128680

Wave Research Lab., U. of Calif., Berkeley.
MODEL STUDY OF SHIP MOORING FORCES: CVE-78, by R. A. Dilley and J. B. Williams, Aug 1956. 31 p. IER Series 92, Issue 6; Contr. NOy-73260.
Order from LC mi $3.00, ph $6.30 PB 128774

FOOD, HANDLING, AND PACKAGING EQUIPMENT

Food

California Agricultural Experiment Station, Davis.
STABILITY OF LOW MOISTURE DEHYDRATED CLINGSTONE PEACHES, 18 Apr 1955 to 17 Apr 1956, by E. M. Nuak. 15 p. F304-Report 6; Contr. DA 19-129-qm-333.
Order from LC mi $2.40, ph $3.30 PB 127564

Illinois U., Urbana.
DETERMINATION OF CHEMICAL CHANGES THAT OCCUR DURING DEHYDRATION AND STORAGE OF SERVING-SIZE PIECES OF CHICKEN MEAT, by A. I. Nelson and M. P. Steinberg, 13 Mar 1955. 15 p. Final Report; Contr. DA 44-109-QM-1553.
Order from LC mi $2.40, ph $3.30 PB 127736

Ingeniors Vetenskaps Akademien (Sweden).
EXPERIMENTS ON THE CULTURE OF CHLORELLA FOR FOOD PURPOSES, by Lars Bjorkman and Monica Bjorkman, 1955. 19 p.
Order from LC mi $2.40, ph $3.30 PB 128361

Chemistry including Metallurgy Series Vol. 4 No. 10; ACTA Polytechnica 176.

Minnesota Agricultural Experiment Station, St. Paul.
FACTORS INFLUENCING THE STORAGE LIFE OF DEHYDRATED WHEAT FLOUR, by W. F. Geddes, 17 Feb 1956. 49 p. Contr. DA19-129-QM-283.
Order from LC mi $3.30, ph $7.80 PB 130909

National Academy of Sciences, Washington, D. C.
CHEMISTRY OF NATURAL FOOD FLAVORS--A SYMPOSIUM, by Col. J. D. Peterman and E. M. Mrak, May 1957. 204 p.
Order from LC mi $9.30, ph $31.80 PB 130202

New York State Agricultural Experiment Station, Geneva.
EXPERIMENTAL DEHYDRATION OF PEAS AND SNAP BEANS, by D. B. Hand. 31 Aug 1954. 116 p. Final report, (No. 7) for period 1 Mar 1953-31 Aug 1954; Contr. DA-44-109-qm-1420.
Order from LC mi $6.00, ph $18.30 PB 132749

Quartermaster Food and Container Inst. for the Armed Forces, Chicago, Ill.
DEVELOP METHOD FOR DIATHERMALLY PROCESSED CANNED HAMS, 17 Feb 1955 to 17 Oct 1955, by L. J. Pircon. 38 p. Contr. DA 19-129-qm-288.
Order from LC mi $3.00, ph $6.30 PB 127563

Quartermaster Food and Container Inst. for the Armed Forces, Chicago, Ill.
KEEPING QUALITY OF SHELL EGGS AS AFFECTED BY THERMOSTABILIZATION (OIL TREATED), July 1956. 29 p.
Order from LC mi $2.70, ph $4.80 PB 130764

Quartermaster Food and Container Inst. for the Armed Forces, Chicago, Ill.
PREFERENCE RATINGS FOR OPERATIONAL RATION ITEMS. TERMINATION REPORT, Sept 1956. 13 p. Proj. 7-84-15-007.
Order from LC mi $2.40, ph $3.30 PB 129348

Refrigeration Equipment Co., Dayton, Ohio.
THE ABILITY OF CONTROLLED TEMPERATURE DRY ICE BOXES TO MAINTAIN SAFE FOOD STORAGE TEMPERATURES, by M. J. Witt and H. S. Schmidt, Jan 1956. 20 p. WADC TN 56-9; Contr. AF-33(616)-2275. AD 95750.
Order from LC mi $2.40, ph $3.30 PB 130806

Packaging

Ekco-Alcoa Containers Inc., River Grove, Ill.
RECTANGULAR ALUMINUM FOIL THREE COMPARTMENT TRAY, AND ROUND ALUMINUM FOIL CASSEROLE CONTAINER, 28 Dec 1955. 14 p. Contr. DA 19-129-QM-450.
Order from LC mi $2.40, ph $3.30 PB 132559

Evans Signal Lab., Signal Corps Engineering Labs., Belmar, N. J.
COMPARISON OF THE LAB PACKAGE TESTERS USED BY SIGNAL CORPS ELECTRON TUBE CONTRACTORS, by Gerard E. Boyan, 6 Mar 1956. 21 p. TN 1821.
Order from LC mi $2.70, ph $4.80 PB 129325

Naval Supply Research and Development Facility, Bayonne, N. J.
APPLICABILITY AND SUITABILITY OF TESTS IN SPECIFICATION MIL-P-116B, by S. Stambler, S. Cholmar, etc., Dec 1956. 192 p. Engineering rept. No. 2.5005.
Order from LC mi $8.70, ph $30.30 PB 129988

Rock Island Arsenal Lab., Ill.
THE COMPATABILITY OF ORDNANCE BARRIER MATERIALS AND MIL-P-3420 MATERIALS, by E. S. Burke, 4 Oct 1956. 27 p. RIALR-56-2658.
Order from LC mi $2.70, ph $4.80 PB 130095

Rock Island Arsenal Lab., Ill.
SIX-YEAR STORAGE PROGRAM TESTS-PACKAGED ITEMS, by R. L. Murrens, 24 Apr 1957. 110 p. RIAL 57-224.
Order from LC mi $5.70, ph $16.80 PB 129603

Report No. 6B of 6 Parts (Shed and Warehouse Storage only).

Rock Island Arsenal Lab., Ill.
SIX-YEAR STORAGE PROGRAM TESTS-PACKAGED ITEMS, by R. L. Murrens, 3 May 1957. 106 p. RIAL 56-3561.
Order from LC mi $5.70, ph $16.80 PB 129469

Rock Island Arsenal Lab., Ill.
STATISTICAL STUDY OF TIN CANS AS CONTAINERS FOR ANTI-FRICTION BEARINGS, by R.L. Murrens, 18 Apr 1956. 21 p. RIAL 56-1034.
Order from LC mi $2.70, ph $4.80 PB 130091

Rock Island Arsenal Lab., Ill.
STATISTICAL STUDY OF TIN CANS AS CONTAINERS FOR ANTIFRICTION BEARINGS, by R. L. Murrens. 18 p. RIAL 57-1584.
Order from LC mi $2.40, ph $3.30 PB 133939

MACHINERY, FABRICATION, AND ACCESSORY EQUIPMENT

Naval Engineering Experiment Station, Annapolis, Md.
FINAL REPORT OF FULL SCALE CONDENSOR CIRCULATING WATER TEST, by J. A. Bauman, 18 Dec 1956. 21 p. Research and Development rept. 030194B.
Order from LC mi $2.70, ph $4.80 PB 133855

Office of Naval Research, Washington, D. C.
ON THE THEORY OF REPLACEMENT OF MACHINERY WITH A RANDOM FAILURE TIME, by George H. Weiss, Dec 1956. 15 p. NAVEXOS P-1278.
Order from LC mi $2.40, ph $3.30 PB 127904

Reprinted from "Naval Research Logistics Quarterly.

Ordnance Corps, Washington, D. C.
PREPARATION HANDLING AND MAINTENANCE OF PRODUCTION EQUIPMENT FOR RESERVE STORAGE, Aug 1954. 68 p. ORDM 4-6.
Order from LC mi $3.90, ph $10.80 PB 133772

Rock Island Arsenal Lab., Ill.
CUTTING FLUID EVALUATION BY ACCELERATED MACHINING TESTS, by F. J. Daasch and S. L. Eisler, 25 May 1956. 21 p. RIAL 56-1560.
Order from LC mi $2.70, ph $4.80 PB 127596

Engines and Propulsion Systems

Detroit Arsenal, Center Line, Mich.
SOLID FUEL TO GAS CONVERTER, TVA-GEORGIA TECH MODEL. FINAL REPORT, 18 May 1955. 94 p. Project TT3-65-3. AD 96735.
Order from LC mi $5.40, ph $15.30 PB 129410

Engineer Research and Development Labs., Fort Belvoir, Va.
INFORMATION ON CORPS OF ENGINEERING SMALL INDUSTRIAL ENGINE PROGRAM, 1/2 THRU 20HP, 1 May 1956. 72 p.
Order from LC mi $4.50, ph $12.30 PB 128690

Escher Wyss, Ltd., Zurich (Switzerland).
APPLICATION OF THE CLOSED-CYCLE PRINCIPLE TO AIRCRAFT PROPULSION SYSTEMS, Vol. I, by R. Tognoni and W. Spillmann, July 1956. 55 p. EW rept. No. 5p-AK-56-027; Contr. AF61(514)854; AFOSR TR-56-45. AD 97,087.
Order from LC mi $3.60, ph $9.30 PB 127103

James Forrestal Research Center, Princeton, New Jersey.
BIBLIOGRAPHY OF UNCLASSIFIED SQUID PUBLICATIONS TO 1 JUNE 1956. 25 p. Contr. N6-ORI-105, T.O.3.

Transportation Research and Development Command, Fort Eustis, Va.
OPERATION ICECAP, SLED AND RUNNER SKI TESTS, 19 Feb 1954. 365 p. TCB 120, Vol. II, Part F, Book 1; Contr. DA-44-177-TC-180. AD 99098.
Order from LC mi $11.10, ph $56.10 PB 128811

Transportation Research and Development Command, Fort Eustis, Va.
RAILWAY SNOW PLOWS (SPREADER DITCHER), 36", 39-3/8" or 42" and 56-1/2" OR 60" GAGE. FINAL REPORT, PART II, by G. S. Goodwin and D. M. Cawthon, July 1956. 27 p. Contr. DA-44-177-TC-130.
Order from LC mi $2.70, ph $4.80 PB 128951

Transportation Research and Development Command, Fort Eustis, Va.
24 MAN, 8 MAN, and 4 MAN WANIGAN TESTS, 1 Mar 1954. 108 p. Operation Icecap; Report 120, Vol. II, Part II; Contr. DA-44-177-TC-1800. AD 99100.
Order from LC mi $5.70, ph $16.80 PB 128105

MATERIALS

Technical Operations, Inc., Burlington, Mass.
SYNTHESIS AND TESTING OF NEW HETEROCYCLIC PHOTOGRAPHIC DEVELOPING AGENTS, by Gershon M. Goldberg and James E. LuValle, May 1957. 97 p. Final Report. Report TO1 57-12; AF OSR TR 57-29; AD 126-464; Contr. AF 18(600)-1569.
Order from LC mi $5.40, ph $15.30 PB 128184

Adhesives and Sealants

Pitman-Dunn Labs., Frankford Arsenal, Philadelphia, Pa.
SOME VARIABLES AFFECTING THE ADHESION TEST RESULTS OF SPRAYABLE, STRIPPABLE, ADHERING VINYL FILMS, by A. Otto and L. Berger, Aug 1956. 11 p. Memo. 630.
Order from LC mi $2.40, ph $3.30 PB 129639

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
SEALING OF SYNTHETIC SAPPHIRE TO GLASS, by Emil Benz, Jan 1954. 9 p. WADC TR 54-18. AD 27587.
Order from LC mi $1.80, ph $1.80 PB 130396

Ceramics and Refractories

Astia Reference Center Library of Congress, Washington, D. C.
CERAMICS, Feb 1955. 126 p.
Order from LC mi $6.30, ph $19.80 PB 130577

Engineer Research and Development Labs., Fort Belvoir, Va.
IRON LAYER ANTI-REFLECTION COATINGS FOR GLASS IN THE NEAR INFRARED, by Robert F. Rowntree and Georg Hass, etc., 31 May 1956. 33 p. R145ORR.
Order from LC mi $3.00, ph $6.30 PB 129607

Federal Telecommunication Laboratories, Nutley, N. J.
RESEARCH ON GROWING SINGLE CRYSTALS OF CERAMIC MATERIALS WITH FERROMAGNETIC PROPERTIES, by A. J. Marino, Jan 1958. 24 p. AF CRC TN 58-105; Contr. AF 19(604)-2261.
Order from LC mi $2.70, ph $4.80 PB 133560

Horizons, Inc., Cleveland, Ohio.
EFFECTS OF LOW CONCENTRATIONS OF RARE EARTH OXIDES UPON REFRACTIVE INDEX AND DENSITY OF A LEAD GLASS, by R. C. Vickery and R. Sedlacek, 1 July 1957. 12 p. Tech. Note No. 2; AF OSR TN-57-318; Contr. AF 49(638)-5. AD 132389.
Order from LC mi $2.40, ph $3.30 PB 129494

Illinois U., Urbana.
THERMAL FRACTURE RESISTANCE OF CERAMIC COATINGS APPLIED TO METAL I ELASTIC DEFORMATION, by J. H. Laucher and D. G. Bennett, May 1957. 21 p. AFOSR-TN-57-52; Contr. AF18(603)-28. AD 115091.
Order from LC mi $2.70, ph $4.80 PB 128341

New York State Coll. of Ceramics, Alfred U.
THE HEAT-TREATMENT REINFORCEMENT AND CLADDING OF TITANIUM CARBIDE CERMETS, by A. D. Joseph et al. 33 p. WADC TR 55-82; Contr. AF 33(616)-2414. AD 75854.
Order from LC mi $3.00, ph $6.30 PB 133930

Ohio State U., Engineering Experiment Station, Columbus.
CERAMIC-FIBER BASE CERMETS, by Louis J. Trostel, Jr. Feb 1955. 35 p. WADC TR 54-172 Part II; Contr. AF 33(616)-472. AD 90042.
Order from LC mi $3.00, ph $6.30 PB 133912

Pennsylvania State U., University Park.
REFRACTORY MATERIALS FOR USE IN HIGH-TEMPERATURE AREAS OF AIRCRAFT, by N. R. Thielke, Sept 1954. 58 p. WADC TR 53-9, pt. 2; Contr. AF-33(038)-16375(17284). AD 48907.
Order from LC mi $3.60, ph $9.30 PB 130809

Philips Lab. Inc., Irvington, N. Y.
RESEARCH INVESTIGATION OF MAGNETIC MATERIAL, PERMANENT CERAMIC TYPE, by F. G. Brockman, 29 Nov 1956. 49 p. 2nd Quarterly Report. Contr. DA-36-039-SC-72319.
Order from LC mi $3.30, ph $7.80 PB 130584

Philips Labs. Inc., Irvington, N. Y.
RESEARCH INVESTIGATION OF MAGNETIC MATERIAL, PERMANENT CERAMIC TYPE, by F. G. Brockman, 31 Jan 1957. 48 p. 3rd Quarterly Report. Contr. DA-36-039-SC-72319.
Order from LC mi $3.30, ph $7.80 PB 130583

Rutgers U. New Brunswick, N. J.
A TECHNIQUE FOR MAKING MOLYBDENUM CRUCIBLES FOR CERAMIC RESEARCH, by H. T. Smyth and R. H. Meinken, 15 June 1952. 8 p. Tech. Report no. 3. Contr. N7onr-34503. AD 201334.
Order from LC mi $1.80, ph $1.80 PB 130570

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
AN EXHAUST GAS TEMPERATURE THERMISTOR BODY FOR THE RANGE 1500° F TO 3500° F, by Harriet R. Wisely, Jan 1957. 49 p. WADC TR 57-2; Contr. AF-33(616) 2749. AD 110722.
Order from LC mi $3.30, ph $7.80 PB 129450

Fuels, Lubricants, and Hydraulic Fluids

Aberdeen Proving Ground, Md.
FINAL REPORT ON COLD TEST ON CD 850-4B AND CD 500-3 TRANSMISSIONS IN THE CLIMATIC LAB. AT EGLIN AIR FORCE BASE, FLORIDA. FIRST REPORT ON PROJECT 251-036-10, by E. H. Roberts, Jr., 27 July 1956. 195 p.
Order from LC mi $7.70, ph $30.30 PB 128206

Aerojet-General Corp., Azusa, Calif.
RESEARCH ON ULTRA-ENERGY FUELS FOR ROCKET PROPULSION, by L. Baum and H. Graff, 31 July 1956. 51 p. AF OSR TN-56-346; Contr. AF18(600)-1216. AD 95432.
Order from LC mi $3.60, ph $9.30 PB 129521

Atlantic Research Corp., Alexandria, Va.
TEMPERATURE-PROFILE STUDIES IN SOLID-PROPELLANT FLAMES, by R. G. Nugent and R. Friedman, Mar 1957. 24 p. AFOSR-TN 57-212; Contr. 18 (600)-1502. AD 126509.
Order from LC mi $2.70, ph $4.80 PB 128002

Badger Ordnance Works, Baraboo, Wis.
IMPROVEMENT OF STRAND BURNING, by R. T. Nagler and R. R. Buell, 15 Jan 1957. 18 p. Technical rept. no. 157.
Order from LC mi $2.40, ph $3.30 PB 133927

Burke Research Co., Van Dyke, Mich.
RESEARCH ON VINYLIE FILTER LUBRICANTS AND GREASES. TECHNICAL REPORT 3A, PREPARED, by U. F. Nager and R. G. Jennen et al, 1 June to 31 Aug 1956. 23 p. Contr. NONR-2146 (00).
Order from LC mi $2.70, ph $4.80 PB 128205

Burke Research Co., Van Dyke, Mich.
RESEARCH ON VINYLIC FILLER LUBRICANTS AND GREASES, by U. F. Nager and A. J. Kizer, et al, 1 Sept to 31 Dec 1956. 25 p. Contr. Nonr-2146(00).
Order from LC mi $2.70, ph $4.80 PB 130862

Coating and Chemical Lab., Aberdeen Proving Ground, Md.
DEVELOPMENT OF A STORAGE STABILITY TEST FOR BRAKE FLUIDS, by E. R. Hess, 28 June 1957. 16 p. CCL R 30.
Order from LC mi $2.40, ph $3.30 PB 129499

Engineer Research and Development Labs., Fort Belvoir, Va.
10,000 GALLON COLLAPSIBLE FUEL CONTAINER, by G. W. Johnston, 2 July 1954. 65 p. ERDL R 1362.
Order from LC mi $3.90, ph $10.80 PB 128667

Instituto Nacional de Tecnica Aeronautica Esteban Terradas (Madrid).
AN EXPERIMENTAL INVESTIGATION OF THE INTERACTION EFFECTS IN THE COMBUSTION OF DROPLETS, by Gregorio Millan and Carlos S. Tarifa, May 1956. 45 p. AF OSR TR 56-38; Contr. AF 61 (514)-734C. AD 95208.
Order from LC mi $3.30, ph $7.80 PB 127085

Jet Propulsion Lab., Calif. Inst. of Tech., Pasadena.
THE EFFECT OF VARIATION OF PROPELLENT DENSITY ON ROCKET PERFORMANCE, by J. Larell and A. Hibbs, 15 July 1952. 36 p. Rept. 20-66; Contr. DA-04-495-ORD-18.
Order from LC mi $3.00, ph $6.30 PB 133568

Lubrication Lab., Mass. Inst. of Tech., Cambridge.
LOW-SPEED SLIDING, by E. Rabinowitz, B. G. Rightmire, 10 July 1956. 20 p.
Order from LC mi $2.40, ph $3.30 PB 127630

Contents: I. Relation between stick-slip and spring stiffness. II. Calculation of size-distribution of asperities. III. Velocity and temperature dependence on rubber friction.

Mine Safety Appliances Co. Callery, Pa.
HAZARDS OF USING A BIPHENYL-TYPE COOLANT: TOXICOLOGY AND FLAMMABILITY, by J. W. Maustellar and K. R. Barker, Rept. on Contr. NObs-65426, 31 Aug 1956. 15 p.
Order from LC mi $2.40, ph $3.30 PB 130331

Naval Air Rocket Test Station, Lake Denmark, Dover, New Jersey.
MOLLIER CHARTS FOR THE PRODUCTS OF COMBUSTION OF AMMONIA AND NITRIC ACID, by I. Forsten, Apr 1956. 34 p. NARTS 83.
Order from LC mi $3.00, ph $6.30 PB 127901

Pouch inside back cover contains six Mollier Charts.

Naval Engineering Experiment Station, Annapolis, Md.
EFFECTS OF CATHODIC TANK PROTECTION ON JP-5 FUEL, by R. T. Jones, 29 Feb 1956. 24 p. EES 070340B.
Order from LC mi $2.70, ph $4.80 PB 130937

Naval Powder Factory, Indian Head, Md.
THE EFFECTS OF GAMMA RADIATION ON JPN PROPELLANT, by Alfred Owyang and Hyman Rosenwasser, 30 July 1956. 23 p. MR-122.
Order from LC mi $2.70, ph $4.80 PB 129323

Naval Research Lab., Washington, D. C.
A PRELIMINARY SURVEY OF FUEL-OIL SLAGGING PROBLEMS, by R. M. Roe, 18 Mar 1952. 30 p. NRL 3933.
Order from LC mi $2.70, ph $4.80 PB 129145

Petroleum Refining Lab., Pennsylvania State U., University Park.
DIBASIC ACID ESTERS AND ESTER-TYPE FLUIDS AND LUBRICANTS, by Merrell R. Fenske, Oct 1951. 196 p. AF TR-6665; Contr. NOrd-7958. AD 2175.
Order from LC mi $8.70, ph $33.30 PB 130816

Rock Island Arsenal, Ill.
CORRELATION BETWEEN SHELL FOUR BALL WEAR AND EXTREME PRESSURE TEST RESULTS, by George P. Murphy, 17 Feb 1958. 16 p. RIAL 58-326.
Order from LC mi $2.40, ph $3.30 PB 133932

Rock Island Arsenal Lab., Ill.
QUATERNIZED BUTADIENE METHYL-VINYL PYRIDINE COPOLYMERS FOR LOW TEMPERATURE OIL RESISTANT SERVICE, by Z. T. Ossefort, 13 Aug 1956. 25 p. Rept. 56-2329.
Order from LC mi $2.70, ph $4.80 PB 130092

Rock Island Arsenal Lab., Ill.
TETRAETHYLLEAD CONTENT OF GASOLINE BY FLAME PHOTOMETRY, by H. W. Brennan, 27 July 1956. 14 p. Rept. 56-2137.
Order from LC mi $2.40, ph $3.30 PB 130089

Rock Island Arsenal Lab., Ill.
THIXOTROPY OF LUBRICATING GREASES AT 20° F., by F. S. Meade, 12 July 1950. 29 p. RIA Lab No. 50-1384.
Order from LC mi $2.70, ph $4.80 PB 127655

Rubber Lab., Mare Island Naval Shipyard, Vallejo, Calif.
PRELIMINARY EVALUATION OF LIGHTWEIGHT FUELING HOSE MANUFACTURED IN UNITED KINGDOM, J. W. Hallister, 15 Dec 1955. 17 p. RL 27-12.
Order from LC mi $2.40, ph $3.30 PB 127268

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
EFFECTS OF DC-4 SILICONE GREASE ON GLASS FILLED POLYSTYRENE, by Wm. H. Schrader, July 1957. 12 p. Technical notes no. 10. AD 135178.
Order from LC mi $2.40, ph $3.30 PB 129628

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
NEW APPARATUS FOR RAPID EXTRACTION OF SINGLE, DOUBLE, AND TRIPLE BASE PROPELLANTS, by Raymond F. Wegman and Milton Roth, May 1957. 11 p. PATR 2423.
Order from LC mi $2.40, ph $3.80 PB 128800

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
THE USE OF PIEZO GAGES IN CLOSED BOMB TESTS OF SOLID PROPELLANTS, by A. I. Rubin and A. G. Edwards, Dec 1956. 42 p. PATR 2367.
Order from LC mi $3.30, ph $7.80 PB 130709

Southwest Research Inst., San Antonia, Tex.
CONTINUED CALIBRATION AND PROCEDURE DEVELOPMENT STUDIES ON THE CLR ENGINE, by Karl J. Springer, Oct 1957. 71 p. Final Rept. Contr.DA 23-072-ord 934.
Order from LC mi $4.50, ph $12.30 PB 133899

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
AN INVESTIGATION OF LITHIUM 9/10 HYDROXY-STEARATE GREASE, by Harvey C. Markle and Herbert Schwenker, Aug 1954. 29 p. WADC TR-54-46. AD 45579.
Order from LC mi $2.70, ph $4.80 PB 129527

Leather and Textiles

Borg, George W., Corp., Delavan, Wis.
DEVELOPMENT OF DYE FORMULATIONS AND DYEING PROCEDURES FOR PRODUCING SAGE GREEN PILE FABRIC, by A. Bartovics, May 1954. 11 p. WADC TR 53-452; Contr. AF33(600) 23440. AD 34419.
Order from LC mi $2.40, ph $3.30 PB 130375

Chemical Warfare Labs., Army Chemical Center, Md.
AEROSOL DEPOSITION ON MILITARY TEXTILES, by J. E. Eipper and G. S. Woodson, 13 Aug 1957. 18 p. CWLR 2162.
Order from LC mi $2.40, ph $3.30 PB 130728

Cheney Bros., Manchester, Conn.
DEVELOPMENT OF 0.9-OZ. NYLON PARACHUTE CLOTH, by H. J. Bickford, Rept. on Contract AF 33 (600)-23196, Sept 1953. 26 p. WADC TR-53-351; AD-26-850.
Order from LC mi $2.70, ph $4.80 PB 133702

Clothing Supply Office, Brooklyn, N. Y.
THE EVALUATION OF REPLACEMENT FABRICS FOR THE OUTER SHELL OF A-2 COLD WEATHER GARMENTS, by J. Naimer, 26 Sept 1956. 13 p. RDD 15.
Order from LC mi $2.40, ph $3.30 PB 132443

Fabric Research Labs., Boston, Mass.
A STUDY OF THE EFFECT OF TEMPERATURE ON TEXTILE MATERIALS, by Myron J. Copean, July 1953. 51 p. WADC TR-53-21, Pt. 2; Contr. AF 33(038)22932. AD 19723.
Order from LC mi $3.60, ph $9.30 PB 130399

General Mills, Inc., Minneapolis, Minn.
BALLOON BARRIER MATERIALS, by A. A. Anderson, Jr., E. C. Gear, and G. L. Morfitt, Apr 1956. 160 p. 1 Apr 1955-14 Mar 1956. Rept. 1525. AF CRC TR 56-262; Contr. AF 19(604)1393.
Order from LC mi $7.50, ph $24.30 PB 127173

Industrial Test Lab., Philadelphis Naval Shipyard Penn.
MILDEW RESISTANCE OF TREATED CORDAGE, by J. A. Miller, July 1956. 23 p. ITL 2669. AD 103730.
Order from LC mi $2.70, ph $4.80 PB 130635

Textile Research Inst., Princeton, N. J.
RESEARCH IN FIBER-YARN-FABRIC RELATIONS BY MODERN STATISTICAL METHODS, by H. Wakeham and Wm. Virgin, 29 Aug 1956. 35 p. Final Report. Contr. NONR-391(00).
Order from LC mi $3.00, ph $6.30 PB 128412

Paints and Finishes

Better Finishes and Coatings, Inc., Newark, N. J.
EXTERIOR STORAGE PROJECT, by G. J. Merritt, Project Officer, 161 p. Final Report. Contr. DA-44-109-QM-1072.
Order from LC mi $7.80, ph $25.80 PB 132743

Coating and Chemical Lab., Aberdeen Proving Ground, Md.
DETECTION OF OITICICA OIL, by M. H. Swann, 12 June 1957. 7 p. CCL no. 27.
Order from LC mi $1.80, ph $1.80 PB 129487

Mare Island Naval Shipyard Vallejo, Calif.
ORGANIC COATINGS ON THE ADHESION OF SARAN TO GALVANIZED MILD STEEL PART III THE CHROMATIC ACID APPLICATION STUDY, by D. H. Smith, Feb 1956. 64 p. Report No. 56-2.
Order from LC mi $3.90, ph $10.80 PB 130903

Mare Island Naval Shipyard Vallejo, Calif.
ORGANIC COATINGS ON THE ADHESION OF SARAN TO GALVANIZED MILD STEEL: THE WELD STUDY, by D. H. Smith, Mar 1956. 49 p. Rept. no. 56-3.
Order from LC mi $3.30, ph $7.80 PB 130904

Naval Research Lab., Washington, D. C.
FINAL REPORT ON REFLECTION REDUCING COATINGS, by L. B. Lockhart, Mar 1947. 28 p. NRL P-3066.
Order from LC mi $2.70, ph $4.80 PB 129279

Rock Island Arsenal Lab., Illinois.
HEAT AND LIGHT REFLECTIVE COATINGS, by J. Knanishu, 29 Jan 1957. 16 p. RIAL 57-254.
Order from LC mi $2.40, ph $3.30 PB 130099

Rock Island Arsenal Lab., Ill.
HEAT-RESISTANT PAINTS FOR ROCKET LAUNCHERS, by T. Rice, 4 Jan 1956. 21 p. Lab. rept. 56-37.
Order from LC mi $2.70, ph $4.80 PB 130647

Plastics

Aeronautical Materials Lab., Naval Air Material Center, Philadelphia, Pa.
COMPARATIVE EVALUATION OF CLEANERS SUITABLE FOR USE ON TRANSPARENT ACRYLIC PLASTICS, C. A. Cassola and D. E. Jost. 11 Oct 1956. 16 p. NAM AML-AE 1016.
Order from LC mi $2.40, ph $3.30 PB 130741

Chemical Warfare Labs., Army Chemical Center, Md.
COATING MATERIALS SURVEY: PROTECTION OF METALS AND NONMETALS FROM FUMING NITRIC ACID, by Joseph D. Phillips, 15 Oct 1956. 30 p. CWLR-2072.
Order from LC mi $2.70, ph $4.80 PB 128108

Emerson and Cuming, Inc., Boston, Mass.
DEVELOPMENT OF AN INORGANIC FOAMED-IN-PLACE MATERIAL. Rept. on Contract NOas-55-491c. n.d. 28 p. AD 102241.
Order from LC mi $2.70, ph $4.80 PB 128072

Naval Powder Factory, Indian Head, Md.
MELTING OF CELLULOSE TRICAPRYLATE, by Philip Goodman, 19 Oct 1956. 36 p. Technical rept. 90; NAVORD rept. 5351.
Order from LC mi $3.00, ph $6.30 PB 128972

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
DURABILITY OF RUBBER-MOLDED POLY-STYRENES, by Kenneth T. Carolan and Lucius Gilman, May 1957. 27 p. PATR 2413.
Order from LC mi $2.70, ph $4.80 PB 129605

School of Aviation Medicine, Randolph Air Force Base, Tex.
SPECTROPHOTOMETRIC CHARACTERIZATION OF LIGHT-INDUCED CHANGES IN THE AUTOPOLY-MERIZING RESINS. THE EFFECT OF ULTRA VIOLET LIGHT UPON VARIOUS POWDERS IN SOLUTION, by Bertram Eichel and Theodore E. Fischer, Aug 1957. 8 p. AF SAM 57-135.
Order from LC mi $1.80, ph $1.80 PB 132271

Wright Air Development Center, Wright-Patterson AFB, Ohio.
PRELIMINARY STUDY OF GLASS AND PLASTIC FILMS USING ELECTRON DIFFRACTION AND ELECTRON MICROSCOPY, by L. H. Bullis, Dec 1954. 29 p. WADC TR-54-393.
Order from LC mi $2.70, ph $4.80 PB 133562

Rubber and Elastomers

Army Ballistic Missile Agency, Huntsville, Ala.
TESTS WITH INFLATABLE SEALS USING SURGICAL RUBBER TUBING, by Oscar C. Holderer and Robert A. Winkless, 10 July 1956. 17 p. IR 15.
Order from LC mi $2.70, ph $3.30 PB 128207

Augustana Research Foundation, Rock Island, Illinois.
STUDY OF REACTION OF OZONE WITH POLY-BUTADIENE RUBBERS, 1 Aug 1957. 51 p. Contr. DA-11-022-ORD-329; Contr. DAI-11-022-ORD-508-(P)-40.
Order from LC mi $3.60, ph $9.30 PB 129906

Burke Research Co., Van Dyke, Mich.
DEVELOPMENT OF PRACTICAL ANTIOZONANTS, by R. G. Spain, Rept. on Contract DA-20-089-ORD-36531, 31 Aug 1955. 101 p. Rept. 35A.
Order from LC mi $5.70, ph $16.80 PB 127996

Burke Research Co., Van Dyke, Mich.
DEVELOPMENT OF SOLVENT PLY CEMENT FOR GR-S ELASTOMERS AND/OR A MODIFIED SYNTHETIC RUBBER WITH NATURAL TACK, by R. G. Jennen and O. M. Grace, 31 July 1956. 17 p. Contr. DA-20-089-ORD-37079.
Order from LC mi $2.40, ph $3.30 PB 130950

California Inst. of Tech., Pasadena.
THE BIOSYNTHESIS OF RUBBER FINAL REPORT, 15 June 1953 to 30 June 1956. 28 p. Contr. DA 44-109-GM-1515.
Order from LC mi $2.70, ph $4.80 PB 127627

Dayton Rubber Co., Ohio
THE DEVELOPMENT OF WEATHER AND AGING RESISTANT PNEUMATIC TIRES AND MECHANICAL RUBBER GOODS, by D. A. Meyer and J. G. Sommer, 26 Aug 1953, to 30 June 1957. 127 p. Contr. DA-20-089-ORD-36756.
Order from LC mi $6.30, ph $19.80 PB 130468

Frick Chemical Lab., Princeton U., N. J.
VISCOELASTIC PROPERTIES OF NATURAL RUBBER AND GR-S GUM VULCANIZATES, by E. Catsiff and A. V. Tobolsky, 18 Dec 1956. 16 p. TR RLT-21; Contr. Nonr-1858 (07).
Order from LC mi $2.40, ph $3.30 PB 130594

Material Lab., New York Naval Shipyard, Brooklyn, N. Y.
SPECIFICATION DEVELOPMENT REPORT ON THE SUITABILITY OF THE PANDUX TESTER FOR MAKING HARDNESS MEASUREMENTS ON FOAM (SPONGE) RUBBER MATERIALS, by S. A. Eller, 15 Mar 1956. 23 p. Lab. Proj 5576-1, Final Report.
Order from LC mi $2.70, ph $4.80 PB 133686

Naval Research Lab., Washington, D. C.
INFRARED SPECTRA OF SOME NATURAL ELASTOMERS, by R. A. Saunders and D. C. Smith, 17 May 1948. 21 p. NRL C-3285.
Order from LC mi $2.70, ph $4.80 PB 129288

Naval Research Lab., Washington, D. C.
ORGANIC COATINGS ADAPTABLE TO FUEL STORAGE, by Jack E. Cowling, Irving J. Eggert, and others, 22 June 1950. 68 p. NRL 3685.
Order from LC mi $3.90, ph $10.80 PB 129420

Pitman-Dunn Labs., Frankford Arsenal, Philadelphia, Pa.
THERMAL STABILITY OF PARLON AND ITS MIXTURES WITH BARIUM PEROXIDE AND RED TONER, by R. A. Garstka, May 1957. 14 p. Memo MR-650.
Order from LC mi $2.40, ph $3.30 PB 129501

Quartermaster-Research and Development Center, Natick, Mass.
ARMY CONTRACTORS' MEETING ON ELASTOMERS, PROCEEDINGS, by Dr. A. W. Harvey and Dr. B. Landrum, 6 Oct 1955. 27 p.
Order from LC mi $2.70, ph $4.80 PB 130714

Rock Island Arsenal Lab., Ill.
OZONE AGING OF ELASTOMERS EXPOSED OUTDOORS AT ROCK ISLAND, ILL., LOS ANGELES, CALIF., AND COLLEGE, ALASKA, by E. W. Bergstrom, 12 Dec 1956. 29 p. RIAL 56-3729.
Order from LC mi $2.70, ph $4.80 PB 130096

Rock Island Arsenal Lab., Illinois.
PROTECTION OF RUBBER VULCANIZATES FROM OZONE CRACKING BY EXTERNAL ANTIOZONANT APPLICATION, by E. W. Bergstrom, 1 Nov 1956. 29 p. RIAL 56-3158.
Order from LC mi $2.70, ph $4.80 PB 130646

Rubber Research Lab., U. of Akron, Ohio.
OIL RESISTANT SILICONE ELASTOMERS, by Marvin A. Deisz from 28 Apr to 27 June 1956. 51 p. Final Report. Contr. DA 44-109-QM-1441.
Order from LC mi $3.60, ph $9.30 PB 128128

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
FLUORINE-CONTAINING ELASTOMERS, by Earl T. McBee and Carleton W. Roberts, Dec 1954. 122 p. WADC TR-52-191, Part 3; Contr. AF 33(038)20581. AD 62929.
Order from LC mi $6.30, ph $19.80 PB 129549

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
ELASTOMERIC FLUORALKYE SILICANE COPOLYMERS, by Roy T. Clark, Jr., July 1954. 24 p. WADC TR-54-213; Contr. AF 33(038)20581. AD 47085.
Order from LC mi $2.70, ph $4.80 PB 129594

Wood and Paper

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
DEVELOPMENT OF SPECIFICATIONS FOR GLASSINE PAPER, by Theodore Fruchtman and Howard M. Weiner, Oct 1956. 21 p. PATR 2356.
Order from LC mi $2.70, ph $4.80 PB 128981

Yale U., New Haven, Conn.
SURVEY OF AFRICAN WOODS. A REVIEW OF LITERATURE ON THE DISTRIBUTION, PROPERTIES AND USES OF AFRICAN WOODS, 31 Aug 1955. 226 p. Contr. SAR/Nobs-66267.
Order from LC mi $9.90, ph $34.80 PB 133614

MATHEMATICS

AN INTRODUCTION TO THE MATHEMATICAL THEORY OF VIBRATIONS OF ELASTIC PLATES, by R. D. Mindlin, 1955. 173 p. Contr. DA-36-039-SC-56772.
Order from LC mi $8.10, ph $27.30 PB 130858

TWO ERGODIC THEOREMS FOR MARKOV CHAINS by Kai Lai Chung, Aug 1956. 9 p. Contr. AF 18(600)-760. AD 113732.
Order from LC mi $1.80, ph $1.80 PB 130443

WAYS OF CHECKING CORRECTIONS OF PREPARATION AND ACCURACY OF SOLUTION OF PROBLEMS WITH ELECTRIC ANALOG COMPUTERS FOR SOLUTION OF ORDINARY DIFFERENTIAL EQUATIONS, by E. A. Gluzberg, 18 Apr 1956. 9 p., tables.
Order from LC mi $1.80, ph $1.80 PB 129912

Translated from the Russian.

Aeronautical Electronic and Electrical Lab., Naval Air Development Center, Johnsville, Pa.
TABLES OF AMPLITUDE AND PHASE OF THE FUNCTION $1+ae^{jb}$, by S. Wolin, 28 Aug 1952. 320 p. NADC EL-5114.
Order from LC mi $11.10, ph $48.60 PB 128788

Air Force Missile Development Center, Holloman Air Force Base, N. Mex.
DELTA-DISTURBED LINEAR SYSTEMS, by G. M. Schindler, Feb 1958, 18 p. AF MDC TN 58-1. AD 135003.
Order from LC mi $2.40, ph $3.30 PB 133754

Air Force Missile Development Center, Holloman Air Force Base, N. Mex.
RULES FOR SYMBOLIC CODING FOR THE UNIVAC SCIENTIFIC COMPUTER (1103A) AND FOR PROGRAMS TO BE COMPILED BY TRANS-USE-1, by R. G. Tantzen, Mar 1958. 21 p. AFMDC TN 58-6. AD 135010.
Order from LC mi $2.70, ph $4.80 PB 133655

Air Force Office of Scientific Research, Washington, D. C.
ESTIMATION OF ERROR FOR NONLINEAR ELLIPTICAL DIFFERENTIAL EQUATIONS, by Alfred Meyer, July 1957. 74 p. AF OSR TR 57-57. AD 136512.
Order from LC mi $4.50, ph $12.30 PB 132160

Air Weather Service, Washington, D. C.
WIND EXTRAPOLATION DEVICE (AWS-WPC-10-4). Nov 1953. 11p. AWSTR 105-114.
Order from LC mi $2.40, ph $3.30 PB 129538

American Inst. of Aerological Research, Pasadena, Calif.
DISCUSSION AND EXTENSION OF GOLDSTEIN'S MATHEMATICAL MODEL REPRESENTING DIFFUSSION WITH HYPERBOLIC PARTIAL DIFFERENTIAL EQUATIONS, by I. Michelson, 11 Jan 1954. 59 p. Tech. Report. 193; Contr. AF 18(600) 476. AD 27865.
Order from LC mi $3.60, ph $9.30 PB 129966

American Inst. of Aerological Research, Pasadena, Calif.
A MATHEMATICAL TREATMENT OF TURBULENT DIFFUSION, by R. W. Davies and R. J. Diamond, 15 Mar 1954. 71 p. AF OSR TN-54-62; Contr. AF18-(600)-476. AD 32814.
Order from LC mi $4.50, ph $12.30 PB 130753

American U., Washington, D. C.
ON LINEAR MODELS AND THE GRAPHS OF MINKOWSKI-LEONTIEF MATRICES, by David Rosenblatt, July 1956. 31 p. Contr. Nonr-1180 (00).
Order from LC mi $3.00, ph $6.30 PB 127539

Applied Mathematics and Statistics Lab., Stanford U., Calif.
AN ECONOMIC APPROACH TO THE CHOICE OF CONTINUOUS SAMPLING PLANS, by G. Gregory, 20 Sep 1956. 103 p. TR-30; Contr. N6onr-25126. AD 109758.
Order from LC mi $5.70, ph $16.80 PB 128675

Applied Mathematics and Statistics Lab., Stanford U., Calif.
ELEMENTARY PROOF OF BERNSTEIN'S THEOREM ON MINIMAL SURFACES, by J. C. C. Nitsche, 29 June 1956. 5 p. TR-54; Contr. Nonr-225(11).
Order from LC mi $1.80, ph $1.80 PB 128594

Applied Mathematics and Statistics Lab., Stanford, U., Calif.
FINITE CONTINUOUS SAMPLING PLANS INVOLVING A STOPPING RULE, by Craig Magwire, Oct 5, 1956. 32 p. TR-31; Contr. N6onr-25126.
Order from LC mi $3.00, ph $6.30 PB 129545

Applied Mathematics and Statistics Lab., Stanford, U., Calif.
INEQUALITIES FOR COEFFICIENTS OF SCHLICHT FUNCTIONS, by Joseph O. Carter, June 5, 1956. 28 p. TR-52; Contr. Nonr 225(11).
Order from LC mi $2.70, ph $4.80 PB 128711

Applied Mathematics and Statistics Lab., Stanford, U., Calif.
INTERIOR VARIATIONS AND SOME EXTERNAL PROBLEMS FOR CERTAIN CLASSES OF UNIVALEN FUNCTIONS, by Vikramaditya Singh, Oct 5, 1956. 31 p. TR-57;Contr. Nonr-225 (11).
Order from LC mi $3.00, ph $6.30 PB 129525

Applied Mathematics and Statistics Lab., Stanford, U., Calif.
A NOTE ON THE WIENER-HOPF TECHNIQUE FOR SOLVING INTEGRAL EQUATIONS, by G. E. Latta, 13 Sep 1956. 18 p. TR-56; Contr. Nonr-225(11).
Order from LC mi $2.40, ph $3.30 PB 128764

Applied Mathematics and Statistics Lab., Stanford, U. Calif.
NUMERICAL CONSTRUCTION OF DETACHED SHOCK WAVES, by P. R. Garabedian, 10 Sep 1956. 26 p. TR-55; Contr. Nonr-225(11).
Order from LC mi $2.70, ph $4.80 PB 128652

Applied Mathematics and Statistics Lab., Stanford U., Calif.
SKIN FRICTION ON A STRIP OF FINITE WIDTH MOVING PARALLEL TO ITS LENGTH, by Harold Kevine, June 1957, 25 p. TR 64; Contr. Nonr-225(11).
Order from LC mi $2.70, ph $4.80 PB 133867

Applied Mathematics and Statistics Lab., Stanford U., Calif.
SOME NOTES ON VARIABLES AND ATTRIBUTES SAMPLING PLANS, by Geoffrey Gregory and George J. Resnikoff, 15 Mar 1955. 45 p. TR 10; Contr. N6onr-25126.
Order from LC mi $3.30, ph $7.80 PB 128789

Applied Mathematics and Statistics Lab., Stanford U., Calif.
STATISTICAL PRODUCTION MODELS AND CONTINUOUS SAMPLING PLANS, Richard Savage, 8 Aug 1956. 40 p. TR 29; Contr. N6onr-25126.
Order from LC mi $3.00, ph $6.30 PB 128406

Ballistic Research Labs., Aberdeen Proving Ground, Md.
TABLES OF THE PROBABILITY DENSITY FUNCTION $Kx^{a}e^{-bxc}$, by Charles E. Clark, Feb 1957. 112 p. BRLR 1007.
Order from LC mi $6.00, ph $18.30 PB 128051

Boston U., Mass.
THE STATISTICAL BASIS OF ONSAGER'S MINIMUM PRINCIPLE, by Armand Siegel, 10 Aug 1955. 18 p. AD-71291.
Order from LC mi $2.40, ph $3.30 PB 129950

Brandeis U., Waltham, Mass.
A FORMAL THEORY OF QUANTUM CLASSIFICATION, by Sidney Golden, 1956 or later, 42 p. Contr. Nonr-1677(01).
Order from LC mi $3.30, ph $7.80 PB 132540

British Columbia U. (Canada)
SOME EXTREME VALUE RESULTS FOR INDEFINITE HERMITION MARTRICES, Marcus M. and Moyls, B.N. Aug 1957. 16 p. AFOSR TN 57-357; Contr. AF 18(603)83. AD 132430.
Order from LC mi $2.40, ph $3.30 PB 130005

Brown U., Providence, R. I.
ON CERTAIN MEROMORPHIC FUNCTIONS OF BOUNDED VALENCE, by Maurice Heins, Nov 1957. 10 p. AF OSR TN 57-502; Contr. AF 18(603)-70. AD 136492.
Order from LC mi $1.80, ph $1.80 PB 132587

Brown U. Div. of Applied Mathematics, Providence, R. I.
ON RIGID, WORK-HARDENING SOLIDS WITH SINGULAR YIELD CONDITIONS, by N. E. Boyce and W. Prager, May 1957. 8 p. TR 23; Contr. Nonr 562(10).
Order from LC mi $1.80, ph $1.80 PB 133587

Brown U. Div. of Applied Mathematics, Providence, R. I.
A SYMMETRY PRINCIPLE FOR NATURALLY TWISTED BARS, by G. A. Cohen, Mar 1957. 14 p. TR 22; Contr. Nonr 562(10).
Order from LC mi $2.40, ph $3.30 PB 130340

Brown U. Div of Applied Mathematics, Providence, R. I.
THERMODYNAMICS OF ELASTIC AND OF SOME VISCO-ELASTIC SOLIDS AND NON-LINEAR THERMOELASTICITY, by Boa-Teh Chu, July 1957. 47 p. TR 1; Contr. Nonr 562(20).
Order from LC mi $3.30, ph $7.80 PB 134439

California Inst. of Tech., Pasadena.
THE CLASSIFICATION OF BIRTH AND DEATH PROCESSES, by S. Karlin and J. McGregor, 1956, 51 p. TR-2; Contr. Nonr-220(16).
Order from LC mi $3.60, ph $9.30 PB 128648

California Inst. of Tech., Pasadena.
DIFFERENTIAL EQUATIONS WITH SINGULAR POINTS, by C. A. Swanson, 1956, 25 p. Contr. Nonr-220(11).
Order from LC mi $2.70, ph $4.80 PB 130629

California Inst. of Tech., Pasadena.
ON STATIONARY MEASURES FOR STOCHASTIC PROCESSES, by J. Lamperti, 1957. 15 p. Technical Report 5. Contr. Nonr-220(16).
Order from LC mi $2.40, ph $3.30 PB 133801

California Inst. of Tech., Pasadena.
THE WIENER-HOPF EQUATION WHOSE KERNEL IS A PROBABILITY DENSITY, by Frank Spitzer, 1956. 24 p. Contr. Nonr-220(16).
Order from LC mi $2.70, ph $4.80 PB 129918

California U., Berkeley.
APPROXIMATE SOLUTIONS OF PARABOLIC AND HYPERBOLIC PARTIAL DIFFERENTIAL EQUATIONS, by Milton Lees, Oct 1957. 77 p. Technical Report 7. Contr. AF 18 (600)-1117.
Order from LC mi $4.50, ph $12.30 PB 132502

California U., Berkeley
THE AVERAGE FIRST-RECURRENCE TIME, by B. Friedman, I. Niven. July 1956. 20 p. TR 3; Contr. Nonr 222(37).
Order from LC mi $2.40, ph $3.30 PB 127534

California U., Berkeley.
LINEAR BOUNDARY PROBLEMS ARISING IN THE DIFFRACTION OF WATER WAVES BY SURFACE OBSTACLES, by Richard C. MacCamy, Aug 1955. 49 p. Contr. Nonr-222(25).
Order from LC mi $3.30, ph $7.80 PB 127116

Technical Report No. 1. Presented at a meeting of the Biometric Society (WNAR) at Pasadena. Technical Report 22. Project NR-042-038.

California U., Berkeley.
LINEAR BOUNDARY PROBLEMS ARISING IN THE DIFFRACTION OF WATER WAVES BY SURFACE OBSTACLES, PART II, by Richard C. MacCamy, Nov 1955. 51 p. Contr. Nonr-222(25).
Order from LC mi $3.60, ph $9.30 PB 127115

Technical Report No. 2.

California U., Berkeley.
ON ITERATED WAVE EQUATIONS, by Leifur Asgeirsson, Nov 1956. 44 p. Contr. NONR-222(37).
Order from LC mi $3.30, ph $7.80 PB 129935

California U., Berkeley.
ON THE ANALYTICITY OF THE SOLUTIONS OF LINEAR ELLIPTIC SYSTEMS OF PARTIAL DIFFERENTIAL EQUATIONS, by L. Nirenberg and C. B. Morrey, Jr., Sept 1956. 44 p. Tech. Report No. 5. Contr. Nonr-222(37).
Order from LC mi $3.30, ph $7.80 PB 129362

California U., Berkeley.
ON THE SOLUTION OF PARABOLIC EQUATIONS BY DIFFERENCE METHODS: I, by M. Lees, Nov 1955. 30 p. Tech. report No. 3. Contr. AF 18 (600)-1117; AF OSR TN 55-439. AD 80361.
Order from LC mi $2.70, ph $4.80 PB 130208

California U., Berkeley.
QUADRATIC FORMS IN HILBERT SPACES AND ASYMPTOTIC PERTURBATION SERIES, by Tosio Kato, Apr 1955 150 p. Technical Report No. 7. Contr. DA-04-200-ORD-171. AD 71898.
Order from LC mi $7.20, ph $22.80 PB 127082

California U., Berkeley.
SUBALGEBRAS OF FUNCTIONS ON A RIEMANN SURFACE, by E. Bishop, Dec 1956. 37 p. TR 7; Contr. Nonr-222(37).
Order from LC mi $3.00, ph $6.30 PB 130687

California U., Berkeley.
THE SUSPENSION OF THE GENERALIZED PONTRJAGIN COHOMOLOGY OPERATIONS, by Emery Thomas, Oct 1957. 27 p. AF OSR TN 57-658; Contr. AF 49(638)-79. AD 133650.
Order from LC mi $2.70, ph $4.80 PB 132598

California U., Los Angeles.
NETWORKS OF WAITING LINES, by James R. Jackson, 13 Feb 1957. 8 p. RR-53 MSRP.
Order from LC mi $1.80, ph $1.80 PB 132546

Carnegie Inst. of Tech., Pittsburgh, Pa.
CONDITIONAL PROBABILITY DISTRIBUTION IN THE WIDE SENSE, by L. E. Dubins, Feb 1957. 10 p. Tech. report 15. AF OSR TN-57-80; Contr. AF 18 (600)-1138. AD 120426.
Order from LC mi $1.80, ph $1.80 PB 128698

Carnegie Inst. of Tech., Pittsburgh, Pa.
DECISION RULES FOR ALLOCATING INVENTORY TO LOTS, AND THE AGGREGATION OF COST FUNCTION, by C. C. Holt, Sept 1956. 25 p. O.N.R. Research Memo. 37. Contr. Nonr-76001.
Order from LC mi $2.70, ph $4.80 PB 128699

Carnegie Inst. of Tech., Pittsburgh, Pa.
A FUNCTIONAL-THEORETIC SOLUTION OF CERTAIN INTERGRAL EQUATIONS I, by A. E. Heins and R. C. MacCamy, May 1957. 19 p. Technical Report 18. AF OSR TN 57-236; Contr. AF18(650)-1138; Contr. DA-36-061-ORD-490. AD 126533.
Order from LC mi $2.40, ph $3.30 PB 130213

Carnegie Inst. of Tech., Pittsburgh, Pa.
NIM-TYPE GAMES, by E. W. Adams and D. C. Benson, Dec 1956. 51 p. AF OSR TN 57-50; Contr. AF 18(600)-1138. AD 115089.
Order from LC mi $3.60, ph $9.30 PB 128591

Carnegie Inst. of Tech., Pittsburgh, Pa.
REPRESENTATION OF FOURIER INTEGRALS AS SUMS. III MATHEMATICAL ANALYSIS OF ELECTRICAL AND MECHANICAL SYSTEMS, by R. J. Duffin, 15 June 1956. 14 p. TR 30; Contr. DA-36-061-ORD-490.
Order from LC mi $2.40, ph $3.30 PB 127594

Carnegie Inst. of Tech., Pittsburgh, Pa.
TRIGGER DECISION RULES FOR ALLOCATING INVENTORY TO BUFFERS AND THE AGGREGATION OF CAST FUNCTIONS, by F. Modigliani and S. S. Rangnekar, Dec 1956. 25 p. Contr. Nonr-76001.
Order from LC mi $2.70, ph $4.80 PB 130700

Chicago U., Ill.
FINAL REPORT ON CONTRACT DA-11-022-ORD-1571., by A. A. Albert, 30 Sept 1956. 12 p.
Order from LC mi $2.40, ph $3.30 PB 130912

Chicago U., Ill.
INVESTIGATION-THE CAUCHY PROBLEM FOR DIFFERENTIAL EQUATIONS, by A. A. Albert, 20 June 1955. 5 p. Contr. DA 11-022-ORD-1246.
Order from LC mi $1.80, ph $1.80 PB 132249

Chicago U., Ill.
SEQUENTIAL ESTIMATION FROM A FINITE POPULATION, by Ingram Olkin and Herbert David 15 Sept 1956. 16 p. Contr. DA-11-022-ORD-1998.
Order from LC mi $2.40, ph $3.30 PB 130911

Colorado U., Boulder.
A NOTE ON THE NUMBER OF LATTICE POINTS IN A REGION BOUNDED BY A CERTAIN RIGHT-ANGLED TRIANGLE, by S. Chawla and W. E. Mientka, Feb 1955. 7 p. AF OSR TN-55-55; Contr. AF18(600)-758. AD 100909.
Order from LC mi $1.80, ph $1.80 PB 130752

Columbia U., New York.
ADDITIONAL TECHNIQUES FOR SAMPLED-DATA FEEDBACK SYSTEMS, by George M. Kranc, 15 Aug 1957. 27 p. CU-35-57-AF-677-EE. Technical Report T-21/B. AFOSR TN-57-592; Contr. AF 18(600)677. AD 136578.
Order from LC mi $2.70, ph $4.80 PB 132347

Columbia U., New York
ESTIMATES WITH PRESCRIBED VARIANCE BASED ON TWO-STAGE SAMPLING, by Wm. C. Healy and A. Birnbaum, 1954 or later. 44 p. Contr. Nonr-266(33).
Order from LC mi $3.30, ph $7.80 PB 130897

Columbia U., New York.
AN INEQUALITY CONCERNING CHARACTERISTIC ROOTS, by T. W. Anderson, 1954 or later. 7 p. CU-12-56; Contr. Nonr 266(33).
Order from LC mi $1.80, ph $1.80 PB 130898

Columbia U., New York.
A METHOD FOR THE EVALUATION OF CERTAIN INFINITE INTEGRALS, B. A. Boley, Jan 1957. 8 p. Contr. Nonr 266(20).
Order from LC mi $1.80, ph $1.80 PB 132625

Columbia U., New York.
ON THE WEAK LAW OF LARGE NUMBERS, by C. Derman, Oct 1956. 3 p. AF OSR TN 58-155; CU 40-56; Contr. AF 18(600)-442. AD 152181.
Order from LC mi $1.80, ph $1.80 PB 133795

Columbia U. School of Engineering, New York
STATISTICAL ESTIMATION OF THE ENDURANCE LIMIT, by E. J. Gumbel, 1 May 1956. 37 p. CU 6-56-ORD-1061-IE. Technical Report T-6A. Contr. DA 30-069-ORD-1061.
Order from LC mi $3.00, ph $16.30 PB 132335

Cornell U., Ithaca, N. Y.
NON-PARAMETRIC MULTIPLE-DECISION PROCEDURES FOR SELECTING THAT ONE OF K POPULATIONS WHICH HAS THE HIGHEST PROBABILITY OF YIELDING THE LARGEST OBSERVATION, by R. E. Beckhofer and M. Sobel, Oct 1957. 2 p. AF OSR TN 57-604; Contr. AF 18(600)-331. AD 136593.
Order from LC mi $1.80, ph $1.80 PB 132200

Cornell U., Ithaca, N. Y.
A NOTE ON DIRECT PRODUCTS, by I. L. Novak Gal, 11 p. Contr. Nonr 401(20).
Order from LC mi $2.40, ph $3.30 PB 129351

Cornell U., Ithaca, N. Y.
ON THE REPRESENTATION OF A COMPLETE BOOLEAN ALGEBRA, by C. C. Chang, N. D. 18 p. Contr. Nonr 401(20).
Order from LC mi $2.40, ph $3.30 PB 128592

Cornell U., Ithaca, N. Y.
PROOF OF AN AXIOM OF LUKASIEWICZ, by C. C. Chang, Circa 1956. 2 p. Contr. Nonr-401(20).
Order from LC mi $1.80, ph $1.80 PB 127537

Cornell U., Ithaca, New York.
TESTS OF FIT IN THE PRESENCE OF NUISANCE LOCATION AND SCALE PARAMETERS, by Lionel Weiss, Mar 1957. 11 p.
Order from LC mi $2.40, ph $3.30 PB 133556

David Taylor Model Basin, Washington, D. C.
THE ERROR ESTIMATION IN AN APPROXIMATE SOLUTION OF AN ORDINARY SECOND ORDER DIFFERENTIAL EQUATION, by Erwin H. Bareiss, Nov 1956. 36 p. DTMB 1031.
Order from LC mi $3.00, ph $6.30 PB 128849

David Taylor Model Basin, Washington, D. C.
TABLES FOR COMPUTING THE EQUILIBRIUM CONFIGURATION OF A FLEXIBLE CABLE IN A UNIFORM STREAM, by Leonard Pode, Mar 1951. 219 p. DTMB 687.
Order from LC mi $9.60, ph $33.30 PB 128853

Diamond Ordnance Fuze Labs., Washington, D. C.
CHEBYSHEV COEFFICIENTS FOR CHEBYSHEV POLYNOMIALS OF ORDERS 12 AND 24 UNDER THE GENERAL LINEAR TRANSFORMATION, by Isabelle Arsham, 20 Jan 1956. 25 p. DOFL TR 326.
Order from LC mi $2.70, ph $4.80 PB 128060

Diamond Ordnance Fuze Labs., Washington, D. C.
NOTE ON CAVITY PERTURBATION THEORY, by E. G. Spencer, and R. C. LeCraw, 22 Aug 1956. 12 p. DOFL TR-371.
Order from LC mi $2.40, ph $3.30 PB 129531

Dugway Proving Ground, Utah.
THEORETICAL DERIVATIONS AND NOMOGRAPHIC METHODS FOR SUTTON'S DIFFUSION EQUATIONS, by H. Greenfield, 10 Sept 1956. 75 p. RR 107.
Order from LC mi $4.50, ph $12.30 PB 128061

Duke U., Durham, N. C.
ON THE ZEROS OF THE DERIVATIVES OF SOME ENTIRE FUNCTIONS, by R. M. McLeod, June 1957. 26 p. AF OSR TN 57-353; Contr. AF 18(600)-1341. AD 132426.
Order from LC mi $2.70, ph $4.80 PB 128610

Ecole Normale Superieure, (France).
EXACT DETERMINATION OF A PHENOMENOLOGICAL SEPARABLE INTERACTION, by M. Gourdin and A. Martin, 1958. 12 p. AF OSR TN 58-214; Contr. AF 61(514)-1060. AD-154115.
Order from LC mi $2.40, ph $3.30 PB 133682

Emmanuel Missionary Coll.
APPLICATION OF THE THEORY OF LINEAR OPERATORS IN HILBERT SPACE TO POTENTIAL THEORY, by E. J. Specht and H. T. Jones June 1957. 50 p. AF OSR TN 57-306; Contr. AF 18(600)-756. AD-132377.
Order from LC mi $3.30, ph $7.80 PB 128420

Geneva U. (Switzerland).
A RESEARCH STUDY IN STATISTICS: STATISTICAL FOUNDATIONS OF THERMODYNAMICAL METHODS IN COMMUNICATION THEORY AND IN ECONOMETRICS, by B. Mandelbrot, 1956-1957. 33 p. AF OSR TR 57-97; Contr. AF 61(514)-1209. AD-148011.
Order from LC mi $3.00, ph $6.30 PB 133749

Hamburg (U., Germany).
FINITE DIFFERENCE METHODS FOR BOUNDARY VALUE PROBLEMS OF PARTIAL ELLIPTIC DIFFERENTIAL EQUATIONS AND CURVED BOUNDARIES, by Dr. Werner Uhlmann, Mar 1957. 132 p. Final Report. AF OSR TR 57-46; Contr. AF 61(514)-881. AD-132431.
Order from LC mi $6.90, ph $21.30 PB 129558

Harvard U., Cambridge, Mass.
FINAL REPORT ON PREPARATION FOR PUBLICATION OF UNFINISHED WORK BY RICHARD VON MISES, by Hilda G. von Mises, Nov 1956. 5 p. Contr. Nonr-07664.
Order from LC mi $1.80, ph $1.80 PB 132010

Harvard U., Cambridge, Mass.
LIPSCHITZ CONDITIONS FOR HARMONIC AND DISCRETE HARMONIC FUNCTIONS, by J. L. Walsh and D. Young. July 1957. 23 p. AFOSR TN 57-404; Contract AF 18(600)-1461; Contract DA 36-034-ord-1486. AD-132482.
Order from LC mi $2.70, ph $4.80 PB 130006

Harvard U., Cambridge, Mass.
NOTE ON DEGREE OF APPROXIMATION TO ANALYTIC FUNCTIONS BY RATIONAL FUNCTIONS WITH PREASSIGNED POLES, by J. L. Walsh. Nov 1956. 7 p. AF OSR TN 56-481; Contr. AF 18 (600)-998. AD-97365.
Order from LC mi $1.80, ph $1.80 PB 127583

Harvard U., Cambridge, Mass.
ON INFRAPOLYNOMIALS WITH PRESCRIBED CONSTANT TERM, by J. L. Walsh, Oct 1956. 28 p. AF OSR TN-56-582; Contr. AF 18(600)-998.
Order from LC mi $2.70, ph $4.80 PB 128694

Harvard U., Cambridge, Mass.
A TABLE OF COEFFICIENTS FOR THE ENERGY LEVELS OF A NEAR SYMMETRIC TOP, by R. H. Schwendeman, Apr 1957. 64 p. Contr. Nonr-1866, T.O.14.
Order from LC mi $3.90, ph $10.80 PB 134445

Hebrew U. (Israel).
EXTENSIONS, RETRACTIONS AND PROJECTIONS, by B. Grunbaum, Jan 1958. 67 p. TN 2. AF OSR TN 58-210; Contr. AF 61(052)-04. AD-154111.
Order from LC mi $3.90, ph $10.80 PB 133683

Hebrew U. (Israel).
SOME REMARKS ON TAUBERIAN THEOREMS, by Amnon Jakimovski, Jan 1958. 29 p. TN 1. AF OSR TN 58-209; Contr. AF 61(052)-04. AD-154110.
Order from LC mi $2.70, ph $4.80 PB 133684

Holloman Air Development Center, Holloman Air Force Base, N. Mex.
AN ITERATIVE METHOD FOR DETERMINING A DIFFERENTIAL EQUATION, by J. A. Ward, June 1957. 6 p. HADC TN 57-7. AD-113037.
Order from LC mi $1.80, ph $1.80 PB 128588

Holloman Air Development Center, Holloman Air Force Base, N. Mex.
ON NON-LINEAR DIFFERENTIAL EQUATIONS OF DAMPED MOTION, by Oswald Wyler, May 1957. 36 p. HADC TN-57-6. AD-113036.
Order from LC mi $3.00, ph $6.30 PB 127582

Illinois Inst. of Tech., Chicago.
THE FINITE STURM-LIOUVILLE TRANSFORM, by A. Cemal Eringen, 1 Aug 1953. 21 p. Technical Report 4; Contr. N 7 onr-32909. AD-17504.
Order from LC mi $2.70, ph $4.80 PB 132321

Illinois U., Urbana.
CONDITIONAL BROWNIAN MOTION AND THE BOUNDARY LIMITS OF HARMONIC FUNCTIONS, by J. L. Doob, 31 Oct 1957. 41 p. AF OSR TN 57-625. AD-110395.
Order from LC mi $3.30, ph $7.80 PB 132590

Illinois U., Urbana.
PROBABILITY THEORY AND THE FIRST BOUNDARY VALUE PROBLEM, by J. L. Doob, 31 Oct 1957. 31 p. AF OSR TN 57-627. AD-110395.
Order from LC mi $3.00, ph $6.30 PB 132591

Ingenlors Vetenskaps Akademien (Sweden).
SOME APPLICATIONS OF THE ISOMETRIC CIRCLE METHOD TO IMPEDANCE TRANSFORMATIONS THROUGH LOSSLESS TWO-PORT NETWORKS, by E. Folke Bolinder, 1957. 25 p. Electrical Engineering Series Vol. 8 No. 6. Acta Polytechnica 232 (1957).
Order from LC mi $2.70, ph $4.80 PB 134212

Institute for Advanced Study, Princeton, N. J.
ALGEBRAIC STRUCTURE AND CONFORMAL MAPPING, by Maurice Heins, May 1957. 18 p. AFOSR TN 57-192; Contr. AF 18(603)-70. AD-126-487.
Order from LC mi $2.40, ph $3.30 PB 129354

Institute for Advanced Study, Princeton, N. J.
THE CONFORMAL MAPPING OF SIMPLY-CONNECTED REIMAN SURFACES, by Maurice Heins, May 1957. 8 p. AF OSR TN 57-191; Contr. AF 18(603)-70. AD-126486.
Order from LC mi $1.80, ph $1.80 PB 128561

Institute for Advanced Study, Princeton, N. J.
EXTENSIONS OF REPRESENTATIONS OF LIE GROUPS AND LIE ALGEBRA I, by G. Hochschild and G. D. Mostow, June 1957. 31 p. AF OSR TN-57-308; Contr. AF 18(600)-1109. AD-132379.
Order from LC mi $3.00, ph $6.30 PB 130214

Institute for Advanced Study, Princeton, N. J.
FIXED POINTS AND TORSION ON KAHLER MANIFOLDS, by Theodore Frankel, Feb 1958. 10 p. AF OSR TN 58-142; Contr. AF 18(600)-1109. AD-152-169.
Order from LC mi $1.80, ph $1.80 PB 133759

Institute for Advanced Study, Princeton, N. J.
FUNCTION RINGS AND RIEMANN SURFACES, by John Wermer, May 1957. 42 p. AF OSR TN 57-207; Contr. AF 18(600)-1109. AD 126504.
Order from LC mi $3.30, ph $7.80 PB 128070

Institute for Advanced Study, Princeton, N. J.
GENERAL MINIMAX THEOREMS, by Maurice Sion, Apr 1957. 11 p. AF OSR TN 57-204; Contr. AF 18(600)-1109. AD-126501.
Order from LC mi $2.40, ph $3.30 PB 128560

Institute for Advanced Study, Princeton, N. J.
A NOTE ON BANACH FUNCTION SPACES, by H. W. Ellis, Dec 1956. 11 p. Contr. DA-36-034-ORD-1622.
Order from LC mi $2.40, ph $3.30 PB 130621

Institute for Advanced Study, Princeton, N. J.
ON A GENERALIZED DIRICHLET PROBLEM FOR PLURISUBHARMONIC FUNCTIONS AND PSEUDA-CONVEX DOMAINS CHARACTERIZATION OF SILOV BOUNDARIES, by H. J. Bremermann, Apr 1957. 50 p. AFOSR-TN-57-178; Contr. AF 18(600)-1109. AD-126473.
Order from LC mi $3.30, ph $7.80 PB 127985

Institute for Advanced Study, Princeton, N. J.
ON THE FUNDAMENTAL GROUP OF A HOMOGENEOUS SPACE, by G. D. Mostow, June 1957. 15 p. AF OSR TN-57-571; Contr. AF 18(600)-1109. AD-136556.
Order from LC mi $2.40, ph $3.30 PB 130194

Institute for Advanced Study, Princeton, N. J.
REPRESENTATIONS AND REPRESENTATIVE FUNCTIONS OF A LIE GROUP, by G. Hochschild and G. D. Mostow, Mar 1957. 83 p. AF OSR TN 57-158; Contr. AF 18(600)-1109. AD-126450.
Order from LC mi $4.80, ph $13.80 PB 127656

Institute for Advanced Study, Princeton, N. J.
RINGS OF ANALYTIC FUNCTION, by John Wermer, July 1957. 25 p. AFOSR TN 57-421; Contr. AF 18(600)-1109. AD-132500.
Order from LC mi $2.70, ph $4.80 PB 130219

Institute for Fluid Dynamics and Applied Mathematics, U. of Maryland, College Park.
THE ANALYTIC CAUCHY PROBLEM FOR THE ITERATED WAVE EQUATION, by E. P. Miles, Jr., Apr 1958. 15 p. BN 133, AF OSR TN 58-340; Contr. AF 49(638)-81. AD-154245.
Order from LC mi $2.40, ph $3.30 PB 134438

Institute for Fluid Dynamics and Applied Mathematics, U. of Maryland, College Park.
NEW BOUNDS FOR SOLUTION OF SECOND-ORDER ELLIPTIC PARTIAL DIFFERENTIAL EQUATIONS, by L. E. Payne and H. F. Weinberger, Sep 1957. 43 p. Tech. Note BN-108 AF OSR TN 57-651; Contr. AF 18(600)-593. AD-136636.
Order from LC mi $3.30, ph $7.80 PB 132297

Institute for Fluid Dynamics and Applied Mathematics, U. of Maryland, College Park.
ON DISCONTINUOUS INITIAL VALUE PROBLEMS FOR CERTAIN NON-LINEAR PARTIAL DIFFERENTIAL EQUATIONS, by Avron Douglis, Feb 1958. 27 p. BN 119 AF OSR TN 58-165; Contr. AF 18(600)-573. AD-152192.
Order from LC mi $2.70, ph $4.80 PB 133673

Institute for Fluid Dynamics and Applied Mathematics, U. of Maryland, College Park.
REFLECTION PRINCIPLES FOR SOLUTIONS OF EQUATIONS IN ELASTICITY, by James H. Bramble, Aug 1957. 62 p. AF OSR TN-57-499; BN-106; Contr. AF 18(600)-573. AD-136489.
Order from LC mi $3.90, ph $10.80 PB 130228

Institute for Fluid Dynamics and Applied Mathematics, U. of Maryland, College Park.
REPRESENTATION FORMULAS FOR SOLUTIONS OF A CLASS OF PARTIAL DIFFERENTIAL EQUATIONS, by L. E. Payne, Feb 1958. 21 p. BN 122 AF OSR TN 58-197; Contr. AF 18(600)-573. AD-152230.
Order from LC mi $2.70, ph $4.80 PB 133672

Institute of Mathematical Sciences, New York U., N. Y.
EXPANSIONS FOR PRODUCTS OF TWO WHITTAKER FUNCTIONS, by F. M. Ragab, July 1957. 15 p. AFOSR TN-57-419, BR-23; Contr. AF 18 (600)-367. AD-132498.
Order from LC mi $2.40, ph $3.30 PB 130218

New York U., N. Y.
THE FLUCTUATION RATE OF THE CHI-PROCESS, by R. A. Silverman, Sep 1957. 14 p. MME 6; Contr. DA 49-170-SC-2253.
Order from LC mi $2.40, ph $3.30 PB 132078

Institute of Mathematical Sciences, New York U., N. Y.
HILL'S EQUATION PART I: GENERAL THEORY, by W. Magnus and A. Shenitzer, June 1957. 44 p. AF OSR TN 57-291, BR-22; Contr. AF 18(600)-367. AD-132362.
Order from LC mi $3.30, ph $7.80 PB 128611

Institute of Mathematical Sciences, New York U., N. Y.
ON SOLUTIONS OF DELTA u EQUALS f(u), by Joseph B. Keller, Mar 1957. 13 p. MME-1; Contr. DA49-170-SC-2253.
Order from LC mi $2.40, ph $3.30 PB 127685

Institute of Mathematical Sciences, New York U., N. Y.
SOME FORMULAS FOR THE PRODUCTS OF E-FUNCTIONS AND WHITTAKER FUNCTIONS, by F. M. Razab, Sep 1957. 11 p. AF OSR TN 57-582; BR-24; Contr. AF 18(600)-367. AD-136570.
Order from LC mi $2.40, ph $3.30 PB 132135

Institute of Mathematical Sciences, New York U., N. Y.
THEORY OF ELECTROMAGNETIC RESEARCH—ON THE UNCERTAINTY RELATION FOR REAL SIGNALS, by I. Kay and R. A. Silverman, May 1957. 17 p. MME-4; Contr. DA49-170-SC-2253.
Order from LC mi $2.40, ph $3.30 PB 128689

Institute of Statistics, U. of North Carolina, Chapel Hill.
DISTINGUISHABILITY OF SETS OF DISTRIBUTIONS (THE CASE OF INDEPENDENT AND IDENTICALLY DISTRIBUTED CHANCE VARIABLES.) by Wassily Hoeffding and J. Wolfowitz, Apr 1957. 41 p. Mimeograph Series No. 166. AFOSR TN-57-154; Contr. AF 18(600)-458. AD-126446.
Order from LC mi $3.30, ph $7.80 PB 128705

Institute of Statistics, U. of North Carolina, Chapel Hill.
ON THE ASYMPTOTIC DISTRIBUTION OF THE LIKELIHOOD RATIO IN SOME PROBLEMS ON MIXED VARIATE PROPULATIONS, by J. Ogawa, M. D. Moustafa and S. N. Roy, Aug 1957. 37 p. Mimeograph series 180. AF OSR TN 57-498; Contr. Nonr-855(06); Contr. AF 18(600)-83. AD-136488.
Order from LC mi $3.00, ph $6.30 PB 129943

Institute of Statistics, North Carolina State Coll., Raleigh.
TESTING OF HYPOTHESES ON A MULTIVARIATE POPULATION, SOME OF THE VARIETIES BEING CONTINUOUS AND THE REST CATEGORICAL, by M. D. Moustafa. July 1957. 26 p. Mimeograph Series No. 179. AF OSR TN 57-440; Contr. AF 18(600)-83. AD-136430.
Order from LC mi $2.70, ph $4.80 PB 129548

Institute of Statistics, North Carolina State Coll., Raleigh.
TESTS OF MULTIPLE INDEPENDENCE AND THE ASSOCIATED CONFIDENCE BOUNDS, by S. N. Roy and R. E. Bargmann, June 1957. 24 p. Institute of Statistics Mimeograph Series 3.3. Contr. AF 18(600)-83; AFOSR TN 57-380. AD-132455.
Order from LC mi $2.70, ph $4.80 PB 129618

Institute of Tech., U. of Minnesota, Minneapolis.
ON THE HOLDER CONTINUITY OF QUASI-CONFORMAL AND ELLIPTIC MAPPINGS, by Robert Finn and James Serrin, 11 June 1957. 25 p. AF OSR TN 57-355; Contr. AF 18(603)-31. AD-132428.
Order from LC mi $2.70, ph $4.80 PB 129922

Instituto Nacional de Tecnica aeronautica Esteban Terradas.
COMBUSTION OF MONOPROPELLANT DROPLETS: PART I A THEORETICAL MODEL OF COMBUSTION OF A DROPLET, by C. S. Tarifa and J. M. Salas Larrazabal. 27 July 1957. 51 p. AFOSR TN 57-671; Contr. AF 61(514)-997. AD-136660.
Order from LC mi $3.60, ph $9.30 PB 133828

Ionosphere Research Lab., Pennsylvania State U., University Park.
A METHOD OF SOLVING THE INTEGRAL EQUATIONS FOR THE VERTICAL PROPAGATION OF TIME-HARMONIC PLANE WAVES IN ANISOTROPIC, VERTICALLY-INHOMOGENEOUS, NON-MAGNETIC MEDIA, by J. M. Tomlinson, Feb 1958. 63 p. AFCRC TN 58-237, IRL SR 100; Contr. AF 19(604)-1304. AD-152470.
Order from LC mi $3.90, ph $10.80 PB 133629

Johns Hopkins U., Baltimore, Md.
EQUIVARIANT EMBEDDINGS IN EUCLIDEAN SPACE, by G. D. Mostow, Mar 1957. 28 p. AFOSR TN 56-28A; Contr. AF 18(600)-1474. AD-89494.
Order from LC mi $2.70, ph $4.80 PB 129360

Johns Hopkins U., Baltimore, Md.
EXTENSIONS OF REPRESENTATIONS OF LIE GROUPS II, by G. D. Mostow, Aug 1957. 29 p. AF OSR TN-57-439; Contr. AF 18(600)-1474. AD-136429.
Order from LC mi $2.70, ph $4.80 PB 132138

Johns Hopkins U., Baltimore, Md.
ON A CONJECTURE OF MONTGOMERY, by G. D. Mostow, June 1957. 7 p. Contr. AF 18(600)-1474. AFOSR TN-57-157. AD-126449.
Order from LC mi $1.80, ph $1.80 PB 132139

Johns Hopkins U., Baltimore, Md.
ON A THEOREM OF FROBENIUS, by Philip Hartman, Feb 1957. 17 p. Technical Report No. 4. AF OSR TN 57-66; Contr. AF 18(603)-41. AD-120408.
Order from LC mi $2.40, ph $3.30 PB 129522

Johns Hopkins U., Baltimore, Md.
ON EXTERIOR DERIVATIVES AND SOLUTIONS OF ORDINARY DIFFERENTIAL EQUATIONS, by Philip Hartman, July 1957. 15 p. AF OSR TN 57-344; Contr. AF-18(600)-41. AD-132417.
Order from LC mi $2.40, ph $3.30 PB 130645

Johns Hopkins U., Baltimore, Md.
ON HOLDER CONTINUITY AND NON-LINEAR ELLIPTIC PARTIAL DIFFERENTIAL EQUATIONS, by Philip Hartman. Apr 1957. 14 p. Technical Report No. 5. AF OSR TN 57-175; Contr. AF 18(603)-41. AD-126470.
Order from LC mi $2.40, ph $3.30 PB 129533

Johns Hopkins U., Baltimore, Md.
ON MAXIMUM PRINCIPLES FOR NONHYPERBOLIC PARTIAL DIFFERENTIAL OPERATORS, by Philip Hartman, and Richard Sacksteder, Aug 1957. 21 p. Technical Report No. 7. AF OSR TN-57-501; Contr. AF 18(603)-41. AD-136491.
Order from LC mi $2.70, ph $4.80 PB 129994

John Hopkins U., Baltimore Md.
ON THE CONONICAL ENSEMBLE FOR THE IDEAL EINSTEIN-BOSE GAS, by J. Ford and T. H. Berlin, Mar 1957. 7 p. Contr. Nonr 248, T.O.10.
Order from LC mi $1.80, ph $1.80 PB 133829

Johns Hopkins U., Baltimore, Md.
TRANSITION FROM QUANTUM TO "CLASSICAL" PARTITION FUNCTIONS, by R. W. Zwanzig, Mar 1957. 10 p. Contr. Nonr 248, Task order 10.
Order from LC mi $1.80, ph $1.80 PB 132649

Kansas U., Lawrence.
ON A PROBLEM OF HERMAN WEYL IN THE THEORY OF SINGULAR STRUM LIOUVILLE EQUATIONS, by N. Aronszajn, Dec 1956. 21 p. Contr. Nonr 58304. Technical Report 17.
Order from LC mi $2.70, ph $4.80 PB 130699

Kansas U., Lawrence.
A UNIQUE CONTINUATION THEOREM FOR SOLUTIONS OF ELLEPTIC PARTIAL DIFFERENTIAL EQUATIONS OR INEQUALITIES OF SECOND ORDER, by N. Aronszajn, July 1956. 16 p. Contr. Nonr-58304.
Order from LC mi $2.40, ph $3.30 PB 127540

Laboratory of Statistical Research, U., of Washington, Seattle.
BOUNDS FOR THE VARIANCE OF THE MANN-WHITNEY STATISTIC, by Z. W. Birnbaum and O. M. Klose, 2 Nov 1956. 22 p. Contr. NONR-477(11).
Order from LC mi $2.70, ph $4.80 PB 130249

Laboratory of Statistical Research, U. of Washington, Seattle.
A COMPARATIVE STUDY OF SEVERAL ONE-SIDED, GOODNESS-OF-FIT TESTS, by D. G. Chapman, 6 Feb 1957. 50 p. Tech. report No. 27. Contr. Nonr-477(11).
Order from LC mi $3.30, ph $7.80 PB 132632

Laboratory of Statistical Research, U. of Washington, Seattle.
ON SOME DISTRIBUTIONS RELATED TO THE STATISTIC D_n^+, by Z. W. Birnbaum and R. Pyke, 17 July 1957. 27 p. Contr. Nonr-477(11).
Order from LC mi $2.70, ph $4.80 PB 127538

Laboratory of Statistical Research, U. of Washington, Seattle.
PROCEDURE FOR COMPUTING AN ESTIMATE OF THE PARAMETER OF A TRUNCATED POISSON DISTRIBUTION, by Robert F. Tate, 21 Jan 1957. 17 p. Technical Report No. 26. Contr. Nonr-477(11).
Order from LC mi $2.40, ph $3.30 PB 132461

Laboratory of Statistical Research, U. of Washington, Seattle.
SEQUENTIAL AND RANDOMIZED DISTRIBUTION-FREE TOLERANCE LIMITS, by S. C. Saunders, 26 Sep 1956. 55 p. Tech. report 23. Contr. Nonr-477(11).
Order from LC mi $3.60, ph $9.30 PB 128715

Leyden State U. (Netherlands).
SOME PROPERTIES OF THE WIGNER DISTRIBUTION FUNCTION IN QUANTUM STATISTICS, by S. R. Groot, Jan 1958, 11 p. AD-154132.
Order from LC mi $2.40, ph $3.30 PB 133678

Louisiana State U., Baton Rouge.
NOTE ON WEAK CUT-POINTS IN CLANS, by R. J. Koch. 15 May 1957. 10 p. AFOSR TN 57-241; Contr. AF 18(603)-89. AD-54304.
Order from LC mi $1.80, ph $1.80 PB 128614

Maryland U., College Park.
APPLICATION OF DISPERSION RELATION AND UNITARITY CONDITION TO NONCOHERENT FORWARD SCATTERING OF LIGHT BY LIGHT, by David Y. Wong, July 1957. 14 p. AFOSR TN 57-351A TR 81; Contr. AF 49(638)-24. AD-132487.
Order from LC mi $1.80, ph $1.80 PB 129562

Maryland U., College Park.
GEOMETRICAL CHARACTERIZATIONS OF BIORTHOGONAL BASIS SYSTEMS IN A BRANCH SPACE, by R. E. Fullerton, July 1957. 18 p. AF OSR TN 57-426; Contr. AF-18(603)-78.
Order from LC mi $2.40, ph $3.30 PB 132310

Maryland U., College Park.
ON A CLASS OF TOPOLOGIES FOR FIELDS, by Ellen Correl, Feb 1958. 11 p. AF OSR TN 58-198; Contr. AF 18(603)-78. AD-152231.
Order from LC mi $2.40, ph $3.30 PB 133671

Ph. D. thesis.

Maryland University, College Park.
ORDERING AND UNIQUENESS OF SOLUTIONS OF BOUNDARY PROBLEMS FOR ELLIPTIC EQUATIONS, by Carlo Pucci, Oct 1957. 15 p. AFOSR TN 57(690); Contr. AF 18(600)-573. AD-136684.
Order from LC mi $2.40, ph $3.30 PB 132601

Maryland U., College Park.
A PASSIBLE PROOF OF DISPERSION RELATIONS, by H. J. Bremermann and R. Oehme, July 1957. 16 p. TR-84; AFOSR TN-57-467; Contr. AF 49(638)-24. AD-136458.
Order from LC mi $2.40, ph $3.30 PB 130221

Maryland U., College Park.
REMARKS ON THE IMPLICATION OF "CAUSALITY CONDITION IN NON-INTERACTION REGION" AND THE UNITARITY OF THE S-MATRIX, by David Y. Wong, July 1957. 7 p. AFOSR TN 57-351-TR 82; Contr. AF 49(638)-24. AD-132424.
Order from LC mi $1.80, ph $1.80 PB 129561

Maryland U., College Park.
UNIQUENESS OF SOLUTIONS TO DISPERSION RELATIONS AND AN INTERATIVE SCHEME, by David Y. Wong, July 1957. 11 p. AFOSR TN 57-468-TR-85; Contr. AF 49(638)-24. AD-136459.
Order from LC mi $2.40, ph $3.30 PB 129566

Massachusetts Inst. of Tech, Cambridge.
AN EXTENSION OF A THEOREM OF MANDELBROJT, by R. A. Kunze, 30 Oct 1957. 10 p. AF OSR TN 57-650; Contr. AF 49(638)-42. AD-136710.
Order from LC mi $1.80, ph $1.80 PB 132595

Massachusetts Inst. of Tech., Cambridge.
FRACTIONAL INTEGRALS ON N-DIMENSIONAL EUCLIDEAN SPACES, by E. M. Stein and G. Weiss, 2 Dec 1957. 21 p. AFOSR TN 57-689; Contr. AF 49(638)-42. AD-136718.
Order from LC mi $2.70, ph $4.80 PB 132600

Massachusetts Inst. of Tech., Cambridge.
NOTES ON GROUP THEORY, by George F. Koster, 1 Mar 1956. 184 p. TR NO 8; Contr. N5 ori-07856.
Order from LC mi $8.40, ph $28.80 PB 128596

Massachusetts Inst. of Tech. Cambridge.
ON THE INTERPOLATION OF ANALYTIC FAMILIES OF OPERATORS ACTING ON H^p SPACES, by E. M. Stein and G. Weiss, 2 Dec 1957. 45 p. AFOSR TN 57-692; Contr. AF 49(638)-42. AD-136719.
Order from LC mi $3.30, ph $7.80 PB 132602

Miami U., Coral Gables, Fla.
RETRACTS FROM NEIGHBORHOOD RETRACTS, by W. L. Strother and L. E. Ward, Jr., Apr 1957. 9 p. AF OSR TN 57-227; Contr. AF 18(600)-1449. AD-126525.
Order from LC mi $1.80, ph $1.80 PB 129352

Miami U., Coral Gables, Fla.
A SPACE OF SUBSETS HAVING THE FIXED POINT PROPERTY, by W. L. Strother and C. E. Capel, Aug 1955. 7 p. Miami U. report No. 3. AF OSR TN-55-268; Contr. AF 18(600)-1449. AD-110085.
Order from LC mi $1.80, ph $1.80 PB 130207

Michigan State U., East Lansing.
THE MATHEMATICAL THEORY OF ANTENNA RADIATION, by Charles P. Wells, 30 June 1957. 31 p. Final Report. Contr. DA-20-018-ORD-13354.
Order from LC mi $3.00, ph $6.30 PB 133884

Michigan U., Ann Arbor ASYMPTOTIC SOLUTION OF ORDINARY DIFFERENTIAL EQUATIONS, by Nicholas D. Kazarinoff, Sep 1957. 9 p. AF OSR TN 57-494; Contr. AF 18(600)-1481. AD-136484.
Order from LC mi $1.80, ph $1.80 PB 129995

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
SOLUTION OF CERTAIN NONLINEAR DIFFERENTIAL EQUATIONS BY SERIES OF EXPONENTIAL FUNCTIONS, by Wolfgang Wasow, 27 Aug 1956. 24 p. R-516-56, PIB-446; Contr. Nonr-839(05).
Order from LC mi $2.70, ph $4.80 PB 128401

Midwest Research Inst. Kansas City, Mo.
THE PADE TABLE AND THE 2-METHOD, by Yudell L. Luke, Aug 1957. 45 p. AF OSR TN 57-570; Contr. AF 49(638)-66. AD-136555.
Order from LC mi $3.30, ph $7.80 PB 130733

Minnesota U., Minneapolis.
AN OPERATOR IDENTITY, by Glen E. Baxter, 1 Aug 1957. 25 p. AF OSR TN 57-424; Contr. AF-18(600)-30. AD-136413.
Order from LC mi $2.70, ph $4.80 PB 132309

Missouri U., Columbia.
MAXIMIZING THE SUM OF CONCAVE FUNCTIONS, by M. C. Ayer, Aug 1957. 27 p. AF OSR TN 57-549; Contr. AF 18(600)-1108. AD-136533.
Order from LC mi $2.70, ph $4.80 PB 130239

Missouri U., Columbia.
UNIFORM CONSISTENCY OF ESTIMATORS OF LINEARLY ORDERED PARAMETERS, by H. D. Brunk Aug 1957.. 14 p. Technical Report No. 9. AF OSR TN-57-516; Contr. AF 18(600)-1108. AD 136501.
Order from LC mi $2.40, ph $3.30 PB 130236

Naval Ordnance Lab., Corona, Calif.
FACTORS AFFECTING MEASUREMENT RELIABILITY, by J. L. Hayes, 24 Oct 1955. 11 p. NOLC TM 63-106.
Order from LC mi $2.40, ph $3.30 PB 130441

Naval Ordnance Lab., White Oak, Md.
NUMERICAL INTEGRATION BY A METHOD OF INTERLOCKED PARABOLAS, by Thomas S. Walton, June 1957. 11 p. NAVORD 3892.
Order from LC mi $2.40, ph $3.30 PB 133876

Naval Ordnance Lab., White Oak, Md.
THE NUMERICAL SOLUTION OF THE HEAT CONDUCTION EQUATIONS OCCURRING IN THE THEORY OF THERMAL EXPLOSIONS, by J. W. Enig and D. Shanks, 7 Nov. 1956. 14 p. NAVORD 4377.
Order from LC mi $2.40, ph $3.30 PB 130434

Naval Ordnance Lab., White Oak, Md.
POLYNOMIAL APPROXIMATION, by E. K. Blum, 17 Sep 1956. 35 p. Aeroballistic Research Report No. 240; NAVORD 3740.
Order from LC mi $3.00, ph $6.30 PB 128693

Naval Ordnance Test Station, China Lake, Calif.
BIAS ERRORS IN THE REDUCTION OF DATA FROM K-24 CAMERAS, by Frank Reel, Aug 1954. 35 p. NOTS TM 1784.
Order from LC mi $3.00, ph $6.30 PB 129907

Naval Ordnance Test Station, China Lake, Calif.
DISTRIBUTION OF CORRELATED MEANS, by D. S. Villars, 16 Mar 1956. 27 p. NOTS 1407, NAVORD 5056.
Order from LC mi $2.70, ph $4.80 PB 130792

Naval Ordnance Test Station, China Lake, Calif.
AN INTRODUCTION TO LEAST SQUARES THEORY AND ITS APPLICATION TO DATA REDUCTION PROBLEMS, by F. C. Reed, Mar 1956. 67 p. NOTS 1278; NAVORD 4956.
Order from LC mi $3.90, ph $10.80 PB 130435

New York U., N. Y.
HYDROMAGNETIC SHOCKS, by W. B. Ericson and Jack Bazer, Jan 1958. 96 p. AF CRC TN 58-241; Contr. AF 19(604)-2138. AD-152474.
Order from LC mi $5.40, ph $15.30 PB 133847

New York U., N. Y.
THE STRUCTURE OF ISOTROPIC TURBULENCE AT VERY HIGH REYNOLDS NUMBERS, by R. N. Kraichnan, N. D. 61 p. AF CRC TN 58-239; Contr. AF 19(604)-2138. AD-152473.
Order from LC mi $3.90, ph $10.80 PB 133845

North American Instruments Inc., Altadena, Calif.
A MATHEMATICAL THEORY OF WIND COMPENSATION, by D. M. Adelman. N. D. 11 p. Contr. DA-36-039-SC-52599.
Order from LC mi $2.40, ph $3.30 PB 133933

North Carolina State Coll., Raleigh.
DISCORDANT PERMUTATIONS AND THE MENAGE PROBLEM. PART II GENERALIZED ROOK POLYNOMIALS, by Jack Levine, Sep 1956. 48 p. Contr. Nonr 870(00).
Order from LC mi $3.30, ph $7.80 PB 128702

North Carolina U., Chapel Hill.
NEW DESIGN FOR THE EXPLORATION OF RESPONSE SURFACES, by Richard L. Carter, May 1957. 142 p. AF OSR-TN-57-381; Contr. AF 18(600)-83. AD-132456.
Order from LC mi $7.20, ph $22.80 PB 129473

North Carolina U., Chapel Hill.
A NEW PROOF OF THEOREMS OF PERRON AND FROBENIUS ON NONNEGATIVE MATRICES, by Alfred T. Brauer, May 1957. 18 p. UNC Technical Report No. 4. AF OSR TN 56-576; Contr. AF 18 (603)-38. AD-110398.
Order from LC mi $2.40, ph $3.30 PB 128229

Northwestern U., Evanston, Ill.
ASYMPTOTIC DISTRIBUTIONS ASSOCIATED WITH THE LAPLACIAN FOR FORMS, by Matthew P. Gaffney, Feb 1958. 13 p. AFOSR TN-58-144; Contr. AF 18(600)-157. AD-152171.
Order from LC mi $2.40, ph $3.30 PB 133653

Northwestern U., Evanston, Ill.
A CLASS OF TWO-POINT BOUNDARY PROBLEMS, by William T. Reid, Sep 1957. 28 p. Technical Report No. 2. AF OSR TN 57-550; Contr. AF-18(603)-86. AD-136534.
Order from LC mi $2.70, ph $4.80 PB 129990

Northwestern U., Evanston, Ill.
THE CONSERVATION PROPERTY OF THE HEAT EQUATION ON RIEMANNIAN MANIFOLDS, by Matthew P. Gaffney, Feb 1958. 13 p. AFOSR TN 58-145; Contr. AF 18(600)-1571. AD-152172.
Order from LC mi $2.40, ph $3.30 PB 133659

Northwestern U., Evanston, Ill.
PRINCIPAL SOLUTIONS OF NON-OSCILLATORY SELF-ADJOINT LINEAR DIFFERENTIAL SYSTEMS, by William T. Reid, Aug 1957. 29 p. TR 1. Contr. AF 18(603)-86. AFOSR TN-57-465. AD-136456.
Order from LC mi $2.70, ph $4.80 PB 129937

Numerical Analysis Research, U. of Calif., Los Angeles.
LOCATION OF ZEROS OF INFRAPOLYNOMIALS, by T. S. Motzkin and J. L. Walsh, Dec 1956. 31 p. AF OSR TN 57-265; Contr. AF 18(600)-998. AD-126564.
Order from LC mi $3.00, ph $6.30 PB 128618

Numerical Analysis Research, U. of Calif., Los Angeles.
POLYNOMIALS OF BEST APPROXIMATION ON A REAL FINITE POINT SET. I, by T. S. Motzkin and J. L. Walsh, July 1957. 24 p. AFOSR TN 57 406; Contr. AF 18(600)-1461. AD-132484.
Order from LC mi $2.70, ph $4.80 PB 129602

Numerical Analysis Research, U. of Calif., Los Angeles.
TCHEBYSHEV POLYNOMIALS AND EXTREMUM PROBLEMS: FOUR LECTURES, by T. S. Motzkin, 4 Oct 1955. 17 p.
Order from LC mi $2.40, ph $3.30 PB 128582

Ordnance Materials Research Lab., Watertown, Mass.
SPECIFIC HEAT AND MEAN SQUARE AMPLITUDE OF ATOMIC VIBRATIONS OF THE DIATOMIC ONE-DIMENSIONAL LATTICE AND THE TWO-DEBYE MODEL OF BINARY COMPOUNDS, by A. Paskin, Oct 1957. 27 p. MRL 34.
Order from LC mi $2.70, ph $4.80 PB 132092

Parke Mathematical Labs., Inc. Concord, Mass.
MATHEMATICAL DESCRIPTION AND EVALUATION OF FUNNEL SYSTEMS WITH AN APPLICATION TO THE NEW YORK TERMINAL AREA, by Lorenzo Calabi, July 1957. 102 p. AF CRC TN 57-576; Contr. AF 19(604)-1399. AD-117300.
Order from LC mi $5.70, ph $16.80 PB 132195

Parke Mathematical Labs., Inc. Concord, Mass.
OCCUPACY THEORY WITH APPLICATION TO MULTICHANNEL COMMUNICATION SYSTEMS. PART I: THEORY, by John A. Riley. June 1957. 57 p. AF CRC TN 57-562; Contr. AF 19(604)-1396. AD-117283.
Order from LC mi $3.60, ph $9.30 PB 129524

Parsons, Ralph M., Co., Pasadena, Calif.
CENTRALIZED DATA PROCESSING FACILITY, by A. J. Mallinckrodt, 1 Feb 1954. 171 p. Summary technical Report 962-F-1. Contr. AF 04(611)-417. AD-34184.
Order from LC mi $8.10, ph $27.30 PB 129956

Pennsylvania U., Philadelphia.
CONSTRUCTION OF THE ADIABATIC NUCLEAR POTENTIAL I. FORMALISM, by Abraham Klein and Bruce H. McCormick, July 1956. 39 p. Technical Note 3. Contr. AF 18(603)-60.
Order from LC mi $3.00, ph $6.30 PB 128342

Pennsylvania U., Philadelphia.
MEAN-L-STABLE SYSTEMS, by Joseph Auslander, June 1957. 53 p. AF OSR TN 57-460; Contr. AF 18(600)-1116. AD-136451.
Order from LC mi $3.60, ph $9.30 PB 130001

Pennsylvania U., Philadelphia.
ON THE SHEETED STRUCTURE OF COMPACT LOCALLY AFFINE SPACES, by Louis Auslander, 1957. 11 p. AF OSR TN 57-585; Contr. AF 49(638)-12. AD-136573.
Order from LC mi $2.40, ph $3.30 PB 132302

Princeton U., N. J.
COHOMOLOGY OPERATIONS AND OBSTRUCTIONS TO EXTENDING CONTINUOUS FUNCTIONS, by N. E. Steenrod, Aug 1957. 61 p. AF OSR TN 57-548; Contr. AF 18(600)-1494. AD-136532.
Order from LC mi $3.90, ph $10.80 PB 129991

Colloquium Lectures.

Princeton U., N. J.
COMPLEX NEUMANN PROBLEMS ON KAHLER MANIFOLDS, by J. J. Kohn and D. C. Spencer, N. D. 116 p. Contr. DA 36-034-ORD-2164. AD-148114.
Order from LC mi $6.00, ph $18.30 PB 133863

Princeton U., N. J.
DUALITY AND FOURIER ANALYSIS ON COMPACT GROUPS, by S. Helgason, N. D. 13 p. Contr. ODA 36-034-ord-2001.
Order from LC mi $2.40, ph $3.30 PB 133886

Princeton U., N. J.
MEAN VALUE THEOREMS ON HOMOGENEOUS SPACES, by S. Helgason, N. D. 8 p. Contr. DA-36-034-ORD-2001.
Order from LC mi $1.80, ph $1.80 PB 133885

Princeton U., N. J.
ON POTENTIAL THEORIES, by G. A. Hunt, N. D. 17 p. Contr. ODA-36-034-ord-2001.
Order from LC mi $2.40, ph $3.30 PB 133887

Princeton U., N. J.
A SPECIAL TYPE OF RIEMANNIAN MANIFOLD, by D. C. Spencer, 7 May 1952. 19 p. Progress Report 2-Boundary Value Problems for Real and Complex Manifolds; Contr. DA-36-034-ORD-639.
Order from LC mi $2.40, ph $3.30 PB 128490

Princeton U., N. J.
STATISTICAL RESEARCH AT PRINCETON UNIVERSITY SUPPORTED BY THE OFFICE OF NAVAL RESEARCH, 1946-1956, by S. S. Wilks, Project leader, 1 Dec 1956. 121 p. Contr. N 6 onr-270—T.O. I.
Order from LC mi $6.30, ph $19.80 PB 132318

Purdue Research Foundation, Lafayette, Ind.
COMMUTATORS AND ABSOLUTELY CONTINUOUS OPERATORS, by C. R. Putnam, July 1957. 17 p. TN 1 AF OSR TN 56-457; Contr. AF 18(603)-139. AD-97703.
Order from LC mi $2.40, ph $3.30 PB 128627

Purdue Research Foundation, Lafayette, Ind.
ON SEMI-NORMAL OPERATORS, by C. R. Putnam, July 1957. 5 p. AF OSR TN-57-89; Contr. AF 18 (603)-039. AD-120437.
Order from LC mi $1.80, ph $1.80 PB 128704

Purdue Research Foundation, Lafayette, Ind.
ON SQUARE ROOTS OF NORMAL OPERATORS, by C. R. Putnam, July 1957. 3 p. AF OSR TN-56-479; Contr. AF 18(603)-139. AD-97363.
Order from LC mi $1.80, ph $1.80 PB 128703

Purdue Research Foundation, Lafayette, Ind.
ON THE SPECTRA OF CERTAIN LAURENT MATRICES, by G. L. Krabbe, Nov 1956. 6 p. TN 1; AFOSR TN 56-586; Contr. AF 18(603)-44. AD-115010.
Order from LC mi $1.80, ph $1.80 PB 129353

Purdue Research Foundation, Lafayette, Ind.
SPECTRAL INVARIANCE OF CONVOLUTION OPERATORS ON LP(-oo, oo), by G. L. Kraffe, 9 May 1957. 18 p. AF OSR TN 57-238; Contr. AF 18(603)-44. AD-126535.
Order from LC mi $2.40, ph $3.30 PB 128533

Purdue Research Foundation, Lafayette, Ind.
TWO DIMENSIONAL PROBLEMS OF THE CALCULUS OF VARIATIONS. FUNCTIONS WITH GENERALIZED GRADIENT AND GENERALIZED SURFACES, by Wendell H. Fleming, Mar 1957. 16 p. Technical note No. 1. AFOSR TN 57-134; Contr. AF 49(638)-18. AD-120490.
Order from LC mi $2.40, ph $3.30 PB 129359

Rand Corp., Santa Monica, Calif.
SOME OBSERVATIONS ON THE MAXIMIZATION OF STIELTJES INTEGRALS, by J. T. Robacker. 30 Dec 1955. 14 p. RM-1739.
Order from LC mi $2.40, ph $3.30 PB 129539

Redstone Arsenal, Huntsville, Ala.
AN N-POINT PROBLEM FOR A CLASS OF DIFFERENTIAL EQUATIONS CONTAINING A SMALL PARAMETER, by J. C. Wilson, 15 June 1957. 7 p. OML 2R17F.
Order from LC mi $1.80, ph $1.80 PB 127541

Redstone Arsenal, Huntsville, Ala.
PREDICTING RELIABILITY, by Robert Lusser, Oct 1957. 9 p.
Order from LC mi $1.80, ph $1.80 PB 132548

Rutgers U., New Brunswick, N. J.
THE DIVERGENCE THEOREM WITHOUT DIFFERENTIABILITY CONDITIONS, by Victor L. Shapiro. 7 May 1957. 4 p. AF OSR TN 57-232; Contr. AF 18(600)-1595. AD-126529.
Order from LC mi $1.80, ph $1.80 PB 129534

Rutgers U., New Brunswick, N. J.
UNIQUENESS OF MULTIPLE TRIGNOMETRIC SERIES, by Victor L. Shapiro. 31 Jan 1957. 23 p. AF OSR TN 57-51; Contr. AF 18(600)-1595. AD-115090.
Order from LC mi $2.70, ph $4.80 PB 129542

School of Aviation Medicine, Randolph Air Force Base, Tex.
CALCULATION OF PROBABILITY TABLES FOR NEW MULTIVARIATE TESTS, by David F. Votaw, Jr. Sep 1949. 15 p. Proj. No. 21-02-033; Report No. 1.
Order from LC mi $2.40, ph $3.30 PB 130988

School of Aviation Medicine, Randolph Air Force Base, Tex.
MIXED MODEL ANALYSIS OF VARIANCE, ASSUMING EQUAL VARIANCES AND EQUAL CONVARIANCES, by M. B. Danford and Harry M. Hughes, Aug 1957. 15 p. AF SAM 57-144.
Order from LC mi $2.40, ph $3.30 PB 132272

School of Aviation Medicine, Randolph Air Force Base, Tex.
PROBABILITY AND STATISTICS IN ITEM ANALYSIS AND CLASSIFICATION PROBLEMS: AN EXPANSION PRINCIPLE FOR DISTRIBUTION FUNCTIONS WITH APPLICATIONS TO STUDENT'S STATISTIC AND THE ONE-DIMENSIONAL CLASSIFICATION STATISTIC, by Gustav Elfving, Ph.D., Mar 1957. 20 p. AF SAM 57-52.
Order from LC mi $2.40, ph $3.30 PB 128447

School of Aviation Medicine, Randolph Air Force Base, Tex.
PROBABILITY AND STATISTICS IN ITEM ANALYSIS AND CLASSIFICATION PROBLEMS: FURTHER CONTRIBUTIONS TO THE THEORY OF ITEM SELECTION, by Gustav Elfving, June 1957. 44 p. AF SAM 57-97.
Order from LC mi $3.30, ph $7.80 PB 129609

School of Aviation Medicine, Randolph Air Force Base, Tex.
PROBABILITY AND STATISTICS IN ITEM ANALYSIS AND CLASSIFICATION PROBLEMS: STATISTICAL DECISION THEORY APPROACH TO ITEM SELECTION FOR DICHOTOMOUS TEST AND CRITERION VARIABLES, by Howard Raiffa, Ph.D., Jan 1957. 79 p. AF SAM R 56-139.
Order from LC mi $4.50, ph $12.30 PB 128481

School of Aviation Medicine, Randolph Air Force Base, Tex.
STATISTICAL STUDY OF CARE OF FLYER REPORTS, by S. J. Cutler and J. A. Rafferty, Feb 1948. 26 p. AF SAM Proj.-21-02-014; Report No. 3.
Order from LC mi $2.70, ph $4.80 PB 130983

Medical Experiences of the U. S. 8th Air Force Jan. 1943-June 1945.

South Carolina U., Columbia.
LINEAR DIFFERENCE AND DIFFERENTIAL EQUATIONS SATISFYING CONDITIONS AT MORE THAN ONE POINT, by Tomlinson Fort, June 1957. 9 p. AF OSR TN 57-307; Contr. AF 18(603)-23. AD-132378.
Order from LC mi $1.80, ph $1.80 PB 128230

South Carolina U., Columbia.
A NEW METHOD FOR THE SOLUTION OF EQUATIONS AND ITS APPLICATIONS, by Stephen Kulik, Mar 1957. 13 p. Rept. 3. 1 Oct 1956-31 Mar 1957. Contr. DA 36-034-ord 2200.
Order from LC mi $2.40, ph $3.30 PB 133900

South Carolina U., Columbia.
A PROBLEM OF RICHARD BELLMAN, by T. Fort, Aug 1957. 5 p. AF OSR TN 57-542; Contr. AF 18 (603-23). AD-136530.
Order from LC mi $1.80, ph $1.80 PB 130238

Solution to a problem proposed in the "Bulletin of the American Mathematical Society," Jan. 1957.

South Carolina U., Columbia.
SYSTEMS OF LINEAR DIFFERENCE EQUATIONS AND SYSTEMS OF LINEAR DIFFERENTIAL EQUATIONS WHICH SATISFY CONDITIONS AT TWO POINTS, by Tomlinson Fort, Apr 1957. 8 p. AFOSR TN-57-174; Contr. AF 18(603)-23. AD-126469.
Order from LC mi $1.80, ph $1.80 PB 128706

Stanford Electronics Lab., Stanford U., Calif.
LITERATURE GUIDE ON FAILURE CONTROL AND RELIABILITY, by W. F. Luebbert, Dec 1956. 453 p. Technical Report B. Contr. Nonr. 225 (24).
Order from LC mi $11.10, ph $69.60 PB 133841

Stanford U., Calif.
CONVERGENCE OF THE S-MATRIX, by D. R. Yennie and S. Gartenhaus, Feb 1958. 31 p. AFOSR TN 58-137; Contr. AF 18(600)-545. AD-152164.
Order from LC mi $3.00, ph $6.30 PB 133790

Stanford U., Calif.
DETERMINATAL APPROACH TO MESON—NUCLEON SCATTERING, by M. Baker, Feb 1958. 58 p. AFOSR TN 58-136; Contr. AF 18(600)-545. AD-152163.
Order from LC mi $3.60, ph $9.30 PB 133791

Stanford U., Calif.
MANY SERVER QUEUEING PROCESSES WITH POISSON INPUT AND EXPONENTIAL SERVICE TIMES, by S. Karlin and J. McGregor, 15 May 1957. 53 p. TR-1; Contr. Nonr-225(28).
Order from LC mi $3.60, ph $9.30 PB 133583

Stanford U., Calif.
POLYA-TYPE DISTRIBUTIONS III. ADMISSABILITY OF MULTI-ACTION PROBLEMS, by S. Karlin 25 Feb 1957. 43 p. Tech. report No. 9; Contr. Nonr-225(21).
Order from LC mi $3.30, ph $7.80 PB 132629

Stanford U., Calif.
SOME CENTRAL LIMIT THEOREMS FOR INTERCHANGEABLE RANDOM VARIABLES, by H. Chernoff and H. Teicher, 21 Feb 1957. 31 p. Tech. report No. 8. Contr. Nonr-225(21).
Order from LC mi $3.00, ph $6.30 PB 132630

Stanford U., Calif.
SOME PROBLEMS IN MULTIVARIATE ANALYSIS—PART I, by Charles Stein. 25 Oct 1956. 36 p. TR 6; Contr. Nonr 225(21).
Order from LC mi $3.00, ph $6.30 PB 129976

Statistical Lab., Purdue U., Lafayette, Ind.
ON THE CONVERGENCE OF PROJECTED DISTRIBUTIONS, by H. Teicher, Nov 1956. 16 p. Contr. N7ONR-394, T.O.4.
Order from LC mi $2.40, ph $3.30 PB 130246

Stevens Inst. of Tech., Hoboken, N. J.
ANALYSIS OF CLASSICAL STATISTICAL MECHANICS BY MEANS OF COLLECTIVE COORDINATES, by J. K. Percus and G. J. Yevick, N.D. 37 p.
Order from LC mi $3.00, ph $6.30 PB 133756

Stevens Inst. of Tech., Hoboken, N. J.
EINSTEIN BOSE SYSTEMS, by J. K. Percus and G. J. Yevick, N.D. 25 p.
Order from LC mi $2.70, ph $4.80 PB 133757

Syracuse U., N. Y.
ANALYTIC INVESTIGATIONS OF MARKOV CHAINS, by W. B. Jurkat, Sep 1957. 13 p. AF OSR TN 57-643; Contr. AF 18(600)-760. AD-136629.
Order from LC mi $2.40, ph $3.30 PB 132592

Syracuse U., N. Y.
COVARIANT QUANTUM STATISTICS OF FIELDS, by A. O. Barut, Nov 1957. 18 p. AF OSR TN 57-678; Contr. AF 18(600)-459. AD-136668.
Order from LC mi $2.40, ph $3.30 PB 132599

Syracuse U., N. Y.
DISTRIBUTION FUNCTIONS FOR NON-COMMUTING OPERATORS, by A. O. Barut, July 1957. 19 p. Technical Note P-10; AFOSR TN 57-435; Contr. AF 19(600)-459. AD-136425.
Order from LC mi $2.40, ph $3.30 PB 129563

Syracuse U., N. Y.
DOEBLIN'S THEORY OF MARKOV PROCESSES I, by K. L. Chung, Sep 1957. 13 p. AF OSR TN 57-648; Contr. AF 18(600)-760. AD-136634.
Order from LC mi $2.40, ph $3.30 PB 132594

Syracuse U., N. Y.
THE LIMIT DISTRIBUTIONS FOR SUMS OF MARKOV CHAIN VARIABLES WITHOUT SECOND MOMENTS, by L. J. Cote, Sep 1957. 10 p. AF OSR TN 57-647; Contr. AF 18(600)-760. AD-136633.
Order from LC mi $1.80, ph $1.80 PB 134547

Syracuse U., N. Y.
ON MEAN FIRST PASSAGE TIMES, by S. D. Chatterji, Sep 1957. 10 p. AF OSR TN 57-649; Contr. AF 18(600)-760. AD-136635.
Order from LC mi $1.80, ph $1.80 PB 132596

Syracuse U., N. Y.
REMARKS ON AN ERGODIC THEOREM OF CHUNG, by L. J. Cote, Sep 1957. 7 p. AF OSR TN 57-646; Contr. AF 18(600)-760. AD-136632.
Order from LC mi $1.80, ph $1.80 PB 132593

Texas A and M Research Foundation, College Station.
A FURTHER ANALYSIS OF THE LONGITUDINAL RESPONSE OF MOORED VESSELS TO SEA OSCILLATIONS, by Abramson, H. Norman and Wilson, Brasil W., Apr 1955. 26 p. Ref. 55-16T; Contr. N7-onr-48702.
Order from LC mi $2.70, ph $4.80 PB 127077

California U., Berkeley.
DIVERGENCE EXPRESSIONS AND WAVE FUNCTIONS IN THE THEORY OF PARTIAL DIFFERENTIAL EQUATIONS, by Leifur Asgeirsson, May 1956. 14 p. TR No. 5. Contr. Nonr-222(25).
Order from LC mi $2.40, ph $3.30 PB 128593

University of Southern Calif., Los Angeles.
ALGEBRAIC ANALYSIS OF MANY-VALUED LOGICS, by C. C. Chang, N.D. 43 p. Contr. Nonr 401(20).
Order from LC mi $3.30, ph $7.80 PB 130773

Utah U., Salt Lake City.
PENETRATION OF A TIME-DEPENDENT MAGNETIC FIELD THROUGH A THIN CONDUCTING LAYER OF SPHERICAL SHAPE, by J. Duane Dudley, 1 Oct 1956. 32 p. Technical Report No. 22. Contr. Nonr 1288(00).
Order from LC mi $3.00, ph $6.30 PB 130656

Virginia Polytechnic Inst., Blacksburg.
LECTURES ON THE POWER OF ANALYSIS OF STATIONARY PROCESSES, by J. E. Freund, July 1956. 78 p. Contr. DA-36-034-ORD-1527RD.
Order from LC mi $4.50, ph $12.30 PB 130426

Virginia U., Charlottesville.
ON THE HILBERT MATRIX, II, by Marvin Rosenblum. July 1957. 6 p. Technical Note No. 1. AF OSR TN 57-394; Contr. AF 49(638)-72. AD-132469.
Order from LC mi $1.80, ph $1.80 PB 129537

Virginia U., Charlottesville.
QUASI-OPEN MAPPINGS, by G. T. Whyburn. July 1957. 12 p. Technical Note No. 1. AF OSR TN 57-395; Contr. AF 49(638)-71. AD-132470.
Order from LC mi $2.40, ph $3.30 PB 129547

Virginia U., Charlottesville.
A THEOREM ON QUASI-COMPACT MAPPING, by P. McDougle, Aug 1957. 7 p. Technical Note No. 2; AF OSR TN-57-514; Contr. AF 49(638)-72.
Order from LC mi $1.80, ph $1.80 PB 130235

Virginia U., Charlottesville.
TOPOLOGICAL CHARACTERIZATION OF THE SIERPINSKI CURVE, G. T. Whyburn, Aug 1957. 9 p. Contract AFOSR TN-57-469. AD-136460.
Order from LC mi $1.80, ph $1.80 PB 130222

Virginia U., Charlottesville.
UNIFORM CONVERGENCE FOR MONOTONE MAPPINGS, by Gordon T. Whyburn, Sep 1957. 13 p. AF OSR TN 57-589; Contr. AF 49(638)-71.
Order from LC mi $2.40, ph $3.30 PB 132159

Washington U., St. Louis, Mo.
WEIGHTED GUADRATIC NORMS AND ULTRASPHERICAL POLYNOMIALS, by R. Askey and I. I. Hirschman. N. D. 25 p. AFOSR TN-57-349; Contr. AF 18(600)-468. AD-132422.
Order from LC mi $2.70, ph $4.80 PB 130216

Washington U., St. Louis, Mo.
WEIGHTED QUADRATIC NORMS AND ULTRASPHERICAL POLYNOMIALS, II, by I. I. Hirschman, N. D. 25 p. AFOSR TN-57-350; Contr. AF 18(600)-568. AD-132423.
Order from LC mi $2.70, ph $4.80 PB 130217

Date is 1956 or later.

Watertown Arsenal Lab., Mass.
A COMPUTATIONAL TECHNIQUE FOR THE SOLUTION OF THE CLASS OF PSEUDO-STEADY PROBLEMS IN PLASTICITY AND ITS APPLICATION TO LEE'S SOLUTION FOR A V-NOTCHED BAR UNDER TENSION, by B. M. Thompson, 27 Aug 1951. 41 p. WAL 880/32.
Order from LC mi $3.30, ph $7.80 PB 127558

Watertown Arsenal Lab., Mass.
A GEOMETRICAL STRESS ANALYSIS AND DISCUSSION OF FLAT SPIRAL SPRINGS WITH CONSTANT INITIAL PITCH, by J. H. Flanagan, 1 Apr 1954. 47 p. WAL 893/165.
Order from LC mi $3.30, ph $7.80 PB 127706

Watertown Arsenal Lab., Mass.
PRACTICAL SOLUTION OF SIMULTANEOUS LINEAR EQUATIONS, by O. L. Bowie, 13 Feb 1950. 20 p. WAL 900/164.
Order from LC mi $2.40, ph $3.30 PB 128096

Watertown Arsenal Lab., Mass.
REVIEW OF THE TECHNIQUES OF MATCHING DATA BY THE METHOD OF LEAST SQUARES FOR THE NON-LINEAR PROBLEM, by O. L. Bowie, 2 Oct 1950. 20 p. WAL 802/2.
Order from LC mi $2.40, ph $3.30 PB 127688

Wayne State U., Detroit, Mich.
ALGEBRAIC LOCAL INVARIANTS OF TOPOLOGICAL SPACES, by Sze-Tsen Hu, Feb 1958. 74 p. AF OSR TN 58-117; Contr. AF 49(638)-179. AD-152025.
Order from LC mi $4.50, ph $12.30 PB 133648

Wayne U., Detroit, Mich.
OUTLINE OF RESEARCH IN LIFE AND FATIGUE TESTING, by B. Epstein, 31 Jan 1954. 25 p. AD-25302.
Order from LC mi $2.70, ph $4.80 PB 130894

Wisconsin U., Madison.
FOURIER TRANSFORMS, CONFORMAL MAPPING, ENTIRE FUNCTIONS, AND ASYMPTOTIC SOLUTIONS OF ORDINARY DIFFERENTIAL EQUATIONS, by K. de Leeuw, J. Korevaar, et al. Oct 1956. 9 p. Contr. N7onr-28507.
Order from LC mi $1.80, ph $1.80 PB 129399

Wright Air Development Center Wright-Patterson Air Force Base, Ohio.
CORRELATION COMPUTATION, by Vincent S. Haneman, Jr. and John W. Senders, Apr 1955. 17 p. WADC TR-55-197.
Order from LC mi $2.40, ph $3.30 PB 130959

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
LAGRANGIAN INTERPOLATION, by Clarence Ross, Sep 1952. 57 p. WADC TR 52-133. AD-8715.
Order from LC mi $3.60, ph $9.30 PB 129583

Computing Devices

SOVIET APPLICATION OF MODERN COMPUTER TO ECONOMIC ANALYSIS, N. E. Kobrinsky, n. d. 19 p. Diagrs.
Order from LC mi $2.40, ph $3.30 PB 130695

Academy of Technical Sciences (Denmark).
AN ELECTRONIC COMPUTER FOR STATISTICAL ANALYSIS OF RADIO PROPAGATION DATA, by M. Gronlund and C. O. Lund, 1957. 48 p.
Order from LC mi $3.30, ph $7.80 PB 134215

Applied Mathematics and Computing Machinery Series. Acta Polytechnica 222 (1957). Vol. 1, No. 3.

Air Force Cambridge Research Center, Mass.
CODED BINARY COUNTERS FOR HIGH-SPEED OPERATION, by A. William Carlson, Jan 1957. 31 p. AF CRC TR 57-100. AD-117016.
Order from LC mi $3.00, ph $6.30 PB 133750

Air Force Missile Test Center, Patrick Air Force Base, Fla.
BRIEF DESCRIPTION OF FLAC 4096 WORD MAGNETIC CORE MEMORY OPERATIONS AND LOGIC, by FLAC Engineering, N. D. 5 p. AFMTC TN 56-38.
Order from LC mi $1.80, ph $1.80 PB 129326

Army Library, Washington, D. C.
DATA PROCESSING OPERATIONS AND COMPUTERS FOR MANAGEMENT, 4 Oct 1956. 75 p. Special Bibliography No. 10.
Order from LC mi $4.50, ph $12.30 PB 128781

Ballistic Research Labs., Aberdeen Proving Ground, Md.
PROGRAMMING AND CODING FOR ORDVAC, by Tadeusz Leser and Michael Romanelli, Oct 1956. 217 p. Rept. 997.
Order from LC mi $11.10, ph $42.60 PB 128165

Ballistic Research Labs., Aberdeen Proving Ground, Md.
SIMULTANEOUS EQUATION ROUTINES FOR THE ORDVAC AND EDVAC, by Bailey T. Wade, Mar 1956. 66 p. MR-987.
Order from LC mi $3.90, ph $10.80 PB 128524

Columbia U., N. Y.
THEORY OF TIME-VARYING SAMPLED-DATA SYSTEMS, by Bernard Friedland, 15 Apr 1957. 215 p. AF OSR TN 57-183; Contr. AF 18(600)-677. AD-126478.
Order from LC mi $9.60, ph $33.30 PB 128545

Columbia U., School of Engineering, New York.
GENERAL SYNTHESIS PROCEDURE FOR COMPUTER CONTROL OF SINGLE AND MULTI-LOOP LINEAR SYSTEMS, by R. E. Kalman and J. E. Bertram 10 Aug 1957. 29 p. Technical rept. T-20/B; CU-33-57; AFOSR TN 57-504; Contr. AF 18(600)-677. AD-136587.
Order from LC mi $2.70, ph $4.80 PB 130230

David Taylor Model Basin, Washington, D. C.
A TRANSPORTATION SIMPLEX ALGORITHM FOR MACHINE COMPUTATION BASED ON THE GENERALIZED SIMPLEX METHOD, by George Suzuki, June 1955. 17 p. DTMB 959.
Order from LC mi $2.40, ph $3.30 PB 128850

Documentation, Inc., Washington, D. C.
THE DISTINCTION BETWEEN THE LOGIC OF COMPUTERS AND THE LOGICAL STORAGE AND RETRIEVAL DEVICES, by M. Taube, Sep 1957. 13 p. Revised edition; AFOSR TN 57-165; Contr. AF 49 (638)-91. AD-126458.
Order from LC mi $2.40, ph $3.30 PB 130004

Documentation, Inc., Washington, D. C.
MATHEMATICAL FOUNDATIONS FOR A STORAGE AND RETRIEVAL THEORY, by Alexander Kreithen, June 1957. 16 p. AFOSR TN 57 400; Contract AF 49(638)-91. AD-132475.
Order from LC mi $2.40, ph $3.30 PB 129619

Documentation, Inc., Washington, D. C.
THE RELATION OF THE SIZE OF THE QUESTION TO THE WORK ACCOMPLISHED BY A STORAGE AND RETRIEVAL SYSTEM, by Mortimer Taube and L. B. Heilprin, Aug 1957. 14 p. AF OSR TN 57-483; Contr. AF 49(638)-91. AD-136476.
Order from LC mi $2.40, ph $3.30 PB 129666

Documentation, Inc., Washington, D. C.
A TRUTH-TABLE EVALUATION OF THE LOGIC OF NERVE NETS, by Mortimer Taube, July 1957. 21 p. AFOSR TN 57 482; Contr. AF 49(638)-91. AD-136475.
Order from LC mi $2.70, ph $4.80 PB 129567

Duke U., Durham, N. C.
MACHINE CALCULATION OF MATHEMATICAL FUNCTIONS, by Sullivan G. Campbell, Sep 1957. 18 p. AF OSR TN 57-583; Contr. AF 18(600)-1539. AD-136571.
Order from LC mi $2.40, ph $3.30 PB 129989

Electronics Research Lab., U. of California, Berkeley.
THE DOMAIN SYNTHESIS OF SAMPLED-DATA CONTROLS SYSTEM, by F. W. Semelka. 18 Jan 1957. 148 p. IER-60-175; Contr. AF 18(600)-1521. AD-115098.
Order from LC mi $7.20, ph $22.80 PB 127488

Electronics Research Lab., U. of Calif. Berkeley.
GENERAL ANALYSIS AND STABILITY STUDY OF FINITE PULSED FEEDBACK SYSTEMS, by G. Farmanfarma, 20 Nov 1957. 77 p. IER-60-198; AFOSR-TN-57-608. AD-136598.
Order from LC mi $4.50, ph $12.30 PB 133647

Holloman Air Development Center, Holloman Air Force Base, N. Mex.
A DATA ASSIMILATOR FOR A REAL-TIME MISSILE-PERFORMANCE ANALYSIS SYSTEM, June 1957. 133 p. HADC TR 57-3; Contr. AF 29 (600)-928. AD-113039.
Order from LC mi $6.90, ph $21.30 PB 128344
Originally prepared by telemeter Magnetics Inc. Project 6877.

Institute for Advanced Study, Princeton, N. J.
ELECTRONIC COMPUTER PROJECT MONTHLY PROGRESS REPORT, AUGUST-SEPTEMBER 1956, by H. J. Maehly, 30 Sep 1956. 5 p. Contr. DA 36-034-ORD-1646; Contr. Nonr-1358.
Order from LC mi $1.80, ph $1.80 PB 128692

Institute for Advanced Study Princeton, N. J.
ELECTRONIC COMPUTER PROJECT, MONTHLY PROGRESS REPORT, by Han J. Maehly, Nov 1956. 9 p. Contr. DA-36-034-ORD-1646 and Nonr 1358.
Order from LC mi $1.80, ph $1.80 PB 130562

Institute for Advanced Study, Princeton, N. J.
ELECTRONIC COMPUTER PROJECT-MONTHLY PROGRESS REPORT, by Hans J. Maehly, Jan 1957. 6 p. Contr. Nonr-1358(03); Contr. Nonr-1358(04).
Order from LC mi $1.80, ph $1.80 PB 132462

Institute for Advanced Study, Princeton, N. J.
MONTHLY PROGRESS REPORT, by H. J. Machly, Oct 1956. 5 p. Contr. DA 36-034-ORD-1646; Contr. Nonr-1358.
Order from LC mi $1.80, ph $1.80 PB 130023

Institute for Advanced Study, Princeton, N. J.
MONTHLY PROJECT REPORT, by H. J. Maehly, Dec 1956. 3 p. Contr. DA 36-034-ORD 1646; Contr. Nonr 1358.
Order from LC mi $1.80, ph $1.80 PB 130563

Jet Propulsion Lab., Calif. Inst. of Tech., Pasadena.
DATA-HANDLING SYSTEM FOR GENERAL INSTRUMENTATION I. ENCODER, by J. R. Zweizig, 30 Nov 1953. 19 p. CIT JPL M-20-86; Contr. DA-04-495-Ord 18.
Order from LC mi $2.40, ph $3.30 PB 133569

Jet Propulsion Lab., Calif. Inst. of Tech., Pasadena.
THE DIGITAL-COMPUTER FACILITY OF THE JET PROPULSION LABORATORY, by R. E. Carr and J. J. Wedel, 1 Oct 1944. 55 p. Contr. DA 04-495-ORD-18; JPL M20-99.
Order from LC mi $3.60, ph $9.30 PB 129629

Jet Propulsion Lab., Calif. Inst. of Tech., Pasadena.
DIGITAL ENCODER FOR ANALOG-COMPUTER VOLTAGES, Allen Huntington, 11 Mar 1954. 25 p. Memo 20-87; Contr. DA-04-495-ord-18.
Order from LC mi $2.70, ph $4.80 PB 129606

Jet Propulsion Lab., Calif. Inst. of Tech., Pasadena.
A PREPARATION UNIT FOR PUNCHED PAPER TAPE, by R. H. Selzer, 1 June 1956. 23 p. JPLM20-127; Contr. DA-04-495-ORD-18.
Order from LC mi $2.70, ph $4.80 PB 129641

Microwave Lab., General Electric Co., Palo Alto, Calif.
MICROWAVE TECHNIQUES FOR COMPUTER APPLICATION, by M. P. Forrer and L. Fein, 31 Dec 1956. 27 p. Contr. Nonr 2127(00).
Order from LC mi $2.70, ph $4.80 PB 130952

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
ANALOG COMPUTER SIMULATION OF MAGNETIC REACTORS, by J. Taube, 25 Oct 1956. 27 p. Research Report R-518-56; PIB 448; Contr. Nonr-839(05).
Order from LC mi $2.70, ph $4.80 PB 129503

Naval Ordnance Lab., Corona, Calif.
SUMMARY STATUS REPORT ON 30-MC PULSE RECIRCULATION, by W. W. Davis, 31 July 1957. 46 p. NAVORD 4620-NOL CR-375.
Order from LC mi $3.30, ph $7.80 PB 130994

Naval Ordnance Test Station, China Lake, Calif.
"QUEZY" CODING SYSTEM, by B. G. Oldfield, A.M. Fleischman, Jr., 19 Jan 1955. 17 p. TN 5075-10.
Order from LC mi $2.40, ph $3.30 PB 130639

Naval Ordnance Test Station, China Lake, Calif.
USE OF THE 701 COMPUTER FOR COMPLICATED THERMODYNAMIC EQUILIBRIA CALCULATIONS, by D. S. Villars, 16 Oct 1956. 21 p. NOTS 1574, NAVORD 5326.
Order from LC mi $2.70, ph $4.80 PB 130796

Naval Research Lab., Washington, D. C.
THE RELAY INTERPOLATOR, A DESCRIPTION OF ITS OPERATION, by B. L. Sarahan, 25 Sep 1947. 81 p. NRL R-3177.
Order from LC mi $4.80, ph $13.80 PB 130104

Numerical Analysis Research, U. of Calif., Los Angeles.
BEGINNERS GUIDE TO SWAC, by Kenneth E. Ralston and Thomas H. Southard, 2 Nov 1955. 49 p.
Order from LC mi $3.30, ph $7.80 PB 128590

Numerical Analysis Research, U. of Calif., Los Angeles.
INTRODUCTION TO DIGITAL COMPUTERS, by F. H. Hollander and C. Tomkins, 20 Feb 1956. 19 p.
Order from LC mi $2.40, ph $3.30 PB 128583

Ohio State U. Research Foundation, Columbus.
GROUND POSITION COMPUTATION FROM SHORAN-CONTROLLED PHOTOGRAPHY, by Paul Herget, Jan 1954. 27 p. WADC TR 54-180; Contr. AF 18(600)-90. AD-33352.
Order from LC mi $2.70, ph $4.80 PB 133928

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
CALCULATION OF INTERIOR BALLISTICS BY ANALOG COMPUTER, by August G. Edwards and Arthur I. Rubin, Aug 1957. 68 p. PATR 2421.
Order from LC mi $3.90, ph $10.80 PB 130828

Technische Hochschule, Munich (Germany).
SUPERSONIC FLOW PAST SLENDER BODIES OF ARBITRARY SHAPE (PRACTICAL ELECTRONIC COMPUTERS), by Robert Sauer, 1956. 14 p. AFOSR TN 57-162; Contr. AF 61(514)-1080. AD-126454.
Order from LC mi $2.40, ph $3.30 PB 127602

Washington U., Seattle.
OPTIMAL TEST LENGTH FOR MAXIMUM DIFFERENTIAL AND ABSOLUTE PREDICTION ON THE IBM TYPE 650, by C. E. Wright and August Dvorak, Dec 1956. 8 p. Contr. Nonr-477(08).
Order from LC mi $1.80, ph $1.80 PB 130574

Washington U., Seattle.
PREDICTOR SELECTION PROGRAMS FOR THE IBM TYPE 650, by August Dvorak and Calvin E. Wright, Nov 1956. 7 p. Contr. Nonr-477(08).
Order from LC mi $1.80, ph $1.80 PB 129925

Washington U., (Computers), Seattle.
PRINCIPAL AXIS FACTOR ANALYSIS PROGRAM FOR THE IBM TYPE 650, by C. E. Wright, Apr 1957. 9 p. Contr. Nonr-477(08).
Order from LC mi $1.80, ph $1.80 PB 133586

Washington U., Seattle.
SYMMETRIC CORRELATION MATRIX PROGRAM FOR THE IBM TYPE 650, by A. Dvorak and C. E. Wright, Dec 1956. 6 p. Contr. Nonr-477(08).
Order from LC mi $1.80, ph $1.80 PB 130573

Woods Hole Oceanographic Institution, Mass.
OPERATION OF THE SPERRY RAPID RAY TRACER-PART I, by Robert A. Lufburrow, Dec 1956. 58 p. WHOI 56-73; Contr. Nonr-891(00).
Order from LC mi $3.60, ph $9.30 PB 132181

MECHANICS

Georgia Inst. of Tech. Engineering Experiment Station, Atlanta.
INFLUENCE COEFFICIENTS FOR CIRCULAR CYLINDRICAL SHELLS WITH LINEARLY VARYING WALL THICKNESS, by M. B. Sledd, 10 Apr 1957. 24 p. AF OSR TN-57-196; Contr. AF 18(600)-1459. AD-126491.
Order from LC mi $2.70, ph $4.80 PB 128777

Aerodynamics and Pneumatics

Aeronautical Research Inst. of Sweden.
ON THE INFLUENCE OF WALL BOUNDARY LAYERS IN CLOSED TRANSONIC TEST SECTIONS, by Sune B. Berndt, 1957. 78 p. FFA 71.
Order from LC mi $4.50, ph $12.30 PB 134210

Aeronautical Research Inst. of Sweden.
THEORETICAL ASPECTS OF THE CALIBRATION OF TRANSONIC TEST SECTIONS, by Sune B. Berndt, 1957. 28 p. FFA 74.
Order from LC mi $2.70, ph $4.80 PB 134208

Air Force Missile Development Center, Holloman Air Force Base, N. Mex.
PARAMETERS FOR ROCKET-SLED-PROPULSION SYSTEMS, by H. J. Weigand and F. F. Kuhn, Mar 1958. 41 p. AFMDC TN 58-2. AD-135006.
Order from LC mi $3.30, ph $7.80 PB 133653

Air Materiel Command, Wright-Patterson Air Force Base, Ohio.
DIFFUSER EFFICIENCY AND FLOW PROCESS OF SUPERSONIC WIND TUNNELS WITH FREE JET TEST SECTION, by Rudolf Hermann, Dec 1950. 87 p. AF TR 6334. AD-94642.
Order from LC mi $4.80, ph $13.80 PB 130822

Air Research and Development Command, Washington, D. C.
PRESSURE DISTRIBUTION MEASUREMENT ON TWO-DIMENSIONAL CASCADES AT HIGH SUBSONIC MACH NUMBERS-PART I, by K. H. Grewe, 1957. 50 p. AFOSR TN-57-289. AD-132-360.
Order from LC mi $3.30, ph $7.80 PB 128612

Boynton Associates, LaCanada, Calif.
FINAL REPORT ON PRELIMINARY DESIGN FOR AN AIR BLAST SIMULATOR, by W. W. Boynton and V. M. Carter, 8 Aug 1955. 88 p. Contr. Noy 73262.
Order from LC mi $4.80, ph $3.80 PB 128323

Brown University, Providence, R. I.
LINEARIZED TRANSONIC FLOW ABOUT SLENDER BODIES OF REVOLUTION AT ZERO INCIDENCE, by P. F. Maeder and H. U. Thommen, July 1957. 122 p. AFOSR TN 57-384; Contr. AF 18(600)-664. TR W725. AD-132459.
Order from LC mi $6.30, ph $19.80 PB 129933

Colorado A. and M. Coll., Fort Collins.
TURBULENT DIFFUSION OF MOMENTUM AND HEAT FROM A SMOOTH, PLANE BOUNDARY WITH ZERO PRESSURE GRADIENT, by A. C. Spengos and J. E. Cermak, Aug 1956. 39 p. Final Report-Part I-Experimental Equipment CER 56 ACS 12; AF CRC TN 56-273; Contr. AF 19(604)-421.
Order from LC mi $3.00, ph $6.30 PB 128176

Columbia U., New York.
INITIAL VELOCITY IN SHELLS AT A FREE SURFACE DUE TO A PLANE ACOUSTIC SHOCK WAVE, by M. L. Baron and H. H. Bleich, Nov 1956. 53 p. Technical Report No. 19. Contr. Nonr-266(08).
Order from LC mi $3.60, ph $9.30 PB 129926

Cornell Aeronautical Lab. Inc., Buffalo, N. Y.
SINGLE-PULSE SHOCK TUBE STUDIES OF THE KINETICS OF THE REACTION N_2 AND O_2 2 NO BETWEEN 2000-3000° K, by H. Glick and J. J. Klein Sep 1957. 27 p. AF OSR-TN-57-407; Contr. AF 18(600)-1332. AD-132485.
Order from LC mi $2.70, ph $4.80 PB 130455

Cornell U. Graduate School of Aeronautical Engineering, Ithaca, N. Y.
APPROACH TO EQUILIBRIUM IONIZATION BEHIND STRONG SHOCK WAVES IN ARGON, by Harry Petschek and Stanley Byron, N. D. 65 p. Contr. Nonr 401(25).
Order from LC mi $3.90, ph $10.80 PB 132496

Cornell U. Graduate School of Aeronautical Engineering, Ithaca, N. Y.
LAMINAR BOUNDARY LAYER ON A SPINNING CIRCULAR CONE IN SUPERSONIC FLOW AT A SMALL ANGLE OF ATTACK, by M. Fiebig, June 1956. 63 p. AFOSR TN-56-532; Contr. AF 18(600)-1523. AD-110351.
Order from LC mi $3.90, ph $10.80 PB 130211

Defense Research Lab., U. of Texas, Austin.
DESIGN OF AN ACCELERATION INSENSITIVE SKIN FRICTION BALANCE FOR FLIGHT TESTING, by John E. Weiler, Sr. June 1954. 68 p. DRL 342; Contr. NOrd 9195; APL/JHU CF-2094.
Order from LC mi $3.90, ph $10.80 PB 127285

Defense Research Lab., U. of Texas, Austin.
A HIGH-STAGNATION TEMPERATURE INTERMITTENT-FLOW SUPERSONIC WIND TUNNEL, by John L. Harkness, 11 Mar 1957. 55 p. DRL 406; AFOSR TN-57-222; Contr. AF 18(600)-589. AD-126520.
Order from LC mi $3.60, ph $9.30 PB 128559

Defense Research Lab., U. of Texas, Austin.
DEVELOPMENT OF SUBSONIC AND SUPERSONIC TOTAL TEMPERATURE PROBES FOR A BLOWDOWN TYPE WIND TUNNEL, by Grover L. Alexander, June 1957. 53 p. DRL-399. AF OSR TN-57-164. Contract AF 18(600)-589. AD-126456.
Order from LC mi $3.60, ph $9.30 PB 128090

Delaware U., Newark.
TURBULENCE IN NON-NEWTONIAN SYSTEMS, by D. W. Dodge and A. B. Metzner, Feb 1958. 77 p. AF OSR TN 58-94; Contr. AF 18(603)-115. AD-148143.
Order from LC mi $4.50, ph $12.30 PB 133649

Detroit Arsenal, Center Line, Mich.
AIR FLOW CHARACTERISTICS OF A WOOD-MODEL CYLINDER HEAD (4-3/4" BORE), by J. F. Scarpelli, 5 Sep 1956. 33 p. R 3681. AD-109970.
Order from LC mi $3.00, ph $6.30 PB 130454

Dugway Proving Ground, Utah.
THE CONSIDERATION OF NONISOTROPIC TURBULENCE. SUPPLEMENT TO CLOUD PHYSICS REPORT NO. 4: THE USE OF LARGE-SCALE PARAMETERS IN LOW-LEVEL DIFFUSION COMPUTATIONS, by William G. Tank, Mar 1957. 21 p. SR 113.
Order from LC mi $2.70, ph $4.80 PB 127908

Engineering Research Inst., U. of Michigan, Ann Arbor.
ON THE BEHAVIOR OF A GAS NEAR A WALL; A PROBLEM OF KRAMERS', by C. S. Wang Chang and G. E. Uhlenbeck, Aug 1956. 35 p. ERI 2457-2-T. Contr. Nonr-1224-(15).
Order from LC mi $3.00, ph $6.30 PB 128186

Technical Report.

Escher Wyss Engineering Works, Ltd., Zurich (Switzerland).
WAKE STREAM ACCELERATION AS MEANS FOR REDUCING AIRPLANE DRAG. TECHNICAL NOTE NO. 1, by A. Burgdorfer, July 1956. 59 p. AF OSR TR 56-47; Contr. AF 61(514)-854. AD-97089.
Order from LC mi $3.60, ph $9.30 PB 127104

Experimental Towing Tank, Stevens Inst. of Tech., Hoboken, N. J.
THE UNSTEADY PRESSURE FIELD NEAR A SHIP PROPELLER AND THE NATURE OF THE VIBRATORY FORCES PRODUCED ON AN ADJACENT SURFACE, by John P. Breslin, June 1956. 88 p. ETT 609; Contr. Nobs-47790. AD-112951.
Order from LC mi $4.80, ph $13.80 PB 129385

Forest Products Lab., Madison, Wis.
DEFLECTION AND DISTRIBUTION OF STRESSES IN THE FACINGS OF A CENTRALLY LOADED TRANSPARENT SANDWICH BEAM, by Wilhelm S. Erickson, Dec 1953. 22 p. WADC TR 52-185, Supplement 1; Contr. AF 18(600)-70. AD-30551.
Order from LC mi $2.70, ph $4.80 PB 130373

Gas Turbine Lab., Mass. Inst. of Tech., Cambridge.
AN AERODYNAMIC INVESTIGATION OF VANED DIFFUSERS FOR CENTRIFUGAL COMPRESSORS, by C. R. Faulders, Jan 1954. 186 p. Final Report.
Order from LC mi $8.40, ph $28.80 PB 128766

Gas Turbine Lab., Mass. Inst. of Tech., Cambridge.
FINAL SUMMARY REPORT OF THE AERO-THERMOPRESSOR PROJECT, by A. H. Shapiro, and K. R. Wadleigh, Sep 1956. 151 p. Contr. N5ori-07878.
Order from LC mi $7.50, ph $24.30 PB 128765

Guggenheim Aeronautical Lab., Calif. Inst. of Tech., Pasadena.
AN EXPERIMENTAL INVESTIGATION OF THE FLOW OVER BLUNT-NOSED CONES AT A MACH NUMBER OF 5.8, by Reginald M. Machell and William T. O'Bryant. 15 June 1956. 63 p. Hypersonic Research Project Memo No. 32. Contr. DA-04-495-Ord-19.
Order from LC mi $3.90, ph $10.80 PB 128758

Guggenheim Aeronautical Lab., Calif. Inst. of Tech., Pasadena.
EXPERIMENTAL INVESTIGATION OF THICK AXIALLY SYMMETRICAL BOUNDARY LAYERS ON CYLINDERS AT SUBSONIC AND HYPERSONIC SPEEDS, by R. L. Richmond, 20 June 1957. 75 p. M 39; Contr. DA-04-495-ORD-19.
Order from LC mi $4.50, ph $12.30 PB 130047

Guggenheim Aeronautical Lab., Calif. Inst. of Tech., Pasadena.
INVESTIGATION OF FLOW AROUND SIMPLE BODIES IN HYPERSONIC FLOW, by Toshi Kubota, 25 June 1957. 101 p. Hypersonic Research Project; M 40; Contr. DA-04-495-ORD-19.
Order from LC mi $5.70, ph $16.80 PB 129677

Guggenheim Aeronautical Lab., Calif. Inst. of Tech., Pasadena.
A PRELIMINARY EXPERIMENTAL INVESTIGATION OF THE FLOW OVER SIMPLE BODIES OF REVOLUTION AT M-18.4 IN HELIUM, by A. G. Munsun, 15 Dec 1956. 37 p. M 35 Contr. DA-04-495-Ord-19.
Order from LC mi $3.00, ph $6.00 PB 130933

Hypersonic Research Report.

Harvard U., Cambridge, Mass.
ON THE UNSTEADY VISCOUS FLOW PAST A FINITE FLAT PLATE, by R. C. DiPrima, June 1956. 15 p. Contr. N5-Ori-07666.
Order from LC mi $2.40, ph $3.30 PB 128616

Hermann Foettinger Institut fuer Stroemungstechnik an der Technischen Universitaet Berlin-Charlottenburg (Germany).
FURTHER INVESTIGATIONS OF THE LAMINAR-TURBULENT TRANSITION IN A FREE JET (ANNULAR NOZZLE), by O. Wehrman and H. Fabiah, Dec 1956. 46 p. AFOSR TR 57-31; Contr. AF 61(514)-915. AD-126494.
Order from LC mi $3.30, ph $7.80 PB 129357

Holloman Air Development Center, Holloman Air Force Base, N. Mex.
CHARTS OF FLOW PROPERTIES BEHIND PLANE AND CONICAL SHOCK WAVES AT OUTER EDGE OF BOUNDARY LAYER, by Reinhard Krause and John L. Gordon, May 1957. 27 p. HADC TN-57-5. AD-113035.
Order from LC mi $2.70, ph $4.80 PB 127581

Illinois U., Urbana.
SERIES SOLUTION OF LAMINAR INCOMPRESSIBLE MIXING OF TWO STREAMS WITH DIFFERENT VELOCITIES, by L. G. Eldrenkamp and J. Xerikos, May 1954. 34 p. WADC TR 54-275; Contr. AF 33 (038)-21251. AD-63504.
Order from LC mi $3.00, ph $6.30 PB 130388

Institute for Fluid Dynamics and Applied Mathematics, U. of Maryland, College Park.
CHARACTERISTICS OF THE TECHNIQUE OF AERODYNAMIC INVESTIGATION BY MEANS OF SERIES OF ELECTRIC SPARKS, by J. Herzog and J. R. Weske, July 1957. 70 p. Tech. note BN-105. AF OSR TN-57-359; Contr. AF 18(603)-92. AD-132432.
Order from LC mi $3.90, ph $10.80 PB 129617

Institute for Fluid Dynamics and Applied Mathematics, U. of Maryland, College Park.
HYPERSONIC VISCOUS FLOW OVER A WEDGE, by S. I. Pai and S. F. Shen. 1955 or later. 14 p. Contr. AF 18(600)-993. AD-109841.
Order from LC mi $2.40, ph $3.30 PB 130442

Institute for Fluid Dynamics and Applied Mathematics, U. of Maryland, College Park.
ON RELAXATION EFFECTS IN SHOCK WAVES IN GASES, by E. P. Stepanov, July 1956. 24 p. AFOSR-TN-56-309; Contr. AF 18(600)-993. AD-94843.
Order from LC mi $2.70, ph $4.80 PB 130440

Translated by Boyd Cary, Zhurnal Essperimental l'noi i Teoreticheskoi Fiziki. Vol. 17, 1947. pp. 377-85.

Institute for Fluid Dynamics and Applied Mathematics, U. of Maryland, College Park.
ONE-DIMENSIONAL UNSTEADY FLOW OF MAGNETO-GASDYNAMICS, by S. I. Pai, Nov. 1956. 18 p. AF OSR TN 56-537-BN-86; Contr. AF 18(600)-993. AD-110356.
Order from LC mi $2.40, ph $3.30 PB 128629

Institute for Fluid Dynamics and Applied Mathematics, U. of Maryland, College Park.
SELECTED TOPICS FROM THE THEORY OF GAS FLOW AT HIGH TEMPERATURES (I), by J. M. Burgers, Sep 1956. 66 p. Technical note BN-83. AF OSR TN-56-509. Contr. AF 18(600)-993. AD-110324.
Order from LC mi $3.90, ph $10.80 PB 128854

Institute for Fluid Dynamics and Applied Mathematics, U. of Maryland, College Park.
SELECTED TOPICS FROM THE THEORY OF GAS FLOW AT HIGH TEMPERATURES (II), by J. M. Burgers, Oct 1956. 54 p. AF OSR TN-56-538-BN-84; Contr. AF 18(600)-993. AD-110357.
Order from LC mi $3.60, ph $9.30 PB 130212

Institute for the Study of Rate Processes, U. of Utah, Salt Lake City.
MECHANISM OF CRATERING IN ULTRA-HIGH VELOCITY IMPACT, by Melvin A. Cook, 10 July 1957. 30 p. AFOSR TN-57-486; Contr. AF 18(603)-100. AD-136479.
Order from LC mi $2.70, ph $4.80 PB 130223

Jet Propulsion Lab., Calif. Inst. of Tech., Pasadena.
FLEXIBLE-PLATE NOZZLE DESIGN FOR TWO-DIMENSIONAL SUPERSONIC WIND TUNNELS, by Harold N. Riise, 9 June 1954. 45 p. JPLR 20-74; Contr. DA-04-495-ord-18.
Order from LC mi $3.30, ph $7.80 PB 133888

Jet Propulsion Lab., Calif. Inst. of Tech., Pasadena.
RESULTS AND A CRITICAL DISCUSSION OF TRANSITION-REYNOLDS-NUMBER MEASUREMENTS ON INSULATED CONES AND FLAT PLATES IN SUPERSONIC WIND TUNNELS, by John Laufer and Jack E. Marte, 30 Nov 1955. 31 p. Rept. No. 20-96; Contr. DA-04-495-ORD-18.
Order from LC mi $3.00, ph $6.30 PB 133865

Johns Hopkins U., Baltimore, Md.
BOUNDARY LAYER ALONG ANNULAR WALLS IN A SWIRLING FLOW, by Hsuan Yeh, Apr 1957. 43 p. AF OSR TN-57-105; Contr. AF 18(600)-991. AD-120455.
Order from LC mi $3.30, ph $7.80 PB 128220

Johns Hopkins U., Baltimore, Md.
FURTHER INVESTIGATIONS ON FULLY DEVELOPED TURBULENT FLOWS IN A CURVED CHANNEL, by Hsuan Yeh, William G. Rose, etc. Sep 1956. 40 p. Contr. Nonr-248(33).
Order from LC mi $3.00, ph $6.30 PB 128713

Johns Hopkins U., Baltimore, Md.
ON THE ENERGY TRANSFER TO SMALL DISTURBANCES IN A VISCOUS COMPRESSIBLE HEAT CONDUCTIVE MEDIUM, by Boa-Teh Chu, 25 July 1956. 40 p. AF OSR TN-56-377; Contr. AF 18(000)-1121.
Order from LC mi $3.00, ph $6.30 PB 128954

Johns Hopkins U., Baltimore, Md.
THOUGHTS ON SUPERSONIC WIND TUNNELS WITH LOW FREE-STREAM DISTURBANCES, by Mark V. Morkovin, Nov 1956. 22 p. AFOSR TN-56-540; Contr. AF 18(600)-1121. AD-110359.
Order from LC mi $2.70, ph $4.80 PB 128544

Lockheed Aircraft Corp., Van Nuys, Calif.
FREE OSCILLATIONS OF A GAS IN AN ELASTIC CYLINDRICAL SHELL, by H. V. Hahne, 30 Aug 1957. 32 p. LMSD-2160; AF OSR TN-57-348; Contr. AF 18(603)-146. AD-132421.
Order from LC mi $3.00, ph $6.30 PB 130215

Martin, Glenn L., Co., Baltimore, Md.
COMBINED AIRLOAD AND THERMAL SHOCK TEST PROGRAM FINAL REPORT, 15 Oct 1953 to 15 Aug 1955. Engineering report 7630. 80 p. Contr. AF 18(600)-792; Contr. AF 18(600)-682. AD-70746.
Order from LC mi $4.50, ph $12.30 PB 127628

Maryland U., College Park.
INVESTIGATION OF FACTORS AFFECTING THE CONTROL AND STABILITY OF HIGH SPEED AIRCRAFT AND MISSILES, by Phrios Theodorides, Apr 1958. 15 p. AFOSR TR 58-52; Contr. AF 18(600)-428. AD-154215.
Order from LC mi $2.40, ph $3.30 PB 133839

Massachusetts Inst. of Tech., Cambridge.
ANALYTICAL DESIGN OF A FAMILY OF SUPERSONIC NOZZLES BY THE FRIEDRICKS METHOD, by J. R. Baron, June 1954. 419 p. WADC TR 54-279; Contr. AF 33(616)-2132. AD-55902.
Order from LC mi $11.10, ph $63.60 PB 130389

Massachusetts Inst. of Tech., Cambridge.
TRANSIENT AERODYNAMICS OF TWO-DIMENSIONAL AIRFOILS, Part I, by J. Ray Ruetenik and Emmett A. Witmer, Aug 1956. 87 p. WADC TR-54-368, Pt. 1; Contr. AF 33(038)-8906.
Order from LC mi $4.80, ph $13.80 PB 129655

Naval Air Development Center, Johnsville, Penna.
FIN TECHNOLOGY AND ITS MODIFICATIONS IN THE DESIGN OF SECTIONALIZED HEAT EXCHANGERS WITH EXTENDED SURFACE FOR COOLING AIRBORNE ELECTRONIC EQUIPMENT. 14 Feb 1956. 50 p. WADC EL-41002.
Order from LC mi $3.30, ph $7.80 PB 127832

"Phase Report."

Naval Avionics Facility, Indianapolis, Ind.
AERODYNAMIC PHENOMENA FOR BODIES OF REVOLUTION IN SUPERSONIC MOTION, by Glen E. Martin, 26 Sep 1956. 42 p. NAFI-TP-7.
Order from LC mi $3.30, ph $7.80 PB 130595

Naval Ordnance Lab., White Oak, Md.
NOL WIND-TUNNEL INTERNAL STRAIN-GAGE BALANCE SYSTEM, by I. Shantz, B. D. Gilbert, etc., 21 Sep 1953. 41 p. NAVORD 2972-ARR-104.
Order from LC mi $3.30, ph $7.80 PB 133877

Naval Ordnance Test Station, China Lake, Calif.
DETACHED SHOCK WAVES AHEAD OF BLUFF-NOSED CYLINDERS, by Jerome R. Katz, 3 Apr 1957. 44 p. NOTS 1686; NAVORD 5423.
Order from LC mi $3.30, ph $7.80 PB 133905

Naval Ordnance Test Station, China Lake, Calif.
THE EFFECT OF HIGH SPIN ON THE MAGNUS FORCE ON A CYLINDER AT SMALL ANGLES OF ATTACK, by H. R. Kelly and G. R. Thacker, 29 Feb 1956. 77 p. NOTS 1381; NAVORD 5036.
Order from LC mi $4.50, ph $12.30 PB 130045

Naval Supersonic Lab., Mass. Inst. of Tech., Cambridge.
THE BINARY MIXTURE BOUNDARY LAYER ASSOCIATED WITH MASS TRANSFER COOLING AT HIGH SPEEDS, by Judson R. Baron, May 1956. 259 p. TR 160.
Order from LC mi $11.10, ph $39.60 PB 128767

Pp. 57 to 64 Incl. are missing.

Naval Supersonic Lab., Mass. Inst. of Tech., Cambridge.
EFFECT OF REFLECTED SHOCK WAVES ON NORMAL FORCE AND PITCHING MOMENT, by F. E. Fahrenhotz and W. P. Frey. 21 May 1956. 69 p. TR 157.
Order from LC mi $3.90, ph $10.80 PB 128062

Naval Supersonic Lab., Mass. Inst. of Tech., Cambridge.
HEAT TRANSFER AND UNSTEADY AERODYNAMICS, by J. A. F. Hill, and M. Finston et al., 5-13 Sep 1956. 63 p. TR-179.
Order from LC mi $3.90, ph $10.80 PB 130437

Presented at the X International Congress of Applied Mechanics, Brussels, Belgium.

Naval Supersonic Lab., Mass. Inst. of Tech., Cambridge.
THE QUANTITATIVE MEASUREMENT OF GAS DENSITY BY MEANS OF SCHLIEREN INTERFERENCE, by Edward B. Temple, Nov 1955. 63 p. Tech. Report 132.
Order from LC mi $3.90, ph $10.80 PB 129596

North American Aviation Inc., Columbus, Ohio.
STUDY OF SYSTEMS FOR TRUE ANGLE OF ATTACK MEASUREMENT, by F. M. Emerson and F. H. Gardner, May 1955. 147 p. WADC TR-54-267; Contr. AF 33(616)-2348. AD-102442.
Order from LC mi $7.20, ph $22.80 PB 130372

Odin Associates, Pasadena, Calif.
HYPERSONIC FLIGHT WITHOUT OVERHEATING I. FRICTION HEAT ABSORPTION AND THRUST GAIN BY USE OF COOLANT FUELS, by R. Greiner, and I. Michelson, June 1957. 61 p. Technical note 100.2. AFOSR TN-57-347; Contr. AF 18(600)-1501. AD-132448.
Order from LC mi $3.90, ph $10.80 PB 129529

Ordnance Aerophysics Lab., Convair, Daingerfield, Tex.
AN INVESTIGATION OF THE AXIAL-FORCE CHARACTERISTICS OF A PARABOLIC BODY OF REVOLUTION (NACA RM-10) AT VARIOUS REYNOLDS NUMBERS AND MACH NUMBERS 1.50, 1.73, 2.00, 2.23, AND 2.50, by R. E. Tate, 16 May 1955. 74 p. OAL-375; CM-840; Contr. NOrd-9028.
Order from LC mi $4.50, ph $12.30 PB 128942

Pennsylvania State U., University Park.
EFFECT OF YAW ON BOUNDARY LAYERS AT HIGH SPEEDS, by H. G. Lew and J. B. Fanucci, Nov 1956. 58 p. Tech. Report No. 9. AF OSR TN-57-221; Contr. AF 18(600)-575. AD-126519.
Order from LC mi $3.60, ph $9.30 PB 127984

Politecnico di Torino (Italy).
THE DISSOCIATION OF A PURE DIATOMIC GAS BEHIND A STRONG NORMAL SHOCK WAVE, by Gianni Jarre, Nov 1957. 21 p. Technical Note No. 3. AFOSR TN-58-7; Contr. AF 61(514)-1124. AD-148046.
Order from LC mi $2.70, ph $4.80 PB 133860

Politecnico di Torino (Italy).
TRANSONIC FLOWS AROUND SYMMETRIC AIRFOILS, WITH DETACHED SHOCK WAVE, by S. Nocilla, 24 Apr 1957. 27 p. AF OSR TN 57-493; Contr. AF 61(514)-1124. AD-136483.
Order from LC mi $2.70, ph $4.80 PB 130226

Polytechnic Inst. of Brooklyn, N. Y.
DIFFRACTION OF DISTURBANCES AROUND A CONVEX RIGHT CORNER WITH APPLICATIONS IN ACOUSTICS AND WING-BODY INTERFERENCE, by Lu Ting, Aug 1956. 35 p. AF OSR TN-56-428; PIBAL 307; Contr. AF 18(600)-693. AD-96510.
Order from LC mi $3.00, ph $6.30 PB 130210

Polytechnic Inst. of Brooklyn, N. Y.
A NOTE ON THE EFFECT OF CENTRIFUGAL FORCES AND ACCELERATED MOTION ON THE INSTABILITY OF THE LAMINAR BOUNDARY LAYER ABOUT HIGHLY COOLED BODIES, by A. Ferri and R. Vaglio-Laurin, Dec 1956. 16 p. PIBAL-313; AFOSR TN-56-579; Contr. AF 18(600)-693. AD-115002.
Order from LC mi $2.40, ph $3.30 PB 130209

Polytechnic Inst. of Brooklyn, N. Y.
RECENT RESULTS IN THE THEORY OF LARGE DEFLECTIONS OF CYLINDRICAL SHELLS, by Joseph Kempner, Aug 1956. 12 p. PIB AL Rept. 360; Contr. Nonr 839(17).
Order from LC mi $2.40, ph $3.30 PB 128272

Polytechnic Inst. of Brooklyn, N. Y.
SIMILARITY CONDITIONS FOR TESTING HIGH SPEED AIRCRAFT MODELS, by Lu Ting, Nov 1956. 52 p. AFOSR TN-56-548-PIB AL Rept. 308; Contr. AF 18(600)-693. AD-110367.
Order from LC mi $3.60, ph $9.30 PB 128601

Princeton U., N. J.
AN AERODYNAMIC ANALYSIS OF A SINGLE-BLADED ROTOR IN HOVERING AND LOW SPEED FORWARD FLIGHT AS DETERMINED FROM SMOKE STUDIES OF THE VARTICITY DISTRIBUTION IN THE WAKE, by R. B. Gray, Sep 1956. 108 p. AEL-356; Contr. N6onr-27-15.
Order from LC mi $5.70, ph $16.80 PB 128671

Princeton U., N. J.
AN ANALYSIS OF THE EFFECT OF SHOCK WAVES ON TURBULENT BOUNDARY LAYERS, by A. G. Hammitt, and I. E. Vas, etc., July 1957. 41 p. AFOSR TN 57-297-AEL-396; Contr. AF 18(600)-498. AD-132368.
Order from LC mi $3.30, ph $7.80 PB 133641

Princeton U., N. J.
STATES OF PARTIAL EQUILIBRIUM BEHIND SHOCK WAVES IN O_2, N_2, CO, CO_2 AND N_2O, by W. C. Griffith and Anne Kenny, Mar 1957. 29 p. Tech. report II-23; Contr. N6onr-105, Task II.
Order from LC mi $2.70, ph $4.80 PB 132638

Propulsion Research Corp., Inglewood, California.
A STUDY OF A CASCADE SYSTEM FOR SUPERSONIC FLOW DIFFUSION, by E. Beder and R. D. Buhler, May 1954. 75 p. WADC TR-54-261; Contr. AF 33(616)-100. AD-48905.
Order from LC mi $4.50, ph $12.30 PB 130371

Redstone Arsenal, Huntsville, Ala.
THEORETICAL AND EXPERIMENTAL NORMAL FORCE DISTRIBUTION ON A CONE-FRUSTUM BODY AT SUPERSONIC SPEEDS, by Wm. D. Murphree, 15 Sep 1956. 49 p. TR-2R19F.
Order from LC mi $3.30, ph $7.80 PB 128398

Rensselaer Polytechnic Inst. Troy, N. Y.
A COMPARISON OF WALL EFFECTS ON SUPERCAVITATING FLOWS PAST SYMMETRIC BODIES IN SOLID-WALL CHANNELS AND JETS, by Hirsh Cohen and Yih-O Tu, 1 Oct 1956. 19 p. Math. Rept. No. 5; Contr. Nonr 591(08).
Order from LC mi $2.40, ph $3.30 PB 128508

Rensselaer Polytechnic Inst., Troy, N. Y.
ON A STATISTICAL THEORY FOR ONE-DIMENSIONAL REAL GAS FLOWS, by Paul Lieber and Koon-Sang Wan, Sep 1957. 25 p. AFOSR TN 57-478; Contr. AF 18(600)-1704. AD-136470.
Order from LC mi $2.70, ph $4.80 PB 130000

Rensselaer Polytechnic Inst., Troy, N. Y.
A PRINCIPLE OF MINIMAL DISSIPATION FOR REAL FLUIDS, by Paul Lieber and Koon-Sang Wan, Aug 1957. 54 p. AF OSR TN 57-477; Contr. AF 18 (600)-1704. AD-136469.
Order from LC mi $3.60, ph $9.30 PB 130003

Rensselaer Polytechnic Inst. Troy, N. Y.
A PROOF AND GENERALIZATION OF THE PRINCIPLE OF MINIMUM DISSIPATION, by Paul Lieber and Koon-Sang Wan, Sep 1957. 22 p. AF OSR TN 57-479; Contr. AF 18(600)-1704. AD-136471.
Order from LC mi $2.70, ph $4.80 PB 129999

Rome U. (Italy).
AN EXACT SOLUTION FOR FREE RECTANGULAR PLATES LATERALLY LOADED, by Luigi Broglio, Aug 1956. 113 p. Scuola Di Ingegneria Aeronautica Tech. Note No. 2. AF OSR TN-57-288; Contr. AF 61(514)-888. AD-132359.
Order from LC mi $6.00, ph $18.30 PB 128424

Royal Inst. of Tech. (Sweden).
ON THE INFLUENCE OF THE GEOMETRY OF SLENDER BODIES OF REVOLUTION AND DELTA WINGS ON THEIR DRAG AND PRESSURE DISTRIBUTION AT TRANSONIC SPEEDS, by F. Keune and K. Oswatitsch, 15 Apr 1955. 34 p. KTH AERO TN-42; Contr. AF 61(514)-811.
Order from LC mi $3.00, ph $6.30 PB 128024

Senior Observer Section, Mather Air Force Base, Calif.
AIR SPEED AND ALTITUDE MEASUREMENT AT TRANSONIC AND SUPERSONIC SPEEDS, 1 July 1955. 18 p. Project 11-55A.
Order from LC mi $2.40, ph $3.30 PB 128627

Stanford U., Calif.
RESONANCE-BEHAVIOR OF NONLINEAR ONE DIMENSIONAL GAS VIBRATIONS ANALYZED BY THE RITZ-GALERKIN METHOD, by Evyind Fredericksen. May 1956. 32 p. WADC TR 56-416; Contr. AF 33(616)-3490. AD-97169.
Order from LC mi $3.00, ph $6.30 PB 127586

Technion Research and Development Foundation (Israel).
FURTHER RESEARCH ON THE PHYSICS OF AIR VISCOSITY, by Markus Reiner, 15 July 1956 to 14 Feb 1957. 11 p. AF OSR TN-57-189; Contr. AF 61 (514)-964. AD-126484.
Order from LC mi $2.40, ph $3.30 PB 128089

Technische Hochschule, Braunschweig (Germany).
SYSTEMATIC INVESTIGATIONS ON SECONDARY FLOW LOSSES IN CASCADES, by N. Scholz, Mar 1957. 81 p. AFOSR TR 57-39; Contr. AF 61(514)-650C. AD-132400.
Order from LC mi $4.80, ph $13.80 PB 129346

Technische Hochschule, Braunschweig (Germany).
THEORETICAL AND EXPERIMENTAL INVESTIGATIONS ON WING-BODY COMBINATIONS WITH DELTA WINGS IN SYMMETRICAL FLOW, by K. Gersten and E. Truckenbrodt, June 1956. 63 p. Rept. 56120a; Contr. AF 61(514)-875; AFOSR-TR-56-36. AD-96505.
Order from LC mi $3.90, ph $10.80 PB 127069

University of Southern Calif., Los Angeles, Engineering Center.
AN EXPERIMENTAL DETERMINATION OF THE ACOUSTIC IMPEDANCE OF A SPIKE DIFFUSER AT MACH NUMBER 1.98 FINAL REPORT, by C. L. Dailey, T. A. Jacobs, 31 July 1956. 35 p. USC EC 39-101; Contr. Noas-55-320-c. AD-112940.
Order from LC mi $3.00, ph $6.30 PB 130561

Westinghouse Electric Corp., Pittsburgh, Pa.
A CLASSICAL THEORY OF THE TEMPERATURE DEPENDENCE OF MAGNETIC ANISOTROPY ENERGY, by C. Zener, May 1954. 14 p. WADC TR 54-284; Contr. AF 33(616)-309. AD-36071.
Order from LC mi $2.40, ph $3.30 PB 130376

Wichita U., School of Engineering, Kans.
CONTRIBUTIONS TO JET PUMP THEORY, IV. APPROXIMATE THEORY OF JET DIFFUSION IN A CONSTANT-PRESSURE MIXING TUBE, by H. B. Helmbold, Nov 1953. 29 p. Engineering Study No. 118; Contr. NONR 201(00). AD-74376.
Order from LC mi $2.70, ph $4.80 PB 127031

Wichita U., School of Engineering, Kans.
AN INTRODUCTION TO SUBSONIC CONICAL FLOW, by Kelsey Walker, Jr., July 1954. 10 diagrs. Engineering Note No. 149; Contr. NONR 201(00).
Order from LC mi $1.80, ph $1.80 PB 128566

Wichita U., School of Engineering, Kans.
ON THE LIFT OF A BLOWING WING IN A PARALLEL STREAM, by H. B. Helmbold, Apr 1954. 11 p. Engineering Study No. 135. Contr. Nonr 201(01).
Order from LC mi $2.40, ph $3.30 PB 129358

Wichita U., School of Engineering, Kans.
PRE-TEST INFORMATION FOR TWO-DIMENSIONAL WIND-TUNNEL TESTS OF A SUCTION CIRCULATION-CONTROL MODEL (ONR RM-7), by J. L. Stalter, Oct 1954. 15 p. Engineering Study No. 161; Contr. Nonr 201(01).
Order from LC mi $2.40, ph $3.30 PB 128707

Wichita U., School of Engineering, Kans.
REVIEW OF AERODYNAMIC TURBULENCE, by Kelsey Walker, Jr., July 1954. 12 p. Engineering Note No. 148; Contr. Nonr 201(00).
Order from LC mi $2.40, ph $3.30 PB 129355

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
TWO-DIMENSIONAL BODIES AT SLIGHTLY SUPERSONIC MACH NUMBERS, by Gottfried Guderley, Nov 1953. 46 p. WADC TR 53-454.
Order from LC mi $3.30, ph $7.80 PB 130346

Hydrodynamics, Hydraulics, and Hydrostatics

Aeronautical Materials, Lab., Naval Air Experimental Station, Phila., Pa.
THE DEVELOPMENT OF A SUITABLE TEST PROCEDURE TO DETERMINE FILTRATION EFFICIENCY FOR AN6235 LINE TYPE ELEMENTS, by LTJG C. E. McCreary, 2 Mar 1955. 32 p. NAM AML AE 6230.1.
Order from LC mi $3.00, ph $6.30 PB 128950

Chicago U., Ill.
STUDIES IN EXPERIMENTAL HYDRODYNAMICS APPLIED TO LARGE-SCALE METEOROLOGICAL PHENOMENA, PART 1, by Dave Fultz, Apr 1956. 231 p. AF CRC TR 56-259; Contr. AF 19(122)-160.
Order from LC mi $10.20, ph $36.30 PB 132162

Cornell U., Ithaca, N. Y.
LAMINAR BOUNDARY LAYERS ON MOVING WALLS, by S. H. Smith, Sep 1956. 52 p. AF OSR TN-56-454; Contr. AF 18(600)-1523. AD-96800.
Order from LC mi $3.60, ph $9.30 PB 130734

David Taylor Model Basin, Washington, D. C.
AN APPROXIMATE METHOD OF OBTAINING STRESS IN A PROPELLER BLADE, by William B. Morgan Oct 1954. 23 p. DTMB 919.
Order from LC mi $2.70, ph $4.80 PB 128851

David Taylor Model Basin, Washington, D. C.
DETERMINATION OF THE MOTION OF A BODY FROM MEASUREMENTS OF FLOW AHEAD OF THE BODY, by L. Landweber and M. A. Todd, Apr 1956. 35 p. DTMB 987.
Order from LC mi $3.00, ph $6.30 PB 128848

David Taylor Model Basin, Washington, D. C.
THE DYNAMICS OF A GRAVITY TOWING SYSTEM, by H. R. Reiss, July 1957. 48 p. DTMB 1040.
Order from LC mi $3.30, ph $7.80 PB 133573

David Taylor Model Basin, Washington, D. C.
SUMMARY REPORT ON THE DEVELOPMENT OF A HOT-WIRE TURBULENCE SENSING ELEMENT FOR USE IN WATER, by R. G. Stevens and A. Borden, Dec 1956. 17 p. DTMB 953.
Order from LC mi $2.40, ph $3.30 PB 130849

Hydrodynamics Lab., Calif. Inst. of Tech., Pasadena.
FLOW IN HYDRAULIC MACHINERY. FINAL REPORT, by A. J. Acosta, Aug 1956. 7 p. Report E-19-11; Contract N6onr-244-Task II.
Order from LC mi $1.80, ph $1.80 PB 128085

Hydrodynamics Lab., Calif. Inst. of Tech., Pasadena.
A NOTE ON THE LINEAR AND NON-LINEAR THEORIES FOR FULLY CAVITATED HYDROFOILS, by T. Yao-Tsu Wu, Aug 1956. 29 p. HL 21-22; Contr. N6onr-24420.
Order from LC mi $2.70, ph $4.80 PB 128773

Hydrodynamics Lab., Calif. Inst. of Tech., Pasadena.
THE RATE OF GROWTH OF VAPOR BUBBLES IN SUPERHEATED WATER, by Paul Dergarabedian, 1950 or later. 23 p. HL 21-10; Contr. N6onr-24420. AD-197796.
Order from LC mi $2.70, ph $4.80 PB 130723

Hydrodynamics Lab., Calif. Inst. of Tech., Pasadena.
WATER TUNNEL TESTS OF NACA 4412 AND WALCHNER PROFILE 7 HYDROFOILS IN NONCAVITATING AND CAVITATING FLOWS, by R. W. Kermeen, Feb 1956. 85 p. HL-47-5; Contr. Nonr-220(12). AD-99905.
Order from LC mi $4.80, ph $13.80 PB 129642

Hydrodynamics Lab., Calif. Inst. of Tech., Pasadena.
WATER TUNNEL TESTS OF THE NACA 66_1-012 HYDROFOIL IN NONCAVITATING AND CAVITATING FLOWS, by R. W. Kermeen, Feb 1956. 20 p. HL 47-7; Contr. Nonr-220(12). AD-108604.
Order from LC mi $2.40, ph $3.30 PB 128623

Illinois U., Urbana.
SERIES SOLUTION OF LAMINAR INCOMPRESSIBLE MIXING OF TWO STREAMS WITH DIFFERENT VELOCITIES, by L. G. Eldrenkamp and J. Xerikos, May 1954. 34 p. WADC TR 54-275; Contr. AF 33 (038)-21251. AD-63504.
Order from LC mi $3.00, ph $6.30 PB 130388

Institute for Fluid Dynamics and Applied Mathematics, U. of Maryland, College Park.
LOWER BOUNDS FOR ELASTICALLY SUPPORTED MEMBRANES AND PLATES, by L. E. Payne and H. F. Weinberger, Apr 1957. 20 p. AFOSR-TN-57-176-BN-96; Contr. AF 18(600)-573. AD-126471.
Order from LC mi $2.40, ph $3.30 PB 127603

Institute for Fluid Dynamics and Applied Mathematics, U. of Maryland, College Park.
ON THE STABILITY OF LAMINAR FLOW WITH THREE-DIMENSIONAL DISTURBANCES, by Gunther Jungclaus, Sep 1957. 15 p. BN-110, AF OSR TN-57-577; Contr. AF 18(600)-893. AD-136565.
Order from LC mi $2.40, ph $3.30 PB 130732

Institute for Fluid Dynamics and Applied Mathematics, U. of Maryland, College Park.
THEORY OF BLUFF BODIES, by Isao Imai, June 1957. 91 p. BN 104; Contr. Nonr 595-(00) NR 062-196. AD-128412.
Order from LC mi $5.40, ph $15.30 PB 134440

Institute of Mathematical Sciences, New York U., N. Y.
STATISTICAL MECHANICS OF STATIONARY HOMOGENEOUS HYDROMAGNETIC TURBULENCE, by Robert H. Kraichnan, Apr 1957. 45 p. Research Report MH-7; AF CRC TN 57-468; Contr. AF 19 (604)-2138. AD-117224.
Order from LC mi $3.30, ph $7.80 PB 128227

Naval Boiler and Turbine Lab., Philadelphia, Pa.
INVESTIGATION OF ELBOW TYPE FLOW METER, 7 May 1956. 17 p. Test Report I-184.
Order from LC mi $2.40, ph $3.30 PB 130696

Naval Ordnance Test Station, China Lake, Calif.
ROTATIONAL NONVISCOUS FLOWS IN TWO DIMENSIONS, by R. J. Dickson, 17 Mar 1955. 63 p. NOTS 1063; NAVORD 3460.
Order from LC mi $3.90, ph $10.80 PB 130041

Naval Ordnance Test Station, China Lake, Calif.
VERTICAL BROADSIDE WATER IMPACT OF CIRCULAR CYLINDER: GROWING CIRCULAR-ARC APPROXIMATION, by A. G. Fabula and I. D. Ruggles, 12 Oct 1955. 43 p. NOTS 1268; NAVORD 4947.
Order from LC mi $3.30, ph $7.80 PB 130043

Rensselaer Polytechnic Inst., Troy, N. Y.
APPLICATIONS BASED ON VARIATIONAL PRINCIPLES FOR REAL FLUIDS, by Paul Lieber and Koon-Sang Wan, Sep 1957. 38 p. AF OSR TN 57-481; Contr. AF 18(600)-1704. AD-136473.
Order from LC mi $3.00, ph $6.30 PB 129996

Rensselaer Polytechnic Inst., Troy, N. Y.
A PRINCIPLE OF VIRTUAL DISPLACEMENTS FOR REAL FLUIDS, by Paul Lieber and Koon-Sang Wan, July 1957. 24 p. AF OSR TN 57-476; Contr. AF 18 (600)-1704. AD-136468.
Order from LC mi $2.70, ph $4.80 PB 130002

Rensselaer Polytechnic Inst., Troy, N. Y.
A STUDY LEADING TO THE BOUNDARY CONDITIONS AT A FREE SURFACE JOINING AN IRROTATIONAL-ROTATIONAL FLOW REGIME, by Paul Lieber and Koon-Sang Wan, Sep 1957. 12 p. AF OSR TN 57-480; Contr. AF 18(600)-1704. AD-136472.
Order from LC mi $2.40, ph $3.30 PB 129997

Rensselaer Polytechnic Inst., Troy, N. Y.
TWO DIMENSIONAL, STEADY, CAVITY FLOW ABOUT SLENDER BODIES IN CHANNELS OF FINITE BREADTH, by Hirsh Cohen and Robert Gilbert, 15 Sep 1956. 17 p. Contr. Nonr-591(08).
Order from LC mi $2.40, ph $3.30 PB 128393

Rensselaer Polytechnic Inst., Troy, N. Y.
WALL EFFECTS ON SUPERCAVITATING FLOW PAST FOILS, by Hirsch Cohen and Yih-O Tee, 30 Oct 1956. 19 p. Contr. Nonr-591(08).
Order from LC mi $2.40, ph $3.30 PB 130576

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
A HYDRODYNAMIC STUDY OF SMALL DIAMETER ORIFICES IN THIN PLATES, by H. L. Herman and M. V. Ashley, Aug 1957. 23 p. PATR 2450.
Order from LC mi $2.70, ph $4.80 PB 130711

Statics, Kinematics, and Kinetics

Columbia U., New York.
THERMO-ELECTRIC STRESSES AND DEFLECTIONS IN THIN-WALLED BEAMS, by B. A. Boley and I. S. Tolins, Dec 1954. 67 p. WADC TR-54-426; Contr. AF 33(616)-2071. AD-97342.
Order from LC mi $3.90, ph $10.80 PB 133918

Gebelein, Hans, Bamberg (Germany).
STATISTICAL STUDIES ON THE TURBULENT STATE OF MOTION—PART I: KINEMATICS, by Hans Gebelein and Erik Svenson, Mar 1957. 41 p. AF OSR TN 57-278; Contr. AF 61 (514)-925. AD-126539.
Order from LC mi $3.30, ph $7.80 PB 128222

Illinois Inst. of Tech., Chicago, Ill.
A PHOTOELASTIC STUDY OF DYNAMIC STRESSES IN STRUCTURES, by M. M. Frocht and P. D. Flynn, 30 Nov 1954. 87 p. Final Report. Contr. NOy-28149.
Order from LC mi $4.80, ph $13.80 PB 128189

Massachusetts Inst. of Tech., Cambridge.
ELASTIC-PLASTIC TORSION OF SHARPLY NOTCHED BARS, by J. A. H. Hult, July 1957. 9 p. AF OSR TN-57-449; Contr. AF 18(600)-957. AD-136439.
Order from LC mi $1.80, ph $1.80 PB 129553

Office of Ordnance Research, Durham, N. C.
ELASTICITY AND PLASTICITY, by R. M. Davies and W. A. Nash, 7 Feb 1957. 57 p.
Order from LC mi $3.60, ph $9.30 PB 130026

Second Conference on the Mechanics of Elasticity and Plasticity.

Pennsylvania State U., University Park.
ELASTOPLASTIC ANALYSIS OF ROTATING ANNULUS BY A PERTURBATION METHOD, by M. J. Owen, Oct 1956. 21 p. Technical Report No. 2; Contr. DA-36-061-ORD-505.
Order from LC mi $2.70, ph $4.80 PB 128008

Picatinny Arsenal, Dover, N. J.
ESTABLISHING A RELATIONSHIP BETWEEN DYNAMIC AND NON-PERIODIC VISCOELASTIC BEHAVIOR, by Stephen Strella, July 1957. 18 p. PATR 2427.
Order from LC mi $2.40, ph $3.30 PB 128980

METALLURGY

Aeronautical Materials Lab., Naval Air Material Center, Philadelphia, Pa.
EVALUATION OF "APMP" GRADE-257 WITH RESPECT TO CREEP-RUPTURE AND TENSILE PROPERTIES AT 600°F and 800° F ROOM TEMPERATURE TENSILE PROPERTIES AND STREE CORROSION SUSCEPTABILITY, by W. F. Emmons, 19 July 1955. EAML NAM AE 4139.1, Pt. 2.
Order from LC mi $2.70, ph $4.80 PB 130955

American Electro Metal Corp., Yonkers, N. Y.
AN INVESTIGATION OF THE ALLOYS OF ALUMINUM AND MOLYBDENUM, by R. L. Wachtell, Mar 1951. 51 p. AFTR-6601, Pt. 1; Contr. AF 33(038)-10716. AD-121329.
Order from LC mi $3.60, ph $9.30 PB 129614

American Electro Metal Corp., Yonkers, N. Y.
AN INVESTIGATION OF THE ALLOYS OF ALUMINUM AND MOLYBDENUM, by R. L. Wachtell, Oct

1952. 61 p. AF TR-6601, Part 2; Contr. AF 33(038)-10716. AD-18685.
Order from LC mi $3.90, ph $10.80 PB 129615

Armour Research Foundation, Chicago, Ill.
DEVELOPMENT OF TITANIUM-BASE ALLOYS OF HIGH STRENGTH AND TOUGHNESS, by C. R. Lillie and D. J. McPherson, 3 Oct 1956. 85 p. WAL 401/203-7, Contr. DA-11-022-ORD-1428.
Order from LC mi $4.80, ph $13.80 PB 129897

Armour Research Foundation, Chicago, Ill.
RESEARCH ON PHASE RELATIONSHIPS IN MAGNESIUM ALLOYS, by Albert S. Yamamoto, David W. Levinson, and William Rostoker, 1 Nov 1955. 101 p. WADC TN 55-649; Contr. AF 33(616)-2571. AD-89697.
Order from LC mi $5.70, ph $16.80 PB 133833

Armour Research Foundation, Chicago, Ill.
SOLID-SOLUTION HARDENING OF ALPHA AND BETA TITANIUM, by J. J. Rausch, 19 Aug 1953 to 19 Aug 1955. 96 p. WAL 41/204-5; Contr. DA-11-02-ORD-1439.
Order from LC mi $5.40, ph $15.30 PB 129366

Battelle Memorial Inst., Columbus, Ohio.
THE EFFECT OF HYDROGEN ON THE MECHANICAL PROPERTIES OF TITANIUM-ALUMINUM ALLOYS, by L. W. Berger, D. N. Williams, 1 Mar 1957. 22 p. WAL 401/79-33; Contr. DA 33-019-505-ORD-7.
Order from LC mi $2.70, ph $4.80 PB 129896

Battelle Memorial Inst., Columbus, Ohio.
THE EFFECTS OF INTERSTITIAL ELEMENTS ON WELDS IN ALPHA-BETA TITANIUM ALLOYS, by W. J. Lewis and M. L. Kohn, 31 Mar 1956. 87 p. WAL 401/97-35; Contr. DA-33-019-ORD-1524.
Order from LC mi $4.80, ph $13.80 PB 129436

Battelle Memorial Inst., Columbus, Ohio.
PRECIPITATION HARDENING AND EMBRITTLEMENT OF HIGH-STRENGTH TITANIUM ALLOYS, by H. A. Robinson, M. W. Parris, et al. Dec 1954. 82 p. WADC TR-54-355; Contr. AF 33(616)-445.
Order from LC mi $4.80, ph $13.80 PB 130869

California U., Berkeley.
CREEP BUCKLING OF COLUMNS, by D. Rosenthal and D. Hasanovitsh, Sep 1954. 81 p. WADC TR 54-402; Contr. AF 33(616)-379. AD-51800.
Order from LC mi $4.80, ph $13.80 PB 130405

Columbia U., New York.
A FUNDAMENTAL STUDY IN THE PRINCIPLES GOVERNING, SEIZING, AND GALLING IN METALS, by E. S. Machlin, W. R. Yankee, May 1954. 43 p. WADC TR-54-195; Contr. AF 18(600)-75. AD-49028.
Order from LC mi $3.30, ph $7.80 PB 130393

Detroit Arsenal, Center Line, Mich.
EVALUATION OF SPOT WELDS THROUGH PRIMERS AND SEALERS, by B. A. Schevo, 27 Aug 1956. 51 p. R 3603. AD-108484.
Order from LC mi $3.60, ph $9.30 PB 133765

Detroit Arsenal, Center Line, Mich.
MICRORADIOGRAPHY, by Fred Seppi, 11 May 1956. 16 p. R 3598. AD-94293.
Order from LC mi $2.40, ph $3.30 PB 133764

Engineering Research Inst., U. of Michigan, Ann Arbor.
THE EFFECT OF PROCESSING VARIABLES AND THE INFLUENCE OF VACUUM MELTING UPON THE STRESS-RUPTURE PROPERTIES OF CAST NICKEL BASE ALLOYS, by C. M. Hammond, R. A. Flinn, Sep 1956. 48 p. Contr. NOas 56-359d; ERI Proj. 2462. AD-106902.
Order from LC mi $3.30, ph $7.80 PB 130631

Fairchild Engine and Airplane Corp., Oak Ridge, Tenn.
ALUMINA, by Helen M. Lee, 27 June 1950. 101 p. NEPA-1262-EMR-67. AD-260.
Order from LC mi $5.70, ph $16.80 PB 130803

Harnischfeger Corp., Milwaukee, Wisc.
DEVELOPMENT OF COATED ARC WELDING ELECTRODES WHICH SHALL PRODUCE WELDED JOINTS HEAT TREATABLE TO STRENGTH LEVELS OF 220,000 TO 240,000 AND 260,000 TO 280,000 POUNDS PER SQUARE INCH, by D. C. Smith, 12 July 1956. 44 p. Contr. NOas-54-689-C. AD-100879.
Order from LC mi $3.30, ph $7.80 PB 128126

Horizons, Inc., Cleveland, Ohio.
INVESTIGATION OF A NEW METHOD FOR THE DETERMINATION OF THE COEFFICIENTS OF SURFACE DIFFUSION OF METALS, by S. J. Strindberg and F. C. Wagner, 22 Sep 1953. 11 p. Contr. AF 18(600)-644. AD-18056.
Order from LC mi $2.40, ph $3.30 PB 130019

Imperial Coll. of Science and Tech., London (Gt. Brit.).
RESEARCH ON THE CREEP OF METALS, by E. N. da C. Andrade, Jan 1958. 24 p. 1st Annual Report; AF OSR TN 58-227; Contr. AF 61(514)-1177. AD-154129.
Order from LC mi $2.70, ph $4.80 PB 133680

Johns Hopkins U., Baltimore, Md.
EFFECT OF DISLOCATIONS OF GRAIN BOUNDARIES UPON THE DYNAMIC FORMATION OF SLIP BANDS IN ALUMINUM, by Donald F. Haskell and Robert B. Pond, May 1957. 54 p. AFOSR TN-57-223; Contr. AF 18(600)-1587. AD-126521.
Order from LC mi $3.60, ph $9.30 PB 128335

Massachusetts Inst. of Tech., Cambridge.
AGING IN COMPLEX COMMERCIAL NICKEL-CHROMIUM ALLOYS HARDENED WITH TITANIUM AND ALUMINUM, by Robert F. Wilde and Nicholas J. Grant, Apr 1956. 31 p. Contr. NOas 56-110-1d.
Order from LC mi $3.00, ph $6.30 PB 130664

Massachusetts Inst. of Tech., Cambridge.
FATIGUE CRACK PROPAGATION IN TORSION, by J. A. H. Hult, July 1957. 16 p. AF OSR TN-57-448; Contr. AF 18(600)-957. AD-136438.
Order from LC mi $2.40, ph $3.30 PB 129552

Massachusetts Inst. of Tech. Cambridge, Mass.
PERIODIC STATUS REPORT NO. 17, by F. B. Cuff, Jr., and P. E. Price, et al. 1 Nov 1956. 5 p. Contr. Nonr-1841(28).
Order from LC mi $1.80, ph $1.80 PB 129878

Contents:
I. Sub-Structures Studies.
II. The Iron-Chromium System.
III. Nature of Deformation and Fracture in 25-0 Aluminum up to the melting point.

Massachusetts Inst. of Tech., Cambridge.
RESEARCH ON CREEP STRUCTURE CHARACTERISTICS OF TITANIUM AND ITS ALLOYS, by J. Lunsford and N. J. Grant, 1954 or later. 35 p. Final Report. WAL 401/205-6; Contr. DA 19-020-ORD-2787.
Order from LC mi $3.00, ph $6.30 PB 128380

Massachusetts Inst. of Tech., Cambridge.
A THEORY OF CATASTROPHIC SHEAR FRACTURE IN DUCTILE MATERIALS, by Frank A. McClintock, July 1957. 29 p. AFOSR TN-57-450; Contr. AF 18(600)-957. AD-136440.
Order from LC mi $2.70, ph $4.80 PB 129554

Metals Research Lab., Carnegie Inst. of Tech., Pittsburgh, Pa.
MORPHOLOGICAL CHARACTERISTICS OF MARTENSITIC STRUCTURES, by E. E. Lahteenkorva, and R. F. Bunshah, Sep 1954. 42 p. WADC TR 54-330; Contr. AF 33(616)-330. AD-61304.
Order from LC mi $3.30, ph $7.80 PB 130380

Michigan U., Ann Arbor.
APPLICATION OF THE POLAROGRAPH TO ANALYSIS OF TITANIUM-BASE ALLOYS, by Philip J. Elving and Charles L. Rulfs, Mar 1955. 41 p. WADC TR 53-455. Contr. AF 18(600)-379. AD-66445.
Order from LC mi $3.30, ph $7.80 PB 130392

Michigan U., Ann Arbor.
HIGH-TEMPERATURE PROPERTIES OF FOUR LOW-ALLOY STEELS FOR JET-ENGINE TURBINE WHEELS. 121 p. WADC 53-277, Part II; Contr. AF 33(038)-13496. AD-64926.
Order from LC mi $6.30, ph $19.80 PB 133856

Michigan U., Ann Arbor.
AN INVESTIGATION OF INTERGRANULAR OXIDATION IN STAINLESS STEEL, by M. J. Sinnot and C. A. Siebert, Oct 1954. 39 p. Report 2110-4-p; Contr. AF 33(616)-353. AD-46901.
Order from LC mi $3.00, ph $6.30 PB 130018

Minerals Research Lab., U. of Calif., Berkeley.
THE SPECTRUM OF ACTIVATION ENERGIES FOR CREEP, by John E. Dorn, 1 Sep 1956. 50 p. IER 22-47; Contract N7-ONR-295, T. O. 2.
Order from LC mi $3.30, ph $7.80 PB 128377

Minerals Research Lab., U. of Calif., Berkeley.
VISCOUS CREEP OF ALUMINUM NEAR ITS MELTING TEMPERATURE, by James G. Harper and John E. Dorn, 1 Dec 1956. 36 p. 48th Technical Report Series 22, Issue 48; Contr. N7-onr-295, T. O. 2.
Order from LC mi $3.00, ph $6.30 PB 130649

Minnesota U., Minneapolis.
PRELIMINARY INVESTIGATION OF THE EMANATION FROM COLD-WORKED METALS, by F. H. Vitovel, July 1954. 31 p. WADC TR-54-200; Contr. AF 33(038)-20840. AD-41227.
Order from LC mi $3.00, ph $6.30 PB 130367

Naval Ordnance Lab., White Oak, Md.
AN EVALUATION OF IMAGE TECHNIQUES IN THE ULTRASONIC INSPECTION OF MATERIAL, by W. R. Turner, 2 July 1956. 99 p. NAVORD 4090.
Order from LC mi $5.40, ph $15.30 PB 130049

Naval Research Lab., Washington, D. C.
PRELIMINARY STUDIES OF SPECIAL ALUMINUM ARMOR FORGINGS. THIRTEENTH PARTIAL REPORT ON LIGHT ARMOR, by Harold Bernstein, 1 Apr 1950. 24 p. NRL 3670.
Order from LC mi $2.70, ph $4.80 PB 129419

Naval Research Lab., Washington, D. C.
THE USE OF HYPERATMOSPHERIC PRESSURES IN THE FEEDING OF STEEL CASTINGS, by E. T. Myskowski, July 1957. 20 p. NRL M-3148.
Order from LC mi $2.40, ph $3.30 PB 129167

New York U. Coll. of Engineering, N. Y.
BETA PLASTICITY IN TITANIUM-BASE ALLOYS, by P. A. Albert, 15 Oct 1954. 69 p. WAL 401/147-21; Contr. DA-30-069-ORD-869.
Order from LC mi $3.90, ph $10.80 PB 130697

Ordnance Materials Research Office, Watertown, Mass.
A METALLURGICAL SLIDE RULE FOR DETERMINING MAGNETIC PROPERTIES OF 3rd TRANSITION ALLOYS, by R. J. Weiss and K. J. Tauer, Dec 1955. 4 p. MRL-19.
Order from LC mi $2.70, ph $4.80 PB 128937

Ordnance Materials Research Office, Watertown, Mass.
SHORT-RANGE ORDER IN PARTIALLY ORDERED $Cu_3 Au$, by A. Paskin and R. J. Weiss, Oct 1956. 4 p. Report No. 23.
Order from LC mi $1.80, ph $1.80 PB 128536

Pennsylvania State U., University Park.
DETERMINATION OF YIELD STRESS COMPONENTS IN COMBINED STRESS EXPERIMENTS, by L. W. Hu, Nov 1956. 14 p. Technical Report No. 3. Contract DA-36-061-ORD-505.
Order from LC mi $2.40, ph $3.30 PB 128012

Rensselaer Polytechnic Inst., Troy, N. Y.
CREEP BEHAVIOR OF MAGNESIUM AND MAGNESIUM ALLOY SINGLE CRYSTALS AT ROOM AND ELEVATED TEMPERATURES, by W. F. Sheely and R. R. Nash, 31 Aug 1955. 111 p. Contr. DA30-115-ORD-549.
Order from LC mi $6.00, ph $18.30 PB 128772

Period 1 July 1954 to 30 June 1956.

Rock Island Arsenal Lab., Ill.
ABRASION RESISTANCE OF PHOSPHATE COATINGS DETERMINED RADIOMETRICALLY, by Richard C. Wiquist, 27 June 1956. 22 p. RIAL 56-1892.
Order from LC mi $2.70, ph $4.80 PB 127910

Rock Island Arsenal Lab., Ill.
THE INFLUENCE OF GRIT BLASTING ON THE RATE OF COATING FORMATION IN ROOM-TEMPERATURE PHOSPHATIZING SOLUTION, by J. Knanishu, 14 Feb 1947. 26 p. RIALR 57-383.
Order from LC mi $2.70, ph $4.80 PB 130100

Rock Island Arsenal Lab., Ill.
INVESTIGATION OF ALUMINUM BASE BEARING MATERIALS FOR FIELD ARTILLERY APPLICATIONS, by J. C. Hanson, 12 Apr 1957. 19 p. RIALR-57-944.
Order from LC mi $2.40, ph $3.30 PB 130094

Rock Island Arsenal Lab., Ill.
A STUDY OF PHOSPHATE TREATMENT OF METALS, by L. O. Gilbert, 25 May 1956. 66 p. RIALR 56-2995.
Order from LC mi $3.90, ph $10.80 PB 130013

Southern Research Inst., Birmingham, Ala.
METALLURGICAL TESTING OF BORON STEELS, by C. L. Dotson and J. R. Kattus, Oct 1954. 248 p. WADC TR 53-439; Contr. AF 33(616)-468. AD-56078.
Order from LC mi $11.10, ph $37.80 PB 129526

Stevens Inst., of Tech., Hoboken, N. J.
THE INVESTIGATION OF POROUS MEDIA PREPARED FROM SPHERICAL METAL POWDER PARTICLES, by F. W. Heck and F. P. Ferriss, Mar 1955. 261 p. WADC TR 54-183; Contr. AF 33(616)-396.
Order from LC mi $11.10, ph $41.10 PB 133576

Syracuse U., N. Y.
EFFECTS OF HYDROGEN ON LOW-CYCLE FATIGUE OF HIGH STRENGTH STEELS, by George Sachs, et al. Jan 1957. 47 p. WAL 313/48; Contr. DAI-30-115-505-ord-(p)-613.
Order from LC mi $3.30, ph $7.80 PB 133937

Titanium Metals Corp. of America, Henderson, Nev.
RESEARCH STUDY ON THE EFFECTS OF IMPURITIES AND MANUFACTURING VARIABLES OF TITANIUM ALLOYS, by A. B. Smith and D. L. Day, Apr 1956. 23 p. WAL 401/184-3; Contr. DA-30-069-ORD-1157.
Order from LC mi $2.70, ph $4.80 PB 130712

Universal-Cyclops Steel Corp., Bridgeville, Pa.
COBAL-BASE ALLOY AND MELTING PRACTICE DEVELOPMENT PROGRAM. FINAL REPORT, by R. W. Koffler, W. J. Pennington, etc. 17 June 1956. 69 p. NOas; Contr. 55-517-C.
Order from LC mi $3.90, ph $10.80 PB 128510

Utah U., Salt Lake City.
EFFECTS OF OXYGEN UPON THE OXIDATION RATE OF NICKEL, by J. P. Bour and W. Martin, 10 Nov 1955. 40 p. WAL 370/18-8; Contr. DA-04-495-ORD-237.
Order from LC mi $3.00, ph $6.30 PB 130958

Watertown Arsenal Lab., Mass.
CASES IN METALS, ESCAPE OF HYDROGEN FROM PLATES OF PLAIN CARBON STEELS, by M. Goldman 5 Oct 1951. 55 p. WAL 833/5.
Order from LC mi $3.60, ph $9.30 PB 127556

Watertown Arsenal Lab., Mass.
A COMPARISON OF THE MECHANICAL PROPERTIES OF COMMERCIALLY PURE TITANIUM WITH THOSE OF AN 0.80% CARBON-TITANIUM ALLOY TOGETHER WITH SOME OBSERVATIONS OF MICROSTRUCTURE, by M. R. Norton, and W. P. Clancy. 12 June 1951. 29 p. WAL 401/27.
Order from LC mi $2.70, ph $4.80 PB 127572

Watertown Arsenal Lab., Mass.
CURSORY ANALYSIS AND EXPERIMENTS FOR LOAD STRAINS IN THE 81 MM TITANIUM BASE PLATE T-26E2 No. 4, by F. B. Hyland and J. H. Flanagan, 19 Jan 1955. 13 p. WAL 893/171.
Order from LC mi $2.70, ph $4.80 PB 127565

Watertown Arsenal Lab., Mass.
DUCTILITY AND STRAIN HARDENING OF PURE METALS, by F. R. Larson and E. B. Kula, Nov 1956. 39 p. WAL 805/33.
Order from LC mi $3.00, ph $6.30 PB 128277

Watertown Arsenal Lab., Mass.
EFFECT OF GRAIN SIZE UPON TEMPER BRITTLENESS, by L. D. Jaffe and F. L. Carr, 18 Mar 1952. 17 p. Tirteenth Partial Report; WAL 801/1-3.
Order from LC mi $2.40, ph $3.30 PB 127574

Watertown Arsenal Lab., Mass.
EFFECT OF HARDNESS ON TEMPER BRITTLENESS, by D. C. Buffum, and L. D. Jaffe, 17 Jan 1951. 8 p. Seventeenth Partial Report. WAL 801/1-7.
Order from LC mi $1.80, ph $1.80 PB 127595

Watertown Arsenal Lab., Mass.
EFFECT OF HARDNESS ON THE LEVEL OF THE IMPACT ENERGY CURVE FOR TEMPER BRITTLE AND EMBRITTLED STEEL, by F. L. Carr and M. Goldman, 29 Jan 1952. 11 p. Twentieth Partial Report. WAL 801/1-10.
Order from LC mi $2.40, ph $3.30 PB 127576

Watertown Arsenal Lab., Mass.
EFFECT OF MICROSTRUCTURE UPON TEMPER BRITTLENESS, by D. C. Buffum and L. D. Jaffe, 6 May 1952. 9 p. Nineteenth Partial Report. WAL 801/1-9.
Order from LC mi $1.80, ph $1.80 PB 127577

Watertown Arsenal Lab., Mass.
THE EFFECT OF VARIOUS HEAT TREATING CYCLES ON TEMPER BRITTLENESS, by L. D. Jaffe and D. C. Buffum, 1 Feb 1952. 20 p. Eighteenth Partial Report. WAL 801/1-8.
Order from LC mi $2.40, ph $3.30 PB 127575

Watertown Arsenal Lab., Mass.
EFFECT OF WELDING ON THE NOTCH TOUGHNESS OF A CASUALTY MATERIAL C280MM CARRIAGE NO. 60 REAR FLOAT BOLSTER, by W. P. Hatch, Jr. and C. E. Hartblower, 20 Aug 1956. 21 p. WAL 401/220-1.
Order from LC mi $2.70, ph $4.80 PB 128279

Watertown Arsenal Lab., Mass.
HEAT TREATMENT AND ALLOYING OF TITANIUM, by L. D. Jaffee, 23 June 1953. 43 p. WAL 401/191.
Order from LC mi $3.30, ph $7.80 PB 128005

Watertown Arsenal Lab., Mass.
INFLUENCE OF MASS ON MECHANICAL PROPERTIES OF CAST STEEL, by John F. Wallace, 28 Feb 1949. 58 p. WAL 311/17.
Order from LC mi $3.60, ph $9.30 PB 127569

Watertown Arsenal Lab., Mass.
INFLUENCE OF VARIOUS INOCULANTS AND TREATMENTS ON STRUCTURE OF NODULAR CAST IRON, by R. K. Cleworth, and J. F. Wallace, 26 Apr 1950. 34 p. WAL 331.1/10.
Order from LC mi $3.00, ph $6.30 PB 127570

Watertown Arsenal Lab., Mass.
ISOTHERMAL TEMPER EMBRITTLEMENT OF SOE 3140 STEEL, by F. L. Carr and N. Goldman, 27 May 1952. 18 p. Twenty-first Partial Report; WAL 801/1-11.
Order from LC mi $2.40, ph $3.30 PB 127578

Watertown Arsenal Lab., Mass.
LONG-TIME TEMPER EMBRITTLEMENT, by L. D. Jaffee and D. C. Buffum, 9 Sep 1953. 12 p. Twenty-Second Partial Report; WALR 801/1-12.
Order from LC mi $2.40, ph $3.30 PB 127579

Watertown Arsenal Lab., Mass.
METALLOGRAPHIC METHODS: POLISHING PROCEDURE FOR METALLOGRAPHIC EXAMINATION OF ALUMINUM AND ITS ALLOYS, by Everett L. Reed and Harold G. Carter, 18 Apr 1951. 33 p. WAL 130/27.
Order from LC mi $3.00, ph $6.30 PB 128197

Watertown Arsenal Lab., Mass.
PRODUCTION OF TITANIUM IN AN ARC FURNACE, by L. D. Jaffe and R. K. Pitler, 30 June 1950. 21 p. WAL 401/25.
Order from LC mi $2.70, ph $4.80 PB 133936

Watertown Arsenal Lab., Mass.
RETROGRESSION OF TEMPER BRITTLENESS, by L. D. Jaffe and D. C. Fuffum, 17 Apr 1950. 11 p. WAL 801/1-6.
Order from LC mi $2.40, ph $3.30 PB 127548

Watertown Arsenal Lab., Mass.
SUPERCOOLING CHARPY SPECIMENS FOR THE STUDY OF TEMPER BRITTLENESS. (FIFTEENTH PARTIAL REPORT ON TEMPER BRITTLENESS), by D. C. Buffum and F. L. Carr, 1 Aug 1950. 9 p. WAL 801/1-5.
Order from LC mi $1.80, ph $1.80 PB 128239

Watertown Arsenal Lab., Mass.
TEMPER BRITTLENESS OF STEELS, by L. D. Jaffe, 23 Sep 1949. 17 p. 14th partial report; WAL 801/1-4.
Order from LC mi $2.40, ph $3.30 PB 128953

Watertown Arsenal Lab., Mass.
A TIME-TEMPERATURE RELATIONSHIP FOR RECRYSTALLIZATION AND GRAIN GROWTH, by F. R. Larson and J. Salmas, 27 Apr 1953. 57 p. WALR 805/30.
Order from LC mi $3.60, ph $9.30 PB 128094

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
RATES OF MARTENSITE REACTIONS IN METALS, by E. E. Lahteenkorva and R. F. Bunshah, Sep 1954. 39 p. WADC TR 54-331. AD-58598.
Order from LC mi $3.00, ph $6.30 PB 130381

Zapffe, Carl A., Baltimore, Md.
GAS-METAL SYSTEMS by C. A. Zapffe and M. M. Eckstein, 30 Sep 1953. 17 p. Contr. N6onr-25802. AD-28908.
Order from LC mi $2.40, ph $3.30 PB 128600

Light Metals

Bureau of Mines, Washington, D. C.
ELECTROREFINING TITANIUM METAL, by J. R. Nettle, and D. H. Baker, Jr. and others. Feb 1957. 46 p. RI 5315.
Order from LC mi $3.30, ph $7.80 PB 129372

Lubrication Lab., Mass. Inst. of Tech., Cambridge.
THE FRICTIONAL PROPERTIES OF TITANIUM AT HIGH TEMPERATURES, ANNUAL REPORT, by E. Rabinowicz and E. P. Kingsbury, 26 p. Contr. DA-19-202-ORD-3471.
Order from LC mi $2.70, ph $4.80 PB 128167

Period 1 July 1955-30 June 1956.

Naval Ordnance Test Station, China Lake, Calif.
PROGRESS IN CASTING OF TITANIUM AT U. S. NAVAL ORDNANCE TEST STATION FISCAL YEAR 1954, by J. B. LaBosky and D. Veronda, 13 May 1955. 21 p. NOTS-119; NAVORD 3495.
Order from LC mi $2.70, ph $4.80 PB 130042

Watertown Arsenal, Mass.
MINUTES OF FOURTH MEETING OF PANEL ON METHODS OF ANALYSIS OF THE METALLURGICAL ADVISORY COMMITTEE ON TITANIUM, AT HOTEL NEW YORKER, 24-25 May 1956. 13 p.
Order from LC mi $2.40, ph $3.30 PB 128208

Watertown Arsenal Lab., Mass.
THERMODYNAMIC ASPECTS OF THE REDUCTION OF TITANIUM TETRACHLORIDE WITH HYDROGEN (SECOND PARTIAL REPORT ON PRODUCTION OF TITANIUM IN AN ARC FURNACE), by T. A. Ferraro, Jr. and F. Marmo, 26 May 1952. 28 p. WALR 401/25-1.
Order from LC mi $2.70, ph $4.80 PB 127571

Weatherhead Co., Cleveland, Ohio.
DEVELOPMENT OF A METHOD FOR PRODUCING "AN" OR "MS" FITTINGS FROM TITANIUM BY THE CORED FORGING PROCESS FINAL REPORT, by William S. Allan and Steve Kish, 24 June 1957. 91 p. Weatherhead Engineering Report 1017; Contr. NOAS 55-959-F.
Order from LC mi $5.40, ph $15.30 PB 129380

Nonferrous (except Light) Metals

Westinghouse Electric Corp., East Pittsburgh, Pa.
ROLLING OF HIGH-ALUMINUM IRON ALLOYS, by K. Foster and D. Pavlovic, Dec 1955. 24 p. WADC TN 56-29; Contr. AF 33(616)-309.
Order from LC mi $2.70, ph $4.80 PB 130932

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
EFFECT OF STRAIN RATE ON THE STRENGTH PROPERTIES OF SINGLE AND MULTIPLE RIVETED LAP AND BUTT JOINTS, by Richard F. Klinger, Feb 1955. 13 p. WADC TR-54-122. AD-67338.
Order from LC mi $2.40, ph $3.30 PB 130351

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
PROPERTIES OF XA78S ALUMINUM ALLOY, SHEET, PLATE AND EXTRUSIONS, by H. W. Zoeller and R. E. Wittman, Feb 1956. 111 p. WADC TR 54-119. AD-91224.
Order from LC mi $6.00, ph $18.30 PB 130350

Structural Metallurgy and Corrosion

Alabama U., University.
INTERCRYSTALLINE CORROSION OF METALS IN STEAM BOILERS, by P. A. Akol'zin and G. R. Liberman, Oct 1957. 203 p. photos. STS 25 8; Navships T-630.
Order from LC mi $9.30, ph $31.80 PB 133871

Translation by Lloyd G. Robbins of article in Izdatel'stvo Kommunal 'nogo Khozaistva RSFSR (Communal Economy Publishing House of the Russian Soviet Federated Socialist Republic) Moscow, 1955, entitled Mezhkristallitnaya korroziya metalla parovykh kotlov.

Battelle Memorial Inst., Columbus, Ohio.
RELATIONSHIP BETWEEN ISOTHERMAL AND ANISOTHERMAL NUCLEATION CHARACTERISTICS OF AUSTENITE DECOMPOSTION PRODUCTS, by C. R. Simcoe, A. R. Elsea and others. Sep 1954. 34 p. WADC TR-54-303; Rept on Contract AF 33(616)-2025. AD-55199.
Order from LC mi $3.00, ph $6.30 PB 130378

Hallam R. M., Co., Inc.
DEVELOPMENT OF TECHNIQUES FOR EVALUATION OF VCI MATERIALS, by Kenneth W. Sherk and J. C. Roberts, 10 Apr 1956. 33 p. SA TR 20-2308; Contr. DAI 19-059-504-ord(P)-2231. AD-98349.
Order from LC mi $3.00, ph $6.30 PB 133891

Final Narrative Report.

Institute for the Study of Rate Processes Utah U., Salt Lake City.
CORROSION OF COPPER IN SULFURIC ACID, by Neldon L. Jansen and Milton E. Wadsworth, 16 July 1956. 58 p. TR-18; Contr. N7-ONR-45103.
Order from LC mi $3.60, ph $9.30 PB 127553

Little Arthur B., Cambridge, Mass.
FINAL REPORT ON CORROSION INHIBITING MATERIALS AND METHODS FOR MAGNESIUM ALLOYS, 22 Apr 1955. 30 p. Contr. NOAS 55-173-c; HO Mics. 16659.
Order from LC mi $2.70, ph $4.80 PB 130020

Material Lab., New York Naval Shipyard, Brooklyn.
EXTENT OF SORPTION BY RUBBER PROPELLER SHAFT COVERING IMMERSED IN WATER AND SEA WATER UTILIZING RADIOISOTOPE TRACER TECHNIQUES, by N. Michael and B. L. Gilbert, Mar 1956. 26 p. AD-109281. Lab. Proj. 5319-15.
Order from LC mi $2.70, ph $4.80 PB 133621

Naval Gun Factory, Washington, D. C.
HYDROGEN EMBRITTLEMENT OF PHOSPHATE-COATED PARTS (SUSTAINED STATIC LOADING OF V-NOTCHED FS 4340 STEEL), by T. J. Capello, 16 July 1956. 12 p. Technical Report No. NGF-T-35-56; NAVORD 5183.
Order from LC mi $2.40, ph $3.30 PB 128215

Naval Ordnance Test Station, China Lake, Calif.
STRESS-CORROSION CRACKING OF STEEL IN MOLTEN ZINC, by W. O. Wetmore and C. C. Woolsey, Jr., 15 Nov. 1948. 15 p. NOTS TM-170; NAVORD 1050.
Order from LC mi $2.40, ph $3.30 PB 129644

Rock Island Arsenal Lab., Ill.
INFRARED ABSORPTION SPECTRA OF PETRALATUM TYPE CORROSION PRESERVATIVES, by R. R. Freeman and L. H. Wagner, 27 Apr 1956. 28 p. RIAL 56-1175.
Order from LC mi $2.70, ph $7.50 PB 128415

NUCLEAR PHYSICS AND NUCLEAR CHEMISTRY

Naval Research Lab., Washington, D. C.
THE ELECTROLYTIC SEPARATION OF LITHIUM ISOTOPES FROM MOLTER SALT, by J. I. Hoover and G. E. Holloway, 2 Nov 1951. 8 p. NRL 3997.
Order from LC mi $1.80, ph $1.80 PB 129427

Stanford U., Calif.
ELECTROMAGNETIC STRUCTURE OF THE NEUTRON, by L. I. Schiff, Feb 1958. 16 p. Stanford Report 545-25; AF OSR TN 58-123; TR 25; Contr. AF 18(600)-545.
Order from LC mi $2.40, ph $3.30 PB 133800

Elementary Particles

Boston U., Mass.
ANGULAR DISTRIBUTION OF NEUTRONS FROM AL^{27} (d,n) SI^{28}, by A. G. Rubin, 1957. 29 p. AF OSR TN 57-446. AD-136436.
Order from LC mi $2.70, ph $4.80 PB 129565

Date is 1957 or later.

Boston U., Mass.
QUARTERLY REPORT NO. 16, by Fay Ajzenberg-Selove, et al, 30 Sep 1957. 8 p. AF OSR TN 57-68; Contr. AF 18(600)997. AD-136596.
Order from LC mi $1.80, ph $1.80 PB 132121

Ecole Normale Superieure (France).
SPIN-ORBIT COUPLING AND TENSOR FORCES, by Jancovici, N. D. 29 p. Technical Note No. 4; AF OSR TN-57-492; Contr. AF 61(514)-1060. AD-136482.
Order from LC mi $2.70, ph $4.80 PB 130225

Harvard U., Cambridge, Mass.
PALYNOLOGICAL STUDIES OF ORGANIC SEDIMENTS FROM ICE ISLAND T-3 AND OF COATED SLIDES EXPOSED ON T-3 AND ELLESMERE ISLAND. FINAL REPORT, by Elso S. Barghoorn, 30 June 1957. 30 p. AF CRC TR 57-296; Contr. AF 19(604)-1371. AD-117255.
Order from LC mi $2.70, ph $4.80 PB 128957

Maryland U., College Park.
CAUSALITY AND THE DISPERSION RELATION: S-MATRIX FOR KLEIN GORDON AND DIRAC FIELD, by J. M. Knight and J. S. Toll, Aug 1957. 46 p. U. of Maryland Physics Dept. TR 87; AF OSR TN 57-552; Contr. AF 49(638)-24. AD-136536.
Order from LC mi $3.30, ph $7.80 PB 130240

New York U. Coll. of Engineering, N. Y.
HIGH-ALTITUDE COSMIC RAY NEUTRON INTENSITY VARIATIONS COSMIC RAY PROJECT TECHNICAL REPORT, by Robert K. Soberman, 1 July 1955. 128 p. Contr. N6onr-279-T.O. 2.
Order from LC mi $6.30, ph $19.80 PB 130845

Paris U. (France).
NUCLEON-ANTINUCLEON FORCES IN THE INTERMEDIATE COUPLING THEORY, by M. Levy and E. Normale, N. D. 53 p. Technical Note No. 8. AF OSR TN 58-168; Contr. AF 61(514)-1060.
Order from LC mi $3.60, ph $9.30 PB 133798

Date is 1957 or later.

Purdue U., Lafayette, Ind.
POLARIZATION MEASUREMENTS AND THE UNIVERSAL FERMI INTERACTION, by D. C. Peaslee, 27 June 1957. 14 p. AF OSR TN 57-389; Contr. AF 18(600)-1579. AD-132464.
Order from LC mi $2.40, ph $3.30 PB 132307

Sarah Mellon Scaife Radiation Lab., U. of Pittsburgh, Pa.
PRECISION SCATTERING OF NUCLEAR PARTICLES, by Elizabeth Baranger and Edward Gerjuoy, Nov 1956. 107 p. Contr. N7onr-32505.
Order from LC mi $5.70, ph $16.80 PB 130778

Technical Report VII.
Contents:
1. Helium Excitation Cross Sections Near Threshold.
2. Deuteron—Induced Reactions in Nitrogen and Helium.

Stanford U., Calif.
DECAY OF K-MESONS AS A TEST OF THE UNIVERSAL FERMI INTERACTION, by F. Zachariasen, Mar 1958. 11 p. Stanford Report 545-28; AF OSR TN-58-187; Contr. AF 18(600)-545. AD-152221.
Order from LC mi $2.40, ph $3.30 PB 133633

Technical Operations, Inc., Arlington, Mass.
PENETRATION OF NEUTRONS IN AIR, by Samuel S. Holland, Jr. and Paul I. Richards, Sep 1955. 119 p. AFSWC TR 55-27; Contr. AF 29 (601)-178.
Order from LC mi $6.00, ph $18.30 PB 133834

Instruments and Installations

Aero Medical Lab., Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
MINIMUM ALLOWABLE DIMENSIONS FOR CONTROLS MOUNTED ON CONCENTRIC SHAFTS, by James V. Bradley and Norman E. Stump. Dec 1955. 48 p. WADC TR 55-355.
Order from LC mi $3.30, ph $7.80 PB 127658

Air Crew Equipment Lab., Naval Air Experimental Station, Philadelphia, Pa.
ELAPSED TIME CLOCKS, OPTIMUM PRESENTATION FOR THE EFFECTS OF DIFFERENT METHODS OF PRESENTATION OF TIME INFORMATION ON LEGIBILITY, by I. Gaito, 25 May 1956. 56 p. NAMC-ACEL-271.
Order from LC mi $3.60, ph $9.30 PB 128729

Air Force Cambridge Research Center, Mass.
VARIATIONS OF ATMOSPHERIC TRANSMISSIVITY AND CLOUD HEIGHT AT NEWARK, by William C. Morton and Thomas O. Haig, Jan 1958. 43 p. GRD SG-91; AFCRC-TN-57-613. AD-146768.
Order from LC mi $3.30, ph $7.80 PB 133628

Chemical Warfare Labs., Army Chemical Center, Md.
U-CENTERED ALKALI HALIDE DOSIMETERS FOR DETECTION OF INIZING RADIATIONS (U), by Paul Goldberg, 27 May 1957. 14 p. CWLR 2128.
Order from LC mi $2.40, ph $3.30 PB 129336

Laboratory for Nuclear Science, Mass. Inst. of Tech., Cambridge.
PREPARATION OF LARGE PLASTIC SCINTILLATORS, by George W. Clark and Frank Scherb, 15 Sep 1956. 21 p. TR-69; Contr. Nonr-1841(16).
Order from LC mi $2.70, ph $4.80 PB 130464

Laval U. (Canada).
SPECTRUM OF L AUGER ELECTRONS FROM $_{81}Tl^{208}$ AND $_{83}Bi^{212}$, by C. Geoffrion and G. Nadeau, 1 June 1957. 15 p. AF OSR TN 57-607; Contr. AF 18(600)-1574.
Order from LC mi $2.40, ph $3.30 PB 132156

Material Lab., New York Naval Shipyard, Brooklyn.
DESIGN AND EVALUATION OR PROTECTIVE CONTAINER FOR UNDERWATER OPERATION OF QUARTZ-FIBER DOSIMETERS, by A. C. Clark and J. LaRocca, 12 Apr 1956. 11 p. Proj 5115-5.21. AD-111729.
Order from LC mi $2.40, ph $3.30 PB 133762

Naval Air Test Center, Patuxent River, Md.
AIRCRAFT PLASTIC INSTRUMENT LIGHTING PANELS AND INDIVIDUAL LIGHTING FIXTURES, 13 July 1956. 17 p. Project EL 52021; ET 311-147.
Order from LC mi $2.40, ph $3.30 PB 127861

Naval Research Lab., Washington, D. C.
BATTERY-OPERATED PORTABLE READER FOR RADIOPHOTO-LUMINESCENT GLASS DOSIMETER, by Clifford C. Klick, 28 Sep 1951. 6 p. NRL 3878.
Order from LC mi $1.80, ph $1.80 PB 129425

Naval Research Lab., Washington, D. C.
THE DISCHARGE MECHANISM OF SELF-QUENCHING G-M COUNTERS, by S. H. Liebson and I. H. Blifford, May 1947. 21 p. NRL N-3079.
Order from LC mi $2.70, ph $4.80 PB 129416

School of Aviation Medicine, Randolph Air Force Base, Tex.
AN AIRBORNE DOSIMETRY LABORATORY, by John E. Pickering and John M. Talbot, Jan 1951. 19 p. AF SAM Proj.-21-44-001 Report 1.
Order from LC mi $2.40, ph $3.30 PB 132421

School of Aviation Medicine, Randolph Air Force Base, Tex.
CONVERSION OF CARBON-14 SAMPLES TO BENZOIC ACID FOR COUNTING IN A LIQUID SCINTILLATION COUNTER, by Robert M. Dowben, June 1957, 3 p. AF SAM R57-102.
Order from LC mi $1.80, ph $1.80 PB 129387

School of Aviation Medicine, Randolph Air Force Base, Tex.
DEVELOPMENT OF A GERMANIUM CRYSTAL DOSIMETER, by Benedict Cassen and Valerie Burkig, May 1957. 9 p. AF SAM 57-90.
Order from LC mi $1.80, ph $1.80 PB 132263

Sperry Gyroscope Co., Great Neck, N. Y.
AN OPERATIONAL FLIGHT EVALUATION OF AN APPROACH ZONE SLANT VISIBILITY MEASURING SYSTEM, by Theodore Gold and Erving Peterson, May 1957. 197 p. Sperry Report 3245-4079. AF CRC TR-57269; Contr. AF 19(604)-1372. AD-117179.
Order from LC mi $8.70, ph $30.30 PB 129589

Sperry Gyroscope Co., Great Neck, N. Y.
AN OPERATIONAL FLIGHT EVALUATION OF AN APPROACH ZONE SLANT VISIBILITY MEASURING SYSTEM. SUMMARY REPORT, by Theodore Gold and Erving Peterson, May 1957. 54 p. Sperry Report 3245-4080. AFCRC TR-57-270; Contr. AF 19(604)-1372. AD-117180.
Order from LC mi $3.60, ph $9.30 PB 129590

Utah U., Salt Lake City.
ELECTRON DENSITIES OF THE IONOSPHERE, UTILIZING HIGH-ALTITUDE ROCKETS, by Doran J. Baker, Dec 1956. 93 p. AF CRC TN 57-465; Contr. AF 19(604)-384. AD-117218.
Order from LC mi $5.40, ph $15.30 PB 129378

Victoreen Instrument Co., Cleveland, Ohio.
RESEARCH AND DEVELOPMENT OF PHOTOCONDUCTIVE DOSE RATE INDICATOR FOR IONIZING RADIATIONS, by Lewis E. Hollander, Jr., 30 Jan 1956. 27 p. Quarterly progress rept. No. 1; Contr. DA 36-039-SC-70150.
Order from LC mi $2.70, ph $4.80 PB 129379

Victoreen Instrument Co., Cleveland, Ohio.
RESEARCH AND DEVELOPMENT OF PHOTOCONDUCTIVE DOSE RATE INDICATOR FOR IONIZING RADIATIONS, by Lewis E. Hollander, Jr., 1 Feb 1956 to 30 Apr 1956. 35 p. Quarterly progress rept. No. 2; Contr. DA 36-039-SC-70150.
Order from LC mi $3.00, ph $6.30 PB 130782

Victoreen Instrument Co., Cleveland, Ohio.
RESEARCH AND DEVELOPMENT OF PHOTOCONDUCTIVE DOSE RATE INDICATOR FOR IONIZING RADIATIONS, by Lewis E. Hollander, Jr., 1 May 1956 to 31 July 1956. 59 p. Quarterly progress rept. No. 3; Contr. DA 36-039-SC-70150.
Order from LC mi $3.60, ph $9.30 PB 130781

Victoreen Instrument Co., Cleveland, Ohio.
RESEARCH AND DEVELOPMENT OF PHOTOCONDUCTIVE DOSE RATE INDICATOR FOR IONIZING RADIATIONS, by Lewis E. Hollander, Jr., 30 Nov 1956. 66 p. Final Progress rept. Contr. DA 36-039-SC-70150.
Order from LC mi $3.90, ph $10.80 PB 130780

Nuclear Engineering and Power

Aerojet-General Corp., Azusa, Calif.
A VERSATILE, 1000-CURIE COBALT-60 GAMMA RAY SOURCE, by E. Hormats and G. Moe, July 1956. 40 p. AFOSR TN-56-339; Contr. AF 18(600)-1216. AD-95215.
Order from LC mi $3.00, ph $6.30 PB 128171

Bartol Research Foundation, Franklin Inst., Swarthmore, Pa.
SIXTH ANNUAL REPORT, by W. F. G. Swann, et al. 30 Sep 1956. 178 p. Contr. N6ORI-144.
Order from LC mi $8.10, ph $27.30 PB 129949

Contents:
I. Nuclear physics.
  A. Radioactivity.
  B. Resonance Fluorescence with Gamma Rays from charged Particle reactions.
  C. The Mass—Energy relation in Quantum theory.
II. Cosmic Rays.
  A. Sea-Going Cosmic-Ray Laboratory.
  B. Emulsion studies.

Brandeis U., Waltham, Mass.
ON THE STATISTICAL THEORY OF MANY-ELECTRON SYSTEMS, I., by Sidney Golden, 1 July 1956. 41 p. Tech. Report No. 1. Contr. Nonr 1677(01).
Order from LC mi $3.30, ph $7.80 PB 127646

Carnegie Inst. of Tech., Pittsburgh, Pa.
INVESTIGATION OF REFLECTION SCATTERING AND DIFFRACTION OF MOLECULES BY SOLID SURFACE, by Dr. Paul M. Marcus, 7 Sep 1956. 11 p. For period ending 30 Sep 1955. Contr. N7ONR-303.
Order from LC mi $2.40, ph $3.30 PB 128405

Cornell U., Ithaca, N. Y.
A PULSED X-RAY METHOD FOR THE MEASUREMENT OF THE MOBILITIES OF ELECTRONS AND HOLES IN CRYSTALLINE SILVER CHLORIDE, by Martin S. Werman, 15 Sep 1956. 48 p. Contr. NONR-401(16).
Order from LC mi $3.30, ph $7.80 PB 128502

David Taylor Model Basin, Washington, D. C.
FLEXIBLE TRANSPORT THEORY ROUTINES FOR NUCLEAR REACTOR DESIGN, by Erwin H. Bareiss, Dec 1956. 75 p. DTMB 1030.
Order from LC mi $4.50, ph $12.30 PB 129530

David Taylor Model Basin, Washington, D. C.
NUCLEAR REACTOR CALCULATIONS AT DAVID TAYLOR MODEL BASIN, by Erwin H. Bareiss, Feb 1957. 32 p. DTMB 1101.
Order from LC mi $3.00, ph $6.30 PB 132009

Ecole Normale Superieure (France).
EFFECTS OF PROTON CORRELATIONS ON THE SCATTERING OF HIGH ENERGY ELECTRONS FROM NUCLEI, by L. I. Schiff, N. D. 16 p. Tech. note No. 1. AFOSR TN-57-248; Contr. AF 61(514)-1061. AD-126546.
Order from LC mi $2.40, ph $3.30 PB 128175

Ecole Normale Superieure (France).
NON-LOCAL SEPARABLE INTER-ACTION AND COLLISION MATRIX, by M. Gourdin and A. Martin, N. D. 29 p. Technical Note No. 2. AF OSR TN-57-491; Contr. AF 61(514)-1060. AD-136481.
Order from LC mi $2.70, ph $4.80 PB 130224

Ecole Normale Superieure (France).
SPIN-ORBIT COUPLING AND TENSOR FORCES, by B. Janocovici, N. D. 4 p. Technical Note 3. Date is 1957 or later. AF OSR TN 55-508; Contr. AF 61(514)-1060. AD-136495.
Order from LC mi $1.80, ph $1.80 PB 130233

Ecole Normale Superieure (France).
THEORY OF HIGH-ENERGY POTENTIAL SCATTERING, by D. S. Saxon and L. I. Schiff, N. D. 17 p. Technical Note No. 5. Date is 1956 or later. AF OSR TN 57-509; Contr. AF 61(514)-1061. AD-136494.
Order from LC mi $2.40, ph $3.30 PB 130232

Enrico Fermi Inst. for Nuclear Studies, U. of Chicago, Ill.
RADIOCHEMICAL RESEARCHES, by E. A. Martell, 31 Aug 1956. 30 p. Final Report. AF OSR TR 56-35; Contr. AF 18(600)-663. AD-96501.
Order from LC mi $2.70, ph $4.80 PB 128173

Contents:
Reaction Rates for Slow Reactions.
Hot Atom Chemistry of Radiocarbon.
Negative Pi Meson Activation of Silver.

Escher Wyss and Cie., Zurich (Switzerland).
HELIUM COMPRESSOR DESIGN, by R. Tognoni, 21 July 1957. 53 p. Vol X TN 6 EW Report SP-AK-57-042; AF OSR TR 58-34; Contr. AF 61(514)-985. AD-152243.
Order from LC mi $3.60, ph $9.30 PB 133668

Harvard Coll. Observatory, Cambridge, Mass.
CALCULATIONS ON THE AVERAGE POWER SPECTRUM OF THE CAMBRIDGE ELECTRON ACCELERATOR. "CHOPPER" TRANSMISSION STUDIES, by D. H. Tomboulian and D. E. Bedo, Jan 1958. 13 p. AFCRC TN-58-242; Contr. AF 19(122)-482. AD-152477.
Order from LC mi $2.40, ph $3.30 PB 133626

High Energy Physics Lab., Stanford U., Calif.
RESEARCH ON ELECTRON SCATTERING AND NUCLEAR STRUCTURE, by R. Hofstadter, July 1956. 61 p. AF OSR TR-57-34-HEPL 122; Contr. AF 18(600)646. AD-126543.
Order from LC mi $3.90, ph $10.80 PB 129948

Illinois U., Urbana.
INVESTIGATION OF THE FIELD MODULATION PRODUCED BY FLAT SPIRAL SHIMS IN A CYCLOTRON MAGNET, by V. Bluemel and J. B. Carroll. 1956 or later. 26 p. TR 2; Contr. Nonr 1834(05).
Order from LC mi $2.70, ph $4.80 PB 128003

Illinois U., Urbana.
THE RADIAL STABILITY OF ORBITS IN A SPIRAL RIDGE CYCLOTRON, by Peter Stahelin, 1938 or later. 33 p. Contr. NONR 1834(05).
Order from LC mi $3.00, ph $6.30 PB 128064

Institute of Mathematical Sciences, New York U., N. Y.
A VARIATIONAL CALCULATION OF THE SCATTERING CROSS SECTION FOR NEARLY ZERO-ENERGY ELECTRONS BY HYDROGEN ATOMS, by Howard Greenberg and Sidney Borowitz, Apr 1957. 55 p. CX-29 AFCRC TN-57-482; Contr. AF 19(604)-1705. AD-117246.
Order from LC mi $3.60, ph $9.30 PB 128762

Laboratory for Insulation Research, Mass. Inst., of Tech., Cambridge.
SINGULAR POTENTIALS IN QUANTUM MECHANICS, by F. L. Scarf, June 1956. 50 p. TR 109; Contr. N5 ori-07801; Contr. Nonr-1841(10).
Order from LC mi $3.30, ph $7.80 PB 127168

Laboratory for Nuclear Science, Mass. Inst. of Tech., Cambridge.
EAST-WEST ASYMMETRY OF POSITIVE AND NEGATIVE MEASONS, by Frank B. Harris, Jr. 15 Dec 1955. 63 p. TR 67; Contr. N5OR1)07806.
Order from LC mi $3.90, ph $10.80 PB 127057

Martin, Glenn L., Co., Baltimore, Md.
NUCLEAR RADIATION HEATING, by B. L. Byrum and J. A. Bigger-Staff, Jan 1956. 54 p. ER 8018; Contr. NONR-1612(00).
Order from LC mi $3.60, ph $9.30 PB 129951

Minnesota U., Minneapolis.
FINAL REPORT RE N6ONR-24603, by Edward P. Ney, 14 Sep 1950. 7 p.
Order from LC mi $1.80, ph $1.80 PB 128506

Written as a letter with 3-page enclosure: "List of Publications under Contract N6onr-24603;" and one-page, headed "Graduate Degrees Granted."

Pennsylvania State U., University Park.
PHOTOPROTONS FROM Be, C, and O, by L. Cohen and A. K. Mann, 1 Sep 1956. 33 p. Contr. NONR 551(17).
Order from LC mi $3.00, ph $6.30 PB 128565

Pennsylvania U., Philadelphia.
A DERIVATION OF A COMPLETE SET OF DISPERSION RELATIONS AND AN EXAMINATION OF THEIR PHYSICAL CONTENT, by R. E. Norton, June 1957. 96 p. Tech. note No. 8. AF OSR TN-57-309. Contr. AF 18(603)-60. AD-132380.
Order from LC mi $5.40, ph $15.30 PB 128419

Purdue U., Lafayette, Ind.
PHOTOPRODUCTION OF K MESONS FROM SINGLE NUCLEONS, by Masarki Kawaguchi and Michael J. Moravesik, N. D. 28 p. AF OSR TN 57-246; Contr. 18(600)-1579. AD-126544.
Order from LC mi $2.70, ph $4.80 PB 128249

Date is 1955 or later.

School of Aviation Medicine, Randolph Air Force Base, Tex.
CHEMICAL SYSTEMS FOR THE MEASUREMENT OF PENETRATING RADIATIONS, by S. C. Sigoloff, May 1957. 39 p. AF SAM 57-86.
Order from LC mi $3.00, ph $6.30 PB 130061

Stanford U., Calif.
CENTER-OF-MASS MOTION IN MANY-PARTICLE SYSTEMS, by G. Gartenhaus and C. Schwartz, Apr 1957. 39 p. TR 23; Contr. AF 18(600)-545. AFOSR TN-57-184.
Order from LC mi $3.00, ph $6.30 PB 127703

Stanford U., Calif.
A HIGH LINEAR ENERGY ELECTRON ACCELERATOR, by R. B. Neal, Feb 1953. 408 p. NLR 185; Contr. N6onr-25116. AD-13142.
Order from LC mi $11.10, ph $62.10 PB 130640

Watertown Arsenal Lab., Mass.
EXTINCTION EFFECTS IN NEUTRON TRANSMISSION OF POLYCRIPTALLINE MEDIA, by R. J. Weiss, 11 Feb 1952. 15 p. WAL 154/24.
Order from LC mi $2.40, ph $3.30 PB 127549

Wisconsin U., Madison.
FINAL REPORT, THEORETICAL NUCLEAR PHYSICS GROUP, N. D. 12 p. Contr. N6ori-97 Task Order 1; Contr. N6ori-44, Task Order 16. AD-721888.
Order from LC mi $2.40, ph $3.30 PB 127179

Date is 1955 or later.

Yale U., New Haven, Conn.
INFORMATION OBTAINABLE ON POLARIZATION OF U+ AND ASYMMETRY OF E^+ IN MUONIUM EXPERIMENTS, by G. Breit and V. W. Hughes, 13 Mar 1957. 12 p. AF OSR TN 57-117; Contrs. AF 18(600)771 and AF 18(600)-1565. AD-120470.
Order from LC mi $2.40, ph $3.30 PB 127165

Nuclear Reactions

Boston U., Mass.
NEUTRONS FROM THE He^3 BOMBARDMENT OF B^{10}, by F. Ajzenberg-Selove and M. L. Bullock, 1957. 24 p. Contr. AF 18(600)-997. AFOSR TN-57-445; AD-136435.
Order from LC mi $2.70, ph $4.80 PB 129564

Catholic U. of America, Washington, D. C.
A MOLECULAR ORBIT STUDY OF Be_4, by Robert D. Cloney and John S. Dooling, 1 Sep 1957. 28 p. Technical Note No. 2. AFOSR TN-57-507; Contr. AF 18(600)-1537.
Order from LC mi $2.70, ph $4.80 PB 130231

Johns Hopkins U., Baltimore, Md.
NUCLEAR MAGNETIC RESONANCE STUDY OF THE B2D6-BH9 EXCHANGE REACTION, by W. S. Koski and J. J. Kaufman, Oct 1956. 13 p. AFOSR TN 56-494 TN 4; Contr. AF 18(600)-1526. AD-110308.
Order from LC mi $2.40, ph $3.30 PB 127752

Ohio State U. Research Foundation, Columbus.
CHARGE DISTRIBUTION AND CHARACTERISTIC TEMPERATURE OF METALIC LITHIUM FROM X-RAY SCATTERING AT 300^0 AND 100^0 K, by P. L. Splitstone and P. M. Harris, Apr 1956. 31 p. Tech. Report No. 1; AFOSR TN 56-235; Contr. AF 18(600)-769. AD-88355.
Order from LC mi $3.00, ph $6.30 PB 129496

Pennsylvania State U., University Park.
A PRECISE CORRELATION OF NUCLEAR MAGNETIC SHEILDING IN M-AND P- SUBSTITUTED FLUOROBENZENES BY INDUCTIVE AND RESONANCE PARAMETERS FROM REACTIVITY, by R. W. Taft, Nov 1956. 18 p. Contr. Nonr 565(05).
Order from LC mi $2.40, ph $3.30 PB 130669

Radioactivity

Chemical Warfare Lab., Army Chemical Center, Md.
DESCRIPTION OF AERIAL RADIOLOGICAL SURVEY METHODS, by J. P. Johnson and Manfred Morgenthan Oct 1957. 15 p. CWLR 2174.
Order from LC mi $2.40, ph $3.30 PB 133889

Naval Research Lab., Washington, D. C.
AIRBORNE DUAL-CHANNEL RADIATION DETECTION SYSTEM, by F. M. Gager and G. K. Jensen 25 Aug 1948. 28 p. NRL P-3339.
Order from LC mi $2.70, ph $4.80 PB 129295

PERSONNEL SUPPLIES AND PERSONAL EQUIPMENT

Apparel

Army Medical Research Lab., Fort Knox Ky.
CLINICAL EFFECTS OF INSULATED RUBBER BOOT WEAR IN AMBIENT AIR TEMPERATURES 30 TO 60° F, by F. J. Haddy and J. Scott, 14 Sep 1956. 20 p. AMRL 254.
Order from LC mi $2.40, ph $3.30 PB 128386

Navy Experimental Diving Unit, Naval Gun Factory, Washington, D. C.
FLORIKAN HELIUM-OXYGEN GAS MIXING METHODS, by F. H. Munger, 16 Aug 1957. 16 p. RR 258.
Order from LC mi $2.40, ph $3.30 PB 129884

Quartermaster Research and Development Center, Natick, Mass.
DIMENSION OF THE LOWER LIMIT OF GLOVED HAND SIZE, by John L. Kobrick, Feb. 1957. 198 p. EPS-43.
Order from LC mi $8.70, ph $30.30 PB 130715

Quartermaster Research and Development Center, Natick, Mass.
EFFECTS OF CLOTHING ON RANGE OF MOTION IN THE ARM AND SHOULDER GIRDLE, by Christine Nicoloff, June 1957. 36 p. EP-49.
Order from LC mi $3.00, ph $6.30 PB 132439

Quartermaster Research and Development Center, Natick, Mass.
QUARTERMASTER HUMAN ENGINEERING HANDBOOK SERIES: IV. DIMENSIONS OF THE LOWER LIMIT OF BODY SIZE OF THE ARCTIC SOLDIER, by James L. Kolrick, Apr 1957. 49 p. EP-51.
Order from LC mi $3.30, ph $7.80 PB 132438

Talon, Inc., Meadville, Pa.
NYLON SLIDE-FASTENER DEVELOPMENT, by L. M. Dorman, Oct 1953. 51 p. WADC TR 53-392; Contr. AF 33(038)-8944. AD-22064.
Order from LC mi $3.60, ph $9.30 PB 133700

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
EFFECT OF WATER CONTENT AND COMPRESSION ON THERMAL INSULATION OF CLOTHING, by John F. Hall, Jr., and Johannes W. Polte, Oct 1955. 28 p. WADC TR 55-356; AD-99563.
Order from LC mi $2.70, ph $4.80 PB 130359

PHYSICS

Acoustics

Acoustics Lab., Mass Inst. of Tech., Cambridge.
QUARTERLY REPORT, JULY-SEPTEMBER 1956, J. Doty, Ed. 27 p.
Order from LC mi $2.70, ph $4.80 PB 128696

Acoustics Lab., Mass. Inst. of Tech., Cambridge.
QUARTERLY REPORT, JANUARY-MARCH 1957, by Heinz, J. M., Rubin, E. R., et al, 1957. 25 p. AF CRC TN 57-399; Contr. AF 19(604)-061. AD 117117.
Order from LC mi $2.70, ph $4.80 PB 129523

Armed Forces-NRC Committee on Hearing and Bio-Acoustics, Washington, D. C.
EVALUATION OF METHODS FOR REDUCING NOISE FROM JET ENGINES IN FLIGHT. PREPARED BY WORKING GROUP NO. 24, by T. L. K. Smull, Chairman, L. L. Beranek, May 1956. 6 p. CHABA memorandum Report No. 1; Contr. NONR-1151(01).
Order from LC mi $1.80, ph $1.80 PB 128091

Armour Research Foundation, Chicago, Ill.
EXCESS NOISE IN SEMICONDUCTORS, by J. J. Brophy, N. D. 69 p. Contr. Nonr 1800-(00)
Order from LC mi $3.90, ph $10.80 PB 130344

Bolt, Beranek, and Newman, Cambridge, Mass.
ACOUSTICAL ANALYSIS OF THE PROPOSED BIO-ACOUSTICS FACILITY, AERO MEDICAL LABORATORY, WRIGHT-PATTERSON AIR FORCE BASE, by Jack B. C. Purcell, May 1955. 76 p. WADC TR-55-154; Contr. AF 33(616) 5151.
Order from LC mi $4.50, ph $12.30 PB 128140

Boston U., Mass.
ULTRASONIC PROPAGATION IN LIQUID AMMONIA AND AMMONIA SOLUTIONS OF SODIUM BROMIDE SODIUM IODIDE, LITHIUM AND SODIUM METAL, by E. J. Zdanuk and L. V. Caulter, July 1956. 56 p. Contr. DA-020-ORD-2607.
Order from LC mi $3.60, ph $9.30 PB 130910

Electronics Research Lab., Northeastern U., Boston, Mass.
A STUDIO FOR LISTENING TESTS, by Ladislav Dolansky, 30 Aug 1957. 29 p. AF CRC TN 57-766; Contr. AF-19(604)-2198. AD 133706.
Order from LC mi $2.70, ph $4.80 PB 132351

Naval Engineering Experiment Station, Annapolis, Md.
ACOUSTIC POWER-LEVEL DETERMINATION FOR MACHINERY IN HARD AND SEMI-HARD ROOMS, by C. E. Rakes and J. E. Kaune, 24 Feb 1956. 33 p. EES 050016.
Order from LC mi $3.00, ph $6.30 PB 130412

Naval Ordnance Lab., White Oak, Md.
DEVELOPMENT OF A VELOCITY HYDROPHONE, by C. B. Leslie, 4 Nov 1955. 27 p. NAVORD 4122.
Order from LC mi $2.70, ph $4.80 PB 130735

Pennsylvania State U., University Park.
THE PENN STATE ANECHOIC CHAMBER, Robert L. Berger and Eugene Ackerman, Nov 1954. 31 p. WADC TR 54-400; Contr. AF 33(038)-786.
Order from LC mi $3.00, ph $6.30 PB 129571

Philips Labs., Inc., Irvington-on-Hudson, N. Y.
RESEARCH ON NOISE IN HIGH-POWERED KLYSTRONS, William R. Atkinson, 31 Mar 1957. 36 p. Technical Report 114. AF OSR TN-57-211; Contr. AF 18(603)-33. AD 126508
Order from LC mi $3.00, ph $6.30 PB 128816

Purdue Research Foundation, Lafayette, Ind.
FEASIBILITY OF BUILDING HIGH POWER PULSE NOISE GENERATORS FOR THE FREQUENCY RANGE FROM 3000 to 12400 MEGACYCLES, by R. H. George, 21 May 1956. 16 p. Contr. AF 30 (602)-402; RADC TN-56-289. AD 97728.
Order from LC mi $2.40, ph $3.30 PB 130429

Purdue Research Foundation, Lafayette, Ind.
MEASUREMENT OF THE POWER OUTPUT OF PULSE NOISE GENERATORS, R. H. George and H. J. Heim, 30 Apr 1956. 55 p. Scientific rept. no. 2; RADC TR-56-270; Contr. AF 30 (602)-402.
Order from LC mi $3.60, ph $9.30 PB 130198

Signal Corps Engineering Labs., Fort Monmouth, N. J.
AMPLITUDE DISTRIBUTION OF RECEIVER NOISE AFTER DETECTION AND FILTERING, by A. E. Bailey and L. M. Sarlo, 6 July 1956. 14 p. TM 1814.
Order from LC mi $2.40, ph $3.30 PB 130899

Wright Air Development Center Wright-Patterson Air Force Base, Ohio.
THEORY AND PROCEDURES FOR DETERMINING CELL CHARACTERISTICS WITH THE INFRARED CELL TEST SET AN/USM-42(XA-1), by G. A. Klinger, Oct 1955. 106 p. WADC TR 55-178. AD 88634.
Order from LC mi $5.70, ph $16.80 PB 133923

Electricity and Magnetism

Battelle Memorial Inst., Columbus, Ohio.
EVALUATION OF TRANSPORT INTEGRALS FOR MIXED SCATTERING AND APPLICATION TO GALVANOMAGNETIC EFFECTS, by A. C. Beer, et al, 15 Mar 1957. 28 p. AFOSR TN 57-87; Contr. AF 18(600)-1547. AD 120435.
Order from LC mi $2.70, ph $4.80 PB 127500

Diamond Ordnance Fuze Labs., Washington, D. C.
NOTE ON THE MAGNETIC FIELD CONFIGURATION IN AN ANISOTROPIC FERRITE SPHERE, by J. E. Tompkins, 31 Jan 1957. 8 p. TR 425.
Order from LC mi $1.80, ph $1.80 PB 130936

Engineering Research Inst., U. of Michigan, Ann Arbor.
REVERSIBLE PROPERTIES OF POLYCRYSTALLINE FERROMAGNETS--II. EXPERIMENTAL VARIATION OF THE REVERSIBLE SUSCEPTIBILITY AND Q WITH MAGNETIZATION, by D. M. Grimes, May 1957. 26 p. AF OSR TN 57-209; ERI 2495-TR 2; Contr. AF 18 (603)-8. AD 126506.
Order from LC mi $2.70, ph $4.80 PB 128163

Enrico Fermi Inst. for Nuclear Studies, U. of Chicago, Ill.
MAGNETIC SUSCEPTIBILITIES OF URANIUM (V) AND URANIUM (III) CHLORIDES, by Paul Handler and Clyde A. Hutchison, Jr., Rept. on Contract N6or-020(27), 1956. 21 p.
Order from LC mi $2.70, ph $4.80 PB 128258

Enrico Fermi Inst. for Nuclear Studies, U. of Chicago, Ill.
PARAMAGNETIC RESONANCE ABSORPTION IN URANIUM (III) CHLORIDE AND THE NUCLEAR SPIN MAGNETIC DIPOLE MOMENT AND ELECTRIC QUADRUPOLE MOMENT OF URANIUM, by Paul B. Dorain and Clyde A. Hutchison. Rept. on Contract N6ori-020(27), 1956. 12 p.
Order from LC mi $2.40, ph $3.30 PB 130777

General Ceramics Corp., Keasbey, N. J.
FERRITE DEVELOPMENT, by E. Albers-Schoenberg, Harry F. Remde, etc., 31 Mar 1956. 36 p. Final Report; Contr. DA-36-039-SC-56773.
Order from LC mi $3.00, ph $6.30 PB 128191

Indiana Steel Products Co., Valparaiso.
EFFECTS OF TEMPERATURE VARIATIONS ON THE REMANENCE OF PERMANENT MAGNETS, by R. K. Tenzer, Aug 1956. 15 p. WADC TN-56-276; Contr. 23(616) 267. AD 110480.
Order from LC mi $2.40, ph $3.30 PB 129491

Indiana Steel Products Co., Valparaiso.
MAGNETROSTRICTION MEASUREMENTS ON ALNICO 5, by R. K. Tenzer, Aug 1956. 7 p. WADC TN-56-277; Contr. AF33(616)-267. AD 110481.
Order from LC mi $1.80, ph $1.80 PB 129492

Indiana Steel Products Co., Valparaiso.
A SIMPLE METHOD FOR CALCULATING LEAKAGE FACTORS IN MAGNETIC CIRCUITS WITH PERMANENT MAGNETS, by R. K. Tenzer, July 1956. 11 p. WADC TN-56-275; Contr. AF33(616)-267. AD 110479.
Order from LC mi $2.40, ph $3.30 PB 129490

Institute of Mathematical Sciences, New York U., N. Y.
LOCALLY STATIONARY RANDOM PROCESSES, by R. A. Silverman, Apr 1957. 10 p. MME-2; Contr. DA49-170-SC-2253.
Order from LC mi $1.80, ph $1.80 PB 127684

Laboratory for Magnetic Research, Carnegie Inst. of Tech., Pittsburgh, Pa.
FERROMAGNETISM RESEARCH, by H. W. Cooper, 31 July 1956. 34 p. Final Quarterly Progress Report. Contr. DA-36-039-SC-64577.
Order from LC mi $3.00, ph $6.30 PB 133575

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
QUARTERLY PROGRESS REPORT 5 JULY THRU 14 OCT 1956, by Ernst Weber, Nov 1956. 24 p. R-452-56; Contr. AF 18(600) 1505.
Order from LC mi $2.70, ph $4.80 PB 128042

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
QUARTERLY PROGRESS REPORT, 15 JANUARY THROUGH 14 APRIL 1957, by Ernest Weber, May 1957. 92 p. R452.7-57; Contr. AF 18(600) 1505.
Order from LC mi $5.40, ph $15.30 PB 133620

Naval Ordnance Lab., White Oak, Md.
ANTIFERROMAGNETISM IN SINGLE CRYSTALS OF N_IO AND C_0O, by J. R. Singer, 10 Sept 1956. 56 p. NAVORD 4314.
Order from LC mi $3.60, ph $9.30 PB 129508

Naval Ordnance Lab., White Oak, Md.
PROGRESS REPORT OF THE SOLID STATE DIVISION FOR CALENDAR YEAR 1955, 1 May 1956. 25 p. NAVORD 4361.
Order from LC mi $2.70, ph $4.80 PB 130737

Schwarzkopf Development Corp., Yonkers, N. Y.
HALL CONSTANT AND MAGNETIC SUSCEPTIBILITY OF TRANSITION METAL DIBORIDES, by Dr. R. Sternity, 30 Sept 1956. 68 p. NONR 1538(00).
Order from LC mi $3.90, ph $10.80 PB 128391

Toronto U. (Canada).
A STUDY OF SOME TEMPORAL VARIATIONS OF THE GEOMAGNETIC FIELD FROM AN ANALYSIS OF SELECTED OBSERVATORY DATA, by J. A. Jacobs, 30 June 1957. 6 p. AF CRC TR 57-208; Contr. AF 19 (604)-761. AD 133619.
Order from LC mi $1.80, ph $1.80 PB 133794

Utah U., Salt Lake City.
PENETRATION OF THE SECULAR FIELD THROUGH A MANTLE WITH VARIABLE CONDUCTIVITY, PART II, by K. L. McDonald, 1 Aug 1956. 23 p. Tech. report 21; Contr. Nonr 1288(00).
Order from LC mi $2.70, ph $4.80 PB 128647

Westinghouse Electric Corp., East Pittsburgh, Pa.
THE RELATION OF DOMAIN PHENOMENA AND CRYSTAL ORIENTATION TO DESIGN AND THE USE OF MAGNETIC MATERIALS, by L. J. Dijkstra, June 1954. 17 p. WADC TR-54-304; Contr. AF 33(616)309. AD 41506.
Order from LC mi $2.40, ph $3.30 PB 130377

Electronics

California Inst. of Tech., Pasadena.
ON THE HIGH-FREQUENCY (SCILLATIONS OF THE ELECTRONIC PLASMA, by Charles H. Papas, Jan 1958. 16 p. TR 14; AFOSR TN 58-23; Contr. AF 18 (600)-1113. AD 148,062.
Order from LC mi $2.40, ph $3.30 PB 133861

Chatham Electronics Corp., Livingston, N. J.
INDUSTRIAL PREPAREDNESS STUDY ON TEMPERATURE GLASS SEALING (POLYOPTICS) OF TUBES, by G. Yamasahi, 21 June 1957. 12 p. Contr. DA-36-039-SC-72700.
Order from LC mi $2.40, ph $3.30 PB 130028

Electron Tube Research Lab., U. of Minn., Minneapolis.
STUDY OF ELECTRICAL AND PHYSICAL CHARACTERISTICS OF SECONDARY EMITTING SURFACES, by W. G. Shepherd, 31 Jan 1956. 151 p. Contr. DA36-039-SC-64666.
Order from LC mi $7.50, ph $24.30 PB 128940

Contents:
A. Thin Film Studies
B. Single Crystal Studies
C. Theoretical Work

Firth Sterling, Inc., Pittsburgh, Pa.
RESEARCH ON THERMIONIC EMISSION OF BORIDES, by R. Steinmetz, Final rept. on Contract AF 18(600) 1504, 1 May 1957. 36 p.
Order from LC mi $3.00, ph $6.30 PB 129383

Massachusetts Inst. of Tech., Cambridge.
LIGHT--RAY MODULATION METHOD FOR DETECTION OF BLADE VIBRATION, by Barry A. Stein. May 1957. 34 p. WADC TN 56-416; Contr. AF 33(616)-3233. AD 130897.
Order from LC mi $3.00, ph $6.30 PB 133831

Michigan State U., East Lansing.
THE MATHEMATICAL THEORY OF ANTENNA RADIATION, by Charles P. Wells, 30 June 1957. 31 p. Final Report; Contr. DA-20-018-ORD-13354.
Order from LC mi $3.00, ph $6.30 PB 133884

Naval Air Development Center, Johnsville, Pa.
EVAPORATIVE SPRAY TOWER SYSTEM FOR COOLING THE AN/APS-30 SERIES MODULATOR, by A. R. Saltzmann, 18 May 1945. 49 p. NADC-EL-5542.
Order from LC mi $3.30, ph $7.80 PB 129532

Naval Research Lab., Washington, D. C.
THE CONTRIBUTION OF RESTRICTED ROTATION TO ELECTRON SCATTERING BY GASES, by J. Karle, Feb 1947. 14 p. NRL H-3068.
Order from LC mi $2.40, ph $3.30 PB 129278

Transitron Electronic Corp., Melrose, Mass.
INDUSTRIAL PREPAREDNESS STUDY, GERMANIUM PHOTOVOLTAIC CELL, by E. Simon and T. Clark, 1 May 1956. 108 p. Contr. DA-36-039-SC-54698.
Order from LC mi $5.70, ph $16.80 PB 130685

Molecular Physics and Spectroscopy

Arkansas U., Fayetteville.
DESCRIPTION OF A THREE-STAGE RF MASS SPECTROMETER INSTRUMENT, by M. K. Testerman, W. W. Cannon, etc., Jan 1955. 29 p. WADC TR 54-560; Contr. AF33(616)15. AD-76795.
Order from LC mi $2.70, ph $4.80 PB 133565

Boston U., Mass.
IMPROVEMENT OF SPECTROSCOPIC RECORDING TECHNIQUES, R. V. Karandikar, 1 Mar 1957. 18 p. Final Report. AF CRC TR 57-280; Contr. AF 19 (604)-857. AD 117209.
Order from LC mi $2.40, ph $3.30 PB 133934

California U., Berkeley.
MATRIX ISOLATION STUDIES, by M. Van Thiel and E. D. Becker, 15 June 1957. 36 p. AF OSR TN-57-328; Contr. AF 49 (638)-1. AD 312401.
Order from LC mi $3.00, ph $6.30 PB 128248

Contents:
I. Infrared Studies of Hydrogen Bonding of Water by the Matrix Isolation Technique.
II. Reaction Kinetics by the Matrix Isolation Method: Diffusion in Argon; Cistrans Isomerization of Nitrons Acid.

Cincinnati U., Ohio.
MOLECULAR STRUCTURE OF EPOXY POLYMERS AS A BASIS FOR ADHESIONS, by Harvey Alter and Walter Soller, 27 Mar 1957. 31 p. AF OSR TN-57-279; Contr. AF18(600)-1141. AD 126580.
Order from LC mi $3.00, ph $6.30 PB 129588

Columbia U., New York.
MOLECULAR COMPOSITION OF ALKALI HALIDE VAPORS, by R. C. Miller and P. Lusch, Rept. on Contract AF 18(600)1334, 19 Dec 1955, rev. Oct 1957. 17 p.
Order from LC mi $2.40, ph $3.30 PB 128161

Delaware U., Newark.
EVALUATION OF MOLECULAR QUADRUPOLE MOMENTS FROM MICROWAVE SPECTRAL LINE BREADTHS II—EXPERIMENTAL, by Harold Feeny and Walter Madigorsky, Rept. on Contract AF 18 (600)449. 6 June 1957. 17 p. AFOSR TN-57-29; 132-370.
Order from LC mi $2.40, ph $3.30 PB 128805

Delaware U., Newark.
NUCLEAR QUADRUPOLE ZEEMAN SPECTRA OF CRYSTALS, by P. J. Bray, R. G. Barnes and others. Technical rept. no. 1 on Contract DA-36-034-ORD-2035. 31 July 1956. 69 p.
Order from LC mi $3.90, ph $10.80 PB 129898

Duke U., Durham, N. C.
MOLECULAR STRUCTURE-FLAME SPECTROSCOPY, by Einar Hinnov and Hedwig Kohn, 1 Aug 1956. 57 p. TR 11; Contr. N6ori-107; Contr. Nonr-1181 (05).
Order from LC mi $3.60, ph $9.30 PB 128389

Engineering Research Inst., U. of Michigan, Ann Arbor.
THE KINETIC THEORY OF A GAS IN ALTERNATING OUTSIDE FORCE FIELDS, by C. S. Wang Chang and G. E. Uhlenbeck, Oct 1956. 31 p. Contr. Nonr-1224-(15).
Order from LC mi $3.00, ph $6.30 PB 130708

A Generalization of the Rayleigh Problem.

Florence U. (Italy)
APPARATUS FOR MEASURING THE DISPERSION AND ABSORPTION OF A GAS IN THE MICROWAVE REGION UNDER RELATIVELY HIGH PRESSURE CONDITIONS—PRELIMINARY EXPERIMENTAL RESULTS, by A. Gozzini and A. Battaglia, etc., 10 July 1956. 47 p. Technical Note 5; AFCRC TN-56-967; Contr. AF 61(614)903 AD 117105.
Order from LC mi $3.30, ph $7.80 PB 128217

Harvard U., Cambridge, Mass.
CALCULATION OF ENERGY LEVELS FOR INTERNAL TORSION AND OVERALL ROTATION. II: CH_3CHO TYPE MOLECULES, by C. C. Lin and E. B. Wilson, 1956 or later. 34 p. Contr. N5onr 1866.
Order from LC mi $3.00, ph $6.30 PB 130945

Harvard U., Cambridge, Mass.
SPECTROSCOPIC STUDIES OF SIMPLE SILICON COMPOUNDS, by M. Kent Wilson. Rept. on Contract AF 18(600)590. 15 Mar 1957. 22 p. AFOSR TR-57-17; AD-120452.
Order from LC mi $2.70, ph $4.40 PB 127657

James Forrestal Research Center, Princeton, N. J.
A RELATIONSHIP BETWEEN SOME BOND PROPERTIES OF DIATOMIC MOLECULES AND THE IONISATION POTENTIALS OF THEIR CONSTITUENT ATOMS, by B. Stevens, Mar 1957. 19 p. AFOSR-TN-57-194; MR34; Contr. AF-33(038)-23976. AD 126489.
Order from LC mi $2.40, ph $3.30 PB 127710

Johns Hopkins U., Baltimore, Md.
A MASS SPECTROMETRIC APPEARANCE POTENTIAL STUDY OF ISOTOPICALLY LABELED DIBORANES, by Walter S. Koski, Joyce J. Kaufman, et al, Feb 1958. 26 p. AFOSR TN 58-157; TN 7; Contr. AF 18 (600)-1526. AD 152183.
Order from LC mi $2.70, ph $4.80 PB 133657

Massachusetts Inst. of Tech., Cambridge, Mass.
TECHNIQUES OF INFRARED SPECTROSCOPY, by R. C. Lord, 31 Dec 1955. 140 p. Contr. DA-44-009-eng-1409.
Order from LC mi $6.90, ph $21.30 PB 130925

Naval Powder Factory, Indian Head, Md.
A NEW ARRANGEMENT FOR THE SOURCE OPTICS OF THE PERKINELMER DOUBLE-PASS SPECTROMETER, by George B. Wilmot and Robert K. Brookshier, 15 June 1956. 16 p. NAVORD 5157; NPF TR 88.
Order from LC mi $2.40, ph $3.30 PB 128716

Ordnance Materials Research Office, Watertown Arsenal, Mass.
A CONFIGURATION INTERACTION STUDY OF THE ELECTRONIC STRUCTURE OF THE O. H. RADICAL BY THE ATOMIC AND MOLECULAR METHODS, by A. J. Freeman, June 1957. 61 p. MRL 28.
Order from LC mi $3.90, ph $10.80 PB 128605

Samuel Feltman Ammunition Labs., Picatinny Arsenal, Dover, N. J.
ANALYSIS OF DIOCTYL PHTHALATE ISOMERS BY INFRARED SPECTROSCPOY, by Burnwell Banks, Woodrow Huff, etc. Sept 1957. 7 p. PATR 2445.
Order from LC mi $1.80, ph $1.80 PB 130872

Spectroscopy Lab., Mass. Inst. of Tech., Cambridge.
TECHNIQUES OF INFRARED SPECTROSCOPY, by R. C. Lord, 31 Dec 1956. 36 p. Contr. DA-44-009-eng-2758.
Order from LC mi $3.00, ph $6.30 PB 133579

Stanford Research Inst., Menlo Park, Calif.
THE ABSORPTION SPECTRA OF HILL REACTION OXIDANTS, by R. J. Marcus and J. L. Hatchett. Technical note on The Manner in Which Light Energy Interacts with Matter in the Course of a Chemical Reaction, Contract AF18 (603)7. 11 June 1957. 19 p. AFOSR TN-57-304; AD-132375.
Order from LC mi $2.40, ph $3.30 PB 128325

Texas U., Austin.
ENHANCEMENT OF INFRARED ABSORPTION BANDS OF CHARGE TRANSFER COMPLEXES, by E. E. Ferguson and F. A. Matsen, N. D., 11 p. AFOSR TN-57-771; Contr. AF 49(638)35. AD 148,001.
Order from LC mi $2.40, ph $3.30 PB 133859

Date is 1957 or later.

Wisconsin U., Madison.
SOME MOLECULAR COLLISIONS INTEGRALS FOR POINT ATTRACTION AND REPULSION POTENTIALS, M. A. Eliason et al. 5 Mar 1956. 35 p. WIS ONR 19; Contr. N7onr-28511.
Order from LC mi $3.00, ph $6.30 PB 127281

X-Ray and Crystal Analysis Lab., Pennsylvania State U., University Park.
X-RAYS AND THE ABSOLUTE CONFIGURATION OF OPTICALLY ACTIVE MOLECULES, by Ray Pepinsky, 1 Mar 1956. 116 p. Technical Report 8. Contr. DA-36-061-ORD-345.
Order from LC mi $6.00, ph $18.30 PB 128183

Optics

American Meteorological Society, Boston, Mass.
"A NEW TYPE OF BIREFRINGENT FILTER" AND "FURTHER INVESTIGATION OF THE BIREFRINGENT FILTER," by Ivan Solc (Scholts), 1955, 36 p. photos, diagrs.
Order from LC mi $3.00, ph $6.30 PB 129434

Translation from the Czechoslovak Journal of Physics, 4(1): 53-66, 1954; 5(1): 80-86, 1955, of -Novyi tip fil 'tra s dvoinym luchéprelomleniem" and "Dal 'neishie issledovaniia fil 'tra dvoinogo luchéprelomleniia". Translated by Garry Bo er and David Kraus.

Baird Associates, Inc., Cambridge, Mass.
THE INVESTIGATION AND DEVELOPMENT OF FILTERS FOR OPERATION IN WAVELENGTH REGION 100 TO 1000 MICRONS, by Lawrence Mertz. 61 p. Final report, July 1951 to 31 Dec 1952. Contr. DA36-039-SC-15333.
Order from LC mi $3.90, ph $10.80 PB 127945

Baird Associates, Inc., Cambridge, Mass.
LONG WAVE FILTERS: FINAL REPORT. THE INVESTIGATION AND DEVELOPMENT OF FILTERS FOR OPERATION IN THE WAVELENGTH REGION 100 TO 1000 U., by Lawrence Mertz, 14 May 1953 to 15 Dec 1954. 50 p. Contr. DA36-039-SC-52622.
Order from LC mi $3.30, ph $7.80 PB 127735

Cornell Aeronautical Lab., Inc., Buffalo, N. Y.
INSTRUCTION MANUAL FOR THE PEAK PULSE BRIGHTNESS PHOTOMETER, by Louis Wynberg, 13 Apr 1955. 18 p. LCM-0188.
Order from LC mi $2.40, ph $3.30 PB 127906

Emerson and Cuming Inc., Canton, Mass.
SCIENTIFIC REPORT NO. 2, 14 Jan 1958. 11 p. AFCRC TN 58-100; Contr. AF 19(604) 2448. AD 146796.
Order from LC mi $2.40, ph $3.30 PB 133830

Engineer Research and Development Labs., Fort Belvoir, Va.
TRIBRACH, UNIVERSAL, 28 June 1956. 41 p. ERDL 1453 (-TR).
Order from LC mi $3.30, ph $7.80 PB 128743

Florence U. (Italy)
AN APPLICATION OF PARAGEOMETRICAL OPTICS TO THE DESIGN OF A MICROWAVE MIRROR. Laura Ronchi Abbozzo, Giuliano Toraldo di Francia, Technical Note No. 6, Dec 1956. 23 p. AF CRC TN-57-192; Contract AF61 (514)-903. AD 117107.
Order from LC mi $2.70, ph $4.80 PB 128741

Frankford Arsenal, Philadelphia, Penna.
ELECTRON MICROSCOPE AND ELECTRON DIFFRACTION STUDY OF ZINC SULFIDE OPTICAL COATINGS, by V. Kramer, 25 Sept 1955. 8 p. FALR MR-652.
Order from LC mi $1.80, ph $1.80 PB 128744

Human Engineering Lab., Aberdeen Proving Ground, Md.
LOW-POWER OPTICAL SYSTEMS AND AERIAL TARGET DETECTION, by Martin I. Kurke and Claude N. McCain, Jr., June 1957. 17 p. HEL TM 5-57.
Order from LC mi $2.40, ph $3.30 PB 130411

Microwave Lab., Stanford U., Calif.
VELOCITY OF LIGHT MEASUREMENT, by E. L. Ginzton, et al, June 1957. 10 p. Final Report. ML 400; Contr. AF 18 (600)-1593. AD 133388.
Order from LC mi $1.80, ph $1.80 PB 128169

Naval Research Lab., Washington, D. C.
SILICON AS A FAR-INFRARED DETECTOR, by E. Burnstein and J. J. Oberly, 4 Apr 1952. 52 p. NRL 3880.
Order from LC mi $3.60, ph $9.30 PB 129141

New York U., N. Y.
PERSISTENT INTERNAL POLARIZATION. PROGRESS REPORT 6, VOL. I, by Hartmut P. Kallmann and J. R. Freeman, June 1957. 83 p. AF OSR TN 57-371; Contr. AF 18(600)-1004. AD 132,443.
Order from LC mi $4.80, ph $13.80 PB 129474

Annual report for the period Oct. 15, 1955 to Oct. 14, 1956 (including some continuation of the work until Feb. 1957). Proj. R-355-40-16, Vol. I.

Perkin-Elmer, Norwalk, Conn.
NEW METHODS OF PRODUCTION AND UTILIZATION OF ASPHERICAL OPTICAL ELEMENTS, by J. Vrabel, Mar 1958. 68 p. WADC TR 56-92; Contr. AF 33(616)-2111.
Order from LC mi $3.90, ph $10.80 PB 133566

Senior Observer Section, Mather Air Force Base, Calif.
THE FACTORS INVOLVED IN THE DEVELOPMENT OF A PANORAMIC SEXTANT, 30 June 1955. 21 p. Project 10-55A.
Order from LC mi $2.70, ph $4.80 PB 128786

Walter Reed Army Inst. of Research, Washington, D. C.
A CALIBRATED SOURCE OF HIGH-INTENSITY ULTRAVIOLET RADIATION, by Edwin Gordy and Raymond W. Goldblum, Oct 1954. 7 p. AMSGS 64-54.
Order from LC mi $1.80, ph $1.80 PB 130657

Woods Hole Oceanographic Institution, Mass.
A WIDE-RANGE HIGH-SPEED BATHPHOTOMETER, by C. J. Hubbard, Nov 1956. 11 p. WHOI REF 56-68; Contr. Nonr-1720 (00).
Order from LC mi $2.40, ph $3.30 PB 130790

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
COMPARISON OF THE ATTENUATION OF INFRARED AND VISIBLE RADIATION BY CLOUDS ON MT. WASHINGTON, NEW HAMPSHIRE, AUGUST 1951, by Niel F. Beardsley and Francis D. Linton, Apr 1953. 38 p. WADC TR 53-232; WADC TR 52-174. AD 22066.
Order from LC mi $3.00, ph $6.30 PB 133699

Solid State Physics

Air Force Cambridge Research Center, Mass.
A STATISTICAL ANALYSIS OF A TYPE OF NEGATIVE RESISTANCE DIODE, by J. J. Bowe, Sept 1957. 31 p. AF CRC TR 57-122. AD 133776.
Order from LC mi $3.00, ph $6.30 PB 133751

Armour Research Foundation, Chicago, Ill.
PURE SILICON CARBIDE IN SINGLE CRYSTAL FORM, by R. G. Pohl and L. Reiffel, 16 Dec 1957. 38 p. Interim final Report 1. AF CRC TN 58-125; Contr. AF 19(604) 1953.
Order from LC mi $3.00, ph $6.30 PB 133559

Armour Research Foundation, Chicago, Ill.
PURE SILICON CARBIDE IN SINGLE CRYSTAL FORM. Scientific rept. no. 1 on Contract AF 19(604)-1933. 23 Apr 1957. 26 p. AFCRC TN-57-567; AD 117289.
Order from LC mi $2.70, ph $4.80 PB 128747

Armour Research Foundation, Chicago, Ill.
THE RESPONSE OF CRYSTAL PHOSPHORS TO NUCLEAR RADIATION, by L. Reiffel, 4 June 1957. 59 p. AF OSR TN-57-313; Contr. AF 49 (638)-113. AD 132384.
Order from LC mi $3.60, ph $9.30 PB 129627

Brown U., Providence, R. I.
INVESTIGATIONS OF SURFACE PROPERTIES OF SILICON AND OTHER SEMICONDUCTORS, by H. E. Farnsworth and J. A. Dillon, Jr., Rept. for 1 Dec 1956-28 Feb 57 on AFCRC TN-57-183; Contracts AF 19(604)-1952 and AF 19(122)-458. AD 117025.
Order from LC mi $1.80, ph $1.80 PB 128333

Brown U., Providence, R. I.
INVESTIGATIONS OF SURFACE PROPERTIES OF SILICON AND OTHER SEMICONDUCTORS, by H. E. Farnsworth and J. A. Dillon, Jr. Rept. for 1 Mar-31 May 1957 on Contracts AF 19(604)1952 and AF 19(122) 458. June 1957. 15 p. AFCRC TN-57-554; AD-117122.
Order from LC mi $2.40, ph $3.30 PB 129623

Brown U., Providence, R. I.
ON THE EXCITATION OF SURFACE WAVES IN DIELECTRIC SLABS PART I. EXCITATION BY A MAGNETIC LINE (Slot), C. M. Angulo and W. S. C. Chang, June 1956. 55 p. Contract AF 19(604)1391; AFCRC TN-56-950. AD-110141.
Order from LC mi $3.60, ph $9.30 PB 127471

Brown U., Providence, R. I.
ON THE EXCITATION OF SURFACE WAVES IN DIELECTRIC SLABS. PART II. TWO PARALLEL SLABS EXCITED BY A MAGNETIC LINE (SLOT) C. M. Angulo and W. S. C. Chang, Sept 1956. 84 p. AFCRC TN 56 951; Contr. AF 19(604) 1391. AD 110142.
Order from LC mi $4.80, ph $13.80 PB 127484

Brown U., Providence, R. I.
ON THE EXCITATION OF SURFACE WAVES IN DIELECTRIC SLABS PART III. TWO PARALLEL SLABS EXCITED BY AN ELECTRIC DIPOLE, Carlos M. Angulo and W. S. C. Chang, Oct 1956. 55 p. AFCRC TN 56 Contr. AF 19(604) 1391. AD 110143.
Order from LC mi $3.60, ph $9.30 PB 127483

California Inst. of Tech., Pasadena.
THREE DIMENSIONAL LATTICES WITH ISOTROPIC DIELECTRIC PROPERTIES, by Zonrab A. Kaprielian, 28 Jan 1957. 29 p. Antenna Lab. Tech. report 10; AF OSR TN-57-115; Contr. AF 18 (600)-1113. AD 120468.
Order from LC mi $2.70, ph $4.80 PB 127967

California U., Los Angeles.
PLASTIC DEFORMATION OF FACE-CENTERED CUBIC METALS, by T. H. Lin, et al, Nov 1957. 29 p. AF OSR TN 58-37; Contr. AF 49(638)-20. AD 148076.
Order from LC mi $2.70, ph $4.80 PB 133650

Carnegie Inst. of Tech., Pittsburgh, Penn.
EFFECTIVE MASS THEORY IN SOLIDS FROM A MANY PARTICLE STANDPOINT, by W. Kohn, Sept 1956 or later. 33 p. Contr. Nonr-760 (13).
Order from LC mi $3.00, ph $6.30 PB 132029

CBS-Hytron, Danvers, Mass.
RESEARCH AND DEVELOPMENT--ALPHA--GREATER THAN--ONE SILICON DEVICES, Rept. on Contract AF 19(604)1932. Jan 1957. 58 p. AFCRC TN-57-353. AD 117045.
Order from LC mi $3.60, ph $9.30 PB 127895

Columbia U., School of Engineering, New York.
THE TEMPERATURE DEPENDENCE OF FLOW AND FRACTURE IN COATED ZINC SINGLE CRYSTALS, by L. C. Weiner, 16 July 1957. 21 p. AF OSR-TN-57-385; Contr. AF 18 (600)-898. AD 132460.
Order from LC mi $2.70, ph $4.80 PB 129404

Cornell U., Ithaca, N. Y.
THEORETICAL AND EXPERIMENTAL INVESTIGATIONS OF THE ATOMIC PHENOMENA OCCURRING ON AND NEAR THE SURFACES OF SOLIDS. TECHNICAL REPORT NO. 5: THE ADSORPTION OF NICKEL AND ZIRCONIUM ON A CLEAN MOLYBDENUM SURFACE IN THE FIELD EMISSION MICROSCOPE, by E. C. McIrvine, R. C. Bradley, 1 May 1957. 64 p. AF OSR TN 57-151; Contr. AF 18(600)-674. AD 126440.
Order from LC mi $3.90, ph $10.80 PB 129557

Cryogenic Lab., Pennsylvania State U., University Park.
PALLADIUM HYDRIDE III. THERMODYNAMIC STUDY OF Pd_2 D FROM 15° TO 303° K. EVIDENCE FOR THE TETRAHEDRAL Pd H_4, STRUCTURE IN PALLADIUM HYDRIDE, by Donald M. Nace and J. G. Aston, 3 Dec 1956. 24 p. Contribution no. 94; Contract N6onr-269, T.O.3.
Order from LC mi $2.70, ph $4,80 PB 132316

Delaware U., Newark.
NUCLEAR QUADRUPOLE ZEEMAN SPECTRA OF CRYSTALS, by R. G. Barnes, 1 July 1955 to 31 Aug 1956. 51 p. Contr. DA 36-034-ORD-2035-RD.
Order from LC mi $3.60, ph $9.30 PB 133768

Detroit U., Mich.
THE STUDY OF PROPERTIES OF SINGLE CdS and ZnS CRYSTALS FOR USE AS DETECTORS AND CRYSTAL COUNTERS, by W. M. Baker, R. C. Crane and others, Oct 1956. 56 p. Rept. for Nonr-1511(01).
Order from LC mi $3.60, ph $9.30 PB 128507

Diamond Ordnance Fuze Labs., Washington, D. C.
INTRINSIC TENSOR PERMEABILITIES OF FERRITES BELOW MAGNETIC SATURATION, by R. C. LeCraw and E. G. Spencer, 25 Apr 1956. 33 p. TR-345.
Order from LC mi $3.00, ph $6.30 PB 127620

Diamond Ordnance Fuze Labs., Washington, D. C.
MEASUREMENTS OF MICROWAVE DIELECTRIC CONSTANTS AND TENSOR PERMEABILITIES OF FERRITE SPHERES, by E. G. Spencer, R. C. LeCraw, F. Reggia, 25 Apr 1956. 33 p. DOFL TR-344.
Order from LC mi $3.00, ph $6.30 PB 127621

Dugway Proving Ground, Utah.
THE REACTION OF MAGNESIUM OXINATE WITH HYDROGEN FLUORIDE: A FLUORIMETRIC STUDY by Marilyn G. Alder and W. Stuart Haynes, 27 Oct 1955. 31 p. CW Scientific rept. no. 14.
Order from LC mi $3.00, ph $6.30 PB 130924

Engineering Research Inst., U. of Michigan, Ann Arbor.
AN INVESTIGATION OF REACTIONS IN FERROSPINELS BY DIFFERENTIAL THERMAL ANALYSIS, by C. F. Jefferson. Technical note 4 on Contract AF 18(603)8. July 1957. 11 p. AFOSR-TN-57-540; AD 136526.
Order from LC mi $2.40, ph $3.30 PB 130237

Federal Telecommunication Labs., Nutley, N. J.
RESEARCH ON GROWING SINGLE CRYSTALS OF CERAMIC MATERIALS WITH FERRIMAGNETIC PROPERTIES, by A. J. Marino, July 1957. 20 p. AFCRC TN 57-593; Contr. AF 19(604)-2261. AD 133642.
Order from LC mi $2.40, ph $3.30 PB 130450

Florence U. (Italy)
EXPERIMENTAL TEST OF THREE CONFLECTION LENSES, by P. F. Checcacci and Vera Russo, 15 Apr 1957. 31 p. Tech. note No. 10; AF CRC TN-57-579; Contr. AF61(514)-403. AD 133629.
Order from LC mi $3.00, ph $6.30 PB 129630

Guggenheim Jet Propulsion Center, Calif. Inst. of Tech., Pasadena.
CALCULATIONS OF DIPOLE MOMENTS AND ABSOLUTE INTENSITIES OF HF, HCl, AND HBr, by A. Thomson, Mar 1957. 42 p. Tech. report 24. Contr. Nonr-220 (03).
Order from LC mi $3.30, ph $7.80 PB 132800

Harvard U., Cambridge, Mass.
THE MICROWAVE SPECTRUM-DIPOLE MOMENT AND STRUCTURE OF DIFLUOROSILANE, by Victor W. Laurie 1956 or later. 16 p. Contr. N5onr 1866.
Order from LC mi $2.40, ph $3.30 PB 130944

Horizons, Inc., Cleveland, Ohio.
AN UNUSUAL FORM OF NEODYMIUM SILICATE, by R. C. Vickery and R. Sedlacek, Technical note on. 1 on Contract AF 49(638) 5. 1 July 1957. 5 p. AFOSR TN-57-317; AD-132388.
Order from LC mi $1.80, ph $1.80 PB 129493

Hughes Aircraft Co., Culver City, Calif.
HIGH-FREQUENCY SILICON TRANSISTOR INDUSTRIAL PREPAREDNESS STUDY. FINAL REPORT, by M. J. Barrett and S. T. Eng, 28 June 1956 through 28 June 1957. 91 p. Contr. DA-36-039-SC-72702.
Order from LC mi $5.40, ph $15.30 PB 130611

Illinois U., Urbana.
THE IMPORTANCE OF SURFACE SOURCES TO THE ONSET OF PLASTIC FLOW IN KC1 CRYSTALS, by Taira Suzuki, Dec 1956. 31 p. Contr. N6ori 071 (54).
Order from LC mi $3.00, ph $6.30 PB 130962

Illinois U., Urbana.
IONIC CONDUCTIVITY AND DIFFUSION IN SILVER BROMIDE, by A. S. Miller, 1957 or later. 71 p. AF OSR-TN-57-224; Contr. AF 18(600)-662. AD 126522.
Order from LC mi $4.50, ph $12.30 PB 128336

Illinois U., Urbana.
MOBILITY OF THE POLARON IN A_3Cl, by Frederick C. Brown and Francis E. Dart. Rept. on Contract AF 18(600)662. July 1957. 16 p. AFOSR TN-57-638; AD-132440.
Order from LC mi $2.40, ph $3.30 PB 129622

Illinois U., Urbana.
THE NONSATURABILITY OF THE STRAIN FIELD OF A DISLOCATION BY POINT IMPERFECTIONS, by R. Thomson, 15 July 1957. 20 p. MEDUI-19-AF; AF OSR TN-57-266; Contr. AF18(600)-1311. AD 126565.
Order from LC mi $2.40, ph $3.30 PB 129495

Illinois U., Urbana.
PHOTOCONDUCTIVITY IN KBr CRYSTALS CONTAINING F. CENTERS, by Nicolas Inchauske, Oct 1956. 21 p. TR-20; Contr. N6 ONR-07129.
Order from LC mi $2.70, ph $4.80 PB 129985

Illinois U., Urbana.
PHOTOPRODUCTION OF V_1 CENTERS IN KBx CRYSTALS, by G. Chiarotti and N. Inchauspe, July 1957. 14 p. AF OSR-TN-57-367; Contr. AF -18 (600)-662. AD 132439.
Order from LC mi $2.40, ph $3.30 PB 129477

Illinois U., Urbana.
PHYSICS OF THE SOLID STATE, by R. J. Maurer, Dec 1956. 6 p. Contr. N6onr-07129.
Order from LC mi $1.80, ph $1.80 PB 130921

Illinois U., Urbana.
TRANSIENT PHOTOCONDUCTIVITY IN A_gC1 AT ROOM TEMPERATURE, by F. Brown, Rept. on Contract AF 18(600)662. July 1957. 38 p. AFOSR TN-57-366; AD 132438.
Order from LC mi $3.00, ph $6.30 PB 129478

Institute for Fluid Dynamics and Applied Mathematics, U. of Maryland, College Park.
DEFECTS ON A DIPOLE LATTICE, by A. Isihara, June 1957. 20 p. AF OSR TN 57-387: Contr. AF 18 (600)1315. AD 132462.
Order from LC mi $2.40, ph $3.30 PB 128620

Institute for Fluid Dynamics and applied Mathematics, U. of Maryland, College Park.
EFFECT OF DEFECTS ON SPIN INTERACTIONS IN A SIMPLE CUBIC LATTICE, by A. Isihara, May 1957. 39 p. AF OSR-TN-57-263; Contr. AF 18 (600) 1315. AD 126562.
Order from LC mi $3.00, ph $6.30 PB 128174

Institute of Engineering Research, U. of Calif., Berkeley.
AN EXPERIMENTAL DETERMINATION OF REFLECTION COEFFICIENTS FOR AIR ON ALUMINUM, by E. Merlic, 31 Aug 1956. 58 p. IER 20-111; HE-150-141; Contr. NONR-222(45).
Order from LC mi $3.60, ph $9.30 PB 127890

Institute of Molecular Physics, U. of Maryland, College Park.
CONTRIBUTION TO THE ANALYSIS OF MOLECULAR INTERACTIONS IN CRYSTALS OF SOME NON-POLAR MOLECULES, PART A, by L. Jansen and R. M. Winter, 16 Apr 1957. 67 p. Contr. Nonr-595(02).
Order from LC mi $3.90, ph $10.80 PB 133588

Institute of Optics, U. of Rochester, N. Y.
ON EXCITON MODELS IN THE ALKALI HALIDES, by D. L. Dexter. Rept. on Contract AF 18(600) 688. Apr 1957. 23 p. AFOSR TN-57-198. AD-126493.
Order from LC mi $2.70, ph $4.80 PB 128958

Institute of Optics, U. of Rochester, N. Y.
ON THE POSSIBILITY OF LUMINESCENT QUANTUM YIELDS GREATER THAN UNITY IN INORGANIC CRYSTAL, by D. L. Dexter. Rept. on Contract AF18(600) 688. Apr 1957. 13 p. AFOSR TN-57-172; AD-126-466.
Order from LC mi $2.40, ph $3.30 PB 128956

Institute of Tech., U. of Minn., Minneapolis.
HYDROTHERMAL GROWTH OF BARIUM TITANATE CRYSTALS, by E. L. Piret and A. J. Madden. Final rept. on Contract DA-36-039-SC-52635. 3 July 1956. 44 p.
Order from LC mi $3.30, ph $7.80 PB 130589

Laboratory for Insulation Research, Mass. Inst. of Tech., Cambridge.
PROGRESS REPORT XIX, June 1956. 54 p. Contr. N5ori-07801; Contr. Nonr-1841(10); Contr. AF 30 (635)-2872.
Order from LC mi $3.60, ph $9.30 PB 127692

Contents: I. Conduction and Breakdown in gases, liquids and solids.
II. Ferroelec- trics
III. Ferromagnet- ics
IV. Dielectric spectrosopy.
V. Crystals.

Leyden State U. (Netherlands).
ON THE MOLECULAR THEORY OF DIELECTRIC POLARIZATION, by S. R. Groot, Jan 1958. 21 p. AF OSR TN 58-230; Contr. AF 61(514) 961. AD 154133.
Order from LC mi $2.70, ph $4.80 PB 133679

Leyden State U. (Netherlands).
STATISTICAL MECHANICS OF MATTER IN AN ELECTROMAGNETIC FIELD MOMENTUM BALANCE OF SYSTEMS WITH MAGNETIZATION AND POLARIZATION, by S. R. Groot, Jan 1958. 19 p. AF OSR TN 58-232; Contr. AF 61(514)961. AD 154135.
Order from LC mi $2.40, ph $3.30 PB 133677

Louisiana State U., Baton Rouge.
THE HALL EFFECT IN BISMUTH AT LOW TEMPERATURE, by T. E. Leinhardt and J. M. Reynolds, Jan 1957. 194 p. Contr. DA-01 009-ORD-459.
Order from LC mi $8.70, ph $30.30 PB 133870

Loyola U., New Orleans, La.
RESEARCH ACTIVITY: 1--GROWTH OF SINGLE CRYSTALS 2--HALL MEASUREMENTS, by Paul P. Pickar, 15 Mar 1954. 13 p. 2nd Quarterly Report; Contr. NObsr 60428.
Order from LC mi $2.40, ph $3.60 PB 128203

Loyola U., New Orleans, La.
YEARLY REPORT CONTRACT NO. Nonr 1573 (01), by Paul B. Pickar, 14 Oct 1955 to 15 Oct 1956. 48 p.
Order from LC mi $3.30, ph $7.80 PB 130591

McGill U., (Canada).
PROPERTIES OF A NEW LOW-DENSITY ARTIFICIAL DIELECTRIC, by H. E. J. Neugebauer, Apr 1952. 34 p. Contr. AF19(122)-81. AD 28509.
Order from LC mi $3.00, ph $6.30 PB 130917

Maryland U., College Park, Md.
EFFECT OF DEFECTS ON THE VIBRATION OF CRYSTAL LATTICES, by E. W. Montroll, A. A. Maradudin, etc., June 1957. 33 p. Contrs. AF 18(600) 1015 and 1315; AFOSR TN 57-364. AD 132,436.
Order from LC mi $3.00, ph $6.30 PB 129409

Maryland U., College Park.
THEORY OF THE VIBRATIONS OF DISORDERED CRYSTAL LATTICES, by A. Maradudin and G. A. Weiss, 1957 or later. 61 p. Contrs. AF 18(600)-1015 and AF 18(600)-1315; AFOSR TN 57-365. AD 132437.
Order from LC mi $3.90, ph $10.80 PB 128621

Metals Research Lab., Brown U., Providence, R. I.
GROWTH SELECTION DURING RECRYSTALLIZATION OF ALUMINUM SINGLE CRYSTALS, by Hidehiko Yoshida and Bernard Liebmann, 15 Aug 1957. 11 p. AFOSR TN-57-539; Contr. AF 49(638)75. AD 136525.
Order from LC mi $2.40, ph $3.30 PB 129993

Metals Research Lab., Brown U., Providence, R. I.
THE INFLUENCE OF DEFINED SMALL AMOUNTS OF IMPURITIES ON THE RECRYSTALLIZATION OF ALUMINUM AFTER SMALL DEFORMATION, by J. Gurland and K. Lucke, Dec 1957. 31 p. AFOSR TN 57-785; Contr. AF 49(638)-75; Contr. AF 18 (600)1495. AD 148,016.
Order from LC mi $3.00, ph $6.30 PB 133462

Metals Research Lab., Brown U., Providence, R. I.
THE USE OF SPECTRUM ANALYZER AFFECTING THE MEASUREMENT OF ULTRASONIC ATTENUATION IN SOLIDS, by Donald H. Breslow, Aug 1956. 77 p. WAL 143/14-48; Contr. DA-19-020-505-ORD-3882.
Order from LC mi $4.50, ph $12.30 PB 128379

Metals Research Lab., Carnegie Inst. of Tech., Pittsburgh, Pa.
A DISLOCATION SPIRAL MECHANISM OF CRYSTAL EVAPORATION, by J. P. Hirth and G. M. Pound, 30 Nov 1956. 16 p. Contr. Nonr-760 (08).
Order from LC mi $2.40, ph $3.30 PB 130668

Metals Research Lab., Carnegie Inst. of Tech., Pittsburgh, Pa.
EVAPORATION OF METAL CRYSTALS, by J. P. Hirth and G. M. Pound, 30 Nov 1956. 33 p. Contr. Nonr-760(08).
Order from LC mi $3.00, ph $6.30 PB 129927

Michigan State U., East Lansing.
RESIDUAL RESISTIVITY OF COPPER AND SILVER ALLOYS. THE PERIOD DEPENDENCE, by F. J. Blatt, 15 June 1957. 29 p. AF OSR-TN-57-315; Contr. AF 49 (638)-70. AD 132386.
Order from LC mi $2.70, ph $7.80 PB 128418

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
LEAKY WAVE CONTRIBUTIONS TO THE FIELD OF A LINE ABOVE DIELECTRIC SLAB, by Stephen Barone, 26 Nov 1956. 25 p. Research report R-532-56. PIB 462; AF CRC TN-57-173; Contr. AF-19 (604)-2031.
Order from LC mi $2.70, ph $4.80 PB 128043

Minneapolis-Honeywell Regulator Co. Minn.
INDUSTRIAL PREPAREDNESS STUDY ON GERMANIUM POWER TRANSISTOR XH-25, by J. P. Podolinsky, 31 Jan 1957. 31 p. Contr. DA-36-039-SC-66044.
Order from LC mi $3.00, ph $6.30 PB 127608

Naval Ordnance Lab., Corona, Calif.
POSTCONDUCTION PHENOMENON IN SEMICONDUCTOR DIODES, by C. G. Dorn, 27 May 1957. 22 p. NOLC 373; NAVORD 4619.
Order from LC mi $2.70, ph $4.80 PB 129626

Naval Ordnance Lab., White Oak, Md.
INTERDIFFUSION AND THE VACANCY MECHANISM IN BINARY IONIC CRYSTALS, by R. F. Brebrick, June 1957. 13 p. NAVORD 5717.
Order from LC mi $2.40, ph $3.30 PB 133873

Naval Ordnance Lab., White Oak, Md.
STRUCTURE PARAMETER CHANGES IN MnO_2 AT THE ONSET OF ANTIFERROMAGNETISM, by Stephen L. Strong, June 1957. 27 p. NAVORD 4543.
Order from LC mi $2.70, ph $4.80 PB 133875

Naval Research Lab., Washington, D. C.
MEASUREMENT OF THE COLOR CHARACTERISTICS AND BRIGHTNESS OF FLUORESCENT AND PHOSPHORESCENT MATERIAL, by L. J. Boardman, and L. H. Dawson, June 1947. 17 p. NRL N-3143.
Order from LC mi $2.40, ph $3.30 PB 129166

Naval Research Lab., Washington, D. C.
A REVIEW OF THE CHARACTERISTICS OF LEAD PHOTOCONDUCTING SULFIDE CELLS, by J. E. Perry and E. H. Ockert, Jr., 21 July 1946. 16 p. NRL N-3260.
Order from LD mi $2.40, ph $3.30 PB 130106

Naval Research Lab., Washington, D. C.
SURVEY OF INORGANIC PIEZOELECTRIC MATERIALS; by Paul H. Egli, 10 Oct 1947. 18 p. NRL S-3187.
Order from LC mi $2.40, ph $3.30 PB 130105

Naval Research Lab., Washington, D. C.
TRANSFORMATION OF CRYSTALLOGRAPHIC ELASTIC AND PIEZOELECTRIC COEFFICIENTS, by B. J. Faraday and B. D. Simmons, 14 July 1948. 22 p. NRL S-3316.
Order from LC mi $2.70, ph $4.80 PB 129292

New York State Coll. of Ceramics, Alfred U.
SEMICONDUCTING MATERIALS, by R. Lane and J. L. Stull, Nov 1956. 64 p. Annual report Dec 1955 to Nov 1956. Contr. Nonr 1503 (01).
Order from LC mi $3.90, ph $10.80 PB 130670

New York U., N. Y.
PROGRESS REPORT 4 ON FLUORESCENCE AND CONDUCTIVITY PHENOMENA, by Hartmut Kallmann, May 1952. 89 p. Contr. DA-36-039-SC-5487.
Order from LC mi $4.80, ph $13.80 PB 128287

New York U., N. Y.
PROGRESS REPORT 5 ON FLUORESCENCE AND CONDUCTIVITY PHENOMENA, by Hartmut Kallmann, July 1952. 95 p. Contr. DA-36-039-SC-5487.
Order from LC mi $5.40, ph $15.30 PB 128286

New York U., N. Y.
PROGRESS REPORT 6 ON FLUORESCENCE AND CONDUCTIVITY PHENOMENA, by Hartmut Kallmann, Oct 1952. 73 p. Contr. DA 36-039-SC-5487.
Order from LC mi $4.50, ph $12.30 PB 128285

New York U., N. Y.
PROGRESS REPORT 7 ON FLUORESCENCE AND CONDUCTIVITY PHENOMENA, by Hartmut Kallmann, Mar 1953. 72 p. Contr. DA 36-039-SC-5478.
Order from LC mi $4.50, ph $12.30 PB 128284

New York U., N. Y.
PROGRESS REPORT 8 ON FLUORESCENCE AND CONDUCTIVITY PHENOMENA, by Hartmut Kallmann, Aug 1953. 39 p. Contr. DA 36-039-SC-5487.
Order from LC mi $3.00, ph $6.30 PB 128283

New York U., N. Y.
PROGRESS REPORT 1 ON FLUORESCENCE AND CONDUCTIVITY PHENOMENA, by Hartmut Kallmann, Sept 1953. 73 p. Contr. DA36-039-SC-42626.
Order from LC mi $4.50, ph $12.30 PB 128295

New York U., N. Y.
PROGRESS REPORT 2 ON FLUORESCENCE AND CONDUCTIVITY PHENOMENA, by Hartmut Kallmann, Oct 1953. 75 p. Contr. DA36-039-SC-42626.
Order from LC mi $4.50, ph $12.30 PB 128294

New York U., N. Y.
PROGRESS REPORT 3 ON FLUORESCENCE AND CONDUCTIVITY PHENOMENA, by Hartmut Kallmann, Apr 1954. 84 p. Contr. DA-36-039-SC-42626.
Order from LC mi $4.80, ph $13.80 PB 128293

New York U., N. Y.
PROGRESS REPORT 4 FOR FLUORESCENCE AND CONDUCTIVITY PHENOMENA, by Hartmut Kallmann, May 1954. 60 p. Contr. DA-36-039-SC-42626.
Order from LC mi $3.60, ph $9.30 PB 128292

New York U., N. Y.
PROGRESS REPORT 5 ON FLUORESCENCE AND CONDUCTIVITY PHENOMENA, by Hartmut Kallmann, Oct 1954. 67 p. Contr. DA-36-039-SC-42626.
Order from LC mi $3.90, ph $10.80 PB 128291

New York U., N. Y.
PROGRESS REPORT 6 ON FLUORESCENT AND CONDUCTIVITY PHENOMENA, by Hartmut Kallmann, Feb 1955. 52 p. Contr. DA-36-039-SC-42626.
Order from LC mi $3.60 ph $9.30 PB 128290

New York U., N. Y.
PROGRESS REPORT 7 ON FLUORESCENCE AND CONDUCTIVITY PHENOMENA, by Hartmut Kallmann, Feb 1955. 94 p. Contr. DA-36-039-SC-42626.
Order from LC mi $5.40, ph $15.30 PB 128289

New York U., N. Y.
PROGRESS REPORT 8 ON FLUORESCENCE AND CONDUCTIVITY PHENOMENA, by Hartmut Kallmann, July 1955. 81 p. Contr. DA-36-039-SC-42626.
Order from LC mi $4.80, ph $13.80 PB 128288

New York U. Coll. of Engineering, N. Y.
RESEARCH ON PELTIER EFFECT COOLING. FINAL REPORT, by E. Miller and I. Cadoff, 31 Aug 1955. 63 p. Contr. DA36-039-SC-64422. AD 85559.
Order from LC mi $3.90, ph $10.80 PB 129408

SC Project 112 B; D/A Project.

Ohio State U., Research Foundation, Columbus.
TM_{ono} RESONANCES IN A FERRITE-FILLED CYLINDRICAL CAVITY, by E. K. Damon and R. O. Kauyoumjian, 30 June 1956. 11 p. OSURF 662-8; Contr. DA-36-039-SC-70174.
Order from LC mi $2.40, ph $3.30 PB 130580

Pennsylvania State U., University Park.
MODIFIED TRESCA'S YIELD CONDITION AND ASSOCIATED FLOW RULES FOR ANISOTROPIC MATERIALS AND APPLICATIONS, by L. W. Hu, Oct 1956. 30 p. Technical Report No. 1. Contr. DA-36-061-ORD-505.
Order from LC mi $2.70, ph $4.80 PB 128010

Pennsylvania State U., University Park.
PLASTIC BEHAVIOR OF ALUMINUM ALLOY 17S-T4 SUBJECTED TO TRIAXIAL STRESSES, by L. W. Hu and M. J. Owen, Dec 1956. 25 p. Technical report No. 4. Contr. DA-36-061-ORD-505.
Order from LC mi $2.70, ph $4.80 PB 128011

Pennsylvania U. School of Metallurgical Engineering, Philadelphia.
SHEAR ALONG GRAIN BOUNDARIES IN ALUMINUM BICRYSTALS, by Shiu-Kang Tung and R. Maddin, July 1956. 39 p. Contr. Nonr (551)-19.
Order from LC mi $3.00, ph $6.30 PB 127589

Philco Corp., Philadelphia, Pa.
HIGH-SPEED TRANSISTORIZED FREQUENCY COUNTER FINAL PROGRESS REPORT, by Nisson Sher and J. P. Schoenberg, 16 May 1955 to 31 July 1956. 31 p. Contr. DA 36-039-SC-64663.
Order from LC mi $3.00, ph $6.30 PB 130860

Philco Corp., Philadelphia, Pa.
INDUSTRIAL PREPAREDNESS STUDY ON SURFACE ALLOY SILICON TRANSISTORS, Sept 1956 to 30 Nov 1956. 65 p. Second Quarterly Report. Contr. DA 36-039-SC-72686.
Order from LC mi $3.90, ph $10.80 PB 127580

Polytechnic Inst. of Brooklyn, N. Y.
PIECEWISE LINEAR PLASTICITY, P. G. Hodge Jr., Oct 1956. 11 p. PIB AL Rept. 357; Contr. Nonr 839.
Order from LC mi $2.40, ph $3.30. PB 129652

Paper presented at 9th Inst'l. Cong. of Applied Mathematics, Brussels, Sept 1956.

Princeton U., N. J.
SOLID STATE PROPERTIES AND CATALYTIC ACTIVITY, by Hugh Taylor, 7 Oct 1956. 8 p. Contr. N6ONR-27018.
Order from LC mi $1.80, ph $1.80 PB 128408

Purdue Research Foundation, Lafayette, Ind.
DIFFUSION PHENOMENA IN PRESSURE WELDING, by A. G. Guy and A. L. Eiss, 15 Apr 1957. 34 p. AFOSR-TN-57-225; Contr. AF 18 (600)-1463. AD 126523.
Order from LC mi $3.00, ph $6.30 PB 128214

Radio Corp. of America, Somerville, N. J.
FEASIBILITY STUDY ON DEVICE 1 PER MILITARY SPECIFICATION MIL-T-19500A, A. Mohr and H. D. Harmon, 1 May 1957. 91 p. Contr. DA36-039-SC-72709.
Order from LC mi $5.40, ph $15.30 PB 127612

Sarah Mellon Scaife Radiation Lab., U. of Pittsburgh, Pa.
RESEARCH AND DEVELOPMENT ON THE ELECTRON DENSITY DISTRIBUTION IN SEMI-CONDUCTORS, by G. A. Jeffrey and G. E. Pringle, 1 Feb thru Dec 31, 1955. 42 p. Contr. DA 36-061-ORD 463.
Order from LC mi $3.30, ph $7.80 PB 128127

Equipment For X-Ray Crystal Structure Analysis. 1. A study of a Eulerian cradle for single Crystal Intensity Measurements with the XRD-3 or XRD5 Diffractometer and associated equipment, by G. A. Jeffrey and G. E. Pringle. 2. The direct Recording of Scaled Counter Intensities for X-Ray Crystal Structure Analysis-by G. E. Pringle. 3. A Simple Adaption of the XRD-3 for Direct Recording of X-Ray Intensities, by J. R. Townsend.

Scientific Radio Products, Inc., Omaha, Nebr.
QUARTZ CRYSTALS INDUSTRIAL PREPAREDNESS STUDY. COMPLETION REPORT FOR STEP I., 1 May 1956. 98 p. Contr. DA-36-039-SC-46602.
Order from LC mi $5.40, ph $15.30 PB 130588

Signal Corp Engineering Labs., Fort Monmouth, N. J.
EFFECTS OF X-RAY IRRADIATION ON THE FREQUENCY TEMPERATURE BEHAVIOR OF AT-CUT QUARTZ RESONATORS, by A. R. Chi, 14 Mar 1957. 21 p. SCEL M-1871.
Order from LC mi $2.70, ph $4.80 PB 133852

Sylvania Electric Products, Inc., Woburn, Mass.
INDUSTRIAL PREPAREDNESS STUDY FEASIBILITY REPORT FOR DEVICE NO. 5, 12.5 GERMANIUM AMPLIFIER TRANSISTOR, by D. Unger, 25 Mar 1957. 87 p. Contr. DA36-039-SC-72719.
Order from LC mi $4.80, ph $13.80 PB 127606

Sylvania Electric Products, Inc., Woburn, Mass.
INDUSTRIAL PREPAREDNESS STUDY TRANSISTOR MANUFACTURING FEASIBILITY REPORT. DEVICE 1 OF DIFFUSED TRANSISTOR CONTRACT, by C. M. Chang, 5 Apr 1956. 52 p. Contr. DA-039-SC-72719.
Order from LC mi $3.60, ph $9.30 PB 127607

Syracuse U. Research Inst., N. Y.
THEORY OF NON-IDEAL SOLIDS STATUS REPORT, by Melvin Lax (E. P. Gross, Acting), 1 June 1955 to 1 Jan 1956. 5 p. Contr. Nonr 669 (04).
Order from LC mi $1.80, ph $1.80 PB 127120

Watertown Arsenal Lab., Mass.
ON THE PLANE PLASTIC FLOW OF AN INSET BLOCK, by E. W. Ross, Jr., 30 July 1956. 15 p. WAL 880/52.
Order from LC mi $2.40, ph $3.30 PB 127682

Western Electric Co., Laureldale, Pa.
INDUSTRIAL PREPAREDNESS STUDY DIFFUSED SEMICONDUCTOR DEVICES, by J. M. Early and E. A. Temple, 31 Dec 1956. 54 p. Contr.-DA-36-039-SC-72729.
Order from LC mi $3.60, ph $9.30 PB 127605

Western Electric Co., Laureldale, Pa.
INDUSTRIAL PREPAREDNESS STUDY DIFFUSED SEMICONDUCTORS DEVICES: J. M. Early and E. A. Temple, N.D. 57 p. Feasibility report for Device No. 12. Contr. DA-36-039-SC-72729.
Order from LC mi $3.60, ph $9.30 PB 130683

Westinghouse Electric Corp. E. Pittsburgh, Pa.
THE TRAPPING OF HELIUM IONS AND THE REMISSION OF TRAPPED ATOMS FROM MOLYBDENUM, by L. J. Varnerin and J. H. Carmichael, 18 Feb 1957. 28 p. AFOSR TN 57-270; Contr. AF 18(600) 1049.
Order from LC mi $2.70, ph $4.80 PB 127585

Yale U., New Haven, Conn.
SOME TRANSIENT ELECTRICAL EFFECTS OF PLASTIC DEFORMATION IN NaCl CRYSTALS, by D. B. Fischbach, A. S. Nowick, Aug 1957. 42 p. AF OSR TR 57-55; Contr. AF 18(600)-850-6. AD 136474.
Order from LC mi $3.30, ph $7.80 PB 129555

Theoretical Physics

Armour Research Foundation, Chicago, Ill.
DERIVATION OF THE BALTZMAN EQUATION FROM A QUANTUM MECHANICAL DEFINITION OF THE STEADY STATE, by N. Rostoker, 27 June 1956. 11 p.
Order from LC mi $2.40, ph $3.30 PB 128570

Boston U., Mass.
"THEORY OF MEASUREMENT" IN DIFFERENTIAL-SPACE QUANTUM THEORY, by Armand Siegel, Norbert Wiener. 13 p. N.D. Contr. Nonr-49202. AD 71340.
Order from LC mi $2.40, ph $3.30 PB 127690

California U., Los Angeles.
THEORETICAL STUDY OF MAGNETO-HYDRODYNAMIC, MAGNETO-ACOUSTIC, AND MAGNETO-ELASTIC PHENOMENA, by Alfredo Banos, Jr., 15 May 1957. 34 p. AF OSR TR-57-35; Contr. AF 18(600)-1041.
Order from LC mi $3.00, ph $6.30 PB 129902

Carnegie Inst. of Tech., Pittsburgh, Pa.
ON THE FOUNDATION OF THE MECHANICS OF CONTINUOUS MEDIA, by Walter Noll, June 1957. 71 p. Technical Report No. 17; AF OSR 57-352; Contr. AF 18(600)-1138. AD 132425.
Order from LC mi $4.50, ph $12.30 PB 129535

Electrical Engineering Research Lab., U. of Illinois, Urbana.
ELECTRON INTERACTIONS IN GASEOUS DISCHARGE PLASMAS AND THEIR EFFECT ON CYCLOTRON RESONANCE, by Rudolph C. Hwa and L. Goldstein, 30 Sept 1957. 159 p. Scientific rept. no. 3; AFCRC TN 57-780; Contr. AF 19(604)-2152. AD 133729.
Order from LC mi $7.50, ph $24.30 PB 133636

Institute of Mathematical Sciences, New York U., N. Y.
DIFFRACTION THEORY—THREE PAPERS, translated by Abe Shenitzer. 79 p. AFCRC-TN-57-363; EM-103; Contr. AF 19(604)-1717. AD 117057.
Order from LC mi $4.50. ph $12.30 PB 128790

From "Journal of Experimental and Theoretical Physics" (USSR), 30, p. 528 (1956).

Maryland U., College Park.
FURTHER INVESTIGATIONS ON THE TRIANGULAR-PATCH STIMULATOR, by J. C. Hegarty and F. R. Hama, June 1957. 12 p. AF OSR 57-616; Contr. AF 18(600)-1014. AD 136605.
Order from LC mi $2.40, ph $3.30 PB 132149

Naval Ordnance Test Station, China Lake, Calif.
USE OF THE IBM 701 COMPUTER FOR QUANTUM MECHANICAL CALCULATIONS II OVERLAP INTEGRAL, by D. S. Villars, 10 Aug 1956. 40 p. NOTS 1464; NAVORD 5257.
Order from LC mi $3.00, ph $6.30 PB 130794

Pennsylvania U., Philadelphia.
ON THE PRINCIPLE OF MINIMUM ENTROPY PRODUCTION, by Herbert B. Callen, Aug 1956. 19 p. Technical Report 9. Contr. Nonr 698 (00).
Order from LC mi $2.40, ph $3.30 PB 128122

Polytechnic Inst. of Brooklyn, N. Y.
A GENERAL THEORY OF PIECEWISE LINEAR PLASTICITY BASED ON MAXIMUM SHEAR, by P. G. Hodge, Jr., Dec 1956. 38 p. PIB AL Rept. 361; Contr. Nonr 839(11).
Order from LC mi $3.00, ph $6.30 PB 130653

School of Aviation Medicine, Randolph Air Force Base, Tex.
REQUIREMENTS FOR PRESENT-DAY EXPERIMENTAL ZERO GRAVITY PARABOLAS, by Julian E. Ward, July 1957. 7 p. AF SAM 57-121.
Order from LC mi $1.80, ph $1.80 PB 132179

Stanford U., Calif.
NON-LINEAR VIBRATION PROBLEMS TREATED BY THE AVERAGING METHOD OF W. RITZ-PART III-SINGLE DEGREE OF FREEDOM SYSTEMS-NON-ODD RESTORING FORCES-TWO TERM APPROXIMATIONS, by K. Klatter and J. A. Plough, 15 June 1952. 71 p. Contr. N6onr-251. AD 162369.
Order from LC mi $4.50, ph $12.30 PB 130641

Syracuse U., Research Inst., N. Y.
TWO-COMPONENT SPINORS IN GENERAL RELATIVITY, by Peter G. Bergmann, May 1957. 20 p. AF OSR TN 57-259; Contr. AF 18(600)459. AD 126557.
Order from LC mi $2.40, ph $3.30 PB 128337

Utah U., Salt Lake City.
MECHANISM OF INHIBITOR ACTION FOR CHAIN PROCESSES, by Kang Yang and Taikue Ree, 30 Sept 1956. 47 p. AF OSR TN57-399; Contr. AF 33 (038) 20839. AD 122040.
Order from LC mi $3.30, ph $7.80 PB 129472

Thermodynamics

Air Force Cambridge Research Center, Mass.
FURTHER STUDIES OF THERMAL CONNECTION, by Hsiao-Lan Kuo, 1 Feb 1957. 50 p. AFCRC TN-57-267.
Order from LC mi $3.30, ph $7.80 PB 127915

Air Force Cambridge Research Center, Mass.
REFLECTION OF POINT SOURCE RADIATION FROM A LAMBERT PLANE ONTO A PLANE RECEIVER, by Arnold W. Guess, July 1957. 79 p. AF GRC TR 57-243. AD 133821.
Order from LC mi $4.50, ph $12.30 PB 133652

Arkansas U., Fayetteville.
HIGH-TEMPERATURE CHEMISTRY OF FUSED SUBSTANCES. FINAL REPORT, R. F. Kruh, 1 Mar 1957. 88 p. Contract AF 18 (600)960.
Order from LC mi $4.80, ph $13.80 PB 128076

California Inst. of Tech., Pasadena.
INVESTIGATION OF HEAT TRANSFER AT HIGH HEAT-FLUX DENSITIES LITERATURE SURVEY AND EXPERIMENTAL STUDY IN ANNULUS, by Frank Krieth and Martin Summerfield, 20 Feb 1948. 37 p. Contr. W-04-200-ORD-455.
Order from LC mi $3.00, ph $6.30 PB 128589

California U., Los Angeles.
STUDIES ON THERMAL STRESSES FOR AIRCRAFT STRUCTURES EXPOSED TO TRANSIENT EXTERNAL HEATING, VOLUME II. AN ANALYTICAL METHOD FOR THE PREDICTION OF BEHAVIOR OF A SHEET-STRINGER PANEL WITH A UNIFORMLY HEATED SURFACE, by J. E. Mahlmeister, Dec 1955. 51 p. WADC TR 55-192; Contr. AF 33(616)-293. AD 110408.
Order from LC mi $3.60, ph $9.30 PB 133924

Chemical Warfare Labs., Army Chemical Center, Md.
THERMISTOR DISC CALORIMETER, by Jerry J. Mahoney and Douglas D. Keough, 27 June 1956. 20 p. CWLR 2036.
Order from LC mi $2.40, ph $3.30 PB 128859

Cornell Aeronautical Lab., Inc., Buffalo, N. Y.
TABLES OF THERMODYNAMIC PROPERTIES OF AIR FROM 3000 K to 10,000 K., C. E. Treanor and J. G. Logan, Jr., June 1956. 33 p. Report No. AD-1052-A-2. AF OSR TN-56-343; Contr. AF 40 (600)-6; AF 18 (603)-10; Contr. AF 18 (603)-10. AD 95219.
Order from LC mi $3.00, ph $6.30 PB 128833

Cryogenic Lab., Pennsylvania State U., University Park.
PALLADIUM HYDRIDE II. THE ENTROPY OF Pd_2H AT O K, by Donald M. Nace and J. G. Aston, Rept. on Contract N6onr-269(03), 27 Nov 1956. 21 p.
Order from LC mi $2.70, ph $4.80 PB 129885

Cryogenic Lab., Pennsylvania State U., University Park.
RESEARCH AND DEVELOPMENT ON THE THERMODYNAMICS OF SIMPLE GASES ADSORBED ON SOLIDS, by William A. Steele and J. G. Aston. 1 Aug 1956. 16 p. Contr. DA 36-061-ORD-509.
Order from LC mi $2.40, ph $3.30 PB 128265

Cryogenic Lab., Pennsylvania State U., University Park.
RESEARCH AND DEVELOPMENT ON THERMODYNAMICS OF SIMPLE GASES ADSORBED ON SOLIDS, by J. G. Aston and J. Greyson, Oct 1956. 19 p. Contr. DA36-061-ORD-509.
Order from LC mi $2.40, ph $3.30 PB 128968

Contribution No. 90.
Contents: 1. Theory of heats of adsorption on a uniform surface. 2. Effects of lateral interaction and grain boundaries.

Cryogenic Lab., Pennsylvania State U., University Park.
RESEARCH AND DEVELOPMENT ON THE THERMODYNAMICS OF SIMPLE GASES ADSORBED ON SOLIDS, by J. G. Aston and J. Greyson, 7 Nov 1956. 21 p. Contr. DA 36-061-ORD-509.
Order from LC mi $2.70, ph $4.80 PB 128970

Contribution No 88.
Contents: The heats of adsorption of helium and neon on graphitized carbon black.

Cryogenic Lab., Pennsylvania State U., University Park.
RESEARCH AND DEVELOPMENT ON THE THERMODYNAMICS OF SIMPLE GASES ADSORBED ON SOLIDS, by W. A. Steele, 28 May 1957. 23 p. Contr. DA 36-061-ORD-509. AD-132205.
Order from LC mi $2.70, ph $4.80 PB 128969

Contribution No. 91.
Contents: An approximate site distribution function from adsorption data; Application to adsorbed helium.

Curtiss-Wright Corp., Caldwell, N. J.
INVESTIGATION OF HEAT TREATMENT OF COMMERCIAL BASE ALLOYS, by L. Luini, Apr 1953. 73 p. WADC TR 53-26; Contr. AF 33(038)-23302. AD 13773.
Order from LC mi $4.50, ph $12.30 PB 133695

Dayton U., Ohio.
MEASUREMENT OF PEAK TEMPERATURES WITH THERMAL-SENSITIVE INDICATORS, by John G. Lucier, June 1951. 12 p. WADC TR-53-471; Contr. AF 33(616)6.
Order from LC mi $2.40, ph $3.30 PB 130397

Electrical Engineering Research Lab., U. of Illinois, Urbana.
ALIGNMENT CHART FOR THE RESISTANCE-TEMPERATURE CHARACTERISTICS OF THERMISTORS, by E. K. Weise, 20 Jan 1958. 15 p. AF OSR TN 58-96; TN 12, Contr. AF 33(038)-12644. AD 148145.
Order from LC mi $2.40, ph $3.30 PB 133644

Engineering Research Inst., U. of Michigan, Ann Arbor.
DESCRIPTION AND EXPERIMENTAL RESULTS OF TWO REGENERATIVE HEAT EXCHANGERS, by E. K. Dabora, and M. P. Moyle, Feb 1958. 31 p. AF OSR TN 58-226; Contr. AF 18(600)-1199. AD 154128.
Order from LC mi $3.00, ph $6.30 PB 133681

Guggenheim Aeronautical Lab., Calif. Inst. of Tech., Pasadena.
AERODYNAMIC STUDIES IN THE SHOCK TUBE, by J. Rabinowicz, 10 June 1957. 118 p. Memo. 38; Contr. DA 04-495-ORD-19.
Order from LC mi $6.00, ph $18.30 PB 130046

Guggenheim Aeronautical Lab., Calif. Inst. of Tech., Pasadena.
DEVELOPMENT AND APPLICATION OF A TECHNIQUE FOR STEADY STATE AERODYNAMIC HEAT TRANSFER MEASUREMENTS, by Frederic W. Hartwig, 1 June 1957. 55 p. M 37; Contr. DA-04-495-ORD-19.
Order from LC mi $3.60, ph $9.30 PB 129678

Hypersonic Research Project.

Guggenheim Jet Propulsion Center, Calif. Inst. of Tech., Pasadena.
INFRARED EMISSIVITIES AND ABSORPTIVITIES OF GASES, by S. S. Penner and A. Thomson, Aug 1956. 33 p. Technical rept. no. 21. JPL 21; Contr. Nonr-220(03).
Order from LC mi $3.00, ph $6.30 PB 127920

Harvard U., Cambridge, Mass.
A NOTE ON THE HEAT TRANSFER FROM A SEMI-INFINITE FLAT PLATE IN AN UNSTEADY STREAM, R. C. DePrima, Aug 1956. 20 p. Contr. N5-ORI-07666.
Order from LC mi $2.40, ph $3.30 PB 128268

Illinois Inst. of Tech., Chicago.
CRYOSCOPIC BEHAVIOR OF H_2O AND HNO_3 IN FUSED AMMONIUM NITRATE, by A. G. Keenan, Technical note 2 on Contract AF 18(600)1148. Feb 1957. 11 p. AFOSR TN-57-32; AD-115067.
Order from LC mi $2.40, ph $3.30 PB 127969

Illinois U. Urbana.
THEORETICAL STUDY OF THE PROPERTIES OF INSULATING AND CONDUCTING SOLIDS, by T. Suzuki and R. Casella, 31 May 1957. 6 p. Contr. AF 18(600)-689.
Order from LC mi $1.80, ph $1.80 PB 127591

Institute of Flight Structures, Columbia U., New York.
A METHOD FOR THE APPROXIMATE SOLUTION OF THE HEAT EQUATION, by Jerome H. Weiner, Mar 1955. 56 p. WADC TR 54-427; Contr. AF 33(616)2071. AD 97343.
Order from LC mi $3.60, ph $9.30 PB 133917

James Forrestal Research Center, Princeton, N. J.
A SELECTIVE BIBLIOGRAPHY APPLYING TO HEAT TRANSFER IN OSCILLATING FLOW, by Maurice H. Smith and J. P. Rayton, 9 Mar 1955. 42 p. 184 refs. Literature Search No. 7.
Order from LC mi $3.30, ph $7.80 PB 128691

Jet Propulsion Lab., Calif. Inst. of Tech., Pasadena.
INVESTIGATION OF HEAT TRANSFER AT HIGH HEAT-FLUX DENSITIES: EXPERIMENTAL STUDY WITH WATER OF FRICTION DROP AND FORCED CONVECTION WITH AND WITHOUT SURFACE BOILING IN TUBES, by F. Kreith and M. Summerfield, 2 Apr 1948. 50 p. JPL PR-4-68; Contr. W-04-200-ORD-455.
Order from LC mi $3.30, ph $7.80 PB 128941

Leyden State U. (Netherlands).
ON THE THERMODYNAMICAL THEORY OF RELAXATION PHENOMENA: ACOUSTICAL RELAXATION, by S. R. Groot, Jan 1958. 14 p. AF OSR TN 58-233; Title: Relaxation phenomena: Acoustical relaxation; Contr. AF 61(514) 961. AD 154136.
Order from LC mi $2.40, ph $3.30 PB 133676

Massachusetts Inst. of Tech., Cambridge.
APPLICATION OF SPECIAL WORKING FLUIDS TO THERMODYNAMIC POWER CYCLES OF VERY LOW OUTPUT POWER, by J. P. Barger, M. Mojdara, etc., 30 Mar 1956. 44 p. Contr. N5-ori-07899.
Order from LC mi $3.30, ph $7.80 PB 128563

Massachusetts Inst. of Tech., Cambridge.
HEAT TRANSFER TO SUPERCRITICAL FLUORINATED HYDROCARBONS, by R. J. Ferran and Z. J. J. Stekly, Rept. on Contract Nonr-1841(14). 1 July 1956. 40 p.
Order from LC mi $3.00, ph $6.30 PB 128013

Massachusetts Inst. of Tech., Cambridge.
A THEORETICAL INVESTIGATION OF THE THERMODYNAMIC AND DYNAMIC EFFECTS OF WATER INJECTION INTO HIGH-VELOCITY, HIGH-TEMPERATURE GAS STREAMS, by Bruce David Gavril, June 1954. 317 p.
Order from LC mi $11.10, ph $48.60 PB 128104

Naval Air Rocket Test Station, Lake Denmark, Dover, N. J.
THERMISTOR CONTROL AND MEASUREMENT IN ADIABATIC CALORIMETRY, John D. Clark and Herman Menes, Apr 1956. 24 p. NARTS 89.
Order from LC mi $2.70, ph $4.80 PB 128383

Naval Engineering Experiment Station, Annapolis, Md.
HIGH-TEMPERATURE PROPERTIES OF TITANIUM-BORON STEELS, by R. B. Niederberger, 27 Apr 1956. 17 p. Research and Development Rept. 040038F(15). AD 105728.
Order from LC mi $2.40, ph $3.30 PB 129403

Naval Ordnance Test Station, China Lake, Calif.
EFFECTS OF RAPID HEATING AND COOLING ON THE HARDNESS AND STRENGTH OF 2014-T6 AND 7075-T6 ALUMINUM ALLOYS, W. K. Smith, 19 Apr 1956. 10 p. NOTS 1420; NAVORD 5065.
Order from LC mi $1.80, ph $1.80 PB 130793

Naval Research Lab., Washington, D. C.
QUARTERLY PROGRESS REPORT NO. 4 ON THE MEASUREMENT OF THE PHYSICAL AND CHEMICAL PROPERTIES OF THE SODIUM-POTASSIUM ALLOY, by C. T. Ewing and R. S. Hartman, etc. July 1947. 86 p. NRL C-3152.
Order from LC mi $3.90, ph $10.80 PB 129168

New York U. Coll. of Engineering, N. Y.
RESEARCH ON PELTIER EFFECT COOLING. FINAL REPORT, by E. Miller and B. Selikson, Jan 1957. 45 p. Contr. DA 36-039-SC-711.
Order from LC mi $3.30, ph $7.80 PB 128086

Ohio State U., Columbus.
CONTRIBUTIONS TO THE THERMODYNAMIC FUNCTIONS BY A PLANCK-EINSTEIN OSCILLATOR IN ONE DEGREE OF FREEDOM, by H. L. Johnston, July 1949. 66 p. Contr. N6 onr-225. AD 206083.
Order from LC mi $3.90, ph $10.80 PB 132035

Ordnance Materials Research Office, Watertown Arsenal, Mass.
COMPARISON OF THE CORRESPONDING STATES AND TWO-DEBYE METHODS OF MATCHING LATTICE SPECIFIC HEATS, by A. Paskin and R. J. Weiss, May 1957. 34 p. MRL 29.
Order from LC mi $3.00, ph $6.30 PB 128606

Pennsylvania State U., University Park.
THERMODYNAMICS OF SIMPLE GASES ABSORBED ON SOLIDS. TECHNICAL REPORT, by J. B. Aston, 30 Apr 1956. 57 p. Contr. DA 36-061-ORD-509.
Order from LC mi $3.60, ph $9.30 PB 130665

Pitman-Dunn Labs. Group, Frankford Arsenal, Philadelphia, Pa.
A THERMODYNAMIC STUDY OF LIQUID Pb-Zn SOLVENTS, by F. D. Rosenthal and G. J. Mills, June 1956. 68 p. Rept. no. R-1330.
Order from LC mi $3.90, ph $10.80 PB 129449

Polytechnic Inst. of Brooklyn, N. Y.
HEAT TRANSFER IN LAMINAR BOUNDARY LAYER (COMPRESSIBLE FLUIDS) ON A POROUS FLAT PLATE WITH FLUID INJECTION, by Shao Wen Yuan, 21 June 1948. 33 p. PIB AL Rept. 135; Contr. N6ori-98, T.O.2.
Order from LC mi $3.00, ph $6.30 PB 127950

Rennesselaer Polytechnic Inst., Troy, N. Y.
STUDY OF EFFECT OF DEFORMATION ON THE THERMAL EXPANSION OF METALS, by H. B. Huntington, 2 Apr 1957. 6 p. AF OSR-TR-57-60; Contr. AF18(600)-649. AD 136528.
Order from LC mi $1.80, ph $1.80 PB 130915

Stanford U. Calif.
SUMMARY OF BASIC HEAT TRANSFER AND FLOW FRICTION DESIGN DATA FOR PLAIN PLATE-FIN HEAT EXCHANGE SURFACES, by W. M. Kays and S. H. Clark, 15 Aug 1953. 134 p. TR-17; Contr. N6onr-251. Task Order 6. AD 16407.
Order from LC mi $6.90, ph $21.30 PB 129900

Thermal Research and Engineering Corp., Conshohocken.
SUMMARY REPORT OF THE DEVELOPMENT OF A HIGH TEMPERATURE HEAT EXCHANGER, by J. J. Konikoff, 28 June 1955. 100 p. Rept. 1004. Contr. NOBS-50469-C1733.
Order from LC mi $5.40, ph $15.30 PB 130244

Wave Propagation

Academy of Technical Sciences, (Denmark).
POLARIZATION-TRANSFORMING PLANE REFLECTOR FOR MICROWAVES, by J. Aagesen, 1957. 26 p. Electrical Engineering Series Vol. 8 No. 7. Acta Polytechnica 239 (1957).
Order from LC mi $2.70, ph $4.80 PB 134222

Air Force Cambridge Research Center, Bedford, Mass.
SOME AIRBORNE MEASUREMENTS OF VHF REFLECTIONS FROM METEOR TRAILS, by J. P. Casey and J. A. Holladay, Apr 1957. 11 p. AF CRC TN 57-101. AD 117086.
Order from LC mi $2.40, ph $3.30 PB 132084

Air Force Cambridge Research Center, Mass.
THE SPATIAL FREQUENCY RESPONSE OF A TWO-DIMENSIONAL OPTICAL SYSTEM IN THE PRESENCE OF PRIMARY AND THIRD-ORDER SPHERICAL ABERRATION, by George B. Parrent, Jr. and Charles J. Drane, Jr., May 1957. 51 p. AF CRC TR-57-108. AD 117092.
Order from LC mi $3.60, ph $9.30 PB 132336

California U., Los Angeles.
TORSIONAL MAGNETO-HYDRODYNAMIC WAVES IN THE PRESENCE OF FINITE VISCOSITY, by Edwin Blue, 15 Jan 1957. 100 p. AF OSR TN 57-57; Contr. AF 18(600) 1041. AD 115096.
Order from LC mi $5.40, ph $15.30 PB 127702

Cornell U. School of Electrical Engineering, Ithaca, New York.
STUDIES ON PROPAGATION IN THE IONOSPHERE, by W. Flood, R. Cohen, 31 Mar 1953. 34 p. Research Report EE147. Progress Report 3. Contr. DA-36-039-sc-15547.
Order from LC mi $3.00, ph $6.30 PB 127976

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
A THEORY OF LONG-DURATION METEOR-ECHOES BASED ON ATOMOSPHERIC TURBULENCE WITH EXPERIMENTAL CONFIRMATION, by H. G. Booker and Robert Cohen, 1 July 1956. 50 p. Technical Report 36. Research Report EE 298. Contr. DA36-039-SC-56748.
Order from LC mi $3.30, ph $7.80 PB 127737

Electrical Engineering Research Lab., U. of Texas, Austin.
ATMOSPHERIC ATTENUATION OF 3.35 MILLIMETER RADIO WAVES ON A 7.5 MILE PATH, by C. W. Tolbert and C. O. Britt, 29 Mar 1957. 19 p. EERL-90, Contr. Nonr-375 (01).
Order from LC mi $2.40, ph $3.30 PB 132648

Geophysical Inst., U. of Alaska, College.
RADIO PROPAGATION IN THE ARCTIC, by G. G. Little and R. B. Dyce, 15 Apr 1956. 114 p. AFCRC TR-56-121; Contr. AF 19(604) 1089. AD 110177.
Order from LC mi $6.00, ph $18.30 PB 128329

Geophysical Inst., U. of Alaska, College.
STUDIES OF GROUND CONDUCTIVITY IN THE FAIRBANKS, KODIAK, ANCHORAGE, NOME, AND POINT BARROW REGIONS, by Glenn M. Stanley, 30 Sept 1955. 52 p. Final Report. Contr. DA 36-039-SC-56715.
Order from LC mi $3.60, ph $9.30 PB 127699

Institute for the Study of Rate Processes, U. of Utah, Salt Lake City.
TRANSIENTS IN DETONATION, by M. A. Cook and Others, 15 Apr 1956. 52 p. TR-50; Contr. N7-onr-45107.
Order from LC mi $3.60, ph $9.30 PB 128213

Institute of Mathematical Sciences, New York U., N. Y.
FADING OF RADIO WAVES SCATTERED BY DIELECTRIC TURBULENCE, by R. A. Silverman Jan 1957. 17 p. AFCRC TN 57-379; EM-101; Contr. AF 19(604)-1717. AD 117081.
Order from LC mi $2.40, ph $3.30 PB 128792

Microwave Lab., Stanford U., Calif.
THEORETICAL STUDY OF ELECTRO-MAGNETIC WAVES SCATTERED FROM SHAPED METAL SURFACES, by William W. Hansen and Leonard I. Schiff, 24 Feb 1948. 17 p. Quarterly Report No. 2.
Order from LC mi $2.40, ph $3.30 PB 127176

Motorola, Inc., Riverside, Calif.
EXPERIMENTAL INVESTIGATION OF MOUNTAIN OBSTACLE PATH TRANSMISSION, by H. R. Austin, et al, May 1955. 56 p. Contr. DA 36-039-SC-64556.
Order from LC mi $3.60, ph $9.30 PB 133618

Second Quarterly Report, Feb-Apr 1955.

Motorola, Inc., Riverside, Calif.
EXPERIMENTAL INVESTIGATION OF MOUNTAIN OBSTACLE PATH TRANSMISSION AT MICROWAVE FREQUENCIES, by P. L. Cassell and W. R. Kerley, Aug 1957. 155 p. Contr. DA-36-039-SC-73057.
Order from LC mi $7.50, ph $24.30 PB 132503

Naval Ordnance Lab., White Oak, Md.
ON THE OBLIQUE REFLECTION OF UNDER-WATER SHOCKWAVES FROM A FREE SURFACE I, by J. H. Rosenbaum and H. G. Snay, 1 Nov 1956. 31 p. NAVORD 2710.
Order from LC mi $3.00, ph $6.30 PB 130040

Naval Ordnance Lab., White Oak, Maryland.
SHOCKWAVE PROPAGATION IN SHALLOW WATER, by J. H. Rosenbaum, 8 Aug 1956. 33 p. NAVORD-4353.
Order from LC mi $3.00, ph $6.30 PB 128727

Naval Research Lab., Washington, D. C.
SIGNAL FLUCTUATIONS IN LONG RANGE OVER-WATER PROPAGATION, by W. S. Ament and M. Katzin, 17 Mar 1950. 7 p. NRL 3639.
Order from LC mi $1.80, ph $1.80 PB 129132

Polytechnic Inst. of Brooklyn, N. Y.
INVESTIGATIONS IN ELECTROMAGNETIC THEORY AND MICROWAVE NETWORKS, by A. A. Oliner, 8 Mar 1957. 49 p. Final Report. AFCRC TR-57-187; Contr. AF 19(604)-890. AD 117288.
Order from LC mi $3.30, ph $7.80 PB 130445

Raytheon Mfg. Co., Watertown, Mass.
IONOSPHERE PROPAGATION STUDIES, by L. C. Edwards, 31 Mar 1957. 58 p. Scientific Report No. 1-7; AF CRC TN-57-179; Contr. AF 19(604)-1413. AD 117018.
Order from LC mi $3.60, ph $9.30 PB 128939

Raytheon Mfg. Co., Waltham, Mass.
IONOSPHERIC PROPAGATION STUDIES, by L. C. Edwards, 31 July 1957. 69 p. Contr. AF 19 (604)-1413; AFCRC-TR-57-185. AD 117278.
Order from LC mi $3.90, ph $10.80 PB 130446

Rome Air Development Center, Griffis Air Force Base, N. Y.
A PRELIMINARY SURVEY OF TROPOSPHERIC MICROWAVE REFRACTION AT ROME, N. Y., by A. Engleman and L. Calin, Sept 1957. 111 p. RADC TN-57-257. AD 131187.
Order from LC mi $6.00, ph $18.30 PB 130996

Technical Research Group, New York.
EXCITATION EFFICIENCY OF SURFACE WAVES OVER CORRUGATED METAL, DOUBLY CORRUGATED METAL AND IN DIELECTRIC SLABS ON A GROUND PLANE, by Alan F. Kay, Dec 1956. 57 p. Contr. AF 19(604) 1307; AFCRC TN-56-776.
Order from LC mi $3.60, ph $9.30 PB 128569

RESEARCH METHODS, TECHNIQUES AND EQUIPMENT

Astronautics Symposium, San Diego, Calif.
SUMMARY SESSION (REPORTS), by Wm. H. Dorrance et al, 19 Feb 1957. 54 p. AF OSR TR 57-14. AD 120430.
Order from LC mi $3.60, ph $9.30 PB 133771

David Taylor Model Basin, Washington, D. C.
CABLE FUNCTION TABLES FOR SMALL CRITICAL ANGLES, by Leonard Poole and Louis Rosenthal, Sept 1955. 103 p. DTMB 687 Suppl.
Order from LC mi $5.70, ph $16.80 PB 128853S

Naval Research Lab., Washington, D. C.
ANNUAL REPORT FOR THE YEAR ENDING 30 JUNE 1947, June 1947. 17 p. NRL 3146.
Order from LC mi $2.40, ph $3.30 PB 129165

Communication Theory

Developmental Engineering Corp., Washington, D. C.
RELIABLE HIGH-FREQUENCY COMMUNICATIONS FRIST SPECIAL REPORT: GROUND SCREEN MEASUREMENT, by D. F. Bowman, 4 May 1956. 15 p. Contr. DA-36-039-SC-64486.
Order from LC mi $2.40, ph $3.30 PB 130582

General Research Co., Beverly Hills, Calif.
TECHNOTICS: A STUDY OF EFFECTIVE COMMUNICATION OF TECHNICAL AND SCIENTIFIC KNOWLEDGE, by J. S. J. Hlobil, July 1957. 37 p. AFOSR TR 57-45; Contr. AF-49(638)-174. AD 132,473.
Order from LC mi $3.00, ph $6.30 PB 129395

Ingeniors Vetenskaps Akademien (Sweden).
A SOUND SPECTROMETER FOR SPEECH ANALYSIS, by Haus Sund, 1957. 66 p. Electrical Engineering Series Vol. 8, No. 4. Acta Polytechnica 228 (1957).
Order from LC mi $3.90, ph $10.80 PB 134221

Naval Ordnance Lab., White Oak, Md.
RELIABILITY IN COMMUNICATIONS SYSTEMS, by George H. Weiss, June 1957. 18 p. NAVORD 5664.
Order from LC mi $2.40, ph $3.30 PB 133874

New York U. Coll. of Engineering, N. Y.
EVALUATION AND OPTIMIZATION OF DIGITAL COMMUNICATION SYSTEMS, PART I, by D. Hoffman and E. Schutzman, 15 Apr 1957. 32 diagrs. AF CRC TN-57-355; Contr. AF19(604)-1964. AD 117124.
Order from LC mi $3.00, ph $6.30 PB 129624

New York U. Coll. of Engineering, N. Y.
EVALUATION AND OPTIMIZATION OF DIGITAL COMMUNICATION SYSTEMS, PART II, by S. S. L. Chang, B. Harris, and A. Hauptschein, 15 July to 15 Oct 1957. 125 p. AFCRC TN-57-769; Contr. AF 19(604) 1964. AD 133,714.
Order from LC mi $6.30, ph $19.80 PB 133627

New York U. Coll. of Engineering, N. Y.
EVALUATION AND OPTIMIZATION OF DIGITAL COMMUNICATION SYSTEMS, by S. S. L. Chang, B. Harris and A. Hauptschein, 15 Jan 1958. 128 p. AFCRC TN 57-971; Contr. AF 19(604)- 1964. AD 133792.
Order from LC mi $6.30, ph $19.80 PB 133836

Rome Air Development Center, N. Y.
CONSTANT AMPLITUDE SPEECH, by P. J. Ferrell, Oct 1957. 21 p. RADC TN-57-317. AD 131270.
Order from LC mi $2.70, ph $4.80 PB 132431

Information Theory

Operational Applications Lab., Air Force Cambridge Research Center, Washington, D. C.
A FURTHER STUDY OF INFORMATION TRANSMISSION WITH MATRIX PATTERNS, by E. T. Klemmer, Sept 1957. 7 p. AF CRC TN 57-1. AD 110066.
Order from LC mi $1.80, ph $1.80 PB 132059

Signal Corps Engineering Labs., Fort Monmouth, N. J.
THEORY OF INFORMATION IN THE DISCRETE COMMUNICATION SYSTEM, by Abner Shimony, 21 Sept 1945. 76 p.. TM 1690.
Order from LC mi $4.50, ph $12.30 PB 127492

Stavid Engineering, Inc., Plainfield, N. J.
INVESTIGATION OF TECHNIQUES FOR DISPLAYING INFORMATION IN AN AIR TRAFFIC CONTROL CENTER, by R. A. Barker and R. G. Hertz, May 1957. 43 p. AFCRC TR-57-160; Contr. AF 19 (604) 1508. AD 117013.
Order from LC mi $3.30, ph $7.80 PB 129631

Photographic Equipment

Army Medical Research Lab., Fort Knox, Ky.
THE APPLICATION OF FILM SENSITOMETRY TO THULIUM-170 RADIOGRAPHY, by A. Shemesh and R. Tyler, 5 Sept 1956. 17 p. AMRL 253.
Order from LC mi $2.40, ph $3.30 PB 128945

Bulova Research and Development Labs., Woodside, N. Y.
HIGH-SPEED POLYGONAL-PRISM CAMERA STUDY. FINAL REPORT PART I., 1 Dec 1956. 141 p. ARDC-TR-56-63 pt. 1; Contr. AF18(600)-1606. AD 113001.
Order from LC mi $7.20, ph $22.80 PB 128686

Bulova Research and Development Labs., Woodside, N. Y.
HIGH-SPEED POLYGONAL-PRISM CAMERA STUDY. FINAL REPORT PART II, 1 Dec 1956. 48 p. ARDC-TR-56-63 pt. 2; Contr. AF 18(600)-1606. AD 113002.
Order from LC mi $3.30, ph $7.80 PB 128687

Engineer Research and Development Labs., Fort Belvoir, Va.
BRUSH-SURFACED LITHOGRAPHIC TEST PLATES, by John G. Colwell and Stephen W. Gibson, 28 June 1956. 39 p. ERDL 1452-TR.
Order from LC mi $3.00, ph $6.30 PB 129377

Engineering Research Inst., U. of Michigan, Ann Arbor.
THE UNDERWATER SPARK. AN EXAMPLE OF GASEOUS CONDUCTION AT ABOUT 10,000 ATMOSPHERES. FINAL REPORT, by Edward A. Martin, July 1956. 198 p. 2048-12F. Contr. DA 20-018-ORD-12242.
Order from LC mi $8.70, ph $30.30 PB 128192

Naval Ordnance Test Station, China Lake, Calif.
THE BOWEN 76-LENS CAMERA, by J. S. Stanton and M. D. Blatt, 17 Sept 1948. 27 p. NAVORD 1033; NOTS 152.
Order from LC mi $2.70, ph $4.80 PB 129680

Naval Ordnance Test Station, China Lake, Calif.
HIGH-FRAMING-RATE, ARGON-FLASH FIELD PHOTOGRAPHS, by Robert G. S. Lewell and Lawrence N. Cosner, 9 Oct 1956. 26 p. NOTS 1528; NAVORD 5298.
Order from LC mi $2.70, ph $4.80 PB 130833

Naval Ordnance Test Station China Lake, Calif.
M-45 TRACKING CAMERA MOUNT, N.D. 14 p. NOTS 1325.
Order from LC mi $2.40, ph $3.30 PB 130830

A Brochure.

Naval Research Lab., Washington, D. C.
A TIME INTERVAL AND REFERENCE LINE MARKER FOR MOVING FILM PHOTOGRAPHY OF OSCILLOSCOPE TRACES, by E. W. Kammer, June 1947. 7 p. NRL S-3104.
Order from LC mi $1.80, ph $1.80 PB 129155

Ohio State U. Research Foundation, Columbus.
NOTES ON METHODS FOR CHECKING SHORAN PHOTO FLIGHT LINES, by John R. Williams, Feb 1953. 12 p. TP 173; WADC TR 53-76; Contr. AF 18(600)-90. AD 12014.
Order from LC mi $2.40, ph $3.30 PB 133688

Temple U., Philadelphia, Pa.
INVESTIGATION OF VELOCITY AND ATTENUATION OF SHOCK AND ACOUSTIC WAVES AT LOW PRESSURE, DEVELOPMENT OF SENSITIVE TOTAL RADIATION DETECTORS, NEGATIVE POINT CORONA DISCHARGE AND EXPLODING WIRES, by J. Lloyd Bohn, Francis H. Nadig, et al, 30 Mar 1956. 140 p. Contr. AF 19(604)994.
Order from LC mi $6.90, ph $21.30 PB 128188

Woods Hole Oceanographic Institution, Mass.
STEREO-WAVE OBSERVATION PROGRAM, by Wilbur Marks, July 1956. 53 p. WHOI Ref. 56-44; Contr. Nonr 769 (00).
Order from LC mi $3.60, ph $9.30 PB 128110

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
MOTION BLUR IN AERIAL PHOTOGRAPHY PART 1, by M. R. Nagel, Feb 1954. 39 p. WADC TR 54-347, pt. 1. AD 61910.
Order from LC mi $3.00, ph $6.30 PB 130382

Wright Air Development Center, Wright-Patterson Air Force Base, Ohio.
MOTION BLUR IN AERIAL PHOTOGRAPHY PART 2, by M. R. Nagel, Feb 1954. 33 p. WADC TR 54-347, pt. 2. AD 61907.
Order from LC mi $3.00, ph $6.30 PB 130383

SOCIAL SCIENCES

Acoustics Lab., Mass. Inst. of Tech., Cambridge.
SPEECH COMPRESSION RESEARCH FINAL REPORT Feb 1957, 55 p. AF CRC TR-57-166; Contr. AF19 (604)-626. AD 117049.
Order from LC mi $3.60, ph $9.30 PB 132340

Air Force Cambridge Research Center, Mass.
FREQUENCY BAND COMPRESSION AND EXPANSION BY RESPECTIVE EXCLUSION AND REPETITION OF TIME SEGMENTS, by Friedrich Vilbig, Apr 1957. 42 p. AF CRC TN-57-104. AD 117069.
Order from LC mi $3.30, ph $7.80 PB 132353

California U., Berkeley.
AN ECONOMIC THEORY INVOLVING PRODUCTION DELAY PERIODS, by Allan Davis, Sept 1956. 69 p. Contr. NONR-222(37).
Order from LC mi $3.90, ph $10.80 PB 128496

Carnegie Inst. of Tech. Graduate School of Industrial Administration, Pittsburgh, Pa.
A TRIGGER DECISION RULE FOR ALLOCATING INVENTORY TO PRODUCTION LOTS AND BUFFERS, by Peter R. Winters, Aug 1956. 23 p. Research Memorandum 48; Contr. Nonr-76001.
Order from LC mi $2.70, ph $4.80 PB 128237

Dartmouth Coll., Hanover, N. H.
THE FISHING INDUSTRY OF NORTH NORWAY, by Trevor Lloyd and Joan B. Snell, Jan 1956. 34 p. Technical rept.; ONR TR 438-03-05.
Order from LC mi $3.00, ph $6.30 PB 127119

Dartmouth Coll., Hanover, N. H.
THE RECONSTRUCTION OF NORTH NORWAY, 1945-1955, by Trevor Lloyd, 1956. 21 p. Technical Report. ONR 438-03-04, 1956.
Order from LC mi $2.70, ph $4.80 PB 127287

Indiana U., Bloomington.
MESSAGE REPETITION, OPERATING CHARACTERISTICS AND CONFUSION MATRICES IN SPEECH COMMUNICATION, by James P. Egan, 1 June 1957. 169 p. AF CRC TR 57-50. AD 110064.
Order from LC mi $7.80, ph $25.80 PB 132143

Louisiana State U., Baton Rouge.
THE ARCHEOLOGY OF COASTAL NORTH CAROLINA, by William G. Haag, 15 Dec 1956. 137 p. Contr. N 7 onr-35608.
Order from LC mi $6.90, ph $21.30 PB 130567

Ohio State U. Research Foundation, Columbus.
THE MASKING OF ENGLISH WORDS BY PROLONGED VOWEL SOUNDS, by H. M. Moser, May 1957. 23 p. Technical rept. no. 40; Contr. AF 19 (604)-1577; AFCRC TN-56-74. AD 110060.
Order from LC mi $2.70, ph $4.80 PB 132065

Ohio State U. Research Foundation, Columbus.
PHRASEOLOGY OF INTERNATIONAL LANGUAGE OF THE AIR. (SENTENCE FORM), by Henry M. Moser, Aug 1957. 33 p. AF CRC TN 57-51; Contr. AF 19 (604)-1577. AD 110067.
Order from LC mi $3.00, ph $6.30 PB 132058

Princeton U., N. J.
THE RELATION OF ADVERB-ADJECTIVE COMBINATIONS TO THEIR COMPONENTS, by N. Cliff, Oct 1956. 97 p. Contr. N6oni-270-20; Contr. N6onr-1858(15).
Order from LC mi $5.40, ph $15.30 PB 128505

Purdue U., Lafayette, Ind.
INVESTMENT THEORY AND THE THEORY OF COST AND PRODUCTION: A SYNTHESIS WITH APPLICATIONS, Vernon L. Smith, May 1956. 36 p. Contr. Nonr 1100 (05).
Order from LC mi $3.00, ph $6.30 PB 127315

Rand Corp., Santa Monica, Calif.
COST-QUANTITY RELATIONSHIPS IN THE AIRFRAME INDUSTRY, by Harold Asher, 1 July 1956. 199 p. Rpt. R-291.
Order from LC mi $8.70, ph $30.30 PB 128143

Stanford U., Calif.
AN ECONOMIC THEORY OF GOVERNMENT DECISION-MAKING IN A DEMOCRACY, by Anthony Downs, 31 May 1956. 355 p. Contr. N6onr-25133. AD 97061.
Order from LC mi $11.10, ph $54.60 PB 128677

RESEARCH REPORTS

UNIVERSITY OF MICHIGAN
JUN 9 1960
ENGINEERING LIBRARY

Sect H

May 13, 1960
Vol. 33, No. 5

. . . A monthly listing of Government research reports available to industry . . .

In this issue:

Basic Research Resumes: A Survey of Basic Research Activities in the Air Research and Development Command.

Army Research Task Summaries, 1960.

Adaptation of Ceramic Tube Types.

Composite Materials and Composite Structure.

Critical Review of Literature on Formation and Prevention of Scale.

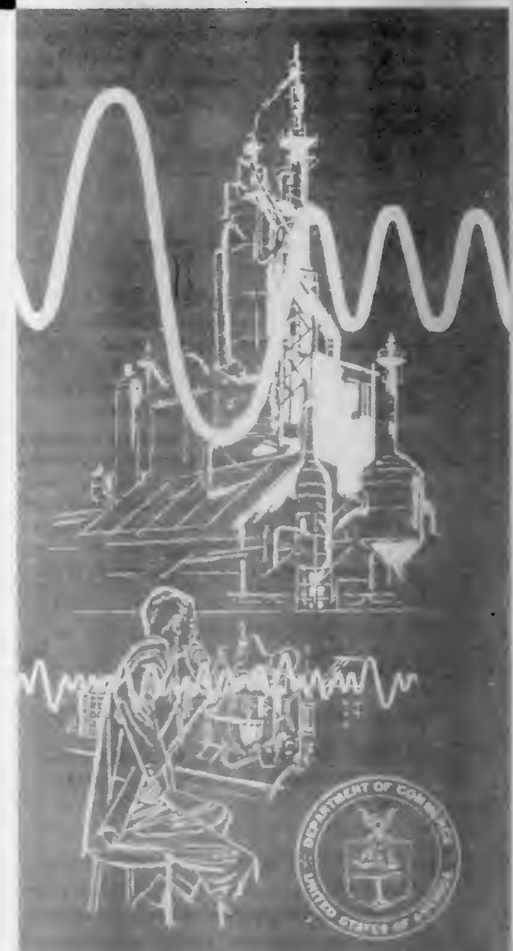
Development of Lightweight Aluminum Crates for Bulky Low Density Items.

Methods of Purification of Metals and Intermetallic Compounds.

Pressure-Sensitive Tape Suspension Systems for Aircraft Parts in Shipping Containers. Part II. Effects of Accelerated Exposure on Tape Properties.

The Properties of Boron.

Complete list of printed reports begins on page 445



U. S. DEPARTMENT OF COMMERCE
BUSINESS AND DEFENSE SERVICES ADMINISTRATION
Office of Technical Services

The PB Reports . . .

announced in this publication have just been released, usually by agencies of the U. S. Government, for dissemination to the public. In most instances they result from Government or Government-sponsored research.

The Office of Technical Services is responsible, under Public Law 776, 81st Congress, for the collection and distribution of these technical reports in the interest of American science and industry.

The more important reports are reprinted for sale to the public by OTS. Many of the reports are so specialized that the demand for them does not warrant reproduction of printed copies; originals of these documents are deposited at the Library of Congress. There they may be inspected in the Annex Reading Room, or copies may be ordered from the Library in either photocopy or microfilm.

PB reports of special interest to smaller businesses are abstracted in OTS's monthly *Technical Reports Newsletter*, available from the Superintendent of Documents, Washington 25, D. C., at $1 a year domestic, $1.50 foreign.

Since 1945 thousands of business firms have used PB reports in their research programs. These reports now constitute one of the world's largest collections of non-confidential technical information, numbering over 250,000 items. OTS has published catalogs of related reports in more than 300 areas of industrial interest. For further information relative to any of its activities, you are invited to write OTS, U. S. Department of Commerce, Washington 25, D. C.

Except to the extent indicated by acknowledgment of authorship, OTS does not edit PB reports, nor does it accept responsibility for the information and conclusions contained in them. If copyrighted material appears, permission for its use should be requested from the copyright owners. Any national security restrictions that may have applied to these reports have been removed. Patents may cover the subject matter of any report, and the reader is advised to make patent searches before developing applications based on the reports.

How To Order

ALWAYS USE COMPLETE TITLE AND PB NUMBER of each report ordered. The letter "s" accompanying some PB numbers means "supplement," "t" means "translation," and "r" means a partial or complete revision. These letters should be included as part of the PB number. Prepayment is required.

TO ORDER FROM LC • Address your order to Library of Congress, Photoduplication Service, Publications Board Project, Washington 25, D. C. Make check or money order payable to Chief, Photoduplication Service, Library of Congress. State whether report is desired in microfilm or photocopy. Microfilm copies are in 35 millimeter film and require special reading equipment; if you do not have such a machine you may be able to use one at a library in your area.

TO ORDER FROM OTS • Address your order to Office of Technical Services, U. S. Department of Commerce, Washington 25, D. C. Make check or money order payable to OTS, Department of Commerce. Reports available from OTS may also be ordered through Department of Commerce field offices.

TO ORDER FROM OTHER SOURCES • When an agency other than OTS or LC is the source, use the full address included in the abstract of the report. Make check or money order payable to that agency.

U.S. GOVERNMENT RESEARCH REPORTS

U.S. DEPARTMENT OF COMMERCE
Frederick H. Mueller, *Secretary*

BUSINESS AND DEFENSE SERVICES ADMINISTRATION
William A. White, Sr., *Administrator*

Office of Technical Services
John C. Green, *Director*

Issued monthly. Annual subscription $9 ($2.50 additional for foreign mailing). Single copy $1. Make remittance payable to Superintendent of Documents and mail either to a Department of Commerce field office or to Superintendent of Documents, U.S. Government Printing Office, Washington 25, D.C. Address changes should be sent to Superintendent of Documents.

Contents may be reprinted freely. Mention of source will be appreciated

Use of funds for printing this publication approved by the Director of the Bureau of the Budget, July 18, 1958

ASTRONOMY

Multiplet table of astrophysical interest, revised edition. Part I. Table of multiplets. Part II. Finding list of all lines in the table of multiplets. Nov 59. 252p. (PB 151 395) $4.00 452

BIBLIOGRAPHY

Basic research resumes: A survey of basic research activities in the air research and development command. Dec 59. 341p. (PB 161 291) $5.00 451

BEHAVIORAL SCIENCES

Device for measuring cross motor behavior in primates. Oct 59. 9p. (PB 161 410) 50 cents 456
Evaluation of the effectiveness of a self-tutoring approach applied to pilot training. July 59. 26p. (PB 161 440) 75 cents 454
Judgments of the relative frequency of sequential binary events: Effects of frequency differences. Oct 59. 22p. (PB 161 426) 75 cents 456
Target recognition on complex displays. Aug 59. 28p. (PB 161 310) 75 cents 452
Use of an operational game as a method of task familiarization. July 59. 22p. (PB 161 439) 75 cents 455
Utilization of multiple cues in paired comparisons. Sep 59. 44p. (PB 161 419) $1.25 453

BIOLOGICAL SCIENCES

Army research task summary, 1960. Volume 1. Medical biological, social and behavioral sciences. 366p. (PB 161 133) $3.75 466
Physiologic production of catechol amines in response to several physical stresses. Sep 59. 24p. (PB 161 441) 75 cents 464
Preliminary report of human response to rearward-facing re-entry accelerations. July 59. 19p. (PB 161 438) 50 cents 460
Some relationships of glare and target perception. Sep 59. 37p. (PB 161 367) $1.00 465
Ventilatory response to forward acceleration. Sep 59. 21p. (PB 161 427) 75 cents 460

CHEMISTRY

Army research task summary, 1960. Volume 2. Chemistry. 365p. (PB 161 134) $3.75 468
Ignition studies. Part V. Study of the processes occurring during the spontaneous ignition of the hexane isomers. Jan 60. 17p. (PB 161 105) 50 cents 474
Organo-metallic and organo-metalloidal materials. May 57. 63p. (PB 131 176) $1.75 470
Solutions for complex systems of chemical reaction kinetics. Part I. An irreversible unimolecular reaction followed by a second irreversible unimolecular reaction. Aug 59. 44p. (PB 161 408) $1.25. 476
Studies in the reactions of high energy atoms and molecules. Jan 59. 36p. (PB 151 875) $1.00 474

EARTH SCIENCES

Geodesy for the layman. Oct 59. 83p. (PB 161 372) $2.25 480
Mean electron density variations of the quiet ionosphere. I. March 1959. Feb 60. 53p. (PB 151 399-1) $1.25 482
Meteorological measurements and field program of project jet stream from 1956 to 1958. Oct 59. 134p. (PB 161 432) $2.75 477

EARTH SCIENCES (con.)

Page

Note comparing 1-km vertical wind shears derived from simultaneous AN/GMD-1A and AN/GMD-2 winds-aloft observations. Nov 59. 15p. (PB 161 429) 50 cents ... 477

ENGINEERING

Adaptation of ceramic tube types. June 59. 166p. (PB 151 922) $3.00 ... 494
Application of RF micropotentiometers for calibration of signal generators to 1000 Mc. Jan 60. 19p. (PB 151 396) 50 cents ... 506
Army research task summary, 1960. Volume 5. Engineering. 375p. (PB 161 137) $3.75 ... 483
Availability of geothermal energy for the demineralization of saline water. July 59. 63p. (PB 161 400) $1.75 ... 486
Composite materials and composite structures: Proceedings of the Sagamore Ordnance Materials Research Conference (No. 6) at Sagamore Conference Center, Raquette Lake, New York, August 18, 19, 20, 21, 1959. 561p. (PB 161 443) $7.00 ... 514
Critical review of literature on formation and prevention of scale. July 59. 50p. (PB 161 399) $1.50 ... 486
Demineralization of saline waters: A preliminary discussion of a research program with an outline and description of potential processes and a bibliography. Oct 52. 70p. (PB 161 373) $1.75 ... 491
Demineralization of saline water with solar energy. Aug 54. 96p. (PB 161 379) $2.25 ... 489
Design, construction, field testing, and cost analysis of an experimental electrodialysis demineralizer for brackish waters. Dec 56. 176p. (PB 161 386) $3.00 ... 488
Development and test of a balloon-borne manned vehicle. June 59. 47p. (PB 161 092) $1.25 ... 483
Development of a direct-freezing continuous wash-separation process for saline water conversion. Jan 59. 94p. (PB 161 397) $2.25 ... 487

BASIC RESEARCH RESUMES: A SURVEY OF BASIC RESEARCH ACTIVITIES IN THE AIR RESEARCH AND DEVELOPMENT COMMAND. Rept. on Contract AF 49(638)652. Dec 59, 341p. AFOSR-TR-59-204.
Order from OTS $5.00 PB 161 291

The purpose of Basic Research Resumes is to promote the broad accessibility of information about the activities of the Air Research and Development Command in the support and performance of basic research. In keeping with this theme of accessibility, the volume is designed in such a way as to accomodate a variety of viewpoints and purposes of use. Thus, Section I is designed primarily for administrative personnel, listing individual efforts by title only, and Section II is keyed to the needs of working scientists, giving a detailed description of each effort. Individual efforts are arranged in broad subject categories in both Sections I and II, and, within subject categories, they are listed alphabetically by the name of the organization or institution doing the research. As a further means of promoting maximum accessibility of the information it contains, Sections I and II of the volume are followed by three indexes. The first index categorizes research programs according to the names of the organizations or institutions in which they are being performed; the second arranges programs by the names of their principal investigators; and the third is a detailed index to the subjects or phases of subjects encompassed by the programs.

ASTRONOMY

Radio Astronomy Lab., U. of Alabama, University.
A RADIO STUDY OF THE SUN AND MOON AT MILLIMETER WAVELENGTHS, by F. H. Mitchell and Robert N. Whitehurst. Final technical rept. on Contract DA 01-009-ORD-456. 21 May 58, 13p. 5 refs. AD-161 317.
Order from LC mi$2.40, ph$3.30 PB 145 096

Solar and lunar temperatures and atmospheric attenuation were measured at selected millimeter wavelengths. The solar temperature is 4500°K at 6 mm, 5700°K at 7.5 mm, and 6500°K at 8.5 mm. No fluctuations were observed. The lunar temperature varies with phase angle in a rather complex manner from 125°K near new moon to 175°K about 4 days after full moon. The values of atmospheric attenuation are consistent with the Van Vleck theory, but absorption in some types of clouds is smaller than anticipated, particularly between 6 and 7 mm. A small effort was devoted to the analysis, design, and construction of a crystal-audio radiometer for the 3-4 mm wavelength region. (Portions of this report will not reproduce well)

Harvard Coll. Observatory, Fort Davis, Tex.
SOLAR RADIO INTERFERENCE AT 125, 200, 425, 550 Mc/s, by A. Maxwell, W. E. Howard, III and G. Garmire. Scientific rept. no. 14 on Contract AF 19(604)1394. July 59, 84p. 48 refs. AFCRC-TN-59-459.
Order from LC mi$4.80, ph$13.80 PB 144 925

This report comprises a detailed analysis of the occurrence and intensity of solar radio bursts at four frequencies in the meter band. The report also includes a brief description of the sweep-frequency equipment and calibration procedures at the Fort Davis Station, a discussion of the characteristics and origin of the four spectral types of solar radio bursts, and a brief account of the association of the bursts with solar optical phenomena. The interfering effects of solar radio activity on radar and radio equipment are discussed at the end of the report.

National Bureau of Standards, Washington, D. C.
A MULTIPLET TABLE OF ASTROPHYSICAL INTEREST, REVISED EDITION. PART I. TABLE OF MULTIPLETS. PART II. FINDING LIST OF ALL LINES IN THE TABLE OF MULTIPLETS, by Charlotte E. Moore. Nov 59, 252p. 410 refs. Technical note 36.
Order from OTS $4.00 PB 151 395

Pending the completion of a current edition, the 1945 Multiplet Table is being reprinted here to meet continuing demands. The leading lines in 196 atomic spectra of 85 chemical elements are listed in related groups called multiplets. Estimated intensities, excitation potentials and multiplet designations are given for the individual lines, and each multiplet is assigned a number. An extensive bibliography covers the source material used for the compilation. The Table is presented in two parts: Part I includes the multiplets, with the spectra of each element being given in order of increasing ionization, and the elements in order of increasing atomic number. Part II is a Finding List in which all the lines in Part I are entered in order of increasing wavelength, with their multiplet numbers. The range of the Table is from 2951 A to 13164 A. A supplementary table of "Forbidden Lines" extends from 2972 A to 12645 A. (Author)

Oslo U. (Norway).
STUDIES IN THE GENERAL FIELD OF THE INTERRELATION OF SOLAR RADIATION IN THE OPTICAL AND METER-WAVE REGIONS WITH OTHER SOLAR PHENOMENA AND PHENOMENA TAKING PLACE IN THE TERRESTRIAL ATMOSPHERE, by Svein Rossland. Technical (Final) rept. for 1 July 54 - 31 Dec 56 on Contract AF 61(514)651-C. 21 Jan 57, 38p. 5 refs. AFCRC-TR-57-267; AD-117 172.
Order from LC mi$3.00, ph$6.30 PB 137 682

Researches in the field of solar radio noise: radiometric observations on 200 mc; general remarks on the registrations on 200 mc; analysis of registrations of solar radiation on 200 mc; a burst analysis receiver; construction of a triple-element interferometer for 200 mc; observations on 55 mc and 500 mc; and analysis of solar eclipse data of June 30, 1954. On sunspot magnetism: the magnetic buoyancy effect; the hypothesis of a toroidal magnetic field on the sun; the magnetic field of sunspots and the Evershed effect; and on short period variations in sunspot magnetic fields. Geometric structure of sunspots: structure of regular single sunspots; structure of double or multiple sunspots; variation of spot structure across the solar disk; and remarks on solar activity indices. Researches on prominences; and flares: theoretical considerations on prominences; and filter observations of prominences and flares. Solar origin of cosmic rays: Solar-terrestrial relationships. Notes on trial projects abandoned or postponed: investigations on the orientation of the axes of sunspots; proper motions of sunspots; the nature of spicules and their dependence on solar magnetic fields; and deformation of a fluid conducting sphere in a magnetic field.

BEHAVIORAL SCIENCES

Human Engineering

Aerospace Medical Lab., Wright Air Development Center, Wright-Patterson AFB, Ohio.
TARGET RECOGNITION ON COMPLEX DISPLAYS, by Charles A. Baker, Dominic F. Morris, and William C. Steedman. Rept. on Criteria for the Design and Arrangement of Displays. Aug 59, 28p. 4 refs. WADC Technical rept. 59-418; AD-228 809.
Order from OTS $0.75 PB 161 310

A study was conducted to determine the speed and accuracy of form recognition as a function of: (1) the amount of distortion between the reference form and the target form, (2) the number of irrelevant forms in the target display, and (3) the stimulus properties of the forms involved. The stimulus forms were generated by filling in, on a statistical basis, some of the cells of a 90,000-cell matrix. The subjects were shown a reference photograph of a target and instructed to locate that target on a display containing numerous other forms. Both criterion measures, viz., search time and errors, increased as a function of: (1) an increase in the number of irrelevant forms on the target display, and (2) an increase in the difference between the resolution of the reference form and that of the target display. A quantitative description of the targets, which can be used to predict relative target difficulty, was developed. (Author)

Aerospace Medical Lab., Wright Air Development Center, Wright-Patterson AFB, Ohio.
UTILIZATION OF MULTIPLE CUES IN PAIRED COMPARISONS, by James V. Bradley. Rept. on research at Antioch Coll. on Contract AF 33(616)6095. Sep 59, 44p. 13 refs. WADC Technical rept. 59-548.
Order from OTS $1.25 PB 161 419

Subjects were given one, two, or three cues with which to make an either—or decision. Certain hypotheses were formulated to describe the subject's thought process in utilizing the multiple cues, and mathematical models were constructed to simulate them. The models were then used upon data for the single-cue case to predict performance in the multiple-cue case. Predicted performance "data" were then compared with actually observed data for the same multiple-cue case, thus testing the predictive validity of the mathematical model and the tenability of the corresponding hypothesis. (Author)

Institute for Cooperative Research, Johns Hopkins U., Baltimore, Md.
APPARENT AND REAL RESOLUTION IN RADAR VISIBILITY, by Harold W. Hake and Emanuel Averbach. Rept. on Human Engineering Analysis of Weapon Systems, Contract AF 33(038)22642. Sep 55, 15p. 9 refs. WADC Technical rept. 55-459; AD-94 316.
Order from LC mi$2.40, ph$3.30 PB 145 334

Differential sensitivity for luminance differences existing in two spatially separated homogeneous fields was measured under three conditions of viewing. In the first the comparison fields, presented on a cathode ray tube face, were separated by darkness; in the second the fields were joined by a transition area in which luminance increased linearly from the value presented in the darker field to that presented in the lighter field. A third condition controlled for the decrease in size of the fields which occurred with increasing separation of them.

Naval Training Device Center, Port Washington, N. Y.
SENSORY INTERACTION AND RESPONSE CAPACITY, by Alexander Goldman. June 59, 60p. 21 refs. Technical rept. NAVTRADEVCEN 789-11-1; AD-225 517.
Order from LC mi$3.60, ph$9.30 PB 144 948

An attempt was made to determine whether the operator in a man-machine system with very high input rates can perform more efficiently when the sensory inputs are through one sense modality or divided between 2 sense modalities. A research tool was developed which permits the display of a target to be tracked so that the movement in either the horizontal or vertical axis may be displayed on the video component while the other is displayed on the audio component; or the movement in both planes may be shown on the video alone; or the movement in both planes may be shown on the video while one of them is also presented in the audio display. Provision was made for a second audio display, so that movement in both horizontal and vertical planes may be presented as audio signals. Any standard control may be used to track the target. Thirty-two Army enlisted men were used as subjects. Results indicated that compensatory tracking was more proficient when the display was entirely video than when it was partly presented by the video component and partly by the audio. When the display was entirely visual, single control (joystick) was superior to two-handed (linear) control. When the display was mixed audio and video, the two-handed control was superior.

Naval Training Device Center, Port Washington, N. Y.
TRACKING PERFORMANCE RELATED TO DISPLAY CONTROL CONFIGURATIONS, by James J. Regan. 23 Jan 59, 37p. 35 refs. Technical rept. NAVTRADEVCEN 322-1-2.
Order from LC mi$3.00, ph$6.30 PB 144 966

The form in which information is presented to and in which control is exercised by operators in instructor's stations and other training equipments can have important effects on the tracking performance of these operators. Questions frequently arise concerning the way in which these display-control configurations should be designed. This research was designed to supplement the information in this area especially as these decisions are affected by a variety of related variables including practice.

Personnel and Training

Adjutant's General's Office, Washington, D. C.
ABSTRACTS OF PRB RESEARCH PUBLICATIONS FY 1959, by A. J. Drucker and Emma E. Brown. Oct 59, 35p. PRB Technical Research Note 105.
Order from LC mi$3.00, ph$6.30 PB 145 110

This volume identifies both by publication serial number and by Research and Development Research Task all research publications prepared and released by the Personnel Research Branch of The Adjutant General's Office in FY 1959. The listing includes 5 Technical Research Reports, 9 Technical Research Notes, 9 Research Studies, and 14 Research Memorandums. Where a publication has been abstracted, the principal research findings have been described in non-technical language as much as possible.

Adjutant General's Office, Washington, D. C.
DEVELOPMENT OF THE ARMY QUALIFICATION BATTERY, AQB-1, by A. G. Bayroff, Leonard C. Seeley, and Alan A. Anderson. Oct 59, 18p. 2 refs. PRB Technical research rept. 1117.
Order from LC mi$2.40, ph$3.30 PB 145 075

The operational requirement that an enlisted man have at least two aptitude area scores of 90 or above to qualify for Army service necessitated more intensive screening of applicants for enlistment and SS

registrants, particularly of men in the Category IV aptitude level. In 1958 the ACB was introduced at all Armed Forces Examining Stations (AFES) as a screening measure. Development and standardization of the Army Qualification Battery composed of tests which are shorter and more appropriate to a limited ability range than the ACB tests is described. The eight AQB tests (four AFQT subtests and four additional short tests parallel to ACB tests) were found to yield satisfactory measures of scores on individual ACB tests. The AQB composites were found to be closely related to corresponding ACB aptitude area scores. As differential measures of the aptitudes of Category IV personnel, the AQB composites can be expected to function as effectively as ACB aptitude areas in identifying the least useful potential soldiers and in appropriately classifying those accepted. AN EVALUATION OF THE EFFECTIVENESS OF A SELF-TUTORING APPROACH APPLIED TO PILOT TRAINING, by Richard S. Hatch. Rept. on Human Factors in the Design of Training Equipment. July 59, 26p. 4 refs. WADC Technical rept. 59-320.
Order from OTS $0.75 PB 161 440

This study concerns the problem of insuring ready recall of a large body of in-flight job information for Air Force pilots. The effectiveness of a voluntary self-tutoring approach utilizing one type of "game appeal" device was examined. Two matched groups of Air Force pilots were pretested on their knowledge of instrument flying information. The device was then installed in the crew lounge of one of the groups. No device was available to the other group. After a 2-month period both groups were post-tested. Despite the fact that minimal exposure to the machine occurred, players improved significantly on the criterion tests while non-players did not improve. Factors pertinent to the interpretation of the results and implications for further research were discussed. (Author)

POST-TRAINING PERFORMANCE CRITERION DEVELOPMENT AND APPLICATION: THE SESR PROGRAM: COMMISSIONED AND PETTY OFFICER OPINIONS, by Arthur I. Siegel, Philip Federman and Milton Richlin. Rept. on Contract Nonr-2279(00). Feb 59, 28p. 2 refs.
Order from LC mi$2.70, ph$4.80 PB 144 791

A series of interviews was held with a small sample of supervisory fleet personnel in order to determine reactions to the Selective Emergency Service Rates program. Problems in assigning the specialized man in accordance with his specialty were evident, especially in understaffed squadrons. Opinion was generally divided regarding the technical superiority of the SESR program trained individual as compared with the graduate of the previous training program. It was generally thought that the SESR program graduate reaches competency earlier but many supervisors preferred the graduate of the previous program because of his more general usefulness. The supervisors thought the SESR program graduate to be accepted by squadron personnel and maintained that few morale differences were evidenced between the products of the two training programs. Ongoing, longitudinal study of the SESR program was suggested for more definitive conclusions. (Author)

Aviation Psychology Lab., U. of Illinois, Urbana.
TRANSFER OF TRAINING IN FLIGHT PROCEDURES FROM SELECTED GROUND TRAINING DEVICES TO THE AIRCRAFT, by Dora J. Dougherty, Robert C. Houston, and Douglass R. Nicklas. Rept. on Contract N6ori-71-16. 1 Sep 57, 97p. 17 refs. NAVTRADEVCEN Technical rept. 71-16-16; AD-149 547.
Order from LC mi$5.40, ph$15.30 PB 138 224

Four configurations of ground training devices were evaluated for training pilots to perform in-flight procedures. These were a photographic mockup of the cockpit, a partly activated trainer, an aircraft flight simulator, and the combination of a part task (procedures trainer) and time-shared tracking task. All 4 methods provided good learning situations. The groups trained on procedures trainers and the flight simulator showed the highest degree of transfer to the first air trial. Neither method was superior in this respect. Training on an operational flight trainer or a procedures trainer did not significantly differ from the same amount of training in the aircraft itself. The photo mockup provided the best learning situation as measured by performance in the ground situation. By the third air trial, no differences could be observed as a result of training with the different methods. The group that learned procedures while practicing the tracking task had the most difficulty in learning. Transfer to the aircraft was not quite as high as practice in the procedures trainer alone. Time sharing while learning procedures did not facilitate the in-flight performance of procedures and flight skills.

Electric Boat Div., General Dynamics Corp., Groton, Conn.
TRAINING EFFECTIVENESS AS A FUNCTION OF SIMULATOR COMPLEXITY, by John M. Newton. Rept. on Contract N61339-458. Sep 59, 94p. 10 refs. Technical rept. NAVTRADEVCEN 458-1.
Order from LC mi$5.40, ph$15.30 PB 145 165

Although generally, there were no significant differences among the proficiency scores obtained under the five conditions, the general trend is for the mean scores to be ranked in order of simulator complexity. Thus, scores of the subjects trained on the same simulator on which they were tested were consistently higher; subjects trained on the PACE computer were second, followed by those trained with the 20-amplifier Donner computer, 18-amplifier Donner computer with motion in tilt-table and the 18-amplifier Donner computer with no motion in the tilt-table. A TEST PROGRAM FOR TWO ANTARCTIC EXPEDITIONS: 1956-1959, by Herbert Zimmer. Final rept. for 1 June 57-15 Dec 58 on Contract Nonr-1530(06). 15 Dec 58, 97p.
Order from LC mi$5.40, ph$15.30 PB 145 091

This report consists of the tests, checklists, rating forms, instructions, schedules, etc., used in Operation Deepfreeze III, in order to make them available to future investigators, since they are not published elsewhere.

Harvard Graduate School of Education, Cambridge, Mass.
ON IDENTITY AND LEVEL OF OCCUPATIONAL ASPIRATION, by David V. Tiedeman and Jiwan Lal Pandit. Rept. no. 9 on Harvard Studies in Career Development, Technical rept. no. 5 on Contract Nonr-1866(31). Dec 58, 35p. 13 refs.
Order from LC mi$3.00, ph$6.30 PB 145 088

This investigation considers only the reports an individual makes about himself. No comparison with the opinion of any other person is yet attempted. In this regard, this study falls short of considering an important aspect of Erikson's explanation of identity, namely the actual evaluations others hold of the one whose identity is investigated. Two schools were used to provide some indication of the stability of the results. Pupils expressed their opinions with regard to themselves and members of the following social system.

Human Resources Research Office, George Washington U., Washington, D. C.
AN IMPROVED ADVANCED INDIVIDUAL TRAINING PROGRAM FOR ARMOR, by Eugene F. MacCaslin, Arnold B. Woodruff, and Robert A. Baker (Army Armor Human Research Unit). Rept. on Contract DA 49-106-qm-1. Dec 59, 82p. 15 refs. Technical rept. 59.
Order from LC mi$4.80, ph$13.80 PB 145 134

As the final phase in research on tank crew proficiency, an experimental Armor AIT program was developed to improve training for the jobs of tank driver, loader, and gunner. Performance of a company trained by the six-week experimental program was compared with performance of a control company just completing the standard eight-week AIT program. The experimental company performed better than the control company in 11 of 21 skill areas tested, including the more complex gunnery skills essential in combat, and scored comparably in seven skill areas. Adoption of the experimental program was recommended as requiring less time and training cost, without lessening proficiency in essential armor crew skills. The principles and techniques used in the training program for improving instruction were recommended for use, where appropriate, in other Army training programs. (Author)

Laboratory of Aviation Psychology, Ohio State U. Research Foundation, Columbus.
THE USE OF AN OPERATIONAL GAME AS A METHOD OF TASK FAMILIARIZATION, by R. G. Kinkade and J. S. Kidd. Rept. on Contract AF 33(616)3612. July 59, 22p. 8 refs. WADC Technical rept. 59-204.
Order from OTS $0.75 PB 161 439

An evaluation of the usefulness of an "operational game" as a system task-familiarization device was attempted. A sample of 20 Ss was divided into two groups after completion of component skill training. One group was given 5 hr. of practice on an operational game derived from a radar air traffic control task. The other group went directly into system training on the end task provided by an electronic ATC simulator. Comparison of the two groups' proficiency during system training on the end task indicates a consistent superiority for the group having had preliminary practice with the operational game. It was hypothesized that the positive transfer effects observed were due to the similarity between the decision-making requirements of the two situations. (Author)

Naval Personnel Research Field Activity, Washington, D. C.
THE DEVELOPMENT OF A NON-COGNITIVE BATTERY: PREDICTION OF RADIOMAN PERFORMANCE, by David Kipnis and Albert S. Glickman. June 59, 28p. 9 refs. BuPers Technical Bulletin 59-14; AD-225 616.
Order from LC mi$2.70, ph$4.80 PB 144 674

In this third in a series of reports on the development of tests of temperament and personality for predicting the performance of enlisted personnel, a number of experimental tests of temperament and personality were administered to entering students at Class A Radioman School. Final grades and marks in code-receiving were obtained from school records. Evaluations of duty performance were obtained from each Radioman's most immediate supervisor about one year after testing. It was found that some of the experimental tests were reasonably effective in predicting both the school grades and the level of performance of duty of the enlisted man. Because of the promise indicated in this study, the research with tests of temperament and personality is being continued and expanded to include different ratings. (Author)

Naval Personnel Research Field Activity, Washington, D. C.
RELATIVE WEIGHTS OF OFFICER CANDIDATE COURSE GRADES, by Byron Groesbeck. June 59, 16p. 1 ref. BuPers Technical Bulletin 59-7; AD-227 795.
Order from LC mi$2.40, ph$3.30 PB 144 539

A comparison was made between (1) the weights prescribed by BuPers for OCS course grades, (2) the weight actually received by each course grade when multiplied by the prescribed weight and summed to form the final grade, and (3) the weight that would be received by each course grade if the final grade were a simple sum of the original course grades. The results obtained from OCS classes 34 and 35 were almost identical. If the final grade were a simple sum of course grades, the engineering, navigation, operations, and naval weapons grades would tend to have greater weight in determining the final grade than would the orientation, seamanship, and military aptitude grades. When the course grades are multiplied by the prescribed weights and summed to form the final grade, the weights of the course grades correspond fairly well to the prescribed weights. Exceptions are the navigation grade, which receives relatively more weight than desired, and the military aptitude grade, which receives relatively less weight than desired. (Author)

Personnel Lab., Lackland AFB, Tex.
PREDICTION OF AIR FORCE TRAINING AND PROFICIENCY CRITERIA FROM AIRMAN CLASSIFICATION BATTERY AC-2A, by Leland D. Brokaw. Oct 59, 20p. 2 refs. WADC-TN-59-196; AD-228 445.
Order from LC mi$2.40, ph$3.30 PB 144 792

The validity of the Airman Classification Battery AC-2A during the first 14 months of its administration was determined. Data are presented for 46 specialties for which both technical training and job proficiency criteria were available, in the form of Final School Grades and Airman Proficiency Test Scores. Technical training validities are given for an additional 20 technical schools. The expectation of some reduction of general validity as a function of maximizing differentiating power was realized. Slightly greater drops in general validity than had been anticipated were found in the mechanical and administrative aptitude clusters, while the remainder of the battery showed validity comparing favorably with the preceding Battery AC-1B. The AC-2A Battery demonstrated itself to be an effective instrument for differential classification; interpretation of its validities are made in this frame of reference. Current Air Force policies require a different kind of instrument for most effective recruitment and placement of new airmen. (Author)

A DEVICE FOR MEASURING CROSS MOTOR BEHAVIOR IN PRIMATES, by Donald W. Ormiston, Frederick H. Rohles, Jr. and Marvin E. Grunzke. Rept. on Behavioral Effects of Unusual Environmental Conditions. Oct 59, 9p. WADC Technical note 59-353.
Order from OTS $0.50 PB 161 410

To meet the need for a method of measuring gross motor behavior as affected by various gravitational forces, a jumping device for primates was developed consisting of a large box with a stand at each end and a well in the middle. The well carried a constant electrical charge. Shock, preceded by a tone, was used to make the animal jump over the well to the opposite side. Motion pictures of the jump, as viewed through the plexiglas side and top, allowed measurement of the height and distance of the jump. Other possible uses of the device are discussed. (Author)

Aerospace Medical Lab., Wright Air Development Center, Wright-Patterson AFB, Ohio.
JUDGMENTS OF THE RELATIVE FREQUENCY OF SEQUENTIAL BINARY EVENTS: EFFECTS OF FREQUENCY DIFFERENCES, by Dwight E. Erlick. Rept. on research done at Antioch Coll. on Contract AF 33(616)6095. Oct 59, 22p. 3 refs. WADC Technical rept. no. 59-580.
Order from OTS $0.75 PB 161 426

This study concerns accuracy of discriminating which of two events occurred more frequently when both are presented in a random sequential order, at a constant rate, too fast to permit counting. Subjects were required to indicate on a 10-cm. scale the proportion of the total time occupied by the more frequent event. Each judgment was based on a total of 100 events, with the overall per cent differences between the occurrence of the two elements being 0, 4, 10, and 14. The mean proportion of correct judgments increased as the per cent difference between the frequency of the events increased, with an 8.3 per cent difference being discriminated correctly 75 per cent of the time. The actual proportion of the trial occupied by the more frequent event was over estimated at the higher per cent differences. (Author)

DIFFERENTIAL SATIATION EFFECTS UNDER FIXED-RATIO AND REGULAR REINFORCEMENT SCHEDULES, by P. L. Carlton. Rept. on Psychophysiological Problems. 28 May 58, 8p. 3 refs. Rept. no. 318.
Order from LC mi$1.80, ph$1.80 PB 144 786

Two water deprived rats were extensively trained on concurrent fixed-ratio and regular reinforcement schedules. After their performance had stabilized, the effects of satiation on the behavior generated by these two schedules were observed. It was noted that satiation served to increase the duration of periods of no responding under the fixed-ratio schedule without altering the response rate. On the other hand, responding under the regular reinforcement schedule was unchanged. (Author)

PERSONAL NEEDS AND THE ACCEPTANCE OF A NEW GROUP AS A REFERENCE GROUP, by Ruth E. Hartley. Technical rept. no. 6 on Acceptance of a New Reference Groups, Contract Nonr-1597(01). 15 Feb 58, 16p. 16 refs. AD-154 874.
Order from LC mi$2.40, ph$3.30 PB 138 286

The relationship between the perceived satisfaction of a complex of needs and the acceptance of a new membership group as a reference group was examined. The following hypotheses were formulated and tested: (1) the more successful a new group is perceived to be in meeting the personal needs of an individual, the more likely he is to accept it as a reference group; (2) the more successful a new group is perceived to be in meeting the personal needs of an individual, in comparison with his established groups, the more likely he is to accept it as a reference group; and (3) the effectiveness of the new group in meeting the needs of the individual, as shown by the individual's acceptance of the group as a reference group, is defined by the importance assigned by the individual to the needs that the group meets, as well as by the individual's perception of the degree to which given needs have been met by the group. Subjects were 146 male freshmen at a municipal college, and data were obtained by means of questionnaires. All the hypotheses were supported by the data. The data indicated that the absolute level of the ability of a given group to fulfill the needs of its members is more significant than its comparative standing in this respect in relation to other membership groups. The data also suggested the operation of a general personality tendency, evidenced by the comparative importance assigned to one's needs, in association with a tendency to the ready acceptance of a new group as a reference group.

MOTOR HABIT INTERFERENCE: A RESUME OF THE LITERATURE AND THE DEVELOPMENT OF PRINCIPLES FOR ITS MINIMIZATION IN TRAINING, by Alfred F. Smode, Jerome C. Beam, and Jack W. Dunlap. Rept. on Contract Nonr-2515(00). Jan 59, 109p. 148 refs.
Order from LC mi$5.70, ph$16.80 PB 144 750

This report presents a detailed discussion of habit interference in motor performance. It is expressly written for operating personnel responsible for the conduct of training in the military, and for psychologists engaged in the area of training research. Three major sections are developed. Chapter I presents a technical review of the literature on what currently is known on habit interference. A brief non-technical summary of the empirical findings on habit interference is presented at the end of the chapter for those individuals more interested in the

essence of the empirical data. Chapters II and III are devoted to the development of techniques and procedures for minimizing the effects of interference in perceptual-motor learning. Chapter III is devoted to the development of categories of behavior which embrace the variety of motor-manipulative jobs for which military personnel are trained. Within this framework principles and hypotheses are developed for minimizing habit interference for the categories or types of motor behaviors identified.

Educational Testing Service, Princeton, N. J.
LEVEL OF ASPIRATION MEASURES AND SELF-ESTIMATES OF PERSONALITY IN RELATION TO ACHIEVEMENT MOTIVATION, by Henry N. Ricciuti and Douglas G. Schults. Rept. on Contract Nonr-694(00). Jan 58, 25p. 12 refs. AD-154 568.
Order from LC mi$2.70, ph$4.80 PB 138 338

The primary purpose of this research was to investigate the relationship between level of aspiration measures derived from two cognitive tasks and achievement motivation scores obtained by means of the thematic apperception method. A secondary purpose was to compare the achievement motivation scores with several indices of reported self-perceptions with respect to various personality traits. The subjects were 61 male and 34 female college students. For measuring achievement motivation, the general technique developed by McClelland and his co-workers was used. A small and generally negative relationship was found between achievement motivation and self-criticalness, regardless of the perceived status, on the Check List traits. The pattern of correlations indicated a sex difference similar to that obtained with the aspiration measures. There was also a suggestion of a low, negative correlation between achievement motivation and favorable self-appraisal on the Check List traits.

Michigan U. Research Inst., Ann Arbor.
LABORATORY FACILITIES EMPLOYED IN PSYCHO-MEMORY EXPERIMENTS, by Robert C. Bilger. Rept. on Contract AF 49(638)369. Sep 59, 20p. 2 refs. Technical memo. no. 72; 2803-2-T; AFOSR-TN-59-923.
Order from LC mi$2.40, ph$3.30 PB 144 793

Equipment and operating procedures used in psychophysical memory experiments at Electronic Defense Group are described and illustrated. This equipment gives precise control of signal parameters and enables one to efficiently collect the large quantities of data required for specification of the parameters of the human hearing mechanism. (Author)

New Mexico U., Albuquerque.
RELATIONSHIPS AMONG THE TRAITS OF THE PERCEIVER AND THOSE OF THE PERCEIVED IN IMPRESSION FORMATION, by David T. Benedetti, Robert M. Morgan, and David W. Bessemer. Final rept. on Contract AF 49(638)33, Phase 4. Sep 59, 51p. 14 refs. AFOSR-TR-59-187.
Order from LC mi$3.60, ph$9.30 PB 144 787

Two questions were experimentally investigated: To what extent are the impressions one forms of other persons contingent upon the extent to which one possesses the traits one perceives in the others? When one perceives another person, is the resulting impression an integrated or a piecemeal cognition? College students were given controlled information about a series of hypothetical persons. The impressions they formed were measured in a variety of ways. The major conclusions were: (1) In general, one's personality traits are not potent, overall determiners of the impressions one forms of others, although there are certain selective relationships here; (2) Impressions formed of other people clearly tend to be integrated cognitions, in the sense that judgemental responses based upon them are typically intercorrelated. This study is predicated upon the assumption that since interpersonal behavior is in part a function of personality impressions, the prediction and control of such behavior in military or other practical situations calls for grounding in knowledge gained by basic research.

New York U., N. Y.
CONCEPT FORMATION AS A FUNCTION OF COMPETITION BETWEEN RESPONSE PRODUCED CUES, by Howard H. Kendler and Alan D. Karasik. Technical rept. no. 1 on Studies on the Experimental Analysis of Problem Solving Behavior, Contract Nonr-285(30). 15 Nov 57, 15p. 10 refs. AD-147 130.
Order from LC mi$2.40, ph$3.30 PB 137 859

A mediational S-R formulation was applied to verbal concept formation behavior. It was hypothesized that concept formation depended not only on S responding to words that belong to a concept (relevant words) with a common implicit response, but also S responding to the words that do not belong (irrelevant words) with different implicit responses. It was predicted, therefore, that different sets of irrelevant words should influence the manner in which a set of relevant words are combined into a common concept. This prediction was confirmed. The results suggested that the speed of concept formation varied directly with the ability of the irrelevant words to evoke implicit responses that are distinctively different from those required for the relevant words. ORIGINALITY IN GROUP PRODUCTIVITY, by Pauline N. Pepinsky and Harold Pepinsky. Technical rept. no. 4 (Annual) 1 Jan-15 Nov 58, on Contract Nonr-495(15). 15 Nov 58, 20p. 5 refs.
Order from LC mi$2.40, ph$3.30 PB 144 851

This report is a resume of the work accomplished and in progress and is directed toward these general objectives: (1) the identification and measurement of behaviors that are independent and original, but contribute to group productivity; and (2) the determination of conditions leading to such behaviors, and the experimental testing of such effects.

Ohio State U. Research Foundation, Columbus.
THE RELATIONSHIP OF PHONETIC STRUCTURE TO THE INTELLIGIBILITY OF WORDS SIMULTANEOUSLY RECORDED AT EAR AND LIPS, by Henry M. Moser, Herbert J. Oyer and Susan M. Wolfe. Technical rept. no. 47 on Contract AF 19(604)1577. Apr 58, 28p. 15 refs. AFCRC-TN-58-54; AD-152 646.
Order from LC mi$2.70, ph$4.80 PB 137 943

Previous study has shown that when speech signals were recorded at lips and left ears of speakers, and fed to headsets of trained listeners at specified S/N ratios, signals, origin ear, were significantly more intelligible than signals, origin lips. A comparative analysis is made of phonetic elements of listener response to speech signals, origins ear and lips, elicited in the earlier study. Listener responses totaled 72,000. Listeners highly trained on fifty words tend to restrict substitute responses to words within the list for signals of both origins. Fewer substitutions of words from outside the original list occur as noise in the listening condition becomes more destructive. Substitutions remain relatively constant between origins through ratios. Omissions for stimuli, origin lips, increase more rapidly. Number of sounds in the test stimuli had no differential effect on intelligibility when related to origin. The frequency of occurrence of two, three, four, and five sound word substitutes is in almost complete agreement with frequency of occurrence of two, three, four, and five sound words in the test list. Analysis of intelligibility errors relative to vowels and diphthongs in the test list revealed that words containing [æ, ʌ, ɑ, ɔ, ɑʊ, and ɔɪ] were less intelligible from origin ear, than origin lips through S/N ratios. Psychological Labs., Carnegie Inst. of Tech., Pittsburgh, Pa.
VARIABLES UNDERLYING SOCIOMETRIC STATUS. V. CONSIDERATION OF SOME VARIABLES RELATIVE TO LEADERSHIP, by E. P. Hollander. Technical rept. on Contract Nonr-1849(00). Mar 59, 16p. 7 refs.
Order from LC mi$2.40, ph$3.30 PB 145 214

This is a report of findings from an investigation of sources of leadership status within eight training sections of naval officer candidates numbering thirty each. Variables of accuracy of estimate of other's values, academic performance, personal desire for social approval, and motivation to maintain affiliation with the section, were of particular concern. Except for academic performance, which quite usually reveals a positive relationship to leadership status in such groups, none of the other variables yielded significant relationships beyond trends. It is suggested that classes of this sort may not behave as functional groups because of the emphasis on intragroup competition, the absence of manifestly significant common goals, and the non-volitional aspects of membership. (See also PB 143 460)

Research Center for Group Dynamics, U. of Michigan, Ann Arbor.
STUDIES IN SELECTION LEARNING. I. THE EFFECT OF SELECTION PROCESSES ON ACQUISITION AND RETENTION, by Eugene Burnstein. Technical rept. no. 1 on Contract AF 49(638)367 and National Science Foundation Grant G-4951. Sep 59, 25p. 17 refs. AFOSR-TN-60-11.
Order from LC mi$2.70, ph$4.80 PB 145 101

The purpose of this study was to examine a type of learning called selection learning. It was hypothesized that there exist two factors in selection learning which cancel each other in acquisition, thus preventing differences in performance from appearing. One factor, facilitation of learning, was hypothesized to be a direct function of the informativeness of the selection cue. The other, interference with recall of international items was hypothesized to be a direct function of the informativeness of the selection cue. It was further hypothesized that the effects of interferences dissipate more rapidly than the effects of facilitation.

Research Center for Human Relations, New York U., N. Y.
STUDIES IN PRODUCTIVITY AND COHESIVENESS OF CULTURALLY MIXED GROUPS. II. EFFECTS OF VARIATIONS IN REWARD STRUCTURE, AUTHORITARIANISM, AND GROUP PRESTIGE, by Irwin Katz. Technical rept. no. 2 on Contract Nonr-285(24). Feb 59, 45p. 11 refs.
Order from LC mi$3.30, ph$7.80 PB 145 208

An experiment was performed in which bi-racial groups, consisting of two Negro college students and two white college students, were given a series of varied tasks to perform. Members of every group were matched on intelligence, informed of this fact, and caused to perform equally well on some cognitive tasks. As in a previous experiment, two types of Reward structure were created, Group Reward and Individual Reward, and also two conditions of Prestige, High Group Prestige and No Group Prestige. In addition, a new variable of Authoritarianism of white Ss was introduced by using high F-Scale scorers and low F-Scale scorers. Each experimental group was subjected to the same experimental treatment throughout its employment. Racial differences for all treatments combined indicated that Negroes oriented compliantly toward whites, felt intellectually inadequate, rejected whites as future work companions, and experienced less total satisfaction. Both the Reward variable and the Prestige variable had opposite effects on Negroes and whites. Negroes responded more favorably to Ind R and No P than to Grp R and Hi P, while whites responded more favorably to the latter conditions than to the former. Negroes were more ascendant with Hi F whites than with Lo F whites, and Hi F whites tended to be compliant in bi-racial situations but mutually antagonistic when paired alone. Numerous interactions of the F-Score variable with Reward and with Prestige revealed highly consistent patterns in which Hi F whites and Lo F whites responded in opposite ways to the experimental conditions.

Syracuse U., N. Y.
THE EFFECT OF NEED-ORIENTED COMMUNICATIONS ON ATTITUDE STRUCTURE AND CHANGE, by Francis J. Di Vesta and Jack C. Merwin. Rept. on Contract AF 41(657)73. June 58, 58p. 20 refs. WADC-TR-58-93; AD-151 044.
Order from LC mi$3.60, ph$9.30 PB 137 881

Several hypotheses, concerning attitude change and derived from a cognitive theory of attitude structure, were tested experimentally. The change procedure consisted of three tape recorded communications in which the positions were, respectively, that the attitude object facilitated, hindered, or had no effect on the satisfaction of the need for achievement. Scales of need strength, beliefs about the attitude object, and attitudes toward the attitude object were administered four months before, immediately before and/or immediately after the change procedure. Each of the two experimental groups and the control group was comprised of approximately 70 subjects. Changes in beliefs about the potentiality of the attitude object for satisfying the need for achievement corresponded to the position asserted by the respective communications. Corresponding changes in attitude were similarly demonstrated. An index based upon need strength and position of beliefs was found not to be related to change in attitude for the experimental groups but was significantly related to change in attitude occurring over a four months period. Significant relationships were found between initial position of attitudes and beliefs and the respective shifts in position. The findings were interpreted as supporting the cognitive theory of attitude structure. (Author)

THE USE OF GROUP DECISION TO RESOLVE A PROBLEM OF FAIRNESS, by L. R. Hoffman and N. R. F. Maier. Rept. on Project Michigan, Contract DA 36-039-sc-52654. Feb 59, 15p. 2 refs. 2144-351-T; AD-210 919.
Order from LC mi$2.40, ph$3.30 PB 144 697

An experiment is reported on the problem of fairly distributing a reward among group members. An empirical investigation was conducted of the use of the method of group decision in making such a distribution. Thirty groups, varying in size from 2 to 5, in an undergraduate psychology course were each assigned a number of points toward the final grade to be divided among their members, with a net loss to the group for failure to agree. In almost three-fourths of the groups, points were awarded to the members with the lower class standings. Variance of points awarded was positively correlated with variance of grade points in a group, and the number of points received was negatively correlated with grade points accumulated by an individual. Satisfaction with the decisions, which was high, was positively related to an individual's felt freedom to participate and to his satisfaction with influence over the decision. People who gave and received many points were also satisfied. Appointed leaders failed to function as leaders but participated more than other group members. Implications of the results for a practical industrial problem involving differential needs are discussed. (Author)

A PRELIMINARY REPORT OF HUMAN RESPONSE TO REARWARD-FACING RE-ENTRY ACCELERATIONS, by Neville P. Clarke, Alvin S. Hyde and others. Rept. on Acceleration in Flight. July 59, 19p. 6 refs. WADC Technical note 59-109.
Order from OTS $0.50 PB 161 438

Tidal volume, electrocardiographic changes, tracking performance ability, and subjective response were evaluated during an acceleration profile designed to encompass several possible rearward-facing re-entry patterns. A maximum acceleration of 16.5 g and a total time of 170 seconds were employed. Subjects faced the center of rotation with the trunk and head inclined 12° in the direction of the centrifuge axis. The subjects were supported with a contoured net system. Two of seven subjects repeated the experiments wearing the MC-2 full pressure suit, both pressurized and unpressurized. (Author)

VENTILATORY RESPONSE TO FORWARD ACCELERATION, by Fred W. Zechman, Neil S. Cherniack and Alvin S. Hyde. Rept. on Biophysics of Acceleration. Sep 59, 21p. 16 refs. WADC Technical rept. 59-584.
Order from OTS $0.75 PB 161 427

This report presents the findings to two series of experiments dealing with the effect of forward acceleration on respiration in man. In the first, the effect of 5, 8, and 12 g on respiratory frequency, tidal volume, minute volume, and nitrogen elimination were determined. Frequency increased reaching an average of 39.2 cycles per minute and tidal volumes decreased to an average of 318 cc at 12 g. The volume of nitrogen eliminated during a 30 second period, breathing oxygen at 12 g, was essentially unchanged suggesting that gross alveolar ventilation did not decrease. In the second series, 0_2 consumptions were measured before, during, and after accelerations of 5, 8, 10, and 12 g. Oxygen consumptions increased with acceleration and it is presumed that the extra work of breathing may be an important contributing factor. In both series of studies the trunk was inclined 12° in the direction of acceleration and a rate of onset of 1 g per second was used. (Author)

ARCTIC SURVIVAL RATIONS. IV. ASSOCIATED EFFECTS OF DIET, ENVIRONMENTAL TEMPERATURE, AND DURATION OF EXPOSURE ON THE MAJOR CONSTITUENTS OF THE LIVERS OF RATS, by David A. Vaughan, John P. Hannon and Lucile N. Vaughan. Sep 59, 16p. 14 refs. Technical rept. 59-5.
Order from LC mi$2.40, ph$3.30 PB 144 850

The effects of feeding pemmican, and of exposure to an environment of 5° C. for periods of 1 month or 5 months, on the percentages of glycogen, total fat, phospholipid, protein, and water in the livers of rats were studied concomitantly. Cold exposure had the following significant effects: (1) a reduction in percentage of glycogen of both dietary groups, (2) a reduction in percentage of total fat of the pemmican group, (3) an increase in phospholipid (percentage of total fat) of both dietary groups, (4) an increase in percentage of water of both dietary groups. The ingestion of pemmican had the following significant effects: (1) a reduction in percentage of glycogen, (2) an increase in percentage of total fat, (3) an increase in phospholipid (percentage of total fat) at 27° C., (4) a decrease in percentage of water. A statistical analysis revealed that the effects of cold exposure and diet were to a certain extent interdependent, and that the duration of exposure modified the effects of both of these experimental treatments in several cases. ARCTIC SURVIVAL RATIONS. VI: THE PHYSIOLOGICAL EFFECTS OF RESTRICTED DIETS DURING SUCCESSIVE WINTER FIELD TRIALS, by David A. Vaughan, Horace F. Drury and others. Aug 59, 27p. 12 refs. Technical rept. 58-8.
Order from LC mi$2.70, ph$4.80 PB 144 834

Two out of three different 1000 calorie combinations of pemmican and sugar were fed to each of 12 subjects during a two-phase, winter field study. All of the diets tested consisted primarily of pemmican, with the sugar contribution ranging from 0 to not more than 32% of the calories. The 5-day experimental phases were separated by a 7-day "recovery period." In the second period, the magnitude of all the above responses was strikingly reduced. The data suggest that the adaptation to caloric restriction which developed during the first period, as evidenced by sequential changes in blood sugar levels, nitrogen balance and ketone body excretion, persisted throughout the recovery period, permitting the subjects to respond more favorably to the second dietary stress.

EFFECT OF A LOW ENVIRONMENTAL TEMPERATURE ON WEIGHT AND FOOD CONSUMPTION OF THIAMINE-DEFICIENT RATS, by David A. Vaughan and Lucile N. Vaughan. June 58, 14p. 6 refs. Technical rept. 58-7; AD-227 508.
Order from LC mi$2.40, ph$3.30 PB 144 836

Fifty young adult rats (220-300 gm.) were divided into two groups. Twenty-five were subjected to moderately severe cold (5° C.); 25 were maintained at 25°C. Each group was divided into 5 subgroups, which received a thiamine-deficient diet for 18 days supplemented with the following levels of thiamine: 0.3 mcg./gm. diet, 0.4 mcg./gm., 0.5 mcg./gm., 0.6 mcg./gm., and 2.0 mcg./gm. Respective mean weight changes at these levels were: -69 gm., -55 gm., -51 gm., -18 gm., and +26 gm. for the cold rats; -89 gm., -71 gm., -49 gm., -37 gm., and +55 gm. for the rats held at 25° C. Corresponding mean voluntary food intakes for the 18-day period were 253, 299, 304, 351, and 436 gm. for the rats at 5° C. and 97, 100, 123, 143, and 284 gm. for the rats at 25° C. A statistical analysis indicated that there was no significant difference in weight response between the warm and cold rats at deficient levels of thiamine intake. The relation of weight changes to food intakes suggested that the cold rats used an approximately constant increment of food for their extra energy requirements in the cold. (Author)

THE EFFECT OF TEMPERATURE ON THE HEART RATE, ELECTROCARDIOGRAM, AND CERTAIN MYOCARDIAL OXIDATIONS OF THE RAT, by John P. Hannon. Mar 58, 21p. 14 refs. Technical rept. 58-3; AD-220 761.
Order from LC mi$2.70, ph$4.80 PB 144 847

Deep hypothermia in the rat was characterized according to the sequential changes in body temperature, heart rate, and electrocardiogram. In vitro assays of myocardial metabolic activity were made at temperatures ranging from 5°C. to 35°C. These assays strongly suggested that the in vivo cardiac dysfunctions observed at low temperatures were attributable to shifts in temperature kinetics of enzyme systems at 20-21°C. (Author)

GROSS LIVER COMPOSITION OF THE RAT FOLLOWING ONE-MONTH COLD EXPOSURE, by John P. Hannon and Lucile N. Vaughan. Sep 59, 13p. 17 refs. Technical rept. 58-26.
Order from LC mi$2.40, ph$3.30 PB 144 844

The total body weight, the liver weight, and the levels of water, protein, lipid, phospholipid, glycogen, and ash were assayed in male Sprague-Dawley rats exposed to either control conditions (26 ± 1° C.) or to cold (5 ± 1° C.) for 1 month. A statistically significant suppression of total body growth, but an augmentation of relative liver growth, was observed in the cold-exposed group. Cold also led to significant increases in the level of liver lipid and phospholipid, and a decrease in glycogen. No differences were observed in the protein, water, or ash content of the two groups. INFRARED EMISSIVITIES OF SOME ARCTIC

FAUNA, by H. T. Hammel. (Pennsulvania U. School of Medicine). May 57, 9p. 7 refs. Technical rept. 57-25; AD-220 677.
Order from LC mi$1.80, ph$1.80 PB 144 848

The infrared emissivities of the surfaces of ten arctic species were measured and found to be 1.0 for every species. The furs measured were winter pelts of the pine marten (Martes americana), sea otter (Enhydra lutris), beaver (Castor canadensis), red fox (Vulpes fulva), gray wolf (Canis lupus), lynx (Lynx canadensis), bobcat (Lynx rufus), snowshoe hare (Lepus americanus), barrenground caribou (Rangifer arcticus) and the winter plumage of the willow ptarmigan (Lagopus lagopus). The color of the surface for visible light, which may range from white to black, is no guide to the color in the far infrared at which wave lengths the surface is radiating energy to its environment. It seems likely that no arctic species has adapted to its radiation environment by acquiring a surface of low emissivity in the far infrared in order to reduce radiant heat loss to the cold sky. The same end would be achieved, however, if the animal were to shield itself from the sky. (Author)

THE RESPIRATION OF RAT LIVER HOMOGENATES FOLLOWING PROLONGED COLD EXPOSURE, by John P. Hannon. Sep 59, 13p. 6 refs. Technical rept. 57-59; AD-228 411.
Order from LC mi$2.40, ph$3.30 PB 144 841

The respiration of liver homogenates derived from adult male rats exposed to cold for about 1 month was studied. Cold exposure led to increased rates when citrate, isocitrate, α-ketoglutarate, succinate, fumarate, malate, glutamate, and β-hydroxybutyrate were present as substrates. An increased endogenous metabolism was also found but no change in rate was observed when lactate was present as substrate. Differences were also found in both the magnitude and pattern of in vitro oxidations following cold exposure. (Author)

ROLE OF THE SYMPATHETIC NERVOUS SYSTEM IN THE CONTROL OF CHEMICAL REGULATION OF HEAT PRODUCTION, by A. C. L. Hsieh, L. D. Carlson, and G. Gray, (U. of Washington School of Medicine). Nov 59, 12p. 5 refs. Technical rept. 57-30; AD-228 548.
Order from LC mi$2.40, ph$3.30 PB 144 839

The ganglionic blocking agent hexamethonium chloride and the adrenolytic agent piperoxane hydrochloride prevented the increase in oxygen consumption otherwise observed in curarized, cold-adapted rats exposed to cold. Atropine sulfate had no effect. The sympathetic nervous system, including the adrenal medulla, appears to be important in the mediation of chemical regulation of heat production in these animals. L-noradrenaline was more effective than adrenaline in preventing the fall in oxygen consumption caused by hexamethonium. This finding suggests that noradrenaline may also play an important part in chemical regulation. (Author)

SEASONAL AND RACIAL VARIATIONS IN HUMAN BLOOD ADENINE NUCLEOTIDE LEVELS, by John P. Hannon. Oct 59, 10p. 7 refs. Technical rept. 57-57.
Order from LC mi$1.80, ph$1.80 PB 144 838

This report presents the results of an observation of highly suggestive seasonal differences in blood chemistry.

Arctic Aeromedical Lab., Ladd AFB, Alaska.
THIAMINE LOAD TEST STUDIES IN HUMANS, by David A. Vaughan and Lucile N. Vaughan. Oct 59, 15p. 27 refs. Technical rept. 57-58.
Order from LC mi$2.40, ph$3.30 PB 144 837

The experiments reported here were of an exploratory nature. The first objective was to devise and test a liquid diet which was deficient in thiamine and in which the fat content could be varied isocalorically. Secondly, the diet was then used to determine whether a load dose return was affected by an extreme change in the fat content of the diet. Thirdly, the urinary excretion of thiamine during the oral ingestion of large amounts of thiamine was followed for an extended period.

TRACKING PROFICIENCY AS A FUNCTION OF THERMAL BALANCE, by Robert B. Payne. May 59, 12p. 12 refs. Technical rept. 58-14; AD-220 763.
Order from LC mi$2.40, ph$3.30 PB 144 845

An experiment was conducted for the purpose of learning (a) whether performance decrement in monitoring and controlling a complex visual display is related to body heat loss, and (b) whether such an impairment can be forestalled by glycine administration. Following extensive training on the experimental task, 72 subjects were independently and randomly assigned to the nine combinations of three ambient temperature conditions (70°, 55°, and 40°F.) and three glycine treatments (0, 20, and 40 gms), then required to execute a performance sequence lasting three hours and twenty minutes. Statistical analyses established that the mathematical function relating performance to temperature was a parabola having a maximum near 55°. No significant glycine effects were observed. (Author)

ACCELERATION PROBLEMS IN SPACE FLIGHT, by James D. Hardy, Carl C. Clark, and R. Flanagan Gray. Rept. no. 4 on Proj. [NM] 005.12-0005.6; Proj. TED ADC AE 1412. 1 Oct 59, 38p. 30 refs. NADC-MA-5909.
Order from LC mi$3.00, ph$6.30 PB 145 036

This paper describes the major problems associated with the effects of acceleration upon man and details the work which has already been done in this field on centrifuges, rocket sleds and other simulators. The problem of weightlessness is discussed with special reference to Gerathewohl's investigation of human tolerance to the weightless state produced during ballistic trajectory aircraft flights. A detailed account is given of advances in high G protection including the use of the contour couch and water immersion. Water immersion as a means of G protection is described with special emphasis on the recent investigations by Gray and Webb with the G capsule. In this total immersion capsule and with chest pressurization Gray in a record centrifuge run, recently withstood 31 G for 5 seconds with no lasting ill effects. (Author)

VASOMOTOR ADJUSTMENTS IN THE MICROCIRCULATION DURING CHANGES IN BLOOD DISTRIBUTION, by George P. Fulton and Robert F. Slechta. Rept. for Jan 57-July 59 on Contract AF 49(638)44. [1959] 28p. 23 refs. AFOSR-TR-59-191.
Order from LC mi$2.70, ph$4.80 PB 144 789

This report describes the progress made on a research program in peripheral vascular responses to such blood-redistributing conditions as body orientation changes, corticosteroids and other substances produced during stress, temperature changes, hemorrhage, anoxia, etc.

Buffalo U., N. Y.
SOME PERCEPTUAL AND PHYSIOLOGICAL ASPECTS OF UNIFORM VISUAL STIMULATION, by Walter Cohen. Rept. for 31 Jan 58-31 Jan 59 on Contract DA 49-007-MD-866. [1959] 20p. 8 refs. AD-211 273.
Order from LC mi$2.40, ph$3.30 PB 144 807

The studies described in this report are concerned with the perception of objects in a uniform visual field. Three major problems were investigated. (A) The extent to which the accuracy of form recognition is dependent upon the structure of the visual field, the structure of the target, and prolonged exposure (90 sec.) to a uniform field. (B) The dependence of spatial orientation on field structure, characteristics of the target, and the subject's set. (C) The effects of prolonged exposure to the uniform field (20 min.) upon the "blank-out" (or "white-out") phenomenon, which involves a temporary cessation of vision. The chief findings were as follows: (a) Both uniformity of the field and prolonged exposure reduced the accuracy of recognition. However, their influence was found to vary with the complexity of the target. (b) Sensitivity to change in tilt was shown to be dependent upon the three variables listed above. An interaction effect among the three variables was found. (c) More frequent and more intensive "blank-outs" were reported with longer stimulation. Form recognition was seriously interfered with when "blank-out" occurred.

A MATHEMATICAL INTERPRETATION OF MOTOR REACTIONS TO FIXED AND MOVING STIMULATION OF THE EYE, by M. Valentinuzzi. Rept. on Application of Information Theory to the Nervous System, Contract AF 18(600)1454. 25 Aug 58, 31p. 22 refs. AFOSR-TN-58-697; AD-162 231.
Order from LC mi$3.00, ph$6.30 PB 137 896

The results of experiments performed by L. S. Stone and by R. W. Sperry, on vision in salamanders are analyzed. A summary of Reichardt's theory, which originated in the researches of B. Hassenstein on insects, is given, and an application to salamanders is carried out. Introducing a simpler mathematical development based on the one-factor theory of excitation, the same formal results are obtained. A complete model, which includes those results and tries to fit the salamander behavior described by Stone, is elaborated and translated into boolean terms. As a complementary consideration it is pointed out that the functional rigidity of the visuomotor system, deriving from a biological molecular hysteresis, could be framed in the neuro-affinity principle, the spatial expression of which would turn out to be a biological field. (Author)

AIRBORNE EEG RECORDING IN HIGH PERFORMANCE AIRCRAFT, by C. W. Sem-Jacobsen, O. Nilseng and others. Technical final rept. on Contract AF 61(514)1201. 28 Jan 59, 7p. 3 refs. AFOSR-TR-59-35; AD-213 038.
Order from LC mi$1.80, ph$1.80 PB 145 074

Thirty pilots performed 10 commonly flown maneu-

vers during which EEG recordings were made to determine whether the EEG was a suitable device for measuring physiological and psychological responses to flight stresses. The pilots were divided into 3 groups on the basis of the EEG records. Group A showed only minimal changes in response to the test flight. Group B showed marked high voltage changes of short duration in response to the same maneuvers. In the EEG's of the pilots belonging to group C gross changes of probably more pathological nature were seen. Out of the 30 pilots, 19 were in group A; 8 were in group B, and 3 in group C. After the test the pilots in group A appeared unaffected by the flight, kept good radio contact, were in good spirits, and reported no blackouts. The pilots of the B-group, on returning to the ground, perspired and appeared fatigued. They revealed blackouts and made mistakes in recollecting the flight. The pilots of group C were pale, perspired heavily, and had gone through episodes of loss of consciousness.

REGULATION OF FOOD INTAKE AND PHYSICAL ACTIVITY AND THE CONTROL OF OBESITY, by Albert Stunkard. Rept. for 1 Dec 57-30 Nov 58 on Contract DA 49-007-MD-925. [1958] 9p. 10 refs.
Order from LC mi$1.80, ph$1.80 PB 144 806

The present program represents a long-range combined psychological and physiological study of human obesity. During the past year the program has successfully negotiated the transfer to the University of Pennsylvania, a new research team has been recruited, new projects have been initiated and old ones continued, and the program is currently at its highest point of effectiveness and productivity. The underlying point of view of the program is that obesity results from a disordered energy regulation, a disorder which has its analogues in the disorders of energy regulation of the lower animals, but to which significant contribution is made by specifically human disturbances in communication and behavior. During the past year a variety of different points in the cycles of regulation have been studied, and further information has been accumulated as to where disorders may occur and where they definitely do not occur. The nature of the problems have, thus, been more clearly specified and beginnings have been made at their solution. (Author)

Research Lab. of Electronics, Mass. Inst. of Tech., Cambridge.
NEUROPHYSIOLOGICAL REPRESENTATION OF COMPLEX AUDITORY STIMULI, by Moise H. Goldstein, Jr. Rept. on Contract DA 36-039-sc-64637. 19 Feb 57, 77p. 83 refs. Technical rept. 323; AD-156 530.
Order from LC mi$4.50, ph$12.30 PB 145 131

Neurophysiological representation of complex acoustic signals at the cochlea and cortex of the cat's auditory pathways was investigated. The signals were presented monoaurally and included repetitive bursts of noise, clicks, and bursts of tone; these are signals which human listeners judge to be of low pitch, although the concentration of energy is not in the low audio frequency range. Thresholds of cortical response were found to be independent of repetition rate. The tonotypic organization of the auditory cortex is related, primarily, to the distribution of stimulus energy in the spectrum. The temporal representation of envelope repetition rate was studied for stimuli at low and moderate intensity levels. The synchrony of cortical potentials is difficult to study by visual inspection, since the ongoing activity tends to observe small evoked responses. A synchrony to stimuli, with repetition rates up to 200/sec, in the cortical potentials from unanesthetized cats was detected by using an electronic processing device that averages a large number of responses. Evoked responses to stimuli with repetition rates up to 100/sec were detected in barbiturate-anesthetized cats. Psychophysical data on the discrimination of envelope repetition rate of modulated stimuli are also presented. A mathematical representation of signals as a function of variables related to spectral frequency and envelope periodicity is included.

University of Southern California. School of Medicine, Los Angeles.
PHYSIOLOGIC PRODUCTION OF CATECHOL AMINES IN RESPONSE TO SEVERAL PHYSICAL STRESSES, by John P. Meehan and Edith Jacobs. Rept. on Biophysics of the Cardiovascular System, Contract AF 33(616)5591. Sep 59, 24p. 17 refs. WADC Technical rept. 59-534.
Order from OTS $0.75 PB 161 441

Measurements of the physiologic production of adrenaline and noradrenaline in response to four standardized physical stresses were undertaken on young adult male subjects. Plasma levels of noradrenaline were found to increase significantly in exercise and the increase appears to bear a positive relationship to the physiologic severity of the exercise. Plasma levels of noradrenaline did not change as the result of the cold pressor test or as the result of exposure to positive accelerations of 3 g for 5 minutes. Renal plasma flow was not altered as the result of similar exposure to acceleration lasting for 10 minutes. (Author)

THE EFFECT OF FIXATION CONDITIONS ON DEPTH-DISCRIMINATION THRESHOLDS AT SCOTOPIC AND PHOTOPIC ILLUMINANCE LEVELS, by Alfred Lit. Rept. on Project Michigan, Contract [DA 36-039-sc-52654]. Nov 58, 16p. 8 refs. 2144-323-T; AD-206 347.
Order from LC mi$2.40, ph$3.30 PB 145 095

The precision of depth discrimination has been measured in a two-rod test apparatus involving real-depth cues. Effects due to different methods of fixating the rods have been assessed at each of a number of levels of equal illuminance presented to the two eyes. It was found that, for all three methods of fixation, the precision of depth discrimination increased by about 20:1 as the level of illuminance was increased over a range of some five log units. One method of fixation involved steady fixation on the movable comparison rod. A second method of fixation involved steady fixation on the immovable standard rod. In the third method of fixation, the observers were allowed to fixate on either of the rods at will. The precision of depth discrimination was clearly greatest with the

first method, at all but the very highest illuminance levels at which all three methods gave essentially equivalent results. The second method produced generally the lowest precision, whereas the third produced levels of precision generally intermediate between the other two. These results have a significance for photochemical theories of vision and for the current controversy concerning the role of convergence cues in stereoscopic acuity. (Author)

Visual Research Lab., Wellesley Coll., Mass.
SOME RELATIONSHIPS OF GLARE AND TARGET PERCEPTION, by Ernst Wolf and Michael J. Zigler. Rept. on Visual Presentation of Information, Contract AF 33(616)3305. Sep 59, 37p. 18 refs. WADC Technical rept. 59-394.
Order from OTS $1.00 PB 161 367

This study was carried out to describe quantitatively the relationship between the luminance of a glare source and threshold luminance of a test target when both are varied in angular subtense and distance from each other. The threshold visibility of a test target in the vicinity of a glare source was determined for various sizes and luminances of the glare source, various angular separations between glare source and target, and various exposure times and retinal locations. Thresholds for target perception become lower as glare luminance is decreased, area of glare source is decreased, distance between glare source and test target is increased, and size of test target is increased. When exposure time of the test target is increased, thresholds become lower until an exposure time of approximately one second is reached; longer exposure times have little effect on thresholds. When Landolt rings, letters, and dials are shown at various distances from a glare source, threshold luminance for readability similarly depends upon glare luminance and angular separation between glare source and target. LUMINOSITY FUNCTIONS OBTAINED WITH DIFFERENT METHODS AND DIFFERENT VIEWING CONDITIONS, by H. R. Blackwell and O. M. Blackwell. Rept. on Proj. Michigan, Contract DA 36-039-sc-52654. Jan 59, 24p. 3 refs. Rept. no. 2144-344-T; AD-211 453.
Order from LC mi$2.70, ph$4.80 PB 144 733

A series of measurements of the human luminosity function made with a variety of methods, and under a variety of viewing conditions, is summarized. The luminosity function defines the effectiveness of various wavelengths of visible radiation in eliciting the brightness response. Methodological variants which were studied include: (a) the method used to arrive at the brightness equation; (b) the number and spectral composition of the standard radiances used; (c) the configuration of the field of the photometric comparator; and (d) the use of direct heterochromatic comparison versus the use of flicker photometry. Luminosity functions were measured by a standard procedure for 1^{o} and 3^{o} comparison fields, and at 4 levels of retinal illuminance from 0.0894 to 304 trolands. The luminosity data obtained were found to agree exceptionally well with the 1931 and 1951 CIE photopic luminosity functions from 520 to 700 mμ. However, at wavelengths below 520 mμ, the luminosity coefficients obtained are considerably higher than even the 1951 CIE values, which are themselves considerably higher than the 1931 CIE values.

THE ROLE OF PLASMA ACCELERATOR-GLOBULIN AND ITS THROMBIN ACTIVATED FORM, SERUM ACCELERATOR-GLOBULIN, IN THE CONVERSION OF PROTHROMBIN, by Betty R. Johnston and H. Jensen. 3 Mar 58, 22p. 27 refs. Rept. no. 329; AD-153 646.
Order from LC mi$2.70, ph$4.80 PB 138 334

Either plasma accelerator-globulin or serum accelerator-globulin must be present in order to obtain complete conversion of prothrombin in the presence of serum-eluate factor (s) [proconvertin or plasma thromboplastin component or both], antihemophilic factor, platelet factor 3, and calcium ions. If plasma accelerator-globulin is present, it must be converted to serum accelerator-globulin by the action of thrombin before the maximum rate of prothrombin conversion is reached. Serum accelerator-globulin does neither affect the degree nor the rate of interaction of serum-eluate factor(s), antihemophilic factor, platelet factor 3, and calcium ions forming a prothrombin-conversion factor but affects thrombin formation at a point just prior to or during the conversion of prothrombin.

AMINO ACID METABOLISM OF MAN IN HEALTH AND DISEASE, by Anthony A. Albanese. Annual progress rept. for 1 Jan-31 Dec 57 on Contract Nonr-1167(00). 15 Dec 57, 12p. 15 refs. AD-150 041.
Order from LC mi$2.40, ph$3.30 PB 138 204

In metabolically normal older convalescents, the consumption of at least 1.5 g of protein per kilo per day, with 30% in the form of meat, speeded tissue regeneration. Consecutive week-long N balance studies with placebo, a supplement containing methionine, threonine, valine and isoleucine (MTVI), a supplement containing MTVI and lysine (MTVIL), and again MTVI, were conducted on 26 adult females (31 to 92 yr). The balance N of 8 subjects was improved during the administration of MTVIL. Increases in N balance were also obtained with steroids. A technique was developed for detecting functional defects in peptic digestion. Observations suggested that greater protein utilization was achieved as the calorie distribution of the supplement approached the ideal ratio (protein 15%, carbohydrates 50% and fats 35%). Plasma amino N levels appeared to constitute a valuable adjunct to differentiate between maximal and submaximal positive N balance states in depleted individuals. Study of enzymatic techniques was initiated to measure the nutritive value of proteins as they occur in common foods.

SIMPLIFIED APPARATUS AND METHODS FOR THE WET ASHING OF LARGE NUMBERS OF BIOLOGICAL SAMPLES, by John P. Hannon. Aug 59, 14p. 1 ref. Technical rept. 57-56.
Order from LC mi$2.40, ph$3.30 PB 144 835

Apparatus and techniques described in this report were developed. These include: construction of a simple 14-unit digestion apparatus that takes up approximately the same space that 6-unit commercial models occupy and yet costs only a fraction as much; racks for holding and segregating the large numbers of kjeldahl digestion flasks finally, a technique for the calibration of kjeldahl flasks so that the digestions and dilutions preparatory to making the desired assay can be carried out in the same flask. Thus, where space is limited, the large capacity of this digestion apparatus, the sulfuric acid-hydrogen peroxide digestion procedure which is described, and the conventional nesslerization method for determining nitrogen will greatly increase the capacity of the laboratory to carry out tissue digestions.

THE RELATIVE EFFICACY OF CULTURE MEDIA FOR THE ISOLATION OF MYCOBACTERIUM TUBERCULOSIS FROM CLINICAL MATERIAL, by Mildred B. Jefferies, Albert V. Hardy, and Nathan J. Schneider. Sep 59, 9 refs. AFSAM rept. 59-94.
Order from LC mi$1.80, ph$1.80 PB 145 103

The relative efficacy of Lowenstein-Jensen medium, penicillin blood agar, American Trudeau Society medium, Difco Peizer TB medium, Middlebrook 7H9 agar A, and a semi-synthetic autoclavable medium for the isolation of Myco. tuberculosis from specimens submitted to a public health laboratory has been compared. Lowenstein-Jensen was the most sensitive of the media tested though the difference in positive isolations on this and on the American Trudeau Society medium was not statistically significant. In our hands, the others were less effective and in some respects more difficult to use. A third slant increased only slightly the proportion of positive findings. The use of two slants with large areas for inoculation appears to be an acceptable technic and this is practicable for laboratories handling large numbers of specimens. (Author)

A STUDY OF THE NEUTRAL RED TEST FOR THE DETERMINATION OF THE VIRULENCE OF MYCOBACTERIA, by Mildred B. Jefferies, N. J. Schneider, and A. V. Hardy. Sep 59, 4p. 6 refs. AFSAM rept. no. 59-54.
Order from LC mi$1.80, ph$1.80 PB 145 098

Two hundred fifty-three acid-fast strains of mycobacteria were tested for virulence by inoculating guinea pigs and comparing the results with those obtained in the neutral red test. In 80.9 percent of the strains tested, test results showed agreement. In 19.0 percent of the strains tested the results were not in agreement. Some of the factors which may have influenced the results are discussed.

DEVELOPMENT OF MICROSTRUCTURE OF ALASKAN ESKIMO TOOTH SAMPLES, by Gisle Bang. 15 May 58, 13p. 15 refs. Technical rept. 58-20.
Order from LC mi$2.40, ph$3.30 PB 144 833

The present study deals with the microstructure of teeth from contemporary Alaskan Eskimos, which do not appear to have been studied histologically before. In addition to teeth from contemporary individuals with and without caries, the study includes teeth obtained from skulls of Alaskan Eskimos prior to their contact with western civilization.

Arctic Aeromedical Lab., Ladd AFB, Alaska.
THE GROWTH OF HUMAN TUMORS IN THE HIBERNATING HAMSTER, by W. Bradford Patterson, Charles P. Layman, and Helen P. Patterson (Harvard Medical School). Oct 59, 9p. 13 refs. Technical rept. 57-18.
Order from LC mi$1.80, ph$1.80 PB 144 840

Four human transplantable tumors have been grown in hibernating hamsters. One human tumor strain failed to grow. During hibernation, tumor growth was markedly inhibited, but resumed its normal rate when animals were returned to warm room temperatures. (Author)

Aviation Medical Acceleration Lab., Naval Air Development Center, Johnsville, Pa.
PRODUCTION OF PAIN AND THERMAL BURNS IN SKIN AREAS PREVIOUSLY EXPOSED TO ULTRAVIOLET RADIATION, by Alice M. Stoll, Leon C. Greene, and James D. Hardy. Rept. no. 19 on Proj. NM 10 01 12.1. 21 Sep 59, 13p. 14 refs. NADC-MA-5915; AD-226 918.
Order from LC mi$2.40, ph$3.30 PB 144 676

In order to evaluate the relationship of tissue damage to pain sensation in areas of hyperalgesia, the skin of three subjects was irradiated with erythemal doses of ultraviolet radiation and then exposed to thermal radiation. Measurements were made of the pain threshold lowering effect of the ultraviolet radiation and, following the development of the hyperalgesia, of the lowering of the blister threshold to thermal radiation. Lowering of the pain threshold of 4-7°C was observed, while the lowering of the blister threshold (i.e., the temperature at which blistering was produced) was of the order of 0.5°C. The ultraviolet-irradiated hyperalgesic skin is therefore not more fragile as regards moderately high temperature (50°C) and high temperature burns than is normal undamaged skin. This finding is in keeping with the previously proposed theory that the intensity of pain is a function of the relative reaction rates at the thermal threshold and at skin temperatures above this threshold. Theory predicts, however, that ultraviolet irradiated skin heated to, and maintained at, relatively low temperatures (40-45°C) will be more easily blistered than will undamaged skin. This possibility has not been investigated as yet. The promising possibility of testing the analgetic action of the weak analgesics, such as the salycilates by experimental procedures in areas of induced hyperalgesia is noted. (Author)

ANALYSIS OF DATA ON THE SURVEY OF THE DENTAL HEALTH OF THE NAVAL RECRUIT, by Ray C. Hackman and John A. Lesser, Jr. Rept. on Contract Nonr-2362(00). Jan 58, 22p. 1 ref. PRA Rept. 58-5.
Order from LC mi$2.70, ph$4.80 PB 138 335

This report summarizes analyses made of the relationships between measures of dental health and/or state and certain personal, demographic, and attitudinal variables that characterize the naval recruit. Some fifteen measures of dental health or state were examined.

Wisconsin U. School of Medicine, Madison.
PREVENTION AND TREATMENT OF VENTRICULAR FIBRILLATION IN HYPOTHERMIA, by John E. Steinhaus and Karl L. Siebecker. Apr 58, 12p. 8 refs. Arctic Aeromedical Lab. technical rept. no. 58-5; AD-227 657.
Order from LC mi$2.40, ph$3.30 PB 145 092

The treatment of heart failure produced by body cooling was studied. The role of CO_2 in onset of ventricular fibrillation was studied, and the results suggest that this physiological variable may be a less important factor than has been previously indicated. Increased CO_2 levels made resuscitation less difficult. An investigation of various anesthetic agents at 27°C. hypothermia revealed an absence of ventricular fibrillation, despite the long periods of hypercarbia and hypoxia. (Author)

THE EFFECT OF EA 1476 ON SWIMMING TIME

IN GUINEA PIGS, by Charles G. Wilber and Roy E. Crawford. Sep 59, 7p. 3 refs. CWLR-2308.
Order from LC mi$1.80, ph$1.80 PB 145 137

The effect of EA 1476 on swimming time in guinea pigs was ascertained. The swimming time of guinea pigs in a bath at 28°C was decreased to approximately 74 per cent of controls after treatment with EA 1476 in a dose of 1 mg/kg. Guinea pigs which had been accustomized to swimming, by repeated training sessions, swam longer and showed less variability than untrained animals. (Author)

[Army Chemical Warfare Labs.] Army Chemical Center, Md.
THE INHALATION TOXICITY OF SESQUI-MUSTARD (Q) AEROSOL IN MICE, RATS, GUINEA PIGS, HAMSTERS, PIGEONS, AND DOGS, by F. J. Vocci, C. L. Punte, Jr., and others. Sep 55, declassified 18 Sep 58, 45p. 24 refs. Medical Labs. Research rept. no. 403.
Order from LC mi$3.30, ph$7.80 PB 144 679

The inhalation toxicity of Q aerosol in mice, rats, guinea pigs, hamsters, pigeons and dogs exposed for a period of 2 or 10 minutes based on a 14 day observation period is summarized in the following table:

Species	LCt50(t = 2 min.) mg. min. /m. 3	LCt50 (t = 10 min.) mg. min. /m. 3
Mice	72 (53 - 85)	63 (40-82)
Rats	133 (114-154)	109 (74-183)
Guinea Pigs	220 (140-470)	83 (63-117)
Hamsters	274 (262-282)	220
Pigeons	---	---
Dogs	180	

[Army Chemical Warfare Labs.] Army Chemical Center, Md.
THE MEDIAN DETECTABLE CONCENTRATION OF DIBORANE, PENTABORANE AND DECABORANE BY ODOR FOR MAN, by Charles C. Comstock and Fred W. Oberst. Aug 53, 9p. 4 refs. Research rept. no. 206; AD-16 993.
Order from LC mi$1.80, ph$1.80 PB 144 667

The median detectable concentrations (MDC's) of 3 boron hydrides were determined with a Fair-Wells osmoscope. Each compound was tested 2 to 4 times on 10 to 15 subjects. The MDC's of diborane (B_2H_6), pentaborane (B_5H_9), and decaborane ($B_{10}H_{14}$) were 3.7, 2.5, and 0.35 mg/cu m, respectively. The prescribed chamber concentration of B_2H_6 was determined by an analytical procedure, whereas the concentrations of B_5H_9 and $B_{10}H_{14}$ were determined by nominal methods. The B_2H_6 was described as having an odor of rotton eggs; B_5H_9, as either garlic, acetylene-like, or slightly sweet; and $B_{10}H_{14}$, either unpleasant, foul, or chocolate-like. No aftereffects occurred from any of the vapors in concentrations of 0.2 to 6 mg/cu m.

Army Chemical Warfare Labs., Army Chemical Center, Md.
THE PROPHYLACTIC AND THERAPEUTIC EFFECTIVENESS OF DAM (2, 3-BUTANEDIONE 2-OXIME) IN RATS POISONED BY GB VAPOR, by Fred W. Oberst, Carl W. Umland, Jr. and others. Sep 59, 22p. 11 refs. CWLR-2305.
Order from LC mi$2.40, ph$3.30 PB 144 711

The work reported was designed to determine some of the factors limiting the prophylactic and therapeutic effectiveness of 2, 3-butanedione 2-oxime (DAM) in protecting rats against the toxic action of inhaled GB vapor. It was concluded that DAM administered intraperitoneally 5 min to 4 hr prior to GB vapor exposure by inhalation is an effective prophylactic agent for rats. Its effectiveness depends on the dose of DAM, the time of its administration before exposure to GB vapor, the concentration of GB vapor, and the length of time of a GB exposure. In contrast with its prophylactic effectiveness, DAM is less effective as a therapeutic agent when administered intraperitoneally to rats immediately after a 30-sec lethal exposure. (Author)

THE CHELON APPROACH TO ANALYSIS, by Charles N. Reilley, R. W. Schmid and Fawzy S. Sadek. UNC-Chem. no. 1 on Contract AF 49(638)333. 29 Aug 59, 56p. 41 refs. AFOSR-TN-59-[896].
Order from LC mi$3.60, ph$9.30 PB 144 879

The introduction of chelons such as EDTA has virtually revolutionized the analytical approach to the metal ion analysis. This approach commenced with the classical work of Schwarzenbach on the volumetric determination of calcium and magnesium—a procedure which was rapidly and universally adopted for estimation of water hardness. Since then the applicability of the EDTA methods has been extended to the determination of over 50 elements and its scope will undoubtedly be broadened even further. Because of the present wide applicability of the chelon approach and because of its unusual future possibilities, this brief and introductory status report is given to acquaint chemists with this approach and to present some material suitable in inorganic research and in analytical courses in summary form. (Author)

Pennsalt Chemicals Corp., Wyndmoor, Pa.
RESEARCH IN THE BROAD FIELD OF SYNTHESIS AND CHARACTERIZATION OF INORGANIC COMPOUNDS AND MATERIALS, by A. Kowalski, F. D. Loomis and others. Technical rept. no. 1, 15 Sep 58-15 Mar 59, on Contract Nonr-2687(00). [1959] 78p. 80 refs.
Order from LC mi$4.50, ph$12.30 PB 145 349

A large number of coordination compounds of chromium, cobalt, platinum and zinc were prepared as potential monomers. In many instances, synthesis procedures reported in the literature could not be duplicated. Polymerization of these monomers is now under investigation. Polymeric $[Zn(NH_3)Cl_2]_x$, which softens at 100°C., was discovered to be capable of being drawn into flexible fibers that retain plasticity under anhydrous conditions. This polymer, which shows excellent bonding strength to glass, will withstand temperatures up to 425°C. for 1.5 hours. Attempts to link 1, 3, 5-triazine rings by means of polyfunctional catenating agents were initiated. A series of novel triazine polymers incorporating sulfamide has been synthesized, some of which could be pressed to transparent films. New methods for synthesizing unusual linking agents such as sulfuryl and thionyl isocyanates and some related phosphorus derivatives were investigated. Experiments were initiated on modification of a number of silicates by interstitial cation substitution, anion replacement and isostructural substitution. Analogous work on fluoaluminates was initially limited to cation substitution.

Washington U., Seattle.
THE REACTION OF BROMINE TRIFLUORIDE AND FLUORINE TO BROMINE PENTAFLUORIDE, by Harris E. Kluksdahl and George H. Cady. Technical rept. no. 21 on Contract Nonr-477(16). 1959, 14p. 14 refs.
Order from LC mi$2.40, ph$3.30 PB 144 898

The kinetics of the gas phase reaction of bromine trifluoride and fluorine to form bromine pentafluoride have been studied from 68 to 121° C in a nickel reactor and with the initial pressures varying from 30 to 300 mm. The reaction was found to be bimolecular, homogeneous, and to have an activation energy of 16.4 kcal. The observed frequency factor of 2.6 x 10" cc. mole sec. corresponded to a probability factor of 10^{-3}, thus indicating that every bimolecular collision was not effective in producing bromine pentafluoride. The loss of three rotational and two vibrational degrees of freedom indicates that energy transformations have to be made in several degrees of freedom in formation of the activated complex, and this very likely accounts for the slowness of the reaction. Evidence was found suggesting that bromine trifluoride is partially associated in the vapor phase. (Author)

Birkbeck Coll. (Gt. Brit.)
ALKYL AND ARYL DERIVATIVES OF THE PHOSPHONITRILIC HALIDES, by R. A. Shaw. Annual technical status rept. no. 1, 1 Oct 58-30 Sep 59, on Contract DA 91-508-EUC-363. 10 Nov 59, 71p. 13 refs.
Order from LC mi$4.50, ph$12.30 PB 145 348

This report covers the first year's work on alkyl and aryl derivatives of the phosphonitrilic halides. The most striking progress was made in the work on the phenylation of the trimeric chloride, $P_3N_3Cl_6$, under FRIEDEL-CRAFT'S conditions. Different catalysts have been examined and so far aluminium chloride has been found to be the most successful. Many compounds and polymers are described and discussed.

Chemical Lab., U. of Kansas, Lawrence.
REDUCTION OF ORGANIC COMPOUNDS BY LOWER VALENT SPECIES OF ACTIVE METALS, by William E. McEwen and Jacob Kleinberg. Technical rept. no. 10, 1 Aug 58-1 Jan 59, on Contract DA 23-072-ORD-1048. [1959] 15p. 23 refs. OOR rept. 873.10-C.
Order from LC mi$2.40, ph$3.30 PB 145 173

The anodic oxidation of aluminum in pyridine solutions of sodium iodide or lithium chloride in the presence of benzophenone gives initial mean valence numbers significantly lower than 3. Reduction products, namely benzhydrol and benzopinacol, are isolated from the anolyte hydrolysate in amounts corresponding to oxidation of aluminum from its measured initial mean valence state to the familiar tripositive state. The ratio of the two reduction products shows a dependence on the nature of the cation of the electrolyte. The same reduction products are obtained from the catholyte hydrolysate when lithium chloride is used as electrolyte and aluminum as cathode. Mechanisms are proposed to account for both anolyte and catholyte products. (Author)

Diamond Ordnance Fuze Labs., Washington, D. C.
THE HEAT OF POLYMERIZATION OF PHENYL GLYCIDYL ETHER AND OF AN EPOXY RESIN. PART II. EFFECT OF ALCOHOL ON THE POLYMERIZATION, by C. H. Klute and B. W. Shellenbarger. 9 Nov 59, 7p. 3 refs. Technical rept. TR-791.
Order from LC mi$1.80, ph$1.80 PB 144 758

In a previous report the heats of polymerization of phenyl glycidyl ether were compared with those of an epoxy resin for a variety of polymerization catalysis. In those experiments 20 parts by weight of ethylene glycol per 100 parts of phenyl glycidyl ether were added to the ether to serve as a cocatalyst. In the present report it is demonstrated that, when lesser amounts of alcohol are used, the measured heats of polymerization are not significantly different from the values obtained earlier. (Author)

ORGANO-METALLIC AND ORGANO-METALLOIDAL HIGH-TEMPERATURE LUBRICANTS AND RELATED MATERIALS, by Henry Gilman and Richard D. Gorsich. Rept. on Rubber, Plastic, and Composite Materials, Contract AF 33(616)3510. May 57, 63p. 26 refs. WADC Technical rept. 53-426, Pt. 4; AD-118 307.
Order from OTS $1.75 PB 131 176

This project is concerned primarily with the synthesis of new compounds to be examined as potential hydraulic fluids and lubricants. The synthesis and preliminary screening of organo-metallic and organo metalloidal compounds has been extended. New cyclic compounds continue to be promising. It has also been found that the meta-biphenylyl group can be added to those groups which impart desirable physical characteristics. The methyl-dibenzylsilylmethyl group is also of significant promise. In the experimental part, there is included a table which outlines the preliminary screening of thirty-six compounds. (Author).

EXPERIMENTAL AND THEORETICAL STUDY OF THE CONJUGATION IN AROMATIC COMPOUNDS WITH PARTICULAR EMPHASIS ON: 1. SUBSTITUTED DIARYL SELENIDES. 2. DISUBSTITUTED THIOPHENE DERIVATIVES. 3. THEORETICAL CORRELATION OF THE EXPERIMENTAL RESULTS, by Angelo Mangini. Final technical rept. for 1 Oct 58-Oct 59 on Contract DA 91-591-EUC-883. Oct 59, 151p. 40 refs. AD-228 535.
Order from LC mi$7.50, ph$24.30 PB 144 912

Seleno-derivatives: Seleno-derivatives, many not yet described in the chemical literature, were prepared; the preparation and purification of these compounds are very difficult because of their low yield and the separation of metallic selenium. A comparison of the electronic spectra of some suitable seleno compounds indicated that the selenium of selenides, like the sulphur of sulphides, does not expand its valence shell, neither as electron-acceptor nor as electron-acceptor-donor. Thiophene derivatives: Thiophene derivatives, phenyl-thiophenes, diphenyl-thiophenes, and thienyl-ketones, with some benzyl-thiophenes, were prepared through a series of intermediates. Many of these derivatives are new compounds. The electronic spectra were recorded in aprotic solvents. Results indicated (1) a stronger resonance effect of the substituent in the α position than in the β position; (2) the α-phenyl-thiophene is quite comparable to diphenyl; (3) a noticeable steric effect in 3, 4-diphenyl-thiophenes, contrary to the 2-thienyl-ortho substituted phenyl-ketones (ortho substituent being the methyl group or bromine); and (4) the electron donor power of the sulphur of thiophene is greater than the oxygen of furan. A study of the UV spectra of thiophene derivatives indicated that expansion of the valence shell of the sulphur of thiophene appears improbable.

PHOTOISOMERISATION PROCESSES IN CYCLIC KETONES I. CYCLOPENTANONE AND CYCLOPENTANONE ($2,2,5,5,-D_4$), by R. Srinivasan. Rept. on Contract AF 18(600)1528. 25 Nov 58, 14 refs. AFOSR-TN-58-998; AD-206 141.
Order from LC mi$2.40, ph$3.30 PB 138 145

4-pentenal has been identified as one of the products of the vapor phase photolysis of cyclopentanone at 3130A. Quantum yields for the formation of 4-pentenal have been obtained at various temperatures and in the presence of added oxygen and carbon dioxide. The photolysis of cyclopentanone ($2,2,5,5\text{-}D_4$) has been found to give tetradeutero 4-pentenal the structure of which is most probably $CD_2 = CHCH_2CD_2CHO$. On the basis of these results, it is deduced that the photoisomerization of cyclopentanone to 4-pentenal involves a direct transfer of a hydrogen atom from a β-carbon to the carbonyl group in an excited state of the ketone molecule. THE CHEMISTRY OF QUINONE, by James E. LuValle, Gershon M. Goldberg and others. Technical note on Contract AF 18(600)371. 15 Aug 58, 73p. 53 refs. Rept. no. TOI 58-29; AFOSR-TN-58-774; AD-201 777.
Order from LC mi$4.50, ph$12.30 PB 137 874

The chemistry of p-benzoquinone has been examined in detail. Of particular interest were the transitory colored intermediates observed in the early stages of some of the known reactions of quinone and the monomeric products thought to be formed on alkaline decomposition of quinone. Hydroxyhydroquinone, hydroxyquinone and 2, 5-dihydroxyquinone were synthesized and their reactions were extensively investigated. It appears likely that a path of decomposition of quinone proceeds through the intermediates hydroxyhydroquinone, hydroxyquinone and dihydroxyhydroquinone to dihydroxyquinone. No evidence for the dismutation of quinone or hydroxyquinone was found. Observations on the behavior of quinone in acid and alkaline solutions led to the formulation of two general mechanisms useful for the explanation of the reactions of quinone in solution. A series of ionic and free radical intermediates formed from quinone are capable of adding ions from solution to form the monomeric reaction products or of adding to other quinone molecules to form the polymeric humic acids. The extreme reactivity of quinone appears to arise as a result of the facile opening of its carbonyl bonds by either acidic or basic reagents. (Author)

THE MECHANISM OF POLYTETRAFLUOROETHYLENE PRYOLYSIS, by Henry Friedman. Rept. on Contract AF 04(647)269. 19 June 59, 28p. 26 refs. Technical Information Series R59SD385; Aerophysics Research Memo 37.
Order from LC mi$2.70, ph$4.80 PB 145 182

New kinetic equations for polymer chain degradation were used to examine the polytetrafluoroethylene pyrolysis mechanism. Observations made during polytetrafluoroethylene pyrolysis, which were not readily explained by previously postulated mechanisms, were accounted for by the present mechanism.

Bureau of Mines, Bartlesville, Okla.
THERMOCHEMISTRY AND VAPOR PRESSURE OF ALIPHATIC FLUOROCARBONS. A COMPARISON OF THE C-F AND C-H THERMOCHEMICAL BOND ENERGIES, by W. D. Good, D. R. Douslin and others. Technical note on Contract CSO 680-57-4. 3 Nov 58, 28p. 15 refs. AFOSR-TN-58-976; AD-205 856.
Order from LC mi$2.70, ph$4.80 PB 137 848

The heat of formation of four organic fluorine compounds, including three completely fluorinated aliphatic compounds, was determined by a rotating-bomb method of combustion calorimetry. An earlier technique that used sealed, fused-quartz ampoules for containing samples of volatile fluorine compounds was replaced by an improved technique that used sealed bags of a polyester film.

California U., Berkeley.
THE INFRARED DETECTION OF THE FORMYL RADICAL, HCO, by George E. Ewing, Warren E. Thompson, and George C. Pimentel. Rept. on Contract AF 49(638)1. 9 Nov 59, 18p. 22 refs. AFOSR-TN-59-1197.
Order from LC mi$2.40, ph$3.30 PB 144 866

The photolysis of HI, DI, HBr, and DBr suspended in solid CO at 20°K is described. The formyl radical, HCO or DCO, is produced, as shown by broad absorptions in the visible spectral region (6695, 6352, 6052, 5789, 5548, 5330, 5102 A) which correspond to absorptions of gaseous HCO. Infrared absorptions of HCO (at 1860 and 1091 cm^{-1}) and of DCO (at 1860 and 856 cm^{-1}) provide a basis for discussing the chemical bonding of this free radical and for calculating its thermodynamic properties. These experiments, the first infrared detection of a triatomic free radical by the matrix isolation method, depend upon reactivity of the matrix, possibly eliminating difficulties of the cage effect. OXIDATION OF NIOBIUM, by Tor Hurlen, Hallstein Kjøllesdal and others. Technical scientific note no. 1 on Contract AF 61(052)90. Apr 59, 126p. 75 refs. AD-225 549.
Order from LC mi$6.30, ph$19.80 PB 145 171

The oxidation of niobium was studied at pressures of 760 to 10^{-2} torr (mm Hg) and at temperatures from 150° to 1000°C by gravimetric and volumetric rate measurements, X-ray and electron diffraction, and electron microscopy. The linear (I) oxidation, in the initial stages of the oxidation up to 550°C, represents a phase boundary-controlled dissolution of O into the metal lattice; no oxides were present on the metal surface. The parabolic (II) oxidation is probably due to the diffusion of O, either through a growing layer of NbO_x or through an O-saturated Nb zone of increasing thickness, becoming rate determinable. NbO_x is formed during this oxidation stage at temperatures below 400°C; above 400°C NbO_x is not readily formed. The transition between II and the linear (III) oxidation is connected to a nucleation of $\gamma\text{-}Nb_2O_5$ on the surface of the sheet and not to a breakdown of a protective oxide film. The extension of the transition stage decreases with increasing temperature. Oxidation III also represents a phase boundary-controlled reaction and shows a square root dependence on O pressure; no transition to pressure independence occurred within 760 to 10^{-2} torr (mm Hg). The parabolic IV and V oxidations show a pressure dependence unusually high for a normal Wagner type of oxide growth. Temperate changes cause only negligible effects on the parabolic rate constants at 500° to 600°C. Deviations from the generalized oxidation behavior were found for the oxidation in O of 1 mm Hg above 600°C. Under these conditions, the oxidation seems near to normal in the beginning of the runs, but later the oxidation successively becomes slower than expected from the generalized behavior and almost stops before the sheets are oxidized throughout.

THERMODYNAMIC STUDY OF InSb USING A MASS SPECTROMETER, by G. DeMaria, J. Drowart and M. G. Inghram. Technical rept. no. 9, 1 July-30 Sep 58, on Contract DA 11-022-ORD-1993. [1958] 23p. 23 refs. WAL-803/19-3; OOR rept. 1543.11P; AD-210 754.
Order from LC mi$2.70, ph$4.80 PB 144 921

The molecules in thermodynamic equilibrium with solutions of indium and antimony have been determined and their partial pressures measured. The partial molar free energy, heat and entropy of solution of antimony in liquid InSb have been calculated.

Coating and Chemical Lab., Aberdeen Proving Ground, Md.
TEMPERATURE DEPENDENCE OF MICELLULAR SOLUBILIZATION, by A. Mankowich. 23 Oct 59, 27p. 9 refs. Rept. CCL-85; AD-228 293.
Order from LC mi$2.70, ph$4.80 PB 145 107

The temperature dependence of micellar solubilization was determined in the 140° - 180° F temperature range using a dye (orange OT) solubilization technique with built and unbuilt solutions of three high cloud point commercial surfactants, one an anionic agent of the alkyl aryl suphonate type (SDBS) and two types of nonionic agents, polyoxyethylene sorbitan monolaurate (PSML) and pentadecaethylene glycol nonyl phenyl ether (PGNPE). It was found that the logarithm of solubilization in both built and unbuilt solutions was directly proportional to temperature (solubilization was an exponential function of temperature), and that the log solubilization - temperature slopes of the built and unbuilt solutions of each surfactant were approximately parallel. The linearity of the log solubilization - log concentration function for built and unbuilt surfactant solutions was confirmed at all temperatures. For 0.58:1 to 1.73:1 mole ratios of builder - SDBS, the enhanced solubilization was independent of builder type (neutral Na_2SO_4 or polyphosphate $Na_5P_3O_{10}$); that is, equimolar amounts of Na_2SO_4 or $Na_5P_3O_{10}$ increased solubilization by sodium dodecyl benzene sulphonate equally. In the temperature range studied, no uniform trend for the effect of builders on micellar solubilization by nonionic surfactants was noted. (Author)

THE FORMATION OF A DINUCLEAR Cr (III) SPECIES BY OXIDATION OF CHROMOUS SOLUTIONS, by Michael Ardon and Robert A. Plane. Rept. on Contract AF 49(638)279. 23 Oct 58, 12p. 18 refs. AFOSR-TN-58-936; AD-205 090.
Order from LC mi$2.40, ph$3.30 PB 137 843

The dissolved chromic species formed when chromous perchlorate is oxidized in aqueous solution by molecular oxygen is shown by visible spectrum and behavior toward a cation exchange resin to be the same as the hydrolytic polymer which forms first when chromic solutions are refluxed. Analysis of the solution for chromium, perchlorate, and free acid show the species to have a charge of +2 per Cr atom. Ion exchange experiments indicate that +4 is the most likely charge for the entire species, which is consistant with its being dinuclear Cr(III) species with the two Cr atoms bound by either an O or two OH bridges. This same product can be formed by oxidation of Cr^{++} with Tl^{+3} and in lower yield by ClO_3^-, HClO, $Cr_2O_7^=$ and H_2O_2. It is absent when the oxidation is performed with Fe^{+3}, Cu^{++}, Cl_2, or Br_2. It is believed that the dimer results from reaction of the intermediate Cr(IV) with Cr^{++}. (Author)

RESEARCH ON THE MANGANESE DIOXIDE ELECTRODE, by W. C. Vosburgh. Terminal rept. on Contract Nonr-1016(00). 26 Feb 58, 12p. 9 refs. AD-153 969.
Order from LC mi$2.40, ph$3.30 PB 137 803

Discharge of MnO_2 electrodes in acid solution: The electrodes were made by electrodeposition of graphite rods from a bath of $MnSO_4$ and H_2SO_4 between 75° and 90°C. The electrolyte was usually 0.045M H_2SO_4. The potential of the MnO_2 electrode was measured against a calomel electrode. The total Mn^{++} in the solution was found by titration and the oxidation value of the MnO_2 was calculated from the time and the current, assuming 100% current efficiency. The calculated composition of the MnO_2 was variable and the total amount was always less than the 0.2 mmol usually found by chemical analysis for similar electrodes. The Mn was also more variable than it should have been. After an apparently complete discharge some MnO_2 always remained on the electrode. The effect of the NH_4Cl concentration of the electrolyte on the potential of MnO_2 electrode: The change of MnO_2 electrode potential was measured with pH for a sample of precipitated MnO_2 in NH_4Cl electrolyte. The change in potential with pH was close to the theoretical value given by the equation, $E = E_o - 0.059$ pH. The effect of adsorption of Mn^{++} ion on the MnO_2 electrode potential: All detectable Mn^{++} was removed from solutions of NH_4Cl and $MnSO_4$ with NH_3 by adsorption or reaction with MnO_2. The termination of a discharge: The discharge of the MnO_2 electrode was terminated when the discharge curve (potential against time) turned fairly sharply downward and the potential decreased more and more rapidly. The Mn^{++} given to the electrolyte at different stages of these discharges was measured.

CHEMICALLY INDUCED VIBRATIONAL EXCITATION: A STUDY OF THE HYDROXYL RADICALS FORMED IN THE H + O_3 ATOMIC FLAME, by David Garvin. Technical note no. 4 on Contracts AF 18(600)134 and CSO 680-56-30. 20 Nov 58, 31p. 26 refs. AFOSR-TN-58-1076; AD-207 455.
Order from LC mi$3.00, ph$6.30 PB 144 853

The vibrational-rotational spectrum of the hydroxyl radical in its electronic ground state has been determined in the visible and near infra-red region. Line systems in twenty-seven vibrational bands have been identified. Intensities of lines in eighteen bands are reported.

General Electric Co., Schenectady, N. Y.
INVESTIGATION OF VARIOUS ACTIVATOR-REFRACTORY SUBSTRATE COMBINATIONS, by J. H. Affleck. Scientific rept. no. 6 on Contract AF 19(604)4093. 14 Dec 59, 20p. 27 refs. AFCRC-TN-60-104.
Order from LC mi$2.40, ph$3.30 PB 145 364

The thermionic constants have been determined for a number of refractory substrates in combination with a barium activator. Effects of inadequate coverage of the substrate by the activator are discussed, and evidence is presented showing how this influences the measurements. The barium-tantalum carbide system has a low Richardson work function and is to be examined in more detail. (Author) (See also PB 144 187)

Industrial Research and Development Labs., (Gt. Brit.)
GENERAL MECHANISM OF DRAINAGE FROM SOLID SURFACES, by J. S. Stanley and J. A. Radley. Final technical rept. for 1 Oct 58-1 Oct 59 on Contract DA 91-591-EUC-929. 31 Oct 59, 87p. 17 refs.
Order from LC mi$4.80, ph$13.80 PB 144 911

Drainage of pure liquids from solid surfaces which they wet completely has been found to follow Bikerman's drainage equation which expresses the rate of flow of a Newtonian liquid draining from a smooth vertical surface under gravity. The experiments described in this report, however, give evidence of hitherto unsuspected properties of wetting agents. All types of wetting agents tested, anionic, nonionic and cationic behaved qualitatively in the same way, although the actual concentration at which the maxima and minima occurred were dependent upon the electrolyte concentrations of the solutions and upon the structure of the wetting agents. Simple salts and acid dyestuffs that were not surface active had no effect on the quantity of solution retained at the surface. Possible applications of these results in the study of adhesives and lubrications are described.

Laboratory for Insulation Research, Mass. Inst. of Tech., Cambridge.
STUDIES ON THE LOWER OXIDES OF TITANIUM, by A. D. Pearson. Doctoral thesis. Rept. on Contracts Nonr-1841(10) and AT(30-1)1937. June 57, 54p. 35 refs. Technical rept. 120; AD-135 252.
Order from LC mi$3.60, ph$9.30 PB 137 818

Pure TiO is face-centered cubic (fcc) above ca. 950°C. The structure of samples annealed below this temperature is complex, consisting of 2 or possibly 3 phases not in equilibrium. Impurities and excess of O stabilize the fcc form at room temperature. The electrical resistivity of TiO (prepared by melting) is 2.81×10^{-4} ohm cm at room temperature, and increases with temperature between -162° and 362°C. The thermoelectric e. m. f. of TiO is of the same order of magnitude as that of metals. The directly measured density is less than that calculated from the lattice constant, indicating that 14.6% of the lattice positions are unoccupied. The properties of the products suggest that the TiO-phase oxides may be considered as solid solutions of O in Ti. X-ray investigations indicate that Ti_3O_4 probably does not exist. The trigonal unit cell of Ti_2O_3 is confirmed between room temperature and 350°C by using an improved technique for developing diffraction photographs; at room temperature $\underline{a}$ = 5.428A; α = 56°39'. The lattice parameters change rapidly between 160° and 200°C, corresponding to the rapid increase in magnetic susceptibility. Ti_2O_3 is antiferromagnetic; $\chi_m = 1.09 \times 10^{-6}$ cgs at 20°C. The thermal activation energy of electric conduction of Ti_2O_3 in the room-temperature region is 0.08 ev, about half of the observed optical activation energy (0.15 ev). The material is a p-type semiconductor at room temperature, but n-type conduction becomes dominant above 240°C.

Laval U. (Canada).
STUDY OF CHEMICAL REACTIONS IN THE ELECTRICAL DISCHARGE, by Paul A. Giguère. Technical rept. no. 50 on Contract AF 18(600)492. 10 Nov 59, 8p. AFOSR-TR-59-183.
Order from LC mi$1.80, ph$1.80 PB 144 905

The work done over the past five years is summed up. The first project, entitled: "Kinetics of the thermal decomposition of hydrogen peroxide vapor" was completed successfully. An incidental result was the discovery of the inhibiting action of hydrogen peroxide on the second explosion limit of the hydrogen-oxygen reaction. The second project "Chemical reactions in the electrical discharge" was aimed mainly at spectroscopic identification of trapped free radicals, in particular HO_2. This could not be achieved for reasons that now appear obvious. However, much useful information was obtained on the products of the reactions in dissociated water and hydrogen peroxide vapors and, lately, on the interaction of atomic hydrogen with solid ozone. ELECTROCHEMICAL SYSTEMS FOR USE IN LOW TEMPERATURE BATTERIES, by G. V. Lago, J. P. Karnes and J. B. Jennings. Quarterly progress rept. no. 2, 17 June-16 Sep 58, on Contract DA 36-039-sc-74994. [1958]. 27p.
Order from LC mi$2.70, ph$4.80 PB 144 916

Load tests have been made on a number of cells employing MnO_2 - Shawinigan Black cathodes and Mg

anodes at room temperature and at -45°C. Initial and final "no-load" voltages were also measured. The cells have been made more uniform with respect to tightness of packing and to folding of the separator paper. No gas is evolved in the cells at -45°C. The equivalent conductances at infinite dilution and dissociation constants of KSCN-CH_3CN and KSCN-H_2O-CH_3CN systems have been calculated. Viscosities and dielectric constants have been redetermined. Some preliminary work with the KSCN-H_2O-CH_3CN has been done. (Author) (See also PB 138 837)

Naval Ordnance Test Station, China Lake, Calif.
A GRAVIMETRIC DETERMINATION OF INSOLUBLE IMPURITIES AND ASH IMPURITIES IN PROPELLANT-GRADE CELLULOSE NITRATE, by Aaron N. Fletcher. 8 Jan 59, 15p. 2 refs. NOTS-TP-2152; NAVORD Rept. 6444; AD-211 979.
Order from LC mi$2.40, ph$3.30 PB 144 870

Mixed-solvent alkaline degradation of propellant-grade cellulose nitrate is used to allow gravimetric determinations of insoluble and ash impurities in 10-g samples. The need for such large samples is indicated by the nonhomogeneity of impure cellulose nitrate. The standard deviations of measurements for precision were found to be about 0.01% for both the insoluble and the ash impurities determination. Tests for accuracy showed standard deviations of 0.03% for the insoluble impurities and 0.01% for the ash impurities when evaluated over the range 0.0 - 0.6% impurities. (Author)

Naval Ordnance Test Station, China Lake, Calif.
SOME NOTES ON TRAVEL IN EUROPE. I. SYMPOSIUM AND CONGRESS ON MODERN ELECTROCHEMICAL METHODS OF ANALYSIS. II. ACADEMIC, GOVERNMENT, AND INDUSTRIAL RESEARCH LABORATORY VISITS, by Gerald C. Whitnack. 30 Apr 58, 25p. NOTS rept. 1942; AD-200 539.
Order from LC mi$2.70, ph$4.80 PB 144 757

The primary purpose of the trip reported here was to present an invited paper at a Symposium in conjunction with the XVI International Congress of Pure and Applied Chemistry in Paris, France. In addition, official visits to academic, government, and industrial laboratories in Italy, England, and Scotland and conferences with leading scientists in the fields of electrochemistry, polarography and analytical chemistry were arranged. Although the writer is most proficient in these fields and therefore concentrated the most on them, nevertheless, a great deal of knowledge pertinent to other fields of research was obtained. This included information on high explosives, propellants, detonator compositions, chromatography, plastics, manufacturing techniques, synthesis, continuous flow processes, etc. (Author)

Naval Research Lab., Washington, D. C.
IGNITION STUDIES. PART V. STUDY OF THE PROCESSES OCCURRING DURING THE SPONTANEOUS IGNITION OF THE HEXANE ISOMERS, by W. A. Affens, J. E. Johnson, and H. W. Carhart. Interim rept. 27 Jan 60, 17p. 10 refs. NRL rept. 5437.
Order from OTS $0.50 PB 161 105

Spontaneous ignition properties of the hexane isomers in air were studied using a uniformly heated one-liter spherical Pyrex flask. Particular emphasis was placed on pre-ignition reactions by means of measurements of internal gas temperature and oxygen consumption. Time-temperature recordings of gas temperature were found to be helpful in distinuguishing between ignition and non-ignition, but not between hot- and cool-flame ignition, although in most cases this distinction could be made visually in total darkness. Minimum ignition temperature in air for cool- or hot-flame ignition, minimum reaction temperature, pre-ignition range, maximum temperature rise above base temperature, and oxygen consumption at ignition for the isomeric hexanes, appear to show correlation with ease of oxidation and ignition. The present work suggests that minimum ignition temperature for cool- or hot-flame ignition may well be a more reliable criterion for fire safety than the commonly used SIT (hot-flame ignition only). (Author) (See also PB 111 614)

STUDIES IN THE REACTIONS OF HIGH ENERGY ATOMS AND MOLECULES, by R. A. Marcus. Rept. on Contract AF 33(616)3887. Jan 59, 36p. 27 refs. WADC Technical rept. 59-24; AD-209 533.
Order from OTS $1.00 PB 151 875

The results obtained in three individual studies are summarized in this final report. A theory is presented which relates the lifetimes of excited molecules formed by light absorption to the wavelength of the exciting light and to the temperature. Measurements of the reaction products from the flash photolysis of acetone are reported for various acetone pressure temperatures, light intensities, wavelengths,

and varying pressures of added oxygen, biacetyl and some hydrocarbons. The measurement of reaction products in flash systems provides helpful, direct information about the primary species produced by light absorption. Various trends in the data indicate the presence of certain excited molecules and hot radicals as well as the usual thermal radicals. The construction of an apparatus is described for the measurement of the rate of a chemical reaction as a function of the relative velocity of the two reactants. In this apparatus a high energy beam of monoenergetic helium atoms is used to bombard hydrogen molecules at room temperature. Preliminary results indicate the formation of hydrogen atoms by this technique, as evidenced by their blue coloration of molybdenum oxide. Various components to be used to make this study a quantitative one are outlined. (Author)

PHOTOCHEMICAL STUDIES 54. METHANOL VAPOR, by Raymond P. Porter and W. Albert Noyes, Jr. Rept. on Contract AF 18(600)1528. 12 Sep 58, 24p. 17 refs. AFOSR-TN-58-848; AD-203 338.
Order from LC mi$2.70, ph$4.80 PB 138 149

The principal products of the photochemical decomposition of methanol vapor at wave lengths below 2000 Å are hydrogen, formaldehyde, ethylene glycol together with small amounts of carbon monoxide and methane. By use of scavengers and by study of deuterated methanol, CD_3OH, at least two primary processes must occur: (1) $CH_3OH + h\nu = CH_2O + H_2$; 2) $CH_3OH + h\nu = CH_3O + H$. Other primary processes, including the formation of hot methoxy radicals and hot hydrogen atoms, may occur but conclusive evidence for or against them could not be obtained. Secondary reactions are discussed. Methoxy radicals must, by abstraction, form CH_2OH radicals, and CH_2OH radicals must also be formed by the reaction $H + CH_3OH = CH_2OH + H_2$. (Author)

Syracuse U., N. Y.
SOLUBILITY OF IRON IN LIQUID LITHIUM, by John J. Sand. Rept. on Subcontract to Olin Mathieson Chemical Corp. Contract AF 33(600)33920. 22 Aug 58, 40p. 15 refs. OMCC-HEF-166.
Order from LC mi$3.00, ph$6.30 PB 145 280

The solubility of iron in lithium over the temperature range 200°C to 1200°C is estimated to be

$S_T^o = 0.178T - 17.5$ where: S_T^o = the equilibrium solubility of iron in lithium, PPM Fe/Li (parts by weight of Iron per million parts by weight lithium) and T = temperature in degrees C. The experimental method used was to heat the Iron capsules containing lithium to equilibrium at specific temperatures and then to quench them in a CO_2 - oil bath at -30°C. Each quenched iron-lithium sample was analyzed colorimetrically for iron and then by titration for lithium.

Texas U., Austin.
CHEMICAL KINETICS IN LINEAR FLOW SYSTEMS I, by J. A. Cunningham and F. A. Matsen. Technical note 4 on Contract AF 18(603)142. Oct 58, 9p. 2 refs. AFOSR-TN-58-872; AD-203 916.
Order from LC mi$1.80, ph$1.80 PB 138 148

Equations are developed describing the kinetics in a flow system assuming parabolic flow. While these equations are more complex then the equations for planar flow developed in the preceding technical note, they do not improve the description of the thermal decomposition of butane. (Author)

Theoretical Chemistry Lab., U. of Wisconsin, Madison.
SOLUTIONS FOR COMPLEX SYSTEMS OF CHEMICAL REACTION KINETICS. PART I. AN IRREVERSIBLE UNIMOLECULAR REACTION FOLLOWED BY A SECOND IRREVERSIBLE UNIMOLECULAR REACTION, by David D. Konowalow, James E. Blair and others. Rept. on Theory of Propagation of Flames and Detonations, Contract AF 33(616)3414. Aug 59, 44p. WADC Technical note 59-243, Pt. 1.
Order from OTS $1.25 PB 161 408

The analytical solutions of the rate equations for the system $A \xrightarrow{k_1} B \xrightarrow{k_2} C$ are explored for characteristic features which are useful to the kineticist in determining the rate constants from fragmentary experimental data. Among the most useful features are the maximum which B exhibits and the time at which it occurs from which both rate constants can be determined. A critical examination of the pseudostationary state approximation as applied to this system is made The approximation is found to be accurate when the intermediate B is short lived. (Author)

MAGNETOCHEMICAL BEHAVIOUR OF THE 7-SUBSTITUTED 8-HYDROXYQUINOLATES OF NICKEL, by William J. Davis and Ronald E. Burton. Final technical rept. no. 1, 1 Oct 58-1 Oct 59, on Contract DA 91-591-EUC-96001-1069-59. 1 Oct 59, 13p. 12 refs.
Order from LC mi$2.40, ph$3.30 PB 144 889

This work was undertaken to elucidate the structure and behavior of the complexes formed by nickel with certain 8-hydroxyquinolines (oxines) substituted in the 7-position. The main effort has been concentrated on (a) the synthesis of 7-substituted 8-hydroxyquinolines, (b) the examination of the compounds formed between nickel ions and these oxines, (c) the construction of a precision magnetic susceptibility balance, and (d) measurements of magnetic susceptibilities of nickel oxinates.

HYDROGEN BONDING STUDIES. IV. ACIDITY AND BASICITY OF TRIPHENYLHYDROXY COMPOUNDS OF GROUP IV_B ELEMENTS AND THE QUESTION OF PI-BONDING FROM OXYGEN TO METALS, by Robert West and Ronald H. Baney. Rept. on Contract AF 49(638)285. 8 Dec 59, 19p. 26 refs. AFOSR-TN-59-1207.
Order from LC mi$2.40, ph$3.30 PB 144 865

The acidity and basicity as hydrogen bond donors and acceptors has been measured for the compounds Ph_3MOH, where M = C, Si, Ge, Sn and Pb. The trends in acidity and basicity in these compounds indicate that dative pi-bonding from oxygen to M is strong in Ph_3SiOH, weaker in Ph_3GeOH, and negligible in the other three compounds. A linear relationship has been found between νOH and the electronegativity of M, for these and related hydroxyl compounds. (Author) (See also PB 142 157)

THE VAPOR PRESSURE OF NICKEL FLUORIDE, by Milton Farber, Richard T. Meyer, and John L. Margrave (Jet Propulsion Lab.). Technical rept. on Contract DA 11-022-ORD-1818. 1 Mar 58, 6p. 9 refs. AD-158 448.
Order from LC mi$1.80, ph$1.80 PB 144 859

The vapor pressure of NiF_2 was measured to see if the objection raised about the possibility that NiF_2 might be sufficiently volatile at high temperatures to complicate the interpretation of the data was checked for its validity for experiments carried out in Ni containers. Vapor pressure was measured by the Knudsen effusion method over the range 1026 to 1104°K and the flow method with N_2 as the flow gas over the range 1233° to 1349°K. Results indicated that the vapor pressure of NiF_2 is a negligible part of the F pressure deviation observed by Doescher (J. Chem. Phys. 19:1070, 1951; 20: 330, 1952), and $NiF_2(g)$ was not present in high enough concentrations to change the interpretation of the effusion data of Wise (J. Chem. Phys. 20:927, 1952).

HIGH ALTITUDE CLOUD PHOTOGRAPHY FROM BALLISTIC MISSILES, by D. N. Vachon and J. I. F. King. Rept. on Contract AF 04(647)269. 1 Dec 59, 17p. Technical Information Series R59SD471.
Order from LC mi$2.40, ph$3.30 PB 145 181

During the time between separation and re-entry, the nose cones of IRBM's and ICBM's can be utilized for many scientific purposes. Recently during the normal course of flight testing, 16mm films were used to record the separation and stabilization processes. Although the camera system was not designed for cloud photography, we were able to obtain some extremely useful information. A brief analysis of the cloud systems has been made and is summarized with the use of a limited number of prints. The potential of future cloud photography during flight tests is explored.

THE METEOROLOGICAL MEASUREMENTS AND FIELD PROGRAM OF PROJECT JET STREAM FROM 1956 TO 1958, by R. M. Endlich and R. M. Rados. Oct 59, 134p. 23 refs. Geophysical Research Papers no. 64; AFCRC-TR-59-266.
Order from OTS $2.75 PB 161 432

During the course of "Project Jet Stream," a number of meteorological research flights were made at altitudes from 25,000 to 40,000 feet in a B-47 aircraft equipped with special instruments for measuring winds, temperatures, pressure, turbulence, etc. The measurements from 36 flights conducted from Wright-Patterson Air Force Base, Dayton, Ohio, during 1956-1957 have been processed for use in research efforts. These data pertain to several operational problems of aircraft and missiles and to many fundamental meteorological questions; therefore, they are being made generally available for study. To use the data intelligently, some familiarity with the measuring instruments and with the conduct of the field program is required. This paper is intended to supply this background. Methods of data reduction and the final forms in which the data are presented are also described. (Author)

A NOTE COMPARING 1-KM VERTICAL WIND SHEARS DERIVED FROM SIMULTANEOUS AN/GMD-1A AND AN/GMD-2 WINDS-ALOFT OBSERVATIONS, by H. A. Salmela and N. Sissenwine. Nov 59, 15p. GRD Research Notes no. 22; AFCRC-TN-59-496.
Order from OTS $0.50 PB 161 429

Winds-aloft observations that were taken simultaneously by the AN/GMD-1A and AN/GMD-2 rawin sets during field trials of the new AN/GMD-2 at Andrews AFB, Maryland are analyzed and compared. For wind-speed differences for approximately one kilometer of ascent (actually three minutes) equal to and greater than 20 mps as observed by the GMD-2, the distribution of the differences as observed by the GMD-1A is presented. The maximum wind differences for the positive shear (wind increasing with height) and the negative shear (wind decreasing with height) as observed by the GMD-1A are compared with the simultaneous differences reported by the GMD-2. These latter differences give the approximate true shears. Comparison of the two sets of vertical wind shears (wind-speed differences) makes it possible to obtain a quantitative estimate of the exaggeration in the vertical wind shears indicated by operational GMD-1A soundings. CLOUD REFRACTIVE INDEX STUDIES. PART II: USE OF DISTRIBUTIONS OF ΔN VS. ΔS FOR ESTIMATING MECHANICAL TURBULENCE, by Roscoe R. Braham, Jr. Edward L. Harrington, and Thomas E. Hoffer. Technical note no. 17 on Contract AF 19(604)1931. 2 Sep 58, 36p. 2 refs. AFCRC-TN-58-613; AD-206 771.
Order from LC mi$3.00, ph$6.30 PB 137 910

An analysis was made of fine structure variations of refractive index in and around a group of about 70 cumulus clouds with a view toward relating these variations to mechanical turbulence parameters. Frequency distributions of refractive index gradients were prepared for each level of flight for clear air, cloud core and regions of transition at the cloud boundaries. Similar distributions were prepared for refractive index increments. The latter distributions in the form of tables of N change vs. gradient size (ΔS), are presented as an appendix. From these distributions a parameter analogous to the "mixing" length" of early turbulence theory was computed. This study shows that eddies of the transition regions of cumulus clouds have dimensions of a few tens of meters and are carried for distances of the order of 30-50 meters before losing their identity. Mixing lengths of clear air eddies are much larger than those of cloud eddies, except, possibly, for those eddies in the uppermost parts of the clouds. (Author)

A NUMERICAL EXPERIMENT IN DEDUCTION OF THE DIVERGENCE ASSOCIATED WITH A MODEL OF A STEADY COLD CYCLONE, by Stanley E. Asplund. Technical rept. no. 14 on Contract Nonr-1600(00). 31 Jan 59, 212p. 62 refs.
Order from LC mi$9.60, ph$33.30 PB 144 555

The tropospheric wind structure in a sub-class of cut-off cold-core cyclones is idealized in a model. This model is a hypothetical case in which velocity divergence is present in exactly the right amount to maintain a zero local rate of change of vorticity. The rotational nondivergent part of the total wind field is prescribed. The divergent irrotational part is obtained by an iterative numerical process based upon evaluation of divergence from the vorticity equation. Beginning with the lower-boundary assumption of vertical velocity, the divergence required to balance all other contributions to vorticity tendency is computed at 100 mb intervals. Successive pressure surfaces are linked by numerical integration of the continuity equation. Computations and results through 500 mb are reported and discussed. The model wind field is prescribed by mathematical expressions for zonal wind superimposed on a vortex at a reference surface of 565 mb.

Massachusetts Inst. of Tech., Cambridge.
THE EVALUATION OF SUBJECTIVE PROBABILITY FORECASTS, by Frederick Sanders. Scientific rept. no. 5 on Contract AF 19(604)1305. June 58, 63p. 6 refs. AFCRC-TN-58-465; AD-160 741.
Order from LC mi$3.90, ph$10.80 PB 137 505

An evaluation is made of a large number of subjective probability forecasts referring to a wide variety of weather elements and conditions and to time periods up to twenty hours in advance. These forecasts are found to be generally quite reliable, if reliability is measured by the correspondance between each forecast probability value and the corresponding percent frequency of occurrence of the forecast weather condition (mean "observed" probability value). The forecast probability values and the corresponding percent frequencies of occurrence are expressed in terms of departures from climatological expectancy. It is then found that the observed departure values are only about three quarters of the forecast departure values. A method is presented of scoring the probability forecasts in terms of a percent reduction over climatology. It is shown that this percent reduction suffers not only because of lack of reliability, as defined above, but also because of lack of resolution. The resolution of a set of forecasts representing a particular forecast probability value is measured by the variance of the individual "observed" probability values about their mean for that set. Lack of resolution is primarily responsible for the rather modest percent reduction yielded by the subjective probability forecasts. A negative percent reduction is found in those forecasts which refer to weather conditions which occur either very infrequently or very frequently. Probabilistic forecasts are discussed in relation to categorical forecasts, and some advantages of the former are elucidated. (Author)

EVALUATION OF THE AN/APQ-39(XA-3) CLOUD DETECTOR RADAR, by K. E. Wilk. Final rept. for 16 Mar 55-31 Mar 58 on Contract AF 19(604)1395. [1958] 42p. 10 refs. AFCRC-TR-58-246; AD-152 596.
Order from LC mi$3.30, ph$7.80 PB 137 693

This report is an evaluation of a ground based AN/APQ-39(XA-3) airborne radar as a cloud indicator during the winter months in the Midwest. Data on clouds, precipitation, and other meteorological parameters were collected by means of a modified AN/APQ-39(XA-3) radar, meteorological instruments, and cloud photography. The observed data and radar characteristics are analyzed to determine the empirical detection capabilities, theoretical detection capabilities, and the synoptic interpretations of the radar echoes. The results indicate the AN/APQ-39(XA-3) radar is capable of detecting 77 percent of the observed clouds. Cloud genera usually can be identified from the configuration of the radar return. The radar also provides limited knowledge of the existence and character of precipitation and of the air mass structure. (Author)

STUDY AS TO MERITS OF VARIOUS RAPID RAINDROP COUNTING AND SORTING TECHNIQUES, by Glenn E. Stout and William C. Ackermann. Final rept. for 15 May 56-13 Mar 58 on Contract AF 19(604)1900. [1958] 30p. 5 refs. AFCRC-TN-58-255; AD-152 632.
Order from LC mi$2.70, ph$4.80 PB 138 093

An extensive literature search has been made to evaluate known instruments, designs, and methods of counting rain and drizzle drops according to their sizes. Emphasis has been placed on the techniques that are adaptable to automatic registration of drop count versus various powers of drop diameter.

Naval Ordnance Test Station, China Lake, Calif.
MODIFIED RADIOSONDE FOR OBTAINING LOWER-LEVEL ATMOSPHERIC DATA, by Paul H. Miller. 1 Oct 59, 19p. 3 refs. NOTS TP-2334; NAVORD Rept. 6600.
Order from LC mi$2.40, ph$3.30 PB 145 124

A standard AMT-4 radiosonde modulator has been modified at the Naval Ordnance Test Station for use in obtaining micro-meteorological temperature data in the lower levels of the atmosphere. The modification consists of reqiring the basic circuit to eliminate the taking of relative humidity data and increase the number of high references made. The sequence of transmitted data consists of alternating low references and temperature data throughout a range of four contacts followed by a high reference. This sequence is repeated until the 105th contact is reached, a point well above the upper limit of the range of interest in a low-level sounding. The modified radiosonde may be used as either a captive instrument or attached to a slow-rising balloon. (Author)

Naval Ordnance Test Station, China Lake, Calif.
A PROPOSED RABAL SYSTEM FOR THE RAPID ACQUISITION OF HIGH-ALTITUDE WIND DATA, by Paul H. Miller. Sep 59, 15p. 4 refs. NAVORD rept. 6593; NOTS TP-2325.
Order from LC mi$2.40, ph$3.30 PB 144 984

A modified radiosonde has been assembled at the Naval Ordnance Test Station with which it is proposed to obtain high-altitude wind data more rapidly and economically than is possible with existing equipment. The unit consists of a battery and an AN/AMT-4 transmitter that emits an unmodulated carrier signal. The unit may be tracked with either one or two GMD-1 tracking antennas depending on whether the desired winds-aloft data is to be obtained by using an assumed ascension rate or by triangulation. Advantages and disadvantages of both methods are outlined. The suggested configuration and methods eliminate many of the steps now involved in the determination of high-altitude winds. (Author)

Naval Ordnance Test Station, China Lake, Calif.
TROPOPAUSES AND RELATED ATMOSPHERIC PHENOMENA AT THE NAVAL ORDNANCE TEST STATION, by P. H. Miller and D. L. Farnham. Nov 59, 158p. 62 refs. NOTS TP-2226; NAVORD rept. 6533.
Order from LC mi$7.50, ph$24.30 PB 145 167

Tropopause data obtained and evaluated at the Naval Ordnance Test Station indicate a very definite correlation between the major tropopauses and their leaves, and such phenomena as the jet steam, clear-air turbulence, mountain waves, and the formation of aircraft condensation trails. A review of the literature on tropopauses and related phenomena is presented. (Author)

Quartermaster Research and Engineering Center, Natick, Mass.
YUMA SUMMER MICROCLIMATE, by Arthur V. Dodd and Harry S. McPhilimy. Nov 59, 39p. 8 refs. Technical rept. EP-120.
Order from LC mi$3.00, ph$6.30 PB 145 139

Detailed and continuous temperature, wind, and radiation records for a 2-month summer period under diverse terrain conditions at Yuma Test Station, Arizona, were analyzed. It was found that the temperature regime near and at the earth's surface varies significantly from the regime as found by "standard" observations. Midday temperatures greater than 140F were frequent on both sand and desert pavement surfaces. Temperatures at levels 200 centimeters above these surfaces were seldom more than 110F. The wind regimes at the relatively low sandy plains and desert pavement sites were quite similar, with strongest winds in the afternoon and very light winds at night. Winds measured at the crest of a hill averaged stronger day and night and had important effects on the temperature regime. The total incoming radiation at Yuma Test Station at midday is extremely high, often exceeding 500 Btu/ft^2/hr. Outgoing radiation is also at a maximum at midday when it averages over 300 Btu/ft^2/hr. The net radiation is positive (incoming) for an average of 12 hours each day, and exceeds 150 Btu/ft^2/hr for an average of 6 hours each day. At night there is a small negative radiation balance. (Author)

Washington U., Seattle.
A METHOD OF ANALYSIS OF SURFACE GEOSTROPHIC WINDS IN MOUNTAINOUS REGIONS, by Nolan Patrick Williams. Scientific rept. no. 6 on Contract AF 19(604)3063. Aug 59, 49p. 7 refs. AFCRC-TN-59-413; AD-217 311.
Order from LC mi$3.30, ph$7.80 PB 144 581

A method of representing the air flow over mountainous terrain is derived to serve the same function as an isobaric analysis in flat regions. Constant pressure charts were analyzed at 50-mb intervals between 950 and 750 mb, the height contours being terminated where they intersected solid ground. At these intersections, geostrophic winds were measured, plotted on a base map, and analyzed by means of streamlines and isotachs. These plots gave what may be termed the true surface geostrophic wind field. This field proved very different from the geostrophic wind field corresponding to the sea-level isobars. A large fictitious gradient over the mountains of western Canada and Alaska was analyzed. The tedious process involved in obtaining the true surface geostrophic wind is not suited to practical use. An attempt was made to combine routine analyses in such a way that they yielded an equivalent result. The combination of the surface and 850-mb charts gave a satisfactory representation in most areas, though it was necessary to make use of the 700-mb chart in the vicinity of the St. Elias Range. (Author)

Washington U. [Seattle]
RESULTS OF A SERIES OF DYNAMICAL PREDICTIONS FOR THE ARCTIC: WINTER SEASON, by Richard J. Reed. Scientific rept. no. 8 on Contract AF 19(604)3063. Sep 59, 56p. 14 refs. AFCRC-TN-59-415; AD-217 313.
Order from LC mi$3.60, ph$9.30 PB 144 690

A series of 24-hr forecasts of 1000 and 500-mb height, and 1000 to 500-mb thickness for the area north of 60° are presented for a 20-day period in December 1956 and January 1957. The forecasts are based on graphical integrations of a two-level baroclinic model. An approximate and exact method were used to convert vorticity changes to height changes. The verifications include both types of forecasts. The performance of the daily forecasts, as expressed by space correlations and root-mean-square errors, was slightly better than for an earlier arctic forecast (AD-211 493), and somewhat poorer than for similar forecasts for the US and Canada. The differences in performance can be explained largely on the basis of the degree of synoptic activity and the equality of the map analyses. From the time correlations (or correlations at grid points) and the corresponding root-mean-square errors, results indicate that the method performed best in or near regions where the observed root-mean-square pressure or height changes were largest. The forecast accuracy seemed to be sensitive to the synoptic regime and, other things being equal, to be greater at middle latitudes where weather changes are more active. (Author)

Washington U. [Seattle]
A SYNOPTIC-CLIMATOLOGICAL STUDY OF THE ARCTIC CIRCULATION IN SUMMER, by Bruce Arlen Kunkel. Scientific rept. no. 7 on Contract AF 19(604)3063. Sep 59, 53p. 20 refs. AFCRC-TN-59-414; AD-217 312.
Order from LC mi$3.60, ph$9.30 PB 144 691

Estimates of cyclone and anticyclone frequencies for the area north of 60°N for the summer season were revised using data for the 5 years, 1952-56. In view of the different pictures these recent data give regarding the arctic circulation in summer, mean monthly sea-level pressures for the 5-year period and frequencies of various types of fronts were obtained. Results indicate that the inner arctic is a region of high cyclone frequency in summer. The large frequency and great persistence of the lows makes this region somewhat analogous to the Aleutian and Icelandic regions of semipermanent low pressure. The lows in the Arctic Basin have their origin mainly over Siberia and may be attributed to the strong baroclinic zone that develops along the arctic coast in summer. Greatest frequency of anticyclones is found in the zone about 75°N. Instead of a single polar front displaced far northward from its winter position, 2 belts of high frequency were found, one off Japan and another along the arctic coast. Minimum frequencies occurred in the area formerly believed to be occupied by the polar front. (Author)

Army Snow, Ice and Permafrost Research Establishment, Wilmette, Ill.
TABLES OF KELVIN FUNCTIONS AND THEIR DERIVATIVES, by D. E. Nevel. Rept. on Mechanics of Ice Sheets. June 59, 75p. 3 refs. Technical rept. 67.
Order from LC mi$4.50, ph$12.30 PB 145 116

Tables of the basic functions necessary for the solution of problems related to the trafficability of ice sheets are tabulated, including the following functions and their first derivatives: ber (χ), bei (χ), ker (χ), kei (χ), ber_ϕ (χ), and bei_ϕ (χ) for $0 \leq X \leq 1$ ($\Delta X = 0.001$), $1 \leq X \leq 6$, ($\Delta X = 0.01$), and $6 \leq X \leq 10$ ($\Delta X = 0.1$). A differential equation is given which describes the bearing capacity of a floating ice sheet (considered as a plate on an elastic foundation) together with a solution in terms of Kelvin functions. The formulas for these functions and their first derivatives are also presented. The functions were computed with a Bendix G-15D electric computer and are accurate to the last digit (12th), except for 4, which are occasionally in error in the last digit. (Author)

Dartmouth Coll., Hanover, N. H.
ICE STRUCTURES, ANGIUSSAQ LAKE, NORTHWEST GREENLAND, by L. D. Taylor and J. B. Lyons. Scientific rept. no. 1 on Contract AF 19(604)2159. 1 Sep 59, 37p. 27 refs. AFCRC-TN-59-461.
Order from LC mi$3.00, ph$6.30 PB 144 799

A discussion is presented of the structural and textural features of the four major ice types underlying perennially-frozen Angiussaq Lake, Northwest Greenland. Major attention is focused on the lake ice and the major and minor features which contribute to its strength and suitability as an aircraft landing platform. The other ice types - glacial ice, coarse-grained stratified ice, and granular stratified ice - are of minor areal extent, but of significance in unravelling the developmental history of the lake. Strength tests on the lake ice, carried out by Barnes, indicate its ability to support a C-124, even at the height of the thaw season. Surface imperfections in the ice cover, however, make it unsafe for landings at that time of the year. Suggestions are offered for a few simple modifications which could possibly convert the lake ice surface into a suitable all-weather airstrip. (Author)

Naval Civil Engineering Lab., Port Hueneme, Calif.
SQUAW VALLEY WINTER TRIALS, 1958-59, COMPACTED-SNOW PARKING STUDY ON MEADOW LAND by R. C. Coffin, Jr. Final rept. 16 Nov 59, 67p. 5 refs. Technical rept. 051.
Order from LC mi$3.90, ph$10.80 PB 145 156

The results of constructing, trafficking, and maintaining a 15-acre compacted-snow public parking lot on the meadow at Squaw Valley, California, during the winter of 1958-59 are presented. It is concluded that a compacted-snow mat can be built in January and maintained through February provided there is at least 18 in. of snow pack, that night temperatures are usually below freezing, and that the area is adequately protected against runoff water from surrounding areas. (Author) (See also PB 137 880)

Geodesy

Aeronautical Chart and Information Center, St. Louis, Mo.
GEODESY FOR THE LAYMAN, by Richard K. Burkard. Oct 59, 83p.
Order from OTS $2.25 PB 161 372

The use of intermediate and long range rockets and missiles requires that the distance and direction from launch site to target be accurately known. The science of geodesy can help to provide this information. The basic principles of geodesy and geodetic surveying are presented in an elementary form. The formation of geodetic datums is introduced and the necessity of connecting or joining datums is discussed. Methods used to connect independent geodetic systems to a single world reference system are discussed. Particular emphasis is placed on the Air Force role in developing a World Geodetic System. (Author)

Air Force Missile Test Center, Patrick AFB, Fla.
RESULTS IN GEODETIC PHOTOGRAMMETRY. I. THE PRECISE DETERMINATION OF THE LOCATION OF BERMUDA FROM PHOTOGRAMMETRIC OBSERVATIONS OF FLARES EJECTED FROM JUNO II, by Duane C. Brown. Rept. on Missile Test Project, Contract AF 08(606)1156. 27 Oct 59, 33p. 4 refs. RCA Data Processing Technical rept. no. 54; AFMTC-TR-59-25.
Order from LC mi$3.00, ph$6.30 PB 144 794

Photogrammetric observations of a pair of flares ejected from a Juno II rocket have led to the determination of the location of Bermuda on the North American Datum. Bermuda's position was altered by 1."2 ±0."54 in latitude and by 6."8 ±0."60 in longitude, the total displacement amounting to 176.5 ±17.5 meters. The success of this venture provides further support to the thesis that advanced photogrammetric techniques are capable of producing geodetic positions to first order accuracy over very long distances. Suggestions on various aspects of a possible global program of geodetic photogrammetry are forwarded. An appendix considers the problem of adjusting a general photogrammetric net when not only the plate coordinates, but also any elements of camera orientation and any coordinates of control are considered to be observed quantities subject to significant errors of known variance and covariance. NEW METHODS OF RECONNAISSANCE AND INTELLIGENCE FROM AERIAL PHOTOGRAPHY, ESPECIALLY BY MEANS OF NEW TYPES OF FILMS AND FILTERS. Technical rept. no. 1 on Contract AF 33(616)262. 30 Sep 53, 86p. AD-203 988.
Order from LC mi$4.80, ph$13.80 PB 145 444

Contents:
Part I. A basic study of the factors which influence the recognition of objects in aerial photographs
Part II. Preliminary review and study (of) past and present color systems, processes and techniques to determine their possibilities for inclusion in an improved film for aerial reconnaissance
Part III. A determination of the characteristics such as, the value, contrast and color, which are necessary in aerial photographs in order to extract the maximum amount of information from monochromatic two-color and three-color aerial photographs
Part IV. Preliminary research of the suitability of techniques of exposing black and white films with alternating color filters producing stereo pairs with different tonal renditions for aerial reconnaissance.

COMPUTATION OF THE LONGITUDINAL SALINITY DISTRIBUTION IN A DELAWARE ESTUARY FOR VARIOUS DEGREES OF RIVER INFLOW REGULATION, by D. W. Pritchard. Rept. on Contracts 14-16-008-517 and 14-16-008-546. Sep 59, 77p. Technical rept. XVIII; Reference 59-3.
Order from LC mi$4.50, ph$12.30 PB 144 712

This report presents the results of an evaluation of the probable longitudinal distribution of salinity as a function of time under four different seasonal flow patterns: (a) Modal Flow: a typical natural annual variation in river inflow; (b) Modified Case 1: low river flow regulated at 4,000 cfs (at Trenton); (c) Modified Case 2: low river flow regulated at 6,000 cfs (at Trenton); (d) Modified Case 3: low river flow regulated at 8,000 cfs (at Trenton). For each of these flow conditions the seasonal variation in salinity was computed as a function of position along the central axis of the estuary, under the assumption that the particular seasonal flow variation under consideration was repeated year after year. The method of computation is described in later sections of this report.

Narragansett Marine Lab., U. of Rhode Island, Kingston.
BIOLOGICAL PRODUCTIVITY PROJECT, by David M. Pratt. Rept. for 1 Jan-31 Dec 58 on Contract Nonr-396(03). [1958] 6p. Ref. no. 59-1.
Order from LC mi$1.80, ph$1.80 PB 145 209

Growth rates of the quahog, Venus mercenaria L., in Narragansett Bay were studied over a three-year period in relation to various environmental factors. It was shown that growth is not appreciably influenced by existing differences in current speed, dissolved oxygen content, or salinity of the bottom water. Growth is negligible below 10°C and increases with rising mean temperatures at least to 23°C. Temperature appears to impose an upper limit to the potential rate of growth. Comparisons of growth rates with phytoplankton concentrations suggested that small diatoms, either living or as detritus, are an important source of quahog nutrition in these waters. It was repeatedly demonstrated that growth is retarded in sediments with a high silt-clay content. This effect was studied in relation to the concomitant reduction in sediment permeability, the possible accumulation of inhibitory substances in muddy sediments, and the necessity for more frequent clearing of the animals' filtering apparatus.

Scripps Institution of Oceanography, U. of California, La Jolla.
MARINE MICROBIOLOGY, by Leslie Ralph Berger and Claude E. ZoBell. Annual progress rept., no. 11, 1 Jan-31 Dec 57, on Physiological Activities of Marine Bacteria, Contract N6onr-275(18). 1 Jan 58, 15p. 5 refs. SIO Reference 58-1; AD-156 539.
Order from LC mi$2.40, ph$3.30 PB 138 280

The effects of temperature and pressure were investigated on a glycosidase from a Streptomyces species. Glycosidase catalyzes the reaction between phenyl-β-D-2-deoxy-2-acetamidoglucoside and H_2O to yield phenol and N-acetylglucosamine. The rate at which phenol is liberated from the glycoside was measured from 1 to 1000 atm and between 15° and 60°C. At the lower temperatures, pressure decreased the reaction rate. At the higher temperatures, the increased pressure inhibited what appeared to be thermal denaturation of the enzyme system. A thermal gradient incubator block is described for use in bacteria growth studies

at 18 different temperatures simultaneously. Equilibrium constants are being determined of various ionic substances under pressure. Attemps are being made to develop better nutrient media for the enumeration of marine bacteria and to determine the specific growth requirements of pure cultures. The kinetics of bacterial growth is discussed. (See also PB 127 188)

Woods Hole Oceanographic Institution, Mass.
OPTICAL STUDIES OF PARTICULATE MATTER IN THE SEA, by Bostwick H. Ketchum and David H. Shonting. Technical rept. on Contract Nonr-2219(00). Feb 58, 29p. 8 refs. Reference no. 58-15.
Order from LC mi$2.70, ph$4.80 PB 138 326

A study of particulate matter distribution using the light-scattering photometer was made on the Cariaco Trench in the Caribbean Sea. Five successful lowerings of the light-scattering photometer were made; two near the center of the basin, one on the eastern sill, one on the western sill of the trench, and one in St. George's Harbor, Grenada, B. W. I. A discussion of the light-scattering data of the trench waters and its relationship to the dynamics of the water in the general area of the trench is presented. A comparison is made with the light scattering and Secchi disc readings of both the trench and the continental shelf waters. In addition, a theoretical relationship of scattering intensity with extinction coefficient is derived along with a comparison of turbidity measurements with other oceanographic data.

THE ABUNDANCE OF ATMOSPHERIC CARBON MONOXIDE AT FLAGSTAFF, ARIZONA, by Arthur Adel. Scientific rept. HB-8 on Infrared Spectroscopy of the Sun, Moon, and Earth, Contract AF 19(604)2177 7 Sep 59, 23p. 3 refs. AFCRC-TN-59-466.
Order from LC mi$2.70, ph$4.80 PB 144 976

Thirty-four recorded measurements of the rotation-vibration line R(2) in the carbon monoxide band at 4.7 microns in the solar-telluric spectrum have been analyzed to ascertain the abundance of the gas above the Atmospheric Research Observatory at Flagstaff, Arizona.

Electrical Engineering Research Lab., U. of Texas, Austin.
A COMPARISON OF OBSERVED AMPLITUDES OF TROPOSPHERIC INDEX OF REFRACTION FLUCTUATIONS WITH THOSE CALCULATED FROM OBSERVED MEDIAN TRANSMISSION LOSSES, by Frank N. Edmonds, Jr. Rept. on Contract AF 19(604)2249. 15 Aug 58, 34p. 14 refs. Rept. no. 6-25; AFCRC-TN-58-378; AD-160 831.
Order from LC mi$3.00, ph$6.30 PB 138 249

In a companion report, a mathematical description of the index of refraction fluctuation field over Camp Carson, Colorado, was obtained from airborne refractometer measurements made on March 8 and 9, 1955. This representation was given in terms of the power spectra of the fluctuations as a function of frequency of the index fluctuations and of altitude. In the present report, a formula derived from scatter propagation theory and based on the measured fluctuation spectra, is given which relates radio transmission loss to the square of the amplitude of the refractive index fluctuations. Using this relationship, a value of the square of the index fluctuations was calculated which would account for the mean radio signal level on each of 14 National Bureau of Standards radio paths originating in the Camp Carson area.

THE MODES OF RELEASE OF AVAILABLE POTENTIAL ENERGY, by Barry Saltzman and Aaron Fleisher. Scientific rept. no. 1 on Planetary Circulations Project, Contract AF 19(604)4958. Oct 59, 21p. 13 refs. AFCRC-TN-59-629.
Order from LC mi$2.70, ph$4.80 PB 144 926

We have obtained the space spectra of the fields of vertical motion and temperature in the free atmosphere for February, 1959, and have estimated from these the conversions between available potential energy and kinetic energy as a function of wavenumber. (Author)

National Bureau of Standards, Boulder, Colo.
MEAN ELECTRON DENSITY VARIATIONS OF THE QUIET IONOSPHERE. I. MARCH 1959, by J. W. Wright and L. A. Fine. Feb 60, 53p. 5 refs. Technical note no. 40-1.
Order from OTS $1.25 PB 151 399-1

The CRPL has initiated a program for large-scale computation of electron density profiles from ionospheric vertical soundings. Scaling is performed at field stations permitting computation of hourly profiles at the central laboratory. These profiles are combined to form hourly mean quiet profiles for each station and month. The results of this program for one month are illustrated graphically. This report is the first of a series illustrating the electron density variations in the mean quiet ionosphere between latitudes 15°N and 50°N along the 75°W meridian. (Author)

FLOW-INDUCED VIBRATIONS IN HEAT EXCHANGERS, by B. J. Grotz and F. R. Arnold. Technical rept. no. 31 on Contract Nonr-225(23). Aug 56, 57p. 9 refs. AD-104 568.
Order from LC mi$3.60, ph$9.30 PB 145 452

Fluid-induced oscillations are familiar in the form of "galloping" transmission lines, waving smokestacks or periscope tubes, the humming of telephone wires, airplane wing flutter, pulsations of the atmosphere in forced-draft fire rooms under pressure, humming of boilers, "chugging" or "screaming" of rockets, familiar musical instruments--even the prosaic reciprocating steam engine. This report deals with a study of the oscillations established in a gas (air) flowing normal to banks of tubes in tube-in-line heat exchanger cores. A set of design factors is presented which may be applied in the design stage to prevent the vibrations which otherwise are humanly unbearable when of sonic frequency, also lead to mechanical component failures, and are accompanied by undesirable increases in flow friction factors.

ADHESIVE METAL BONDING PROCESSES DEVELOPMENT, by Donald L. Poggi. Final rept. on Contract AF 33(600)25661. 15 Oct 56, 125p. Document D-14559-F; AD-119 945.
Order from LC mi$6.30, ph$19.80 PB 138 215

A high-speed airfoil component was developed as a bonded metal part. This part was first designed as a honeycomb-sandwich component incorporating a variably expanded core. This design was later abandoned in favor of a design making use of foamed resin to adjust the final size of the bonded component to its curing mold. It is concluded that this latter method of construction can be used in many aircraft components in lieu of conventional riveted construction at a saving in cost and weight.

California U., Los Angeles.
A PARAMETER TRACKING SERVO FOR ADAPTIVE CONTROL SYSTEMS, by M. Margolis and C. T. Leondes. Rept. on Contract AF 49(638)438. Aug 59, 35p. 10 refs. AFOSR-TN-59-917.
Order from LC mi$3.00, ph$6.30 PB 144 769

This paper describes one very general approach to the design of adaptive control systems. The particular systems considered are process adaptive. The dynamic characteristics of the physical process are determined by the parameter tracking servo. The parameters thus determined are used to program the process' controller. The parameter tracking servo is a closed loop self-adjusting system. It consists of the following elements: (1) the physical process, (2) the learning model, and (3) the adjusting mechanism. The learning model and the physical process are subjected to the same input signals. Their outputs are compared and the resultant error is fed to the adjusting mechanism where some function of this error is used to adjust the parameters of the learning model.

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
A REVIEW OF CERTAIN FERROUS CASTINGS APPLICATIONS IN AIRCRAFT AND MISSILES, by John Varga, Jr., Rept. on Contract AF 18(600)1375. 18 Dec 59, 54p. 34 refs. DMIC rept. 120.
Order from OTS $1.50 PB 151 077

This report is a general summary of the application of steel castings to aircraft. Representative types of castings are illustrated and discussed. The problems of the aircraft manufacturer and castings

producer are presented. Future casting requirements and work that is in progress toward the increased use of castings are discussed. The purpose of this report is to present background information rather than the complete coverage required for a state-of-the-art report. (Author)

Equipment Lab., Wright Air Development Center, Wright-Patterson AFB, Ohio.
AIRCRAFT STRUCTURAL VIBRATION INDUCED BY JET NOISE, by Neal Granick and C. E. Thomas. Dec 56, 20p. 6 refs. WADC Technical note 56-514; AD-110 620.
Order from LC mi$2.40, ph$3.30 PB 145 344

The question as to whether aircraft structures respond closely with random jet noise is investigated. Vibration measurements were made at locations repreaenting several types of structures in the B-52 airplane. It was found that continuous frequency vibration exists only on relatively light structures having large surfaces exposed to the jet source. However, on typical structures suitable for equipment locations, structural vibration was characterized by the presence of discrete frequencies with insignificant continuous frequency vibration. (Author)

Forest Products Lab., Madison Wis.
PRESSURE-SENSITIVE TAPE SUSPENSION SYSTEMS FOR AIRCRAFT PARTS IN SHIPPING CONTAINERS. PART II. EFFECTS OF ACCELERATED EXPOSURE ON TAPE PROPERTIES, by Arnold W. Voss. Rept. for Dec 57-Aug 58 on Finishes and Materials Preservation, Contract PO (33-600)53-4023. Oct 59, 35p. WADC Technical rept. 58-455, Pt 2.
Order from OTS $1.00 PB 161 362

Black pressure-sensitive tape backed with polyester film and reinforced with glass filaments was subjected to dynamic tests at room temperature and at -20°F. to determine its strength and toughness in tension and the shear strength and toughness of its bond to aluminum. Tests were made before exposure and after 4, 8, 12, 16, 20, and 32 cycles of accelerated exposure. Each cycle included 18 hours of ultraviolet light with alternate wetting and drying in a weatherometer, and 4 hours of freezing at below zero Fahrenheit. The initial effect of exposure was an improvement in these properties, but continued exposure beyond 12 cycles deleteriously affected the tensile strength and toughness of the tape. Principal conclusions are that suspension systems utilizing this tape have adequate weather resistance to withstand extended periods of outdoor exposure, and that the serviceability of the systems after extended exposure may be determined by visual inspection. (Author) (See also PB 151 945)

General Electric Co., Schenectady, N. Y.
HERMES B-1 AUTOMATIC PILOT, by A. B. Grafinger. Rept. on Project Hermes. Aug 50, declassified 17 Nov 58. 17p. Technical Information Series DF 50A0515.
Order from LC mi$2.40, ph$3.30 PB 144 947

The autopilot for the Hermes B-1 is a two axis system capable of atabilizing the missile attitude in roll and yaw during the desired portion of the flight. The roll control loop has fast response in order to minimize the effect of disturbances at separation, while the yaw channel has slow response, the cross-over frequency being well below the missile resonant frequency. (Author)

AN ELASTO-PLASTIC THERMAL STRESS ANALYSIS OF A FREE PLATE, by Jerome H. Weiner. Rept. on Effect of Atomic Weapons on Aircraft, Contract AF 33(616)2071. June 55, 40p. 6 refs. WADC Technical note 55-512; AD-97 338.
Order from LC mi$3.00, ph$6.30 PB 145 145

The thermal stresses in a free plate of elasto-plastic material subjected to a varying heat input over one face are determined. A heuristic solution is first found by suitable modifications of the known elastic solution. It is then verified that the solution satisfies all the conditions of the appropriate uniqueness theorem and represents therefore the unique solution to the problem. Residual stresses are determined and found to depend markedly on the peak magnitude of the heat input. (Author)

Institute of Flight Structures, Columbia U., New York.
THERMAL STRESS ANALYSIS FOR AIRCRAFT STRUCTURES. PART II: BIBLIOGRAPHY, by Bruno A. Boley, Jerome H. Weiner, and Irwin S. Tolins. Rept. on Effects of Atomic Weapons on Aircraft, Contract AF 33(616)2071. Nov 55, 39p. 444 refs. WADC Technical rept. 56-102, Pt. 2; AD-97 340.
Order from LC mi$3.00, ph$6.30 PB 145 146

This report presents a chronological listing of the literature pertaining to thermoelasticity from the beginnings of this subject in the early nineteenth century to the present. A short summary is given of some of the works, particularly those of interest in aircraft stress analysis. (Author)

Materials Lab., Wright Air Development Center, Wright-Patterson AFB, Ohio.
DEVELOPMENT OF LIGHTWEIGHT ALUMINUM CRATES FOR BULKY LOW DENSITY ITEMS, by Warren Hypes. Rept. for Jan 57-Mar 59 on Finishes and Materials Preservation. Sep 59, 40p. WADC Technical rept. 59-297.
Order from OTS $1.00 PB 161 364

Formed aluminum channels were used in assembling crates for lightweight, bulky airframe components. The crates passed the Level A rough handling requirements of Specification MIL-P-7936. In addition to possessing the required strength, the channels are reusable, thus a modular system of crate components could be developed. Use of the aluminum crates will provide a means for considerable reduction in tare weight when used as shipping containers for airframe components. The use of the aluminum channels also appears to be economical. (Author)

Michigan U., Ann Arbor.
AN INVESTIGATION OF FLIGHT EQUATION REQUIREMENTS FOR SIMULATORS OF AIRCRAFT UP TO MACH 3.5, by R. M. Howe. Rept. on Contract AF 33(616)2839. Mar 57, 45p. 8 refs. WADC Technical note 57-144; AD-210 834.
Order from LC mi$3.30, ph$7.80 PB 145 343

This report summarizes the results of an investigation of the computer-section requirements of flight simulators for aircraft up to Mach 3.5 in performance capabilities. Included in the report are the flight equations which, it is felt, represent the best mechanization of the required computations. The source, expected range in value, effect on the aircraft response, and estimated tolerance requirements for the lateral and longitudinal stability derivatives are presented. The effect of inertia coupling terms is discussed, as well as recommendations regarding which terms should be included in the simulator. A survey of the effect of aerodynamic heating and the probable simulator requirements which it may introduce is given. Finally, the expected dynamic performance range, both in regard to limiting velocities and accelerations, and in frequencies, is presented.

National Research Labs., Ottawa (Canada).
FLIGHT TESTS OF AN EXPERIMENTAL HELICOPTER ROTOR BLADE ELECTRICAL DE-ICER, by J. R. Stallabrass. Nov 59, 58p. 6 refs. Aeronautical rept. LR-263.
Order from LC mi$3.60, ph$9.30 PB 144 886

A sprayed metal in resin rotor blade de-icing mat employing the spanwise shedding principle was tested on a helicopter in flight under simulated icing conditions. The results showed that, despite shortcomings in the design of the heater elements used, this method of de-icing is practical and can result in clean, efficient shedding of ice. In particular, the negligible increase in vibration resulting from asymmetric shedding makes the spanwise shedding method attractive for small helicopters having limited electrical generating capacity. ANALYSIS OF TURBOJET ENGINE THRUST IN FLIGHT, by W. J. Hesse. Rept. on Proj. TED-PTR-PP-343. 18 July 51, declassified. 268p. 80 refs. NATC Serial TPTO3-1-51.
Order from LC mi$11.10, ph$44.10 PB 145 306

An F2H-1 airplane was extensively instrumented for the purpose of evaluating several methods of measuring gross and net thrust of a turbojet engine in flight. The theory and test results of 4 methods of gross thrust measurement are presented, and it is shown that several methods produce satisfactory results. The results of the net thrust data are compared to the airplane drag data as obtained from the same airplane by measuring the accelerations in a number of power off dives. It is shown that a satisfactory correlation exists between the flight thrust and flight drag data.

Pennsylvania State U. Coll. of Engineering and Architecture, University Park.
A STUDY OF TURBINE PERFORMANCE IN A NONSTEADY FLOW FIELD, by D. F. White. Final rept. on Contract Nonr-656(16). Feb 59, 21p.
Order from LC mi$2.70, ph$4.80 PB 145 213

The performance of a single stage axial flow turbine which is supplied with energy in the form of finite amplitude gas pressure waves was analyzed by means of a wave diagram technique based on the method of characteristics. The major portion of the analytical work is concerned with the case of full admission, and numerical solutions for given initial conditions can be obtained with the aid of a program written for the IBM 704 EDPM. Test data under actual nonsteady flow conditions were obtained from two experimental turbines. Within the range of validity of the assumptions used in the wave diagram analysis, the agreement between experimental and calculated results is excellent. Some very approximate calculations were made on the nonsteady effects due to partial admission, the results of which show order of magnitude agreement with test data. (Author) (See also PB 142 226)

RESEARCH ON SALT WATER PURIFICATION BY FREEZING, by Arthur Rose and Thomas B. Hoover. Rept. on Contract 14-01-001-69. Sep 55, 58p. Saline Water Research Development progress rept. no. 7.
Order from OTS $1.50 PB 161 382

The experiments of this project have shown that ice made from saline solution always consists of crystals of minute size, and that a mass of such crystals necessarily retains in its interstices a comparatively great volume of mother liquor which cannot be separated by ordinary draining or filtering, is only partially separated by centrifuging, and is displaced only slowly and inefficiently by ordinary washing. As a result of these experiments, the most promising method of making a sharp separation of salt from the ice appears to be countercurrent contacting.

CRITICAL REVIEW OF LITERATURE ON FORMATION AND PREVENTION OF SCALE. Rept. on Contract 14-01-001-99. July 59, 51p. 143 refs. Office of Saline Water Research and Development progress rept. no. 25.
Order from OTS $1.50 PB 161 399

This report is based primarily on a comprehensive survey of literature published since 1930 and unclassified reports put out by various research organizations and governmental laboratories. The literature review resulted in the preparation of some 900 abstract cards, which are on file at the Office of Saline Water.

Badger Mfg. Co., Cambridge, Mass.
RESEARCH CONTINUATION OF BADGER-HICKMAN CENTRIFUGAL DISTILLATION TESTING ON UNIT NUMBER 4. Rept. on Contract 14-01-001-81. Mar 57, 80p. Office of Saline Water Research and Development progress rept. no. 15.
Order from OTS $2.00 PB 161 390

The Badger-Hickman still is relatively insensitive to certain changes in feed rate or load rate, as far as heat transfer coefficient is concerned, and, thus is largely self managing. Contamination by partially consensable nonaqueous vapor or permanent gas is exceedingly repressive of distillation, but, simple precautions in design and operation obviate this hazard. The No. 4 still has conformed and extended the performance characteristics of the previous centrifugal phase barrier stills. A still with a rotor 4.5 ft. diameter has a steady state operating heat transfer coefficient at least 4 times the average of present commercial vapor compression stills. The No. 4 stills can operate for 200 hours and evidently much longer periods on sea water without serious loss of efficiency at temperatures of 150°F. and below.

Badger Mfg. Co., Cambridge, Mass.
RESEARCH ON AND DEVELOPMENT OF BADGER-HICKMAN CENTRIFUGAL DISTILLATION TECHNIQUES AND EQUIPMENTS. Rept. on Contract 14-01-001-65. Nov 56, 98p. Saline Water Research and Development progress rept. no. 12.
Order from OTS $2.25 PB 161 387

The development was continued of a radically new type of vapor-compression distillation apparatus for saline water, based on the principle of high-velocity flow of thin films of water over the heating surfaces at temperatures below the scale forming limit. A small machine with 18 inch rotors was constructed and operated successfully for over 300 consecutive hours on sea water to demonstrate heat transfer efficiency. A larger experimental machine, with 5 foot diameter evaporator disks was then constructed and operated on both sea water and tap water in order to extend and confirm the information obtained on the smaller machines. This research and development work has been directed toward reducing evaluation of variables with respect to unit design and operation, such as effect of heat transfer element shape and movement, and the effects of operating temperatures, pressures and rates of evaporation. As a result of this effort, a No. 5 unit of 25,000 gpd capacity has been designed and is under development. (Author)

Battelle Memorial Inst., Columbus, Ohio.
AVAILABILITY OF GEOTHERMAL ENERGY FOR THE DEMINERALIZATION OF SALINE WATER, by J. C. Bell, R. C. Crooks and others. Rept. on Contract 14-01-001-89. July 59, 63p. 53 refs. Office of Saline Water Research and Development progress rept. no. 27.
Order from OTS $1.75 PB 161 400

Cost estimates for a so-called "average" example of salt-water evaporation with geothermal energy (i.e. average thermal gradient, 20,000 foot vertical shaft in granite; 1 foot in diameter) resulted in a calculated cost of over $28 per 1000 gallons of fresh water. The cost of the hole represented about 75 per cent of the total estimated investment and the method of cost estimating used reflected the high investment in terms of various operating costs. Even if the hole were available free of charge, the calculated water cost would still be between $5 and $10 per 1000 gallons. Unusual thermal gradients and a free hole conceivable might bring this cost below $1 per 1000 gallons, but a rather unique set of circumstances ("free" hole, high gradient, large cooling water supply) would be required to produce even such a situation. A similar estimate for conversion of geothermal energy into electric power showed an estimated cost of 66 cents per kwh. The cost of the hole represented about two-thirds of the estimated investment. A "free" hole thus would bring the estimated power cost into the 20 cents per kwh range. The effect of unusual gradients would have to be even greater here than in the evaporation case to reduce further the cost into the range of today's U. S. power costs. (Author) (See also PB 161 392)

Battelle Memorial Inst., Columbus, Ohio.
RESEARCH INVESTIGATIONS OF MULTIPLE-EFFECT EVAPORATION OF SALINE WATERS BY STEAM FROM SOLAR RADIATION, by B. A. Landry. 17 June 53, 6p, Summary of Office of Saline Water Research and Development progress rept. no. 2, Dec 53, out-of-print.
Order from OTS $0.50 PB 161 377

Research investigations were conducted of multiple-effect evaporation of saline waters by steam from solar radiation. The work consisted of the preparation of preliminary designs, of the calculation of performance and of estimates of gross costs of water production. The information obtained is of use in estimating (1) the technical possibility of substituting solar energy for fuel energy for raising the steam required to operate a multiple-effect evaporator to produce pure water from saline waters, (2) how far such a plant might be made automatic in its operation, and (3) operating and maintenance costs including fixed charges and additional energy requirements.

THE ZONE-PURIFICATION PROCESS AS A METHOD OF PREPARATION OF PORTABLE WATER FROM SEA WATER, by S. E. Miller, R. C. Himes, and H. L. Goering. Rept. on Contract 14-01-001-80. Jan 58, 16p. Office of Saline Water Research and Development progress rept. no. 17.
Order from OTS $0.50 PB 161 392

At the outset of this investigation, a number of process parameters were recognized as possible conditions influencing the effectiveness of zone refining and directional freezing of salt water. Among these parameters, temperature in the freezing compartment, rate of crystallization, solution concentration and agitation were found to influence the efficiency of the process. In an effort to clarify certain anomalies in the results of earlier studies conducted under this contract, apparatus was devised in which visual observations could be made directly and continuously in the freezing system. Studies (microscopic and analytical) of the nature of ice laid down from salt solutions at various rates and concentrations and under varying degrees of agitation have shown that, while good clear ice may be crystallized at reasonably high rates (2 inches per hour) from dilute solutions, the rate at which such ice may be grown is suppressed as solution concentration is increased (other conditions being held constant). In experiments performed to date, taking these factors into consideration qualitatively, it has been found possible regularly to remove with a single directional freeze 99.9+ per cent of salt from solutions containing up to 20 grams per liter. In the range 20 to 30 grams per liter, 97.5 per cent removals are effected, and in the range 30 to 70 grams per liter, about 82 per cent removal has been made. In directional freezing experiments on sea water it was found possible to prepare excellent drinking water (less than 50 ppm total salt concentration) in a two-stage program. The results indicate that with some additional refinement it may be possible to accomplish the task in a single stage. (See also PB 161 377)

DEVELOPMENT OF PLASTICS SOLAR STILLS. Final rept. for July 57-Oct 58 on Contract 14-01-001-64. Feb 59, 34p. Office of Saline Water Research and Development progress rept. no. 24.
Order from OTS $1.00 PB 161 398

Contents
Development of plastic solar still design: triangular plastic solar still; "standard" greenhouse-type plastic solar still; air inflated solar still; tubular plastic solar still; polyethylene spiral solar still; wire-supported triangular plastic solar stills; suspended envelope type plastic solar still; Experiments with plastics for use in plastic solar still construction: results of tests with "standard" greenhouse-type stills; performance data, suspended envelope stills; resistance of films to solar radiation; transmissivities of plastic films.

Bureau of Reclamation, Washington, D. C.
POTENTIAL USE OF CONVERTED SEA WATER FOR IRRIGATION IN PARTS OF CALIFORNIA AND TEXAS. Apr 54, 27p. Saline Water Research and Development progress rept. no. 3.
Order from OTS $0.75 PB 161 378

This report is a rough inventory of arable lands and other potential uses of water which might conceivably benefit from development of a low-cost method of sea water conversion. There are identifiable estimated potential uses for water, over and above those which can be supplied from natural local sources, totalling as much as 21,000,000 acre-feet annually in southern California and Texas. Of this amount, over 8,000,000 acre-feet could be used by direct pumping of converted sea waters onto the arable lands within reasonable heights above or distance from the ocean. Some 3,250,000 acre-feet of converted sea water could be used directly by municipalities or industries near sea level. Releasing the water which is now being imported or is proposed to be imported to meet those needs would permit almost 10,000,000 acre-feet of that water to be used on other lands which may be beyond the economic reach of direct service with converted sea water.

Carrier Corp. [Syracuse, N. Y.]
DEVELOPMENT OF A DIRECT-FREEZING CONTINUOUS WASH-SEPARATION PROCESS FOR SALINE WATER CONVERSION, by C. M. Bosworth, S. S. Carfagno, and D. J. Sandell. Rept. for 1 Aug-15 Oct 57 on Contract 14-01-001-86. Jan 59, 94p. Office of Saline Water Research and Development progress rept. no. 23.
Order from OTS $2.25 PB 161 397

The experimental program has progressed to the point that ice has been produced in the freezer at design rate. Product ice of the freezer-separation column combination has a salt concentration of less than 500 ppm. Operational characteristics of the equipment have yet to be optimized. The cost of producing fresh water from sea water by the direct freezing, vapor compression, wash separation process is less than presently available distillation processes. This cost has been estimated to be $1.14 per 1,000 gallons, using the economic analysis system suggested by the United States Department of the Interior. If waste steam is available, the absorption refrigeration process is estimated at $1.02 per 1,000 gallons. (Author)

Carrier Corp. [Syracuse, N. Y.]
FURTHER DEVELOPMENT OF A DIRECT-FREEZING CONTINUOUS WASH-SEPARATION PROCESS FOR SALINE WATER CONVERSION, by C. M. Bosworth, S. S. Carfagno and others. Rept. for 1 Sep-30 Nov 58 on Contract 14-01-001-86. July 59, 82p. Office of Saline Water Research and Development progress rept. no. 32.
Order from OTS $2.25 PB 161 403

The experimental equipment constructed in 1957 has evaluated the feasibility of a direct freezer and of a wash separation column. This equipment produced ice, which when melted contained less than 500 ppm of dissolved solids, at the design rate of 100 lb. of ice per hour or 300 gallons fresh water per day. Recent modifications have resulted in greater capacity or about 400 gpd with an acceptable amount of wasted wash water. The objective of the experimental program during 1958 was the determination of operational variables of both the freezer and the column in order to design a pilot plant and this objective has been met. A summary of the experiments to produce more ice is included. Discussions of the correlations of the transfer rates in the separation column are also presented. A pilot plant has been designed to produce 15,000 gpd of fresh water from seawater. This plant utilizes an absorption refrigeration machine for water vapor removal. (Author) (See also PB 161 397)

ECONOMIC EVALUATION STUDY OF DISTILLATION OF SALINE WATER BY MEANS OF FORCED-CIRCULATION VAPOR-COMPRESSION DISTILLATION EQUIPMENT. Rept. on Contract 14-01-001-101. [1958] 194p. 38 refs. Office of Saline Water Research and Development progress rept. no. 21.
Order from OTS $3.00 PB 161 395

A vapor-compression cycle in which the brine is in forced circulation within the tubes and the steam condenses in dropwise manner on the outside of the tubes has been studied in order to determine the optimum combination of the important variables. To decrease the rate of scale formation, the hot brine is flashed in a separate chamber and no boiling occurs in the heat exchanger tubes. The investigation has covered the following values of the independent plant parameters: (1) Capacity of 10^5, 10^6, 10^7 gpd. (2) Maximum brine temperatures of 160°F and 212°F. (3) Tube sizes of 3/4", 1", 1 1/4", and 1 1/2" O. D., 16 BWG (4) Scaling and condensation heat resistance. (a) $h_s = \infty$ and $h_c = 13,000$ Btu/hr-°F-ft^2 (Condition I) (b) $h_s = 5000$ and $h_c = 9000$ Btu/hr-°F-ft^2 (Condition II)

RESEARCH ON AND ANALYSIS OF SINGLE-EFFECT LOW TEMPERATURE FLASH EVAPORATION PROCESS. Rept. on Contract 14-01-001-90. [1955] 102p. 7 refs. Office of Saline Water Research and Development progress rept. no. 18.
Order from OTS $2.50 PB 161 393

Low temperature flash evaporation of warm saline waters is theoretically sound, technically feasible, and proven by actual installations which have been operating for a number of years. With a 30° total temperature difference between the incoming warm water and the incoming cooling water, cost estimates using the Office of Saline Water standardized procedure show that water could be produced by this process for approximately $1.20 per thousand gallons in a plant designed to produce 10,000,000 GPD, and for approximately $1.75 per thousand gallons for a plant designed to produce 100,000 GPD. The cost of water produced by such plants at a total temperature difference of 15° between the incoming warm water and the outgoing cold water would be very close to double the corresponding costs for 30°F The quantity of air which must be removed from the evaporators by vacuum pumping equipment was determined experimentally with a precision sufficient for purposes of selecting pumping equipment.

Ionics, Inc., Cambridge, Mass.
DESIGN, CONSTRUCTION, FIELD TESTING, AND COST ANALYSIS OF AN EXPERIMENTAL ELECTRODIALYSIS DEMINERALIZER FOR BRACKISH WATERS, by J. P. Dankese, T. A. Kirkham and others. Rept. on Contract 14-01-001-66. Dec 56, 176p. Office of Saline Water Research and Development progress rept. no. 11.
Order from OTS $3.00 PB 161 386

The purpose of the tests was primarily to determine the effects of operating the process under field conditions, to provide estimates of the cost of demineralizing brackish waters on a large scale, and as a means of planning further needed research in this field. An experimental apparatus capable of reducing the salinity of a brackish water containing 4,000 ppm dissolved solids to 350 ppm at a rate of 1,000 gph was built and tested. Two tests were made. The first, of six months duration, was in Arizona where the unit was operated on an irrigation water supply containing about 4,000 ppm dissolved salts. The second, of three months duration, was in Miller, South Dakota on a municipal water supply from a deep well which contained about 2,000 ppm dissolved salts. Both of these field tests demonstrated that the electrodialysis process could be used to reduce the salinity of those waters to below 350 ppm. (See also PB 161 376)

Ionics, Inc., Cambridge, Mass.
RESULTS OF SELECTED LABORATORY TESTS OF AN IONICS DEMINERALIZER, by N. W. Rosenberg, T. A. Kirkham and others. Rept. on Contract 14-01-001-52. Apr 54, 78p. Saline Water Research and Development rept. no. 1.
Order from OTS $2.00 PB 161 376

An electrical process has been developed for the demineralization of water, using the special properties of ion-transfer membranes. Estimates of the costs of this process have been made for the treatment of typical brackish waters. These costs vary widely, depending on the salt content of the raw water. The waters studied under the present contract and the projected costs of mass-produced installed units to treat 75,000,000 gal/day (10 acre ft/hr) are included. It is the opinion of Ionics, Incorporated, that sufficient promise has been shown by the membrane demineralizer to warrant field operation of a larger installation to confirm the estimates of this report.

Koenig, Louis, Research, San Antonio, Tex.
DISPOSAL OF SALINE CONVERSION BRINES: AN ORIENTATION STUDY, by Louis Koenig. Rept. for 11 Dec 56-18 Apr 57 on Contract 14-01-001-92. 1958, 129p. 1 ref. Office of Saline Water Research and Development progress rept. no. 20.
Order from OTS $2.75 PB 161 394

This report constitutes a preliminary exploration of the problem of disposing of waste salts, usually in the form of brine, resulting from the conversion of saline waters to fresh water. So far as known, this is the first attempt that has been made to assay the order of magnitude of these waste disposal costs. As a first attempt the result is definitely intended as a bird's-eye view which will allow selection of favorable areas for more intensive study. The cost estimates are of a "huddle" estimate type, usually a one man huddle. At the same time it was desired to present a general method by which the technical and economic aspects of any particular disposal method could be worked out. For that reason the report contains a number of correlations allowing extrapolation and interpolation which would not ordinarily be found in cost estimating for a specific process or a specific location.

Löf, George O. G.
DEMINERALIZATION OF SALINE WATER WITH SOLAR ENERGY, by George O. G. Löf. Rept. on Contract 14-01-001-55. Aug 54, 96p. 73 refs. Saline Water Research and Development progress rept. no. 4.
Order from OTS $2.25 PB 161 379

About 30 proposed methods for demineralizing saline water with solar energy have been analyzed from the engineering and economic standpoints, and probable minimum costs for producing fresh water by these methods have been estimated.

Löf, George O. G.
SOLAR DISTILLATION OF SEA WATER IN THE VIRGIN ISLANDS, by George O. G. Löf. Rept. on [Contract 14-01-001-55]. Feb 55, 42p. 7 refs. Saline Water Research and Development progress rept. no. 5.
Order from OTS $1.25 PB 161 380

It was found that under the average solar conditions which prevailed during the period of the tests, which corresponded very closely to normal winter weather in the Caribbean Islands, the distiller operated at about 35 percent solar utilization efficiency, resulting in a daily yield of about 0.6 pound of water per square foot of evaporator pan. Under the best sunshine conditions, approximately 1.0 pound of water was obtained per square foot per day, at an efficiency only slightly higher than 35 percent. The above values are only about half those which might be considered ideal for this type of equipment under the best operating conditions. The difference between the actual and the ideal performance is accounted for in the various heat losses which occurred. Improvements in distiller construction and operation would result in substantial reduction of these losses, and an average winter efficiency of about 55 percent should be obtainable in a large installation. This efficiency would permit the average daily production of 1 pound of water per square foot of evaporator surface, corresponding to a requirement of about 85,000 square feet for an average daily production of 10,000 gallons of water. (See also PB 161 379)

Murphy, George W.
THE MINIMUM ENERGY REQUIREMENTS FOR SEA WATER CONVERSION PROCESSES, by George W. Murphy, Robert C. Taber, and H. H. Steinhauser. Rept. on Contract 14-01-001-58. Apr 56, 79p. 10 refs. Office of Saline Water Research and Development progress rept. no. 9.
Order from OTS $2.00 PB 161 384

Chapter 1 deals with ultimate idealizations of saline water conversion processes, using a classical thermodynamic approach. The value of this approach is to provide a convenient classification of the various method based on thermodynamic criteria, to illustrate the fact that the thermodynamic minimum work done is the same regardless of method, and to provide a first approximation to the energy requirement as a basis for dealing with real processes. The aim of the remaining work is to furnish as good a second approximation to the actual minimum energy requirement as possible, taking into account the rate phenomena which are a part of every method. Although the groundwork has been laid for many methods, calculations have been performed for only two, compression distillation and the electrical membrane process. Some idealization is still present in the results of these calculations, but less than in those of Chapter 1. In both cases the practical minimum energy requirement is estimated to be about four times the thermodynamic minimum, exclusive of losses in energy conversion devices and of water transport requirements. This can be regarded as a crude second approximation, compared to the exact first approximation of the thermodynamic minimum. It is difficult to gauge at this point how much a further reduction in idealization will raise the energy value, but further work along this line is clearly in order. It is unrealistic to believe that other methods presently under investigation or yet to be devised can

operate with a lower "practical minimum", although it is still theoretically possible. The expected degree of generality in applying the thermodynamic equations of motion to all methods has not yet been achieved, but further progress in this line is to be expected. (Author)

Murphy, George W.
THE OSMIONIC PROCESS, by George W. Murphy. Rept. on Contract 14-01-001-58. 1957, 75p. 4 refs. Office of Saline Water Research and Development progress rept. no. 14.
Order from OTS $2.00 PB 161 389

An experimental program was initiated in 1954 on a new approach to saline water demineralization which uses as a power source (osmotic power) the free energy difference between concentrated brine and a saline water of lower concentration; the energy conversion principle is based on the properties of an assembly of permselective membranes. Experimental devices have been constructed and successfully operated over the concentration range 1,000-30,000 ppm NaCl for the purpose of obtaining basic equilibrium and rate data. In this report, the basic theory for the simplest or single-effect osmionic cell is developed first, followed by an extension of the theory to include multiple-effect cells and multiple-stage operation. Calculations are presented for typical cases. (See also PB 161 384)

Naval Research Lab., Washington, D. C.
EXPERIMENTAL VALVELESS PULSEJET DIESEL-FUELED FOG GENERATOR, by M. A. Persechino. Final rept. 22 Dec 59, 17p. 7 refs. NRL rept. 5414.
Order from LC mi$2.40, ph$3.30 PB 143 016

A valveless pulsejet fog generator has been developed and tested at NRL under a program sponsored by the Bureau of Ships. The unit consists of a ducted 3-1/2-in. valveless pulsejet engine capable of producing oil-droplet particle sizes within the operational range of 0.6 to 0.7 micron in diameter and a vaporizing capacity of 55 gph (using fog oil type SGF-2, MIL-F-12070A). The burner and vaporizing assembly without controls weighs approximately 65 lb fully insulated. The valveless pulsejet fog generator is capable of vaporizing a variety of fogging oils and offers the following possible advantages over existing units: (1) Low manufacturing costs; (2) Little or no carbon deposition in the vaporizing chamber; (3) Operation with no moving parts, thus promoting long service life with little or no maintenance; (4) Ability to operate on a variety of fuels, including the more viscous fuels, including the more viscous fuel oils; (5) Ability to operate at part load; (6) Resistance to high temperatures caused by the absence of the cooling effect from oil vaporization during starting and securing; (7) Simplicity. With little further development and modification, larger capacity units can be made available for operational purposes either by paralleling the present unit in multiple ducted pairs or by scaling up to larger sizes. Development work along these lines was terminated upon exhaustion of allocated funds. (Author)

NEW AND IMPROVED METHODS FOR LOWER COST SOLAR DISTILLATION, by Maria Telkes. Rept. on Contract 14-01-001-68. Aug 59, 40p. 3 refs. Office of Saline Water Research and Development progress rept. no. 31.
Order from OTS $1.00 PB 161 402

Further design and experimental work with flat, tilted single effect stills resulted in definite improvements. Most of the heat carried away by the outflowing brine could be recovered with a heat exchanger tube and used to preheat the feed water, resulting in an increased water yield of 10 to 15 percent on clear summer days, and considerably larger improvements on cloudy or partly cloudy days. Automatic regulation of the feed water was achieved by using solar radiation to operate a capillary flow rate governor. Experimental results indicated that temperature increase changes the fluidity of the feed water, and in this way increases the feeding rate in proportion to solar radiation intensity. Another simple feeder has been designed which changes the feeding rate by increasing the water-head. Several devices have been built and tested to determine the possibility of using the heat of condensation of the distillate. The results indicated that it is not possible to recover more heat from the condensate than is needed to preheat the feed water. Circulation of air within the still similarly failed to increase the water yield. Larger multiple effect stills were built and tested, using electrical heating during the sunless colder months. The use of aluminum sheet produced results comparable to those obtained previously with Mylar films. Perfect vapor-tight arrangement is essential, heat insulation must be used. Solar energy operated multiple effect stills were designed and tested. (Author) (See also PB 161 388)

New York U. Coll. of Engineering, N. Y.
RESEARCH ON METHODS FOR SOLAR DISTILLATION, by Maria Telkes. Rept. on Contract 14-01-001-68. Dec 56, 78p. 4 refs. Office of Saline Water Research and Development progress rept. no. 13.
Order from OTS $2.00 PB 161 388

The objective of this investigation is to reduce as much as possible the total cost of sustained conversion of sea, or other saline water, to fresh water in large quantities, by solar energy, by conceiving and developing new methods and improving existing methods, or both. Tilted flat type solar stills have been developed and compared with roof-type stills. The tilted stills had approximately 26 to 50 percent greater yield during the summer months. This was definitely in excess of the estimate, based on increased solar energy received by the tilted surface.

GRANTS AND CONTRACTS FOR SCIENTIFIC RESEARCH. GUIDES FOR THE SUBMISSION OF RESEARCH AND DEVELOPMENT PROPOSALS. Nov 52, 7p.
Order from OTS $0.50 PB 161 374

Public Law 448 is an act to provide for research into and development of practicable low-cost means of producing from sea water, or other saline waters, water of a quality suitable for agricultural, industrial, municipal, and other beneficial consumptive uses on a scale sufficient to determine the feasibility of the development of such production and distribution on a large-scale basis, for the purpose of conserving and increasing the water resources of the Nation. Two general types of proposals will be considered. One type relates to research and development work for which it is possible and desirable to define the objectives and procedures only in general terms. In the second type objectives, procedures and expected results can be determined in advance. Either type may take the form of a grant or a contract.

Office of Saline Water, Washington, D. C.
A STANDARDIZED PROCEDURE FOR ESTIMATING COSTS OF SALINE WATER CONVERSION. Mar 56, 50p. 20 refs.
Order from OTS $1.25 PB 161 375

This volume presents a standardized procedure for making initial cost estimates for demineralization of saline waters by various processes. It is believed that use of this procedure will provide sufficiently accurate cost estimates for initial economic comparisons between processes. More detailed estimates will become necessary for processes in advanced stages of development. The procedure is primarily for the use of the Office of Saline Water, its consultants, and its present and prospective cooperators for comparing processes and determining feasibility of conducting research and development work.

Purdue U., Lafayette, Ind.
AN ANNULAR JET PUMP, by Werner H. Haak and Frederick Vratný. Rept. on Contract AF 18(603)45. Oct 58, 4p. 2 refs. AFOSR-TN-58-937; AD-205 089.
Order from LC mi$1.80, ph$1.80 PB 137 842

A two stage pump was designed with the idea that the upper stage jet would aid the diffusion of mercury into the upper trapping mechanism without serious reduction of pumping speed. On testing the design the extent of mercury diffusion was significantly reduced over the single stage pump (a thin mirror was produced in an eight hour period), and the consumption of liquid nitrogen was likewise appreciably diminished (about 5 liter in a 10 hour period).

Rochester U., N. Y.
ADHESION OF PROTECTIVE COATINGS TO METALS BY TENSILE TESTS, by Gouq-Jen Su, Thomas R. Faucett, and Bogdan Gumowski. Rept. on Contract AF 18(600)1187. Sep 59, 71p. 37 refs. AFOSR-TR-59-172.
Order from LC mi$4.50, ph$12.30 PB 145 362

The results were obtained by tensile tests with butt joints, using steel, brass, and aluminum as the metal substrates, and various commercial resins and coating formulations. The following factors which affect adhesion are discussed: Effect of loading rate on measured bond strength. Surface treatment effects on adhesion to aluminum. Bond strength as a function of bond thickness. Bond strength as a function of curing time for thermosetting coatings.

INVESTIGATION OF AVAILABILITY OF GEOTHERMAL ENERGY FOR THE DETERMINATION OF SALINE WATER. Rept. on Contract 14-01-001-87. July 59, 50p. 9 refs. Office of Saline Water Research and Development progress rept. no. 28.
Order from OTS $1.25 PB 161 401

The Black Hills have many "hot wells," although the measured temperatures are not great. The highest well temperature measured was 168°F. at a depth of 6,250 feet. The data indicate that as a whole thermal gradients are not appreciably higher than the average thermal gradient reported for the earth's crust, except for certain local areas of two or three times the magnitude. Thus, the Black Hills do not seem to offer any unique advantage for extraction of geothermal energy. Pumping of existing hot wells offers the simplest possibility for extracting geothermal energy, but even at 168°F. and, say, 50°F. cooling water the theoretical availability would be only about 19%; the temperature level of the hot water is low, for practical purposes. Moreover, a huge heat-collecting area for the aquifer would have to be assured, something about which present knowledge does not cover. Sinking a deep shaft to reach a level of high temperature and constructing a heat-collecting area or zone would involve high capital expenditures and resulting excessive costs for the energy removed, without doubt. Moreover, there is the important

conclusion that the temperature at the heat-collecting zone is reduced significantly upon extracting a relatively small amount of heat, which inevitably reduces the availability. (Author)

RESEARCH ON LIQUID-LIQUID EXTRACTION FOR SALINE WATER CONVERSION, by Richard Davison, Lela M. Jeffrey and others. Rept. on Contracts 14-01-001-60 (Final) and 14-01-001-77. Dec 58, 86p. 5 refs. Office of Saline Water Research and Development progress rept. no. 22.
Order from OTS $2.25 PB 161 396

A search for the most efficient solvent or solvents for use in the process was made by conducting a series of screening tests on a wide variety of solvents and obtaining detailed data such as phase equilibrium data on the most promising compounds. Particular emphasis was place on correlation of solvent properties with molecular structure. Solvent purity was given much consideration. Methods were investigated for the recovery of solvents from the brine and product water. Recovery by liquid-liquid extraction and adsorption on activated carbon and clay were studied. Preliminary data were obtained on the process operation by the use of a laboratory model. A preliminary engineering cost estimate was made for the demineralization of sea water on a large scale by the liquid-liquid extraction process.

Washington U., Seattle. Engineering Experiment Station.
RESEARCH AND DEVELOPMENT OF PROCESSES FOR DESALTING WATER BY FREEZING, by Harold M. Hendrickson and Ralph W. Moulton. Rept. on Contract 14-01-001-73. Aug 56, 173p. Office of Saline Water Research and Development progress rept. no. 10.
Order from OTS $3.00 PB 161 385

It was found that research on freezing methods for purification of sea water had not been very extensive. The second phase of the research was to run field tests with sea water on commercial and industrial icemakers of all available types, and evaluate the results obtained. Tests were made in can-ice plants, on flake-ice machines, on slush-ice machines, on tube-ice machines and on ice cream freezers. While a reduction in salinity was obtained in some cases, no commercial icemaker was found that would reduce sea water at 30,000 PPM total solids content down to potable water at 500 PPM or even down to irrigation water at 1500 PPM. The third phase of the study was to set up several representative icemakers in the laboratory to study their performance under more accurately controlled conditions, and to determine the best methods for separating the entrapped salt from the ice-brine mixture obtained by freezing. Also during this phase, theoretical studies were made of various freezing cycles in an effort to find the most efficient one, and economic studies were made of the most promising cycles.

Yale U., New Haven, Conn.
RESEARCH ON FORCED-CIRCULATION AND DROPWISE CONDENSATION TECHNIQUES FOR IMPROVING HEAT TRANSFER RATES FOR VAPOR COMPRESSION EVAPORATORS, by Harding Bliss. Rept. on Contract 14-01-001-59. Oct 55, 59p. 1 ref. Office of Saline Water Research and Development Progress rept. no. 8.
Order from OTS $1.50 PB 161 383

The experimental program was made up of two broad parts consisting of (a) measurement of over-all and film heat transfer coefficients with pure water or pure NaCl brine, (b) testing of sealing behavior over an extended period with synthetic sea water and Long Island Sound sea water. A forced circulation evaporator was built in which water and brine were heated with negligible boiling in the tubes, evaporation being accomplished by "flashing" after leaving the tubes. Two test sections were used, one of 0.951 inch inside diameter and the other of 0.761 inch inside diameter both 6 feet in length. Temperatures of steam, brine, and tube wall surface were measured.

FURTHER STUDIES OF CREEP BUCKLING OF CURVED BEAM UNDER LATERAL LOADING, by T. H. H. Pian and C. Y. Chow. Rept. on Contract Nonr-1841(22). Dec 58, 29p. 3 refs. Technical rept. 25-28.
Order from LC mi$2.70, ph$4.80 PB 144 860

The creep buckling analysis of curved beam given in Technical Report 25-26 (PB 139 334) has been extended to include the effect of antisymmetrical mode. It is shown that when the axial compressive stress becomes four times the Euler critical stress the antisymmetrical mode sets in to aid the snapping action and hence will yield a shorter creep buckling time. The paper also makes an analysis of the behavior of the beam succeeding the snapping action. (Author)

CONTRACT ADMINISTRATION. 17 Apr 57, 337p. Technical pub. NAVDOCKS TP-AD-4, Rev.; BUDOCKSINST 4330.5A.
Order from LC mi$11.10, ph$51.50 PB 144 512

This publication defines the authority and responsibilities of the Bureau of Yards and Docks, its field activities, and others concerned with the administration of contracts. It also contains information on the procedures for the award, preparation, and administration of contracts. Some of the specific subjects discussed are (a) competitive bid and negotiated fixed-price construction contracts, (b) architectural-engineering (A-E) and engineering-services (E-S) contracts, (c) many miscellaneous contracts, such as demolition and equipment repair, (d) cost-plus-a-fixed-fee (CPFF) contracts, (e) utility services contracts, (f) drawings and specifications, (g) industrial security, and (h) a tabulation showing the functions reserved to the Chief, Bureau of Yards and Docks, the District Public Works Officer (DPWO), the Officer in Charge of Construction (OICC), and the Resident Officer in Charge of Construction (ROICC) in the administration of contracts after award.

HOUSING HANDBOOK. Engineered Performance Standards, Public Works Maintenance. July 59, 89p. NAVDOCKS p-705.
Order from LC mi$4.80, ph$13.80 PB 145 003

The housing times are presented in three categories: (1) standard maintenance, (2) room maintenance, and (3) miscellaneous work. The Task Areas are: asphalt tile - remove, reinstall; miscellaneous: carpentry, pest control, plumbing, roofing; paint, brush: acoustical tile, bathroom, bedroom, dining, living rooms, hallway, stairwell, kitchen, utility room, wall, ceiling; paint - brush or varnish: floor, woodwork; and standard maintenance: carpentry, electrical, plumbing, venetian blinds.

Bureau of Yards and Docks, Washington, D. C.
PIPEFITTING AND PLUMBING FORMULAS. Engineered Performance Standards, Public Works Maintenance. Aug 58, 387p. NAVDOCKS P-711.1.
Order from LC mi$11.10, ph$59.10 PB 145 009

The time formulas developed for the Pipefitting and Plumbing Shop are: cut and thread small pipe, measure installation for pipe length, install and remove small pipe, make and install pipe supports, clean parts and machine components, dismantle or assemble machine components, install and remove pipe insulation, adjust position or setting of machine components, inspect and check machine components, make gaskets, miscellaneous time values, install and remove bell and spigot pipe up to 10" I. D., cut and assemble copper tubing, operate toledo "donkey" machine, assemble and install threaded pipe 21/2" to 6" I. D., hydrostatic test, maintenance of fire sprinkler systems, semi-annual maintenance of fire hydrants, pipe welding - pipefitters, burn pipe, operate medium size pipe machine, gas water heater repair, supply water to ships, and cut into water main.

Bureau of Yards and Docks, Washington, D. C.
PIPEFITTING AND PLUMBING HANDBOOK. Engineered Performance Standards, Public Works Maintenance. Rev. July 59, supersedes Aug 58, 100p. NAVDOCKS P-711.
Order from LC mi$5.40, ph$15.30 PB 145 005

Section I - Spread Sheets: A spread sheet is a form for presenting typical related tasks in a sequence of varying complexities so that an estimator can compare the work content of the known task with the work to be estimated. Individual crafts are subdivided into task areas. These task areas, which may include one or more spread sheets, are arranged in alphabetical order. The task areas are further subdivided into time groups which are presented in columnar form on each spread sheet. The specific tasks within each group column are arranged from top to bottom according to increasing work content. Section II - Task Times: Task Times are derived from Operation Time values. Task Time values are those required to perform all operations constituting the task, but not the variables, such as job preparation time, travel time, or allowances for delay. They are arranged in numerical order. Section III - Operation Times: Operation Times are the tabulation of the formula values taken from the formula manual. They represent the actual time required to perform a work portion of a task. These values become the components of a task and, when added together, become the time to perform the task. These task times do not contain travel, job preparation, or delay allowances. The operation times of Section III are used in various combinations in the Task Times. Most operation times are used in more than one task area. For ease of location, they are arranged in formula numerical order.

Naval Civil Engineering Lab., Port Hueneme, Calif.
ENGINEERING STUDY OF WAVES AND CURRENTS IN THE HARBOR OF PORT HUENEME, CALIFORNIA, by J. J. Leendertse. Final rept. 7 Dec 59, 87p. 31 refs. Technical rept. 052.
Order from LC mi$4.80, ph$13.80 PB 145 157

The report presents information as to the likely effect on the water wave environment of Port Hueneme Harbor, California, and on harbor operations in general of alterations to the major wharves, of deepening the Harbor, and of proposed changes in the existing channel with entrance at the Harbor. PHASE SHIFT IN ELECTROACOUSTIC TRANSDUCERS, by W. Richard Stroh. Technical memo. no. 42 on Contract Nonr-1866(24). 18 Mar 58, 32p. 17 refs.
Order from LC mi$3.00, ph$6.30 PB 138 579

A complex transfer function is defined which relates the sound pressure at a point on the principal axis of an electroacoustic transducer to the electrical input of the transducer. The argument of this function is composed of a phase function representing phase shift in the transducer, plus a shift proportional to frequency representing travel time. By using an electrical delay line to match the travel time phase shift, the shift in

the transducer itself can be measured directly. Typical phase functions for moving-coil and electrostatic loudspeakers are shown and discussed. The effect of transducer phase distortion on correlation functions is discussed, as is the use of the phase meaaurement in "phasing" a multiple-transducer system. (See also PB 137 455)

Aeronautical Electronic and Electrical Lab., Naval Air Development Center, Johnsville, Pa.
DEVELOPMENT OF ALTERNATING-CURRENT OPERATED POWER RELAYS AND CONTACTORS FOR AIRCRAFT 400-CPS ELECTRIC SYSTEMS, by R. J. Coppola. Final rept. on TED Proj. ADC EL-52048. 27 Aug 58, 48p. Rept. no. NADC-EL-5862.
Order from LC mi$3.30, ph$7.80 PB 144 937

A complete study was conducted of existing unacceptable 400-cps a-c relays and all possible design methods for a-c relay construction. Such principles as rectified current, motor-generator, induction, mechanical rectification, and shaded poles for relay operation were investigated and found to be unacceptable for the particular purpose. The study revealed the potentialities of a polyphase operated relay and the use of permanent magnets in the magnetic structure of a single phase relay. Experimental models of such relays were designed and fabricated for test purposes. The resultant "Self Seal-In A-C Relay" and the "Polarized A-C Relay" performed within reasonable limits of military specification requirements, and indicated that the design principles were sound.

Aerovox Corp., Olean, N. Y.
ADAPTATION OF CERAMIC TUBE TYPES, by John D. Cronin. Rept. on Electronic Tubes and Transistors, Contract AF 33(600)33577. June 59, 166p. 31 refs. WADC Technical rept. 59-84; AD-210 230.
Order from OTS $3.00 PB 151 922

The use of the Eimac tubes at high temperatures was investigated by simulated high temperature circuitry and by measurement of the variations in the operating point for fixed grid bias and plate voltages as a function of the ambient tube temperature. A series of mechanical mounting configurations were analyzed for use at high temperatures. The most suitable appeared to be a cylinder, a flat plate, and a cavity approach; the flat plate was the primary choice. The material chosen for construction of the configuration was an alumina ceramic. A survey of non-classified literature was made to determine the effects radiation would have upon the materials used in the 500°C. circuitry. It was determined that the tensile strengtn, yield strength, and electrical resistivity of most alloys increase with radiation, while the creep strength, fatigue strength, impact strength, density, and elongation can decrease slightly, depending upon the alloy.

Air Force Cambridge Research Center, Bedford, Mass.
INCREASING THE RELIABILITY OF DIGITAL COMMUNICATIONS SYSTEMS UNDER POOR SIGNAL CONDITIONS, by Nathan Levine, Paul J. Daly, and Harold C. Porter. June 59, 36p. AFCRC-TR-59-158; AD-228 773.
Order from LC mi$3.00, ph$6.30 PB 144 967

Synchronous communication using phase modulation: A graphical analysis showed the improvement of the phase modulation system over amplitude modulation. The amplitude modulation system is recommended where reliable S/N levels of greater than 20 db and no serious fluctuations in signal amplitude are anticipated. For the type of military service envisioned with a mobile system, however, phase modulation is superior. Amplitude modulation using an autocorrelation receiver: Two methods of instrumentation were used for evaluation. The first method compared each message on a target-for-target basis registering each erroneous target. Each non-conforming target showed up as an error. In the second method, the detected data were inserted into a standard AN/TSQ-13 digital detector after the digital receiver, a conventional receiver circuit. Tests indicated that the basic receiver circuit performance was superior to the AN/TSQ-13 digital receiver. An over-all gain of 3 to 5 db was realized over conventional methods. The high frequency method showed no worthwhile gain over the second method. The consistently greatest single cause of errors was the 600-c burst.

Airtron, Inc., Linden, N. J.
FINAL ENGINEERING REPORT, by Tore N. Anderson. Rept. on Contract AF 30(602)1178. 1 Nov 56, 42p. 28 refs. Rept. no. 6035-I; RADC-TR-57-3; AD-114 208.
Order from LC mi$3.30, ph$7.80 PB 137 649

A high powered ferrite circulator was developed for duplexing in radar systems in conjunction with conventional TR's. The final version of the duplexer showed the following low-level characteristics: a 33.8- to 35.9-kmc range, less than 0.7-db insertion loss (of which the ferrite losses were only a small part), more than 20 db of isolation between all arms, and a maximum input VSWR of 1.30. The device has inherent load-to-magnetron isolation and it removes the bulk of the power from the TR. No breakdown occurred during high-power tests at 70-kw peak power pressurized with 2 atmospheres and at 100-kw peak power with a 2:1 mismatch on 4 atmospheres.

Antenna Lab., Ohio State U. Research Foundation, Columbus.
BEAM-DIRECTION INDICATING SYSTEMS FOR TRAVELING-WAVE ANTENNAS, by Ko-Hsin Liu. Master's thesis. Rept. on Polarization Dependence of Radar Echoes, Contract AF 30(635)2811. 15 Oct 56, 35p. 4 refs. Rept. no. 612-10; RADC-TR-57-14; AD-114 241.
Order from LC mi$3.00, ph$6.30 PB 137 567

Alternative methods of measuring the direction of maximum radiation from a traveling-wave scanning antenna are presented. The direction of maximum radiation can be determined if the relative phase constant withih the waveguide feed is known. Two types of non-mechanical indicating systems are considered: 1. Amplitude-measuring system, Simple amplitude system, Compound amplitude system. 2. Phase-measuring system, Simple amplitude system with added phase shifter. Conventional phase-measuring system.

A. R. F. Products, Inc., River Forest, Ill.
USE OF TRANSISTORS IN HETERODYNE-TYPE PORTABLE FREQUENCY METER AN/URM-32( ) by Andrzej B. Przedpelski. Quarterly progress rept. (Engineering) no. 1, 15 July-15 Oct 54, on Contract DA 36-039-sc-64450. 18 Oct 54, 38p.
Order from LC mi$3.00, ph$6.30 PB 145 336

The main purpose of this Contract is to transistorize Frequency Meter AN/URM-32( ) and thus achieve a reduction in size, weight and power consumption and at the same time increase overall reliability. To accomplish this general purpose, the following work will have to be carried out. Conduct circuit studies to establish the feasibility of using transistors as active elements to reproduce or improve the electrical characteristics of Frequency Meter AN/URM-32( ). Ascertain the highest degree of accuracy and stability attainable in transistor equipment of this type. Develop data on which to base specifications for transistor characteristics which will provide reliable operation.

Armour Research Foundation, Chicago, Ill.
METHODS OF PURIFICATION OF METALS AND INTERMETALLIC COMPOUNDS, by Sherman Susman. Rept. for 15 June 58-14 May 59 on Electrical and Electronic Materials, Contract AF 33(616)5895. Nov 59, 86p. 38 refs. ARF-3133-11; WADC Technical rept. 59-303.
Order from OTS $2.25 PB 161 415

SiC, ThO_2, and ZrO_2 were studied to learn how impurities move in thermal gradients in potential materials for high temperature thermoelectric, thermionic, or photovoltaic generators. The electrical resistivity, thermal conductivity, and thermoelectric power of ThO_2 and ZrO_2 were studied at high temperatures. Thermal conductivity was measured by a method which eliminates common errors. ZrO_2 had a much lower electrical resistivity than ThO_2. ThO_2 doped with CeO_2 was minimally changed in its electrical properties. The band structure of CeO_2-stabilized ZrO_2 was more complex than that of CaO-stabilized ZrO_2. Impurity transport in polycrystalline SiC was studied by inductive coupling and spectrometric diffusibility. The total (p) of all purification effects in a thermal gradient were 32.8 and 8.4 for Ca and Al in polycrystalline SiC. Single crystal SiC was studied by spectrometric diffusibility to obtain an index, $J_t S_t / C^2 o i$, of the ease with which an impurity is transported through the solid. Values for Cu, Ca, and Al were 113, 194, and 58, respectively. (Author)

Armour Research Foundation, Chicago, Ill.
RESEARCH ON THE PYROLYTIC DEPOSITION OF THIN FILMS, by F. V. Schossberger, S. Spriggs and others. Rept. for 1 May 58-30 Apr 59 on Research on Physical Phenomena Affecting the Characteristics of Electronic Components, Contract AF 33(616)5720. Oct 59, 50p. 14 refs. WADC Technical rept. 59-363.
Order from OTS $1.25 PB 161 417

This report describes the results of a one year program devoted to the preparation, chiefly by pyrolytic deposition, of thin films potentially useful in composite molecular electronics. Of particular interest was the pyrolytic deposition of thin films with high temperature stability. Compact polycrystalline films of translucent, yellow β-SiC have been reproducibly prepared on tungsten substrates by the pyrolysis of trimethylchlorosilane vapor at 1 to 2 mm pressure and 1700°C. Unsupported films of β-SiC have been made by dissolving away the tungsten in melted sodium nitrite. Spectrochemical analyses and spectral transmission measurements verify that these films are of high purity. Nonporous films of silica on molybdenum have also been made by the low pressure pyrolysis of tetraethylsilicate; and the films of nickel metal mixed with NiO have been prepared with high temperature coefficients of electrical resistance. These films, and films of a number of ferrites such as $(Ni, Zn)Fe_2O_4$, have been made by spraying ethanol-ethyl acetate solutions of metal acetylacetonates on alumina substrates heated to 600° to 950°C. Dielectric films adherent to copper have been prepared by the vacuum alloying of a titanium-copper-nickel bonding layer, followed by the pyrolytic decomposition of triethanolamine titanate to titanium dioxide. The limits of composition, the conditions of firing, and the optimum thickness required for a flexible alloy layer were determined. Finally, beta-ray back-scattering has been shown to be a useful method for the measurement of film thickness. (Author)

Army Ordnance Human Engineering Lab., Aberdeen Proving Ground, Md.
A STUDY ON THE EFFECTS OF CONTINUOUS WAVE JAMMING ON THE DETECTION OF ANTI-AIRCRAFT OPERATIONS CENTER SYMBOLS, by Charles Fried, Claude D. Patton and Raymond F. Blackmer. Sep 59, 25p. 5 refs. Technical Memo. 9-59.
Order from LC mi$2.70, ph$4.80 PB 144 951

Detection time was studied for four geometric shapes, considered for adoption as Antiaircraft Operations Center Symbols, that were exposed to three degrees of simulated continuous wave jamming. The shapes studied were the Circle, Cross, Half Circle and Cross-Within-Circle. Their diameters remained constant at 5/16". The shapes were generated electronically on a Planned Position Indicator display. Detection time increased for all four symbols as the intensity of continuous wave jamming increased, but this increase was not significant for the increase from the no noise to the mild noise level. All symbols, except for the Cross, had approximately the same detection time for each of the three noise levels. Any differences were not significant. The number of errors made by the subject were small and did not show any trend. The significantly lower detection time for the Cross at all noise levels is discussed. (Author)

PROCEEDINGS OF THE ANNUAL BATTERY RESEARCH AND DEVELOPMENT CONFERENCE [NO. 12] 21-22 MAY 1958. [1958] 141p. 35 refs.
Order from LC mi$7.20, ph$22.80 PB 145 520

Symposia included were on fuel cells; nickel-cadmium batteries; special purpose batteries; special purpose batteries; battery symposium; on power sources of the future. (See also PB 137 392)

Army Signal Research and Development Lab., Fort Monmouth, N. J.
PROCEEDINGS OF THE ANNUAL POWER SOURCES CONFERENCE [NO. 13] 28-30 APRIL 1959. [1959] 183p. 148 refs.
Order from LC mi$8.40, ph$28.70 PB 145 521

Sessions included were on space power; thermal energy conversion; nuclear energy sources; solar energy sources; secondary batteries; comparison of energy conversion systems; fuel cell batteries; primary batteries; high rate batteries.

Army Signal Research and Development Lab., Fort Monmouth, N. J.
TRANSISTORIZED EQUIPMENT FOR MEASURING TRANSISTOR FREQUENCY RESPONSE, by Bernard Reich and William Orloff. 2 Mar 59, 17p. USASRDL Technical rept. 2016; AD-214 650.
Order from LC mi$2.40, ph$3.30 PB 145 138

The theory and operation of a transistorized equipment capable of measuring the frequency response of transistors is described. The characteristic chosen for representing this parameter is the f_t frequency or the frequency at which the current gain is unity. The equipment employs a transistor oscillator and small-signal r-f amplifier as the basic elements of the system. Although the equipment is capable of representing frequency responses in excess of 1000 mc/sec, the actual frequency used by the set does not have to exceed 100 mc/sec. (Author)

RESEARCH INVESTIGATION OF CATHODE EMISSIVE MATERIALS, by W. E. Danforth, D. L. Goldwater and others. Scientific rept. no. 2 on Contract AF 19(604)3904. 15 Oct 58, 31p. 25 refs. AFCRC-TN-58-550; AD-160 859.
Order from LC mi$3.00, ph$6.30 PB 138 434

Fabrication and testing of thorium impregnated matrix cathodes. A study of the formation of ions by collision between electrons and thorium atoms in the cathode-anode space investigation of desorption of thorium from a tungsten surface by electron bombardment. (See also PB 137 001)

Battelle Memorial Inst., Columbus, Ohio.
COMPONENT EVALUATION AND SPECIFICATION ENGINEERING ON TASK XV. RESISTORS, VARIABLE, SUBMINATURE, by L. H. Stember, Jr. and P. G. Perry. Final rept. on Contract DA 36-039-sc-63136. 12 Aug 55, 115p. AD-115 178.
Order from LC mi$6.00, ph$18.30 PB 137 810

This is the final report on a program of investigation of subminiature, variable resistors. These resistors are one of a number of components studied in an evaluation program conducted under Contract No. DA 36-039-sc-63136. The general objective of this work is to determine the component's ability to meet the performance characteristics required by guided missiles, missile guidance systems of the Army Ordnance, and the highly specialized electronic equipments of the Signal Corps. The information obtained will be utilized to guide the component application engineer in the use of components, the component development engineer in furthering component improvement, and the specification specialist in defining a minimum quality level from production that will be acceptable for military service. Eight hundred and sixty one variable resistors were procured from six designated manufacturers to provide the specimens required to conduct the investigations scheduled in the program. These were separated into six groups and the investigations conducted on these were as follows: Group I. Initial resistance and linearity measurements; II. Rotational life; III. Load life; IV. Vibration (10-55 cps); Moisture resistance cycling (temperature cycling with high relative humidity). V. Minimum resistance measurements; Low-temperature storage; Low-temperature operation; Temperature cycling; VI. Temperature coefficient measurements; Short-timed overload; Insulation-breakdown voltage; Strength of mechanical rotation stops. (See also PB 137 866)

Bell Telephone Labs., [Whippany, N. J.]
MICROWAVE SOLID-STATE DEVICES. Interim rept. no. 7, 1 July-30 Sep 58, on Contract DA 36-039-sc-73224. 15 Nov 58, 34p. 8 refs.
Order from LC mi$3.00, ph$6.30 PB 144 943

Results of the Solid-State Maser studies are reported. Work on the spectra of Cr doped Al_2O_3 (ruby), Cr doped $3BeO \cdot Al_2O_3 \cdot 6SiO_2$ (emerald) and Co doped Al_2O_3 has been completed. A 6 kmc unilateral travelling wave maser (TWM) using a ruby loaded comb type digital structure has been built and tested. A gain of 23 db with a 25 mc bandwidth was obtained over an electronically tunable frequency range of 350 mc. By employing stagger tuning a gain of 13 db with a bandwidth of 67 mc was obtained in the same structure. Preliminary results obtained for diffused germanium nonlinear-capacitance diodes are reported. The best cut-off frequencies obtained (~80 to 100 kmc) are comparable to results obtained for silicon, but the best noise figure obtained in a 6 kmc amplifier (4.5 db) is inferior to that obtained for silicon varactor diodes (2.5 db). The inferior noise figure of the germanium diode appears to be due to shot noise, inasmuch as the silicon and germanium diodes had comparable figures of merit. A theoretical treatment of broadband harmonic generation effected by non-linear capacitance is described. The treatment is similar to that reported earlier, except that an attempt is made to evaluate the effects of parasitics by including a fixed parallel capacitance and a series resistance. Results show that the parasitics do not produce appreciable degradation of performance provided the frequency of the desired harmonic is sufficiently lower than a cut-off frequency defined in terms of the parasitic resistance and capacitance. (Author)

Bell Telephone Labs., [Whippany, N. J.]
MICROWAVE SOLID-STATE DEVICES. Interim rept. no. 8, 1 Oct-31 Dec 58, on Contract DA 36-039-sc-73224. 15 Feb 59, 32p. 3 refs.
Order from LC mi$3.00, ph$6.30 PB 144 934

Noise temperature measurements have been made on a traveling wave maser preamplifier. The measured noise temperature referred to the input terminals at room temperature is $10.7 \pm 2.3^{\circ}K$. This compares favorably with a calculated noise temperature of $11.4 \pm 1.2^{\circ}K$. Feasibility tests have been made on a ruby maser for a signal frequency of 1500 mc. The measured spin temperature of $-0.28^{\circ}K$ indicates that compact traveling wave masers may be built at this frequency. A theoretical analysis of the gain and noise figure of a lower sideband nonlinear capacitance diode amplifier is presented. Approximate values of noise figure are calculated and compared with several measured noise figures. The comparison indicates that the diodes were operated at close to optimum conditions. The generation of subharmonics by a nonlinear capacitance diode is discussed briefly, from a theoretical point of view, and an experiment is described, in which the one-half harmonic was generated. (Author) (See also PB 144 943)

Berkeley Div., Beckman Instruments, Inc., Richmond, Calif.
APPLICATION OF TRANSISTORS TO FREQUENCY METER FR-67( )/U AND MANUFACTURE OF EXPERIMENTAL MODELS, by Hamilton Chisholm, Robert Ellsworth, and Robert Evans. Final rept. on Contract DA 36-039-sc-63238. 10 Feb 56, 60p.
Order from LC mi$3.60, ph$9.30 PB 145 260

Two complete frequency meters were manufactured and tested for conformance with all electrical specifications. The major portion of the final report dwells upon the circuitry of the final units. The theory and characteristics of each major function is given in detail. Following this is a section on operating techniques which should serve as a complete guide in the use of the instrument. Maintenance procedures are then given with emphasis on precautions peculiar to the instrument. The text of the report makes frequent reference to photographs, sketches, and complete schematics. (Author)

Chatham Electronics, Livingston, N. J.
INDUSTRIAL PREPAREDNESS MEASURE FOR POLYOPTIC SEALING OF HYDROGEN THYRATRON TUBES. Quarterly progress rept. no. 1, 1 July-30 Sep 59, on Contract DA 36-039-sc-81289. 30 Nov 59, 10p.
Order from LC mi$1.80, ph$1.80 PB 145 220

The first quarter of the contract was spent in ordering necessary materials and equipment such as glass, lap material, grinding and lapping compounds, a life test unit, and an automatic exhaust machine. Different polishing procedures and techniques were investigated, and old methods revised and improved to make the process more suitable for production. (Author)

Clevite Research Center, Cleveland, Ohio.
INITIAL STUDY AND DEVELOPMENT OF PIEZOELECTRIC CERAMIC 1-F TRANSFORMERS, by O. E. Mattiat and W. F. Ford. Final rept. for 15 May 55-14 June 56 on Contract DA 36-039-sc-64644. 15 July 56, 84p. AD-115 854.
Order from LC mi$4.80, ph$13.80 PB 145 205

The two basic approaches of using piezoelectric ceramic resonators for band-pass filter purposes are described. The first is to employ such resonators as electric network elements in otherwise conventionally designed filters. The simplest two structures, as reported in detail in the First Quarterly Progress Report, are reviewed and impedance and insertion loss curves are presented. The second approach, employing ceramic resonators in new unconventional ways is summarized and impedance and attenuation behavior of one-, two- and three-disk filters are described. Some technical details (polarization and electroding) and material problems including aging, temperature-coefficient, dielectric constant, and quality factor are discussed. Conclusions are drawn for the application of one- and three-disk filters and recommendations are made for future development work. Representative sample filters are described in detail. (Author)

Colorado U. Engineering Experiment Station, Boulder.
STATIC TRANSVERSE POTENTIAL SOLUTIONS FOR DENSE DRIFTING ELECTRON BEAMS, by J. E. Lauer and J. C. Twombly. Technical rept. no. 1 on Contract Nonr-1147(06). 1 Mar 59, 53p. 7 refs.
Order from LC mi$3.60, ph$9.30 PB 144 896

The concept of supercritical perveance is reviewed, and nomenclature is established for the distinct regions of perveance separated by abrupt changes in potential state. Static transverse-potential functions are obtained for long drifting beams operating in the high- and low-potential modes. Change from one of these potential modes to the other is effected by excursions of beam perveance past certain critical values. These are calculated for each beam configuration.

Columbia U. School of Engineering, New York.
GENERAL FLOW GRAPH TECHNIQUE FOR THE SOLUTION OF MULTI-LOOP SAMPLED SYSTEMS, by R. Ash, W. H. Kim, and G. M. Kranc. Technical rept. T-37/B on Contract AF 18(600)677. 31 July 59, 33p. 10 refs. CU-57-59-AF-677-EE; AFOSR-TN-59-824.
Order from LC mi$3.00, ph$6.30 PB 144 752

This paper presents a flow-graph approach for analyzing multi-loop sampled-data systems. Two techniques for finding the sampled output are examined. These are: first, construction of a "sampled" signal flow-graph from the original system; second, a general

gain formula which can be directly applied to the original system. The theorems necessary to establish the formula are rigorously proven. The first technique allows two possible modes of solution. The sampled output can be found directly from the "sampled" flow graph by the use of Mason's Formula, or in case of a more complicated multi-loop system, the problem of enumerating non-touching feed-back loops can be simplified by the use of topological matrices. Techniques developed in the paper are also applied to the solution of multirate systems. (Author)

Columbia U. School of Engineering, New York.
OPTIMUM MULTIRATE CONTROLLER FOR A SAMPLED FEEDBACK SYSTEM, by G. M. Kranc. Technical rept. T-38/B on Contract AF 18(600)677. 1 Oct 59, 31p. 8 refs. CU 59-59-AF-677-EE; AFOSR-TN-59-1095.
Order from LC mi$3.00, ph$6.30 PB 145 100

This paper extends optimum design procedures to sampled-data systems with a multirate controller used as a discrete compensator. The multirate controller used as a discrete compensator. The multirate controller is a discrete network which in response to input samples at time t = 0, T, 2T, . . . produces output samples at time t = 0, T/n, 2T/n, . . . (where n is an integer), any output sample being a linear combination of the past and present inputs and outputs. It is shown in this paper how to design this controller to achieve a least mean square continuous error with random inputs or a least integral continuous error with known test input functions. The advantages of the multirate controller over the single-rate compensator are demonstrated. (Author)

FAST-RESPONSE LINEAR MICRO-MICROAMMETER, by J. R. Gardner. Rept. on Contract AF 33(600)32054. 20 Aug 58, 19p. MR-N-181; NARF-58-36T.
Order from LC mi$2.40, ph$3.30 PB 145 346

A prototype fast-response linear micromicroammeter has been developed which uses the 100 percent-feedback type of circuit without the usual dc-to-ac input converter. The circuit consists basically of an ORNL electrometer and a new type of push-pull magnetic amplifier. The output impedance of the electrometer matches the input impedance of the magnetic amplifier. The magamp output is fed back to the electrometer input to obtain fast response time (<0.1 sec) and negligible drift. The accuracy of measurement depends on the values of input and feedback resistors, and voltage gain is eliminated as a measure of accuracy and linearity. The ranges of current measurement extend from 10^{-11} amperes full scale to 5×10^{-6} amperes full scale, in 18 steps. (Author)

ELECTRICAL CHARACTERISTICS OF COILED WAVEGUIDE, by H. S. Jones and H. K. Morlock. 3 Nov 58, 18p. 2 refs. Technical rept. TR-637; AD-209 130.
Order from LC mi$2.40, ph$3.30 PB 144 857

A comparison is made between the performance of a coiled waveguide section and a straight section of equivalent length. Stages of development and properties of coiled waveguides are discussed, and test results of several coils and assembled units are given. Theoretical calculations and an empirical determination of waveguide time delay are given. Some characteristics of coaxial delay lines are also discussed. (Author)

FLAT VIBRATION-GENERATOR FOR MICROPHONIC INVESTIGATIONS, by J. D. Rosenberg. 30 Aug 54, 44p. 10 refs. Technical rept. TR-102.
Order from LC mi$3.30, ph$7.80 PB 145 617

A vibration-generator which was developed for the investigation of subminiature tube microphonics is described. Its characteristic frequency-acceleration curve, when properly adjusted, is flat within ±20% at 10 g from 100 to 10,000 cps. The fabrication blueprints of the generator and of a convenient quick-change tube clamp and tube-lead clamp are included. In addition, microphonic test techniques - white noise production test, swept frequency test, and white noise resonance test - which are dependent upon the generator, are presented, as well as a few sample recordings, and a general discussion of the tests. A SAMPLING PULSE OSCILLOSCOPE UNIT TRANSISTORIZED, 'SPOUT', by Philip Emile, Jr. and George R. Yetter. 6 Nov 59, 44p. 4 refs. TR-761.
Order from LC mi$3.30, ph$7.80 PB 144 706

A Sampling Pulse Oscilloscope Unit Transistorized, "SPOUT", capable of resolving repetitive pulses with risetimes in the order of 1 mμs was designed and built. SPOUT was built as a plug-in unit for a standard oscilloscope. A narrow pulse (approximately 1 mμs wide) is generated by an avalanche transistor switch and used to sample repetitive, unamplified input pulses. From the samples, a composite picture of the input pulse is formed on a cathode-ray tube (CRT). The main advantage of SPOUT and sampling oscilloscopes in general, is the possibility of viewing narrow (mμs) pulses with a low frequency CRT by trading sampling time for bandwidth. The disadvantages of the sampling method are that the pulse must be repetitive, the maximum and minimum input pulse rates are limited, and only a small dynamic range of input pulses can be observed. (Author)

UTILIZING AN ELECTRONIC COMPUTER TO OPTIMIZE A TRANSISTOR NOR CIRCUIT, by E. L. Cox and L. L. Hall. 20 Oct 59, 21p. 2 refs. TR-748.
Order from LC mi$2.70, ph$4.80 PB 144 707

The accuracy with which a transistor NOR circuit can be designed for minimum power dissipation has been increased by including an additional parameter not considered in a previous analysis. The method of design involves determining the values of the input resistors, R_1, the maximum collector current, I_C, the collector resistor, R_C, and the collector supply voltage, V_{CC}, from the basic NOR circuit parameters (β/S, I_{CBO}, M, N, V_{BE}). The determination of R_1 consists of obtaining two analytical expressions, one larger and one smaller than the optimum R_1. The optimum R_1 is then obtained by numerical interpolation on an electronic computer and is subsequently used to compute the other quantities. The flow diagram of the computer program is included, as are graphical results indicating the trends of minimum power dissipation with changes in the basic NOR circuit parameters. (Author)

ANTENNA PATTERN FLUCTUATIONS AT 4.3 MILLIMETER WAVELENGTHS DUE TO ATMOSPHERIC INHOMOGENEITIES, by C. W. Tolbert, C. O. Britt, and A. W. Straiton. Rept. on Contract Nonr-375(01). 13 Dec 57, 15p. 6 refs. Rept. no. 96; AD-151 653.
Order from LC mi$2.40, ph$3.30 PB 138 074

A comparison was made between the fluctuation of optical images and the fluctuation of signal strength at millimeter wavelengths owing to inhomogeneities of the atmosphere. Measurements were made at 4.3-mm wavelengths to determine some of the characteristics and orders of magnitude of dancing, pulsation, and scintillation that might affect seeing at these wavelengths. Simultaneous measurements were made with 2 receivers of the signal strength over a 7.5-mi propagation path. The separation between the 2 receivers was varied from 1 to 50 ft. Results showed a limitation on the resolving power of narrow beam antennas owing to the inhomogeneities of the lower atmosphere. The seeing ability of easily obtainable antennas operating at millimeter radio wavelengths is limited by the atmosphere similar to the manner in which the seeing ability at optical wavelengths is limited.

Electrical Engineering Research Lab., U. of Texas, Austin.
PHANTOM RADAR TARGETS AT MILLIMETER RADIO WAVELENGTHS, by C. W. Tolbert, A. W. Straiton, and C. O. Britt. Rept. on Contracts Nonr-375(01) and Nonr-375(07). 21 Feb 58, 20p. 5 refs. Rept. no. 99; AD-156 772.
Order from LC mi$2.40, ph$3.30 PB 138 133

This report describes the techniques and the measured radar returns from "phantom targets" using 8.6 & 4.3 millimeter radars. The radar returns are compared to the measured back-scattering cross sections of water drops, insects, steam and other materials at 8.6 millimeter wavelength as measured by a c. w. radar at this wavelength. Within the limits of the conditions used in the laboratory, it was impossible to produce returns from synthesized refractive index gradients of sufficient magnitude to account for those noted on the radar. It is, therefore, concluded that for the millimeter wavelengths and the short ranges considered, the observed phantom returns were due to solid or liquid particles in the atmosphere.

STUDIES ON BASE NICKELS FOR OXIDE COATED CATHODES, by W. G. Shepherd. Scientific rept. no. 3, 15 Oct 58-15 Jan 59, on Contract AF 19(604)3890. [1959]. 72p. AFCRC-TN-59-377; AD-217 857.
Order from LC mi$4.50, ph$12.30 PB 144 955

Coating adherence studies: The procedure for the co-precipitation of $(BaSr)CO_3$ from $Ba(NO_3)_2$ and $Sr(NO_3)_2$ is detailed; any deviation from the specified temperature, pH, or concentrations of reactants will affect the density and particle size of the carbonates. The density of the radioactive carbonates was nearly doubled when radioactive $Sr(NO_3)_2$ was used. To obtain the desired density it was necessary to redissolve the high density carbonates in a low normality HNO_3 solution and reprecipitate. Studies of controlled chemical activation: A series of experiments concerning the interactions between active-based and passive-based cathodes are described. The experiments consist in exposing a passive-based cathode to a controlled pressure of free Ba or to the evolution of an active metal (Mg) from a heated anode. An experimental study of the nature of chemical activation: A system was designed to permit the controlled variation in the rate at which a reducing additive is dispensed to the oxide coating from the cathode base. Alloy based cathodes: The emission characteristics were determined for oxide coatings on an 0.22% Al-Ni alloy base operating at 1119°K for 442 hr. Titanium anode studies: Extended operation of a passive-based oxide cathode exposed to a heated Ti anode resulted in a slow decay in peak emission. (See also PB 140 679)

A PRECISION PHASING ELEMENT. Interim engineering rept. for 1 July-30 Sep 58 on Contract AF 30(602)1776. [1958] 51p. 1 ref. RADC-TR-58-148; AD-205 915.
Order from LC mi$3.60, ph$9.30 PB 138 128

A system for obtaining precision electronically controllable phase shift in the C-band region is presented. The system utilizes a folded-waveguide ferrite phase shifter element whose phase shift is controlled by a servo system referenced to a variable frequency microwave signal. With this system 360° phase change can be accomplished in 2.5 milliseconds. Bench tests indicate that temperature changes, magnetic field interaction effects, and hysteresis effects are held to negligible proportions within the operating limits of the phase shifter. The phase shifter element will handle peak power levels up to 50 kw without appreciable increase in loss. Auxiliary investigation on ferrite materials made during the course of this contract are discussed and typical results are given. Limits on the capabilities of phase shifters and switching circuits are given along with recommendations for future work. (Author)

THE ANALYSIS OF SAMPLED-DATA CONTROL SYSTEMS WITH PERIODICALLY TIME VARYING SAMPLING RATE, by F. J. Mullin and E. I. Jury. Rept. on Contract AF 18(600)1521. 30 June 58, 25p. 12 refs. Series no. 60, issue no. 207; AFOSR-TN-58-665; AD-162 196.
Order from LC mi$2.70, ph$4.80 PB 138 060

The z-transform is used to solve sampled-data feedback systems which have a periodically time varying sampling rate. Such systems are described by linear difference equations with periodic coefficients; however the difference equation which describes the system at the sampling instants corresponding to KN, where N is the period of the coefficients and K = 0, 1, 2, ... is a linear difference equation with constant coefficients. Thus, by forming a series of constant coefficient difference equations which individually describe the system at sampling instants corresponding to n = KN, KN+1, KN+2, ... (K+1)N-1, the time varying features of the system are in essence removed from the analysis. The z-transform can then be used to solve the resulting constant coefficient difference equations. The response between sampling instants can also be obtained from the solution of the difference equations.

ANALYSIS OF INTEGRAL-SQUARE ERROR IN SAMPLED-DATA CONTROL SYSTEMS, by Behram Homi Bharucha. Rept. on Contract AF 18(600)1521 30 June 58, 52p. 11 refs. IER Series no. 60, issue no. 206; AFOSR-TN-58-679; AD-162 211.
Order from LC mi$3.60, ph$9.30 PB 137 786

Finite moments of the squared error of a linear time-invariant (continuous or sampled-data) control system for a non-random input are developed as integrals in the modified z-transform domain. An explicit solution of the zero moment of the total squared error integral is given as the ratio of determinants of two nxn matrices where n is the order of the system characteristic polynomial in z and the elements of the matrices are obtained readily from the coefficients of the rational form in z of the modified z-transform of the error signal.

Electronics Research Lab., U. of California, Berkeley.
A GASEOUS-CONDITION LINEAR AMPLIFIER WITH MAGNETIC FOCUSING, by John Noland Dukes. Master's thesis. Scientific rept. no. 5 on Contract AF 19(604)2270. 30 June 59, 58p. 9 refs. IER series no. 60, issue no. 240; AFCRC-TN-59-589.
Order from LC mi$3.60, ph$9.30 PB 144 593

An investigation is described to determine the feasibility of linear amplification by means of a cold-cathode tube with the electrode configuration and the gaseous-conduction properties of the Philips Ion Gauge but, unlike the latter, with electrically independent cathodes. The characteristics of this tube indicate that linear amplification can be attained with the tube operating either as a current-gain amplifier or as a "regenerative direct-coupled" amplifier in a manner similar to a negative-resistance amplifier. The negative-resistance property of the device is also utilized for oscillator operation, and a graphical analysis of the results is made. A theory is developed, based in part on the results of particle-extraction experiments in which a modified version of the tube was used, to explain the voltage-current characteristics of the device, including the negative-resistance effects. The negative resistance observed was of the short-circuit-stable variety, which is unusual in a gaseous-conduction device. (Author)

LOSS EQUALIZER SYNTHESIS UTILIZING THE IBM 701, by R. H. Mitchell. Rept. on Contract N7onr-29529. 12 Jan 59, 47p. 6 refs. IER series no. 60, issue no. 224.
Order from LC mi$3.30, ph$7.80 PB 144 520

The equalization problem has long confronted the engineer with the design of networks to produce a given loss over a specified frequency band. This given loss of the equalization network, coupled with that of the transmission line, some other networks, etc., will (it is hoped) produce a flat loss over this same frequency band. In the past, the choice of networks to produce this desired loss has been rather haphazard--depending on cut-and-try and, most generally, on the experience of the design engineer. This paper was written in order to give a straight-forward design procedure for developing a network of constant-R circuits in cascade which will produce any desired loss in the frequency band. The IBM 701 computer at the University of California Computer Center was used in the analysis of four curves to check the validity of the process. In Appendix D will be found the results of analysis; and it can be seen that, by expanding the program as presented here, practically any loss function may be approximated to a very good degree by this method.

A PROPOSAL FOR EVALUATING AND IMPROVING ACCELEROMETERS, by Vernon Ames, Meyer Shulman, and Saul Wanetick. 15 Oct 58, 13p. Technical note TN-1108, AD-204 454.
Order from LC mi$2.40, ph$3.30 PB 145 616

A program for improving conventional piezoelectric accelerometers is proposed. New concepts in accelerometer design are proposed using other than the piezolectric principle as a solution to eliminate secondary effects which affect sensitivity and linearity characteristics. (Author)

General Electric Co., Schenectady, N. Y.
INVESTIGATION OF VARIOUS ACTIVATOR-REFRACTORY SUBSTRATE COMBINATIONS, by N. J. Hawkins and J. H. Affleck. Scientific rept. no. 1 on Contract AF 19(604)4093. 29 Aug 58, 24p. 6 refs. AFCRC-TN-58-372; AD-160 820.
Order from LC mi$2.70, ph$4.80 PB 137 710

The object of this investigation is to study experimentally the emission and evaporation rate of cathodes composed of refractory salts with low work function activator elements. Also, an attempt will be made to evolve a correlation theory which will aid in design of practical cathodes and give an insight into the emission properties of untried combinations of related materials. Initially, the general problem of a relation between emission of electrons and evaporation rate activator elements is examined by methods of thermodynamics. This leads to the effective dipole moment present at a surface and is expressed in an equation of state for the film. Next, considering the evaporation of adsorbed particles using Langmuir's approach a general equation of state is obtained for a sorbed film. Then in the case of an ionic film of one metal on another a relation is derived between the relative evaporation rate of electrons at zero field and the adatom evaporation in terms of the numbers of monolayers, the number of atoms per unit area to produce a complete monolayer, the temperature of the system and the condensation coefficient. The assumptions used in deriving the general relation between emission and life are discussed. Some of these assumptions may have to be modified in the systems that are to be studied. (Author)

STUDY OF NUMERICAL INTEGRATION METHODS FOR ANTENNA PATTERN CALCULATIONS, by C. C. Allen. Scientific rept. no. 1 on Antenna Beam Scanning, Contract AF 19(604)1848. 15 Aug 58, 61p. 5 refs. AFCRC-TN-58-389; AD-160 855.
Order from LC mi$3.90, ph$10.80 PB 137 794

A study of numerical integration methods suitable for antenna pattern calculations was conducted for the purpose of determining their accuracy and relative costs. The general principles of numerical integration are discussed and four methods outlined in detail. The results of applying these methods to a simple cosine distribution are presented and analyzed. The relation of these results to those for a pattern integral having a nonlinear phase function is discussed. The Gaussian quadratures are shown to have the highest degree of precision and lowest cost in general, while Filon's method is preferable when integrals having a linear phase function are calculated over a large range of pattern angle. The procedure for applying these methods to double numerical integration is outlined. (Author)

Georgetown Coll. Observatory [Washington, D. C.]
A STABLE DIRECT-CURRENT AMPLIFIER FOR A PHOTOELECTRIC PHOTOMETER, by Charles F. Dohne and Francis J. Heyden. Technical rept. no. 11 on Contract AF 19(604)880. Feb 58, 5p. GCO monograph no. 8; AFCRC-TN-58-226; AD-146 882.
Order from LC mi$1.80, ph$1.80 PB 138 135

A direct current amplifier has been designed for use with a Multiplier Phototube. Stability and simplicity are obtained by using balanced circuitry, silicon power rectifiers and transistors. Light filters and voltage control of the Multiplier Phototube are employed. The purpose for which this amplifier was developed is to provide a stable and relatively simple direct current amplifier for photoelectric observation and recording of the total solar eclipse in the field.

Georgia Inst. of Tech. Engineering Experiment Station, Atlanta.
INVESTIGATION OF METHODS FOR MEASURING THE EQUIVALENT ELECTRICAL PARAMETERS OF QUARTZ CRYSTALS, by Douglas W. Robertson, S. N. Witt, Jr. and William R. Free. Progress rept. no. 2, 16 July-15 Oct 56, on Contract DA 36-039-sc-71191. [1956] 37p. 4 refs.
Order from LC mi$3.00, ph$6.30 PB 138 497

Work has continued on the development of a more sensitive detector system for use with standard impedance bridges. Two experimental crystal oscillators, the Plate Degenerative Oscillator and a capacitance bridge oscillator, appear suitable for use as driving sources for the coaxial crystal parameter bridge being developed. Experimental models of each have been successfully operated with various crystals at frequencies up to and above 300 mc/sec. A calorimetric system utilizing a thermistor bridge makes possible the measurement of crystal power dissipation without any electrical connection to the crystal parameter bridge. (See also PB 138 498)

Georgia Inst. of Tech. Engineering Experiment Station, Atlanta.
PRECISION FREQUENCY CONTROL TECHNIQUES (500 Mc AND HIGHER) by Vernon Crawford and Donald W. Fraser. Progress rept. no. 1, 1 Feb-1 May 53, on Contract DA 36-039-sc-42590. [1953]

45p. 7 refs.
Order from LC mi$3.30, ph$7.80 PB 138 184

A conference with representatives of the Signal Corps early this quarter resulted in a decision to concentrate upon two phases of experimental work during the year. These two phases are respectively: (1) continuation of research on coaxial cavities as mediums for oscillator control, utilizing the information gained under a previous project, and (2) initiation of studies of the absorption and transfer characteristics of piezoelectric quartz crystals when excited at very high orders of mechanical overtones. Three new cavities have been designed during the period of this report. The one to which the most attention has been devoted is constructed, in the main, of Stupalith, a ceramic material having a claimed coefficient of expansion of zero parts per million per degree centigrade. Another cavity was constructed completely of brass. It was intended to serve as a convenient test vehicle for oscillators and for the Cavity Q-Meter described below. The third and final cavity contains a silver-plated brass outer conductor, a silver-plated Vycor inner conductor, plus a compensation section designed to produce a first order correction for temperature effects on frequency. A Cavity Q-Meter has been constructed to permit studies of the coaxial cavities as passive resonators rather than as active parts of an oscillating system. This device features a frequency-swept oscillator, a variable-frequency oscillator, and a band-pass amplifier.

Georgia Inst. of Tech. Engineering Experiment Station, Atlanta.
PRECISION FREQUENCY CONTROL TECHNIQUES (500 Mc AND HIGHER) by Vernon Crawford and Donald W. Fraser. Progress rept. no. 2, 1 May-1 Aug 53, on Contract DA 36-039-sc-42590. [1953] 49p. 11 refs.
Order from LC mi$3.30, ph$7.80 PB 138 185

A temperature-compensated cavity using an outer conductor of brass and an inner conductor of silver-plated Pyrex has been constructed and has been given extensive tests. This resonator, operating at a frequency of 300 megacyles, has exhibited an average frequency-versus-temperature change of about 0.5 parts per million per degree centigrade over a temperature range of seventy five degrees centigrade. A cavity has been constructed which utilizes a ceramic, Stupalith, having a claimed small (approximately zero) coefficient of expansion. Problems arising during silver-plating and during final assembly of the completed resonator have been discussed in detail. Cavity-controlled oscillators operating in the 500 megacycle range have been constructed and tested. In these oscillators the cavity serves as a reactive element. Further investigations of the high-order overtone responses of quartz crystal resonators have shown that some crystals may be excited at overtones as high as the fifty-ninth, and that the responses of various crystals are virtually independent of holder capacitance and of the Q of the holder. REPRESENTATION AND ANALYSIS OF SIGNALS. PART III. SIGNAL REPRESENTATION USING DIRAC'S NOTATION, by David C. Lai. Rept. on Contracts AF 19(604)1941 and Nonr-248(53). 31 Oct 58, 75p. 21 refs. AFCRC-TN-58-560; AD-160 869.
Order from LC mi$4.50, ph$12.30 PB 137 788

In this report, Dirac's Notation, originally applied by him to problems in quantum mechanics, is adopted and interpreted to provide a new representation of signals. Based upon the four operations most often encountered in the laboratory, viz., sampling, time reversing, filtering, and modulating, we introduce new compact symbols and operators to represent their mathematical counterparts, viz., sifting, tilding, convolution, and multiplication. In establishing any operation or equation, we have emphasized the physical and operational significance of the mathematics. The justification for this formulation depends, aside from its internal consistency, upon its ability to express compactly and concisely the various experimental processes used in analyzing signals.

Markite Co., New York.
INVESTIGATION OF CONDUCTIVE PLASTICS FOR USE IN BATTERIES, by Sidney A. Corren and Arnold S. Louis. Quarterly progress rept. no. 12 (Final) 15 Apr-Aug 57, on Contract DA 36-039-sc-64463. 15 Sep 57, 104p. Rept. no. 107-12.
Order from LC mi$5.70, ph$16.80 PB 144 917

Phase A: Continuation of work on improvement of stability, reproducibility and voltage life at 130°F of high voltage miniature molded batteries. Reported is a structure and a process for making sealed multiple cell battery stacks by machine assembly. Such stacks with magnesium anodes, conductive plastic cathodes and aqueous electrolyte exhibit more than 200 volts per cubic inch after 4 years of storage at 130°F. Phase B: A nickel-cadmium battery system with conductive plastic plates was investigated. Active battery plates were made by incorporating active material in porous conductive plastic. Characteristics of plates fabricated as continuous strip are described. Positive plates were produced which yielded 3 ah/cu in and negative plates with a capacity of 6 ah/cu in to a 1.0 v cut-off. BB403/U sized cells were made

which yielded 2 ah to 1.0 v at a 3a rate. Progress is reported in the direction if improved cycling life, volumetric capacity and voltage level at high discharge rate. (Author)

Melpar, Inc., Falls Church, Va.
RESEARCH STUDY OF THE CAPABILITIES AND LIMITATIONS OF CABLE BURYING TECHNIQUES IN THE MILITARY WIRE PLANT, by W. Bradley, M. J. Costello and others. Final rept. on Contract DA 36-039-sc-73130. 15 Jan 58, 148p. 112 refs. AD-153 115.
Order from LC mi$7.20, ph$22.80 PB 138 218

The history and development of cable burying is reviewed and recent military tests summarized. The resources required for the construction and maintenance of military cable lines by laying on the ground, installing aerially, and direct burial are developed from an evaluation of available information. An assumed basic situation is described to establish a basis for comparing characteristics of the 3 alternative methods of cable installation. An analysis is made of significant factors affecting the choice of installation method. The relative importance of cable burying in theaters of operations is discussed in the light of restrictions imposed by geography and the increased mobility of operational units. The probable use of cable in area grid systems is also examined. Commercial experience is examined for guidance in arriving at recommended techniques and procedures for military cable burial. Methods of analyses to be employed by signal officers in the field in determining the optimal method of construction of cable lines are covered. Means of controlling buried cable and a method of camouflaging a plow trace are discussed.

Michigan U. Research Inst., Ann Arbor.
DETECTION OF A SIGNAL SPECIFIED EXACTLY WITH A NOISY STORED REFERENCE SIGNAL, by T. G. Birdsall. Rept. on Contract AF 49(638)369. Sep 59, 29p. 5 refs. Technical rept. no. 93; 2803-1-T; AFOSR-TN-59-909.
Order from LC mi$2.70, ph$4.80 PB 144 784

This report treats the optimization problem of detecting the presence of a signal in a background of white Gaussian noise, under the restriction that the signal is specified exactly but the receiver memory contains only a noisy version of the signal. The optimum receiver is specified. The performances of both the optimum receiver and the crosscorrelation receiver with a noisy memory are calculated and compared for a special case. (Author)

STUDIES IN RADAR CROSS SECTIONS 30. THE THEORY OF SCALAR DIFFRACTION WITH APPLICATION TO THE PROLATE SPHEROID, by R. K. Ritt, appendix by N. D. Kazarinoff. Scientific rept. no. 4 on Contract AF 19(603)1949, Aug 58, 54p. 21 refs. 2591-4-T; AFCRC-TN-58-351; AD-160 791.
Order from LC mi$3.60, ph$9.30 PB 137 831

It is shown that the inhomogeneous wave equation, $\nabla^2 u - u_{tt} = \rho e^{i\omega t}$, with prescribed initial conditions and subject to outer boundary conditions on a smooth closed surface, has a solution of the form $v(x,t)e^{i\omega t}$, and that $\lim_{T\to\infty} T^{-1} \int_0^T v(x,t)\,dt$ is given by the formula $\phi(x) = \lim_{s\to 0} \phi(x,s)$, where $\phi(x,s)$ is the solution of $\nabla^2\phi + (\omega - is)^2\phi = \rho$, subject to the same boundary conditions as u, and which is square-integrable in the exterior region. The theory of analytic resolvents of Sims and Phillips is applied to obtain a representation of the solution of this equation as a contour integral.

Microwave Lab., Stanford U., Calif.
BASIC MICROWAVE RESEARCH, by M. Chodorow. Scientific rept. no. 7, 1 Apr - 30 June 58, on Contract AF 19(604)1930. July 58, 14p. 1 ref. M. L. rept. no. 528; AFCRC-TN-58-360; AD-160 803.
Order from LC mi$2.40, ph$3.30 PB 137 862

Four projects are presently supported by this contract. In the electron velocity spectrograph project, much of the recent quarter's activity has been devoted to improvement in the experimental equipment. In the connected-ring structures project, work has continued on the design of a traveling-wave amplifier which is expected to produce between 25 and 50 kw peak power output at S-band. In the coupled-cavity-theory project, work has continued on the more detailed verification of the equivalent circuits which are now being used. The present equivalent circuit representation of the clover-leaf structure has succeeded in predicting a number of the characteristics actually observed with this circuit. In the electron gun studies project, the original gun design has been revised because of certain difficulties which were encountered with secondary emission and grid interception. (See also PB 137 681)

Microwave Physics Lab., Sylvania Electric Products, Inc., Mountain View, Calif.
FACTORS AFFECTING MICROWAVE ELECTRICAL BREAKDOWN AND TRANSMISSION NEAR MISSILE ANTENNAS, by R. M. Hill, A. J. Penico and others. Final rept. on Contract AF 19(604)3883. 28 Aug 59, 75p. 24 refs. AFCRC-TR-59-188.
Order from LC mi$4.50, ph$12.30 PB 144 544

Two experimental investigations have been made into intrinsic properties of atmospheric gases which affect microwave transmission. One experiment has measured the electron collision frequency for electrons of thermal energy in neon, nitrogen and oxygen. The method depends upon a measurement of the electron-cyclotron-resonance line width for thermal electrons. The other experiment has been a study of the rate of build up of electron density associated with the microwave pulse breakdown of air. The experiment was specifically designed to study attachment control in the pressure region of interest for missile antennas. A 10 cm cavity was used with the pulsed breakdown field applied to the TM_{010} mode.

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
ELECTRONIC WARFARE APPLICATION OF MICROWAVE ELECTRONICS, by John W. E. Griemsmann. Final rept. on Contract AF 30(602)1650. 7 July 59, 122p. 24 refs. Rept. R-743-59; PIB-671; RADC-TR-59-156.
Order from LC mi$6.30, ph$19.80 PB 144 861

Strip line high pass filters which can be fabricated completely by photoetching techniques have been developed for the frequency band from 100 to 1000 Mc/sec. The short circuited terminations for the shunt lines used in earlier designs have been eliminated by the use of wide band open circuited shunt inductive structures. Series overlap capacitors were avoided by employing an alternative design procedure to yield a structure containing only transmission line sections. A narrow band bandpass filter employing coupled lengths of line to simulate the behavior of series inductors appears to exhibit desireable electrical and mechanical properties in the frequency range below 1000 Mc/sec. A savings in the overall size of the filter can be effected by coupling successive filter sections of this type through series capacitors. Other types of bandpass filters for the frequency band from 50 to 1000 Mc/sec. have also been considered. These include quarter wave coupled cavity types of filters and conventional strip line filter structures in low characteristic impedance lines.

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
OPTIMUM TWO-TERMINAL INTERSTAGE DESIGN FOR HIGH-FREQUENCY TRANSISTOR AMPLIFIER, by W. H. Ku and H. J. Carlin. Rept. on Contract Nonr-839(05). 13 Feb 59, 64p. 5 refs. Rept. no. R-679-58; PIB-607.
Order from LC mi$3.90, ph$10.80 PB 144 821

The design of optimum two-terminal interstage is treated. In transistor feedback amplifier design, the most satisfactory interstage networks are two-terminal structures. For high-frequency transistors in cascade, we can consider the equivalent network to consist a shunt resistance-capacitance load in parallel with the two-terminal interstage structure. The problem is to design a coupling network to obtain maximum gain-bandwidth product consistent with physical realizability conditions of a two-terminal structure for the prescribed shunt R-C load. The theoretical limitations on the performance of the optimum two-terminal interstage are examined and three basic methods of design are given. It is concluded that the optimum gain-bandwidth of a two-terminal interstage is reduced by the presence of the shunt resistive element. Optimum gain-bandwidth characteristics are deduced and used to determine the shunt equalizer network. (Author)

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
VARIABLE PARAMETER DELAY LINES, by G. Aaronson. Rept. on Contract Nonr-839(05). 13 Mar 59, 78p. 10 refs. Research rept. R-720-59; PIB-648.
Order from LC mi$4.50, ph$12.30 PB 145 149

This report is concerned with a study of the delay properties of networks containing several variable parameters. The effect of a parameter change on the delay function of the network yields information that aids in the synthesis of high order variable delay lines. The Bridged-T network is used as a prototype section in this investigation.

Minneapolis-Honeywell [Regulator Co., Philadelphia, Pa.]
DEVELOPMENT AND CONSTRUCTION OF MILITARY TYPE CRYSTAL OVENS, by E. Snitzer and R. Strong. Quarterly progress rept. no. 1 for 1 June-1 Sep 55 on Contract DA 36-039-sc-64622. [1955] 26p. B. I. rept. no. 9203-2.
Order from LC mi$2.70, ph$4.80 PB 145 222

The coexistence of the solid, liquid, and vapor phases of a substance, or the coexistence of only the solid and liquid phases under conditions of approximately constant pressure, insures the constancy of the temperature over wide ranges of heat exchange with the surroundings. A constant temperature oven can be designed which takes advantage of this type of thermal ballast.

Minneapolis-Honeywell [Regulator Co., Philadelphia, Pa.]
DEVELOPMENT AND CONSTRUCTION OF MILITARY TYPE CRYSTAL OVENS, by E. Snitzer and R. Strong. Quarterly progress rept. no. 2, 1 Sep-1 Dec 55, on Contract DA 36-039-sc-64622. [1955] 25p. B. I. rept. no. 9203-3.
Order from LC mi$2.70, ph$4.80 PB 145 223

Designs are discussed for ovens which are based on a solid-liquid system. The change in volume on phase change is detected by a bellows which operates a microswitch. The Class A oven is based on the use of the triple point temperature. The actuating mechanism is a float connected to a bellows whose movement controls the heater supply through a microswitch. (See also PB 145 222)

Minneapolis-Honeywell [Regulator Co., Philadelphia, Pa.]
DEVELOPMENT AND CONSTRUCTION OF MILITARY TYPE CRYSTAL OVENS, by E. Snitzer and R. Strong. Quarterly progress rept. no. 3, 1 Dec 55-29 Feb 56, on Contract DA 36-039-sc-64622. [1956] 17p. B. I. rept. no. 9203-4.
Order from LC mi$2.40, ph$3.30 PB 145 224

Preparation of pure para-dibromobenzene. The Class "B" oven designed for the HC-13 crystal holder was filled. The other Class "B" oven is in the process of being assembled. The detailed drawings on the Class "C" ovens were completed. (See also PB 145 223)

Minneapolis-Honeywell [Regulator Co., Philadelphia, Pa.]
DEVELOPMENT AND CONSTRUCTION OF MILITARY TYPE CRYSTAL OVENS, by R. C. Whitehead and R. K. Strong. Final rept. for 1 June 55-1 Oct 56 on Contract DA 36-039-sc-64622. [1956] 33p. B. I.

rept. no. 9203-6.
Order from LC mi$3.00, ph$6.30 PB 145 225

Three classes of crystal ovens were built utilizing paradibromobenzene at its melting temperature of 87.36°C as the thermostatic material. In this report the design construction and filling are discussed. The Class B and C ovens were within the temperature stability specification. The Class A ovens did not operate satisfactorily. (See also PB 145 224)

National Bureau of Standards, Boulder, Colo.
APPLICATION OF RF MICROPOTENTIOMETERS FOR CALIBRATION OF SIGNAL GENERATORS TO 1000 Mc, by L. F. Behrent. Jan 60, 19p. 2 refs. Technical note no. 37.
Order from OTS $0.50 PB 151 396

With the RF Micropotentiometer, signal generator output voltage can be calibrated to 1000 Mc simply and accurately if the procedures outlined in this paper are carefully followed. The sources of error are discussed and methods for minimizing or eliminating them are described. Topics discussed include: rf shielding, selection of a suitable rf detector, impedance matching and the proper selection of voltage reference planes. (Author)

Naval Ordnance Lab., Corona, Calif.
MAGNETIC RING TELEMETER DEVELOPMENT, by M. G. Pawley and T. B. Jackson. Feb 54, declassified 17 June 54, 27p. NOL-CORONA rept. 110.
Order from LC mi$2.70, ph$4.80 PB 144 747

The Magnetic Ring Telemeter is a multichannel pulse position modulated telemeter that utilizes small saturable reactors in place of vacuum tubes in the ring counter chains required in the transmitter premodulator to affect time division for the several channel pulses. A magnetic ring counter chain is also used in the receiver decoder for separating the channel pulses prior to recording of the transmitted intelligence. The development of the Magnetic Ring Telemeter was initiated for the purpose of providing a telemeter with increased intelligence-handling capabilities. The size was to be kept at a minimum and the reliability increased over former models by utilization of new techniques. The development has been reported periodically in the PETREL progress reports. A general description was presented at the 3rd National Telemetering Symposium sponsored by the Research and Development Board at Patrick Air Force Base, Florida, March 17, 1953.

Naval Ordnance Lab., Corona, Calif.
VHF MULTIPLE-SLOT FIN-TYPE AND MICROWAVE DIELECTRIC ROD ANTENNA ASSEMBLY, by D. E. Rowe, Ivan Rainwater, and D. A. Schriner. 31 Aug 59, 26p. 2 refs. NOLC rept. 467; NAVORD rept. 5966.
Order from LC mi$2.70, ph$4.80 PB 144 942

The Naval Ordnance Laboratory Corona has developed a fin-type multiple-antenna structure for mounting on a supersonic rocket sled. It provides four slot antennas for simultaneous signal transmission on four telemeter channels without mutual interference and a dielectric rod X-band antenna for receipt of command signals. The antenna assembly has given satisfactory performance under severe rocket-sled service conditions in the transmitting range of 215 to 235 Mc. It is believed that the design can be adapted to fulfill other special antenna requirements. (Author)

Naval Ordnance Test Station, China Lake, Calif.
FUZING APPLICATION OF THE FOUR-LAYER DIODE, by Duane J. Russell. 15 Sep 59, 33p. 3 refs. NOTS TP-2317; NAVORD rept. 6587; AD-228 825.
Order from LC mi$3.00, ph$6.30 PB 144 986

A new semiconductor device called the Shockley Four-Layer Diode has appeared recently on the market. Its electrical characteristics make the device of special interest for application to fuzing systems since it can perform both the operations of timing and energy switching. Energies of up to one million ergs can be switched using units with higher breakover voltages. A limited testing program indicated that the usefulness of the four-layer diode as a timer would probably be restricted by its temperature sensitivity. Testing programs also indicate that the diode can withstand at least 10 g vibration near its resonant frequency and a steady acceleration of at least 9,000 g. (Author)

Naval Research Lab., Washington, D. C.
RADAR TARGET ANGULAR SCINTILLATION IN TRACKING AND GUIDANCE SYSTEMS BASED ON ECHO SIGNAL PHASE FRONT DISTORTION, by D. D. Howard. Interim rept. 23 Dec 59, 12p. 8 refs. NRL rept. 5430.
Order from LC mi$2.40, ph$3.30 PB 143 942

The slope of the echo signal phase front from a finite-size complex target is identical to the angular error caused in tracking radars by target angle noise. Thus, the target angle noise is contained in the echo signal as a distortion of the phase front. This new concept aids in visualizing the source of target angle noise and in assessing, in general, the effects of target angular scintillation or target angle noise on any target locating device. As an example, identical errors in target location also occur in a search radar. (Author)

Naval Research Lab., Washington, D. C.
THERMOELECTRICITY, by H. E. Stauss. Status rept. no. 1, Feb 59, 124p. NRL Memo rept. 901.
Order from LC mi$9.90, ph$34.80 PB 145 601

New materials and new methods of preparation indicate that a survey of thermoelectricity at this time is desirable and hold out promise that the development of practical thermoelectric generators is possible. Practical applications of Peltier cooling is already a fact. Overall efficiencies of 20% to 35% appear to be within the realm of possibility. There is a high probability that the figure of 20% can be achieved. Actual work on new materials for generators has hardly been started in this country. Intensive efforts have been made to derive guide lines for materials development. From the strictly experimental side, several types of materials have shown promise.

Naval Research Lab., Washington, D. C.
THERMOELECTRICITY, by H. E. Stauss. Status rept. no. 2, June 59, 56p. Memo. rept. 940.
Order from LC mi$3.60, ph$9.30 PB 145 602

In this report the material presented consists of: (1) the power to weight ratios of several thermoelectric generators, (2) the characteristics of thermoelements cooled by radiation, (3) the effect of increasing temperature upon efficiency, (4) materials data, and (5) changes and corrections in contracts. (See also PB 145 601)

Naval Research Lab., Washington, D. C.
THERMOELECTRICITY, by H. E. Stauss. Status rept. no. 3, Dec 59, 75p. 16 refs. Memo. rept. 969.
Order from LC mi$4.50, ph$12.30 PB 145 603

The progress on development of new materials is encouraging up to intermediate temperature levels. No results have yet been obtained from the small, early efforts to develop high temperature materials. Design and construction of the several generators on order is reported to be on schedule with no particular problems arising that were not anticipated. More efforts are now directed toward materials that will diffuse into the semiconductor with a minimum deterioration to the thermoelectric properties. Interest in nuclear powered thermoelectric generators is becoming more widespread, and efforts to explore material behavior in high energy environments are just starting. The materials data presented includes information of unusual interest on encapsulated materials. The results show the possibility of operating efficiently at appreciably higher temperatures than measurements have shown on material not enclosed. A review of Russian progress on thermoelectricity is presented as an Appendix. (See also PB 145 602)

New York U. Coll. of Engineering, N. Y.
AIR TRANSPORTABLE SHELTER FOR GROUND ELECTRONIC EQUIPMENT, by William D. Murray, Alan M. Nathan, and Harold Gussaroff. Rept. on Contract AF 30(602)205. 15 May 54, 129p. 51 refs. Technical rept. 222.05; RADC-TR-54-69; AD-43 896.
Order from LC mi$6.30, ph$19.80 PB 145 607

Analytical and experimental studies produced a shelter consisting of a structural framework with aluminum faced sandwich panels serving as walls, floors, and ceiling. Included are an air conditioning system, means for electronic shielding, and a mechanism for lifting the assembled shelter into or out of a flat bed truck or C-119 aircraft.

New York U. Coll. of Engineering, N. Y.
TRANSIENT RESPONSE AS A DESIGN CRITERION FOR STABILIZATION OF FEEDBACK AMPLIFIERS, by J. H. Mulligan, Jr. Rept. on Contract AF 49(638)586. Sep 59, 30p. 9 refs. Technical rept. 400-5; AFOSR-TN-59-1075.
Order from LC mi$2.70, ph$4.80 PB 144 770

A design criterion for use in the stabilization of feedback amplifiers is discussed which is concerned directly with pole locations and with a feature of the transient response. The criterion is the relative damping of the amplifier step-function response, i.e., the ratio of the deviations from unity in the normalized time response at two successive extreme values. Use of the proposed criterion in conjunction with a dominant term approximation to the transient response to formulate design equations for representative transistor and vacuum tube amplifier stages is demonstrated. Transient response curves for a particular design using various values of mid-band loop gain illustrate the effect of parameter changes on the stabilization design parameter. (Author)

STUDY OF AGING EFFECTS ON MILITARY PLATED CRYSTAL UNITS, by E. M. Washburn. Quarterly progress rept. no. 3, 1 Aug-31 Oct 53, on Contract DA 36-039-sc-42670. [1953] 90p.
Order from LC mi$4.80, ph$13.80 PB 145 196

The aging curves of seventy crystal units have revealed three important characteristics. Heavily contoured 1000 Kc AT-cut units show a positive frequency shift followed by a stabilization. Third overtone 50 Mc plated crystals are negatively at a rapid rate with no indication of stabilization. There is very low aging of both fundamental 10 Mc and fifth overtone 50 Mc units wherein the quartz plates had been polished by optical methods. (See also PB 145 195)

Radio Corp. of America, Camden, N. J.
STUDY OF AGING EFFECTS ON MILITARY PLATED CRYSTAL UNITS, by E. M. Washburn. Quarterly progress rept. no. 4, 1 Nov 53-31 Jan 54, on Contract DA 36-039-sc-42670. [1954] 135p.
Order from LC mi$6.90, ph$21.30 PB 145 197

Factors of evacuation, gas filling and sealing are of paramount significance in achieving low aging crystal units. The individual aging curves of 105 units are presented. (See also PB 145 196)

Radio Corp. of America, Camden, N. J.
STUDY OF AGING EFFECTS ON MILITARY PLATED CRYSTAL UNITS, by E. M. Washburn. Quarterly progress rept. no. 5, 1 Feb-30 Apr 54, on Contract DA 36-039-sc-42670. [1954] 147p.
Order from LC mi$7.20, ph$22.80 PB 145 198

This report shows the aging characteristics of 103 crystal units. The gold evaporation plating problem has been resolved. The two most important factors in obtaining the required adhesion are freedom from crystal surface contamination and infra-red heating of the quartz plates to a temperature between 300°C and 400°C before plating. (See also PB 145 197)

Radio Corp. of America, Camden, N. J.
STUDY OF AGING EFFECTS ON MILITARY PLATED CRYSTAL UNITS, by E. M. Washburn. Quarterly progress rept. no. 6, 1 May-31 July 54, on Contract DA 36-039-sc-42670. [1954] 125p.
Order from LC mi$6.30, ph$19.80 PB 145 199

This report contains actual aging curves for more than 125 units, with a brief description of the aging characteristics of each group. (See also PB 145 198)

Radio Corp. of America, Camden, N. J.
STUDY OF AGING EFFECTS ON MILITARY PLATED CRYSTAL UNITS, by E. M. Washburn. Quarterly progress rept. no. 7, 1 Aug-31 Oct 54, on Contract DA 36-039-sc-42670. [1954] 165p.
Order from LC mi$7.80, ph$25.80 PB 145 200

There appear to be three phases of aging effects. The initial deviation in frequency experienced by the majority of units is during the first month after fabrication. The second phase covers a period of about six months and is characterized by a tendency towards frequency stabilization. The third phase is a retarded effect, not greatly influencing crystal unit performance until six or seven months after fabrication and exposure to an elevated temperature such as +75°C. Latest techniques in lapping, etching, plating and mounting of the crystal units currently being produced. (See also PB 145 199)

Radio Corp. of America, Somerville, N. J.
INDUSTRIAL PREPAREDNESS STUDY ON DEVICE 1, by J. E. Wright and P. A. Wemett. Quarterly rept. no. 2, 1 Nov 57-31 Jan 58, on Contract DA 36-039-sc-72709. 1 Apr 58, 22p. AD-160 634.
Order from LC mi$2.70, ph$4.80 PB 138 053

Both p-n-p and n-p-n versions of device 1 are being developed to meet Spec MIL-T-19500A. Both versions are being fabricated.

Radio Receptor Co., Inc., Brooklyn, N. Y.
INDUSTRIAL PREPAREDNESS STUDY ON SILICON JUNCTION CRYSTAL DIODES, by William E. Harding and Melvin Klein. Final engineering rept. on Contract DA 36-039-sc-70264. [1958] 225p. AD-161 315.
Order from LC mi$9.90, ph$24.80 PB 138 096

The developmental history, design, construction, electrical characteristics, and pilot line manufacturing process are discussed for the 1N658 glass-encapsulated, Si junction diode. The diode has high forward conductance, fast reverse recovery, and low leakage at room and elevated temperatures. The basic rectifying structure is a p-n-n+ assembly consisting of an n-type Si die with an Al wire alloyed to one surface to form the p-n junction; an Sb-doped Au disk is alloyed to the opposite side to form the n-n+ junction. External connections consist of a Dumet lead spot welded to the Al wire and a Dumet lead soldered to a Kovar disk. The leads are hermetically sealed in a glass capsule which is evacuated. A pilot production yield of 25% was obtained for the diode. (See also PB 132 079)

Raytheon Mfg. Co., Newton, Mass.
INDUSTRIAL PREPAREDNESS STUDY ON TRANSISTORS AND AUTOMATIC MACHINERY FOR THEIR MANUFACTURE, by Frank M. Dukat and George Freedman. Quarterly rept. no. 9, 28 Mar-28 June 57, on Contract DA 36-039-sc-66038. [1957] 72p. AD-159 993.
Order from LC mi$4.50, ph$12.30 PB 138 050

The stability resulting from packaging processes was investigated. The use of SR-98 base coat required DC-4 silicone grease or other protective processing to eliminate the collector diode current (I_{co}) and the floating potential (V_{if}) problems encountered in environmental testing. Exhausting of the weld gases and solder sealing in a nitrogen atmosphere did not reduce the I_{co} problem. The change from the type E to the type 30 package in itself produced no significant change in in-line yields. Two package processing experiments showed that if no base coat, or silicone grease or oil is used, high in-line rejection levels occur for I_{co} and V_{if}. Units packaged with 50% SR-98 base coat and DC-4 silicone grease applied around the unit resulted in the highest in-line yields coupled with the best over-all stability. (See also PB 138 094)

Research Lab. of Electronics, Mass. Inst. of Tech., Cambridge.
NEW METHOD OF MEASURING THE NOISE PARAMETERS OF THE ELECTRON BEAM, ESPECIALLY THE CORRELATION BETWEEN ITS VELOCITY AND CURRENT FLUCTUATIONS, by Shigebumi Saito. Rept. on Contract DA 36-039-sc-64637. 22 Aug 57, 52p. 8 refs. Technical rept. no. 333; AD-201 537.
Order from LC mi$3.60, ph$9.30 PB 145 132

The noise figure of a microwave beam amplifier has a lower limit that depends entirely upon the noise process in the electron gun at and near the potential minimum. This report is chiefly concerned with the theory and experimental results of a new method of measuring the noise parameters of the electron beam, especially the correlation between its velocity and current fluctuations, by using a selective beam coupler that has properties similar to the conventional microwave directional coupler. The value of the correlation coefficient of the velocity and current fluctuations was found to be from 0.2 to 0.35 in the space-charge-limited region and zero, or slightly negative, in the temperature-limited region. The probable error of this measuring method is discussed by taking account of the residual selectivity of the selective beam coupler, the effect of the pickup cavities upon the beam, the thermal noise from these cavities, and the higher-order modes.

Research Lab. of Electronics, Mass. Inst. of Tech., Cambridge.
A STUDY OF ASYNCHRONOUS LOGICAL FEEDBACK NETWORKS, by Stephen H. Unger. Doctoral thesis. Rept. on Contract DA 36-039-sc-64637. 26 April 57, 47p. 13 refs. Technical rept. no. 320; AD-150 502.
Order from LC mi$3.30, ph$7.80 PB 145 436

The systems considered are asynchronous, dc-level, sequential switching circuits; that is, there are no clock pulses, and the signals are represented, not by pulses, but by variables that can assume values in either of two nonoverlapping ranges. The analysis of these circuits is discussed, with emphasis on the problem of choosing state variables. A relationship has been established between the number of rows of a reduced flow matrix and the feedback index of the associated circuit and, furthermore, the need for amplification around each feedback loop has been proved. The major portion of the research is devoted to a study of the effects of stray delays on the operation of sequential switching circuits.

Research Lab. of Electronics, Mass. Inst. of Tech., Cambridge.
THEORY OF LOW-DISTORTION TRANSMISSION OF FM SIGNALS THROUGH LINEAR SYSTEMS, by Elie J. Baghdady. Rept. on Contract DA 36-039-sc-64637. 30 July 57, 50p. 10 refs. Technical rept. 332.
Order from LC mi$3.30, ph$7.80 PB 145 340

The convergence properties of the Carson and Fry and of the van der Pol-Stumpers expansions for the complex amplitude of the steady-state response of a filter to an FM excitation are discussed. The theory of quasi-stationary analysis and of FM-to-AM conversion with low distortion is presented. The use of Taylor's formula leads to error estimates and to a simple condition that specifies an upper bound on the error incurred in restricting the solution to the quasi-stationary term (the instantaneous-frequency method). A sluggishness ratio and an index of stiffness are defined for filters whose system functions have poles only in the left half-plane. Sluggishness ratios and indices are given for various filters of wide practical interest.

Sage Labs., Inc., Wellesley, Mass.
INVESTIGATION INTO THE DESIGN OF ROTATING MECHANICAL PHASE SHIFTING DEVICES, by Jay J. Chacran and Theodore S. Saad. Final rept. on Contract AF 19(604) 1844. 31 Dec 58, 51p. AFCRC-TR-59-156; AD-216 764.
Order from LC mi$3.60, ph$9.30 PB 145 301

The advent of more complicated antenna systems has lead to the need for various components that make such systems practical. One of these components, a continuous phase shifter, is described. This phase shifter operates over the 400- to 440-mc band with VSWR≤1.13, insertion loss≤0.8 db, rotational variation≤0.3 db, and deviation from phase linearity ≤ + 7.0 to -3°.

Stanford Electronics Labs., Stanford U., Calif.
A CLASS OF SYSTEMATIC CODES FOR NON-INDEPENDENT ERRORS, by N. M. Abramson. Technical rept. no. 51 on Contract Nonr-225(24). 30 Dec 58, 35p. 9 refs.
Order from LC mi$3.00, ph$6.30 PB 144 933

A class of systematic codes has been obtained which will correct all single errors and all double errors which occur in adjacent digits. These codes use significantly fewer checking digits than codes which correct all double errors. In addition, because of inherent regularities in their structure, these codes may be instrumented in a strikingly simple fashion. (Author)

Stanford Electronics Lab., Stanford U., Calif.
AN INVESTIGATION OF THE MAGNETRON AMPLIFIER, by B. A. Wightman. Technical rept. no. 52 on Contract Nonr-225(24). 9 Feb 59, 99p. 32 refs. AD-211 869.
Order from LC mi$5.40, ph$15.30 PB 144 812

The magnetron amplifier is investigated because of its promise of efficiencies in excess of fifty percent. Two problems are dealt with: an analytical investigation of the interaction at small signal levels, and an experimental effort to adapt the zig-zag line for the higher power requirements in the magnetron amplifier. The model for the space-charge effects

postulated by Heffner and Unotoro is inserted into the Pierce analysis of the magnetron amplifier. The result includes a determinantal equation for the space-charge-wave interaction which is the same as Gould's, but the analysis embraces all interactions. These interactions are examined with respect to the energy exchange between beam and circuit in order to determine which interactions are useful. The selection of a slow-wave circuit for the magnetron amplifier is discussed, and the zig-zag line is chosen for its low dispersion. This circuit was adapted for higher powers by mounting on a ceramic of high thermal conductivity which was undercut to minimize dielectric loading. The circuit thermal capacity was satisfactory, but the effect of the undercutting was not as great as anticipated. The coupling impedance was reduced and the attenuation increased excessively for a high-efficiency application. An experimental amplifier using this circuit had an efficiency of only twelve percent. (Author)

Stanford Electronics Labs., Stanford U., Calif.
PHYSICAL PRINCIPLES OF AVALANCHE TRANSISTOR PULSE CIRCUITS, by D. J. Hamilton, J. Gibbons, and W. Shockley. Technical rept. no. 53 on Contract Nonr-225(24). 17 Feb 59, 22p. 6 refs.
Order from LC mi$2.70, ph$4.80 PB 144 811

A simple physical theory is developed which permits a calculation of the significant points of avalanche transistor transient behavior. A model for the transistor is defined in terms of charge variables and the physical parameters of the device. The transient performance of the model is calculated by focusing attention on the minority carrier charge stored in the base region and the influence of base-width modulation upon this stored charge. In the charge formulation of the problem the physical details of the avalanche multiplication process need not be considered; multiplication is accounted for by the boundary conditions which it imposes upon the stored charge. Good agreement has been obtained between calculated and experimentally observed data for a simple avalanche transistor relaxation oscillator. (Author)

Stanford Research Inst., Menlo Park, Calif.
INVESTIGATION OF PRINTED CIRCUIT ECM ANTENNAS, by E. M. T. Jones. Final rept. for 1 Dec 55-15 Aug 58 on Contract AF 19(604)1571. July 58, 12p. AFCRC-TR-58-176; AD-160 817.
Order from LC mi$2.40, ph$3.30 PB 137 448

Summaries are given of studies in the following categories: novel types of printed circuit driving elements, wideband radiating structures, and modulated surface-wave antennas. Novel types of wideband driving circuits are being investigated which can be constructed by printed circuit techniques and have particular application to ECM antennas. These circuits included strip-line 3-db directional couplers, broadband 90° phase shifters, and wideband baluns. The studies of wideband radiating structures were concerned with flush-mounted leaky-wave antennas, printed-circuit zig-zag radiators, and dielectric-filled ECM-horn antennas.

[Stelma, Inc., Stamford, Conn.]
DEVELOPMENT AND CONSTRUCTION OF REPEATER, TELEGRAPH TH-18( )/FG, by L. M. Carver. Final rept. for 23 June 53-26 Jan 57 on Contract DA 36-039-sc-52675. [1957] 127p. AD-126 100.
Order from LC mi$6.30, ph$19.80 PB 145 193

The purpose of the contract is to develop a general purpose electronic regenerative repeater to correct dc teleprinter signal distortion and improve transmission on wire and radio circuits and to produce 13 service test repeaters after tests were performed on the first two prototypes. Specifications for the equipment are outlined in Technical Requirement SCL-1436. A breakdown of tasks in the job can be made generally following circuit sections of the equipment as follows: (A) Packaging; (B) Input circuits; (C) Timing circuits; (D) Synchronous circuits; (E) Sampling circuits; (F) Output circuits and (G) Power Supply circuits.

Technische Hochschule, Munich (West Germany).
WAVE PROPAGATION AND OSCILLATIONS IN PLASMA BODIES, by W. O. Schumann. Technical final rept. for 1 Apr 58-31 Mar 59 on Contract AF 61(052)79. [1959] 44p. 11 refs. AD-225 053.
Order from LC mi$3.30, ph$7.80 PB 145 170

The propagation of electromagnetic waves and appearances of oscillations in a coaxial cable, the inner conductor of which was a plasma, were investigated under the influence of an external longitudinal magnetic field and the results were compared with the theory. (Author)

Transitron Electronic Corp., Wakefield, Mass.
THE FABRICATION OF SILICON CARBIDE JUNCTIONS, by Karl M. Hergenrother. Scientific rept. no. 1 on Contract AF 19(604)4989. 5 Nov 59, 13p. AFCRC-TN-59-960.
Order from LC mi$2.40, ph$3.30 PB 144 974

It has been found possible to grow P-N junctions in silicon carbide by depositing a single crystal film from the vapor phase onto a silicon carbide seed. The junction is made by adding impurities to the ambient gas in the furnace during the crystal growth. These P-N junctions are suitable for fabricating diodes and other junction devices which will operate at 500°C and have relatively good resistance to high energy radiation.

Varian Associates, Palo Alto, Calif.
RESEARCH ON MOLECULAR AND ATOMIC RESONANCE DEVICES, by J. C. Helmer, H. S. Weaver and others. Quarterly rept. no. 4, 1 Apr-30 June 58, on Contract DA 36-039-sc-73266. [1958] 33p. 8 refs. Engineering rept. no. 218-4Q.
Order from LC mi$3.00, ph$6.30 PB 145 232

Measurements have been completed on the new parabolic beam focuser. The results show that at a given power output the molecular flow rate is reduced by a factor of eight, and at maximum power output the power has been increased by a factor of 2.5. An experiment is described which conclusively shows

that paramagnetic resonance in $BaTiO_3$ is a volume rather than a surface effect.

Varian Associates, Palo Alto, Calif.
RESEARCH ON MOLECULAR AND ATOMIC RESONANCE DEVICES, by J. C. Helmer, R. C. Rempel and others. Quarterly rept. no. 5, 1 July-30 Sep 58, on Contract DA 36-039-sc-73266. [1958] 43p. 23 refs. Engineering rept. no. 218-5Q.
Order from LC mi$3.30, ph$7.80 PB 145 233

Research in molecular beam masers has included the investigation of noise in quantum mechanical systems, the frequency-mixing properties of quantum mechanical systems, and the determination of methods for improving maser performance and reducing the threshold beam intensity required for oscillation. In the solid-state maser program, it has been shown that $SrTiO_3$ containing an Fe^{3+} impurity is a suitable material for a zero field, three-level maser. Methods have been developed for growing single crystals of $BaTiO_3$ and $SrTiO_3$. (See also PB 145 232)

Varian Associates, Palo Alto, Calif.
RESEARCH ON MOLECULAR AND ATOMIC RESONANCE DEVICES, by J. C. Helmer and H. E. Weaver. Quarterly rept. no. 6, 1 Oct-31 Dec 58, on Contract DA 36-039-sc-73266. [1958] 38p. 17 refs. Engineering rept. no. 218-6Q.
Order from LC mi$3.00, ph$6.30 PB 145 234

A summary of the dielectric properties of $SrTiO_3$ at low temperatures is included. Equations are set up for the design of molecular beam masers with prescribed characteristics. It is shown that it is necessary to compromise between molecular Q and power output. The problems of detecting oscillation are considered, and solutions are proposed for novel types of particle and photon detectors. (See also PB 145 233)

Westinghouse Electric Corp., Boston, Mass.
RESEARCH ON SILICON CARBIDE TRANSITORS. Scientific rept. no. 4, 15 Jan-15 July 59, on Contract AF 33(616)5592. [1959] 42p. 5 refs. AFCRC-TN-59-951.
Order from LC mi$3.30, ph$7.80 PB 144 975

Boron-tin-platinum alloy was found to be promising for forming p-n junctions in n-type silicon carbide. The rectification ratios for the fused junctions were higher for higher fusion temperature and greater temperature gradient normal to the regrowth layer.

Westinghouse Research Labs., Pittsburgh, Pa.
SYNTHESIS AND PURIFICATION OF DIELECTRIC MATERIALS, by T. W. Dakin, R. N. Wenzel and others. Rept. for 1 July 58-30 June 59 on Electrical and Electronic Materials, Contract AF 33(616)5979. Oct 59, 141p. 37 refs. WADC Technical rept. 59-337, Pt. 1.
Order from OTS $2.75 PB 161 366

This project seeks to improve the dielectric properties in inorganic insulating materials, for use at 500°C through rigorous exclusion of impurities. Results to date with boron nitride, alumina, silica and reconstituted mica are presented. Methods of synthesizing the pure materials and preparing test specimens without contamination are described. Dielectric measurements are reported over the temperature range 25° to 500°C and at frequencies 60, 10^3 and 10^5 cycles per sec. Boron nitride prepared from purified chemicals showed lower low frequency dissipation factors and higher resistances at 500°C than have heretofore been reported for any known material. With alumina, the high temperature dielectric properties of the best single crystal sapphire examined were equalled and somewhat surpassed. Little improvement could be effected, however, in reconstituted mica through purification by dialysis or electrodialysis. (Author)

Willow Run Labs., U. of Michigan, Ann Arbor.
A CALIBRATED SHAKE TABLE FEATURING LINEAR AIR SPRING SUSPENSION, by James H. Prout, John W. Wescott, and William H. Follett. Rept. on Project Michigan, Contract DA 36-039-sc-52654. Aug 58, 15p. 2 refs. Rept 2144-309-T.
Order from LC mi$2.40, ph$3.30 PB 145 120

In an electromechanical transducer designed especially for calibration of geophones wide frequency response is made possible by the use of feedback within the driver amplifier and over-all feedback from a sampling coil mounted on the moving platform. An adjustable "air spring" accommodates static loads up to 30 pounds. Integration of the shaker with a complete automatic calibration system is described. (Author)

Aeronautical Research Lab., Wright Air Development Center, Wright-Patterson AFB, Ohio.
A STUDY OF THE SATELLITE EQUATIONS OF MOTION AND TRANSFER ORBITS, by Lynn E. Wolaver. Dec 58, 174p. 3 refs. WADC Technical note 58-378; AD-215 854.
Order from LC mi$8.10, ph$27.30 PB 144 858

The equations of motion are derived for a satellite moving about a spherical earth and subject to a direct or retro-grade impulse thrust. The cases of direct thrust to lengthen the apogee and retro-grade thrust to initiate re-entry into the earth's atmosphere are considered. Direct thrust values needed to obtain a given apogee are found and presented graphically. Thrust errors in magnitude and alignment angle are considered. For the retro-grade thrust at apogee, the re-entry velocity, re-entry angle, and re-entry distance from apogee are determined and shown graphically. The effects of thrust errors both in magnitude and misalignment angle, including the radial thrust case, are derived and shown in graphs. The same quantities are also found for the case of retro-grade thrust applied at perigee. The general transfer orbit case is considered. Given any initial elliptical orbit and a point on that in terms of its

angular distance from apogee, and given the thrust components to be applied at that point, then the re-entry velocity and re-entry angle may be found by a simple graphical solution. Use is made of relationships in the energy-angular momentum plane. (Author)

Air Force Cambridge Research Center, Bedford, Mass.
SPACE PROBES AND PERSISTENCE OF STRONG TROPOPAUSE LEVEL WINDS, by H. Salmela and N. Sissenwine. Dec 59, 15p. 1 refs. GRD Research notes no. 26; AFCRC-TN-59-652.
Order from OTS $0.50 PB 161 431

When current military missiles are used as boosters of scientific space probes, additional components required for certain experiments will result in missile configurations which are more critical to strong tropospheric wind profiles than for the basic military missile. The persistence of certain critical tropopause-level Cape Canaveral-Patrick Air Force Base wind speeds is investigated. The probabilities of various durations are presented in tables. (Author)

Air Force Missile Development Center, Holloman AFB, N. Mex.
DETERMINATION OF RADIANT ENERGY REQUIREMENTS FOR PHOTOGRAPHIC SPACE VEHICLE TRACKING, by Thomas P. Rona. Nov 59, 19p. 3 refs. AFMDC-TN-59-31.
Order from LC mi$2.40, ph$3.30 PB 144 978

Photographic tracking, known to supply far better accuracy in angular resolution than conventional CW and pulsed microwave radar techniques, is not in widespread use for missiles and artificial satellites mainly because it lacks appropriate flash transponders. It is shown that the signal-to-noise ratio is, for optical tracking in clear atmosphere, at least equal to, but often superior to, radar communication; it is further shown that techniques for vehicle-borne flash sources are within the state of the art, and finally that star background reference can be made available for increased absolute accuracy. Daylight optical tracking is possible with optics of sufficient aperture. (Author)

ROCKET FLIGHT AND EARTH SATELLITE ORBITS, by James E. Norman. 1 July 58, 32p. 6 refs. Rept. no. 2R28p; AD-200 412.
Order from LC mi$3.00, ph$6.30 PB 145 618

The problem of rocket propulsion of an earth satellite into orbit is analyzed, utilizing Kepler's laws for description of orbital parameters. The motion of the rocket during powered flight is treated subject to certain simplifying assumptions, and final vehicle energy related to orbital energy. Examples of hypothetical satellite missions are given. (Author)

Avco Research Lab., Everett, Mass.
REDUCTION OF FLIGHT TIME AND PROPELLANT REQUIREMENTS OF STAELLITES WITH ELECTRIC PROPULSION BY THE USE OF STORED ELECTRICAL ENERGY, by Morton Camac. Rept. on Contract AF 49(638)61. Oct 58, 28p. 8 refs. Research rept. 36; AFOSR-TN-58-1013; AD-206 156.
Order from LC mi$2.70, ph$4.80 PB 138 439

This paper analyzes flight plans for satellites having a lower thrust than the local gravitational forces. The minimum impulse plan to go from a low circular orbit to a high altitude orbit is accomplished with the Hohmann transfer ellipse which requires two short impulses. It will be shown that electrical propulsion can also use impulse and still have a complete utilization of the available energy when energy storage is incorporated in the propulsion system. The extent to which this electrical storage is useful for reducing the flight time and propellant consumption is the subject of this paper.

Ballistic Research Labs., Aberdeen Proving Ground, Md.
EXPLOSION IN WIND TUNNEL AIR LINE, by T. L. Smith. Sep 59, 20p. 2 refs. Memo. rept. no. 1235.
Order from LC mi$2.40, ph$3.30 PB 144 901

On 10 February 1959 a pipe line carrying compressed air at 750 psi exploded in two places. The air had been contaminated with oil. This report covers the explosion, and some pertinent facts learned as a result of the ensuing investigation. Total damage will be about $250,000. (Author)

EFFECTS OF SMALL CHANGES IN POSITION AND VELOCITY AT BURNOUT ON THE ORBIT OF A BALLISTIC MISSILE, by Edouard E. Perret and John C. Corbin, Jr. Oct 59, 33p. WADC Technical note 59-336.
Order from OTS $1.00 PB 161 409

The effects of small changes in position and velocity at burnout on the orbit of a ballistic missile have been examined. It is shown that assumed spherical distributions of error in position or velocity at burnout propagate as error ellipsoids of position of increasing eccentricity with time. The results can be used to assess the accuracy required in establishing the position and velocity of the missile at burnout (1) to accomplish interception at various points on the orbit (defensive sense), or (2) to achieve a desired CEP at impact (offensive sense). In addition, the relative motion of closely spaced missiles and/or decoys having the same or slightly different velocities can be examined. (Author)

Feltman Research and Engineering Labs., Picatinny Arsenal, Dover, N. J.
DEVELOPMENT OF TEST APPARATUS TO MEASURE SHOCK PROTECTION OFFERED BY PACKAGING TO MISSILE COMPONENTS, by George Zell. Aug 59, 9p. Final engineering rept. FR: 1-60.
Order from LC mi$1.80, ph$1.80 PB 144 737

The extremely high cost and shock sensitivity of complex missile system components necessitates elaborate and expensive protective packaging to eliminate damage from shocks sustained in transit. Since the shock response of components, containers and isolation systems is a function not only of shock magnitude, but also of the duration and waveshape of the shock, the laboratory shock apparatus must be capable of reproducing all three parameters as they occur in the environments. A survey of the shock simulation systems currently available indicated that the HYGE shock tester most closely met the performance criteria that had been established through extensive study of transportation shock data.

Feltman Research and Engineering Labs., Picatinny Arsenal, Dover, N. J.
DYNAMIC TESTING OF CUSHIONING MATERIALS FOR PACKAGING, by Theodore Fruchtman and Samuel A. Gee. Final engineering rept. Aug 59, 6p. 1 ref. FR: 2-60.
Order from LC mi$1.80, ph$1.80 PB 145 152

This assignment is related to the general object of improving sensitive devices, by the consideration of packaging to protect the devices during transportation and handling. Specifically, cushioning material of various kinds and dimensions, were tested and information compiled for the determination of optimum efficiency and economy in reducing the shock below the breaking point or fragility factor of the item to be packaged. Resultant data were recorded and charted. Incidentally, improvements were made in the original test equipment specified for this work. (Author)

Feltman Research and Engineering Labs., Picatinny Arsenal, Dover, N. J.
GAS GENERATOR FOR THE E120 BOMBLET, by Arthur Graff. Dec 59, 29p. 2 refs. Technical rept. 2633.
Order from LC mi$2.70, ph$4.80 PB 145 151

An igniter composition and an intermediate composition were developed for ignition of the gas-generating propellant composition for use in the E120 bomblet. The igniter contains barium chromate (78.2%), zirconium (20.8%), and vinyl alcohol-acetate resin (1.0%). The intermediate is a 50/50 mixture of the igniter and the propellant. A one-piece molded plastic insulator cup was developed. A technique for loading the igniter, intermediate, and propellant compositions as a single increment was devised. A test fixture of the liquid pressurizer type was designed, fabricated, and used in testing the gas generator. Functioning characteristics of the gas generator in the test fixture were established. (Author)

A THEORETICAL INTERIOR BALLISTIC STUDY OF RECOILLESS HIGH-LOW-PRESSURE GUNS, by D. J. Katsanis. June 59, 55p. 17 refs. Rept. R-1513.
Order from LC mi$3.60, ph$9.30 PB 144 977

The general theory of high-low-pressure recoilless guns is derived and discussed. Analytical solutions are obtained for the high-pressure section; performance stability is evaluated for tubular and cord shaped propellant grains with a linear burning rate and for tubular grains with a plateau type burning rate.

General Electric Co., Schenectady, N. Y.
COMPLETE MISSILE: - NORMAL FORCE COEFFICIENTS AND CENTER OF PRESSURE, by Otto Klima, Jr. and Margaret M. Iavelle. 28 Oct 52, declassified, 4p. Hermes A-3B Aero Data memo. no. 14B.
Order from LC mi$1.80, ph$1.80 PB 145 080

In addition to the slightly revised curves here recommended for the chosen fin size (58" root chord) all available test points are also shown. The tests were made, however, only for models representing 50" and 60" fullscale fins.

[General Electric Co., Schenectady, N. Y.]
EFFECT OF LARGE PITCH ANGLES ON STATIC STABILITY IN YAW FOR SMALL YAW ANGLES, by Otto Klima, Jr. and Helen C. Engvold. 27 Oct 52, declassified. 5p. Hermes A-3B Aerodynamic data memo. 14C.
Order from LC mi$1.80, ph$1.80 PB 144 888

Results of wind-tunnel tests recently conducted at

Aberdeen at M = 3.80 and 2.47 to determine the effect of large angles of attack (in pitch) on the center of pressure in the yaw plane, for small yaw angles, are presented.

General Electric Co., Schenectady, N. Y.
FORCE AND BENDING MOMENT IN PLANE OF FIN, by R. B. Chamberlin. 5 Feb 54, declassified. 1p. 2 refs. Hermes A-3B Aerodynamic data memo. no. 11F.
Order from LC mi$1.80, ph$1.80 PB 145 081

This memorandum supplements the other memorandums in this series. The maximum and nominal forces and bending moments on one fin are presented for power-on and power-off flight. The force vector is contained in the plane of the fin and also in a plane which is perpendicular to the plane of the fin and is parallel to the body axis. The bending moment is in the plane of the fin and is measured about the intersection of the hinge line and the body skin. These data are pertinent to a test of a fin actuator under flight conditions.

General Electric Co., Schenectady, N. Y.
MAXIMUM TAIL LOADS DURING POWERED FLIGHT, by R. B. Chamberlin. 31 Dec 53, declassified. 1p. 4 refs. Hermes A-3B Aerodynamic data memo. no. 11E.
Order from LC mi$1.80, ph$1.80 PB 145 082

The maximum load (including tolerances stated below) normal to the missile axis on one fin is 5250 pounds for A-3B missiles having command guidance equipment with a maximum output as specified in reference 1 and launched under fair weather conditions at White Sands Proving Grounds.

STATISTICAL METHODS IN AIRBORNE FIRE CONTROL THEORY. ERROR STUDIES, by Melvin D. Springer. 8 Apr 57, 66p. 3 refs. NAFI-TP-15; AD-129 382.
Order from LC mi$3.90, ph$10.80 PB 144 663

A study is made of mechanization and input errors which arise in connection with a fire-control system. Two methods of evaluating mechanization error are explained: (1) the errors which occur when each component unit alone is malfunctioning are calculated and then combined statistically to determine a confidence interval for the system output error which applies when all component units are malfunctioning simultaneously; and (2) the component errors are considered simultaneously and the resultant error in the output of the system is evaluated by calculating a total differential. The procedures involve static or dynamic methods of error analysis, respectively. The errors in the system output caused by input errors are also analyzed by these methods. If the combined effect of mechanization error and input error are analyzed, the methods may be employed provided the 2 types of errors are mutually independent.

Naval Ordnance Lab., Corona, Calif.
THE NOLC ROCKET SLED AS A SUPERSONIC ENVIRONMENT SIMULATOR, by D. E. Rowe, J. L. Day, and L. H. Witbeck. 27 Aug 59, 32p. 5 refs. NAVORD rept. 5967; NOLC rept. 468.
Order from LC mi$3.00, ph$6.30 PB 144 988

The NOLC Rocket Sled was designed and built by the Naval Ordnance Laboratory Corona as a research test vehicle for use on the Supersonic Naval Ordnance Research Track (SNORT) at the Naval Ordnance Test Station, China Lake, Calif. It provides NOLC with a reliable means for the supersonic environment testing of guided missile components and ordnance items during their development and evaluation stages. It is believed that the design ideas incorporated in the sled can be adapted to the needs of other activities interested in building test vehicles for similar purposes. (Author)

Naval Weapons Lab., Dahlgren, Va.
WATER IMPACT TESTS OF THE MOD 6 AND MOD 7 DATA CAPSULE, FINAL REPORT, by D. W. Culbertson. Final rept. 4 Nov 59, 83p. 8 refs. NWL rept. no. 1681.
Order from LC mi$4.80, ph$13.80 PB 144 983

The Mod 6 and Mod 7 Data Capsule and its payload will reliably survive water impact at terminal velocities of 450 ft/sec when impacted within the spherical sector defined respectively for the Mod 6 by a 16.9" and for the Mod 7 by a 18" diameter circle on the lower hemisphere of the capsule. Separation and breakaway of the shell fragments do not occur until after complete penetration by the capsule. (Author)

Springfield Armory, Mass.
COMPARATIVE EVALUATION OF CHROMIUM PLATED M14 RIFLE BARRELS FABRICATED FROM CHROME-MOLY-VANADIUM STEEL AND ORD 4150 RESULPHURIZED STEEL, MIL-S-11595(ORD), by T. P. Jones, S. D. Caloccia and others. 3 Aug 59, 88p. SA-TR11-2621.
Order from LC mi$4.80, ph$13.80 PB 144 924

Results of erosion tests, and standard and accelerated firing tests for both materials were satisfactory. Bore damage for both materials was nearly equal. In view of known potential savings, use of ORD 4150 resulphurized steel is recommended.

HABITABILITY OF A DIFFUSION-TYPE PROTECTIVE SHELTER IN SUMMER WEATHER (KIT, CONVERSION, MEDIUM G. P. TENT, PROTECTIVE SHELTER, E21) by F. N. Craig and P. J. Edgar. Aug 59, 29p. 18 refs. CWLR-2300.
Order from LC mi$2.70, ph$4.80 PB 144 683

The E21 protective shelter kit provides an assembly for a protective shelter within a tent to permit 10 to 12 men to function without personal protective equipment during a CBR attack. A physiological assessment of the shelter is described. The method involved placing 12 subjects within the shelter for 7 to 8 hours on 2 days and 3 subjects for the same period on one other day. Oral temperatures and pulse rates were taken periodically as indices of thermal stress. Environmental data included analysis of CO_2 and O_2 concentration of the shelter air, air temperatures, relative humidities, wet-bulb-globe temperature indices, and wind velocities. The usefulness of the shelter appears to be limited in hot weather due to an interference with the loss of body heat from the men. (Author)

SEWERAGE SYSTEMS. 1 May 54, 133p. Technical pub. NAVDOCKS TP-PW-15; BUDOCKSINST 11345.2.
Order from LC mi$6.90, ph$21.30 PB 145 542

This publication provides guidance to Bureau and field personnel concerned with the planning, design, construction, maintenance, and operation of sewerage systems and appurtenant facilities for the collection, transportation, treatment, and disposal of sewage at naval shore activities. Part A delineates the general authority under which the Bureau of Yards and Docks is delegated administrative and operational responsibilities for sewerage systems. It also presents the policies, standards, and responsibilities of this Bureau in performing its mission, as well as operational policies and procedures and a list of definitions and abbreviations. Part B deals with design and construction criteria for sewerage systems and includes an analysis of sewage quantity and characteristics, collection systems, pumping facilities, treatment and disposal methods and equipment, and safety measures. Part C covers maintenance and operation procedures for collection systems, pumping facilities, and treatment and disposal systems. Emphasis is placed on gas-handling and backflow-prevention devices, personnel safety measures, stream pollution supervision and laboratory test procedures. Appendix A contains a report on the hazards of production and use of sludge gas. Appendix B contains further information on the responsibilities of the District Public Works Officer for sanitation control. (Author)

NUCLEAR RADIATION SHIELDING PROVIDED BY BURIED SHELTERS, by J. C. LeDoux. Interim rept. 27 Oct 59, 76p. 17 refs. Technical rept. 025.
Order from LC mi$4.50, ph$12.30 PB 145 155

This report presents methods of calculating the attenuation of initial gamma, initial neutron, and residual gamma radiation incident upon buried shelters from fission-type weapons. Attenuation curves are presented which account for variation in the moisture content and density of the soil cover. The effect of the various energy spectra for each type of radiation has been considered. Three types of shelter configurations have been investigated: the rectangular or slab, the hemisphere, and the arch. (Author)

PROTOTYPE 250-POUNDS-PER-HOUR ADVANCED BASE INCINERATOR, by K. B. Edwards and E. C. Morales. Final rept. 2 Dec 59, 27p. 4 refs. Technical rept. 053.
Order from LC mi$2.70, ph$4.80 PB 145 159

A prototype, 250-pounds-per-hour incinerator was developed for garbage-and waste-burning at Advanced Bases. It is rugged, portable, easily erected, and designed to be manufactured as a factory prefabricated kit including bagged powdered refractory for monolithic casting in the field. To determine the adequacy of the design, a kit was purchased, erected, and tested. This report gives the results of erection and performance tests of the prototype incinerator. (Author)

PERFORMANCE SPECIFICATIONS FOR A SOUND NATIONAL SHELTER SYSTEM, by W. E. Strope. 13 Feb 57, 27p. 5 refs. Research and Development Technical rept. USNRDL-TR-132; AD-207 928.
Order from LC mi$2.70, ph$4.80 PB 144 696

The urgent need for a national shelter program because of the advance of megaton nuclear weapons and guided missile delivery systems is pointed out. Conclusions, based on five years of military atomic defense studies are presented regarding shelter performance specifications and estimated cost for a sound and feasible national shelter program. Utilizing three classes of shelter, the program is designed to provide adequate protection to the nation's population against the effects of fallout radiation, air blast, heat, and fire resulting from land-surface detonations of megaton weapons. Basic criteria used for establishing the shelter classes are ranges of weapon effects, building density, and population density. The classes of shelter are: Class I – fallout, 10-psi air blast; Class II- fallout, 10-psi air blast, mass fires; Class IIIa fallout, 25-psi air blast, mass fires; and Class IIIb–fallout, 100-psi air blast,

mass fires. The interior arrangement and equipment of a typical shelter are illustrated. Estimated shelter construction costs per person range from about $30 to about $300 depending on shelter class, resulting in an estimated total construction cost for the national shelter system of about $15 to 20 billion. Additional costs for the total program would include those for development and engineering, land acquisition, and shelter equipment; but it is explained how these costs could be minimized. Feasibility of the program is discussed, together with modified programs that would take advantage of using existing construction and of integrating shelter construction into other construction programs. (Author)

THERMAL ENERGY EXCHANGE WITH SPECIFIC APPLICATION TO WASTE HANDLING IN A CLOSED ECOLOGICAL SYSTEM, by Lawrence Slote. Progress rept. on The Engineering Biotechnology of Handling Wastes Resulting from a Closed Ecological System, Contract AF 18(603)71. July 57, 8p. 5 refs. AFOSR-TN-58-268; AD-154 169.
Order from LC mi$1.80, ph$1.80 PB 137 795

The analysis attempts to show the variation in the total surface temperature of a perfect heat conducting or spinning biosatellite for a given orbit and for various conditions of irradiation. As the thermal capacity of the satellite is reduced a temperature distribution is obtained about the surface of the sphere. Therefore, it becomes evident that various temperatures can be obtained depending upon the geometry, surface and trajectory of the biosatellite. With this in mind, it seems feasible to use thermal energy sources in connection with processes for cracking of human waste and for the purification of urine by freezing, if these processes are used.

Bureau of Yards and Docks, Washington, D. C.
MOORING GUIDE. VOLUME 1. 1 Mar 54, 342p. 13 refs. Technical Pub. NAVDOCKS TP-Pw-2
Order from LC mi$11.10, ph$53.10 PB 145 540

This publication provides guidance to Bureau and field personnel concerned with determining the most practicable method of mooring vessels at a given site, either singly or in groups, and with effecting the planning, design, assembly, placement, inspection, repair, and maintenance of the Navy's permanent or temporary mooring facilities. Part A presents this Bureau's authority, policy, and responsibilities for providing the Navy's mooring facilities and defines related terms. Part B describes the various types of mooring devices and related equipment, including mooring buoys and anchors. Part C provides information on the design of mooring of various types. Part D covers the operation and care of all types of Fleet moorings, including inspection and maintenance of camels, fender piles, and dolphins, also the placement and recovery of moorings.

David Taylor Model Basin, Washington, D. C.
A CONTROL-SURFACE FLUTTER STUDY IN THE FIELD OF NAVAL ARCHITECTURE, by R. T. McGoldrick and D. A. Jewell. Sep 59, 47p. 25 refs. Rept. 1222; AD-226 588.
Order from LC mi$3.30, ph$7.80 PB 144 856

This study of control-surface flutter was initiated because of serious hull vibration on destroyers of the DD 931 Class. The source of the vibration had been traced to the twin rudders by the Boston Naval Shipyard. For making experimental observations on control-surface flutter phenomena in the towing basin, the David Taylor Model Basin constructed the TMB Control-Surface Flutter Apparatus. With this equipment, a marked decrease in overall damping was demonstrated when the downstream mass unbalance was increased during underway tests. A condition in which hydrofoil oscillatory motion results in low damping without oscillatory instability is defined as "subcritical flutter." Such a condition, which greatly magnifies the sensitivity of the mechanical system to external sources of vibration, may be quite significant in the field of naval architecture. Analyses varying in complexity are explored and compared with experimental results. (Author)

PRELIMINARY EVALUATION OF A SEMI-SUBMERGED SHIP FOR HIGH-SPEED OPERATION IN ROUGH SEAS, by Edward V. Lewis and Clayton Odenbrett. Rept. on Contract Nonr-263(10). Mar 59, 21p. 6 refs. Rept. no. 736.
Order from LC mi$2.70, ph$4.80 PB 144 647

This report describes the evaluation by means of model tests of an unusual hull form intended for high-speed operation in rough seas. The form can be described as a surfaced submarine, made longer and more slender in order to attain high calm-water speed A long natural pitching period is obtained by fine, hollow waterline endings and use of large peak ballast tanks for rough water operation. It was considered best not to attempt to keep water off the deck, and therefore comparatively low freeboard and tumblehome were adopted. Tests in regular head seas of model length and twice model length confirmed the expectation that at high speeds the semi-submerged ship could exceed the speeds at which the peaks of synchronous pitching and heaving motions occur. Consequently, in irregular head seas corresponding to a storm of Beaufort force 6, motions decreased as speed increased. Heaving was more pronounced than pitching, but accelerations were not prohibitively high even at a speed of 40 knots. It is concluded that a semi-submerged ship of the type tested shows promise of attaining much higher rough-water speeds than conventional destroyers, provided sufficient power can be installed.

ARCTIC SURVIVAL RATIONS. III: THE EVALUATION OF PEMMICAN UNDER WINTER FIELD CONDITIONS, by Horace F. Drury, David A. Vaughan, and John P. Hannon. Jan 59, 37p. 24 refs. Technical rept. 58-6.
Order from LC mi$3.00, ph$6.30 PB 144 832

Pemmican, a dehydrated high-fat, high-protein, carbohydrate-free meat preparation was fed, with and without an isocaloric supplement of sugar, to 10 human subjects undergoing simulated survival in a severely cold environment for 9 days. No ill effects were noted that could not be attributed to caloric restriction, and the performance of the subjects was considered adequate for survival situations involving moderate activity. An isocaloric supplement of 40 grams of sugar increased the fasting blood-sugar levels, decreased the nitrogen balance, and decreased the excretion of ketones. During the 3 days following initiation of the dietary regimen, fasting blood-sugar levels and daily nitrogen balances fell precipitately, while ketone excretion rose. After this, however, the blood-sugar levels rose somewhat and leveled off, the nitrogen balance increased appreciably, and excretion of ketones fell gradually to quite low levels irrespective of the isocaloric supplement of sugar. These results have been interpreted to mean that the subjects were becoming adapted to the combination of pemmican and restricted caloric intake. (Author)

ARCTIC SURVIVAL RATIONS. VII: ALTERATIONS IN SERUM ELECTROLYTES DURING WINTER FIELD TESTS OF SURVIVAL RATIONS, by John P. Hannon, Anna F. Larson and others. Sep 59, 11p. 8 refs. Technical rept. 58-25.
Order from LC mi$2.40, ph$3.30 PB 144 842

The levels of plasma sodium, potassium, calcium, magnesium, chloride, and phosphate, as well as blood hemoglobin and packed cell volume, were determined before and during simulated arctic winter survival. During the 5-day semi-starvation survival situation the following blood changes were noted: (a) an increase in magnesium and a decrease in calcium after the first day with subsequent return toward normal levels over the next 3 or 4 days; (b) a progressive decline in plasma phosphate during the first 4 days; (c) slight decreases in sodium, chloride, hemoglobin, and packed cell volume; (d) no significant change in plasma potassium. (Author)

Arctic Aeromedical Lab., Ladd AFB, Alaska.
THE DISTRIBUTION IN ALASKA OF PLANT AND ANIMAL LIFE AVAILABLE FOR SURVIVAL, by John L. Buckley and Wilbur L. Libby (U. of Alaska). May 59, 47p. 8 refs. Technical rept. 58-10; AD-220 762.
Order from LC mi$3.30, ph$7.80 PB 144 846

This project was undertaken to determine the abundance of native foods, both plant and animal, available for survival in the Alaskan subarctic. In general, forest types produce the greatest amounts of edible materials; however, no single type is as productive as the ecotone between types. The supply of wild foods available fluctuates seasonally and between years. In good years, especially during late summer, native foods would probably be sufficient to prevent starvation in a well-trained individual. In poor years the chances of finding adequate foods would be greatly reduced. Recommendations for equipment for procuring native foods are given. (Author)

Army Medical Research and Nutrition Lab., Denver, Colo.
THE EFFECT OF HIGH TEMPERATURE STORAGE ON THE ACCEPTABILITY, DIGESTIBILITY AND COMPOSITION OF THE U. S. ARMY RATION, INDIVIDUAL, COMBAT, by Irvin C. Plough, Richard S. Harding and others. Final rept. on Metabolism and Nutrition. 22 Oct 58, 45p. 34 refs. Rept. no. 228.
Order from LC mi$3.30, ph$7.80 PB 138 597

Two groups of C rations, both from the same procurement in 1954, were obtained from the Quartermaster Food and Container Institute. One group had been stored at 100°F., and the other at 34°F., for 20 months. Analysis showed that storage had caused no changes in nutrient composition, except for considerable losses of thiamine and of vitamin B_6. These changes were more marked in the rations stored at high temperature. These two rations were fed to nine test subjects in comparison with a diet of approximately the same composition made up of fresh foods. The C rations, particularly those stored at high temperature, evoked a number of mild symptoms, but these were doubtless of psychological origin. The protein and carbohydrate of the C ration were less digestible than were the nutrients in the fresh ration. High temperature storage further reduced the digestibility. The C ration stored at high temperature produced evidence of vitamin B_6 deficiency manifested by increased net excretion of xanthurenic acid, in response to a tryptophane load.

Quartermaster Food and Container Inst. for the Armed Forces, Chicago, Ill.
INVESTIGATION OF THE USE OF MONOSODIUM GLUTAMATE IN COMMERCIAL PRODUCTION OF PRECOOKED MEALS, by Mary B. Brown. Interim rept. no. 2, Dec 57, 6p. QMFCI rept. no. 42-57; AD-154 839.
Order from LC mi$1.80, ph$1.80 PB 144 880

This study reports the results of sensory evaluations of eight different precooked frozen meals and two casseroles prepared with and without monosodium glutamate after storage at -20° F., 0° F., and at fluctuating temperatures. Monosodium glutamate improved the acceptance of all food items with the exception of the chicken items and tenderloin steak with mushroom sauce. The lack of improvement in acceptance of these two items may be attributed to the high concentration of MSG used. (Author)

Quartermaster Food and Container Inst. for the Armed Forces, Chicago, Ill.
THE STABILITY OF VITAMIN-FORTIFIED DEHYDRATED SOUPS, by Mariam H. Thomas. Interim rept. on Simplified Food Logistics. Aug 58, 19p. 7 refs. QMFCI rept. no. 21-58.
Order from LC mi$2.40, ph$3.30 PB 144 881

Dehydrated cream of onion and cream of potato soups fortified with thiamine, ascorbic acid, and vitamin A palmitate have been evaluated after storage. Samples were packed in rigid and flexible containers for storage at 70° and 100°F. Analyses for palatability and vitamin content were made initially and after storage for six, twelve, and twenty-four months. There was evidence of flavor deterioration during storage. However, there was no significant difference in palatability ratings for fortified and unfortified samples throughout storage. Samples stored in cans were preferred to those stored in packages. In general, better vitamin retention was obtained in dehydrated soup which was canned and stored at 70°F.

NON-STATIONARY COMBUSTION STUDIES, by D. Bitondo and D. Perper. Rept. on Contract AF 18(600)1509. Aug 58, 51p. 11 refs. Aerophysics TR 58-98; AFOSR-TR-58-144; AD-204 734.
Order from LC mi$3.60, ph$9.30 PB 137 951

A study of gaseous fuel ignition in transient flow by means of a "heated wall" mounted in the test section of a shock tube is the subject of this report. The process was followed photographically by means of schlieren apparatus and a high speed Fastax movie camera. Pressure in the test section and in the immediate vicinity was followed by means of high frequency pressure recorders.

Douglas Aircraft Co., Inc., El Segundo, Calif.
INVESTIGATION OF THE EFFECTIVENESS OF A WINDMILL ON IMPROVING FLOW UNIFORMITY IN A DUCT, by J. S. Murphy and D. W. Clutter. Rept. on Contract NOa(s) 54-321. 8 Oct 57, 103p. 4 refs. Rept. no. ES-26393; AD-161 446.
Order from LC mi$5.70, ph$16.80 PB 145 206

Tests have been made to determine the effectiveness of a freely rotating windmill in smoothing out nonuniform duct flow. The action of the windmill is to transfer total head from high-speed regions to low-speed regions. The design of a windmill and the forces on a windmill due to changes in wind speed are discussed. The experimental results show the effect of blade angle and number of blades on the windmill's effectiveness in smoothing out a wide variety of disturbance profiles, both circumferential and radial.

Electrical Engineering Research Lab., U. of Illinois, Urbana.
ELECTRON TEMPERATURE DEPENDENCE OF THE RECOMBINATION COEFFICIENT IN PURE HELIUM, by C. L. Chen, C. C. Leiby, and L. G. Goldstein. Scientific rept. no. 7 on Contract AF 19(604)2152. 1 Sep 59, 158p. 45 refs. AFCRC-TN-59-597.
Order from LC mi$7.50, ph$24.30 PB 144 961

Recombination of oppositely charged particles of a helium gas discharge plasma is studied in this work. Attention has been focused especially on investigating the law governing the variation with electron temperature of the recombination coefficient, characterizing the process of recombination of free electrons with positive ions in decaying plasmas produced in pure helium. A better treatment to the guided wave propagation in a waveguide filled with ionized gases has been given, which is believed to give more accurate determination of the fundamental parameters in a gaseous discharge plasma confined in the geometry used. In the determination of the electron temperature, correction due to thermal conduction has also been included in an approximate way.

Fairchild Guided Missiles Div., Fairchild Engine and Aircraft Corp., Wyandanch, N. Y.
FIBERGLASS CONTAINERS FOR J-57 ENGINE, by Harry E. Kellar (Materials Lab.) Rept. for June 56-May 58 on Finishes and Materials Preservation, Contract AF 01(608)832. Feb 59, 74p. 10 refs. WADC Technical rept. 58-268; AD-209 911.
Order from LC mi$4.50, ph$12.30 PB 144 991

Twenty fiberglass containers were manufactured for the Air Force to serve as shipping containers for the J-57 jet aircraft engine. The application of fiberglass for this purpose has proved successful with the exception of a liner sealing problem. The fiberglass container assembly weighs approximately 50% less than its metal counterpart, and testing has proved it to be rugged enough to withstand the rough handling it may receive in shipment. The container consists of two shells, upper and lower, with the basic construction utilizing plies of bidirectional roving fabric impregnated with polyester resin. The sealing liner is made of rigid vinyl, thermoplastically drawn under vacuum into the shells. Provisions have been incorporated for fork lift, cable hoisting, rollover and stacking of the containers three high while in storage. (Author)

Jet Propulsion Lab., Calif. Inst. of Tech., Pasadena.
THERMODYNAMIC PROPERTIES AND CALCULATED ROCKET PERFORMANCE OF HYDROGEN AT 20,000°K, by David Altman. Rept. on Contract DA 04-495-ORD-18. 3 Sep 56, 32p. 12 refs. Rept. no. 20-106.
Order from LC mi$3.00, ph$6.30 PB 144 761

A tabulation is made of the equilibrium thermodynamic properties of hydrogen between 300 and 20,000°K. Consideration is given to molecular dissociation, atomic excitation, and ionization. The data are presented in Mollier charts, for the purpose of simplifying rocket performance calculations. Tables are presented which list the specific-impulse and power values required to develop a given thrust at a specified chamber temperature. A tabulation is also given of the loading factors required for escape from the earth by a hydrogen missile operating at various temperatures. (Author)

Koppers Co., Inc. [Pittsburgh, Pa.]
EVALUATION OF DESIGNS AND MATERIALS FOR HIGH SPEED-HIGH TEMPERATURE SHAFT SEALS FOR TURBOJET ENGINE APPLICATIONS, by John J. Brenza, John H. Fuchsluger and others. Rept. on Gas Turbine Technology, Contract AF 33(616)5015. 31 Dec 58, 110p. 5 refs. WADC-Technical rept. 56-267, Pt. 2; AD-219 109.
Order from OTS $2.50 PB 151 915

The demand for higher performance aircraft engines has resulted in increase in engine operating temperatures and pressures. In turn, this has necessitated the adoption of new shaft seal materials and refinement in shaft seal design. This development program was undertaken to develop rubbing seals that would operate for 1000 hours, at 1000°F, and at a rubbing speed of 30,000 feet per minute. Accordingly new materials were investigated; these materials were incorporated in seals; and their performance as seals was evaluated. In all, one hundred and sixty-three materials were screened on the basis of room temperature and 1000°F, dry, rubbing, wear tests and 1000-hour, 1000°F oxidation tests. Material combinations found to be promising were next evaluated as seals under increased operating conditions, and eventually under conditions duplicating those existing in a jet engine. (Author) (See also PB 121 992)

Massachusetts Inst. of Tech. [Cambridge].
OPTIMIZATION OF SPACE VEHICLE DESIGN WITH RESPECT TO PROPULSION SYSTEM, by Paul E. Sandorff. Rept. on Contract AF 49(638)363. 1 July 58, 11p. 6 refs. AFOSR-TN-58-580; AD-158 402.
Order from LC mi$2.40, ph$3.30 PB 137 861

A mathematical analysis was made of propulsion systems necessary to move a desired useful payload to a given destination in as feasible and as efficient a manner as possible. The specific impulse to the most significant factor is the performance of the propulsion system of contemporary chemical rockets. Optimum specific impulse was shown to depend on the particular duty for which the engine was designed. Typical characteristics for various types of reaction engines as they are currently conceived are presented.

Pennsylvania State U. Coll. of Engineering and Architecture, University Park.
THE FILM VAPORIZATION PRINCIPLE FOR GAS TURBINE COMBUSTORS, by Gunter W. Maybach. Final rept. on Contract Nonr-656(13). Mar 59, 46p. 9 refs.
Order from LC mi$3.30, ph$7.80 PB 145 212

A new combustion principle for gas turbine engines is developed that inherently reduces the formation of smoke and of carbon deposits inside combustion chambers, and should permit more compact combustor designs without increasing the pressure loss across the combustors. The new combustion principle is based on the vaporization of the fuel from a liquid film spread along the inner wall surface of a cylindrical combustor section. Several problems relating to the mixture formation and combustion mechanisms of the new principle were treated. A research prototype combustor incorporating the film vaporization principle was built and its operational characteristics determined. (See also PB 144 371)

Picatinny Arsenal, Dover, N. J.
SUITABILITY OF CARBON BLACK PRODUCED BY THE OIL FURNACE PROCESS FOR USE IN ROCKET PROPELLANTS, by J. S. Merten. Dec 58, 43p. 8 refs. Technical rept. DB-TR: 16-58.
Order from LC mi$3.30, ph$7.80 PB 138 357

Commercial furnace blacks adversely affect the stability of M7 propellants and therefore were not suitable for M7 propellant manufacture. The poor stabilities obtained with the M7 propellant using the furnace blacks cast doubt on the use of these blacks for the manufacture of M16, T16, and T19 compositions. Further study of furnace blacks is unwarranted because the very small mobilization requirements for carbon black should be readily available from commercial sources.

Plasmadyne Corp., Santa Ana, Calif.
EQUILIBRIUM THERMODYNAMIC PROPERTIES OF HELIUM TO 60,000°K, by Gordon L. Cann and Adriano C. Ducati. Technical note no. 4 on Contract AF 49(638)54. 18 June 59, 90p. 4 refs. P-4TN069-54; AFOSR-TN-59-633; AD-228 710.
Order from LC mi$4.80, ph$13.80 PB 144 864

Helium was considered as a possible propellant for a plasma propulsion system because of its low molecular weight. To obtain reasonable exhaust velocities (greater than 10,000 m/sec.) it is necessary to heat the gas to temperatures at which an appreciable percent ionization occurs. In order to assess the potentially available exhaust velocities when ionization is

present, it is necessary to have a Mollier chart to determine isentropic expansions, hence the thermodynamic properties of helium were computed over a temperature range of 6000-60, 000°K and a pressure range of 10^{-4} -10^{-2} atm. A Mollier chart was constructed from this data. (Author)

Plasmadyne Corp., Santa Ana, Calif.
RESEARCH ON HIGH INTENSITY IONIC JETS, by Gordon L. Cann and Adriano C. Ducati. Final technical rept. on Contract AF 49(638)54. 5 Nov 59, 30p. 7 refs. P-FR109-54; AFOSR-[TR]-59-167.
Order from LC mi$2.70, ph$4.80 PB 144 907

The various steps that have been completed in the development of a practical plasma jet propulsion unit are outlined and detailed references to the work made. The steps that still need to be completed before a prototype unit can be constructed are indicated. (Author)

Space Research Labs., Litton Industries, Beverly Hills, Calif.
RESEARCH STUDY ON PLASMA ACCELERATION, by G. Fonda-Bonardi. Final rept. for 1 Mar 58-30 Sep 59 on Contract AF 49(638)345. 30 Sep 59, 76p. 207 refs. AFOSR-TR-59-170.
Order from LC mi$4.50, ph$12.30 PB 144 906

This report contains a summary of the principles of operation, design criteria, construction details and instrumentation of a pulsed plasma accelerator. The purpose of the project was twofold: to provide verification of the theory previously developed, and to supply engineering information and design data for further applications of the principles involved. A bibliography on pertinent magnetohydrodynamics research and related subjects is appended.

Manufacturing Equipment and Processes

Materials Lab., Wright Air Development Center, Wright-Patterson AFB, Ohio.
RAPID LOADING OF ALUMINUM ALLOY RIVETED JOINTS, by Robert T. Ault. Rept. for Nov 58-June 59 on Materials Analysis and Evaluation Techniques. Dec 59, 23p. 3 refs. WADC Technical rept. 59-433.
Order from OTS $0.75 PB 161 434

Slow and rapid loading tensile shear tests were conducted at room temperature to determine the failure strength of multiple riveted lap and butt joints. Both concentric and eccentric loading conditions were used. The time to failure for the rapid loading tests ranged from 0.02 to 0.08 seconds. All failures were by rivet shear. The results indicate that for both eccentric and concentric loading conditions, rapid loading has no significant effect on the strength of the joint. (Author)

MACHINING CHARACTERISTICS OF HIGH STRENGTH THERMAL RESISTANT MATERIALS, by Leonard J. Nowikowski. Interim Engineering rept. no. 6, Phase II, 1 Apr-10 July 59, on Contract AF 33(600)35967. 14 Aug 59, 424p. Wright Aeronautical Serial rept. no. MP. 00-192; AD-220 540.
Order from OTS $6.00 PB 161 369

A study of the machining characteristics in turning, milling, drilling, and tapping on twenty-five high strength, thermal resistant alloys. The data is presented in graphical form to show the relationships between tool life, cutting speed, feed, tool geometry, tool material and cutting fluids. Cutting and thrust force measurements, average power requirements, coefficient of friction for the turning operation and thrust force and torque measurements were made for drilling. The data for these tests is shown in graphical form to show the torque and thrust requirements for drilling these materials for various machine conditions. The average power required for drilling these materials was computed. Grinding characteristics for six alloys show the effect of wheel speed, table speed, cross feed, down feed, wheel grade, and grinding fluid on wheel wear and surface finish. Grinding and face milling tests on three materials show workpiece distortion and residual stress as a function of machine variables. (See also PB 140 798)

Metcut Research Associates, Inc., Cincinnati, Ohio.
MACHINING CHARACTERISTICS OF HIGH STRENGTH THERMAL RESISTANT MATERIALS. PHASE III. MACHINE TOOL REQUIREMENTS, by Leonard J. Nowikowski. Rept. for 2 Sep-18 Dec 59 on Subcontract to Contract AF 33(600)35967. 18 Dec 59, 55p. Wright Aeronautical serial rept. no. MP. 00-204.
Order from LC mi$3.60, ph$9.30 PB 145 016

Machine tool requirements were established for machining the high strength thermal resistant alloys. The required range of speeds, feeds and power in turning, milling, drilling, tapping and grinding are listed in tables for each alloy group. Several recent developments in machine tools designed specifically for machining the high strength thermal resistant alloys are also described.

Southern Research Inst., Birmingham, Ala.
AN INVESTIGATION OF ELECTROPOLISHING AS A TECHNIQUE FOR PRODUCING TAPERED WIRE, Technical note no. 1, 1 May-15 Sep 59, on Contract AF 08(635)391. Nov 59, 35p. 6 refs. APGC-TN-59-59.
Order from LC mi$3.00, ph$6.30 PB 144 573

Tests were run on carbon steel music wire and Type 302 stainless steel wire to determine what loss in unit strength would result from electropolishing 0.050- and 0.033-inch diameter wire down to 0.020 inch. The purpose was to discover whether electropolishing might be a feasible method of manufacturing a continuously tapered tow cable for aerial targets. The stainless steel increased in unit strength from 276,000 psi at 0.0495-inch diameter to 374,000 psi at 0.023-inch diameter. The carbon steel music wire unit strength remained substantially constant. It was concluded that electropolishing is a technically feasible technique, and it was recommended that design

parameters be determined for a production setup to produce a tapered tow wire. (Author)

Transport, Traction and Hoist Facilities

DYNAMIC MODES OF TRANSPORTATION STUDY. Addendum to Final rept. on Contract AF 30(635)2903. 14 Feb 57, 3p. RADC-TR-57-16B AD-114 500.
Order from LC mi$1.80, ph$1.80 PB 137 568

This addendum to the Final Report on the "Dynamic Modes of Transportation Study" contains further suggestions regarding techniques of programming a platform-type shaker; such a machine had been proposed for the simulation of the shock and vibration environments to which military electronic equipment is subjected in field transit.

Bureau of Yards and Docks, Washington, D. C.
MOVING AND RIGGING HANDBOOK. Engineered Performance Standards, Public Works Maintenance. Oct 59, 97p. NAVDOCKS P-709.
Order from LC mi$5.40, ph$15.30 PB 145 002

The Engineered Performance Standards set forth time values which cover most of the work performed by the Moving and Rigging Craft. Spread Sheets are task times grouped by subject area and time. The time to perform a specific task is obtained by using the group value time covering equal work content described on the spread sheet. Task Times are derived from operation time values. Task times include all operations constituting the task but not job preparation time, travel time, or allowances for delays. Operation Times are the formula values taken from the formula manual. They represent the actual time required to perform a portion of a task and, when several are added together, they become the time to perform the task. The task areas included in this manual are: crane operations, equipment moving, reeving, shop operations, and weight capacity testing.

THE EFFECT OF MOLTEN BISMUTH ON INSULATING MATERIALS, by W. S. Fleshman and C. G. Collins. 9 Feb 50, 16p. NEPA-1306-SCR-56; AD-206 722.
Order from LC mi$2.40, ph$3.30 PB 138 453

Samples of twenty-six Johns-Manville insulating materials, which included cements, bonded fibrous blocks and fire bricks, were tested for possible reaction with molten bismuth. The tests consisted essentially of pouring molten bismuth at 1832°F (1000°C) over insulation maintained both at room temperature and at 1832°F (1000°C), although some tests were made in which the insulation was heated together with the bismuth for periods up to three hours. In general, the results indicated that little or no reaction, particularly of an explosive nature, occurred when the molten bismuth came into contact with the unheated materials, and that none of the materials would withstand contact with the bismuth when both were at 1832°F (1000°C) for more than a few hours. Greatest resistance to bismuth attack was shown by three types of asbestos millboards.

Virginia Agricultural Experiment Station, Blacksburg.
COMBINED INTRA- AND INTER-BLOCK ANALYSIS FOR FACTORIALS IN INCOMPLETE BLOCK DESIGNS, by R. E. Walpole, R. A. Bradley and C. Y. Kramer. Technical rept. no. 2 on The Development of Statistical Methods for Experimental Designs in Quality Control and Surveillance Testing, Contract Nonr-2352(01). Mar 58, 145p. 26 refs. AD-157 825.
Order from LC mi$7.20, ph$22.80 PB 138 572

A combined intra- and inter-block analysis was obtained for factorials in balanced incomplete block designs, group divisible designs, and Latin Square type of partially balanced, incomplete block designs. For the class of Latin Square sub-type L_3 designs, both the intra-block and combined intra- and inter-block analyses were considered. Estimators for the factorial effects were obtained along with their variances and covariances. Sums of squares in terms of the factorial estimators were derived which can be used for tests of significance. These sums were independently distributed as x^2-variates with the appropriate number of degrees of freedom. For the special cases of 4 x 4 Latin Square sub-type L_3 designs, a complete analysis yielding the adjusted sums of squares, for the factorial effects, was possible. The appropriate sums of squares for main effects and interactions of a multi-factor factorial were obtained either as functions of the original estimators or as functions of the row and column averages of the original treatment estimators. The method of incorporating a fractional replicate of a factorial was also considered. Numerical examples were worked in detail for a group divisible design and a Latin Square sub-type L_3 design. The problem of analyzing factorials in various types of lattice designs is being investigated.

Ceramics and Refractories

Armour Research Foundation, Chicago, Ill.
RESEARCH AND DEVELOPMENT SERVICES LEADING TO THE CONTROL OF ELECTRICAL PROPERTIES OF MATERIALS FOR HIGH TEMPERATURE RADOMES, by Leon M. Atlas. Rept. for 1 July 58-30 Apr 59 on Electrical and Electronic Materials, Contract AF 33(616)5929. Oct 59, 34p. 14 refs. WADC Technical rept. 59 300.
Order from OTS $1.00 PB 161 423

Methods are described for the preparation of high purity aluminum oxide (less than 100 ppm of impurities) by the solution of 99.999% Al metal in hydrochloric acid and precipitation with ammonia. After calcining at 1400°C, this batch was fabricated into ceramics by firing in air at temperatures up to 1900°C. Loss tangents at 500°C approach that of sapphire, and the temperature variation of dielectric constant is considerably lower than for high purity commercial aluminas. Defects in alumina ceramics produced by impurities and by interactions with gaseous atmospheres have been studied by measuring the reflectance and thermoluminescence of gamma irradiated specimens.

Cincinnati U., Ohio.
THE SYSTEM TITANIUM-ZIRCONIUM-OXYGEN, by Michael Hoch, Robert L. Dean and others. Rept. for 1 Nov 56-31 Aug 59 on Solid State Research and Properties of Matter, Contract AF 33(616)3881. July 59, 83p. 37 refs. WADC Technical rept. 59-539.
Order from OTS $2.25 PB 161 435

The general shape of the 1450°C isotherm of the Ti-TiO-ZrO_2-Zr region was calculated from the surrounding binary phase diagrams. The phase boundaries were accurately determined by investigating 50 compositions using X-ray and metallographic techniques. The isotherm at 1500°C for the region TiO-TiO_2-ZrO_2 was obtained by investigating 45 compositions, using X-ray diffraction. The activities of titanium and TiO in the α + TiO + tetragonal ZrO_2 and the two $\alpha + \beta$ + tetragonal ZrO_2 regions were measured using the Knudsen effusion method. The solidus and liquidus surfaces were determined by observing samples suspended with a fine tungsten wire in a tungsten crucible, and heated in vacuum. The oxidation of titanium-zirconium alloys was also investigated. The presence of zirconium in titanium, and vice versa, decreases the oxidation resistance and the alloys oxidize faster than the pure metals.

Douglas Aircraft Co., Inc., Long Beach, Calif.
INFLUENCE OF SURFACE ON CERAMIC MECHANICAL PROPERTIES, by George R. Pulliam. Rept. for June 58-June 59 on Solid State Research and Properties of Matter, Contract AF 33(616)5875. Sep 59, 36p. 13 refs. WADC Technical rept. 59-261.
Order from OTS $1.00 PB 161 309

This study was devoted to establishing the importance of gaseous and liquid environments, electromagnetic irradiation, and non-stoichiometry on the deformation and fracture processes in ceramic materials. The surface condition of the material and its chemical environment have been found to have a large effect on these processes. The small ductility of magnesium oxide is reduced by air and basic solutions. Acid solutions produce ductility in previously brittle magnesium oxide. Exclusion of air by a protective coating or a protective atmosphere preserves the ductility. Photochemical reactions essentially stop the creep of silver chloride. A more quantitative evaluation of these effects should be conducted to permit the establishment of the mechanisms operating. (Author)

INTERNAL STRESSES IN MODEL CERAMIC SYSTEMS II. A. X-RAY STRAIN MEASUREMENT TECHNIQUES FOR CERAMIC BODIES. B. EXTENDING THE RANGE OF REPLICATION TECHNIQUES, by Leonard N. Grossman, Richard M. Fulrath and Robert B. Langston. Technical progress rept. no. 2 on Contract AF 49(638)04. 1 Oct 59, 36p. 14 refs. Series no. 119, issue no. 2; AFOSR-TN-59-1181.
Order from LC mi$3.00, ph$6.30 PB 145 018

X-ray diffractometer techniques for measuring triaxial and biaxial strain in ceramic bodies are described. Results using Al_2O_3 and ThO_2 crystal phases with various glasses in the Na_2O-B_2O_3-SiO_2 system are presented. It is shown that internal stresses due to expansion coefficient mismatches occur in these systems and that their magnitudes often exceed the bulk strength of the body. A progress report is included on obtaining the microstructures of model ceramic systems used in the investigation of internal stresses in ceramics.

Ohio State U. Research Foundation, Columbus.
EXPLORATORY STUDY OF NICKEL-MAGNESIA CERMETS, by Earle T. Montgomery and Paul E. Rempes, Jr. Rept. on Contract AF 33(616)3. Apr 53, 11p. 1 ref. WADC Technical rept. 53-164; AD-14 010.
Order from LC mi$2.40, ph$3.30 PB 145 333

Test bars were prepared by combining finely ground commercially fused MgO with 38.8 and 71.6 wt-% of Ni at high pressures and sintering. Descriptions are presented of the body preparation, sintering, and testing procedures. Results indicated that: (1) the firing shrinkage and the oxidation resistance increased with the longer milling time, (2) the porosity of most of the bars was under 1.0%, (3) modulus-of-rupture strength at room temperature was fair, and (4) thermal shock resistance of the specimens was adequate. It was concluded that combinations of Ni and MgO for use as solid body cermets are less promising than other oxide-base cermets now available.

Utah U., Salt Lake City.
CERAMIC STUDIES SUMMARY TECHNICAL REPORT, by P. Gibbs, G. S. Baker and others. Rept. for June 58-Apr 59 on Ceramic and Cermet Materials, Contract AF 33(616)5876. Aug 59, 20p. 9 refs. WADC Technical rept. 59-381.
Order from OTS $0.50 PB 161 146

Progress is reviewed in the preparation of high purity and doped sintered alumina samples. A high-precision fast-recording, bending creep furnace with resolution of at least 10^{-6} strain in the outer fiber is described. Preliminary tests suggest a stick-slip behavior with jumps of about 5.10^{-5} strain in the outer fiber. Progress in an electrical study of corundum-metal interface is reviewed. Migration of silver ions from a coating is found above 200° C on application of several volts/cm. The observed conduction current rises to an asymptotic value of nearly an amp. in seconds. The rise time for this process depends upon the temperature as well as the length of time during which the specimen "rested" without any field. The value of the asymptotic current was greatest at about 350° C. (Author)

Brown U. Div. of Applied Mathematics, Providence, R. I.
THE APPLICABILITY OF LINEAR VISCOELASTIC ANALYSIS TO ROCKET GRAIN DESIGN, by E. H. Lee. Technical rept. no. 3 on Contract NOrd-17838. July 58, 24p. 7 refs. AD-200 172.
Order from LC mi$2.70, ph$4.80 PB 145 216

The significance for the stress analysis problem of rate effect in materials in the form of delayed elasticity and creep is discussed, and the present well developed methods of attack on the problem through the theory of linear viscoelasticity are mentioned. It is shown that a method of testing the applicability of this theory to a specific design problem for a specific material is available for which any convenient component containing the material can be used with a free choice of loading pattern. This eliminates the need for carefully made test specimens and uniform loading systems in assessing the influence of viscoelasticity and linearity. Such a test for a propellant grain is suggested. Once the applicability of the theory has been established, the need for carefully designed experiments to measure basic viscoelastic properties is emphasized. The accurate determination of shear and compressibility properties is essential for the understanding of the behavior under combined stresses, which characterizes most propellant grain design problems. (Author)

DEVELOPMENT AND APPRAISAL OF A PHOTOGRAPHIC TECHNIQUE FOR ROCKER-MOTOR-COMBUSTION STUDY, by George A. Agoston. Rept. on Contract NOa(s)-53729. 29 Jan 54, declassified. 22p. 5 refs. Rept. no. 25-1.
Order from LC mi$2.70, ph$4.80 PB 145 615

The application and merits of Lucite, fused silica, and Pyrex in transparent-motor construction is described. High-speed, colored-motion-picture photography of RFNA-ammonia flame within transparent motors has been investigated for use in combustion research. This photographic technique has proved to be useful in general flow visualization. Because of flame opacity no success was achieved in utilizing it in tracer tracking for local velocity determination. Evidence has been obtained which suggests that the bright-yellow luminosity emitted from a thin rectangular motor with Lucite flame panels originates from burning Lucite rather than from propellant constituents or reaction components. In tests with cylindrical motors the shift in luminosity from one side of the turbulence ring to the other was demonstrated when the position of the latter was changed with respect to the injector. The disappearance of diffuse luminosity at a distance from the injector in a long transparent motor was noted under acid-rich conditions. Local gas analysis and temperature measurement in the nonluminous, annular, recirculating gas zone surrounding the flaming jet issuing from a turbulence ring indicated lack of attainment of equilibrium. (Author)

Massachusetts Inst. of Tech., Cambridge.
METHODS OF TESTING MECHANICAL PROPERTIES OF PROPELLANTS, by Albert G. H. Dietz, Frederick J. McGarry, and James Dorsey. Final summary rept. for 1 Mar 50-31 May 54 on Contract DA 19-020-ORD-6. [1954] 121p. 7 refs.
Order from LC mi$6.30, ph$19.80 PB 144 990

The purpose of this research was to develop and explore various methods of testing the mechanical properties of solid rocket propellant materials. A high speed tensile testing device which provides stress-strain information from tests of a few milliseconds duration has been designed, constructed and operated. Using data and techniques from an extensive static testing program on plasticized polymethyl methacrylate, a considerable amount of mathematical analysis work has been done. The purpose of this was to present conveniently and predict accurately the stress-strain-time relations describing viscoelastic behavior. A high frequency sonic, through transmission, device was designed and built to investigate one type of non-destructive test procedure for propellant materials. Operating in the 1/2-5 megacycle region at very low energy levels, it makes possible the determination of the velocity of transmission and apparent energy absorption characteristics of propellant materials.

Midwest Research Inst., Kansas City, Mo.
MODIFICATION OF SHELL FOUR-BALL WEAR TESTER FOR 800°F OPERATION AND DEVELOPMENT OF A LUBRICANT EVALUATION TECHNIQUE, by Vernice Hopkins. Rept. for Apr 57-Dec 58 on Aviation Lubricants, Contract AF 33(616)5205. June 59, 68p. 4 refs. WADC Technical rept. 59-48; AD-215 447.
Order from LC mi$3.90, ph$10.80 PB 145 451

The modifications made to adapt the Shell four-ball wear tester for 800°F operation have been outlined. Detailed discussions of the design changes, the frictional torque measuring setup, lubricant circulating system, and the application of additional controls and instrumentation are presented. The evaluation of the performance of the modified wear tester is described. Operating test procedures for a conventional test and the alterations required for lubricants solid at room temperature and for lubricants circulating through the ballpot assembly are included. Testing experiences

are discussed, especially for high temperature tests. A method for evaluating lubricants is outlined. (Author)

Naval Research Lab., Washington, D. C.
IGNITION OF HYDROCARBON VAPORS BY CONTINUOUS DC ARCS, by F. J. Woods, K. G. Williams, and H. W. Carhart. Interim rept. 30 Dec 59, 18p. 12 refs. NRL rept. 5423.
Order from OTS $0.50 PB 161 068

Studies of the ignition of flammable vapors by dc arcs drawn between stationary metal-plate electrodes and retracting spherical electrodes have shown that quenching effects of the electrodes play a dominant role in the ignition process. This dominance decreases as the spherical electrodes are made smaller and as the rate of separation is increased. With electrodes which are separated at rates less than the propagation velocity of the incipient flame kernel in the direction of electrode movement, the arc must be extended to a distance comparable to the quenching distance of the electrode system for spark ignitions. This quenching distance can be determined experimentally and expressed in terms of dimensional parameters for given electrode geometries. The electrical requirements for maintaining arcs to the required separation were found to depend on the material of the electrodes and the electrical characteristics of the current supply. (Author)

Naval Research Lab., Washington, D. C.
SHIPBOARD STUDIES OF FUEL-VAPOR IGNITION BY RADIO-FREQUENCY ARCS, by F. J. Woods, K. G. Williams and H. W. Carhart. Interim rept. 25 Jan 60, 16p. 3 refs. NRL rept. 5443.
Order from LC mi$2.40, ph$3.30 PB 143 950

Shipboard studies of radio frequency arcs developed on parked aircraft aboard the CVA 42 have shown that arcs of 0.4 ampere or more drawn from locations with an open-circuit potential greater than 120 volts can ignite flammable concentrations of fuel vapor. Such arcs were observed under conditions which were considered normal for purposes of fueling. Measurements of arc voltage and current are reported for various locations of the aircraft and transmitters. Suggestions are made for reducing the possibility of accidental fires. (Author)

Naval [Weapons Plant] Washington, D. C.
INVESTIGATION OF FLUIDS FOR USE IN HYDRAULIC TYPE RECOIL AND RECOIL-COUNTER-RECOIL MECHANISMS, AND IN HYDRAULIC TYPE BUFFERS, by M. R. Dyer. 12 Dec 58, 108p. 8 refs. Technical rept. no. NGF-T-20-57; NAVORD rept. 511; AD-209 272.
Order from LC mi$5.70, ph$16.80 PB 144 675

Experience in service revealed that some fluids currently used in hydraulic type recoil and recoil-counterrecoil mechanisms and in hydraulic type buffers have unsatisfactory low temperature properties and that corrosion occurs within this equipment. An investigation was therefore conducted on twenty different fluids, ten different packings, and three different metals to evaluate the compatibility of these materials for use in this equipment. The fluids were of four classes: (1) Glycerin-water Mixtures, (2) Petroleum Base Oils, (3) Hydrolubes, and (4) Water-Soluble Ucon Fluid. Included among these fluids were several currently used in Naval Ordnance. The packings were of three classes: (1) Rubber, (2) Leather, and (3) Flax. The metals used were Carbon Steel, Alloy Steel, and Phosphor Bronze.

Naval [Weapons Plant] Washington, D. C.
USE OF COLLOIDAL GRAPHITE (IN POLY-ALKYLENE GLYCOL) AS AN ALL-WEATHER LUBRICANT ON THE 3"/50 CAL. GUN SURFACES, SUCH AS, BARRELS, COUNTER-RECOIL-SPRING GUIDES AND HOUSING GUIDES; TEST AND EVALUATION OF, by Robert C. Duncan. 19 Sep 56, 17p. Technical rept. no. NGF-T-29-56; NAVORD rept. no. 5178.
Order from LC mi$2.40, ph$3.30 PB 138 344

Tests indicate that the counter recoil time of the 3"50 gun is less while using colloidal graphite (in Polyalkylene Glycol) than while the currently recommended cold weather lubricant mixture is used.

Ordnance Fuels and Lubricants Research Lab., Southwest Research Inst., San Antonio, Tex.
CONTINUED DEVELOPMENT OF CRC L-38 TECHNIQUE, by William P. Teich. Rept. on Contract DA 23-072-ORD-1144. Sep 58, 88p. 4 refs. AD-211 625.
Order from LC mi$4.80, ph$13.80 PB 138 266

A series of sixteen tests were conducted to investigate the effect on oil oxidation and bearing weight loss of the following: (1) an increase in the oil gallery temperature, (2) a higher engine speed and consequently a higher connecting rod bearing rubbing velocity, and (3) a reduced lubricating oil output from the engine driven oil pump. The results of these tests indicated that a slight increase in bearing weight loss occurs as the result of an increase in the oil gallery temperature, an increase in engine speed within the limits of these tests will not significantly alter the bearing weight loss, and the oil pump output between the limits of 1.81 gal/min and 3.0 gal/min has no significant effect upon test severity. With the knowledge that it is urgent that a CLR engine procedure be available as soon as possible to replace the current CRC L-4 procedure, it is recommended that studies be undertaken to eliminate the excessive camshaft thrust washer wear, determine the effects of introducing various amounts of air into the crankcase, and determine the desirability of using the new type low volume external oil heater. (Author)

Rock Island Arsenal Lab., Ill.
MILLIPORE FILTER TECHNIQUE FOR ANALYSIS OF CONTAMINATION IN MISSILE HYDRAULIC FLUID, by H. S. Muffley. 30 June 59, 17p. 1 ref. Rept. no. 59-1773.
Order from LC mi$2.40, ph$3.30 PB 145 113

The servo valves found in the guidance system of missiles are extremely sensitive to solid particle contamination extending to particles of microscopic size. Forty-one samples of missile hydraulic fluids including new, used, and reprocessed oils, were filtered through a millipore filter. Four areas of the millipore filter were photographed at 100X. The size range and distribution of the solid particles were established for the areas photographed. Total counts for the entire filtering area were then calculated. The millipore filter technique provides a fairly reliable estimate of the level of contamination of a missile fluid, however, the validity of the results is dependent upon the control of the many variables encountered. (Author)

AIRCRAFT GEAR LUBRICATION. A LITERATURE SURVEY, by A. Hundere and B. B. Baber, Jr. Rept. on Contract AF 33(616)498. Oct 53, 100p. 206 refs. AD-20 156.
Order from LC mi$5.40, ph$15.30 PB 145 691

A summary is presented of the information that was developed from a literature survey on gear lubrication applicable for aviation use. The published information on the effect of lubricant factors, design features, and operating variables on gear tooth scuffing and pitting is summarized. Available information on test techniques and test methods is included. The articles pertinent to aircraft gear lubrication and gear lubricants are listed chronologically with abstracts in the appendix.

Thiokol Chemical Corp., Trenton, N. J.
A STUDY OF THE CORROSIVE EFFECTS OF THE COMBUSTION PRODUCTS OF BORON CONTAINING FUELS ON SELECTED HIGH TEMPERATURE MATERIALS, by Frank J. Loprest and Steven J. Tunkel. Rept. for July 56-May 58 on Aviation Fuels, Contract AF 33(616)3713. Sep 59, 331p. 21 refs. WADC Technical rept. 57-542.
Order from OTS $5.00 PB 161 421

A method is presented for treating in a quantitative manner the corrosion data obtained, as is a rating of all the alloys tested. The data show that for all alloys there exists a critical temperature (Tc) in the range 1600 to 2000°F above which the corrosion rate increases very rapidly with increasing temperature, and above which serious pitting, and even destruction, occurs within 150 hours. The rate of corrosion below Tc has been determined. A characteristic value, A, representing this rate has been listed for many alloys and tentatively related to the elemental composition. The effect of velocity of combustion products on the corrosion process has been discussed. Mechanisms of the process are presented. Finally, data on the cleaning of deposited boric oxide by saturated steam are included. (Author)

Little, Arthur D., Inc., Cambridge, Mass.
CANDIDATE MATERIALS FOR HIGH TEMPERATURE FABRICS. Rept. for July 58-Feb 59 on Air Force Textile Materials, Contract AF 33(616)5880. Sep 59, 166p. 49 refs. WADC Technical rept. 59-155.
Order from OTS $3.00 PB 161 411

This program involved an evaluation of existing data relative to the development and use of high-temperature fabrics for re-entry parachutes. Anticipated environmental and aerodynamic factors of re-entry from satellite orbits were used as a basis for the selection of candidate materials. Among these factors were heating and deceleration rates, surface temperatures, erosion and corrosion rates, strength-to-weight properties at elevated temperatures, porosity, and flexibility. All evaluated, including metals, ceramics glasses, inorganic and organic polymers, and single crystal systems (whiskers). Although there was very little data on the behavior of fine filaments at the expected environmental conditions, we were able to select commercially available materials that could be used in a high-temperature parachute cloth with a minimum of development work. We also defined the type of data necessary to the development of more sophisticated fabrics that would have greater reliability and an extended service temperature. (Author)

EVALUATION OF NON-DESTRUCTIVE TEST METHODS FOR LAMINATED FIBER GLASS PLASTIC MATERIALS, by J. A. Reilly and M. Goldberg. Final rept. 8 Sep 59, 19p. 5 refs. Lab. Project 5761-1.
Order from LC mi$2.40, ph$3.30 PB 144 928

Due to the increasing use of glass laminated plastic products, simple and rapid non-destructive test methods are required to determine the presence of internal structural defects such as voids, resin-rich areas, and delaminations. Several methods, based on the development of visually observable flaw patterns as a result of variations in thermal conductivity through the item tested, were evaluated. A method based on the use of thermo-sensitive decals in conjunction with an infrared heat source was selected as potentially suitable, within defined limits.

REVISED CALIBRATION CURVE FOR DETERMINATION OF STAIN RESISTANCE OF VINYL MATERIALS, by James T. Hill and William Wiedmann. 3 Feb 59, 3p. 2 refs. Technical rept. no. 5903; AD-211 236.
Order from LC mi$1.80, ph$1.80 PB 144 725

In previous work calibration curves were presented for use in determining stain resistance of vinyl materials using a color difference meter. These curves were obtained using two tiles for standards. A blue tile was used with the stained samples and a white tile for the unstained samples. To simplify this procedure we decided to calibrate the color difference meter using one tile which would result in a single calibration curve. This report discusses this investigation.

Hughes Aircraft Co., Culver City, Calif.
RESEARCH ON HIGH TEMPERATURE POLYMERS, by J. B. Rust, C. L. Segal and H. H. Takimoto. Technical rept. no. 2, 1 Sep 58-1 Mar 59 on Contract Nonr-2540(00). [1959] 53p. 55 refs. AD-217 196
Order from LC mi$3.60, ph$9.30 PB 144 891

A study was made of the synthesis of polymer intermediates of the type $[(CH_3)_3SiO]_n Ti(OC_3H_7)_{4-n}$, where n was 2 or 4. A chemical analysis and an IR spectra analysis were conducted on the products. The postulated structure of the Ti ester intermediates was verified. The reaction of ethyl orthosilicate with trimethylacetoxysilane to form intermediates analogous to the Ti esters produced low yields of the Si ester when sodium ethylate catalyst was used. A linear polymer, a poly(triorganosiloxy)titanosiloxane, with a weight average molecular weight of 42, 300 was obtained by the use of sodium ethylate as a catalyst. Some indication was given that part of the trimethylsiloxy side groups were cleaved during the reaction or during processing of the polymers. Poly(triorganosiloxy)titanoxanes were prepared and the products were identified; there was some indication of cleavage of trimethylsiloxy groups. Polymers containing Si and Al, poly(triorganosiloxy)aluminoxanes were prepared. A linear polymer was found to have a weight average molecular weight of 42, 500. (See also PB 140 992)

Material Lab., New York Naval Shipyard, Brooklyn.
METHODS FOR DETERMINING THE SHEAR MODULUS OF GLASS REINFORCED PLASTIC LAMINATES, by P. M. Goldfarb. Final rept. 31 Aug 59, 21p. 8 refs. Lab. Project 3995-1.
Order from LC mi$2.70, ph$4.80 PB 145 037

Tests were conducted on a 1/4 inch style 181 glass cloth reinforced polyester laminate employing spans of 1 in. to 5 in. length. The beam bending method is more rapid and requires a much smaller specimen than the panel shear method.

Material Labs., Puget Sound Naval Shipyard, Bremerton, Wash.
INVESTIGATION OF THREE FIBER-RESIN DEPOSITORS PHASE II, by M. E. Phelps and L. N. Schultz. June 59, 60p. 4 refs. Rept. no. P-399-2.
Order from LC mi$3.60, ph$9.30 PB 144 742

Three fiber-resin depositors were obtained for comparison and evaluation. Molded items and laminates to determine physical strengths were prepared. Each depositor was evaluated with regard to various operational features. Areas of usefulness of the depositors to the Navy were considered somewhat limited. (Author)

Midwest Research Inst., Kansas City, Mo.
FABRICATION AND DEVELOPMENT OF COMPOSITE PLASTIC PLATES, by Howard W. Christie and Daniel A. Netzel. Quarterly progress rept. no. 3, phase II [Final], 16 Jan-15 Apr 59, on Contract NOas 58-563-c. 5 June 59, 62p. 3 refs.
Order from LC mi$3.90, ph$10.80 PB 144 890

Short cure cycles for the polymerization of diethylene glycol bis(allyl carbonate) have been achieved. The allyl resins do not appear promising for production of temperature resistant composites. Fabrication of allyl composites proved to be extremely difficult. Cracking of the allyl layer occurred during polymerization. High internal stresses developed by shrinkage of the resin during cure and the low strength of the partially cured resin produced the failure. Upon exposure to elevated temperatures the composites failed with cracking of the allyl layer. Epoxide resins have proved promising for the temperature resistant layer of the composites. The low shrinkage of the epoxide resins upon polymerization greatly reduces internal stressing. A curved composite of an anhydride cured epoxy resin has been fabricated. The color stability of the epoxide resins at temperatures above 300°F is poor. Most of the discoloration is produced by oxidation of the exposed surface. (See also PB 139 584)

Naval Ordnance Test Station, China Lake, Calif.
PRELIMINARY INVESTIGATION OF THE RELATIVE EFFECTS OF VARIOUS CURING FACTORS ON THE COMPRESSIVE STRENGTH OF AN ASBESTOS-FILLED MOLDED PHENOLIC RESIN, by J. S. Simpson and H. B. Porter. 12 Dec 58, 19p. NOTS TP-2149; NAVORD rept. 6441; AD-211 000.
Order from LC mi$2.40, ph$3.30 PB 144 869

A preliminary series of tests was conducted on a molded asbestos-filled phenolic resin to determine the relative effects of several curing factors on the compressive strength of the fully-cured resin. A secondary objective was to determine the feasibility of substituting gamma radiation for heat in the post cure stage.

Physical Sciences Lab., Ordnance Tank-Automotive Command, Center Line, Mich.
THE EFFECTS OF IONIZING RADIATION UPON TRANSPARENT MATERIALS, by Gregory Arutunian and Fred L. Seppi. 26 Oct 59, 38p. (4 color photographs will not reproduce) Rept. no. RR-1.
Order from LC mi$3.00, ph$6.30 PB 145 013

Commercial-grade glass, polystyrene, plexiglas, allyl carbonate, and polyvinyl acetate were exposed to x-rays ranging in energy from 50 KVP to 150 KVP for differing lengths of time. As a result of radiation, materials containing doubly bound oxygen atoms exhibited the greatest coloration and exhibited a greater loss in transmittance in the blue region of the visible spectrum than in the red. Polystyrene, an oxygen-free aromatic hydrocarbon, was least affected by x-rays and, on the basis of retention of optical transmission, can be considered for vehicular optical viewing systems exposed to intense gamma-radiation or x-rays.

Rubber and Elastomers

Institute of Rubber Research, U. of Akron, Ohio.
STRESS RELAXATION AND THE STRUCTURE OF HIGH TEMPERATURE ELASTOMERS, by Maurice Morton, V. R. Allen, and R. D. Gates. Technical rept. no. 3, 1 Dec 58-28 Feb 59, on Contract Nonr-2573(00). [1959] 28p. 7 refs.
Order from LC mi$2.70, ph$4.80 PB 144 960

A theoretical study has been made of the effect of a "recombination" (crosslinking) reaction on the relation between sol formation and network breakdown during degradation in bulk or in a swollen condition. Experimental work on sulfur vulcanizates of natural rubber has actually shown that the sol vs. degradation relations for the above two cases are very divergent. From a similar investigation of peroxide vulcanizates of natural rubber, it was found that there is no apparent "recombination" during swollen degradation. (See also PB 143 458)

International Latex Corp., Dover, Del.
DEVELOPMENT OF ELASTOMERS WITH IMPROVED PROPERTIES IN THE ABSENCE OF CARBON BLACK REINFORCEMENT, by Verle A. Miller, Edwin B. Gienger, Jr. and others. Comprehensive progress rept. no. 3, 1 July 55-31 Jan 56, on Contract DA 44-109-qm-1778. [1956] 81p. AD-92 245.
Order from LC mi$4.80, ph$13.80 PB 145 440

Under an earlier contract the development of butadiene/acrylonitrile/methacrylic acid terpolymers was described. Dipped films of these terpolymers exhibited gum tensile strengths as high as 4000-6000 psi. combined with high oil resistance equivalent to that of the low strength Buna N rubbers. This contract covers two work phases: I. Compounding and evaluation studies with the above terpolymers directed toward applying these advances to mill compounded stocks. II. The preparation and evaluation of other functional group-containing polymers directed toward an attempt to improve the strength and tear resistance of unreinforced synthetic rubbers by utilization of reversible secondary bonding forces or chemical reaction between various polar groups of the polymer chains. (See also PB 142 062)

Wood and Paper

Marine Lab., U. of Miami, Coral Gables, Fla.
MARINE BORER INVESTIGATIONS. Annual rept. for Jan-Dec 57 on Contract NOy-81879. Feb 58, 37p. 9 refs. Rept. 58-1; AD-158 567.
Order from LC mi$3.00, ph$6.30 PB 137 904

The ultimate objective of the program is to develop an efficient, dependable wood preservative treatment for protection of wood against attack by marine borers. Wood which has been pressure-impregnated with coal tar creosote exhibits adequate resistance to marine borer attack in temperate regions. In some tropical and sub-tropical coastal areas however, creosoted piling and timber is relatively short-lived, presumably because the higher water temperature accelerates leaching of the preservative, and because some forms of boring organisms peculiar to these regions are relatively resistant to the toxic action of creosote, even when it is present in the wood in maximum concentrations. Inasmuch as creosote has been shown to be an effective marine wood preservative for many applications, one channel of the research program has been directed toward improvement of the preservative ability of creosote by systematic modification of its constitution. However, because the complex composition of creosote might limit the degree of success which can be attained by such an approach, an equal effort has been devoted to development of preservatives unrelated to creosote. Results of the overall preservative development program may be categorized as follows: (1) Accelerated evaluation of modified creosotes. (2) Modification of the accelerated leaching-exposure test. (3) Investigation of the mechanism of creosote diffusion within wood. (4) Screening of experimental preservative materials. (5) Studies on copper-based preservative treatments.

Material Lab., New York Naval Shipyard, Brooklyn.
INVESTIGATION OF THE STANDARD ASTM MECHANICAL AND PHYSICAL PROPERTIES OF EKKI, LOPHIRA PROCERA, A. CHEV. IN THE GREEN AND AIR DRY CONDITION OF MOISTURE, by C. P. Cologer. Progress rept. no. 5 (Final) on Lab. Proj. 5740-7. 17 June 59, 26p. 18 refs. AD-226 708.
Order from LC mi$2.70, ph$4.80 PB 144 677

The standard ASTM mechanical and physical properties of ekki, Lophira procera, in the green and air-dry moisture conditions were investigated. Test indicated that ekki is generally below greenheart in its mechanical strength, although it is similar to greenheart in specific gravity. Ekki is equivalent to green heart in side hardness, shear parallel to grain, cleavage and superior in end hardness. The mechanical properties of ekki are superior to white oak, and

are in accord with the difference in their relative specific gravities. The order of merit for the mechanical strength of the 3 species is greenheart, ekki, and white oak. The volumetric shrinkage of ekki compares favorably with greenheart. Ekki appeared to have a greater tendency to warp on seasoning than greenheart. The computed weights per cubic foot at 50% moisture content disclosed that ekki and greenheart would have approximately the same weight, and that both would be significantly heavier than white oak.

Material Labs., Puget Sound Naval Shipyard, Bremerton, Wash.
MARINE LAMINATING PROPERTIES OF SELECTED WOOD SPECIES, ANGELIQUE (DICORYNIA GUIANENSIS) by R. F. England. Aug 59, 5p. 7 refs. Progress rept. no. E-412-3.
Order from LC mi$1.80, ph$1.80 PB 145 111

The laminating properties of angelique (a tropical South American hardwood) were investigated using three commercial adhesives. Curing conditions of 150-153°F for 6 hours (glueline temperature) produced satisfactory results with each of the adhesives tested. (Author)

ARITHMETIZATION OF METAMATHEMATICS IN A GENERAL SETTING, by Solomon Feferman. Technical rept. no. 1 on Contract DA 04-200-ORD-997. 25 Aug 59, 112p. 33 refs. OOR rept. 2379.1-M.
Order from LC mi$6.00, ph$18.30 PB 145 073

The method of arithmetization, as developed by Gödel (Monatshefte f. Math. u. Physik, v. 38 (1931) p. 173-198), exploits the possibility of defining within a formal theory $\mathcal{T}$, or in arithmetical theories closely related to $\mathcal{T}$, various syntactical and logical notions concerning $\mathcal{T}$. In broad terms, the applications of the method can be classified as being extensional if essentially only numerically correct definitions are needed, or intensional if the definitions must more fully express the notions involved, so that various of the general properties of these notions can be formally derived.

Applied Mathematics and Statistics Lab., Stanford U., Calif.
SOME STOCHASTIC PROCESSES WITH APPLICATIONS TO COUNTER MODELS, by Ronald Pyke. Technical rept. no. 44 on Contract N6onr-25140. 18 Dec 58, 38p. 9 refs.
Order from LC mi$3.00, ph$6.30 PB 144 939

A family of stochastic processes with applications in physics as well as in economic risk-theory is described. Following the work of Takacs [Acta. Math. Ac. Sci. Hung., vol. 5 (1954) pp. 203-236] the one-dimensional characteristic functions of the processes, as well as their covariance functions, are determined. The notions of counts, state A, and state B, are defined. In two special cases the expected number of counts and the expected time in state A are studied in more detail. In one case, a system of partial differential equations is given for a quantity which can be used to determine both the probability of being in state A and the expected number of counts. In a second case, approximations to the expected number of counts may be obtained by the method of steepest descents. Examples are given. (Author)

California U., Berkeley.
THE CLOSED GRAPH THEOREM AND THE KREIN-SMULIAN THEOREM, by J. L. Kelley. Technical rept. no. 20 on Contract Nonr-222(37). Jan 58, 28p. 6 refs. AD-153 817.
Order from LC mi$2.70, ph$4.80 PB 137 913

The purpose of the investigation reported here was to describe the class of locally convex Hausdorff spaces F for which a closed graph theorem holds for all possible spaces E (a more precise statement is given later). It will be shown that such spaces F are precisely those which satisfy a weakened form of the requirement that the class $\mathcal{C}$ of all convex circled subsets of F be complete relative to the Hausdorff uniformity. We will call F hyper-complete if $\mathcal{C}$ is complete; a complete metric space is automatically hyper-complete.

California U., Berkeley.
THE PARTITION FUNCTION FOR CERTAIN SIMPLE LIE ALGEBRAS, by Jan Tarski. Technical rept. no. 7 on Contract AF 49(638)79. Aug 58, 21p. 3 refs. AFOSR-TN-58-657; AD-162 188.
Order from LC mi$2.70, ph$4.80 PB 137 580

Explicit expressions are found for the partition function for the following Lie algebras: A_2, B_2, G_2, and A_3.

Carnegie Inst. of Tech., Pittsburgh, Pa.
AXIALLY SYMMETRIC SOLUTIONS OF ELLIPTIC DIFFERENTIAL EQUATIONS, by Richard C. MacCamy and Albert E. Heins. Technical rept. no. 24 on Contract AF 49(638)227. Nov 58, 37p. 15 refs. AFOSR-TN-58-922; AD-204 558.
Order from LC mi$3.00, ph$6.30 PB 137 775

An investigation is made of the representation of solutions of the axially-symmetric elliptic equations. The representations are derived by exploiting the connection between such equations and singular initial value problems for hyperbolic equations. The result is a correspondence between solutions of the elliptic equations and functions of a complex variable. Certain boundary-value problems for the elliptic equations are solved explicitly or semi-explicitly with the aid of these representations. (Author)

Chicago U., Ill.
GROUP EXTENSIONS BY PRIMARY ABELIAN GROUPS, by Saunders Mac Lane. Rept. on Contract AF 18(600)1383. May 59, 27p. 7 refs. AFOSR-TN-59-457; AD-215 262.
Order from LC mi$2.70, ph$4.80 PB 144 935

The effective calculation of the functor Ext(A, G) is considered which is defined as the group of all Abelian group extensions of the Abelian group G by the Abelian group A. For finitely generated A, the functor is known: (1) it is additive in A, (2) Ext(Z, G) = 0 when A = Z is the infinite cyclic group and (3) for A the finite cyclic group Z/mZ of order m, Ext(Z/mZ, G) = G/mG. The case when A is a torsion group is considered. The assumption is made that A is a p-primary group T. i. e., a group in which every element has order a power of the prine p. (Author)

SEQUENCES GENERATED BY ITERATION, by W. J. Thron. Rept. on Contract AF 49(638)100. [1958] 20p. 3 refs. AFOSR-TN-59-938; AD-226 018.
Order from LC mi$2.40, ph$3.30 PB 145 442

The rapidity of convergence is investigated for sequences generated by functions of the class H and of certain subclasses. The difference is considered between sequences generated by different functions and sequences generated by the same function with different initial elements. This results in obtaining, for sufficiently restricted g, all terms that are not affected by the value of the initial element of the sequence.

Colorado U., Boulder.
A TWO-PARAMETER FAMILY OF BEST TWIN CONVERGENCE REGIONS FOR CONTINUED FRACTIONS, by L. J. Lange and W. J. Thron. Rept. on Contract AF 49(638)100. [1959] 35p. 8 refs. AFOSR-TN-59-1301.
Order from LC mi$3.00, ph$6.30 PB 144 777

In this paper we shall study the continued fraction

$$1 + \frac{a_1}{1} + \frac{a_2}{1} + \cdots$$

whose elements a_n satisfy the conditions

$$a_{2n-1} = c_{2n-1}^2, \quad |c_{2n-1} \pm ia| \geq \rho$$

$$a_{2n} = c_{2n}^2, \quad |c_{2n} \pm i(1+a)| \geq \rho$$

where a is a complex number and a and ρ satisfy the inequality $|a| < \rho < |1+a|$.

Columbia U., School of Engineering, New York.
TABOO GENERATING FUNCTIONS AND OTHER TOPICS IN MARKOV CHAINS, by Peter Frank. Technical rept. no. 2 (N) on Contract Nonr-266(55). 26 Feb 59, 73p. 11 refs. AD-211 635.
Order from LC mi$4.50, ph$12.30 PB 144 810

Combinatorial properties and limit properties of Markov chains are studied. The assumption is made that the Markov chain is always one with discrete time, a countable number of states, and stationary transition probabilities. A complete answer is given to the problem of expressing the function $_Tp_{ij}(z)$ (the generating function of the probability $_Tp_{ij}^{(n)}$) in terms of the functions of the class $p_{kl}(z)$ when the taboo set of states T is finite. The limit condition is considered for $\lim_{z \to 1} {}_1p_{11}(z) = 2$, which expresses the fact that the state i is recurrent. The notion of alternation of a Markov chain and the notion of a subchain are considered. If weights $[W_i]$ with $W_i > 0$ are given, the problem is considered for finding whether an indecomposable recurrent Markov chain exists which has these numbers as stationary weights. Two uniform theorems are established which state that a property is true of all states if it is true for one state.

Columbia U., New York.
MULTIVARIATE DISTRIBUTIONS WITH GIVEN MARGINS, by E. J. Gumbel. Technical rept. T-12A on Contract DA 30-069-ORD-1061. 1 July 58, 54p. 6 refs. CU-12-58-ORD-1061-IE; OOR rept. 1716.6; AD-200 607.
Order from LC mi$3.60, ph$9.30 PB 144 804

We have developed a general system of multivariate distributions for given marginal distributions under the assumption that the marginal distributions possess at least two moments, and, that the multivariate probability function has at least two derivatives. This system includes a new bivariate normal distribution, where the regression curves are not linear and the curves of equal probability are not ellipses. It was believed that the correlation always varies between ±1. However within the general system the coefficient of correlation varies only from -1/3 to +1/3. The two limits are reached for the bivariate uniform distribution. For a certain bivariate exponential distribution the correlation has only one fixed value. The usual properties of the coefficient of correlation hold for the bivariate normal distribution for which it was designed. But they do not hold for the general case of multivariate distribution. Assume we know that the marginal distributions are normal and obtain a correlation r = .30 based on a large number of observations. The usual conclusion that the correlation is weak is based on the unwarranted hypothesis that the bivariate distribution is of the Bravais-Pearson type. If the bivariate distribution belongs to the system developed here, the correlation is about 95 per cent of a possible maximum, i.e., very high. (Author)

AN APPROXIMATE SOLUTION TO AN IMPROPER BOUNDARY VALUE PROBLEM, by Jim Douglas, Jr. and T. M. Gallie, Jr. Rept. on Contract AF 18(600)1341. Aug 58, 17p. 14 refs. AFOSR-TN-58-776; AD-201 924.
Order from LC mi$2.40, ph$3.30 PB 138 174

Hadamard called those boundary value problems whose solutions do not depend continuously on the boundary data "improperly posed." In this paper we give a new solution of an improperly posed problem first solved by Kreisel (Proc. of the Royal Society A, vol. 195 (1959) p. 160-183). His method of solution is to seek smoothed solutions of an integral equation; our method is to seek a normal family of solutions of the corresponding differential equation.

SOLUTION OF THE DIRICHLET PROBLEM FOR THE ELLIPSE BY INTERPOLATING HARMONIC POLYNOMIALS, by J. L. Walsh. Rept. on Contract AF 18(600)1461. Oct 58, 7p. 5 refs. AFOSR-TN-58-1001; AD-206 144.
Order from LC mi$1.80, ph$1.80 PB 137 779

Recently J. H. Curtis has raised anew the question of interpolation by harmonic polynomials, and points out the analogy to interpolation by polynomials in the complex variable. He conjectures that satisfactory points of interpolation may be (for instance) equally spaced on the boundary of D with respect to the conjugate of Green's function for the complement of D. The object of the present note is to confirm this conjecture for the case that D is the interior of an ellipse, by computation of the polynomials involved.

Hebrew U. (Israel).
LOCAL DIFFERENTIAL ALGEBRA, by Abraham Robinson. Technical note no. 4 on Contract AF 61(052)187. May 59, 62p. 4 refs. AFOSR-TN-59-817; AD-220 589.
Order from LC mi$3.90, ph$10.80 PB 145 311

A consistency condition is obtained for a system of algebraic differential equations with given initial values. Theories are developed for ideals, polynomial ideals, and corresponding varieties. The starting point is a differential ring whose elements, at a given point, are represented by a homomorphic mapping into an ordinary ring.

Institute for Advanced Study, Princeton, N. J.
DIFFERENCE METHODS FOR PARABOLIC PARTIAL DIFFERENTIAL EQUATIONS, by Milton Lees. Rept. on Contract AF 49(638)253. Sep 59, 28p. 16 refs. AFOSR-[TN]-59-1039.
Order from LC mi$2.70, ph$4.80 PB 145 304

The purpose of this paper is to introduce and apply a general technique for analyzing stability and convergence of the principal difference schemes currently in use for approximating solutions of parabolic differential equations. In addition to linear parabolic equations with non-constant coefficients, the method will be applied to certain non-linear equations.

Institute for Advanced Study, Princeton, N. J.
INTEGRATION OF THE GOURSAT PROBLEM BY DIFFERENCE METHODS, by Milton Lees. Rept. on Contract AF 49(638)253. Oct 59, 19p. 6 refs. AFOSR-TN-59-1109.
Order from LC mi$2.40, ph$3.30 PB 145 318

In this paper we employ finite difference methods to solve the Goursat problem for linear and quasi-linear hyperbolic equations in characteristic form. In addition to existence and uniqueness theorems, we derive several approximation theorems. The results are based on an integral inequality for the solutions of the Goursat problem which is similar to the well-known energy inequality for hyperbolic equations. (Author)

Institute for Advanced Study, Princeton, N. J.
ON UNIVALENT FUNCTIONS WITH REAL COEFFICIENTS, by James A. Jenkins. Rept. on Contract DA 36-034-ORD-2453. Dec 58, 20p. 6 refs.
Order from LC mi$2.40, ph$3.30 PB 138 578

The object of the present paper is to treat the class of univalent functions with real coefficients using the usual normalization in a unified manner through the medium of the General Coefficient Theorem [3;4, p. 51]. In this way we obtain substantially more complete results than have been obtained before. Among others we obtain the exact domain covered by the image of the unit circle under every such function, the region of values of such functions at a point in the unit circle and new bounds involving the derivative of these functions.

Institute for Advanced Study, Princeton, N. J.
UNIQUE CONTINUATION FOR PARABOLIC DIFFERENTIAL EQUATIONS AND INEQUALITIES, by M. Lees and M. H. Protter. Rept. on Contract AF 49(638)253 and National Science Foundation Grant G-5863. Oct 59, 22p. 8 refs. AFOSR-TN-59-1110.
Order from LC mi$2.70, ph$4.80 PB 145 317

In this paper certain unique continuation theorems are proved for parabolic equations and inequalities. Essentially, these continuation theorems have the following form. If a solution of a parabolic equation (or inequality) exists in a region and vanishes in a subregion, then it vanishes in the original region. As a consequence of one of the continuation theorems, the uniqueness of the first mixed, initial-boundary value problem for "negative time" is proved. (Author)

Institute for Fluid Dynamics and Applied Mathematics, U. of Maryland, College Park.
A METHOD FOR EVALUATING CERTAIN LATTICE SUMS, by A. A. Maradudin and G. H. Weiss. Rept. on Contracts AF 18(600)1015 and 1315). Sep 58, 8p. 6 refs. Technical note BN-148; AFOSR-TN-58-927; AD-204 737.
Order from LC mi$1.80, ph$1.80 PB 137 776

A method for transforming slowly convergent lattice sums into very rapidly convergent sums with the aid of asymptotic expansions is presented, and the method is applied to the evaluation of a class of sums evaluation of a class of sums evaluated previously by Benson and Schreiber by purely numerical methods. ON CERTAIN REFLECTION PRINCIPLES, by E. P. Miles, Jr. Rept. on Contract AF 49(638)81. July 58, 12p. 10 refs. Technical note BN-146; AFOSR-TN-58-702; AD-162 236.
Order from LC mi$2.40, ph$3.30 PB 137 506

A reflection principle was recently established by A. Huber (Communications on Pure and Applied Mathematics 9:471-478, 1956) for functions polyharmonic of order p, applicable when the function and its first p-1 derivatives with respect to x_1 vanish on the hyperplane of reflection $x_1 = 0$. Huber's theorem includes as special cases the classical principle of H. A. Schwarz for harmonic functions and the corresponding results of H. Poritsky (Trans. Am. Math. Soc. 59:248-279, 1946) and R. J. Duffin (Duke Math. J. 22:313-324, 1955) for biharmonics. Assuming that a polyharmonic function of order p, meeting the above conditions on its derivatives, has an analytic continuation across this hyperplane, a locally valid expansion for the function is obtained in terms of its Cauchy data on the hyperplane. From this expansion an alternate reflection principle of limited range is obtained which is shown to be reducible to the Schwarz, Duffin, and Huber principles for $p = 1, 2, 3$, respectively, within their common range of validity. Results for the iterated Laplace equation are used which closely parallel those recently discussed by the author. A brief description is also presented of a corresponding heuristic approach to the reflection principle for the Helmholtz equation treated recently by Diaz and Ludford [Annali di Mathematica Pura ed Applicata, Serie IV, Tomo XXXIX (1955) pp 87-95].

EXTENSIONS OF THE KHINCHINE-WISSER THEOREM, by Harold N. Shapiro. Rept. on Contract Nonr-285(38). Dec 58, 43p. IMM-NYU 253.
Order from LC mi$3.30, ph$7.80 PB 144 854

Wisser provided a much simplified proof of Khinchine's theorem, and at the same time dropped the assumption of stationarity. In this note various extensions of Wisser's result are obtained, which focus on providing subsequences, of given infinite sequences, on which the probability of any finite intersection is bounded from below in a "natural way".

STEP-DOWN PROCEDURE IN MULTIVARIATE ANALYSIS, by J. Roy. Rept. on Contract AF 18(600)83. Dec 57, 18p. 7 refs. Mimeograph series no. 187; AFOSR-TN-58-33; AD-148 072.
Order from LC mi$2.40, ph$3.30 PB 137 711

The step-down procedure is applied to the multivariate analysis of variance and the comparison of variance-covariance matrices in order to derive new tests of significance and simultaneous confidence-bounds on a number of deviation-parameters. The step-down procedure is not invariant under a permutation of the variates and should be used only when the variates can be arranged on a priori grounds. Some advantages of the step-down procedure are that (1) the procedure uses widely known statistics like the variance-ratio; (2) the test is carried out in successive stages and in significance is established at a certain stage, one can stop at that stage; (3) it leads to simultaneous confidence-bounds on certain meaningful parametric functions.

Laboratory of Statistical Research, U. of Washington, Seattle.
ON CONTINUITY OF TRANSITION FUNCTIONS, by R. M. Blumenthal. Technical rept. no. 29 on Contract Nonr-477(11). 21 Oct 57, 11p. 3 refs. AD-148 390.
Order from LC mi$2.40, ph$3.30 PB 137 713

The continuity of transition functions $P(T, x, A)$ of a time-homogeneous Markov process with state-space X is discussed from the standpoint of placing less restrictive properties on the function than was done by J. L. Doob (Stochastic Processes, New York, 1953) and D. G. Kendall (Trans. Amer. Math. Soc. 78:529-540, 1955) when they assumed that for each x in X, $P(t, x, [x]) \to 1$ as $t \to 0$. The following properties are always assumed: (1) for each $t > 0$ and x in X, $P(t, x, \cdot)$ is a measure on $\underline{F}$ with $P(t, x, X) \leq 1$; (2) for each $t > 0$ and A in $\underline{F}$, $P(t, \cdot, A)$ is $\underline{F}$-measurable; and (3) for each $s > 0$, $t > 0$, x in X, A in $\underline{F}$, $P(t+s, x, A) = \int P(t, y, A)(s, x, dy)$. These additional properties are also assumed at various stages in the discussion: (1) for each A in $\underline{F}$, $P(t, x, A)$ defines a function on $(0, \infty) \times X$ which is measurable in (t, x) with respect to

the product Borel field of the Lebesgue measurable subsets of $(0,\infty)$ and $\underline{F}$; and (2) with x fixed, for each A in $\underline{F}$, $\lim_{t\to 0} P(t, x, A)$ exists. F is a Borel filed of subsets of X.

OPERATORS AND THEIR FREDHOLM DOMAIN, by John W. Brace. Rept. on Contract AF 18(603)78. Sep 58, 24p. 19 refs. AFOSR-TN-58-851; AD-203 492.
Order from LC mi$2.70, ph$4.80 PB 138 049

This paper is concerned with the operator $I-\lambda T$, λ a complex number, I the identity mapping, and T a closed linear operator taking a Banach space X into itself. For a given y in X, the goal is to solve the equation $x-\lambda T(x)=y$ for x. The set of complex numbers called the generalized Fredholm domain for T is presented along with appropriate generalizations of the definition of the Fredholm radius. Making use of the Fredholm domain of type I, a very general class of operators having the spectral properties of compact operators is given. In analogy to the Fredholm method for integral equations, a method is given which is applicable in the Fredholm domain of type I. Though this method presupposes information about the eigen values, it may be used in reverse to determine such information.

INHERENT ERRORS IN MATRICES WITH STATISTICAL APPLICATIONS, by Joseph Bryce Tysver. Rept. on Project Michigan, Contract DA 36-039-sc-52654. Feb 58, 102p. 74 refs. 2144-213-T; AD-154 973.
Order from LC mi$5.70, ph$16.80 PB 138 467

The class of inherent errors evaluated in this study includes errors due to observation and measurement and does not include computational errors introduced by roundoff. The matrix operations are limited to the solution of linear systems. Additional development is made of the two usual methods of stating the effects of inherent errors: bounds and probability distributions. Second order increments are considered, new expressions for bounds are introduced, and distributional considerations are used in matrix operations for which such treatment is not presently available. An additional method of evaluation involves the determination of maximum values for the errors in the results of matrix operations. Application is made to the statistical problems of linear regression and analysis of variance for one-factor experiments.

ON GENERALIZED GRID SCHEMES AND FINITE DIFFERENCES, by E. W. Schwiderski. 4 Nov 59, 47p. 7 refs. NWL rept. no. 1672.
Order from LC mi$3.30, ph$7.80 PB 144 946

This report introduces the "principle of complete interpretation of initial or boundary conditions" for the integration of partial differential equations which uses the geometry of prescribed domains of operation and the integral at the boundary. Rectangular grid schemes are generalized. The definition of ordinary finite differences is reformulated into new generalized differences. Laplace's equation is illustrated, and applications of generalized differences are cited. (Author)

HOMOMORPHISMS OF TRANSFORMATION GROUPS, by Robert Ellis and W. H. Gottschalk. Rept. on Contract AF 18(600)1116. 30 Nov 58, 22p. 4 refs. AFOSR-TN-58-874; AD-203 914.
Order from LC mi$2.70, ph$4.80 PB 138 147

Results of the study show that a transformation group with compact phase space and non-compact phase group gives rise to a compact topological group called its structure group. Let (X, T) be a transformation group with compact phase space X and with arbitrary phase group T. There exists least invariant closed equivalence relations S_d and S_e in X such that T is distal on X/S_d and T is equicontinuous on X/S_e. If (X, T) is locally almost periodic, then the 4 relations of S_d and S_e with the proximal and regionally proximal relations coincide. Such transformation groups are partially classifiable according to their structure groups.

PROPERTIES OF SECOND-ORDER CORRELATION FUNCTIONS, by J. Y. Hayase. Thesis. Rept. on Contract DA 36-039-sc-64637. 17 May 57, 68p. 47 refs. Technical rept. 330; AD-201 535.
Order from LC mi$3.90, ph$10.80 PB 145 267

The idea of correlation functions is extended to higher-order correlation functions. A definition of n^{th}-order correlation functions is given, and the general nature of these functions is considered. The emphasis is placed on the case n = 2. A survey of the ideas of stochastic process is given, and it is shown how it serves as a model for messages in a communication system. The second-order autocorrelation functions of periodic, aperiodic, and random functions are computed and plotted. Properties of second-order autocorrelation functions concerning continuity, behavior at the origin, phase effects of harmonics, and so forth, are considered. For periodic and aperiodic functions, the relation between the first- and second-order autocorrelation functions is given. The Fourier transform of second-order autocorrelation functions is investigated and a physical interpretation of this transform is given. Second-order crosscorrelation techniques are used to determine the location of random noise sources. (Author)

STUDIES IN PERTURBATION THEORY. II. GENERALIZATION OF THE BRILLOUIN-WIGNER FORMALISM. III. SOLUTION OF THE SCHRÖDINGER EQUATION UNDER A VARIATION OF A PARAMETER, by Per-Olov Löwdin. Technical note no. 28 on Contract AF 61(514)1200. 15 June 59, 21p. 7 refs.
Order from LC mi$2.70, ph$4.80 PB 145 191

Part II. The solution of the Schrödinger equation by means of the variation principle and a discrete basis

leads to a certain secular equation. In a previous paper it was shown that, if this equation is handled by a partitioning technique, a generalization of the Schrödinger-Brillouin formula is obtained. The procedure contains an inverse matrix, and it is shown here that, if in the expression for the wave function this matrix is approximated to the M^{sh} order, the corresponding matrix in the expectation value for the energy is approximated to order $(2M+1)$. This gives a simple derivation and generalization of the Brillouin-Wigner theorem. The connection between the variation principle and perturbation theory is further discussed. Part III. The solution of the Schrödinger equation by means of the variation principle and a discrete but not necessarily orthonormal basis is studied in the case when the Hamiltonian $T1 = T1(\alpha)$ is a function of a parameter α. The coefficients in the power series expansions in α of the wave function and the energy are explicitly determined in the form of expectation values, and the connection with the conventional Schrödinger theory is discussed. (Author)

SEMI-COMPACT MAPPINGS, by Paul McDougle. Technical note no. 5 on Topology and Mathematical Analysis, Contract AF 49(638)72. July 58, 10p. 5 refs. AFOSR-TN-58-768; AD-201 923.
Order from LC mi$1.80, ph$1.80 PB 138 175

The semi-compact mapping property is introduced here for the purpose of relating certain properties that have been of importance in the study of decomposition spaces. Also, since certain equivalences have been established among space property invariants, mapping properties, and decomposition properties it has seemed feasible to introduce a system of spaces and mappings which characterize many decomposition space problems while obviating the decomposition construction. Particular attention is given the case where point inverses are connected and have bicompact boundaries.

STATIONARY POINTS FOR FINITE TRANSFORMATION GROUPS, by John Greever. Technical note no. 6 on Topology and Mathematical Analysis, Contract AF 49(638)72. Aug 58, 16p. 9 refs. AFOSR-TN-58-797; AD-202 230.
Order from LC mi$2.40, ph$3.30 PB 138 171

Let X be a finite-dimensional compact Hausdorff space and let G be a group of transformations of X into itself. A corollary to the Lefschetz Fixed Point Theorem asserts that F_G is non-empty when G is cyclic and X is triangulable and homologically trivial over R. From a theorem of P. A. Smith it follows that F_G is non-empty when X is homologically trivial over Z_p and G is of order p^{α}. It is the purpose of this paper to set forth results of this nature for groups of more arbitrary orders than those dealt with by the Lefschetz and Smith Theorems

Washington U., Seattle.
A COMPARISON OF SOME ANALYTIC METHODS OF ROTATION IN FACTOR ANALYSIS, by Edward F. Gocka. Rept. on Contract Nonr-477(08) and Public Health Research Grant M-743(C3). Feb 59, 169p. 29 refs.
Order from LC mi$7.80, ph$25.80 PB 144 824

The present study does not compare all analytic methods; it is restricted to a comparison of three analytic methods which are regarded as representative of the major trends in current analytic procedures. The results from the analytic procedures are compared with those obtained from known graphical procedures. Properties such as factorial invariance, which are quite adequately demonstrated for the graphical results, are used to evaluate the analytic results. The matrices to be rotated are selected so as to adequately sample the range of all possible positive manifold factor patterns for small matrices which have a complete and determinate simple structure.

Washington U., Seattle.
ON A CLASS OF PARTIALLY ORDERED SETS, by E. Michael. Technical rept. no. 5 on Contract Nonr-477(21). Mar 59, 5p. 1 ref.
Order from LC mi$1.80, ph$1.80 PB 145 211

In this note we consider a class of partially ordered sets, called partially well-ordered, and it is shown that they have some simple, desirable properties. As the name suggests, a simply ordered set is well-ordered if and only if it is partially well-ordered. Moreover, it is shown that any subset, finite cartesian product or image under an order-preserving map of partially well-ordered sets is partially well-ordered.

Ballistic Research Labs., Aberdeen Proving Ground, Md.
ON THE AUTOMATIC DETECTION OF SCALING ERRORS IN AN ORDVAC-TYPE ARITHMETICAL ORGAN, by George W. Reitwiesner. Jan 56, 21p. 7 refs. Memo. rept. no. 966.
Order from LC mi$2.70, ph$4.80 PB 144 653

In preparing programming for the solution of problems by fixed radix calculating machines, programmers must scale the arithmetic to satisfy certain number-size restrictions which exist inherently in the functioning of the machines. In complicated problems this may not always be possible, and considerations of machine solution time may prohibit resort to programmed floating radix operation. A very definite advantage accrues when circuits are incorporated into the machine to recognize unanticipated violations of these restrictions and to effect appropriate alarm action when they occur. The ORDVAC contains no such circuits. All schemes considered heretofore for the addition of such circuits have appeared to require a significant quantity of equipment of distinctive design and function.

Computer Control Co., Inc., Wellesley, Mass.
FEASIBILITY STUDY FOR A KEYBOARD TYPE SELECTOR PLUGBOARD AND PLUGBOARD CHECKER, by Robert E. Michaud. Technical rept. no. 173 on Contract AF 30(602)1728. 20 June 58, 76p. 3 refs. RADC-TN-58-149; AD-148 752.
Order from LC mi$4.50, ph$12.30 PB 137 513

A study has been conducted to determine the feasibility of replacing a plugboard method of connecting logical elements by an automatic method, using a paper tape or a keyboard. Two possible means of implementation were considered: The telephone crossbar and the magnetic transfluxor with associated electronic circuits. The Transfluxor was adjudged to be superior, and a demonstration unit constructed to illustrate the logical design and circuit techniques involved. (Author)

Melpar, Inc., Falls Church, Va.
VOICE DATA PROCESSING SYSTEM, by L. P. Schoene, Jr. Scientific rept. no. 1 on Contract AF 19(604)5579. 15 Oct 59, 121p. AFCRC-TN-59-791.
Order from LC mi$6.30, ph$19.80 PB 144 797

The system programming, the results of a feasibility study, and the design and development of transistorized plug-in modules for a digital Voice Data Processing System are presented. This system, being fabricated to support the development by AFCRC of a speech bandwidth compression technique, is a special purpose computer operating from a 400 kilocycles-per-second clock. Several operational modes are provided to enable use of the Voice Data Processing System as a data accumulating and sorting device and then as a complete communication system simulator. The mathematical design analysis and the description of the operational evaluation tests for one of the circuit modules are included as appendices. (Author)

Michigan U. [Research Inst.] Ann Arbor.
THE LOGIC OF FIXED AND GROWING AUTOMATA by Arthur W. Burks. Rept. on Project Michigan, Contract DA 36-039-sc-52654. Feb 58, 39p. 14 refs. 2144-231-T.
Order from LC mi$3.00, ph$6.30 PB 144 660

Computers may be classified in various ways: discrete versus continuous, synchronous versus asynchronous, deterministic versus probabilistic, fixed versus growing. When the word "automaton" is used in this paper without qualification, it will be to refer to discrete, synchronous, deterministic computers. In Sections 2 through 5 fixed automata are discussed, and, in Section 6, growing automata. Several languages for describing automata and methods for transforming expressions from one language to another are presented, and some general theorems concerning automata are stated and proved. Language and theory are, of course, intimately related: to state theorems about automata one must specify the class of automata under consideration, which can be accomplished by specifying the languages adequate to describe them. Automata languages have considerable practical importance for the process of logical design. (Author)

National Research Labs., Ottawa (Canada).
COMBINED ANALOG-DIGITAL SIMULATION OF ENGINEERING PROBLEMS, by F. W. Pruden. Oct 59, 17p. 7 refs. Mechanical engineering rept. MK-6.
Order from LC mi$2.40, ph$3.30 PB 144 887

A simple, but realistic dynamic system is considered, and the relative advantages of analog and digital methods of solution are investigated. For solution accuracy limited to 3 to 4 decimal digits the analog method is cheaper. However for certain mathematical operations such as long-term integration and generation of complicated functions, digital computer accuracy may be necessary. The coupling of analog and digital machines is discussed, and the relevant sampled-data theory is introduced. The stability of such combined systems in calculations is considered. Finally some examples of combined calculations are given. (Author)

Naval Ordnance Test Station, China Lake, Calif.
INVESTIGATION OF HIGH-FREQUENCY TRANSISTOR LOGIC CIRCUIT FOR DIGITAL APPLICATION, by Thomas Wong. 1 Aug 59, 104p. 18 refs. NOTS-TP-2319; NAVORD rept. 6588.
Order from LC mi$5.70, ph$16.80 PB 145 166

A discussion on the design of a logic module employing junction transistors is given. This package is designed as a standard module for logical operation in a digital computer, and employs "NOR" logic in place of the usual "AND", "OR", and "NOT" functions. In addition, the principle of threshold operation for the "NOR" circuit is introduced; this characteristic increases the versatility of the logical operation. The worst-case design philosophy was employed in the design technique. The circuit analysis of this module includes the various input and output loading conditions. A small-signal equivalent circuit for saturation operation is also presented. (Author)

THE ROLE OF HUMANS IN COMPLEX COMPUTER SYSTEMS: MAINTENANCE, by Glenn L. Bryan, Joseph W. Rigney and others. Technical rept. no. 26 on Contract Nonr-228(02). Jan 59, 102p. 8 refs.
Order from LC mi$5.70, ph$16.80 PB 145 020

This investigation was designed (1) to observe and describe maintenance requirements and practices for digital computer systems now in use, (2) to examine the methods for screening, training, and evaluating computer technicians, and (3) to obtain up-to-date information on the organization and supervision of computer maintenance work. Visits were made to 50 representative computing centers in the United States. on-site information was collected by means of observation, questionnaires, and interviews. The results presented provide a state-of-the-art summary regarding human factors problems in computer maintenance; they also serve to define computer personnel problems where future data are most needed.

University of Southern California, Los Angeles.
THE ROLE OF HUMANS IN COMPLEX COMPUTER SYSTEMS: PROGRAMMING, by Glenn L. Bryan, Joseph W. Rigney and others. Technical rept. no. 25 on Contract Nonr-228(02). Jan 59, 81p. 4 refs.
Order from LC mi$4.80, ph$13.80 PB 145 021

This report describes the results of research undertaken to develop and organize information about the role of humans in programming digital computers. It discusses programming practices and problems and pays special attention to the selection, training, and utilization of programmers. Information was collected by visiting 50 computers centers engaged in business, scientific, and military data-processing. Interviews, questionnaires, and direct observation were among the techniques used. Programming was found to be a process requiring the best talents of many different people. It appears that what is needed most for successful programming is a broad enough approach on the part of planners to encompass the diverse problems that are inevitable, but that so often are overlooked when programming is undertaken by a new group. A list of 50 summary statements is presented in the concluding section of the report. (Author)

LAWS FOR LARGE ELASTIC RESPONSE AND PERMANENT DEFORMATION OF MODEL STRUCTURES SUBJECTED TO BLAST LOADING, by W. E. Baker, W. O. Ewing, Jr. and J. W. Hanna. Dec 58, 56p. 10 refs. Rept. no. 1060.
Order from OTS $1.75 PB 161 446

A model law is developed for scaling of response to blast loading of structures which undergo large elastic and plastic deformations. In the derivation of the model law, strain-rate and gravity effects are assumed negligible. The geometrical scaling of response predicted by the law is verified by a series of experiments on small cantilever beams. (Author)

DAMPING OF FLEXURAL VIBRATIONS BY ALTERNATE VISCO-ELASTIC AND ELASTIC LAYERS, by Eric E. Ungar, Donald Ross, and Edward M. Kerwin, Jr. Rept. for Dec 58-July 59 on Materials Analysis and Evaluation Techniques, Contract AF 33(616)5426. Nov 59, 45p. 10 refs. WADC Technical rept. 59-509.
Order from OTS $1.25 PB 161 425

A general analysis of damping due to N equal tapes is presented; the effect of using non-equal tapes is investigated for double tape applications. Suitable dimensionless parameters are used where possible in order to maintain generality. Previous work dealing with the damping of flexural vibrations by application of single "damping tapes" consisting of metal foils and dissipative adhesives is summarized and extended to multiple tapes. It is shown that additional tapes provide a considerable increase in damping at low frequencies, but only a very small increase at high frequencies. It is found that multiple tapes and single tapes incorporating an equivalent amount of metal provide nearly the same damping, a fact which results in great design flexibility. Experimental and theoretically predicted results are shown to be in reasonabl/ good agreement. (Author)

THE CONTACT PROBLEM FOR VISCOELASTIC BODIES, by E. H. Lee and J. R. M. Radok. Technical rept. no. 47 on Contract Nonr-562(10). Jan 59, 31p. 13 refs. C11-47.
Order from LC mi$3.00, ph$6.30 PB 144 863

The contact problem in viscoelasticity is one in which different types of boundary conditions are prescribed depending on whether boundary points inside or outside the region of contact are considered. Since, in general, the contact region varies with time, this leads to a problem which cannot be treated directly by application of the Laplace transform, which has formed the basis for most published viscoelastic stress distribution solutions. It is shown that the solution of the viscoelastic counterpart of the Hertz problem in elasticity can be deduced from the elastic solution by the method of functional equations. A particular example is presented, and the marked effect of viscoelastic behavior on the pressure distribution in the contact region is illustrated.

Brown U. Div. of Engineering, Providence, R. I.
A DIFFERENTIAL STRESS-STRAIN RELATION FOR THE HEXAGONAL CLOSE-PACKED ARRAY OF ELASTIC SPHERES, by J. Duffy. Technical rept. no. 3 on Contracts Nonr-562(14) and Nonr-266(09). Oct 57, 15p. 5 refs. 562(14)/3; AD-145 022.
Order from LC mi$2.40, ph$3.30 PB 137 548

A differential stress-strain relation is derived for a medium composed of a hexagonal close-packed array of elastic spheres in contact. The stress-strain relation is based on the theory of elastic bodies in contact, and includes the effects of both normal and tangential components of contact forces. Results are presented for an experiment performed as a test of the differential stress-strain relation. (Author)

RESPONSE OF A FIXED ENDED RIGID FRAME TO TRANSIENT LOADING, by R. C. DeHart. 1 Nov 57, 40p. 3 refs. AFSWP-613; AD-151 333.
Order from LC mi$3.00, ph$6.30 PB 145 400

The response of a fixed ended rigid frame subjected to time dependent forces is determined. The Lagrange equation of motion, written in terms of the generalized coordinates for each of several normal modes, is used. The analysis shows that if the column mass is large and the time dependent concentrated load is applied at the column top, a rigid frame containing columns with fixed ends has a quite different bending moment response than an identical rigid frame containing pinned rather than fixed ends. For the case in which the dynamic load is uniformly distributed along a column, there is essentially no difference between the response of the frame with fixed ended columns and the response of the frame with pin ended columns. Changing the column ends from a pinned to a fixed condition does not materially change the time dependent deflections of the frame.

VIBRATIONS OF PRISMATIC BARS INCLUDING ROTATORY INERTIA AND SHEAR CORRECTIONS, by J. G. Sutherland and L. E. Goodman. Technical rept. on Contract N6ori-71, T.O. 6. 15 Apr 51, 28p. 16 refs. ATI-122 886.
Order from LC mi$2.70, ph$4.80 PB 138 124

The natural frequencies of beams, as predicted by the classical Bernoulli-Euler theory, are known to be slightly higher than those obtained in carefully controlled experiments. The difference between theory and experiment is almost completely removed, however, if consideration is given to the influence of rotatory inertia and shear deformation. This was first done by Timoshenko. Others who have contributed to an understanding of the importance of these effects include Jacobsen, Mindlin, Kruszewski, Fife and Wilbur, and E. Reissner.

Institute of Flight Structures, Columbia U., New York.
SHEAR BUCKLING OF BARS, by G. Herrmann and A. E. Armenakas. Technical note no. 3 on Contract AF 49(638)430. Oct 59, 14p. 1 ref. CU-7-59-AF-430-CE; AFOSR-TN-59-1016; AD-228 828.
Order from LC mi$2.40, ph$3.30 PB 144 762

It is shown that a perfectly straight bar, subjected to a state of uniform shear stresses will buckle, in a manner similar to a column under compression, if the shear stress exceeds a certain critical value. The buckling equations are obtained by the Newtonian approach, and also by the application of the principle of minimum potential energy. In order to provide additional insight into this buckling mechanism, a simple model is introduced and analysed. (Author)

Institute of Mathematical Sciences, New York U., N. Y.
ON FINITE DEFORMATIONS OF AN ELASTIC ISOTROPIC MATERIAL, by Fritz John. Rept. on Contract AF 49(638)161. Oct 58, 69p. 6 refs. IMM-NYU-250; AFOSR-TN-58-955; AD-205 348.
Order from LC mi$3.90, ph$10.80 PB 138 255

This report contains some results on finite deformations of an ideal elastic material. The first chapter deals with a purely geometric question, which is quite independent of the physical properties of materials. Chapter II gives an exposition of the classical equations for ideal elastic isotropic materials. The relations

$$q_{ik} = \frac{\partial U(p)}{\partial p_{ik}}$$

between p and q which take the place of the stress strain relations are analyzed in more detail in Chapter III. In Chapter IV we consider changes in potential energy resulting from changes in the transforma-

tion x' = f(x). Chapters V and VI derive the equations for bending of thin plates using Lagrange coordinates.

Martin Co., Baltimore, Md.
COMBINED EFFECTS OF AXIAL LOAD, THERMAL STRESS, AND CREEP IN FLAT PLATES, by P. C. Huang and C. J. Van Der Maas. Rept. for 1 Nov 56-31 Aug 57 on Structures Research at Elevated Temperature, Contract AF 33(616)3617. Mar 58, 145p. 3 refs. WADC Technical rept. 57-442.
Order from OTS $2.75 PB 161 087

This report presents methods for calculating the stresses and strains in unevenly heated flat plates. The methods are limited to the analysis of loadings in the plane of the plate and to temperature and strain distributions which are one-dimensional. The effects of plasticity, creep, and stability have been considered. Several experiments using 2024-T4 bare aluminum plates are reported in detail. It is concluded that the analytical methods have been verified by the experimental data. (Author)

Martin Co., Baltimore, Md.
COMBINED EFFECTS OF AXIAL LOAD, THERMAL STRESS, AND CREEP IN FLAT PLATES. LARGE DEFLECTION ANALYSIS OF BUCKLED PLATES UNDER THERMAL EFFECTS, by P. C. Huang and C. J. Van Der Maas. Rept. for 1 Oct 58-15 Jan 59 on Structures Research at Elevated Temperature, Contract AF 33(616)3617. Feb 59, 30p. WADC Technical rept. 57-442, supplement 1.
Order from OTS $0.75 PB 161 087-S-1

This report presents a method for calculating the post-buckling deflections, stresses, and strains in simply-supported flat plates which are evenly or unevenly heated. The analysis method is limited to uniaxial elastic-loads in the plane of plate and to one-dimensional temperature distribution. The method is applied to particular examples to demonstrate its use for calculating critical buckling loads and post-buckling behavior of plates subjected to the following temperature distributions: uniform, hot at the center varying linearly to cool at the edges, and cool in the center varying linearly to hot at the edges. The deflections and stresses resulting from these conditions are compared. An experimental verification for the method was sought using compression-buckling data from three tests. It was found that the theoretical data correlate satisfactorily with the experimental data. (Author)

STEADY STATE RESPONSE OF A SIMPLE SYSTEM WITH A HYSTERETIC SPRING, by Edward R. Rang. Rept. for 1 June-31 Dec 58 on Materials Analysis and Evaluation Techniques, Contract AF 33(616)5426. July 59, 22p. 10 refs. WADC Technical rept. 59-121; AD-227 099.
Order from OTS $0.75 PB 161 091

The response of a simple spring-mass system is studied. The spring characteristics are chosen to simulate hysteresis loops found for systems in which the damping is due to the energy dissipation of materials or fabricated joints. Procedures for approximate calculation are outlined and an example is given. (Author)

Naval Research Lab., Washington, D. C.
MECHANICAL IMPEDANCE AS A TOOL FOR SHOCK OR VIBRATION ANALYSIS, by R. O. Belsheim and J. W. Young, Jr. Interim rept. 15 Feb 60, 31p. 78 refs. NRL rept. 5409.
Order from OTS $1.00 PB 161 022

This report introduces mechanical impedance to those already familiar with classical vibration theory. The impedance term is defined and discussed in detail. The analog between mechanical and electrical systems is noted and electrical circuit theorems which are especially applicable to mechanical systems are presented. In order to provide an introduction to the impedance concept, several simple mass-spring-dashpot systems are analyzed to obtain their impedance and the results are presented graphically. Since most structures are too complicated to yield to an analytical determination of impedance, methods for experimentally measuring mechanical impedance are discussed. Applications of impedance techniques for the general analysis of some shock and vibration problems are discussed. Material throughout the report is referenced and a fairly complete bibliography is included for those who would like more detailed information. (Author)

THEORETICAL STUDY OF THE INFLUENCE OF BLEED AREA ON AERODYNAMIC GROUND-INTERFERENCE PHENOMENA, by T. Kubota. Rept. on Contract N123(60530)14510A. 31 Mar 59, 98p. 9 refs. Technical rept. 115 (114-9-1); NOTS-TP 2324; NAVORD rept. 6592.
Order from LC mi$5.40, ph$15.30 PB 144 985

A theoretical analysis is carried out to determine the effects of bleed area on the ground interference of high-speed test sleds. At subsonic speeds a method is presented for estimating the bleed area effect of a lifting surface in an infinitely deep channel. For slender bodies an estimation of the bleed area effect is obtained by considering the two-dimensional flow in a transverse plane. At transonic speeds the transonic slender wing theory is extended to the case of ground interference, and the problem is reduced to that of finding a two-demensional incompressible flow in a transverse plane and an axisymmetric transonic flow around an equivalent body of revolution. Finally, at supersonic speeds the ground interference effects on slender bodies of revolution are analyzed by the method of Laplace transformation. (Author)

AN EXPLORATORY INVESTIGATION OF SOME AERODYNAMIC HEATING EFFECTS ON FLUTTER, by Sidney I. Gravitz. Rept. on Contract AF 49(638)219 Sep 58, 94p. 34 refs. ASRL Technical note 74-1; AFOSR-TN-58-972; AD-205 600.
Order from LC mi$5.40, ph$15.30 PB 138 125

An experimental and theoretical investigation is made of the effects of rapid change in Mach number on the flutter characteristics of supersonic wings; and the feasibility of utilizing a heated model in a low stagnation temperature wind tunnel to observe aerodynamic heating effects is studied.

Aeroelastic and Structures Research Lab., Mass. Inst. of Tech., Cambridge.
MEASUREMENT OF PRESSURE DISTRIBUTIONS ON AN OSCILLATING WEDGE IN SUPERSONIC FLOW, by John R. Martuccelli. Rept. on Contract NOas-58-313-d. Oct 58, 43p. 7 refs. Technical rept. 71-2; NAVAER-5151; AD-210 874.
Order from LC mi$3.30, ph$7.80 PB 144 950

A series of pressure distributions over a wedge oscillating in pitch in a two-dimensional supersonic flow are presented for two Mach numbers, two surface angles, and three amplitudes of oscillation. In general the pressure amplitudes lie on or slightly above those predicted by linearized theory, while the phase angles are much lower than the theoretical values. A theoretical investigation, confirmed by a limited amount of experimental evidence, is also presented to show that flow discontinuities may be causing significant errors in the pressure measurements. AERODYNAMIC CRITERIA FOR OPTIMUM DESIGN OF MIXED-FLOW IMPELLERS: EXPERIMENTAL RESULTS FOR IMPELLERS I AND IB, by J. L. Dussourd, N. Van Le, and D. E. Lewis. Rept. on Research on Mixed-Flow Compressors for Small Turbomachinery Application, Contract AF 33(616)2940. July 58, 152p. 13 refs. Rept. no. GT-5944-R; WADC Technical note 58-88.
Order from LC mi$7.50, ph$24.30 PB 144 669

This technical note reports the experimental results obtained on the performance of two mixed-flow impellers, designated as I and IB. These impellers are two of a series designed to provide information in formulating criteria for the aerodynamic designs of such compressors. Impellers I and IB represent compressor components aimed at a 5:1 pressure ratio and approximately 400 lb per min flow capacity. They are identical in meridonal shape, have identical inlet and exit conditions, have "medium-loaded" blades, and differ only in their respective blade shapes. The blade shape is such that the loading distribution is different, Impeller IB having a more highly loaded inducer. Each impeller, coupled with a vaneless diffuser, was tested extensively. Recorded test information includes over-all compressor calibration, impeller inlet survey data of total and static pressure, exit survey data of yaw angle, total pressures and temperatures at several peripheral positions, and shroud static pressures. The results indicate that little performance difference is detectable between the two impellers under all operating conditions. A discussion is presented of the performance results at conditions of subsonic, transonic, and supersonic flow relative to the inducer. (Author)

Applied Physics Lab., Johns Hopkins U., Silver Spring, Md.
INSTRUMENTATION FOR THE 5-IN. HYPERSONIC WIND TUNNEL AT FOREST GROVE STATION, by C. T. Holliday. Rept. on Contract NOrd-7386.
1 Oct 49, 50p. CM-576.
Order from LC mi$3.30, ph$7.80 PB 145 446

The requirements for satisfactory instrumentation of the blow-down type of wind tunnel differ somewhat from the requirements of the more conventional type of wind tunnel that is designed for continuous operation. Since static temperatures and pressures are very high and the time of supersonic flow is short the wind tunnel must be operated safely and automatically, and all data recording instruments must be automatic in operation and have a sufficiently high frequency response to accurately record all significant information. This report describes briefly the instrumentation of the five-inch hypersonic wind tunnel at the Forest Grove Station (near Silver Spring, Maryland) of the Applied Physics Laboratory, The Johns Hopkins University.

Cornell Aeronautical Lab., Inc., Buffalo, N. Y.
ENGINEERING DESIGN OF A WAVE SUPERHEATER FACILITY FOR HYPERSONIC RESEARCH AND DEVELOPMENT, by J. E. Carpenter. Rept. on Contract AF 18(603)141. Feb 59, 332p. 11 refs. Rept. no. AD-1118-A-2; AFOSR-TN-59-108; AD-210 224.
Order from LC mi$11.10, ph$51.60 PB 145 085

The engineering problems associated with the development of the 9000°R. Wave Superheater are presented in considerable detail. Included are the approaches that were pursued to attain a sound solution and the reasons for selecting the final engineering configurations. The major portion of the report is concerned with equipment selection and the background of engineering information required to perform the selection. Several Appendices are included which report in detail the results of various analytical and experimental studies. Specifications for the major items of purchased equipment are also included. (Author)

Cornell Aeronautical Lab., Inc., Buffalo, N. Y.
MODIFICATIONS OF THE BASIC SHOCK TUBE TO IMPROVE ITS PERFORMANCE, by Anthony L. Russo and A. Hertzberg. Rept. on Contract AF 18(603)10.
Aug 58, 50p. 11 refs. Rept. no. AD-1052-A-7; AFOSR-TN-58-716; AD-162 251.
Order from LC mi$3.30, ph$7.80 PB 144 524

Basic modifications are considered which would improve the performance of shock tubes in producing higher shock strengths and extend the use of hydrogen in generating strong shock waves in air. These modifications are the double-diaphragm driver with monatomic buffer gases and an area contraction at the diaphragm station. The results of this investigation indicate that the use of a shock tube with an area contraction and the proper monatomic buffer gas will permit the generation of strong shock waves, using cold hydrogen as a driver gas, with overall pressure ratios comparable to those required for combustion drivers. It is also shown that, by using a buffer gas with the proper atomic weight, the downstream diaphragm pressure ratio may be controlled to minimize the mass of the downstream diaphragm.

Cornell Aeronautical Lab., Inc., Buffalo, N. Y.
STUDIES OF CHEMICAL NONEQUILIBRIUM IN HYPERSONIC NOZZLE FLOWS, by J. Gordon Hall and Anthony L. Russo. Rept. on Contract AF 18(603)141. Nov 59, 62p. 20 refs. Rept. no. AD-1118-A-6; AFOSR-TN-59-1090.
Order from LC mi$3.90, ph$10.80 PB 144 945

Analyses have been made of chemical nonequilibrium effects in pseudo-one-dimensional nozzle flows where the working fluid is a mixture of a dissociating species and inert diluent. Numerical examples computed on a high-speed digital machine are given for the critical flow of pure oxygen at a reservoir temperature of 5900°K over a wide range of reservoir pressures. From the examples discussed it appears that high reservoir pressures are essential to avoid significant nonequilibrium effects in hypersonic wind tunnel test flows of air and in rocket nozzle flows employing hydrogen-like propellants. For the rocket nozzle, the net effect of nonequilibrium is to make the specific impulse for infinite expansion ratio only weakly dependent on chamber pressure for a given chamber temperature.

Institute for Fluid Dynamics and Applied Mathematics, U. of Maryland, College Park.
CALCULATION OF THE CROSS-STREAM WAVE LENGTH OF THE THREE-DIMENSIONAL TRANSITION PATTERN IN THE BOUNDARY LAYER ALONG A FLAT PLATE, by John R. Weske. Rept. on Contract AF 18(600)893. Nov 58, 30p. 10 refs. Technical note BN-150; AFOSR-TN-58-864; AD-203 671.
Order from LC mi$2.70, ph$4.80 PB 137 785

Observed three-dimensional transition motions in the boundary layer showing a pronounced pattern recurring periodically across the stream are analyzed under the assumption that secondary vorticity is a controlling factor and that viscous effects are of minor consequence. An optimum cross-stream wave length was computed which is numerically in agreement with experimental observations. The results of the computation point to the emergence of composite periodic vortex configurations. (Author)

AERODYNAMIC STUDIES: THE FORCES ACTING ON AN AIR VEHICLE: A REVIEW OF THE LITERATURE [PART 23] by M. Z. Krzywoblocki. Rept. on Scientific and Engineering Research Investigations in Flight Dynamics, Contract AF 33(616)5689.
Dec 59, 345p. 2183 refs. WADC Technical note 56-360, Part 23; AD-161 021.
Order from OTS $5.00 PB 161 442

The work is an annotated bibliography of the scientific literature pertaining to methods of calculating the aerodynamic forces acting on an air vehicle in flight. The present segment of the work includes material reviewed by the author in the period July-Sep 57. The more interesting papers and reports (from the viewpoint of the aerodynamicist) are discussed briefly; others are listed without comment. (Author) (See also PB 161 140)

Institute of Engineering Research, U. of California, Berkeley.
SLIP FLOW OVER A SHORT FLAT PLATE, by J. A. Laurmann. Doctoral thesis. Technical rept. on Contract Nonr-222(45). 26 Dec 57, 37p. 9 refs. HE-150-152; Series no. 20, issue no. 116; AD-155 324.
Order from LC mi$3.00, ph$6.30 PB 138 005

Solutions of the compressible flow Navier-Stokes equations have been obtained for the problem of slip flow over a short flat plate at zero angle of attack by linearization for small values of the ratio of the plate length to the mean free path of the gas. A closed form solution was found possible in the incompressible case; in the compressible case a general discussion has been given in terms of splitting of the solution into transverse and longitudinal waves. It was found that the effect of viscous terms of order higher than boundary layer theory extends over distances at the leading and trailing edges of the order of $\sqrt{\nu}$, and thus in many practical cases of interest are negligible. (Author)

Laboratorio di Meccanica Applicata del Politecnico di Torino (Italy).
THE DISSOCIATION OF A PURE DIATOMIC GAS IN A LAMINAR BOUNDARY LAYER ON AN ADIABATIC FLAT PLATE, by Gianni Jarre. Technical note 10 on Contract AF 61(514)1124.
Sep 58. 22p. 4 refs. AFOSR-TN-58-944; AD-205 082.
Order from LC mi$2.70, ph$4.80 PB 138 057

The present paper deals with the problem of the dissociation, produced by the friction heating, in a pure diatomic gas in a laminar boundary layer on an adiabatic flat plate at hypersonic Mach numbers. Two different and simplified methods are applied and give almost the same numerical laws describing the temperature-decay at the wall at the approaching of the chemical equilibrium state. Two numerical examples show that the considered case of dissociation is a very slow process. (Author)

Massachusetts Inst. of Tech., Cambridge.
GAS DYNAMICS OF FREE MOLECULE FLOW, by Alar Toomre. Rept. on Contract AF 49(638)207.
Mar 58, 41p. 10 refs. Fluid Dynamics Research Group rept. no. 58-2; AFOSR Technical note no. 58-787; AD-202 114.
Order from LC mi$3.30, ph$7.80 PB 144 982

The influence of a solid object upon the velocity distribution of gas atoms in free molecule flow is studied. A concept of shadow flow makes it possible to consider two distinct velocity categories, and in principle facilitates the calculation of the velocity distribution function at any point in space. The interaction with the surface is considered in detail. The cosine dependence of diffuse reflection, in particular, is shown to be useful. (Author)

National Research Labs., Ottawa (Canada).
HALF-MODEL MEASUREMENTS OF LONGITUDINAL FORCE AND MOMENT CHARACTERISTICS OF AGARD MODEL 'B' AT SUBSONIC AND SUPERSONIC SPEEDS, by J. G. Laberge. Dec 59, 30p. 5 refs. Aeronautical rept. LR-267.
Order from LC mi$2.70, ph$4.80 PB 144 884

This report presents longitudinal force and moment characteristics of AGARD model 'B' as measured on a half model in the N. A. E. 30-inch x 16-inch high speed wind tunnel, over a Mach number range from 0.375 to 2.03. (Author)

Naval Ordnance Test Station, China Lake, Calif.
PRESSURE AND WAVE DRAG COEFFICIENTS FOR HEMISPHERES, HEMISPHERE-CONES AND HEMISPHERE-OGIVES, by Jerome R. Katz.
21 Mar 58, 23p. 13 refs. NOTS-1947; NAVORD rept. 5849; AD-159 801.
Order from LC mi$2.70, ph$4.80 PB 144 989

Experimental pressure and wave drag coefficients for hemispheres, hemisphere-cones, and hemisphere-ogives were compiled and compared with modified Newtonian theory for a wide range of Mach numbers. (Author)

Naval Weapons Lab., Dahlgren, Va.
TRANSONIC FLOWS PAST BLUNT BODIES OF REVOLUTION WITH DETACHED SHOCK WAVES, by E. W. Schwiderski. 2 Dec 59, 63p. 16 refs. NWL Rept. no. 1673.
Order from LC mi$3.90, ph$10.80 PB 145 153

An investigation of the intrinsic analytic properties of the quasi-linear mixed flow yields a flow model which contradicts the common well-known flow pattern in some fundamental points. Basically new concepts are formed which consider the whole transonic flow as an entirety. Based on the new flow model a numerical method is developed which constructs regular analytic transonic flow elements as an entirety. The method is founded upon generalized grid schemes and finite differences which were introduced in NWL Report No. 1672. The principal ideas of this method will be used for the construction of the final solution to the shock wave problem in a future report. The described method is programmed for NORC. The complete program and numerous samples of transonic flow elements will be given in another NWL Report. In this report only one example is discussed in detail.

Rensselaer Polytechnic Inst., Troy, N. Y.
SIMPLE SHEAR FLOW PAST A FLAT PLATE IN AN INCOMPRESSIBLE FLUID OF SMALL VISCOSITY, by Ting Yi Li. Rept. on Contract AF 18(600)1591. July 58, 47p. 15 refs. TR AE 5813; AFOSR-TN-[58]-718; AD-162 253.
Order from LC mi$3.30, ph$7.80 PB 137 905

We shall consider the simple shear flow past a flat plate in an incompressible fluid of small viscosity. This problem has been discussed in a number of recent articles by the present writer. However, in these articles the present writer did not expand his viewpoints fully mainly because of the limitation of these articles' length, and consequently there exist a number of obscure points which call for further discussion. In the present report, therefore, the author shall attempt to bring forth a more complete account of his solution.

Rosemount Aeronautical Labs., U. of Minnesota, Minneapolis.
A TECHNIQUE FOR EXPERIMENTAL INVESTIGATION OF HEAT TRANSFER FROM A SURFACE IN SUPERSONIC FLOW AT LARGE SURFACE-TO-FREE-STREAM TEMPERATURE RATIOS, by W. S. Bradfield, A. R. Hanson and others. Rept. on Contract AF 18(603)16. June 58, 31p. 5 refs. Research rept. no. 150; AFOSR-TR-58-64; AD-158 252.
Order from LC mi$3.00, ph$6.30 PB 144 952

A description is given of an experimental technique for studying heat transfer at high temperatures. The direction of heat flux is from the surface to the boundary layer. Preliminary values of local convective and radiative heat transfer are reported. Some data are given on the deterioration of graphite surfaces coated with silicon nitride and silicon carbide. RIEMANN'S PROBLEM FOR A LAVAL-NOZZLE, I. HYDRAULIC APPROXIMATION, by Rudolf Schätz. Technical note no. 9 on Contract AF 61(514)1080. 12 Aug 59, 23p. 5 refs. AFOSR-TN-59-709.
Order from LC mi$2.70, ph$4.80 PB 145 296

This report discusses hydraulic approximation of RIEMANN's problem, i.e., the determination of flow arising from discontinuous initial pressure distribution, for LAVAL nozzles, presenting a detailed analysis of numerical features of difference methods employed. (Author)

A RELATIVISTIC TREATMENT OF STRONG SHOCK WAVES IN A CLASSICAL GAS, by Arnold W. Guess. Dec 59, 40p. 12 refs. GRD Research Notes no. 27; AFCRC-TN-59-642.
Order from OTS $1.00 PB 161 430

The relativistic Rankine-Hugoniot conditions of Taub are extended to include radiation pressure and energy density. The equations are specialized to the case of a classical gas in front of the shock (neglect of pressure and internal energy compared to rest mass energy density) and found to give strong shocks. Solutions are obtained separately for the cases of a pure material gas and a pure radiation gas behind the shock.

Experimental Towing Tank, Stevens Inst. of Tech., Hoboken, N. J.
AN EXPERIMENTAL STUDY OF THE EFFECT OF EXTREME VARIATIONS IN PROPORTIONS AND FORM ON SHIP MODEL BEHAVIOR IN WAVES, by Edward Numata and Edward V. Lewis. Rept. on Contract Nonr-263(10). Dec 57, 55p. 10 refs. Rept. no. 643; AD-154 980.
Order from LC mi$3.60, ph$9.30 PB 138 220

Results are presented of tests in regular and irregular waves of five models varying widely in form and proportions. Comparisions are given both among these models and with models tested in connection with other projects. It is shown that a low displacement-length ratio is a distinct advantage for reducing amplitudes of motions and, hence, for increasing speed at sea provided freeboard is adequate. The good sea performance of certain small craft with high displacement-length ratios appears to result mainly from ample free-board and, to a lesser extent, their V-form sections. It is shown that a good estimate of comparative performance of models of different form and proportions in irregular head seas can be obtained by suitable non-dimensional plots of motion amplitudes in regular waves of various lengths.

MODIFICATION AND FLOW CALIBRATION OF TEST SECTION OF HIGH-SPEED WATER TUNNEL, by Robert W. Kermeen. Summary rept. on Task 4, Contract NOrd-16200. Dec 58, 7p. 3 refs. Rept. no. E-73-10; AD-210 194.
Order from LC mi$1.80, ph$1.80 PB 145 273

The test section of the High-Speed Water Tunnel (Trans. ASME, vo/, 70, no. 5, p. 437-457, July 48) was modified in preparation for experiments on the force and cavitation characteristics of torpedo fins and control surfaces mounted on a reflection plane. The modification involved installing a reflection plane in the 14-inch diameter working section of the tunnel. The reflection plane is described and the results of flow calibrations of the tunnel test section with the reflection plane installed are given. (Author)

ON THE ORIGIN AND MECHANISM OF VORTEX MOTION AT THE INLET OF INTAKES PLACED NEAR A FLAT SURFACE, by J. R. Weske. Rept. on Contract AF 18(600)893. Nov 58, 27p. 4 refs. Technical note BN-152; AFOSR-TN-58-863; AD-203 672.
Order from LC mi$2.70, ph$4.80 PB 137 784

Occurrence of vortex motion at the inlet of intakes is traced to the effect of the free flow upon the motion

in the boundary layer along the plate and to the generations of secondary vorticity. The flow is investigated experimentally and by preliminary theoretical analysis. (Author)

Institute of Mathematical Sciences, New York U., N. Y.
A SOLUTION OF THE EQUATIONS OF STATISTICAL MECHANICS, by Robert M. Lewis. Rept. on Contract AF 49(638)341. Nov 59, 23p. 5 refs. Research rept. HT-3; AFOSR-TN-59-1216.
Order from LC mi$2.70, ph$4.80 PB 144 970

The solution of the initial value problem for Bogoliubov's functional differential equation of non-equilibrium statistical mechanics is obtained. This solution is then expanded in an infinite power series in the density which has the advantage that the calculation of the leading terms requires the solution of s-body problems only for small values of s. A derivation of the equilibrium equation by reduction from the non-equilibrium equation is included. (Author)

DETERMINATION OF TURBULENCE CHARACTERISTICS OF SOLID PARTICLES IN A TWO-PHASE STREAM BY OPTICAL AUTO-CORRELATION, by S. L. Soo, C. L. Tien, and V. Kadambi. Rept. on Project Squid, Contract Nonr-1858(25). Oct 58, 17p. 5 refs. Technical rept. PR-84-P.
Order from LC mi$2.40, ph$3.30 PB 145 723

Application of optical auto-correlation techniques enables determination of Lagrangian correlation, scale and intensity of turbulent motion of solid particles in a two-phase stream. This method allows measurement of both longitudinal and transverse correlations. (Author)

Technion Research and Development Foundation, Ltd. (Israel).
RESEARCH ON CROSS-STRESSES IN THE FLOW OF LIQUIDS, by Markus Reiner. Technical rept. for 1 Oct 57-30 Sep 58 on Contract AF 61(052)10. [1959] 27p. 12 refs. AFOSR-TN-59-37; AD-209 209.
Order from LC mi$2.70, ph$4.80 PB 145 168

Part I. An instrument is described which works as a centripetal vacuum pump. It consists of two circular metal plates, one stationary, the other rotating opposite it. The stator has an opening in the centre. The rotor can be freely displaced along the axis of rotation. By centripetal pumping action it is kept floating on an air cushion of thickness D. The relation between D and the speed of rotation was determined for different weights of the rotor to be supported. The results are interpreted on the basis of Maxwell's theory of the elastico-viscosity of air. Part II. An instrument is described which works as a centripetal pressure pump with incompressible liquids. (Author)

Armour Research Foundation, Chicago, Ill.
DEVELOPMENT OF A METHOD TO IMPROVE CASTINGS BY PRESS FORGING, by Andrew H. Murphy and Lyle L. Clark. Rept. for June 55-Dec 56 on Contract AF 33(600)30159. Mar 57, 217p. 12 refs. AD-140 817.
Order from LC mi$9.60, ph$33.30 PB 145 245

The effect of various press-forging and heat-treating conditions on the mechanical properties of Al, Mg, and Ti alloy castings was investigated. Optimum forging conditions (percent deformation, forging temperature, and heat-treatment prior to or after forging) were determined for a series of cast test bars of Al alloys 220 and 356, Mg alloy AZ92, and Ti-6Al-4V. The feasibility of utilizing a die block of cast Be-Cu alloy was demonstrated by press forging (to finished size and shape) 100 aircraft elevator control levers from Mg alloy castings; negligible die wear was observed. The improvement in the properties obtained by press forming Al 356 castings can be duplicated by increasing the normal aging time for this material. Mg AZ92 castings showed a marked improvement in physical properties when press forged with a 20% deformation. The increase in the strength of Al 220 press forged castings was proportional to the forging deformation. Ti-6Al-4V castings showed a very slight improvement in strength when subjected to press forging. The improvement imparted to production press-forged castings can be predicted by press forging cast test bars of the same alloy. (Portions of this report are illegible)

Massachusetts Inst. of Tech., Cambridge.
ON THE AGING BEHAVIOR OF THE ALLOY Ti-6Al-4V, by J. M. Dupouy, M. B. Bever, and B. L. Averbach. Technical rept. no. 2 on Physical Metallurgy of Titanium Alloys, Contract Nonr-1841(02). 31 Mar 59, 23p. 15 refs.
Order from LC mi$2.20, ph$4.80 PB 144 956

The effects of aging in the temperature range 800-1100°F (427-593°C) on the mechanical properties of the alloy Ti-6Al-4V were investigated. The amount of beta phase was measured as a function of aging time using an x-ray technique which employed a scintillation counter and a pulse-height analyzer.

Northwestern Technological Inst., Evanston, Ill.
AN ACOUSTICAL STUDY OF LOW-TEMPERATURE AGE-HARDENING AFTER REVERSION IN Al - 6 at.% Ag, by Herbert Herman and Morris E. Fine. 3 Dec 58, 19p. 25 refs. AFOSR-TN-58-1025; AD-162 292.
Order from LC mi$2.40, ph$3.30 PB 137 941

A study was conducted to determine the kinetics of re-aging after reversion in single crystals and to determine the mechanism of growth of Guinier-Preston zones. Two Al-6 at-% Ag single crystals, about 1.3 by 0.05 in. in size, were grown using a modified Bridgeman technique from ingots. The specimens were homogenized for 1 mo in a 550° C salt bath. For solution treatment, the specimen was contained in a sealed and weighted pyrex ampule evacuated to 10^{-6} mm of Hg which was suspended by a wire in a vertical furnace. For the quench, the wire was cut, allowing the ampule to drop into 25° water. Aging to the fully hardened state was attained by a 42-hr treatment at 100°C. Reversion was accomplished by heating for 15 min at 220°C. Plots were made for the fractional change of the resonant frequency from the initial reading to time t for re-aging after reversion at 50°, 70°, and 100°C. The re-aging reactions at 70° and 100°C were completed while the 50°C re-aging curve was 60% complete after 160 hr. Young's modulus decreased during concentration of Ag atoms into zones, the rate decreasing with increasing aging time. Zone formation occurred while the specimens were being warmed to the re-aging temperature. The decrease in modulus for the completed re-aging reactor was 2 of 3%. The total change from 1/2 hr to completion was less for direct aging than for re-aging after revision. Curves obtained for a crystal re-aged for 2 hr at 70°C and dropped to 50°C were extrapolated to 2.5 hr and indicated a 10±2 Kcal/mol activation energy.

Watertown Arsenal Labs., Mass.
CHROMIUM PLATING ON TITANIUM ALLOYS, by Charles Levy. Nov 59, 22p. 12 refs. WAL TR 405/1.
Order from LC mi$2.70, ph$4.80 PB 144 877

Methods for plating on titanium, reported in the literature, have been investigated and evaluated. Average adhesion values ranged from 572 to 5785 psi for the various methods. Acid immersion zinc deposits which offer promise of conditioning titanium surfaces for electroplating were developed in laboratory experimentation. More research is needed to achieve adhesion of chromium plate to titanium comparable to that obtained on steel, which is of the order of 40,000 psi.

Wisconsin U., Madison.
SUMMARY DATA TABULATION OF 300 MB FLOW CHARACTERISTICS FOR THE NORTHERN HEMISPHERE, by James F. Lahey, Reid A. Bryson and others. Final rept., Pt. 2, on Contract AF 19(604)2278. Sep 59, 139p. 1 ref. AFCRC-TR-59-270.
Order from LC mi$6.90, ph$21.30 PB 144 796

This tabulation contains, in addition to the types of data presented in the atlas, listings of 300 mb densities and the number of days for which U, V, and UV data were available at each grid intersection.

AN INVESTIGATION OF SPECIAL TREATMENT FOR DEVELOPING HIGH TOUGHNESS IN ULTRA HIGH-STRENGTH STEELS, by C. W. Marshall, G. W. Form and R. F. Hehemann. Final rept. on Contract DA 33-019-505-ORD-8. Nov 58, 56p. 9 refs. WAL no. 310/214; AD-211 011.
Order from LC mi$3.60, ph$9.30 PB 144 878

A new hardening technique involves deformation of the austenitic structure (without recrystallization) prior to the martensitic transformation to yield pronounced improvements in strength and toughness of high-strength steels. The principal variables investigated were working temperature and amount and mode of deformation prior to quenching. Rolling of 4350 steel at 1000°F caused a significant increase in strength but lowered ductility and notch impact toughness. Deformation of austenite prior to quenching did not invariably lead to improvement in mechanical properties.

Cornell Aeronautical Lab., Inc., Buffalo, N. Y.
SUPPLYING OF CAST TEST BARS FOR HIGH TEMPERATURE LEAN ALLOY STUDY, by J. Salvaggi. Final rept. for 19 Jan 53-30 Dec 56 on Contract NObsr-61335. [1957] 20p. 2 refs. Rept. no. KA-875-M-14; AD-144 946.
Order from LC mi$2.40, ph$3.30 PB 137 940

An investigation of the high-temperature behavior of modified chromium-nickel stainless steels in cast form has been conducted. A base analysis corresponding to a 17 Cr- 12 Ni- 2.5 Mo- 0.25 C stainless steel was modified by small additions of titanium, boron, and tungsten. The shell mold process was used to produce all cast test bars. Hot strength properties developed by the cast boron bearing compositions at 1350 and 1500°F compared favorably with those obtained for wrought material of similar compositions tested previously. These hot strength properties are in the same range as those of many of the super alloys containing appreciable quantities of strategic elements.

James Forrestal Research Center, Princeton, N. J.
SELF-DIFFUSION OF IRON IN NICKEL AND COBALT FERRITES, by R. H. Condit, M. J. Brabers and C. E. Birchenall. Rept. on Contract AF 18(600)967. July 58, 10p. 5 refs. Metallurgy rept. no. 18; AFOSR-TN-58-565; AD-158 383.
Order from LC mi$1.80, ph$1.80 PB 137 435

The self-diffusion of radioactive iron has been measured in nickel and cobalt ferrites in the temperature range between 844° and 1190°C. The rate of diffusion in the nickel ferrite is lower by about an order of magnitude than the diffusion in magnetite, and the rate in cobalt ferrite is about two orders of magnitude lower than the diffusion in magnetite. Iron diffusion in nickel ferrite appears to decrease with decreasing iron content. (Author)

National Bureau of Standards, Washington, D. C.
A STUDY OF 17-7 PH STAINLESS STEEL, by Nesbit L. Carwile and Samuel J. Rosenberg. Rept. for Jan 57-Dec 58 on Metallic Materials, Contract AF 33(616)57-7. June 59, 44p. WADC Technical rept. 58-653; AD-216 528.
Order from OTS $1.25 PB 161 089

A study was made of the mechanical properties and microstructures of 17-7 PH stainless steel as affected by heat treatment. Although optimum room temperature mechanical properties were obtained by a treatment slightly different from the TH 950 and TH 1050 treatments recommended by the manufacturer, the best tensile and stress-rupture properties at elevated temperatures (600° and 800°F) were obtained with the TH 950 treatment. When this steel in either the TH 950 or TH 1050 condition was subjected to prolonged exposure at 800°F, either with or without stress, a definite embrittlement resulted. The material may be restored to approximately its original properties by re-aging. Although extensive metallographic and X-ray examinations were made to ascertain the mechanism of aging and the precipitation-hardening compound, no definite conclusions were reached. The microstructure of this steel is extremely complex and could be a fertile field for study. (Author)

Naval Research Lab., Washington, D. C.
SOME OBSERVATIONS ON LOCALIZED BUCKLING OF CENTRALLY NOTCHED SHEET-STEEL SPECIMENS, by W. L. Bingham. Interim rept. 22 Dec 59, 8p. 1 ref. NRL rept. 5412.
Order from LC mi$1.80, ph$1.80 PB 143 015

Bending strains above a transverse slit in variously sized specimens of constant thickness have been used to indicate the presence of buckling. Buckling was found to occur only in the widest plate tested (48 inches); this is an observation in accordance with present elastic theory. Values of the transverse strains measured at positions ahead of the slit indicate the presence of a stress-relieving mechanism. This may be either a buckling deflection or a localized strain of the Luder-band type. (Author)

SUBSIZE CHARPY CORRELATION WITH STANDARD CHARPY, by Charles H. Curll. Dec 59, 26p. 3 refs. Technical rept. no. WAL TR 112/95.
Order from LC mi$2.70, ph$4.80 PB 144 923

The test data tend to verify a previously established nonlinear correlation between selected subsizes above the transition range and further indicate a linear correlation between the energy required to fracture standard-size and subsize V notch Charpy specimens at the normal acceptance testing temperature of -40°C.

Aeroelastic and Structures Research Lab., Mass. Inst. of Tech., Cambridge.
A STUDY OF THE RELATIONSHIP BETWEEN NOTCHED AND UNNOTCHED SPECIMENS OF 2024 ALUMINUM ALLOY IN THE LOW-CYCLE FATIGUE REGIME, by Richard D'Amato and Robert De Boer. Rept. for 1 Mar 58-31 Dec 59 on Structural Design Criteria, Contract AF 33(616)3310. May 59, 80p. 6 refs. WADC Technical note 59-2.
Order from OTS $2.00 PB 161 405

An experimental fatigue investigation was conducted in the range of life between 1 and 10000 cycles to failure using notched and unnotched specimens of 2024 aluminum alloy. The notched specimens with theoretical elastic stress concentration factors of 2.0 and 4.0 were cycled between limits of deformation across the notch and the unnotched specimens were cycled between limits of elongation measured over a gage length of 3/4 inch. It was found that a linear relationship existed between range of deformation and cycles to failure when these variables were plotted on log-log coordinates and that the slope was the same for all three specimen configurations. In addition, when the strain-cycling data from each notch type was normalized to the failure strain, the data from all specimen configurations were found to lie within a relatively narrow band. The present investigation also indicated that the results of fatigue tests on notched specimens tested between limits of strain may be converted to stress-cycling results (S-N diagrams) by means of a stress-strain curve. [Aeronautical Materials Lab.] Naval Air Material Center, Philadelphia, Pa.
ENDURANCE TESTS OF ALUMINUM AND MAGNESIUM CASTING ALLOYS CONTAINING VARIOUS DEGREES OF DISPERSED DISCONTINUITIES. Rept. on Endurance Tests of Aluminum Alloy AL-355 Containing Various Degrees of Porosity, Proj. TED NAM AE 4132. 14 Dec 54, 10p. 4 refs. Rept. no. AML NAM AE 4132, Pt. 2.
Order from LC mi$1.80, ph$1.80 PB 138 242

Fatigue strengths for porosity degrees Numbers 1 through 4 for aluminum casting alloy AL-355 in the solution treated and aged (T6) condition were determined. Based on the rising order of porosity and the fatigue strength taken as the stress corresponding to the fatigue life at 10,000,000 cycles, it was found that as porosity increased, the fatigue strength decreased from a maximum of 12,000 psi for degree Number 1 to a minimum of 9,000 psi for degree Number 4. Porosity degrees are illustrated by radiographic reproductions.

California U., Berkeley.
THE EFFECT OF HIGH TEMPERATURE RECOVERY ON THE CREEP OF POLYCRYSTALLINE ALUMINUM IN THE DISLOCATION CLIMB REGION OF TEMPERATURES, by W. D. Ludemann, L. A. Shepard, and J. E. Dorn. Rept. for 31 Jan 58-31 Jan 59 on Materials Analysis and Evaluation Techniques, Contract AF 33(616)3860. Dec 59, 34p. 32 refs. WADC Technical rept. 59-131.
Order from OTS $1.00 PB 161 422

Recovery of the creep resistance of 99.99% pure aluminum was studied at temperatures of 540°, 573°, 600°, and 611°K. Polycrystalline specimens crept under a stress of 950 psi to a strain of 5.5% were allowed to recover for periods of from one minute to sixteen days under a residual stress of 4.4 psi. Increased creep rates upon reapplication of the 950 psi stress evidenced softening of the material. The activation energy for the recovery process was found to be 64,000 cal/mole. Metallographic studies of the specimens showed relief of local elastic strains by coalescence of dislocations into sub-grain boundaries upon recovery, and sub-boundary migration. Indications of minor grain growth were also found. The activation energy of 64,000 cal/mole indicates that recovery of creep resistance was due primarily to the sweeping out of dislocations within the grains by the migration of sub-boundaries. (Author)

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
THE WELDING OF TITANIUM AND TITANIUM ALLOYS, by G. E. Faulkner and C. B. Voldrich. Rept. on Contract AF 18(600)1375. 31 Dec 59, 69p. 38 refs. DMIC Rept. 122.
Order from OTS $1.75 PB 151 079

Information available to the Defense Metals Information Center on the welding of titanium and titanium alloys is summarized in this report. Welding is used to fabricate titanium and titanium-alloy components for air-frames, jet engines, missiles, and chemical equipment. Among the most important considerations in adapting titanium and its alloys to welded components is to use proper welding procedures and to select alloys that have the required weld-joint properties. The chemical and metallurgical characteristics that affect the selection of welding processes and alloys are discussed. Also, information is presented on surface preparation, welding procedures, and quality control. In addition, detailed data on the mechanical properties of welded joints in the commercial grades of titanium and titanium alloys and how these properties are affected by heat treatment and elevated temperatures are presented. (Author)

Manufacturing Labs., Inc., Cambridge, Mass.
INVESTIGATION OF THE STRENGTH AND DUCTILITY RELATIONSHIPS IN TITANIUM-ALUMINUM ALLOYS BETWEEN 6 AND 15% ALUMINUM FOR APPLICATION AT ELEVATED TEMPERATURES, by B. S. Lement, G. T. Hahn, and K. Kreder. Rept. for 28 May 58-14 May 59 on Contract AF 33(616)5948. Nov 58, 74p. 13 refs. WADC Technical rept. 59-342.
Order from OTS $1.75 PB 161 424

An investigation of the strength and ductility relationships in a series of Ti-Al alloys varying from 6 to 15% aluminum was carried out. The activation energy for the embrittlement reaction in a Ti-8Al alloy was found to be about 34,000 cal/mol, which is compatible with present knowledge of diffusion of aluminum or interstitial elements. More complete evidence was obtained that striations represent sub-boundaries that form as a result of the beta-alpha transformation and at which micro-segregation occurs. Striations can be eliminated by cold working and recrystallizing, or by quenching and recrystallizing. Rapid quenching results in a martensitic structure which exhibits high resistance to embrittlement on subsequent aging at 750°F in a Ti-8Al alloy. In the embrittled condition fracture takes place by trans-granular cleavage. (Author)

Materials Lab., Wright Air Development Center, Wright-Patterson AFB, Ohio.
EFFECT OF HEAT TREATMENT ON THE METALLURGICAL AND MECHANICAL PROPERTIES OF 7AL-3MO TITANIUM ALLOY, by Paul L. Hendricks. Rept. for 18 Sep 57-13 Jan 59 on Metallic Materials, Contract AF 33(600)35886. Nov 59, 109p. WADC Technical rept. 59-263.
Order from OTS $2.50 PB 161 363

Metallurgical and mechanical properties of 7Al-3Mo titanium alloy were determined on a production size heat. The investigation included heat treatment, the determination of tensile properties, stress rupture, creep stability, compressive yield, modulus, and impact strength. The conditions under which testing was accomplished varied from room temperature up to 1000°F. (Author)

Metals Research Lab., Brown U., Providence, R.I.
INFLUENCE OF THERMAL HISTORY ON PREFERRED ORIENTATIONS IN THE RECRYSTALLIZATION OF TECHNICALLY PURE ALUMINUM, by R. E. Green, Jr., B. G. Liebmann and H. Yoshida. Rept. on Contract AF 49(638)479. 15 Nov 58, 11p. 10 refs. AFOSR-TN-58-1014; AD-162 279.
Order from LC mi$2.40, ph$3.30 PB 137 931

The influence of the state of impurities (dissolved or precipitated) on the generation of preferred orientations in recrystallization of strained aluminum single crystals, has been investigated. The crystal contained 99.79% Al, 0.09% Fe, 0.09% Si and 0.03% Zn, only the iron not being well within its solid solubility limit. It is indicated that iron in supersaturated solid solution prevents the generation of preferred orientations while it has no effect of this kind when precipitated.

Climax Molybdenum Co. of Michigan, Detroit.
DEVELOPMENT OF MOLYBDENUM-BASE ALLOYS. PART I. HIGH STRENGTHS AND HIGH RECRYSTALLIZATION TEMPERATURES IN WROUGHT MOLYBDENUM-BASE ALLOY BAR STOCK. PART II. MOLYBDENUM-BASE ALLOY SHEET MATERIALS, by M. Semchyshen, Gordon D. McArdle, and Robert Q. Barr. Rept. for Jan-Dec 58 on Metallic Materials, Contract AF 33(616)5447. Oct 59, 138p. 6 refs. WADC Technical rept. 59-280.
Order from OTS $2.75 PB 161 413

Some significant advances have been made in the development of Molybdenum-base alloys. Of several investigated, one exhibited an ultimate tensile strength at room temperature of 155600 psi and 101300 psi at 1800°F. Another showed a one hour recrystallization temperature in excess of 3200°F. A third alloy had a 100 hour rupture strength of 32700 psi at 2400°F. These represent the strongest known metallic materials for service at 1800°F to 2400°F. Nominally 1/16" thick sheet was fabricated from some of the alloys. While this sheet exhibited recrystallization temperatures comparable to those of wrought bar stock of the same composition, the tensile strengths and uniform elongations were lower for the sheet material. Annealing temperatures sufficient to recrystallize the cone of the alloy sheets were inadequate to recrystallize the extreme surface layers. This "case effect" is attributed to contamination of the surface during rolling and annealing. Bendability of the sheet alloys was substantially increased by milling off these outer layers. (Author)

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
THE PROPERTIES OF BORON, by D. N. Williams. 4 Jan 60, 9p. 19 refs. DMIC memo. 41.
Order from OTS $0.50 PB 161 191

The element boron has properties that have given rise to speculation on its possible use as a structural material. However, considerable careful work in reduction and purification of boron has produced nothing encouraging. The purest material available today shatters at low impact, has no ductility, and such poor thermal-shock resistance that it breaks up on cooling slowly from the temperature at which it was produced to room temperature. This memorandum is written to collect as much authentic information as is available and to disseminate this to researchers who may be interested in the future potential and present limitations of boron.

PREPARATION OF HIGH PURITY W, Mo, Ta, Cb, AND Zr, by Geo. A. Moore and L. L. Wyman. Rept. for Feb 58-Feb 59 on Materials Analysis and Evaluation Techniques, Contract AF 33(616)58-11. Oct 59, 15p. WADC Technical rept. 59-314.
Order from OTS $0.50 PB 161 365

This project has been undertaken to prepare refractory metals of the highest possible purity in massive forms suitable for spectrochemical standards and for other essential applications. Experiments were made leading toward the preparation of purified volatile halides, taking advantage of fractional distillation and ion exchange reactions. An apparatus for the formation of refractory metal rods by the thermal decomposition of purified halides was completed. A large zone melting unit for the final purification of these rods was approaching completion at the end of the project year. In this unit electric bombardment heating is provided for the most refractory metals and an RF heating unit is provided for zone melting larger quantities of the less refractory metals. (Author)

THE SPECTRAL EMISSIVITY AND OPTICAL PROPERTIES OF TUNGSTEN, by Robert Dean Larrabee. Rept. on Contract DA 36-039-sc-64637. 21 May 57, 85p. 36 refs. Technical rept. 328; AD-156 602.
Order from LC mi$4.80, ph$13.80 PB 144 929

An experiment designed to measure the spectral emissivity of tungsten at incandescent temperatures has been initiated. A direct comparison method is utilized in which the radiant intensity from a tungsten source is compared with the radiant intensity from an approximative black body, and the spectral emissivity is computed from the basic relation $E_{\lambda T} = S/B$, where $E_{\lambda T}$ is the spectral emissivity at temperature T and wavelength λ, S is the radiant intensity of the tungsten source, and B is the radiant intensity of the approximative black body. It is shown that the spectral emissivity of tungsten is caused by the classical electromagnetic reflection and refraction of black-body light incident upon the metal-vacuum interface from inside the metal. Equations for the spectral emissivity of tungsten as a function of the direction of polarization and the angle of viewing the tungsten surface are developed in terms of the optical constants of tungsten. The optical constants of tungsten are computed by comparing these equations with the experimental data. An attempt is made to explain the main features of these data in terms of a combination of the Lorentz elastically bound electron theory of insulators and the Drude-Zener-Kronig free-electron theory of metals. CAUSES OF CRACKING IN HIGH-STRENGTH WELD METALS, by A. J. Jacobs. R. P. Sopher and P. J. Rieppel. Rept. on Contract AF 33(038)12619. Aug 54, 35p. 5 refs. WADC Technical rept. 52-322, Pt. 3; AD-65 474.
Order from LC mi$3.00, ph$6.30 PB 145 332

Hot-tension and weld-metal cracking studies were conducted on SAE 43XX-type steels and other selected steels. Results from these studies showed a correlation, inasmuch as an increase in carbon, sulfur, and phosphorus tended to lower hot ductility and promote hot-crack susceptibility, and a misch metal addition seemed to have the opposite effects. (Author)

THE PRESSURE DERIVATIVES OF THE ELASTIC CONSTANTS OF COPPER, SILVER AND GOLD, TO 10,000 BARS, by E. B. Daniels and Charles S. Smith. Technical rept. no. 1 on Contract Nonr-

1141(05). Jan 58, 35p. 30 refs. AD-219 023.
Order from LC mi$3.00, ph$6.30 PB 137 957

The pressure derivatives of the elastic constants of the homologous series of metals copper, silver and gold, were measured over the pressure range from 0 to 10,000 bars, using a modified ultrasonic pulse echo method. Means were devised to measure the change of elastic constant with pressure as directly as possible. The values found for the pressure derivatives of the elastic constants of copper, silver and gold are reported. The notation, $C = C_{44}$, $C' = (C_{11} - C_{12})/2$ and $B_S = (C_{11} + 2C_{12})_S/3$ was used. The data for each metal, of the three elastic constants and their pressure derivatives, were interpreted in terms of conventional theory. The theoretical contributions of long-range interactions were subtracted off and the remainder attributed to short range nearest neighbor interaction. The analysis indicates that these must be non-central, many-body interactions in order to account for the shear constants and their pressure derivatives. The many-body character of the interactions is of rapidly increasing importance in the sequence, copper, silver and gold.

COMPOSITION FOR RAPID AND SIMULTANEOUS DERUSTING, DEGREASING AND RUST-PROOFING OF FERROUS SURFACES AT AMBIENT TEMPERATURES, by M. H. Swann. 8 Jan 58, 11p. CCL #40; AD-155 258.
Order from LC mi$2.40, ph$3.30 PB 145 043

The amount of Fe required to take into H_3PO_4 solution to prevent flash rusting was determined. At 5% Fe-phosphate content, the effect was first noticed. The effect increased as the concentration increased until at 15% excessive amounts of loose powdery deposits were left on the metal surfaces. The salts tested as additives included ferric and ferrous phosphates, ferric and ferrous oxalates, ferric and ammonium citrates, ferric sulfate, zinc oxalate, maganese phosphate, zinc phosphate, and combinations of the Na, K, and ammonium salts of oxalates and phosphates. In the presence of excess phosphoric acid as needed to remove rust, only ferric oxalate or combinations of ferric salts and alkali oxalates were protective. The effect of temperature, the weight of ferrous oxalate coating deposited, and the effect of time and temperature on coating weights were studied. A formula was developed that can be supplied in concentrated form for dilution with H_2O to facilitate shipping and storing; the formula exhibited an accelerated rate of rust removal. The formula is composed of ethylene glycol monobutyl ether in a water-soluble, acid-stable, nonionic surface-active agent used in aqueous medium containing H_3PO_4 and ferric oxalate.

DEVELOPMENT OF APPARATUS AND METHODS FOR MEASUREMENT OF CREEP AT TEMPERATURES TO 3500° F, by M. J. Sinnott. Progress rept. no. 14, 15 Aug-15 Sep [49] on Project NEPA. 15 Sep 49, 10p. [NEPA-1159-MIC-14] ATI-184 781.
Order from LC mi$1.80, ph$1.80 PB 137 450

The Geiger temperature indicating and recording unit (GETIR) has been successfully coupled to a motor-generator set to control the temperature of an induction-heated furnace. Life tests on a graphite induction furnace with no protection for the graphite show a life of approximately sixty hours at a temperature of 3300° F. A graphite induction furnace to operate with a protective atmosphere has been constructed and is currently being put into operation. Creep tests on a test sample of a carbide submitted by NACA were attempted, but oxidation and fluxing of the sample invalidated the test, which was run for forty-eight hours at 1800°F. at a load of 4000 pounds per square inch. Creep tests on BeO samples are currently being attempted. Stability tests on ThO_2-Y_2O_3 heater rods have been started to determine the life of these units. (Author) (See also PB 138 461)

Midwest Research Inst., Kansas City, Mo.
RESEARCH ON THE MECHANISMS OF FATIGUE, by J. C. Grosskreutz and Fred R. Rollins. Rept. for Mar 58-Mar 59 on Materials Analysis and Evaluation Techniques, Contract AF 33(616)5065. Sep 59, 71p. 56 refs. WADC Technical rept. 59-192.
Order from OTS $2.00 PB 161 412

Small angle X-ray scattering from fatigued copper and aluminum reveals that the formation of misoriented subgrains is the most pronounced structural change occurring and that this formation is essentially completed within the first 10% of the fatigue life. It is demonstrated that high temperature annealing does not remove this polygonized structure, but does promote some growth and consolidation of the subgrains. The effect of annealing on fatigue life is discussed. No evidence has been found for the formation of voids in the volume of the samples during cyclic stressing. This result strongly favors the hypothesis that cracks originate at the surface. Electron micrographs have shown the existence of deep intrusions on the surface of copper samples run to fatigue. Energy dissipation during fatigue has been measured and found to follow the classic stages of fatigue. Reasons are discussed for discarding these stages in favor of a simple picture of crack initiation and crack propagation. A comprehensive state of the art survey is included. (Author)

Midwest Research Inst., Kansas City, Mo.
STUDY OF METHODS FOR NONDESTRUCTIVE MEASUREMENT OF RESIDUAL STRESS, by Fred R. Rollins. Rept. for 1 July 58-30 Sep 59 on Solid State Research and Properties of Matter, Contract AF 33(616)5932. Dec 59, 48p. 56 refs. WADC Technical rept. 59-561.
Order from OTS $1.25 PB 161 436

A rather thorough search for new techniques of measuring residual stresses has been conducted. This search has included a study of various physical phenomena which exhibit some stress dependent relationship. Of the many phenomena studied, ultrasonics was chosen for further experimental investigation. It has been definitely established that residual stresses in metals can cause double refraction of a polarized shear wave. A technique, based on the double refraction of shear waves, for measuring the average stress through certain specimens is described and sources of error are discussed. The interaction of two ultrasonic waves in metals has been investigated also. (Author)

Naval Boiler and Turbine Lab., Philadelphia, Pa.
CORROSION OF AN IRON-CHROMIUM-ALUMINUM ALLOY BY SYNTHETIC FUEL OIL ASH, by J. F. Kelly. Evaluation rept. 26 Aug 57, 15p. NBTL Test R-232; AD-147 472.
Order from LC mi$2.40, ph$3.30 PB 144 918

Tests were conducted on a Fe:Cr:Al alloy (25 Cr:4.6 Al: balFe). In synthetic fuel oil ash corrodants of high vanadium and of high sodium contents it had better resistance than type 310 alloy. Tests were conducted at 1700° for a maximum of 20 hours.

Physical Sciences Lab., Ordnance Tank-Automotive Command, Center Line, Mich.
A STUDY OF METALLIC CORROSION BY X-RAY DIFFRACTION, by Otto Renius and Gerald P. Connell. Rept. on Contract DA 20-089-ORD-39246. Dec 59, 38p. 10 refs. Rept. no. RR-4.
Order from LC mi$3.00, ph$6.30 PB 145 011

Several metallic specimens, subjected to controlled corrosion, were studied by x-ray diffraction to determine the crystal structure of the base metal and the corrosion products. Diffraction patterns for various corroded and uncorroded, stressed and unstressed metals were obtained. The relationship between diffraction peak-to-background intensity ratios and the extent of corrosion was investigated. (Author)

Rock Island Arsenal Lab., Ill.
IN SITU CONVERSION OF OPERATING HYDRAULIC OILS TO PRESERVATIVE OILS, by R. L. LeMar. 26 Oct 59, 19p. Rept. no. 59-2773.
Order from LC mi$2.40, ph$3.30 PB 145 114

Fourteen commercial, inhibitor, additive concentrates were evaluated in four samples of used, operating hydraulic oil. A number of these concentrates were found to convert such an oil to an inhibited oil with preservative properties comparable to MIL-L-21260 oil. These additive concentrates were also miscible with the oil at room temperature and so could be added directly to the oil in the machine tool hydraulic system and mixed therein, by exercising the machine tool. Viscosity and flash point effects of the additive concentrates were also considered. A list of quality control tests for future selection of concentrates is included. (Author)

Rock Island Arsenal Lab., Ill.
PROCESS QUALITY CONTROL FOR CORROSION PREVENTIVE OILS AND COMPOUNDS, by Robert E. Johnson. 21 Oct 59, 24p. Rept. no. 59-2721; AD-228 438.
Order from LC mi$2.70, ph$4.80 PB 144 735

A quality control program was initiated and maintained in an attempt to insure the quality of preservative materials utilized in the storage of Ordnance materiel. The results obtained indicate that such a program is feasible and will provide valuable information if the personnel concerned are conscientious in the maintenance of necessary records. A satisfactory procedure was established to check periodically the preservative oils and fingerprint remover compounds. The use of a short fingerprint removal test considerably reduced the testing time. Additional work is necessary to establish a satisfactory procedure for the periodic check of solvent cutback and petrolatum type materials. Actual savings realized

from this program cannot be readily determined. However, periodic testing revealed deficiencies which were immediately corrected. A considerable amount of Ordnance materiel would have been preserved with deficient preservatives had it not been for this program. (Author)

Watertown Arsenal Labs., Mass.
ELEVATED TEMPERATURE CHARACTERISTICS OF THREE AGE HARDENED AND INTERNALLY OXIDIZED TITANIUM-COPPER-CERIUM ALLOYS, by Joseph M. Dhosi. Master's thesis. Dec 59, 57p. 16 refs. Technical rept. no. WAL TR-405.2/5.
Order from LC mi$3.60, ph$9.30 PB 144 922

The effects of solid solution strengthening by zirconium and tantalum on the precipitation hardening response of Ti-2.0Cu-0.4Ce were determined. Elevated temperature characteristics after aging and after internal oxidation were compared and it was found that the beneficial effects of each treatment are not additive. Internal oxidation was observed to improve the temperature stability of the base alloy.

NUCLEAR PHYSICS AND NUCLEAR CHEMISTRY

Air Force Cambridge Research Center, Bedford, Mass.
NATURAL AEROSOLS AND NUCLEAR DEBRIS STUDIES, by M. I. Kalkstein, P. J. Drevinsky and others. Progress rept. no. 2 on Contract AT(49-7)1431. Nov 59, 44p. 17 refs. GRD Research Notes no. 24; AFCRC-TN-59-627.
Order from OTS $1.25 PB 161 368

Some additional results of research on radioactive and inactive aerosols in the troposphere and stratosphere are presented. Results of studies of stratospheric particulate aerosols and of the size distribution of fission products in the lower atmosphere are discussed. Techniques of particulate aerosol collection and analysis are described. Results for barium-140 and strontium-90 in individual precipitation samples are presented together with preliminary meteorological interpretation. Some results for gamma-ray activities in precipitation and soil samples are discussed. (Author)

RADIATION CHEMISTRY AND RELATED PHENOMENA. PART I. MECHANISMS OF RADIATION CHEMISTRY. PART II. RADIATION CHEMISTRY OF SATURATED ALIPHATIC HYDROCARBONS. PART III. RADIATION CHEMISTRY AS A PRECURSOR TO RADIATION EFFECTS ANALYSES, by Gordon G. Wepfer, Lowell A. King and William L. R. Rice. Rept. for Apr-June 59 on Materials Analysis and Evaluation Techniques. Nov 59, 91p. 12 refs. WADC Technical rept. 59-296.
Order from OTS $2.25 PB 161 414

It is known that when high-energy radiation passes through matter, energy is transferred to the target by ionization and excitation processes. Subsequently, any number of processes can and do occur, depending on the ionization density. Part I of this report is a summary of the mechanisms which can take place leading to the observed effects in radiation chemistry studies. The discussion is limited somewhat by a lack of knowledge of the extent to which the various secondary processes take place in a given system. It is possible, however, to discuss things which have been observed and the conditions under which certain processes are known to take place, processes which should be considered in studying any new system. Part II is a review of the radiation chemistry of pure saturated aliphatic hydrocarbons. Discussions and experimental observations found in the literature have been condensed and are presented. Part III is concerned with gross property changes resulting from interaction of radiation with materials. Programs to date in the radiation effects area are discussed. The relative success or failure of these various research efforts is indicated. An attempt is made to show the need for correlation of fundamental changes observed through radiation chemistry, and macroscopic changes observed in radiation effects studies. (Author)

Palmer Physical Lab., Princeton U., N. J.
STRANGE PARTICLE PRODUCTION IN COMPLEX NUCLEI, by Albert Eugene Werbrouck. Technical rept. no. 22 by Cosmic Ray and Elementary Particles Group on Contract Nonr-1858(06). 20 Feb 59, 100p. 45 refs.
Order from LC mi$5.40, ph$15.30 PB 144 723

Strange particle production by high energy pions and protons bombarding carbon, iron, and lead nuclei in a multiplate cloud chamber was investigated. This choice of targets provided an opportunity to compare the effects of multistage processes which are sensitive to nuclear radius. The two stage process that originally motivated the experiment was the indirect production of strange particles by pions in turn produced by a nucleon incident on the same nucleus. Early indications of very low direct production of strange particles in p-p collisions led to the belief that a large fraction of the production in p-nucleus collisions was through the indirect process. The result for this fraction in lead is $\sim 2/3$. A K-pair production by protons comparable to the direct production of hyperon-K meson pairs by protons was observed.

Stanford U., Calif.
NUCLEON FORM FACTORS FROM ELECTROPRODUCTION OF PIONS, by S. Gartenhaus and C. N. Lindner. Technical rept. no. 37 on Contract AF 49(638)388. Sep 58, 19p. 15 refs. AFOSR-TN-58-819; AD-202 351.
Order from LC mi$2.40, ph$3.30 PB 137 535

The dispersion relation analysis of Fubini, Nambu, and Wataghin [Phys. Rev. 111:329; 1958] for electropion production was applied to the experiments of Panofsky and Allton [Phys. Rev. 110:1155; 1958] as an independent means for studying nucleon structure.

The results are in qualitative agreement with those from elastic scattering experiments. Some of the limitations inherent in the form factor measurements by this process are also discussed. (Author)

NATURE OF THE TWO-ELECTRON CHEMICAL BOND I. THE HOMOPOLAR CASE, by Harrison Shull. Technical note no. 26 on Contract AF 61(514)1200. 5 June 59, 40p. 12 refs.
Order fr[illegible]C mi$3.00, ph$6.30 PB 145 190

By using the artifice of dividing space into two parts by means of a plane perpendicular to the internuclear axis and passing through its midpoint, it is shown that there is possible a division of a two-configuration two-electron wave function into two orthogonal parts each of which has optimum properties associated with the plane intuitively corresponding to the names "ionic" and "atomic". The division of the density distributions for the Wang, Weinbaum, and Rosen functions into ionic, atomic, and ionic-atomic cross-term parts is considered, and it is shown that the former two parts are roughly non-bonding, where as it is the latter part which contributes most to the density between the nuclei in the binding region. The term covalent seems best applied to the cross-term. The method is capable of extension to the heteropolar bond.

ELECTROMAGNETIC STRUCTURE OF THE NUCLEON, by Adam M. Bincer. Rept. on Contract AF 49(638)327. Nov 59, 35p. 17 refs. AFOSR-TN-59-1217.
Order from LC mi$3.00, ph$6.30 PB 145 041

Dispersion relations are proved for the electromagnetic and mesonic nucleon vertex functions considered as a function of the nucleon mass. The results are used to express the isotopic scalar and the isotopic vector electromagnetic form factors of the nucleon in terms of pion electroproduction (or photoproduction) and pion-nucleon scattering amplitudes in the $J = \frac{1}{2}$, $T = \frac{1}{2}$ state. (Author)

California U., Berkeley.
LOW-ENERGY π-MESONS IN THE COSMIC RADIATION, by Mircea Fotino. Technical rept. no. 41 on Cosmic Rays, Contract Nonr-222(40). 2 Feb 59, 47p. 39 refs.
Order from LC mi$3.30, ph$7.80 PB 144 899

The intensity of π-mesons in the atmosphere is investigated in the energy region $E_{kin} \lesssim 50$ Mev. at sea level and mountain altitudes. Positive π-mesons coming to rest in an absorber-scintillator are identified by the characteristic π-μ decay. They are detected electronically and recorded photographically. The value 1.45 ± 0.09 is adopted for the negative-to-positive ratio at small energies. The omnidirectional intensities J_{π^+} of slow positive π-mesons at sea level (91 m.), Echo Lake, Colorado (3260 m.), and Mt. Evans, Colorado (4310 m.) are found to be 0.0094 ± 0.0024, 0.098 ± 0.005 and 0.240 ± 0.011 $g^{-1}d^{-1}$ respectively. The altitude dependence of $J_{\pi^\pm}$, $J_{\mu^\pm}$ and $J_{\pi^\pm}/J_{\mu^\pm}$ is given and the attenuation length of slow π-mesons in the atmosphere found to be $L_a^\pi \approx 120\text{-}130 g/cm^2$ in this altitude interval. A discussion covering most of the available results along the same line is presented. (Author)

California U., Berkeley.
SPECTRAL REPRESENTATIONS IN PERTURBATION THEORY. III. THE SCATTERING AMPLITUDE WITH TWO COMPLEX INVARIANTS, by Jan Tarski. Rept. on Contract AF 49(638)327. [1958] 53p. 14 refs. AFOSR-TN-59-1071.
Order from LC mi$3.60, ph$9.30 PB 145 322

The partial Feynman amplitude corresponding to a particular fourth order diagram is examined as a function of energy and momentum transfer with both of these variables complex. The region of regularity of this function is found, and the types of singularities at the remaining points are determined. An approach which requires only elementary calculations is developed. The condition for the validity of Mandelstam's representation in the fourth order is obtained. Spectral representations for exchange scattering processes at fixed momentum transfer are discussed as another application of the principal results. (Author)

Convair, Fort Worth, Tex.
APPLICATION OF WIENER-HOPF METHOD TO TRANSPORT THEORY, by N. Edmonson. Rept. on Contract AF 33(600)32054. 8 Sep 58, 60p. 8 refs. MR-N-202; NARF-58-34T.
Order from LC mi$3.60, ph$9.30 PB 145 347

Milne's equation is derived as an example of an equation of the Wiener-Hopf type. The basic mathematical theory of the Wiener-Hopf method is developed and a number of physical problems solvable by the Wiener-Hopf method are presented. A discussion of the application of the Wiener-Hopf method to the non-homogeneous integral equation is included. (Author)

Convair, Fort Worth, Tex.
THE TWO-REGION NEUTRON TRANSPORT EQUATION, by T. W. Summers. Rept. on Contract AF 33(600)32054. 29 Dec 58, 24p. 4 refs. MR-N-220; NARF-58-53T.
Order from LC mi$2.70, ph$4.80 PB 145 345

The two-region neutron transport equation with plane symmetry has been solved by the Wiener-Hopf method for the case in which one region contains a plane, isotropic source parallel to the interface. The results are subject to the restrictions of isotropic scattering without loss of energy and a constant total mean free path. Analytical results are presented for the total flux and the angular flux at the interface. Numerical results for the total flux at the interface are presented in the form of a parameter study. (Author)

Illinois U., Urbana.
EVALUATION OF K^-- NUCLEON SCATTERING PHASE SHIFTS ON BASIS OF PRESENT DATA, by R. D. Hill. Technical rept. no. 7 on Contract Nonr-1834(05). Mar 59, 12p. 12 refs.
Order from LC mi$2.40, ph$3.30 PB 144 893

The purpose of the following evaluation was to try to obtain an estimate of the K^- neutron elastic scattering cross-section. This is useful in planning a possible emulsion K^-- nuclear scattering analysis. Since the summer of 1958, when Dalitz carried out his evaluation of the phase-shifts, certain more complete experimental data, such as the inelastic K^--proton scattering cross-sections as a function of energy and the charge-exchange K^- proton scattering cross-sections, have become available. A re-evaluation of the phase-shifts was therefore felt to be worth-while. (Author)

Miami U., Coral Gables, Fla.
NEGATIVE PION INTERACTIONS AT 1.3 $\frac{Bev}{c}$, by M. Blau, C. F. Carter and A. Perlmutter. Rept. on Contract AF 49(638)97. 10 July 59, 36p. 15 refs. AFOSR-TN-59-788; AD-220 514.
Order from LC mi$3.00, ph$6.30 PB 145 040

A total of 340 meters of track of negative pions of momentum 1.3 $\frac{Bev}{c}$ were followed in emulsion, and pion interactions were recorded. Special emphasis is placed on inelastic scattering on free protons (single meson production). The resulting angular and momentum distributions of the emitted particles are investigated and compared with previous experiments at similar energies. An attempt is made to explain these results on the basis of an isobar decaying into a nucleon and the slower pion. In the case of reaction $\pi^- + p \rightarrow \pi^- + \pi^0 + p$, it appears that there exists an anisotropy in the isobar frame of reference, in which the slower pion is emitted predominantly backward, with respect to the isobar direction. The results are compared with the π - π coupling model. Angular and energy distributions of mesons emitted in nuclear interactions are investigated and compared with other results and Monte Carlo calculations. The meson multiplicity and energy degradation in these collisions are also discussed. Strange particles found during the investigation are analyzed. (Author)

Stanford U., Calif.
FLUX AT SEA LEVEL OF HEAVY CHARGED PARTICLES PAIR-PRODUCED IN COSMIC-RAY SHOWERS, by A. Goldberg. Technical note no. 6 on Contract AF 49(638)388. Sep 59, 10p. 13 refs. AFOSR-TN-59-964.
Order from LC mi$1.80, ph$1.80 PB 144 964

The flux at sea level of charged particles with mass 300-600 electron masses is calculated assuming the particles to be pair-produced by cosmic-ray photons. The cross section for pair production, including the effects of nuclear size, is folded into the distribution of photons predicted by shower theory. Absorption of the produced particles is also considered approximately. The results are well below the experimental upper limit set up by Keuffel and co-workers. (Author)

MULTI-PURPOSE MAGNETIC PARTICLE ANALYZER, by Robert L. Burman and Avivi I. Yavin. Technical rept. no. 6 on Contract Nonr-1834(05). Mar 59, 28p. 10 refs.
Order from LC mi$2.70, ph$4.80 PB 144 895

A suggestion is made in this paper to apply Mileikowsky's idea of an astigmatic magnet to Enge's spectrometer.

Naval Radiological Defense Lab., San Francisco, Calif.
A SIMPLE CALIBRATION AND CHECKING FACILITY FOR FAST AND SLOW NEUTRON DETECTORS, by A. H. Redmond. 28 Jan 59, 20p. Research and development technical rept. USNRDL-TR-302.
Order from LC mi$2.40, ph$3.30 PB 145 614

A simple facility is described for checking the sensitivity of doserate instruments for fast neutron detection, and for calibration of thermal neutron detectors. About 7 million plutonium-beryllium neutrons per second give a tolerance flux density of slow neutrons from the walls of a cavity in paraffin or water. Construction drawings of the cavity are given, and for the dimensions specified the constant is given for converting any plutonium-beryllium flux of neutrons to combined thermal and epithermal flux densities, so that instruments can be calibrated in standard flux densities.

New York U. Coll. of Engineering, N. Y.
PLATEAU SLOPES AND PULSE CHARACTERISTICS OF LARGE, HIGH PRESSURE BF_3 COUNTERS, by Rosalind B. Mendell. Rept. on Contract AF 18(600)1555. July 59, 75p. 30 refs. AFOSR-TN-59-738.
Order from LC mi$4.50, ph$12.30 PB 144 936
